

Meeting Agenda Planning Commission

Monday, March 21, 2022

7:30 PM

Betty J. Glick Assembly Chambers

Zoom Meeting Id 907 714 2200

The hearing procedure for the Planning Commission public hearings are as follows:

- 1) Staff will present a report on the item.
- 2) The Chair will ask for petitioner's presentation given by Petitioner(s) / Applicant (s) or their representative – 10 minutes
- 3) Public testimony on the issue. – 5 minutes per person
- 4) After testimony is completed, the Planning Commission may follow with questions. A person may only testify once on an issue unless questioned by the Planning Commission.
- 5) Staff may respond to any testimony given and the Commission may ask staff questions.
- 6) Rebuttal by the Petitioner(s) / Applicant(s) to rebut evidence or provide clarification but should not present new testimony or evidence.
- 7) The Chair closes the hearing and no further public comment will be heard.
- 8) The Chair entertains a motion and the Commission deliberates and makes a decision.

All those wishing to testify must wait for recognition by the Chair. Each person that testifies must write his or her name and mailing address on the sign-in sheet located by the microphone provided for public comment. They must begin by stating their name and address for the record at the microphone. All questions will be directed to the Chair. Testimony must be kept to the subject at hand and shall not deal with personalities. Decorum must be maintained at all times and all testifiers shall be treated with respect.

A. CALL TO ORDER

B. ROLL CALL

C. APPROVAL OF CONSENT AND REGULAR AGENDA

All items marked with an asterisk () are consent agenda items. Consent agenda items are considered routine and non-controversial by the Planning Commission and will be approved by one motion. There will be no separate discussion of consent agenda items unless a Planning Commissioner so requests in which case the item will be removed from the consent agenda and considered in its normal sequence on the regular agenda.*

If you wish to comment on a consent agenda item or a regular agenda item other than a public hearing, please advise the recording secretary before the meeting begins, and she will inform the Chairman of your wish to comment.

NEXT REGULARLY SCHEDULED PLANNING COMMISSION MEETING

The next regularly scheduled Planning Commission meeting will be held Monday, April 11, 2022 in the Betty J. Glick Assembly Chambers of the Kenai Peninsula Borough George A. Navarre Administration Building, 144 North Binkley Street, Soldotna, Alaska at 7:30 p.m.

CONTACT INFORMATION

KENAI PENINSULA BOROUGH PLANNING DEPARTMENT

Phone: 907-714-2215

Phone: toll free within the Borough 1-800-478-4441, extension 2215

Fax: 907-714-2378

e-mail address: planning@kpb.us

website: <http://www.kpb.us/planning-dept/planning-home>

A party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances. An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the filing and records preparation fees. Vacations of right-of-ways, public areas, or public easements outside city limits cannot be made without the consent of the borough assembly.

Vacations within city limits cannot be made without the consent of the city council. The assembly or city council shall have 30 calendar days from the date of approval in which to veto the planning commission decision. If no veto is received within the specified period, it shall be considered that consent was given.

A denial of a vacation is a final act for which the Kenai Peninsula Borough shall give no further consideration. Upon denial, no reapplication or petition concerning the same vacation may be filed within one calendar year of the date of the final denial action except in the case where new evidence or circumstances exist that were not available or present when the original petition was filed.

ADMINISTRATIVE APPROVAL

Subdivision: Foothills Subdivision Sunset View Estates 2020 Addition Phase 1
KPB File 2020-113R1
Homer Recording District

The Kenai Peninsula Borough Planning Commission conditionally approved the preliminary subdivision plat on October 12, 2020. Approval for the plat is valid for two years from the date of approval.

The final plat complied with conditions of preliminary approval and KPB Title 20 (Subdivisions); therefore, per KPB 20.60.220, administrative approval has been granted by the undersigned on March 17, 2022.

Julie Hindman
Acting Platting Manager

State of Alaska
Kenai Peninsula Borough

Signed and sworn (or affirmed) in my presence this 17 day of March 2022
by Acting Platting Manager.

Notary Public for the State of Alaska

My commission expires: 5/12/23

The survey firm has been advised of additional requirements, if any, to be complied with prior to recording. After the original mylar has been signed by the KPB official, it must be filed with the appropriate district recorder within ten business days by the surveyor or the Planning Department.

C. CONSENT AGENDA

***5. Plat Amendment Request**

1. Plat Amendment Request; Beaver Dam Estates Part Seven (KN 2021-45)

Request: Change the range listed in the title block from R11n to R11W

Property Tax and Collections Manager

**ITEM *5 – PLAT AMENDMENT REQUEST
a. BEAVER DAM ESTATES PART 7**

KPB File No.	2021-025R1A1
Planning Commission Meeting:	March 21, 2022
Recording Number:	KN 2021-45
Surveyor:	John Segesser / Segesser Surveys
General Location:	Eider Drive an Mallard Road, Kalifornsky Area

STAFF REPORT

Following the recording of this plat with the State Recorder's Office, the survey firm has requested permission to withdraw the original mylar for amending.

Specific Request: Change the range listed in the title block from R11N to R11W.

Notification: A letter was sent to the land owners affected by this amendment. They were notified of the proposed changes.

Staff recommends the requested amendment be accomplished by striking through the incorrect range and adding the correct range to the title block.

RECOMMENDATION:

GRANT PERMISSION TO SURVEYOR TO WITHDRAW THE ORIGINAL MYLAR TO AMEND AS REQUESTED, SUBJECT TO THE FOLLOWING:

1. **WRITTEN APPROVAL BY THE STATE RECORDER.**

20.25.120 – Review and appeal.

A decision of the planning commission may be appealed to the hearing officer by a party of record within 15 days of the date of distribution of decision in accordance with KPB 21.20.250.

END OF STAFF REPORT

Kenai Peninsula Borough Planning Commission

Betty J. Glick Assembly Chambers, Kenai Peninsula Borough George A. Navarre Administration Building

February 28, 2022
7:30 P.M.
UNAPPROVED MINUTES

Chair Martin requested that Vice Chair Ruffner chair the meeting. Chair Martin attended via Zoom and had connection concerns.

CALL TO ORDER

Vice Chair Ruffner called the meeting to order at 7:30 p.m.

Oath of Office

Ms. Shirnberg administered the oath of office for two new commissioner, Michael Horton representing District 4 and David Stutzer representing District 8.

ROLL CALL

Commissioners Present

Jeremy Brantley, District 5 – Sterling/Funny River
Diane Fikes, City of Kenai
Pamela Gillham, District 1 – Kalifornsky
Michael Horton, District 4 - Soldotna
Virginia Morgan, District 6 – East Peninsula
Blair Martin, District 2 – Kenai
Robert Ruffner, District 7 – Central
David Stutzer, District 8 - Homer
Franco Venuti, City of Homer

With 9 members of an 10-member seated commission in attendance, a quorum was present.

Staff Present

Melanie Aeschliman, Planning Director
Walker Steinhage, Deputy Borough Attorney
Julie Hindman, Platting Specialist
Samantha Lopez, KRC Manager
Nancy Carver, Resource Planning
Eric Ogren, Code Compliance
Ann Shirnberg, Planning Administrative Assistant
Avery Harrison, Land Management Administrative Assistant

AGENDA ITEM C. CONSENT & REGULAR AGENDAS

***2 Planning Commission Resolutions**

- a. PC Resolution 2022-09

***3. Plats Granted Administrative Approval**

- a. Kasilof Alaska Subd. 2021 Addition; KPB File 2021-113

***4. Plats Granted Final Approval (20.10.040)**

- a. Slikok Creek Alaska Subdivision 2022 Replat Endicott Drive ROW; KPB File 2021-151V

***6. Commissioner Excused Absences**

- a. Syverine Bentz, District 9 – South Peninsula
- b. City of Soldotna, Vacant
- c. City of Seward, Vacant
- d. City of Seldovia, Vacant
- e. District 3 – Nikiski, Vacant
- f. District 4 – Soldotna, Vacant

***7. Minutes**

- a. January 25, 2022 Planning Commission Special Meeting Minutes
- b. February 14, 2022 Planning Commission Meeting Minutes

Vice Chair Ruffner asked if anyone wished to speak to any of the items on the consent agenda. Hearing no one wishing to comment he asked that Ms. Shirnberg read into the record the consent agenda items. Ms. Shirnberg read the items into the record. Vice Chair Ruffner then brought it back to the commission for a motion.

MOTION: Commissioner Brantley moved, seconded by Commissioner Fikes to approve the consent and regular agendas

Hearing no objection or further discussion, the motion was carried by the following vote:

MOTION PASSED BY UNANIMOUS VOTE:

Yes	9	Absent	1	Vacant	4
Yes	Brantley, Fikes, Gillham, Horton, Martin, Morgan, Ruffner, Stutzer, Venuti				
Absent	Bentz				

Vice Chair Ruffner asked Ms. Shirnberg to read the procedures for public testimony.

AGENDA ITEM D. OLD BUSINESS - None

AGENDA ITEM E. NEW BUSINESS

Vice Chair Ruffner asked Ms. Shirnberg to read into the record the rules for public hearings.

**ITEM 1 - RIGHT OF WAY VACATION
VACATE 20' PUBLIC STREET EASEMENTS ADJOINING THE SOUTH BOUNDARY AND
NORTHWEST BOUNDARY OF LOT 1 TOYON SUBDIVISION AS GRANTED BY PLAT K-1592.**

KPB File No.	2022-011V
Planning Commission Meeting:	February 28, 2022
Applicant / Owner:	Kenaitze Indian Tribe IRA of Kenai, Alaska
Surveyor:	Jason Young, Mark Aimonetti / Edgy Survey and Design LLC
General Location:	Mission Avenue, City of Kenai
Legal Description:	20' public street easements adjoining the south boundary and northwest boundary of Lot 1 Toyon Subdivision as granted by plat K-1592.

Staff report presented by Julie Hindman

Vice Chair Ruffner opened the meeting for public comment.

Jason Young, Edge Survey & Design, LLC; P.O Box 208, Kasilof, AK 99610: Mr. Young was the surveyor on this project and made himself available for questions.

Hearing no one else wishing to comment, public comment was closed and discussion was open among the commission.

MOTION: Commissioner Brantley moved, seconded by Commissioner Fikes to approve the vacation as petitioned based on the means of evaluating public necessity established by KPB 20.65, subject to staff

recommendations and compliance with borough code.

Hearing no objection or further discussion, the motion was carried by the following vote:

MOTION PASSED BY UNANIMOUS VOTE:

Yes	9	Absent	1	Vacant	4
Yes	Brantley, Fikes, Gillham, Horton, Martin, Morgan, Ruffner, Stutzer, Venuti				
Absent	Bentz				

**ITEM e2 – MARIJUANA CULTIVATION FACILITY LICENSE
L & H ENTERPRISES, LLC**

Applicant	L & H Enterprises, LLC
Landowner	Stephen T. Lovelace
Planning Commission Meeting:	February 28, 2022
Parcel ID#	065-500-04
Location	29945 Aspen Avenue, Sterling, AK 99672
General Location:	Mission Avenue, City of Kenai
Legal Description:	T05N, R08W, SEC 23, S.M., KN 0720031, Green Acres Sub, Tract 2

Staff report presented by Nancy Carver.

Vice Chair Ruffner opened the meeting for public comment.

Chantelle Hacker, Applicant; P.O. Box 908, Sterling, AK 99672: Ms. Hacker spoke in support of approving the license. She noted that this would be a family owned and operated business, that there will be little increase in traffic in the area and parking will not be an issue for the facility. She also noted that they have gone above what is required by AMCO for filtration of odors.

Commissioner Gillham noted that obnoxious smells from facilities like this is the #1 complaint from the public. She asked how they would ensure that this does not become an issue with this facility. Ms. Hacker again stated that the measure that they were taking in this area exceed AMCO standards and that obnoxious odors should not be an issue. Commissioner Gillham then asked if they had put into place a process to receive complaints from the public. Ms. Hacker replied that they most definitely would like the public to approach them with their complaints before going to AMCO.

Commissioner Fikes asked if the security lighting required by AMCO regulations would negatively affect neighbors. Ms. Hacker replied that the location of security lighting was such that it would not affect neighbors.

Commissioner Horton asked the applicant if they had a way of controlling humidity in their facility. He noted that the effectiveness of the charcoal filters is compromised if the humidity gets too high. Ms. Hacker replied that the facility does have a dehumidifier system to address those types of issues.

Linda Anderson; 36660 Feuding Lane, Sterling, AK 99672: Ms. Anderson spoke in opposition to the application. She note that this type of crop has high water demands and expressed concerns that this facility could negatively affect the neighborhood aquifer. She also noted that this facility is close in proximity to a school bus stop.

Malan Paquette; Anchor Point, AK 99556: Ms. Paquette spoke in opposition to the application. She expressed concerns regarding the location of the facility, the increase of traffic in the area and what she felt was the inundation of these types of facilities in the area. She support the development of local farming on the peninsula but feels that there are better crops than this controlled substance.

Sarah Williams; P.O. Box 546, Sterling, AK 99672: Ms. Williams spoke in opposition to the application. She noted that she lives in the neighborhood and has young children. She also has concerns about possible fire issues as she know that these types of business use grow lights and pull a lot of power from

the grid. She also expressed concerns that there may be water runoff from the watering of the plants that could possibly have a negative effect to the neighborhood. She also had concerns regarding the possible increase in crime to the area that cash only businesses like this could bring. She also is concerned how this type of business might negatively affect the surrounding property values.

Matthew Roster; 29645 Bunny Court, Sterling, AK 99672: Mr. Roster spoke in opposition to the application. He expressed concerns that the facility was in close proximity to a school bus stop and that school children should not have to deal with this situation. He expressed concerns related to odors from the facility, the potential negative effect on surrounding property values. He does not believe that facilities like this should be allowed in residential areas. He had concerns about how wastewater runoff could negatively affect neighboring wells and asked if there had been any environmental impact studies done on long-term impacts and damage done to the water table. He also had concerns about noise pollution because of the noise of the large fans used in these types of facilities.

Ron Swank; 36750 Feuding Lane, Sterling, AK 99672: Mr. Swank spoke in opposition to the application. He noted that he had many of the same concerns that have been expressed by others such as the school bus stop, noise pollution and potential increase of crime. He does not believe that these types of facilities should be allowed in residential areas.

Maryanne Rodgers; 36297 Cottontree Lane, Sterling, AK 99672: Ms. Rodgers spoke in opposition to the application. She expressed concerns about the close proximity of this facility to the school bus stop and odors from the facility. She asked what options the neighborhood has if the facility complies with AMCO rules and there are still odors coming from the facility. She also share the same concerns regarding the impacts to neighboring wells and the water table.

Steven Lovelace, Applicant; 29945 Aspen Avenue, Sterling, AK 99672: Mr. Lovelace is one of the applicants. He noted that they have invested quite a bit of money into the air filtration system for the facility and it exceeds AMCO requirements. He does not foresee odors being a problem, and should it become one he would improve the filtration system. He noted that his well is at 180' and is within the confining layer. He believes there is an aquifer at 70-80 feet which most of the neighborhood residents get their water from, so he does not believe the area wells will be affected.

Commissioner Fikes noted that there were several comments related to security issues with this being a cash only business. She asked the applicant if he had a plan in place to address this issue. Mr. Lovelace replied that AMCO requires and has standards for security plans. He has a security plan in place that meets AMCO standards.

Commissioner Gillham noted that several members of the public expressed concerns regarding how close the facility was to a school bus stop. She asked if there are regulations addressing the distance that the facility had to be from a school bus stop. Mr. Lovelace replied that he was aware of distance regulation related to schools and daycares, which he meets, but he is not aware of any regulations related to bus stops. Commissioner Gillham then noted that even with required filtration system there are still complaints regarding odor issues and asked again, what he has done to insure that his neighbors will not experience odor issues. Mr. Lovelace replied that the building has been completely renovated and his filtration system has gone above what AMCO requires and there should be no odor issues.

Dan Spencer (no address given): Mr. Spencer asked the applicant how does the filtration system on his facility compare with other facilities like his. Would the applicant say that his system is the same or better than most? Mr. Lovelace stated that he has no idea what other facilities are doing but his system exceeds AMCO standards.

Brendan Hopkins; 36707 Feuding Lane, Sterling, AK 99672: Mr. Hopkins spoke in opposition to the application. He noted that he agreed with many of the comments from the other neighbors. He is concerned that this facility is right next to a school bus stop. He wanted to know how the efficacy of the filtration system will be monitored and who would be overseeing the monitoring. He believes there should be a quantitative way to measure the efficacy of the filtration system. He also expressed concerns that the odors could have a negative health effect on children. He also believes that the public noticing for this application was inadequate and should have gone out to more people in the neighborhood. He would like to see the commission require signage on the property similar to the requirement of construction projects posting storm water protection plans for the public to review.

Chantelle Hacker, Applicant; P.O. Box 908, Sterling, AK 99672: Ms. Hacker noted that the school bus stop is over 530' from the building and the building cannot be seen from the bus stop. She stated that the filtration system will keep any odors from escaping from the building. There should not be any impacts to neighboring power systems as they have a separate 400-amp power system.

Steven Lovelace, Applicant; 299945 Aspen Avenue, Sterling, AK 99672: Mr. Lovelace noted that the filters in his filtration system are good for a year and he will replace them on a yearly basis.

Commissioner Fikes noted that the facility will not be open to the public and they would not need any signage for the facility. Mr. Lovelace replied that she was correct and that it was against AMCO policy to have signage. Commissioner Fikes then asked if AMCO required the facility to have a sprinkler system. Ms. Hacker replied that AMCO does require a fire suppression system, which they have, but not sprinklers specifically.

Commissioner Stutzer noted that the applicants will be working in an environment with strong and pungent odors. He then asked the applicants if they are aware of health risks associated with these odors. Mr. Lovelace replied that there are not any health risk associated these odors.

Hearing no one else wishing to comment, public comment was closed and discussion was open among the commission.

MOTION: Commissioner Brantley moved, seconded by Commissioner Gillham to forward to the Assembly a recommendation to approve a marijuana cultivation facility license for L & H Enterprises, LLC.

Vice Chair Ruffner asked staff what was the process for lodging complaints associated with these types of facilities. Code Compliance Officer Eric Ogren replied that all complaints are to go to AMCO. If a resident should call the borough with a complaint he would forward it on to AMCO. He also noted that there is nothing in borough code that would support the borough conducting an investigation into these facilities. Vice Chair Ruffner then asked how many complaints has the borough received associated with these facilities. Mr. Ogren replied that in the last two years he has received less than six complaints.

