Subject: Ordinance 2016-36

Message:

I would ask that you give special consideration to Ordinance 2016-36. It seems to me that installing Flood Vents on opposite walls is only a recommendation by FEMA. This is Alaska. We design and build energy efficient structures with spaces to keep warm air in and cold air out. These Flood Vents are not practical for Alaska. Why should we be required to put holes in our homes, especially for a theoretical flooding event? A standard garage door could be opened in an emergency, yet it keeps the cold air out year-round. Please don't just adopt this ordinance without considering the consequences for home owners.