Commissioner Venuti noted that the commission has forwarded many licenses like this to the Assembly recommending approval. The commission has also received many comments from neighboring landowners in opposition to these licenses. He understands that many folks do not want these types of facilities to be allowed their neighborhoods. But that is what can happen in communities that do not have zoning. He then noted the borough does have local option zoning, which would allow the residents of neighborhoods to come together to implement residential zoning. This would be one way to limit these types of facilities from popping up in mainly residential area.

Commissioner Gillham noted that KPB 7.30.020(E) does give the assembly the right to recommend additional conditions on licenses to meet the standard regarding the protection against offsite odors. This particular facility is within a heavily residential area and wondered if there were any additional conditions related to this license that the commission might recommend to Assembly regarding odor control. She then asked staff if the Assembly had ever imposed additional conditions on these types of licenses. Mr. Ogren replied that if the AMCO conditions are met it should mitigate odor issues. He then noted that it is within the Assembly's authority to recommend additional conditions on a license to AMCO but he is not aware of this having been done in the past.

Commissioner Fikes stated that she agreed with Commissioner Venuti's comments regarding zoning. She lives in the City of Kenai and noted that the city has a number of marijuana facilities within its' limits. The city does have zoning in place so that these facilities are not in heavily residential areas. There is no zoning that affects this facility and she believes that the landowner has a right to use their property as they see fit. She believes that the applicant has met or gone above the standards set by AMCO. She noted that AMCO does require that certain types of data be reported to them on an annual basis. That data can be used to add additional conditions to a license if needed. She is not comfortable recommending additional requirements to this license as it is a new business and there is not any data available to support the request. She does not believe that would be fair to the applicant.

Commissioner Stutzer noted that there are many types of businesses that create odors that can permeate

the surrounding areas, such a paper mills and wineries. While the odors are not necessarily pleasant, they do not pose any negative health effects. He believes that the applicant has met or exceeded AMCO standards in this area. The applicant has also said that he should there be odor issues he will work to resolve them. He stated that he supports forwarding the application to the Assembly for approval.

Commissioner Gillham stated that she agrees with Commissioners Fikes and Stutzer in protecting the rights of all landowners. She stated that there is a process in place to address complaints and that the applicant has met AMCO conditions and standards. She will be supporting the approval of the application.

Vice Chair Ruffner noted one way to regulate the location of these types of facilities is zoning, and this area does not have any zoning in place. The applicant is on notice that their neighbors have concerns and the neighbors now know where they can go to report complaints or problems. He will be voting in support of approving this application.

Hearing no objection or further discussion, the motion was carried by the following vote:

MOTION PASSED BY UNANIMOUS VOTE:

Yes	9	Absent	1	Vacant	4
Yes	Brantley, Fikes, Gillham, Horton, Martin, Morgan, Ruffner, Stutzer, Venuti				

ITEM E3 – ORDINANCE 2022-02

Ordinance 2022-02: An ordinance enacting KPB 2.40.110 and KPB 2.40.120 authorizing the planning commission to adopt bylaws and defining quorum.

Staff report was given by Melanie Aeschliman.

Vice Chair Ruffner opened the meeting for public comment. Hearing no one wishing to comment, public comment was closed and discussion was open among the commission.

MOTION: Commissioner Morgan moved, seconded by Commissioner Fikes to forward to the assembly a recommendation to adopt Ordinance 2022-02 enacting KPB 2.40.110 and KPB 2.40.120 authorizing the planning commission to adopt bylaws and defining quorum.

Commissioner Brantley asked if the planning commission bylaws would have to go to the Assembly for approval. Deputy Borough Attorney replied that they would not.

Hearing no objection or further discussion, the motion was carried by the following vote:

MOTION PASSED BY UNANIMOUS VOTE:

Yes	9	Absent	1	Vacant	4
Yes	Brantley, Fikes, Gillham, Horton, Martin, Morgan, Ruffner, Stutzer, Venuti				

AGENDA ITEM F. PLAT COMMITTEE REPORT – Plat Committee reviewed and approved 8 plats.

AGENDA ITEM G. OTHER

1. Plat Committee for March 21, 2022 meeting:
 - Commissioner Ruffner
 - Commissioner Gillham
 - Commissioner Brantley
 - Commissioner Venuti

2. Public Comment:

Brendan Hopkins; 36707 Feuding Lane, Sterling, AK 99672: Mr. Hopkins stated he was dissatisfied with the Planning Commission’s decision to support the marijuana cultivation facility license. He feels that public’s concerns were not adequately addressed and the process for approval of these types of licenses is just “rubber stamped”.

AGENDA ITEM I. **DIRECTOR'S COMMENTS** - None

AGENDA ITEM J. **COMMISSIONER COMMENTS** - None

AGENDA ITEM M. **ADJOURNMENT** – Commissioner Brantley moved to adjourn the meeting 9:03 p.m.

UNAPPROVED

MEMORANDUM

TO: Blair Martin, Chair
Member, Kenai Peninsula Planning Commission

FROM: Sean Kelley, Borough Attorney

DATE: December 30, 2021

RE: Setting the Remand Hearing Date ITMO: Beachcomber, LLC

The purpose of this scheduling discussion is for the Planning Commission to set a date to consider this matter consistent with the Superior Court's decision. The Commission should not discuss the merits during the scheduling discussion.

On September 2, 2021, Kenai Superior Court Judge Jason M. Gist issued a *Memorandum Decision and Order* in the matter of *Hans Bilben, et al. v. Kenai Peninsula Borough, Planning Commission, and Beachcomber LLC, et al.*, Appeal Case No. 3KN-20-00034CI (the "decision"). The Court's decision is attached. Two excerpts from the remand decision, at page 15 of 17 and page 17 of 17, are provided to highlight the direction and guidance from the Court:

"Having reviewed the record in this case, this court agrees that the findings of fact in Resolution 2018-23 are supported by substantial evidence. However, the court finds that the findings of fact related to the Buffer Zone in Section 17 of the Resolution are legally insufficient under KPB 21.29.050(A)(2). Under that Code section, "[t]he vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission ... " The findings of fact in Section 17 of the Resolution detail what conditions are imposed on the CLUP, and those findings repeatedly indicate that some of the proposed conditions will "increase visual and noise screening." (See, decision at page 15.)

....

"The Commission did not specifically find whether the conditions imposed on the CLUP were *deemed appropriate* to satisfy the standards set forth in KPB 21.29.040. By all accounts from the record, it appears that the Commission operated under the incorrect assumption that KPB 21.29.040 was "necessarily satisfied" so long as the CLUP contained conditions in KPB 21.29.050. It is unclear from the record whether the Commission

deemed the conditions appropriate to satisfy those standards. For these reasons, the case is REMANDED back to the Commission for further review and/or clarification. If the Commission does in fact deem the conditions set forth in Resolution 2018-23 appropriate to satisfy the standards set forth in KPB 21.29.040, then it shall grant the CLUP. If, however, the Commission finds that no conditions in KPB 21.29.050 could adequately minimize visual and noise impacts to the standards set forth in KPB 21.29.040, then it may deny the CLUP.” (Emphasis original). (See, decision at page 17.)

It is recommended that as part of this scheduling discussion the Planning Commission consider scheduling a special meeting for the sole purpose of deciding two adjudicatory proceedings on remand, to wit: (1) the *Bilben v. Beachcomber LLC* remand hearing; and (2) the *Rosenberg v. Cook Inlet Region, Inc.* remand hearing. A special meeting for this purpose can be arranged for the week of January 17th or the week of January 24th.

Appeal Case No. 3KN-20-00034CI

AGENCY CASE NO. 2019-01-PCA

MEMORANDUM DECISION AND ORDER

On January 10, 2020, Appellants, Hans Bilben et al.¹ (herein referred to solely as “Bilben”), filed a *Notice of Appeal* of a Hearing Officer Decision and Order in Kenai Peninsula Borough Planning Commission (“Commission”) Case 2019-01-PCA, which ultimately granted a conditional land use permit (“CLUP”) in favor of Beachcomber, LLC, for materials extraction on certain Beachcomber property.

I. BACKGROUND

On June 4, 2018, Beachcomber applied for a CLUP under Kenai Peninsula Borough Code (“KPB”) 21.29.30 to excavate and process materials on 27.7 acres of its 41.72-acre property in Anchor Point.² The proposed development would occur in phases over a 15-year period, two to five acres at a time. The proposed material site is surrounded by residential and recreational properties. The site is also topographically depressed, meaning that the surrounding properties look down over any activities occurring at the proposed gravel mine.

¹ The Appellants in this case consist of 29 owners of real properties that adjoin or surround the proposed 27.7-acre gravel pit situated in an area presently used for residential and recreational purposes.

² Excerpt of Record (“Exc.”), pp.1-21.

D

Beachcomber's CLUP application contained information required by the KPB Code, including a reclamation plan and proposed buffers to minimize impact on the surrounding community.³

Notice of the CLUP was posted and public comment was invited at a meeting set for July 16, 2018. Prior to the meeting, the Commission received nearly 200 documents for consideration. At the meeting, the Commission heard hours of public testimony from over 30 people affected by the CLUP. Due to the volume of testimony, the meeting continued beyond the Commission's ordinary adjournment time. Following the meeting, the Commission deliberated on the proposed gravel mine and voted to disapprove the application by a vote of 6-3.⁴ The Commission identified two primary reasons under KPB Code 21.29.040 for disapproving the CLUP application: (1) the noise disturbance will not be sufficiently reduced with any buffer or berm that could be added, and (2) the visual impact to the neighboring properties will not be sufficiently reduced.⁵

On August 2, 2018, Beachcomber appealed the Commission's denial of the CLUP. In advance of the appeal proceeding, the Planning Director submitted a brief in which he described the Commission's decision to deny the CLUP as "hasty and reactionary [...] made to accommodate the fears and concerns of the crowd."⁶ The Planning Director requested that the Hearing Officer either approve the CLUP or remand the decision back to the Commission for further analysis.⁷

On December 6, 2018, Hearing Officer Holly Wells was assigned to preside over the administrative appeal. In her decision, Officer Wells discussed KPB Code 21.29.050, and held that the Commission exceeded the scope of its authority in denying the CLUP application.⁸ Officer Wells found that:

³ Exc. 1-4.

⁴ Exc. 36.

⁵ Exc. 36.

⁶ Exc. 227.

⁷ The Planning Director stated that the Commission did not make sufficient findings to support its denial. Specifically, "[p]ursuant to KPB 21.29.050(A)(2) the planning commission determines the appropriate height and density of the buffers for a material site within the confines of the code section. However, no exploration or effort was made to determine whether the buffers proposed by staff, or different or additional buffers, could be fashioned to screen the material site. If the planning commission believed that buffers were not feasible it should have made findings to support that position and then waived the buffers under KPB 21.29.050(e). Further, the decision lacked any reference as to whether the other 14 conditions set forth in KPB 21.29.050 were also useless to afford any protection to the surrounding property owners." See Exc. 224.

⁸ Exc. 60.

“the Code does not provide the Commission discretion to deny such a permit when the application has been properly submitted [...] The Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code [...] the [Kenai Peninsula Borough] Assembly, in adopting the Code, only granted the Commission authority to impose these conditions and ensure that any application complied with these application requirements [...] the Commission may only apply the conditions under KPB 21.29.050 when issuing a material site conditional use permit.”⁹

Officer Wells remanded the CLUP application back to the Commission for further findings. In ruling on a *Motion for Reconsideration* by Bilben, Hearing Officer Wells reiterated that “the Commission’s findings were not sufficient to determine whether the denial was properly within the Commission’s authority.”¹⁰ Bilben did not appeal Officer Wells’ decision. On remand, the Planning Department issued a staff report and provided background information to the Commission with excerpts from the hearing with Officer Wells.¹¹

Beginning in March, 2019, the Commission again considered Beachcomber’s CLUP application at a series of hearings and deliberations held over five days.¹² Commissioners expressed ongoing concerns about the CLUP application, including that Beachcomber’s proposed buffer would not adequately reduce the noise disturbance and visual impact on the surrounding properties.¹³

Beachcomber voluntarily added conditions to mitigate the visual and noise impacts, including (1) using roaming (rather than stationary) berms to be moved as the extraction area expanded, (2) operating onsite equipment with multi-frequency (white noise) back-up alarms instead of traditional (beep-beep) back-up alarms, and (3) restricting operating hours for rock crushing on holiday weekends during the summer.¹⁴ Following deliberations, the Commission voted to approve the application by a vote of 8-2.¹⁵ The Commission adopted Resolution 2018-23, which included 30 findings of fact and outlined 22 permit conditions.¹⁶ The

Resolution adhered to the instructions provided on remand that “[c]ompliance with the mandatory conditions in KPB [Code] 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.”¹⁷

Bilben appealed the Commission’s approval of the CLUP. On October 30, 2019, Hearing Officer Goldsmith presided over the appeal. Officer Goldsmith gave deference to the Commission’s interpretation of the Code, and found that the “Commission’s interpretation that these two provisions must be read together, and that compliance with KPB 21.29.050 necessarily means compliance with KPB 21.29.040, is reasonable.”¹⁸ Hearing Officer Goldsmith upheld the Commission’s decision, finding that the “Commission acted within the scope of its authority in approving the Application, and finding that “the additional facts presented at the Commission’s 2019 public meetings on this Application provide the evidence to support the Commission’s findings of fact.”¹⁹

II. PARTIES’ ARGUMENTS

a. Standard of Review

The parties agree on which standards of review are appropriate for administrative decisions, but disagree as to which should be applied in this case. Bilben argues that the court should apply the independent judgment standard, arguing that deference to agency decisions are not warranted where the matter is one of purely statutory interpretation for which no agency expertise or questions of fundamental policy are involved.²⁰ Bilben argues that the question of whether the Commission has authority to disapprove a completed permit application is one of purely statutory interpretation. Bilben notes that courts have accorded deliberative weight to “what the agency has done, especially where the agency interpretation is longstanding.”²¹ However, Bilben asserts that the Commission’s final interpretation of the Code in this case (that compliance with KPB Code 21.29.050 necessarily means compliance with KPB Code

¹⁷ Exc. 115.

¹⁸ Exc. 182.

¹⁹ Exc. 177.

²⁰ *Balough v. Fairbanks North Star Borough*, 995 P.2d 245 (Alaska 2000).

²¹ *State, Dep’t of Health and Human Services, Div. of Public Assistance v. Gross*, 347 P.3d 116 (Alaska 2015).

21.29.040) is due little deference based on longevity because (1) the final interpretation of the Code did not originate from the agency, but rather from Hearing Officer Wells, and (2) the Commission has not previously been required to approve a CLUP application in a residential area with overlooking surrounding properties where the standards in KPB Code 21.29.040 could not feasibly be met.

Bilben argues that if the court applies deference to agency interpretation, it should defer to the Commission's 2018 interpretation rather than the 2019 interpretation. Bilben argues that when the Commission voted to disapprove the CLUP application in 2018, the majority of the Commission understood that the Commission was authorized to determine whether the standards in KPB Code 21.29.040 had been met prior to approving the permit.

Conversely, Appellees argue that the court should apply the reasonable basis standard of review because (1) the Commission has expertise in approving or denying CLUPs pursuant to the KPB Code and should be afforded deference; (2) one of the Commission's core statutory functions is to consider and approve properly-submitted CLUPs; (3) the Commission has maintained a longstanding and continuous policy of approving CLUPs that comply with KPB Code; and (4) the Alaska Supreme Court has specifically directed courts to be deferential when considering a zoning board's determination.²²

b. Discretion of the Planning Commission

Bilben argues that the instruction provided to the Commission on remand – that it lacked the discretion to judge whether the CLUP application met the KPB Code 21.29.040 standards and that it lacked the authority to disapprove a completed permit application – was incorrect. Bilben argues that KPB Code 21.25.050(b) explicitly provides the Commission with discretion to “either approve, modify, or disapprove the permit application.”²³ Bilben asserts that the purpose of Chapter 21.25 is to “require advance notice, to provide an opportunity for public

²² *South Anchorage Concerned Coalition, Inc. v. Coffey*, 862 P.2d 168, 173 n.12 (“When a planning agency does, in fact, provide its interpretation of an ordinance within its area of expertise, we will give that interpretation considerable deference.”); See also, *Griswold v. Homer Advisory Planning Commission et al.*, No. S-17669, Op. No. 7515 (Alaska Apr. 9, 2021).

²³ KPB Code 21.25.050(b).

comment, and *impose minimum standards*” for certain land uses, including CLUPs.²⁴ Bilben further asserts that “before granting the permit, the Commission must find *at a minimum* that the proposed activity complies with the requirements” of Chapter 21.25.²⁵ Therefore, Bilben argues that the standards outlined in the Code represent the floor of the Commission’s discretionary authority, not the ceiling.

Bilben contends that statutory construction indicates that the Commission does indeed have authority to disapprove a CLUP application that does not meet the KPB 21.29.040 standards. Bilben asserts that if the Commission were prohibited from denying a completed application, various portions of the Code would be rendered obsolete, including (1) the responsibility of the Planning Director to assess the completeness of an application provided in KPB 21.25.050(A); (2) the Commission’s authority to “either approve, modify or disapprove the permit application” provided in KPB 21.25.050(B); and (3) the utility and meaning of the standards in KPB 21.25.050(B),²⁶ 21.25.020,²⁷ and 21.29.040.²⁸

A more straightforward interpretation, Bilben argues, is that the Legislature imposed minimum standards that must be met prior to granting permission to engage in activities on a parcel of land. To that end, Bilben asserts that the Legislature divided responsibility between the Planning Director, who is responsible for assessing completeness of an application, and the Commission, which is responsible for assessing whether the standards have been met.

Moreover, Bilben asserts that the Code’s stated purpose is to “provide advance public notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes private property rights.”²⁹ As such, Bilben argues that it would be unreasonable to adopt an interpretation of the Code that prohibits the Commission from

²⁴ KPB Code 21.25.020 (emphasis added).

²⁵ KPB 21.25.050(B) (emphasis added).

²⁶ KPB Code 21.25.050(B) (“Before granting the permit, the commission must find at a minimum that the proposed activity complies with the requirements of this chapter.”).

²⁷ KPB Code 21.25.020 (“It is the purpose of this chapter... to impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare...”).

²⁸ Setting forth the list of six standards applicable to Material Site Permits.

²⁹ KPB 21.25.020.

disallowing a CLUP, regardless of the outcome of public comment, public health, safety and welfare, or whether or not the application satisfies standards imposed by KPB 21.29.040.

Bilben concedes that the Commission's authority to impose standards on material site permits is limited by KPB Code 21.29. Specifically, KPB Code 21.29.050 provides sixteen permit conditions which the Commission may impose to meet the six specific standards outlined in KPB 21.29.040. However, Bilben argues that while KPB Code 21.29.040 states that "[o]nly the conditions set forth in KPB 21.29.050 may be imposed to meet the standards," it does not otherwise restrict or define the Commission's authority to deny an application in the event that the standards are, nevertheless, not met by the applicant. Bilben argues that the word "only" in KPB Code 21.29.040 serves to limit the universe of allowable conditions that the Commission could impose on a gravel mine operator, not eviscerate the Commission's discretion to deny an application altogether.³⁰ Therefore, Bilben argues that the Commission was not in error when it disapproved the CLUP in 2018 for failure to sufficiently reduce noise or visual impacts.

In opposition, Appellees argue that the word "only" in KPB Code 21.29.040 limits the Commission's discretion to deny a completed CLUP application. Namely, that the Commission may *only* impose conditions listed in KPB Code 21.29.050 to meet the standards outlined in KPB Code 21.29.040. Appellees note that KPB Code 21.29.040 provides a list of six goals, including minimizing noise disturbances and visual impacts. However, Appellees argue that KPB Code 21.29.040 illustrates the Legislative Assembly's aspirational intent; it does not seek to eliminate *all* noise disturbances or visual impacts - instead it only aspires to *minimize* them. Appellees argue that KPB 21.29.050(A)(2)(e) explicitly gives the Commission the ability to "waive buffer requirements" entirely "where the topography of the property [...] makes screening not feasible or necessary." Appellees contend that the Commission must view a CLUP application through the lens of KPB 21.29.050 while keeping the six aspirational goals of KPB 21.29.040 in mind. Appellees argue that because the six standards of KPB 21.29.040 are aspirational, it would be improper for the Commission to deny a CLUP based only on those standards if the applicant otherwise meets the sixteen mandatory conditions outlined in KPB 21.29.050.

³⁰ KPB 21.29.040 ("Only the conditions set forth in KPB 21.29.050 may be imposed to meet these [six] standards").

Appellees argue that the Assembly crafted legislation that favors minimal restrictions on landowners to use and control their land. In support, they assert that in 1999 the Assembly removed a Code provision that required the Commission to deny a permit application if it was either detrimental to the public welfare or injurious to other property in the area.³¹ Instead, the Assembly adopted Code provisions that limit the Commission's discretion to deny a CLUP solely to situations in which the application fails to meet the mandatory conditions of KPB Code 21.29.050.

Both parties agree that when various Code chapters conflict, the more specific chapter controls. Appellees argue that KPB 21.29, which outlines mandatory permit conditions, is more specific than the provisions in KPB 21.25. Therefore, Appellees argue, the discretion afforded to the Commission in chapter 21.25 to "either approve, modify or disapprove" a permit application gives way to the limited discretion provided to the Commission in KPB 21.29 to deny a permit application if and only if it fails to meet the mandatory conditions of KPB 21.29.050. Appellees assert that the Commission does not have authority to impose additional conditions or requirements beyond those listed in KPB 21.29.050.³² Appellees argue that in 2019, the Commission found that Beachcomber's application met all of the mandatory conditions and that approval of the CLUP was, therefore, proper.

In reply, Bilben asserts that he is not seeking to impose *additional* conditions to the CLUP, but rather only aim to apply the standards already listed in the Code.³³ Bilben asserts that mapped depictions of the proposed CLUP area that were created using the Borough's mapping technology demonstrates that the visual and noise impacts will not be minimized.³⁴ He further insists that conditions listed in the CLUP may be ineffective at minimizing the visual and aural impact. For example, he argues, a condition that requires a screen or buffer to be placed near the material excavation site would do nothing to minimize the impacts for the transportation routes or processing sites. For those reasons, he argues that the Commission had authority to deny the CLUP.

³¹ See former KPB Code 21.13.

³² See Warrington, Memorandum Decision and Order, 3KN-05-00206CI, at 8.

³³ *Id.* Bilben argues that Warrington is distinguishable because in that case the agency found that the proposed gravel mining pit would not affect the neighboring water sources.

³⁴ Exc. 12-13.

c. Substantial Evidence

Bilben argues that substantial evidence does not support the Commission's findings in Resolution 2018-23 and that Hearing Officer Goldsmith's decision upholding the Resolution must be reversed. Bilben asserts that Officer Goldsmith reasoned that substantial evidence existed for the Resolution approving the CLUP because "due consideration must be given to the Commission's interpretation of the Code."³⁵ However, Bilben asserts that it cannot be discerned whether the Commission determined that the standards had been met in 2019 because the only finding relating to standards states that the standards in KPB 21.29.040 are "necessarily met" when the mandatory conditions in KPB 21.29.050 are imposed.³⁶ Bilben contends that the evidence presented in 2019 was not sufficiently different from the evidence presented in 2018 when the Commission denied the CLUP due to visual and noise impacts.

In opposition, Appellees argue that the Commission made factual findings concerning the topography of the properties, as well as the ability of buffers to minimize noise and visual impacts. Specifically, the Commission discussed how Beachcomber's CLUP could "mar the view," and recognized that the "material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers."³⁷ Appellees argue that after reviewing the evidence and detailing the findings, the Commission "deemed appropriate" the conditions imposed on Beachcomber's CLUP application.³⁸

III. DISCUSSION

A. Standard of Review

When the superior court sits as a court of appeal from an administrative decision, there are four principle standards of review. The court applies the "substantial evidence test to

³⁵ Appellant's Brief at p.35-36; Exc. 184-85.

³⁶ Exc. 115.

³⁷ Exc. 116.

³⁸ Appellee's Brief at p.24.

questions of fact,”³⁹ the “reasonable basis test to questions of law involving agency expertise,”⁴⁰ the “substitution of judgment test” for questions of law that do not involve agency expertise, and the “reasonable and not arbitrary standard applies to review of administrative regulations.”⁴¹ The Alaska Supreme Court has recognized that planning commissions “receive deference equal to that accorded to an administrative agency,” and that “their interpretations of zoning ordinances should be given great weight and...accepted whenever there is a reasonable basis for the meaning given by the board.”⁴²

B. Authority of the Planning Commission to Deny a CLUP

A significant dispute between the parties concerns the scope of the Commission’s authority in reviewing a CLUP application. Appellants argue that the Commission initially interpreted the Borough Code to allow them to deny an application that did not sufficiently satisfy the requirements of KPB 21.29.040 even after imposing conditions contained in KPB 21.29.050. As such, Appellants urge this court to defer to the Commission’s interpretation of the Borough Code at that time. Appellee’s urge the court to adopt the Commission’s interpretation of the Borough Code as it was during the 2019 hearings. Appellant’s respond that the Commission did not interpret the Borough Code in 2019, but rather, adopted the required interpretation as ordered by Hearing Officer Wells.

At the July 16, 2018, hearing before the Commission, the commissioners discussed whether they had the authority to deny the CLUP. Commissioner Ecklund believed that the Commission had “sufficient findings to deny this permit based on...the borough code as it is written now.”⁴³ Commissioner Ruffner felt otherwise, stating that “as commissioners, our hands are tied.”⁴⁴ Commissioner Carluccio questioned whether the intent of the law was to

⁴⁴ *Id.* at 35.

protect surrounding landowners, giving the Commission authority to deny the CLUP.⁴⁵ As evidence by the vote of 6-3 to deny the CLUP, Other Commissioners also interpreted the Borough Code in such a way that gave the Commission the authority to deny the CLUP due to their findings that any conditions imposed would fail to sufficiently minimize noise or visual impacts.⁴⁶

On appeal, Hearing Officer Wells found that the Commission exceeded the scope of its authority in denying the permit based upon its determination that the conditions would not afford adequate protection from noise and visual blight.⁴⁷ She further held that “the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code.”⁴⁸ On remand at the June 10, 2019, hearing, some commissioners continued to recognize that they did not believe the conditions in KPB 21.29.050 would sufficiently minimize the noise and visual impacts of the material site.⁴⁹ At the July 24, 2019, hearing, Commissioner Ruffner, however, expressed his long-held belief that “if a permit application comes in and it’s complete and it meets the conditions that have been set forth in 21.29, then those....if those conditions are met, then we don’t have the ability to deny the permit.”⁵⁰

As noted above, this court is to apply its own independent judgment to questions of law that do not involve agency expertise, but is to give deference to planning commissions in interpreting their zoning ordinances involving agency expertise “whenever there is a reasonable basis for the meaning given by the board.”⁵¹ Appellants argue that this court should apply its

⁴⁵ *Id.* Commissioner Carluccio eventually voted to deny the CLUP. *Id.* at 36.

⁴⁶ *Id.* at 36 (Commissioner Bentz noting that “I don’t think these conditions will minimize noise disturbance...and the conditions won’t minimize visual impacts either; Commissioner Morgan stated that she did not “see how the 50-foot buffer or berms are going to minimize visual impact or sound impact because of the unique topography.”; Exc. 96 (Commissioner Whitney expressed concern that “I just don’t think the berms that proposed and anything that’s going on here is adequate to control the visual impact...”)).

⁴⁷ Exc. 46.

⁴⁸ Exc. 50.

⁴⁹ Exc. 90 (Commissioner Ernst expressed concern that “in this unique situation...[i]s there any possible buffer that could be reasonably used to protect the, you know, the noise levels and visual impact of this pit...?; Exc. 95, Commissioner Ecklund worried that while KPB 21.29.050(14) required consideration of the “best interest of the borough and the surrounding property owners,” the limit of the Commission’s authority gave them “no meat to help [surrounding property owners] in this ordinance.”)

⁵⁰ Exc. 103.

⁵¹ *Griswold*, 484 P.3d at 127 (citing *Griswold v. City of Homer*, 55 P.3d 64, 67-68 (Alaska 2002) (quoting *S. Anchorage Concerned Coal, Inc. v. Coffey*, 862 P.2d 168, 173 (Alaska 1993))).

independent judgment in interpreting the Borough Code in this instance, as the scope of the Commission's authority does not involve agency expertise. Appellees argue that the Commission's interpretation of the Borough Code is entitled to deference, as it does in fact involve agency expertise.

While both arguments have merit, this court finds that under either standard of review, the Commission has authority to deny a CLUP if it determines that the requirements of KPB 21.29.040 cannot be met. It is clear that the Commission interpreted the Borough Code in 2018 in such a way that provided it with the authority to deny the CLUP, as it voted 6-3 to deny the CLUP. While the Commission voted 8-2 in favor of the CLUP in June 2019, the record is not entirely clear as to whether this decision hinged on the commissioners' belief that they were obliged to do so per Hearing Officer Wells' decision, or whether they actually found that the visual impacts and noise levels were sufficiently minimized. Thus, if this court were to apply a deferential standard of review, it would defer to the agency's interpretation as it was in June 2018.

Applying the independent judgment standard, the court finds that the Commission had the authority to deny the CLUP if the standards in KPB 21.29.040 cannot not be satisfied. KPB 21.25 details the procedure for obtaining a CLUP. KPB 21.25.040 requires a permit for "material site pursuant to KPB 21.29."⁵² Under KPB 21.25.050, there must be a public hearing where those wishing to contest the permit can be heard. Following the hearing, the Commission "shall either approve, modify, or disapprove the permit application."⁵³ KPB 21.25 contains general provisions, while KPB 21.29 are more specific provisions. While this court recognizes that "where the provisions of [KPB 21.25] and a CLUP chapter regulating a specific use conflict, the more specific chapter shall control,"⁵⁴ the court does not find a conflict between KPB 21.25.050's requirement that the Commission "approve, modify, or disapprove" and any provision in KPB 21.29. Simply put, there is no specific provision in KPB 21.29 that precludes

⁵² The parties agree that the proposed gravel pit in this case falls within the definition of a "material site," and that it is of sufficient magnitude to require a CLUP rather than a "Counter Permit" under 21.29.020.

⁵³ KPB 21.25.050(B).

⁵⁴ KPB 21.25.010.

the Commission from denying a CLUP when it finds that the conditions in KPB 21.29.050 will not satisfy the standards in KPB 21.29.040.

KPB 21.29.040 states that the material site regulations are “intended to protect against...noise and visual impacts,” listing six standards that include “minimiz[ing] noise disturbances to other properties,” and “minimiz[ing] visual impacts.” That section also states that “*Only* the conditions set forth in KPB 21.29.050 may be imposed to meet these standards.”⁵⁵ Appellees assert that this language requires the Commission to grant a CLUP application so long as the conditions in KPB 21.29.050 are met. This argument is supported by Hearing Officer Wells’ finding that “the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code.”⁵⁶

The language in KPB 21.29.040(A) that “*Only* the conditions set forth in KPB 21.29.050 may be imposed to meet these standards” undoubtedly limits the Commission’s authority. If the Commission believes that certain steps must be taken to meet the standards set forth in KPB 21.29.040, the only tools at its disposal to meet such standards are those conditions listed in KPB 21.29.050. Planning authorities are “bound by the terms and standards of the applicable zoning ordinance, and are not at liberty to either grant or deny [permits] in derogation of legislative standards.”⁵⁷ CLUP applicants may voluntarily agree to additional types of conditions that are not contained in KPB 21.29.050, but the authority of the Commission to impose such conditions is legislatively restricted.⁵⁸ Indeed, Appellees agreed to a number of voluntary conditions in this case.⁵⁹

While KPB 21.29.040 limits the types of conditions the Commission can impose, KPB 21.29.050 provides the Commission with some latitude as to those specific conditions. For example, material sites must maintain a “buffer zone” of at least “50 feet of undisturbed natural vegetation, *or* ... a minimum six-foot earthen berm, *or*... a minimum six-foot fence.”⁶⁰

⁵⁵ KPB 21.29.040(A) (emphasis added).

⁵⁶ Exc. 50.

⁵⁷ *So. Anch. Concerned Coalition, Inc. v. Coffey*, 862 P.2d 168, 174-75 (Alaska 1993).

⁵⁸ KPB 21.29.050(A)(14).

⁵⁹ Exc. 117-18.

⁶⁰ KPB 21.29.050(A)(2)(i)-(iii) (emphasis added).

However, while only one type of these conditions is required, the Commission has the authority to designate “a combination of the above *as it deems appropriate*.”⁶¹ While Hearing Officer Wells found that “the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code,”⁶² this finding appears to be in direct conflict with KPB 21.29.050’s requirement that “[t]he vegetation and fence *shall* be of sufficient height and density to provide visual and noise screening of the proposed use *as deemed appropriate by the planning commission*.”⁶³ In other words, the Commission is specifically tasked with determining the effectiveness of the conditions that are to be imposed and whether they will meet the standards set forth in KPB 21.29.040. If after judging the effectiveness of the potential conditions in its toolbox under KPB 21.29.050(A)(2) the Commission finds that no combination of buffers could be “deem[ed] appropriate” to satisfy the standards set forth in KPB 21.29.040, the Commission is not required to approve the CLUP nonetheless. Nothing in KPB 21.29 suggests otherwise, nor do any of KPB 21.29’s provision conflict with KPB 21.25.050(B) grant of authority to “approve, modify, or deny” a CLUP.⁶⁴

Appellees argue that the conclusion that the Commission is required to approve the CLUP is “consistent with the unzoned rural area at issue in this appeal, along with the general approval-oriented framework adopted by the Assembly.”⁶⁵ Appellees cite to *Warrington v. Kenai Peninsular Borough Board of Adjustments, Cecil Jones and In Jones*, where Judge Huguelet found that “[t]he Assembly has specifically adopted ordinances that are protective of material site operators,” and “could have chose a policy that favors residential property owners, but instead it chose to adopt a policy that favors material site operators.”⁶⁶

⁶¹ KPB 21.29.050(A)(2)(c).

⁶² Exc. 50.

⁶³ *Id.* (emphasis added).

⁶⁴ The court is not persuaded by Appellee’s argument that an “application cannot be denied based on inadequate buffers, when under KPB Code either enhancing the buffers or waiving the buffers are the authorized resolution to a situation where buffers are not feasible.” See Appellee Brief, p.10, n.18. KPB 21.29.050(e) states that “*At its discretion*, the planning commission *may* waive buffer requirements where the topography of the property or the placement of natural barriers makes screening not feasible or not necessary.” Waiving the buffer requirements are clearly within the discretion of the Commission. Moreover, it seems to this court that the Commission would be derelict in its duties to waive the requirements in this instance given that under that Code section, “[b]uffer requirements *shall* be made in consideration of and in accordance with existing uses of adjacent property at the time of the approval of the permit.”

⁶⁵ Appellee’s Brief, p.18.

⁶⁶ Memorandum Decision and Order, 3KN-05-00206CI, at 9-10 (May 31, 2006) (Appendix A to Appellee’s Brief).

Indeed, the Borough Code significantly favors material site operators. The Commission recognized as much in its June 10, 2019, hearing.⁶⁷ That favoritism is not unlimited, however. Nothing in the Borough Code requires the Commission to approve a CLUP even where it finds that the conditions imposed cannot possibly minimize the visual and noise impacts to surrounding neighbors. In fact, Judge Huguelet even recognized the interplay between KPB 21.25.050's grant of authority to "approve, modify, or disapprove" permit applications where certain conditions cannot be sufficiently satisfied.⁶⁸

For these reasons, the court finds that the Commission does have the authority under KPB 21.25.050(B) to deny a CLUP if it finds that the standards set forth in KPB 21.29.040 cannot be sufficiently satisfied, even after implementing the tools at its disposal listed in KPB 21.29.050.

C. Why Remand to the Planning Commission is Necessary

As noted above, this court finds that the Commission does have the authority under KPB 21.25.050(B) to deny a CLUP if it finds that the standards set forth in KPB 21.29.040 cannot be sufficiently satisfied by conditions in KPB 21.29.050. Under KPB 21.25.050(B)-(C), the Commission must detail their findings in writing by way of a resolution, which they did in this case in Resolution 2018-23. The court will uphold the Commission's factual findings if they are supported by substantial evidence.⁶⁹

Having reviewed the record in this case, this court agrees that the findings of fact in Resolution 2018-23 are supported by substantial evidence. However, the court finds that the findings of fact related to the Buffer Zone in Section 17 of the Resolution are legally insufficient under KPB 21.29.050(A)(2). Under that Code section, "[t]he vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as

⁶⁷ Exc. 095 (Commissioner Ecklund noted that the Planning Commission had only denied two gravel pits in the ten years he had been on the commission, noting that both of those denials had been overturned).

⁶⁸ *Warrington* Memorandum Decision and Order, 3KN-05-00206C1, at 6, 8 (recognizing the authority of the Planning Commission to deny a permit under KPB 21.25.050, and recognizing the authority of the Planning Commission to "consider the evidence, as they did in the case at hand, to determine whether gravel mining will negatively impact the quality and quantity of water" in a nearby aquifer.).

⁶⁹ *State, Dep't of Nat. Res. V. Alaska Crude Corp.*, 441 P.3d at 398.

deemed appropriate by the planning commission...” The findings of fact in Section 17 of the Resolution detail what conditions are imposed on the CLUP, and those findings repeatedly indicate that some of the proposed conditions will “increase visual and noise screening.”⁷⁰

However, the findings in Section 17 do not detail whether the Commission found those conditions to in fact be *deemed appropriate* or sufficient to satisfy the standards set forth in KPB 21.29.040. Rather, the Resolution concedes that “Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.”⁷¹ This concession is well-founded only if the Commission did in fact deem the buffer zone appropriate and sufficient to satisfy the standards set forth in KPB 21.29.040.

Throughout the hearings in both 2018 and 2019, multiple commissioners questioned whether any buffers could adequately provide visual and noise screening of the material site. In 2018, a majority of the commissioners found that the neighboring properties could not be adequately screened, with similar conditions imposed. Commissioners Bentz, Morgan and Carluccio were adamant that they did not believe the buffer or berms would minimize the noise and sound impacts because of the “unique topography.”⁷² As a result, the Commission denied the CLUP.

In 2019, commissioners again questioned whether buffers could adequately satisfy the noise and visual standards set forth in KPB 21.29.040. Commissioner Ecklund expressed great concern that the conditions imposed would not minimize the visual and noise impacts. While he recognized that the Commission would never ask an applicant “to put a 53 [foot] high earthen berm” into place (calling the proposal “ridiculous”), he also asked whether it was in their authority to do so if necessary, to which the Borough Planner replied “Yes, and staff did...propose a 12-foot berm in most locations.”⁷³ Despite these expressed concerns,

⁷⁰ Resolution 2018-21, Sec 17, ¶¶H, I, J, M, N.

⁷¹ *Id.*, ¶15.

⁷² Exc. 35-36.

⁷³ Exc. 95.

Commissioner Ecklund voted to grant the CLUP. Commissioner Carluccio questioned “but is a 12-foot berm enough to minimize visual and noise impacts?”⁷⁴

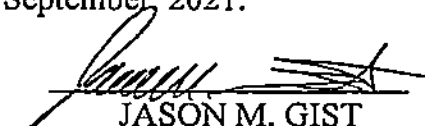

The Commission did not specifically find whether the conditions imposed on the CLUP were *deemed appropriate* to satisfy the standards set forth in KPB 21.29.040. By all accounts from the record, it appears that the Commission operated under the incorrect assumption that KPB 21.29.040 was “necessarily satisfied” so long as the CLUP contained conditions in KPB 21.29.050. It is unclear from the record whether the Commission deemed the conditions appropriate to satisfy those standards. For these reasons, the case is REMANDED back to the Commission for further review and/or clarification. If the Commission does in fact deem the conditions set forth in Resolution 2018-23 appropriate to satisfy the standards set forth in KPB 21.29.040, then it shall grant the CLUP. If, however, the Commission finds that no conditions in KPB 21.29.050 could adequately minimize visual and noise impacts to the standards set forth in KPB 21.29.040, then it may deny the CLUP.

IV. CONCLUSION

For the reasons stated herein, this case is REMANDED back to the Commission for further consideration consistent with this *Order*.

II. PARCEL INFORMATION

KPB Tax Parcel ID# 16901067 Legal Description _____
T5S R15W Section 5 S.M., McGee Tracts Deed of Record Boundary Survey Tract B
If permit is not for entire parcel, describe specific location within parcel to be material site, e.g.: "N1/2 SW1/4 NE1/4 - 10 acres", or "5 acres in center of parcel".
Easterly 27.7 acres

III. APPLICATION INFORMATION "Check" boxes below to indicate items included.

- \$300.00 permit processing fee payable to: Kenai Peninsula Borough. (Include Parcel # on check comment line.)
- Site Plan, to scale, prepared by a professional surveyor (licensed and registered in Alaska) showing, where applicable:
- parcel boundaries
 - location of boundary stakes within 300 ft. of excavation area (to be in place at time of application)
 - proposed buffers, or requested buffer waiver(s)
 - proposed extraction area(s), and acreage to be mined
 - proposed location of processing area(s)
 - all encumbrances, including easements
 - points of ingress and egress
 - anticipated haul routes
 - location/depth of testholes, and depth to groundwater, if encountered
 - location of all wells within 300 ft. of parcel boundary
 - location of water bodies on parcel, including riparian wetlands
 - surface water protection measures
 - north arrow and diagram scale
 - preparer's name, date and seal
- Site Plan Worksheet (attached)
- Reclamation Plan (attached) and bond, if required. Bond requirement does not apply to material sites exempt from bonding requirements pursuant to AS 27.19.050

Please Note: If a variance from the conditions of KPB 21.29 is requested, a variance application must be attached. (A variance is NOT the same thing as a waiver.)

IV. CERTIFICATION STATEMENT

The information contained on this form and attachments are true and complete to the best of my knowledge. I grant permission for borough staff to enter onto the property for the purpose of processing the permit application.

KPB Tax Parcel ID # 16901067 Parcel Acreage 41.72

- 1. Cumulative acres to be disturbed (excavation plus stockpiles, berms, etc.) 27.7 acres
- 2. Material to be mined (check all that apply): gravel sand peat other(list) _____
- 3. Equipment to be used (check all that apply): excavation processing other _____
- 4. Proposed buffers as required by KPB 21.29.050.A.2 (check all types and directions that apply):

<input checked="" type="checkbox"/> 50 ft. of natural or improved vegetation	<input checked="" type="checkbox"/> N <input type="checkbox"/> S <input type="checkbox"/> E <input checked="" type="checkbox"/> W
<input checked="" type="checkbox"/> minimum 6 ft. earthen berm	<input checked="" type="checkbox"/> N <input checked="" type="checkbox"/> S <input checked="" type="checkbox"/> E <input checked="" type="checkbox"/> W
<input type="checkbox"/> minimum 6 ft. fence	<input type="checkbox"/> N <input type="checkbox"/> S <input type="checkbox"/> E <input type="checkbox"/> W
<input type="checkbox"/> other _____	<input type="checkbox"/> N <input type="checkbox"/> S <input type="checkbox"/> E <input type="checkbox"/> W

- 5. Proposed depth of excavation: 18' ft. Depth to groundwater: +20' ft.
- 6. How was groundwater depth determined? Testhole on parcel & exposed surface water to north
- 7. A permit modification to enter the water table will be requested in the future: Yes No
- 8. Approx. annual quantity of material, including overburden, to be mined: <50,000 cubic yards
- 9. Is parcel intended for subdivision? Yes No
- 10. Expected life span of site? 15 years

11. If site is to be developed in phases, describe: the excavation acreage, anticipated life span, and reclamation date for each phase: (use additional space on page 4 if necessary)
Kindly see page 4.

- 12. Voluntary permit conditions proposed (additional buffers, dust control, limited hours of operation, etc.)
 - A. _____
 - B. _____
 - C. _____

Material Site Reclamation Plan for Conditional Land Use Permit Application

1. All disturbed land shall be reclaimed upon exhausting the material on-site, so as to leave the land in a stable condition.
2. All revegetation shall be done with a "non-invasive" plant species.
3. Total acreage to be reclaimed each year: 2-5 acres
4. List equipment (type and quantity) to be used in reclamation:

Loader & dozer

5. Describe time schedule of reclamation measures:

Reclamation will be completed annually before the growing season ends (September). Seeding will be applied

as necessary each season to areas that achieve final grade in order to minimize erosion and dust.

6. The following measures must be considered in preparing and implementing the reclamation plan, although not all will be applicable to every plan – **"check" all that apply to your plan.**

Topsoil that is not promptly redistributed to an area being reclaimed will be separated and stockpiled for future use. This material will be protected from erosion and contamination by acidic or toxic materials and preserved in a condition suitable for later use.

The area will be backfilled, graded and recontoured using strippings, overburden, and topsoil to a condition that allows for the reestablishment of renewable resources on the site within a reasonable period of time. It will be stabilized to a condition that will allow sufficient moisture for revegetation.

Sufficient quantities of stockpiled or imported topsoil will be spread over the reclaimed area to a depth of four inches to promote natural plant growth that can reasonably be expected to revegetate the area within five years. The applicant may use the existing natural organic blanket representative of the project area if the soil is found to have an organic content of 5% or more and meets the specification of Class B topsoil requirements as set by Alaska Test Method (ATM) T-6. The material shall be reasonably free from roots, clods, sticks, and branches greater than 3 inches in diameter. Areas having slopes greater than 2:1 require special consideration and design for stabilization by a licensed engineer.

Exploration trenches or pits will be backfilled. Brush piles and unwanted vegetation shall be removed from the site, buried or burned. Topsoil and other organics will be spread on the backfilled surface to inhibit erosion and promote natural revegetation.

Peat and topsoil mine operations shall ensure a minimum of two inches of suitable growing medium is left or replaced on the site upon completion of the reclamation activity (unless otherwise authorized).

Ponding will be used as a reclamation method. (Requires approval by the planning commission.)

CONDITIONAL LAND USE PERMIT FOR MATERIAL SITE

OWNER/APPLICANT:
 BEACHCOMBER LLC
 PO BOX 193
 ANCHOR POINT, ALASKA 99556

LEGEND	
	RECORD MONUMENT
	PROPERTY CORNERS
	PROPOSED INGRESS/EGRESS
	WELL SETBACK
	INTERVISIBLE FLAGGING
	EXISTING TREELINE
	PROPOSED BUFFER TREELINE
	WETLAND
	APPROX. TESTHOLE LOCATION
	EXISTING FENCELINE

CLUP DEVELOPMENT NOTES

1. THIS PERMIT APPLICATION IS KPB PARCEL 16901067; T5S R15W SECTION 5 SEWARD MERIDIAN, MCGEE TRACTS DEED OF RECORD BOUNDARY SURVEY TRACT B.
2. THE EASTERLY PORTION OF THIS PARCEL IS UNDEVELOPED AND COVERED IN NATIVE VEGETATION AND GRASS FIELD.
3. THE EXISTING AND PROPOSED INGRESS/EGRESS IS TO DANVER STREET AND/OR SECTION LINE EASEMENT, AS SHOWN.
4. THE PREFERRED BUFFERS ARE A COMBINATION OF 50' (OR GREATER) NATIVE VEGETATIVE BUFFERS AND 6' HIGH BERM.
5. WELLS WITHIN 100' AND/OR 300' OF THE EXCAVATION AREA ARE SHOWN HEREON. EXCAVATION BELOW WATER TABLE MAY BE PROPOSED AT A FUTURE TIME.
6. THERE IS MAPPED WETLAND AND SURFACE WATER, AS SHOWN, IN THE NORTHEAST CORNER OF THE PARCEL.
7. GROUNDWATER IS ESTIMATED AT APPROXIMATELY 18' BELOW EXISTING GROUND IN PROPOSED EXCAVATION AREAS. THIS ESTIMATE IS FROM TEST HOLE EXCAVATED BY THE OWNER OR OTHER REPRESENTATIVES.
8. THE RECLAIMED AREA WILL BE GRADED AND RECONTOURED USING STRIPPINGS, OVERBURDEN AND TOPSOIL TO A CONDITION THAT ALLOWS FOR RE-ESTABLISHMENT OF NATURAL VEGETATION AND SLOPES STEEPER THAN 2:1 WILL BE SEEDDED.
9. PROPOSED MATERIAL EXTRACTION INCLUDING STRIPPING WILL BE DONE IN INCREMENTALLY BEGINNING AT THE NORTHERN LIMITS, AS SHOWN, AND PROCEEDING SOUTHERLY AS MARKET FOR MATERIAL SALES JUSTIFIES. THE CENTRAL AREA WILL BE MAINTAINED AS A PROCESSING AND STAGING AREA.
10. PROPOSED PROCESS AREA IS SHOWN. A PROCESS WAIVER WILL BE REQUESTED FOR SEPARATION TO THE NORTH PROPERTY LINE.
11. THE PROPERTY CORNERS, WITNESS CORNERS, OR SECTION LINE EASEMENT WAS LOCATED AND THE PARCEL BOUNDARY HAS BEEN FLAGGED AT VISIBLE INTERVALS AS SHOWN HEREON.

PLANNING COMMISSION

RESOLUTION 2018-23

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed disturbed area is approximately 27.7 acres.
6. A public hearing of the Planning Commission was held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
7. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line.

8. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter.
9. A 200-foot separation distance to the property boundaries for the processing area is not sufficient to minimize noise disturbance to other properties.
10. The proposed extraction meets material site standard 21.29.040(A1); "Protects against the lowering of water sources serving other properties", as evidenced by:
 - A. Permit condition number 6 requires that the permittee not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 - B. The submitted site plan shows several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.
 - C. Permit condition number 7 requires that the permittee maintain a 2-foot vertical separation from the seasonal high water table.
 - D. The application indicates that the depth to groundwater is greater than 20 feet and that the depth of the proposed excavation is 18 feet.
 - E. Permit condition number 8 requires that the permittee not dewater either by pumping, ditching or any other form of draining.
11. The proposed extraction meets material site standard 21.29.040(A2); "Protects against physical damage to other properties". There is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
12. The proposed extraction meets material site standard 21.29.040(A3); "Minimizes off-site movement of dust", as evidenced by:
 - A. Permit condition number 13 requires that the permittee provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
13. The proposed extraction meets material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
 - A. Permit condition number 2 requires that the permittee maintain the following buffers that will reduce the noise disturbance to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
 - B. Permit condition number 5 requires that the processing area be located greater than 300 feet from the property boundaries.
14. The proposed extraction meets material site standard 21.29.040(A5); "Minimizes visual impacts" as evidenced by permit condition number 2 that requires that the permittee maintain the following buffers that will reduce the visual impacts to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm

- shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
15. The proposed extraction meets material site standard 21.29.040(A6); "Provides for alternate post-mining land uses" as evidenced by:
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C3) is necessary to meet this material site standard.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.

These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable

- surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.
 16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
 17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
 18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON THIS _____ DAY OF _____, 2018.

 Blair J. Martin, Chairperson
 Planning Commission

NOTICE OF DECISION

At their July 16, 2018 meeting, the Planning Commission disapproved a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

FINDINGS OF FACT

1. The noise will not be sufficiently reduced with any buffer or berm that could be added.
2. The visual impact to the neighboring properties will not be reduced sufficiently.

This decision may be appealed through the Borough Clerk within fifteen days of the date of the Notice of Decision.

Bruce Wall, AICP
Planner

JULY 16, 2018

(Please note that some information has been dispersed throughout the record so that there was not duplicate information.)

AGENDA ITEM F. PUBLIC HEARING

4. Conditional Land Use Permit for a Material Site; Anchor Point Area

STAFF REPORT

PC MEETING: July 16, 2018

Applicant: Beachcomber LLC

Landowner: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

The submitted site plan indicates that the material site haul route will be Denver Street, which is a Borough maintained road. The site plan and application proposes the following buffers:

- North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
- South: 6-foot high berm.
- East: 6-foot high berm.
- West: Greater than 50-foot vegetated buffer.

The application indicates that the depth to groundwater is 20 feet and that the depth of the proposed excavation is 18 feet. The groundwater depth was determined by a test hole on the property and exposed surface water to the north. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. Staff does not recommend approval of the processing distance waiver request.

The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area. The site plan indicates 100-foot setback from the wetlands area located in the northeast corner of the property and that this setback will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, Best Management Practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska, will be utilized as a guideline to reduce potential impacts to water quality.

The application states that reclamation will be completed annually before the growing season ends (September) and that seeding will be applied as necessary each season to areas that achieve final grade in order to minimize erosion and dust. The applicant estimates a life span of 15 years for the site with an approximate annual quantity of less than 50,000 cubic yards.

Much of the vegetation was removed from this property 20-30 years ago. The neighboring properties adjacent to the southeast corner of the proposed material site are at a higher elevation than the subject property. The proposed 6-foot high berm alone will do little to minimize the visual impact or noise disturbance to other properties. Staff recommends that a 50-foot vegetated buffer be required adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer. Staff also recommends that a 50-foot vegetated buffer be required adjacent to the Echo Drive right-of-way

and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer. Staff recommends that a 12-foot high berm be placed along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm should take place prior to removing the existing vegetation in the western portion of the material site.

PUBLIC NOTICE: Public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their Post Office. Public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News.

KPB AGENCY REVIEW: Application information was provided to pertinent KPB staff and other agencies on July 6, 2018.

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed disturbed area is approximately 27.7 acres.
6. A public hearing of the Planning Commission was held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
7. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. A 200-foot separation distance to the property boundaries for the processing area is not sufficient to minimize noise disturbance to other properties.
8. The proposed extraction meets material site standard 21.29.040(A1); "Protects against the lowering of water sources serving other properties", as evidenced by:
 - A. Permit condition number 6 requires that the permittee not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 - B. The submitted site plan shows several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.
 - C. Permit condition number 7 requires that the permittee maintain a 2-foot vertical separation from the seasonal high water table.
 - D. The application indicates that the depth to groundwater is greater than 20 feet and that the depth of the proposed excavation is 18 feet.
 - E. Permit condition number 8 requires that the permittee not dewater either by pumping, ditching or any other form of draining.
9. The proposed extraction meets material site standard 21.29.040(A2); "Protects against physical damage to other properties". There is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
10. The proposed extraction meets material site standard 21.29.040(A3); "Minimizes off-site

movement of dust", as evidenced by:

- A. Permit condition number 13 requires that the permittee provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
11. The proposed extraction meets material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
- A. Permit condition number 2 requires that the permittee maintain the following buffers that will reduce the noise disturbance to other properties:
- 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
- B. Permit condition number 5 requires that the processing area be located greater than 300 feet from the property boundaries.
12. The proposed extraction meets material site standard 21.29.040(A5); "Minimizes visual impacts" as evidenced by permit condition number 2 that requires that the permittee maintain the following buffers that will reduce the visual impacts to other properties:
- 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
13. The proposed extraction meets material site standard 21.29.040(A6); "Provides for alternate post-mining land uses" as evidenced by:
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
- B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C3) is necessary to meet this material site standard.
- C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.

STAFF RECOMMENDATION

In reviewing the application staff has determined that the six standards contained in KPB 21.29.040 will be

met and recommends that the Planning Commission deny the processing distance waiver request, approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the following:

1. Filing of the PC Resolution in the appropriate recording district after the deadline to appeal the Planning Commission's approval has expired (15 days from the date of the notice of decision) unless there are no parties with appeal rights.
2. The Planning Department is responsible for filing the Planning Commission resolution.
3. The applicant will provide the recording fee for the resolution to the Planning Department.
4. Driveway permits must be acquired from either the state or borough as appropriate prior to the issuance of the material site permit.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.

13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A "party of record" is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the \$300 filing and records preparation fee. (KPB Code 21.25.100)

KENAI PENNINSULA PLANNING BOARD

144 BINKLEY STREET

SOLDOTNA, AK 99669

JUNE 26, 2018

I AND MY NEIGHBORS STRONGLY OBJECT TO THE PERMITTING OF THIS PLANNED GRAVEL PIT. THE ROADS THAT WILL BE USED BY THE THOUSANDS OF COMMERCIAL TRUCKS ARE IN DEPLORABLE CONDITION AND WITH THE PLANNED TRUCK TRAFFIC IN AND OUT OF THIS PIT THE ROADS WILL BE DESTROYED. UNLESS BEACHCOMBER LLC POSTS A BOND TO REPLACE AND MAINTAIN THE ROADS THAT THE TRUCKS WILL BE TRAVELING, THIS PERMIT SHOULD NOT BE GRANTED. THE PLANNING BOARD OWES THE RESIDENTS AND CURRENT USERS OF THESE ROADS THE PROTECTION THEY ARE ENTITLED TO FROM BEACHCOMBER LL WHO WILL DO NOTHING BUT RAPE THE LAND AND LEAVE AN UNSIGHTLY MESS AND HOLE IN THE GROUND.

IF THE COMMERCIAL TRUCKS ARE ALLOWED TO USE "THE BEACH ROAD" IT WILL CAUSE HUGE PROBLEMS WITH THE BOATS THAT TRAVEL THIS ROAD TO AND FROM THE TRACTOR LAUNCH WHICH IS A CRITICAL PART OF THE ANCHOR POINT ECONOMY.

Subject: Beachcomber LLC gravel pit

Dear Chairman-

I received a letter yesterday regarding this proposed development. Although I have no objections to the extraction of the materials from this site, I do have reservations about the transport of same. The corridor, what we call the beach road, is a narrow two-lane road in serious need of an upgrade. The pavement is separating in several places and it has very narrow shoulders, making it hazardous to pedestrians when two wide vehicles travel in opposite directions. Given that there is a popular boat launch and several RV parks along this route, this is not uncommon. Boat and Rv traffic is heavy at times during the summer months.

I would recommend wider shoulders along the beach road portion and repaving this corridor.

I also have a question about the route these trucks would take. Would they cross the Anchor River bridge or use the Old Sterling? If the bridge, I have concerns about its integrity and its narrow width. The Old Sterling is another road in need of an upgrade if that is the route taken.

In conclusion, my concerns are about conflicts in the corridor with the various user groups and the poor condition of the roads.

Any additional information you could forward to me on these matters would be appreciated.

Sincerely,

James Gorman
Anchor Point

July 1, 2018

Planning Commission Chairman
Kenai Peninsula Borough
144 N. Binkley Street
Soldotna, AK 99669

To Whom It May Concern,

I am in receipt of the KPB Planning Commission Notice of Public Hearing on the proposed sand, gravel and peat extraction request by Beachcomber LLC, Parcel No 169-010-67 at 74185 Anchor Point Road.

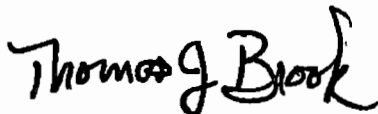

I will not be available on July 16 to attend the meeting and give oral testimony, thus this letter should serve as my input. I am **vehemently and adamantly opposed to the issuance of a permit for sand, gravel, and peat extraction on this site.** Such an endeavor will dramatically detract from the property I currently own abutting Echo Drive and Spruce View Street. This is a developing home site community and the currently existing homes and home values would be seriously devalued should a permit of this type be granted in this area. The deterrents to ~~lot sales~~ and existing homes would be numerous but some of the most serious would be the devaluation of property, the ugly sight of a gravel pit from the road, specifically Denver Street which I use to access Echo and Spruce View Streets, plus along Anchor Point Road, the daily noise of a "gravel pit" which, at the very least is obnoxious, and the dust generated which can have a serious impact on anyone with allergies or lung conditions aggravated by dust and dirt (pollutants) in the air, not to mention the housekeeping nightmares. There is also no way to measure the damage to the ground and surrounding ground with the gravel pit activity and you can't possibly tell me or others that this absolutely WILL NOT affect the ground water servicing our wells. I realize you think berms are meant to provide a barrier, however a 6 foot berm does nothing to alleviate or eradicate the above listed concerns. I don't think it's adequate to say that the Planning Commission approve the conditional land use permit because all six standards have been met.

There's far more at stake here than just meeting the borough's six standards. This is no longer the wild west of Alaska and because Anchor Point has not traditionally been a highly populated area does not automatically make it eligible for a gravel pit land use off Anchor Point Road.

I am shocked that this proposal is even being given consideration. This area has been growing in popularity as a housing area of development for many years now, especially view lots and beachfront (both high and low bluff) and is a highly inappropriate area to put a pit. The Planning Department should have denied this usage request before it even got to this stage. Just imagine for a moment if this were your home or your valuable property and now the view you have from any surrounding hill is this gravel pit. Would you allow this proposal in your neighborhood? I think not, so just because an application meets your technical criteria does not mean it's an appropriate or even necessary usage type. I completely understand the pressure exerted to grant this permit because the owner(s) of this land are obviously anxious to make the potential money, as gravel pits are trying to pop up seemingly everywhere in the borough as very lucrative endeavors. However, this particular one is at the expense of the homes, people and potential for land development in this immediate area. I don't think that can be ignored nor sacrificed for the lucrative potential of a gravel pit just because your criteria does not specifically prohibit this activity.

Again, I cannot stress this point enough, I do not, cannot, and will not support the application for a gravel pit as proposed. Please reconsider your inclination and recommendation to approve this permit.

Sincerely,

A handwritten signature in black ink that reads "Thomas J. Brook". The signature is written in a cursive, slightly slanted style.

Thomas J. Brook

Friday, July 6, 2018

Mr. Bruce Wall
Planner
Kenai Peninsula Borough
144 North Binkley Street
Soldotna, Alaska 99669

Dear Mr. Wall,

We are writing to you on behalf of our small community of Anchor Point neighbors who are upset about a proposed sand, gravel, and peat extraction permit submitted by Emmitt and Mary Trimble of Beachcomber LLC/Coastal Realty. The 40+ acre property in question is located on the west side of Danver St. between Anchor River Road and Echo. We respectfully request that you reconsider your draft recommendation of approval and reject the proposed permit.

We are sorry we cannot be present at your public hearing to be held July 16, 2018 in Soldotna at 7:30 P.M. Unfortunately, Richard and I are already obligated in Washington State, but we hope that this letter can be read to those present at the meeting. The following are our key concerns:

[1] Visual enjoyment of property

Currently, the hillside view overlooking the proposed gravel pit is of a lovely green meadow, spruce and alder trees, and spectacular Cook Inlet and Alaska Range beyond. A dusty gravel pit is not what we had in mind when we purchased our lots here. Those neighbors who abut the property are naturally quite concerned about the potential loss of property value as well as the aesthetics of losing their Alaskan green space. Of course we would all be thrilled to have enough money to purchase enough acres to completely ensure our privacy and solitude. Not being in a financial position to do so, we have trusted our realtors to speak the truth about the land we consider purchasing. We trust the borough officials to protect our interest and desire to live peacefully with our neighbors. We hope that we can together find a solution that will render everyone contented. Surely there must be a suitable, alternative location that the Trimbles can find to locate their sand, gravel, and peat business that does not so negatively impact local Alaskan residents.

[2] Noise

Alaskans take pride in the beauty of their land. Some, like Richard and I, love the pastoral setting and mountain views afforded by a hillside home. Others

prefer the quiet solitude of a home nestled hidden among spruce and alder. **ALL** of us are adamantly opposed to an unpleasant drone of gravel excavators, machinery, and dump trucks next door. Several years ago when the Trimbles cleared the property, there was a constant obnoxious noise from heavy equipment, easily heard from all surrounding properties. As you review the proposed three phases of sand, gravel, and peat extraction, we implore you to consider thoughtfully the full import of your decision on our neighborhood as well as the precedent it could set for future Kenai Peninsula communities.

[3] Dust

Richard and I have built our cabin over the past four summers. We have experienced first hand the weather and winds here in Anchor Point. We can appreciate the dismay of Marie Drinkhouse, Lee and Mark Yale, Bob Baker (to name a few) when they were apprised of the proposed permit application. The Anchor Point winds would carry excavation dust, dirt, and debris straight south to their houses. All of us within at least a half mile would be negatively effected by the dust pollution created by such an operation. Today is a sunny, clear day. I hate to imagine what the air would smell, taste, look, or feel like with an excavation project underway.

We understand that there are several sand, gravel, and peat excavation permits under current consideration. Each will succeed or fail on its individual merits or problems. We hope that as you deliberate and examine the concerns, goals, and plans of all parties involved, you also include the honorable aspect of this issue. When all is said and done, it is our hope that everyone will feel good about the outcome. Perhaps someone can offer the Trimbles assistance in locating a more suitable location for the business of sand, gravel, and peat. In the end, we are neighbors and a community that wants the best for each and every citizen.

Thank you for your consideration, Mr. Wall. We look forward to hearing from you. If there is anything else we can do to plead our case, please let us know.

Respectfully,

Ann and RC Cline

Subject: Re: KPB CLUP Material Site Application - Parcel 169-010-67
Attachments: Reclamation Plan.pdf

Bruce,

Thank you for the opportunity to comment on the subject public notice. Per AS 27.19, a mining operation must have Reclamation Plan approval with the State of Alaska prior to operations. This requirement is for all land ownerships.

To date, DNR does not have an approved Reclamation Plan for the subject parcel. DNR requests for the applicant to apply for a Reclamation Plan at the Southcentral Regional Office at 269-8503. An application is attached.

Re: Parcel Number 169-010-67, 74185 Anchor Point Road

I would like to pose some questions and concerns on this proposed gravel pit.

Is DEC involved in this process?

Is Beachcomber LLC required to submit a 15 year time line action plan?

Are there other places in the area where this process has been completed and the reclamation process also complete? It would be nice to see this process at various stages. Does the applicant have a history in this type of endeavor? Could we see one of their reclamations?

What are the hours of operation and the usual season of operation? Will the truck traffic be going over the old bridge?

What type of soil is left after this process? What is the reclamation process?

With the tides rising over extended periods of time and this lowering the land by 10 feet close to the inlet don't you have some concern for the long term affect?

There has to be someplace further away from the water and further away from homes that could provide these resources!

How does Fish and Game feel about this operation? Poor Anchor Point has so struggled to get tourism going in the area and this surely can't help the cause.

Does the Anchor Point Chamber of Commerce know about this?

Have you walked the property? What happens to the trees on the property?

Thank you for taking my concerns into consideration. I look forward to your thoughtful answers.. I own the property @ 34925 Echo Drive in Anchor Point.

Subject: regarding the proposed Beachcomber LLC Gravel Pit site

Dear Bruce, My husband and I live at Parcel 16936027, 73500 Seabury Rd. T5S R 15 W Sec 9 Seward Meridian HM 2001035 Meadow View Estates Tract 15A. We are responding to the public announcement document provided to us by the Kenai Peninsula Borough June, 22 2018 and wish to respond and object to the Beachcomber LLC application as stated. We have grave concerns about the proposed "Gravel Pit." We have a retirement home with a substantial investment and chose Alaska for its beauty, wildlife and solitude. The reviewed documents do not reflect an environmental impact study regarding the proposed "Gravel Pit." This proposed "Gravel Pit" will run the risk of negatively impacting wildlife and wetlands. This is a critical Moose calving area as well as Bald Eagle nesting sites. With rock crushing, dust and noise, we will loose the very reason we chose Alaska as a place to retire. This would terminate the beauty of the wildlife we value and enjoy. With children bicycling, walking to the beach the increased truck congestion may reveal disastrous results. The Anchor Road is always congested but with increased traffic, a failing, narrow road with no path to walk, the risks of a fatality increase substantially. I have witnessed current loaded rock trucks rarely adhering to the speed limit. The dust pollution will affect many areas. We don't look forward to the smell, taste and appearance of blowing dust. This not why we chose Alaska. In Alaska we love the quiet, beauty and solitude of out home and not the unpleasant drone of truck engines and rock crushers. I believe the property value of our homes will plummet. Who wants to purchase a home with a gravel pit in their backyard? We hope you will not approve the application for Beachcomber LLC. We have worked very hard to be able to retire in this beautiful area. Thank you for allowing us a voice. Rick and Marie Carlton 509-430-4304 seaburyroad@live.com

Subject: Fwd: Beachcomber LLC Gravel Pit Application

>> My name is Gary L. Gordon, my wife Pamela C. Gordon and I own an assessed \$280,000 view home at 34919 Fisher Court, directly above the proposed gravel pit. We also own two more lots off Danver and High Seas Court, assessed at over \$120,000. We don't want a gravel pit in our view, nor the additional traffic on Danver, resulting in excessive noise and dust. I own and operate a commercial gravel pit here in Dillingham, AK. They are noisy and dusty even if the operator or operators of the gravel pit maintain the public roads. Applicant is not going to operate this gravel pit, nor does he have the experience or equipment to develop the pit. He intends to sell gravel to highest bidder; therefore, if a project, say Anchor Point Bridge comes out to bid, applicants representative will solicit his gravel pit as the extraction source. The contractor will most likely use it, for it is the closest source. That contractor will further develop the source, move man camp in, job trailers, offices, rock crushing plant and an asphalt plant. They will work 84 hours a week, maybe more if weather hinders paving operation. We the land owners and tax payers now get an asphalt smoke screen and an enormous amount of noise and dust blown on us from tidal winds through the summer.

>> Developing the proposed commercial gravel pit operation in heart of the only recreation site Anchor Point has, is not acceptable. There are State camping parks, boat launch facilities, private RV parks and guiding businesses, plus us the home and land owners that will be adversely affected. Locals, other Alaskans and visiting tourists all travel these wore out roads and bridge now, putting fifty or more loaded dump trucks on these roads a day is going to ruin them. Our State has no funding to repair or rebuild this infrastructure that our lives require to occupy our homes and businesses.

>> Another serious consideration is line 7 on page 2 of 4 of permit, gravel extraction into OUR water table, stated again on page 4, monitoring wells. This has a potential to be very bad for all surrounding owners and businesses.

>> I hope the federal land owners between this site and the beach have been notified, as well as the wet land issues north of this site.

>>

>> Bottom Line, This is not good for Anchor Point it's residents or businesses.

>>

>> Cordially, Gary L. Gordon

>>

Dear Planning Commission Chairman,

In regards to the proposed gravel pit, please address that this is in the middle of recreational and residential area. Also, the road is weak and broken already. At times it has extremely heavy traffic as well as pedestrian traffic with no shoulder or walking trails.

There is the problem of silt generated from the pit flowing to wetlands which will not be able to be controlled.

The view property in the area will need to be reassessed for the change of value, as part of the view becomes a large hole/gravel pit.

We are extremely against this proposed gravel pit. It will forever change a much loved and used recreational area as well as devalue residential property.

Kind regards,

Dan and Cathy Millard

Re: Public Testimony Regarding Beachcomber LLC's Application for a Permit for Sand, Gravel, and Peat Extraction on A Portion of Parcel Number 169-010-67, Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104), Location: 74185 Anchor Point Road

Dear Planning Commission:

We are property owners and Party of Record in the vicinity of the above proposed "Gravel Pit". Our property is located at 34860 Seabury Court, Anchor Point, Alaska 99556 (Lot 6-A Silver King Ten, Plat No. 97-41 Homer Recording District). We built our house here in 2004 and have a substantial investment in our property and home.

We are deeply concerned about the proposed "Gravel Pit" and wish to document our objection to the Beachcomber LLC's application as described in public announcement provided us by the Kenai Peninsula Borough June 22, 2018.

Environmental Impact Statement:

There is no reference to there being an Environmental Impact Statement regarding the proposed location of the "Gravel Pit". While the Borough may not deem it is required for this proposal, it is evident that the proposal will effect wildlife and birds in the area which includes the wetlands.

Moose: The specific location and surrounding area is an annual moose calving and rearing area. We know this to be a fact as having lived here for 14 years. Each year, cow moose wander throughout the proposed extraction area and across all the extraction area boundaries to give birth to young moose. This is a critical time for young moose as they are literally born in this area and are nursed and oversaw by cow moose until they are able to fend for themselves. In the 14 years we have lived here, we have personally observed more and more habitats made less available to cow moose birthing due to new home construction and other development. They are extremely sensitive to noise and human activity during this period. There's also concern that cows may abandon their young if enough pressure is brought to bear as proposed by this "Gravel Pit" application.

Birds and Small Game Animals: The specific location and surrounding area is home to numerous birds and small wild animals. From the smallest Chickadee to the largest eagle, they use this area daily and are seen throughout the proposed "Gravel Pit" site. We have personally observed Eagles abandon their nests with young in them due to too much human activity and noise. While there may not be a large number of Eagle nests immediately in the proposed site boundaries, there may be, but we know there are a number of Eagle nests in adjacent locations.

The addition of a 'Rock Crusher' in the project will exacerbate the already large impact of noise and activity many birds and wildlife can't withstand. The noise and intrusion of a 'Rock Crusher' in this critical moose calving area will do immeasurable harm to them.

The area being proposed as a "Gravel Pit" is a disastrous breach of our husbandry of Alaska's bird and wild life. It is near to the State Park and camp ground and world renown fishing river.

If an Environmental Impact Statement isn't demanded by the Kenai Borough regarding this application then we question the integrity of the Borough's interest in the proposed project.

Public Safety:

The Anchor River Road (from the Anchor River Bridge/Old Sterling Highway to the end of it at the Tractor Launch is narrow and in complete disrepair. Major pavement cracks, pot holes, heaving, and other roadway hazards currently exist. During the summer heavy traffic from commercial fishing charters, tourists, and local residents battle these bad road conditions.

The roadway is extremely narrow without any significant shoulders for pedestrians, and bike riders to get away from the heavy summer traffic. There are a number of "blind" corners making even more dangerous for people walking or bike riders. While this roadway is posted with a 25 mile per hour speed limit, very few drivers observe the limit and often are traveling at least 35 miles per hour and even more.

With the proposed application, the applicant will be introducing another layer of traffic to an already problematic roadway. However, this won't be light weight vehicles. They will be at minimum, large dump trucks filled with heavy loads of gravel and sand. In fact, there is no restrictions regarding the size of heavy trucks that can be used. If it's in the applicant's interests to haul using large 'belly dump" rigs he'll likely do so. Regular 'dump trucks' will soon tear up the Anchor River Road to the point it will be unusable for all of us. Lets face it, dump truck operators are on the clock and inevitably push the speed limit as it is. Already, with the limited amount of dump truck use of the Anchor River Road, we observe them driving well over the 25 mph speed limit.

Even if the Anchor River Road surfaces were brought up to standard, there would continue to be a major public safety issue due to the lack of shoulders and blind corners making pedestrian and bike traffic perilous.

No where in the proposed application are these problems addressed. For these reasons alone, we oppose the application for a 'Gravel Pit' in this area.

If the Borough is insistent upon granting this permit, then the applicant and/or Borough should provide a new roadway from Danver to the Old Sterling Highway, thereby, eliminating the Anchor River Road from the equation. There has been a proposal to make this connection by extending Seaward Avenue to the Old Sterling for a number of years.

At minimum, the Kenai Borough should photographically document the existing condition of the Anchor River Road prior to the applicant's engaging in and hauling activity in order to ensure applicant's compliance with KPB 14.40.175 and KPB 14.40 .

Property Values:

When we built our home in 2004, the area adjacent to the proposed "Gravel Pit" was little developed and there were very few homes in our area. We selected our home site understanding that Anchor Point was a tourist destination to enjoy the Anchor River fishing and the beautiful flora and fauna found here. Our home location was and remains relatively quiet and peaceful. We have a secondary view of Cook Inlet and our home's value has increased

substantially since we built it. There was no 'talk' about a 'Gravel Pit' being made near our home. If there had been, we wouldn't have even considered building our house anywhere near it. Now, instead of an almost pristine environment with quiet and solitude, a beautiful river nearby, and almost constant opportunities for bird and wildlife viewing, we will be subject to a layer of human impact that can only subject our home's value to degradation. If this application granted we will be lucky to regain our original investment. No one will be interested in property that is near to a large 'Gravel Pit' operation.

General Comments:

1. Under discussion of groundwater as being 20' and that the depth of the proposed excavation is 18 feet, we are concerned about two issues: 1) This was apparently established by only one test hole on the proposed project site. This seems to be a very limited testing approach given that the project is over 25 acres in scope. It would seem prudent to require additional test hole at various locations throughout the project area to ensure the water table is consistent; 2) There does not appear to be any consideration related to the water table level upon the removal of all surface vegetation. It seems obvious the groundwater level will be effected by such removal. Provisions should be made to protect groundwater throughout the project and adjacent properties to the extent possible.
2. 50 foot buffer zones- We were pleased to see that the Staff have recommended these 50 foot buffer zones be required. However, we would like to see the applicant be required to create a 12 foot berm all along the East boundary of the project inside the 50 foot buffer zone if this project is going to be approved.
3. Staff have recommended that, "The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m." It has been traditional throughout Alaska that construction activities be between the hours of 9:00 a.m. and 9:00 p.m. to give families brief periods of respite from loud noise and general neighborhood disturbances. We believe this should not only include rock crushing activities but hauling activities as well.
4. Regarding permit renewal at the end of five years, we believe it should be required that the public also be notified of a request for permit extension at least 30 days prior to the permit extension and a public hearing be held by the Borough to determine how the applicant has performed under the original permit if its given.

We wish to thank you for your consideration of our comments.

Sincerely,

Gary and Eileen Sheridan

Borough Planning Commission,

I am writing in regard to the following agenda item: Applicant for
Conditional Use Permit: Beach Comber LLC
Parcel: 169-010-67
Tract: Tract B, McGee Subdivision

I live within 500 ft. of this proposed gravel pit and am asking that the Planning Commission look hard and long before granting this permit. The community is on the Inlet and adjacent to a state park. Those of us that live there have peace and quiet, and such beautiful scenery, that it is hard to quantify how much it means to us. I am sure those that come to the park also feel that they have rarely seen anything more beautiful.

It may be news to those on the Planning Commission that many people who are living in this area are retired and have invested in new homes and have a quiet, rural lifestyle. We have much pride in our homes and gardens and love this community. This isn't just a summer fishing place where tourists come to visit. The tourists are a part of summer life but Anchor Point is a real community that is growing.

Please ask yourself if you would like to have a 40 acre gravel pit next to your home. Please make this decision as if it was your neighborhood that was about to be invaded with heavy equipment, loud noises, dirt and dust filling the air you breathe, possible loss of water in your well and loss of animals that have been habitating in that 40 acres. How would you like 5,000 loads of gravel traveling on your road that isn't designed well enough to manage the traffic it already has. How would you like to not be able to ride your bike along the road anymore, or even take a walk, because of the large equipment, including dump trucks. Remember that in that world "time is money" and these vehicles don't go slow. How would you like to think that these trucks may not keep the rules that regulate the 11 ton limit going over the old and rickety bridge that covers the Anchor River.

I have no objection to gravel pits that are isolated and away from public view. Gravel is important, but there seems to be adequate gravel pits in our area. I think a "certificate of need" should be required when so much raw land is dug up. There are, potentially, many repercussions that may ensue if this permit is granted to Beach Comber LLC, or if that corporation doesn't follow the requirements specified in the permit.

Is the borough prepared to reduce our personal property taxes? As you might imagine, the property values will go down and our availability to sell our homes will be lost toodue to the 40 acre gravel pit just out our front door.

I ask you once again to really think this permit over as there are many, many peoples lives that will be changed due to this project. Why should one land owner's needs be met in front of the many that have lived in the community for a long time, and have so much to lose.

Thank you for the ability to express my concerns.

Sincerely,

A handwritten signature in black ink that reads "Vickey Hodnik". The signature is written in a cursive, flowing style.

Subject: Gravel pit on Danver st in Anchor Point

Dear Sir,

My wife and I own the lot to the south of purposed gravel pit, we bought it for recreational and maybe to build on someday.

Our only view is looking across the property in question, we have great view of Mt. Redoubt it would suck to look across a gravel pit to see it. I can give you lots of reasons not to approve the permit like noise, dust, dump truck traffic on the beach access rd and danver st both of are already pos roads, a old bridge over the river that is need of repair and isn't rated for that kind of weight anyway, environmental issues to surrounding area, ground water issues to near by wells and the Anchor River, not to mention it will drop mine and everybody else's property value to almost 0. There is no way I would build a house across the street to a gravel pit and wouldn't be able to sell if I wanted to. I'm sure that no one on this planning comision would want this in their front yard like it would be in mine.

Please do not approve this permit in no fashion it will literally ruin the little slice of Heaven/Alaska that we own!

Don and Lori Horton

July 10, 2018

Borough Planning Commission,

I would like to tell you of my concern for the gravel pit permit being sought by Beach Comber LLC, of Anchor Point.

The gravel pit will potentially cover 40 acres and it located near the state park and tractor launch, and the bluff, south of the tractor launch. This area is both park and residential, with gravel roads and nice homes. These homes are expensive and have their own wells and septic systems. Vacation homes make up some of these residences and these people come to relax and enjoy the quiet and beauty of Cook Inlet and the beach.

I chose to move to Anchor Point for my retirement years; I sold everything I owned in Homer and now have invested that money in a new home. Two weeks ago the news of the gravel pit was delivered by mail. If that pit happens, my land values will decrease, and no one would want to buy my property as it is within 500 ft. of the gravel pit.

My concerns lie with the noise, dust, disruption of beautiful property, what happens to the salmon who return to this area, ground water and private wells and the danger of the dump trucks on Danver, River Road and the Old Sterling Highway. The bridge over the Anchor River is not capable of handling more than 11 tons.

Those at the borough have stated that "these permits are never withheld"....really? Do the adjoining residents not have a say about what happens in their neighborhood? Why does a new landowner have his/her desires met over those who have been there for sometime and paid considerable tax dollars to the borough. Will the borough pay the home owners for the lost value of their property due to this gravel pit?

A dramatic change like this in our neighborhood would be heart breaking and also ruin the ambiance of the state park. The parcel of land that this pit could be developed on is beautiful and is a lovely habitat for wildlife, or could become awesome home lots. A gravel pit is not appropriate for this neighborhood.

Upon issuing this permit, who is liable for the dust, noise, disruption of view, increased traffic, possible loss of water for private wells, decline of salmon and disruption of wildlife. Who will make sure that the 5,000/yr. dump truck-loads don't cross the old bridge and that speed violations don't happen on the Old Sterling highway? Who will monitor that this pit doesn't operate 24/7 so that there is no relief for those living near it?

In 2018 why do we have to beg for quality of life in our neighborhoods? There are plenty of gravel pits up and down the Sterling Highway. I don't think there is a need for this pit and I think families and lifestyle should come first.

Respectfully,

G. George Krier

Re: Beachcomber LLC Application for Conditional Land Use Permit
for material extraction of sand, gravel, and peat on
a portion of Tract B, McGee Tracts

Location : Anchor Point, AK

Parcel #: 169-010-67

To Whom it May Concern,

My partner and I live at 1/2 mile south Danver Street, Anchor Point – approximately 1/4 mile south of the proposed site for extraction of sand, gravel by Beachcomber LLC. Other than Danver Street traffic, this is a quiet neighborhood and has been since we moved here in 1990.

We are opposed to a business that will create noise, dust, and more traffic on Danver Street, which is well known to have great deal of truck traffic as it is. Danver Street is notorious for people who like to speed and ignore stop signs at the corner of Echo Drive, Kyllonen Drive, Desa Avenue, and Seaward Avenue and cut the corner at Danver and Anchor Point Road.

One issue that wasn't mentioned in the Public Hearing Notice is the use and condition of Anchor Point Road. Anchor Point Road is notorious for the lack of maintenance by the State of Alaska. It is a narrow road that has no bike trails, no shoulders, is full of cracks and holes that get filled but never fixed. Add to that in the summer, traffic consists of motor homes driving in and out of four campgrounds, pickups hauling boats and trailers to and from the Cook Inlet boat launch, people driving four wheelers, people walking on the edge of a road that has no shoulders or walking trails, bicyclists sometimes 20 at a time riding in single file in either lane, trucks delivering water, fuel oil, wood etc., not to mention the locals who use it every day – we don't need more traffic on Anchor Point Road, especially trucks hauling sand and gravel to add to the chaos.

Finally, we are opposed to a business in our neighborhood that will likely lower our property values.

Thank you for your consideration.

Subject: Anchor Point Road CLUP

Hi Bruce,

I am attaching two pictures taken from my deck, and overlooking the property which would become a gravel pit if the CLUP for Beachcomber LLC (Emmit Trimble) is granted. As is true with all properties (of which there are many) located at higher elevations than the proposed pit, it is not possible for the applicant to meet Standard #5 — Minimize visual impacts. Because of the unique topography of the area surrounding the proposed site and the way sound is transmitted within the bowl, Standard #4 — Minimize noise disturbance to other properties is also not attainable. In light of the inability of the applicant to meet these two standards, as well as a multitude of other legitimate concerns, this CLUP needs to be denied.

The parcel is located in the very heart of a residential/recreational gem and development of a gravel mine upon it would adversely affect the quality of life for residents, drastically lower property values in the surrounding area, and in all likelihood impact tourism (the lifeblood of Anchor Point) when visitors to the area find camping next to the noise and dust generated by a gravel mine is unacceptable.

RE: Comments on Conditional Land Use Permit for Material Site; Beachcomber LLC; 169-010-67

I am providing comments on the referenced Land Use Permit application.

1. I am opposed to development of a material site and approval of a land use permit at this location. I request that the KPB deny the permit.
2. I am the owner of the residential parcel (PID 169-022-08), which is immediately to the north of the proposed processing area and which is almost completely surrounded by the proposed material site.
3. I purchased this property in 2001 and installed an access road and pad. My intent is to build a recreational cabin at this location. I own another cabin in the Clark Peterson subdivision near the Steelhead Campground and adjacent to the Anchor River. This cabin has experienced flooding in recent years and my wife and I have been investigating building another cabin on our property at PID 169-022-08.
4. Approval of the proposed material site application will preclude me from building another cabin because of noise and dust related disturbances. Additionally, a material site will significantly diminish my property value and will impact my ability to sell this property. Development of a material site at this location effectively constitutes a taking of my property value.
5. This is a residential and recreational area and it is inappropriate for the KPB to allow development of a material site at this location. A material site will significantly impact property values and use and enjoyment of residential and recreational property, including the Anchor River Recreational Unit, a part of the State Park System. A material site will conflict with existing residential and recreational use of the area.

6. There is considerable recreational use of the Anchor Point Road and Denver Street by people, including children, walking, running, walking dogs, bicycle tours, and riding bikes in the summer. Use of these roads by gravel trucks is a disaster waiting to happen.
7. I am concerned that this project could affect ground water input to the Anchor River and its estuary but these affects cannot be quantified without better groundwater data.

If the KPB approves this material site application over the objections of local people, the permit conditions must be adequate for protection of residential and recreational use of adjacent properties. I therefore recommend:

1. There be no onsite processing of gravel, especially crushing. This would mitigate many concerns related to noise and dust.
2. There must be a minimum of a 6 foot high vegetated berm and a separate 50 foot vegetated buffer along the entire northern boundary of the property.
3. The requested waiver from the 300 foot setback of the processing area from the northern boundary should not be approved.
4. There shall be no equipment operations between the hours of 6 p.m. and 8 a.m.
5. If the KPB approves this material site application property taxes of all adjacent properties should be reduced.

Philip J. Brna

Subject: Fwd: Anchor River estuary, salmon and new potential gravel operations
Attachments: T-1T-31-13 Estuary habitat use by juvenile chinook and coho salmon in a Kenai Lowlands (Anchor) River_Final Report9-20-16.pdf; Hoem-Neher et al. 2013 Estuarine environ as rearing habs TAFS.pdf

Hello Bruce,

I am sharing information from my perspective as an ecologist regarding the potential new gravel operations on the parcels to the east of the Anchor River estuary. I have been studying this estuary (as well as other estuaries in the Kachemak Bay region) since 2009. I am attaching a couple of documents - a final report and a peer reviewed journal article that reflect data on juvenile salmon use specifically in the Anchor River estuary. A few salient points are:

- 1) There are thousands of juvenile salmon (Coho and Chinook salmon primarily), as well as other species (Steelhead, Dolly Varden, Starry Flounders, sculpins, sticklebacks) rearing in the Anchor River estuary;
- 2) Juvenile fish rearing in the Anchor estuary exhibit many different life history patterns, and preliminary data indicates that these patterns reflect genetic diversity in the salmon populations of the estuary.
- 3) Juvenile salmon move broadly throughout the estuary, using tidal channels, pools, as well as river habitats,
- 4) Juvenile salmon are present in the Anchor River estuary year round.
- 5) Conductivity measurements taken in the estuary indicate that groundwater flows are supporting juvenile salmon habitats

I am very concerned that the proposed gravel operations could impact groundwater flows that support salmon habitat, and also create dust that could settle on the surface and adversely affect salmon. The estuary of the Anchor River is relatively small, but is an extremely important component of the Anchor River watershed. All salmon use the estuary as habitat at least twice in their lives, as adults returning from the ocean, and as juveniles transitioning to the ocean. As I pointed out earlier, we know that some juveniles rear in the estuary for prolonged periods, and that these may represent genetically distinct fish. There is no other 'alternative' estuary habitat for the fish of the Anchor River to use. In my opinion, it would better to have more understanding of the potential consequences before any of the proposed operations proceed.

Unfortunately, I won't be able to attend the public meeting. Please let me know if I can provide any more information.

Thanks,
Coowe

Abstract

For Pacific salmon, estuaries are typically considered transitional staging areas between freshwater and marine environments, but their potential as rearing habitat has only recently been recognized. The objectives of this study were two-fold: (1) to determine if Coho Salmon *Oncorhynchus kisutch* were rearing in estuarine habitats, and (2) to characterize and compare the body length, age, condition, and duration and timing of estuarine occupancy of juvenile Coho Salmon between the two contrasting estuaries. We examined use of estuary habitats with analysis of microchemistry and microstructure of sagittal otoliths in two watersheds of south-central Alaska. Juvenile Coho Salmon were classified as estuary residents or nonresidents (recent estuary immigrants) based on otolith Sr : Ca ratios and counts of daily growth increments on otoliths. The estuaries differed in water source (glacial versus snowmelt hydrographs) and in relative estuarine and watershed area. Juvenile Coho Salmon with evidence of estuary rearing were greater in body length and condition than individuals lacking evidence of estuarine rearing. Coho Salmon captured in the glacial estuary had greater variability in body length and condition, and younger age-classes predominated the catch compared with the nearby snowmelt-fed, smaller estuary. Estuary-rearing fish in the glacial estuary arrived later and remained longer (39 versus 24 d of summer growth) during the summer than did fish using the snowmelt estuary. Finally, we observed definitive patterns of overwintering in estuarine and near shore environments in both estuaries. Evidence of estuary rearing and overwintering with differences in fish traits among contrasting estuary types refute the notion that estuaries function as only staging or transitional habitats in the early life history of Coho Salmon.

Pacific salmon exhibit multiple life histories in response to variability in selection pressures and habitat conditions (Healey 1994, Groot and Margolis 1991). Early marine entry and presmolt growth just prior to entry is a time of severe selective pressure due to the physiological and environmental changes experienced by salmon smolts (Williams 1996; Thorpe et al. 1998; Beamish et al. 2004). This life stage has been linked to an optimal out-migration survival period that corresponds to a period when ocean conditions provide suitable temperatures and abundant resources for growing and feeding (Gargett 1997; Johnsson et al. 1997; Beamish et al. 2008). The period and duration of optimal out-migration timing may change from year to year depending on precipitation levels, wind patterns, and solar energy inputs (Gargett 1997; Beamish et al. 2008). Fish size, body condition, and timing of marine entry are instrumental for optimal timing and to ensure coincidence with both the quantity and quality of available prey and the ability of the individual to use it (Beamish and Mahnken 2001; Hobday and Boehlert 2001).

Estuaries play an important role as transitional habitats prior to the ocean entry phase of salmon smolt. The mixing zone of freshwater and saltwater environments buffers against osmoregulatory and physiological stress in smolts (Healey 1982; McMahon and Holtby 1992; Miller and Sadro 2003; Beamish et al. 2004; Bottom et al. 2005a). Estuaries, however, also have potential to serve as important salmon rearing habitats; Chinook Salmon *Oncorhynchus tshawytscha*, in particular, have increased survival rates (Magnusson and Hilborn 2003) and life history variability (Bottom et al. 2005a; Campbell 2010; Volk et al. 2010) with estuarine habitat use. Factors expected to impact individual fish survival include the duration of estuary occupancy, timing of early marine entry, and environmental conditions that affect body condition (Healey 1982; Bohlin et al. 1993; Beamish et al. 2004). Given their importance for rearing, we anticipated that strong spatial and temporal variability in environmental conditions within estuaries may play a key role in trait expression of individuals subject to overall conditions within these habitats.

Estuaries fed by different freshwater hydrologic regimes may provide contrasting rearing environments for resident biota (Saltveit et al. 2001). Freshwater influx into northern estuaries is expected to be particularly high during snowmelt periods; however, within Alaska, many estuarine habitats are fed by glacial river systems. For these systems, peak freshwater discharge occurs in midsummer rather than early spring, yielding cold, sediment-laden discharge during the warmest months. Differences between glacial and snowmelt-fed estuaries may therefore contribute to variability in the timing and duration of estuarine use for juvenile salmon.

Previous investigations into estuary ecology of juvenile Coho Salmon *O. kisutch* are limited, but indicate that the transition from fresh to salt water life stages is complicated and may differ by age or life stage (McMahon and Holtby 1992). For example, young-of-year fish undertake seasonal migrations within the up-

per estuarine ecotone and freshwater river channels and sloughs, and residency between these areas is estimated to be as long as 8 months (Miller and Sadro 2003; Koski 2009). Fingerling (age-1 and -2) Coho Salmon were present in estuaries for only 2 months (McMahon and Holtby 1992), and individuals within these populations were reported to have short estuary residence times (up to 17 d; Chittenden et al. 2008). Understanding some of the environmental conditions that lead to the differences in use by young salmon may provide insight into critical rearing habitats for conservation and management.

Direct and unbiased documentation of estuarine habitat use by juvenile salmon is difficult, given a limited suite of tracking and marking techniques applicable to small fish. The use of otolith microchemistry in combination with examination of microstructure (incremental growth layers) can be used to determine ontogenetic patterns of habitat occupancy when water chemistry contrasts strongly between habitats (Neilson et al. 1985; Campana 1999; Kennedy et al. 2002; Réveillac et al. 2008). The salinity of the surrounding environment, in particular, has been linked to ratios of strontium to calcium (Sr : Ca) deposited in otoliths, a useful feature for measuring life history patterns in diadromous fishes (Zimmerman 2005). In tandem with microchemical analysis, microstructural analysis of incremental growth patterns and age of fish can allow discernment of habitat transitions through time (Campana and Neilson 1985; Neilson et al. 1985; Volk et al. 2010). It can be difficult, however, to determine and validate daily incremental growth patterns, particularly during periods of low growth (Campana and Neilson 1985). In that case, seasonal growth patterns may provide sufficient resolution to determine history, particularly in the case of estuarine or marine versus freshwater habitat use.

In this study, we investigated and compared the ecology and life history patterns of juvenile Coho Salmon captured within two contrasting estuary environments. Our first question was two-fold: (1) were juvenile Coho Salmon rearing within estuary systems, and (2) did fish rearing within estuaries show trait differences (condition, dates of entry, and weights) from those that did not? Using otolith microanalyses, we determined the timing and duration of use and correspondence with fish traits of different ages of juvenile salmon captured within estuary channels. We hypothesized that fish using estuaries, having a longer time for osmoregulatory adjustment and thereby benefiting from these environments, would exhibit greater lengths and body condition than those without evidence of estuary residence. The second question of our work was, did patterns of estuary use by juvenile Coho Salmon, including timing and duration of occupancy, differ between two estuaries with contrasting freshwater environments? We hypothesized that differences in freshwater discharge regimes (i.e., a glacial-fed versus snowmelt-fed estuary) that result in differences in thermal regimes and available habitats may be factors that drive use of differing estuary systems. This would suggest that physical processes are important drivers of ontogenetic variability in use of estuarine environments and therefore life history expression in juvenile salmon.

STUDY SITE

The large tidal range (>8 m depth) of Kachemak Bay and Cook Inlet (NOAA 2012) in south-central Alaska can create extensive estuarine ecotones with diverse habitat conditions, particularly in glacial rivers with heavy silt deposition zones. Our study compared environmental conditions and fish collected from similar channel habitat types sampled within two contrasting estuaries of the Anchor and the Fox rivers, located approximately 29 km apart, (Figure 1). Juvenile salmon were captured within channels located in the intertidal zone of each estuary, bordered by mud flats and vegetation. Channels were chosen to maximize habitat similarity between the estuaries (i.e., similar connectivity to the main-stem river, locations within the intertidal zones respective of the estuary size, channel shape, and channel length).

The Anchor River delta is a snowmelt and spring-fed, bar-built estuary that abruptly transitions into the marine environ-

ment of southern Cook Inlet; its estuary length is about 0.8 km (measured from the high-water tide line to its confluence with the Cook Inlet). The Fox River delta is a glacially fed estuary that transitions through a large delta, approximately 6 km long, into Kachemak Bay. The Fox River watershed is located in a smaller, more constrained valley and lacks freshwater back-channel areas in the lower river, whereas the Anchor River has numerous side-channel areas in the lower river. Compared with the Anchor River estuary, the Fox River estuary has more gradual, extended ecotones between the marine environments of Cook Inlet and freshwater environments of the Fox River.

METHODS

Habitat characteristics.—We sampled fish and recorded environmental data in tidal channels spaced within the intertidal zone of each estuary. Habitats upstream of these channels are

FIGURE 1. The study area on the lower Kenai Peninsula, Alaska, where age-0 to age-2 Coho Salmon were sampled from the Anchor River (triangle) and Fox River (trapezoid) estuaries.

not tidally influenced and therefore were not considered estuary habitats for this study. Four channels were sampled in the Fox River estuary and two channels were sampled in the Anchor River estuary, twice monthly from April through September for a total of 10 sampling events in the Anchor River and 11 sampling events in the Fox River. Sampling occurred during moderate tide levels in both estuaries because some channels could not be sampled at high tide. Sample events in each estuary usually occurred within 7 d of one another, often within the same week. Temperature and depth were measured and recorded using Solinst TM 3001 level loggers (Solinst Canada Ltd., Ontario, Canada) calibrated with a Solinst TM 3000 barologger set onsite. Level loggers were set at 15-min recording intervals and placed in 5 × 25 cm plastic PVC housings attached to steel fence posts driven approximately 25 cm into the substrate. Fence posts were located five meters upstream from the channel mouth in each of the six channels sampled, and one logger was placed along the margin of each river channel. In addition, measurements were taken for each sampling event at a cross-section downstream of the fence posts for each sampling event. Thalweg depth, conductivity (direct and standardized for temperature), salinity (measured as salt concentration), and temperature (with probe at the surface, mid water column, and channel bottom) were measured using a YSI model 30.

Habitat data were summarized for analyses as follows: continuous water level data as 7-d mean, minimum, and maximum depths for each estuary channel and the main-stem river. Continuous temperature data were summarized as daily averages summed for accumulated thermal units by week and month. Point measurements of salinity collected at each sampling event were combined and expressed as monthly mean, minimum, and maximum recordings.

Fish capture.—Juvenile Coho Salmon were captured in tidal channels of the intertidal zones of Fox and Anchor river estuaries within 25-m reaches using three depletion passes with a pole-seine (2.2 × 6.1 m, 0.31 cm mesh) twice per month from late April through September 2011. Prior to fish sampling, each unit was closed with blocking nets (2.2 × 6.1 m, 0.31 cm mesh) secured along the sides and bottom with stakes to prevent fish escape. Fish from each pass were placed in separate, 19-L aerated tubs filled with water from the channel. All fish captured were identified to species and counted. Fifty juvenile Coho Salmon captured from each of three passes of the seine (total, 150 fish/site per each event) were anesthetized in tricaine methanesulfonate (MS-222) at 70 mg/L of water (Bailey et al. 1998; Chittenden et al. 2008) and measured for FL (mm). If more than 150 Coho Salmon were captured at each site, samples were indiscriminately selected by gently stirring the incarcerated fish and removing samples with a hand dip net. Age-classes of Coho Salmon were apparent by length; therefore, three juvenile cohorts ($\leq 10\%$ of the catch) at each were indiscriminately collected at each site: small (age 0, <50 mm FL), medium (age 1, 50–85 mm FL), and large (age 2, >85 mm FL) and sacrificed via overdose of MS-222 at

140 mg/L, labeled, placed on ice, returned to the laboratory, and frozen.

Fish condition.—We used dry weight and Fulton's condition factor measured from the frozen specimens for metrics of condition (Jonas et al. 1996; Pope and Kruse 2007). Fulton's condition, $K = (W/L^3)100,000$, was calculated using laboratory measures of fish length (FL; mm) and whole fish weight (W; g). Dry weights were determined from dissected samples with all tissue other than stomachs and otoliths returned to the sample prior to drying. Coho Salmon samples were placed in a drying oven at 65–70°C for 3 d, weighed, and returned to the oven for 24 h, and then re-weighed. Samples were considered dried when minimal change was detected between consecutive daily weights (Jonas et al. 1996).

Estuary residence time.—We used analysis of otolith microchemistry combined with microstructural analysis to determine if juvenile Coho Salmon were rearing in the saline environments of estuaries. Sagittal otoliths were removed from both sides of the cranial cavity of fish prior to condition analyses, rinsed, and stored in plastic vials. Otoliths were mounted in thermoplastic cement on sections of cover slips and glued to standard microscope slides (Donohoe and Zimmerman 2010). Otoliths were mounted sulcus down, and the sagittal plane was ground with 2,000-grit sand paper to expose a clean, flat surface. The sample was reheated, turned over to expose the sulcus, and ground to expose the nucleus (Zimmerman 2005; Donohoe and Zimmerman 2010). The sample was labeled and aged via winter counts, and the cover slip was cut to remove the mounted sample. The sample was then glued in a 2.54-cm-diameter circle centered on a petrographic slide for analysis. Once the slide was filled, it was washed, rinsed with deionized water, and allowed to air dry prior to processing.

We used the Laser-ablation Inductively Couple Plasma Mass Spectrometer (Agilent mass spectrometer 7500ce fitted with a CS lens stack combined with a New Wave UP213 laser, LA-ICPMS) housed at the Advanced Instrumentation Laboratory of the University of Alaska Fairbanks to complete the microchemical analyses. Transects were ablated from the primordia perpendicular to the growth increments into the mounting medium beyond the distal edge of one otolith from each fish. Count data were collected for the elements strontium (^{88}Sr) and calcium (^{43}Ca). Calcium (^{43}Ca) was used as an internal standard and background-subtracted counts of Sr were adjusted to Ca and calibrated to glass standard reference material (NIST 610, National Institute of Standards and Testing). Calibration standards were run for 10 samples or less, depending on the number of samples on the slides, and one sample duplicate (both sagittal otoliths from one fish) was run for the entire batch. Laser speed was set at 5 $\mu\text{m/s}$ with a 25- μm spot diameter on a single pass transect set to 80% power. The elemental count/s output of the LA-ICPMS was then converted to concentration and sampling distance using the elemental weights for each constituent and the laser settings, respectively. Strontium : calcium (Sr : Ca) ratios were then calculated for each of the distance

measures. Otoliths were photographed under $4\times$, $10\times$, $20\times$, and $40\times$ magnification using a Leica DM1000 compound light microscope fitted with a Leica DFC425 digital camera housed at the Alaska Science Center (Anchorage, Alaska). Images were taken using a 1,000- μm stage standard at all magnifications to calibrate otolith measurements, and the images were digitally processed to enhance clarity of incremental growth patterns. ImageJ software (version 1.46 h, <http://imagej.nih.gov>) was used to process digital images and to overlay distance-ratio graphs on the image, calibrated to the laser distance.

Estuarine residence time was determined by counting incremental growth marks on otoliths from juvenile salmon captured in the estuary (Miller and Simenstad 1997; Neilson et al. 1985). We defined residence time as the daily growth within the saline reaches of the estuary. Residence time was calculated as the number of incremental growth bands following the point of estuarine entry determined by the Sr : Ca inflection point with the distance-matched ratio graph overlaid on the otolith digital image. The inflection point, or estuary signature, was defined as an abrupt increase in Sr : Ca, as visually determined as the consecutive ratio increase of >0.3 per reading; levels remaining at >1.0 followed the freshwater mean ratios (Figure 2). Inflection points often correspond with dark banding, identified by some researchers as an estuary growth check (Lind-Null and Larsen 2011). These growth checks, though not always easily identifiable or consistent among individuals, corresponded to inflection points and provided additional support in identifying the points of estuary entry. All fish were categorized according to the presence or absence of an estuarine salinity signature (inflection point followed by growth), and incremental growth counts were completed to determine duration of estuary use on those with estuary signatures. Duration of estuarine rearing was determined by using a digital image of the otolith taken at $20\times$ magnification overlaid with the distance-matched (μm) Sr : Ca graph. Inflection points were digitally marked on the image and were considered the point of estuarine entry. Growth increments were counted along two different radii from the distal edge of the otolith to the inflection point to determine days of residence (Figure 2). If counts differed between readings, a third count was made, and the median of the three counts was used. One group of salmon overwintered in estuarine/marine environments, therefore comparisons were made using summer season (April-September) residence times calculated as the date of capture less the incremental growth count (days) to the first discernible daily growth increment. The growth increment-time relationship was validated by marking a sample of four fish with alizarin complexone (Zimmerman 2005), holding them in a small net pen in an estuary channel for 6 d, sacrificing the fish, and counting the increments past the Alizarin mark on prepared otoliths. The results from this test verified that incremental growth rings indeed represented a 24-h period, all fish showing six increments corresponding to the 6 d held in captive nets in the estuary.

Statistical analyses.—Based on our study questions, we wanted to determine whether (1) estuaries were used by Coho Salmon for rearing purposes, (2) those salmon that used estuaries for rearing differed from those that showed no evidence of estuarine rearing, (3) salmon rearing in two different estuaries show differences in traits and residence times related to environmental conditions, and (4) factors that contribute most to the variability in fish traits (e.g., presence of estuarine rearing, estuary habitat conditions, or the age of the fish) could be identified. The otolith microchemistry and microstructural analysis described above addressed whether fish were using estuaries for rearing, and we used analyses of empirical data to address the remaining objectives. When possible, confounding sources of variability, such as timing of capture, were included in these analyses, along with several potential sources of error and bias.

Because samples were a subset of the total catch and collected over the summer season, potential sources of bias and error must be addressed. Our protocol sampled evenly across age-classes for fish retained for laboratory analyses; therefore, the composition of the laboratory fish sample did not correspond to catch composition. We therefore tested (chi-square goodness of fit) for differences in age-class composition of measured fish between estuaries and in the laboratory sample versus the measured group age structure. Finding significant differences on both accounts, we ran analyses to compare length, age-class composition, and capture date based on two subsamples of the total catch: those that were caught, measured, and released (hereafter, measured group) versus those sacrificed and analyzed in the laboratory (hereafter, laboratory group). For each sampling event we inferred age-class composition of the measured group via their length-frequency histograms from length groups validated via otolith-determined ages of the laboratory group. Analyses completed with all age-classes pooled were weighted to ensure that the laboratory sample results reflected the composition of the population relative to the total catch of fish; laboratory fish data were weighted by percent composition of each age-class from the measured group of fish for each estuary. We also examined the relationship between capture date and residence time using simple linear regression for each estuary; a strong linear relationship between residence time and date of capture would indicate bias.

For the second objective, we compared those juvenile Coho Salmon that had a marine signature in their otolith, indicating estuarine rearing, with those salmon that were captured in the estuary but lacking detectible marine signature in the otolith. Those comparisons were done to determine whether fish in these groups showed differences in trait patterns (time of entry, condition, length, and weight). Two separate analyses were used: ANCOVA for all age-classes pooled, and Student's *t*-tests for individual age-classes (due to small sample lengths and disproportionate distribution of age-classes between estuaries). We tested data from the laboratory fish group captured in each estuary via ANCOVA analyses. This analysis used the independent

FIGURE 2. Images of otoliths of Coho Salmon from the Fox and Anchor River estuaries showing Sr : Ca ratio graphs overlaid with laser transect distances. Different estuary use patterns are depicted: (A) no estuary use, (B) summer season estuary use signature, and (C) age-2 fish with overwintering signature and variable use of salinities during the summer season, where (1) is the first summer estuary signature, (2) is the winter estuary signature, and (3) is the second summer estuary signature.

variable (condition) and dependent variable (date of capture) with estuary rearing as the covariate for fish comparison for all ages pooled (weighted bycatch). For the age-class comparisons, we compared traits (length, condition, dates of entry, and weights) between signature patterns using Student's unpaired two-sample *t*-tests for each age-class; estuaries were analyzed separately. Because, in this scenario, each variable was repeated a total of four times (for age-0 and age-1 classes by two es-

tuaries), we adjusted our alpha values accordingly (Dunn Sidak correction alpha level 0.013; Abdi 2007).

Our third objective focused on whether fish using the glacial Fox River estuary showed differential trait expression from those using the snowmelt, spring fed Anchor River estuary. Two separate analyses were performed as described above. For the between-age-class comparisons, traits were examined for differences between estuaries using Student's unpaired

two-sample *t*-tests for each age-class. To compare fish traits with all age-classes pooled, we used an ANCOVA analysis with each dependent variable (length, dry weight, condition) and capture date as the independent variable with estuary of capture as the covariate.

The final objective was to examine the influence of three potential factors (age, estuary type, and presence of an estuary signature) in explaining variability in Coho Salmon traits. We used a three-way catch-weighted ANOVA with the laboratory group data to address this question.

Data were standardized to the mean of each variable and fourth-root transformed (when necessary) to meet homogeneity assumptions for all linear tests. Data were checked for equal variance using *F*-tests for age-class comparisons. If samples had unequal variances and could not be transformed to meet this assumption, a Welch two-sample, unpaired *t*-test was used for comparison of age-class data.

RESULTS

Estuary Habitats

Temporal trends in habitat features followed trends and differences anticipated for snowmelt versus glacially fed estuaries. Minimum salinities were higher and more variable in the snowmelt-fed Anchor River estuary channels, particularly in midsummer (Student's two-sample unpaired *t*-test: *t* = 1.32, *P* < 0.001, *df* = 18; Figure 3; Table 1). Data from the stationary loggers placed in the sampling sites showed expected patterns in trends associated with each watershed type. The glacial Fox River showed seasonal increases in water depth and decreases in temperature associated with the glacial runoff, whereas the snowmelt and spring-fed Anchor River exhibited peak water depths and coolest temperatures in the early spring. The highest 7-d average estuarine water temperatures occurred in late May (13.3°C) for the Fox River and late July (15.3°C) for the Anchor River.

Fish

We captured a total of 1,743 Coho Salmon in the Anchor River and measured 532. In the Fox River we captured 4,232 individuals and measured 1,621. We sacrificed and retained 35

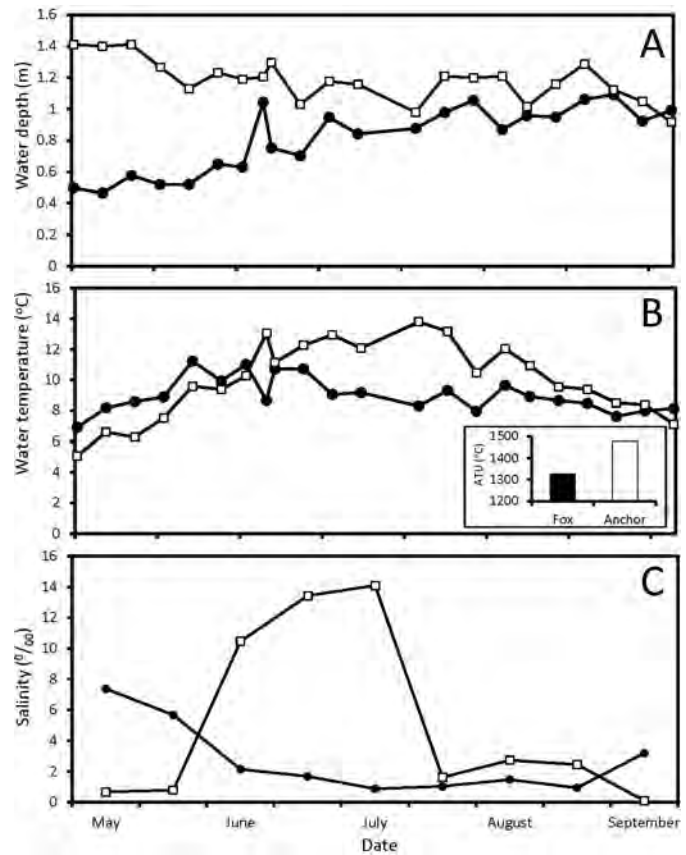

FIGURE 3. Continuous data logger results for the Fox River (black circles) and Anchor River (open squares) estuaries showing the summer-season 7-d average (A) water levels, and (B) water temperatures with an inset in accumulated thermal units (ATU). from the Anchor River estuary and 73 fish from the Fox River estuary for laboratory analysis.

Three age-classes of Coho Salmon were captured in both estuaries (0, 1, 2), though the relative dominance of age-classes within the measured group differed significantly between estuaries ($\chi^2 = 338.4$, *P* < 0.001, *df* = 2, Table 2; Figure 4). Fish captured in the Fox River estuary were primarily composed of younger age-classes (age-0 and age-1 fish), with less than 5% of the catch composed of age-2 fish. The Anchor River estuary

TABLE 2. Numbers of measured and laboratory Coho Salmon grouped by age for the Fox River and Anchor River estuaries. Counts of fish showing estuary use is denoted for the laboratory group in parentheses.

Estuary	Age 0	Age 1	Age 2	Total
Measured group composition: numbers of fish				
Fox	785	760	76	1,621
Anchor	291	133	108	532
Total	1,076	893	184	2,153
Laboratory group composition: numbers of fish				
Fox	24 (6)	45 (17)	4 (1)	73 (24)
Anchor	9 (3)	14 (11)	12 (10)	35 (24)
Total	33 (9)	59 (28)	16 (11)	108 (48)
Percent of total laboratory group with estuary signature				
Laboratory group	41	48	69	44

measured fish group was composed of over 20% age-2 fish and had a smaller proportion of age-1 fish than the Fox River (Table 2). We were restricted in retaining age-2 fish for individual analysis from the Fox River estuary due to low catch rates of this age-class in the system.

A substantial proportion of laboratory group fish displayed elevated Sr : Ca signatures, indicating growth within the saline reaches of the estuary (44%, 48 of 108 collected fish). Of these, 10 individuals overwintered in saline environments (either estuarine or near shore environments), 13 exhibited summer season use patterns of residence in saline environments followed by use of less saline environments (e.g., Figure 2A). Of the 35 Anchor River fish and 73 Fox River fish analyzed, 24 from each river exhibited evidence of estuary rearing. The Fox River fish showed a significantly lower proportion of fish with estuary signatures. Only two fish from the Fox River estuary showed estuary–marine overwintering signatures (one individual each from age-classes 1 and 2).

Disparity in patterns of capture, estuary use, and entry dates were apparent in comparisons of fish captured in the two estuaries (Table 3). The highest total capture of Coho Salmon occurred in the Anchor River estuary in late August and in late July in the Fox River (Figure 4). In both estuaries, most age-2 individuals were captured in April–June. Age-1 individuals predominated the June and early July catches, and age-0 individuals were not captured until later in June. Fish captured in the Anchor River estuary entered earlier during the sampling period and had shorter and less variable times of use than those captured in the Fox River estuary; however, these differences were not statistically significant (weighted 2-way linear model) for the pooled, catch-composition-weighted data for laboratory group with estuarine rearing: entry dates ($F = 1.71$, $P = 0.20$, $df = 46$) and residence ($F = 2.06$, $P = 0.16$, $df = 463.69$; Table 3). Only two variables were significant (Student's unpaired t -test) among comparisons made between estuaries by

TABLE 3. Mean residence times and capture dates for the laboratory group of Coho Salmon captured in the Fox and Anchor rivers in 2011.

Estuary	Age 0	Age 1	Age 2
Average summer season use (d)			
Fox	49.33	39.23	6.00
Anchor	36.33	29.72	14.80
Mean capture dates (estuary signature)			
Fox	Aug 21	Jul 31	May 28 ^a
Anchor	Aug 8	Jul 20	May 29
Mean capture date (no estuary signature)			
Fox	Jul 13	Jul 18	Jun 17
Anchor	Aug 23	Jul 13	Jul 4

^aSample size was 1.

age-class: laboratory group age-0 entry date ($t = -2.50$, $df = 30$, $P = 0.02$) and condition ($t = -1.92$, $df = 30$, $P = 0.06$).

Generally, fish captured and measured within the two estuaries differed in length, weight, and body condition; however this was only statistically significant when single age-classes were compared (Table 4). Compared with Fox River fish, the Anchor River mean FL at age was significantly (Student's unpaired t -tests) larger and less variable for each age-class in the measured group, i.e., age 0 ($t = -151.15$, $P < 0.01$, $df = 306$), age 1 ($t = -6.22$, $P < 0.01$, $df = 889$), and age 2 ($t = -3.35$, $P < 0.01$, $df = 108$; Table 5). Fish in the laboratory group followed a similar pattern as the measured group; however, these differences were statistically significant only in some comparisons made by separate age-classes (Table 5).

The age and presence or absence of an estuary signature significantly contributed to variability between traits (length, condition, dates of capture, and weights), whereas the estuary of capture did not. Fish that demonstrated more extended estuary use tended to be captured in the estuaries later than those that showed little to no estuary use (weighted 2-way linear model: $F = 5.14$, $P = 0.02$, $df = 103$; Table 5). Fish using the estuary were significantly (weighted 2-way linear models) greater in length and had higher condition when samples from both estuaries were pooled: length ($F = 5.75$, $P < 0.01$, $df = 103$) and condition ($F = 13.12$, $P < 0.01$, $df = 103$; Table 4). Finally, the evidence of estuarine rearing significantly (ANCOVA) accounted for variation in fish condition over time for both the Anchor ($F = 11.06$, $P < 0.01$) and Fox ($F = 6.42$, $P = 0.01$) river estuaries. Generally, fish in both estuaries increased in condition over time. However, fish lacking estuary signatures showed smaller sizes and lower condition when captured, and the condition increased at a greater rate over the summer season than it did among fish with an estuary signature (Figure 5).

In summary, juvenile Coho Salmon used estuaries for rearing, the greatest variability in fish traits (body condition, length, weight, capture date) being explained by the age-class and the presence or absence of estuary rearing. All fish exhibiting estuary use were significantly larger and had greater weights and

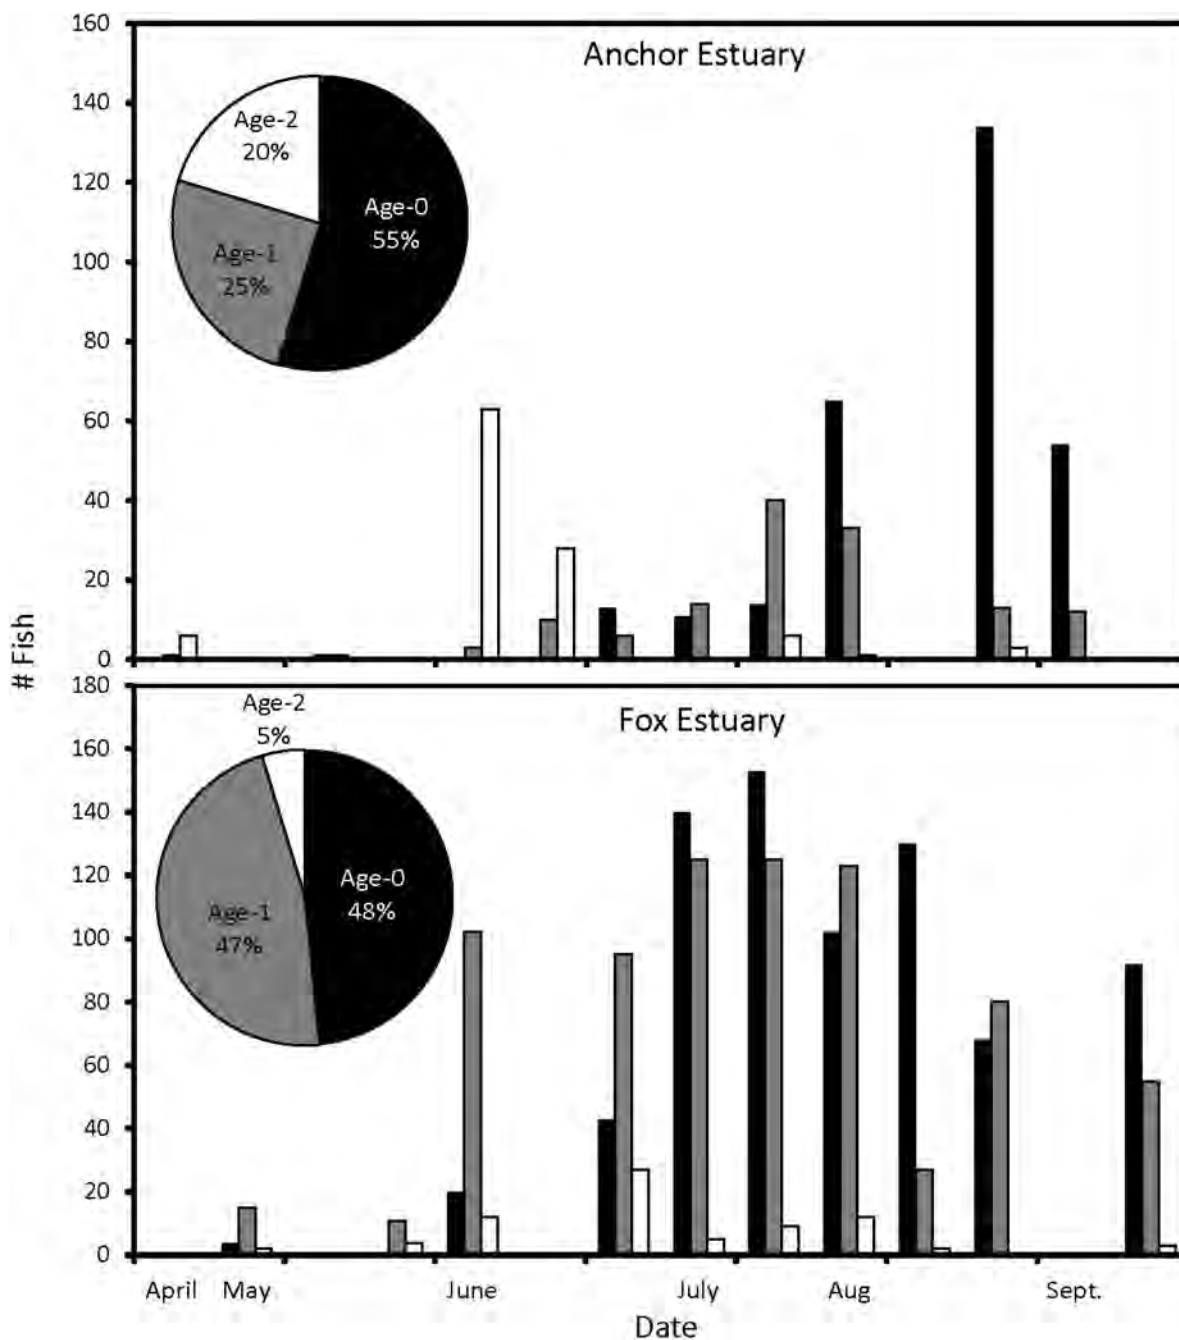

FIGURE 4. Comparison of total sample catch of Coho Salmon separated by age-class in the Fox and Anchor river estuaries. Inset pie charts illustrate age composition.

higher body condition than those lacking estuary-use signatures. Patterns of trait differences between estuaries were apparent, though not statistically significant given our limited sample sizes of estuary residents. Compared with fish in the Fox River estuary, those using the Anchor River estuary showed a higher proportion of overwintering use, and the summer composition of residents was higher in older individuals with greater body condition, length, earlier entry, and shorter times of use.

Finally, we addressed the potential for capture date to bias residence. We found a weak, though significant, positive relationship between capture date and residence days for fish from the Fox River estuary ($P < 0.01$, adjusted $r^2 = 0.18$) but not for fish from the Anchor River estuary ($P = 0.28$, adjusted $r^2 = 0.01$). This relationship could potentially be explained by the differences in behavior patterns of the fish from the two estuaries.

TABLE 4. Mean and variance of body size, weight, and condition for measured ($n = 2,153$) and laboratory ($n = 108$) groups of Coho Salmon captured in the Fox River and Anchor River estuaries.

Estuary	Age 0	Age 1	Age 2
Measured group mean size (variance)			
Fox	40.68 (73.16)	72.86 (176.75)	85.34 (166.70)
Laboratory group mean size (variance)			
Fox	41.91 (117.63)	76.11 (332.58)	90.75 (189.30)
Estuary signature	51.50 (96.30)	79.10 (214.74)	80.10 ^a
No signature	38.50 (85.01)	74.10 (411.18)	93.00 (207.33)
Anchor	48.22 (84.94)	77.90 (173.91)	99.75 (86.75)
Estuary signature	53.30 (114.33)	79.10 (137.69)	98.10 (76.98)
Laboratory group mean dry weight (variance)			
Fox	0.15 (0.02)	1.13 (0.80)	1.47 (0.42)
Estuary signature	0.30 (0.03)	1.22 (0.42)	0.96 ^a
No signature	0.09 (0.01)	1.08 (0.89)	1.60 (0.45)
Anchor	0.25 (0.02)	1.04 (0.40)	1.99 (1.05)
Estuary signature	0.32 (0.04)	1.11 (0.42)	1.91 (1.12)
No signature	0.18 (0.01)	0.70 (0.36)	2.40 (1.08)
Laboratory group Fulton's mean condition (variance)			
Fox	0.91 (0.04)	1.08 (0.02)	1.05 (0.01)
Estuary signature	1.12 (0.01)	1.12 (0.01)	1.14 ^a
No signature	0.84 (0.03)	1.06 (0.04)	1.03 (0.01)

DISCUSSION

Fish using the estuaries in our study exhibited substantially greater estuary use times in the saline reaches of the estuary than previously reported for juvenile Coho Salmon, particularly older

cohorts (age-1 and age-2 juveniles; McMahon and Holtby 1992; Thorpe 1994; Magnusson and Hilborn 2003). Juvenile Coho Salmon in all age-classes used estuaries for extended periods of time, including overwintering in estuaries or nearshore areas,

TABLE 5. Trait comparisons between estuaries and signature groups for pooled, catch weighted data shown by age-class for Coho Salmon captured in the Fox River and Anchor River estuaries. Only tests with probability values <0.10 are reported.

Metric	Statistical significance	Pattern
Comparisons between estuaries		
Age 0		
Size	$t = 61.27, P < 0.01^a, df = 751$	Measured fish, Anchor fish larger
Entry date	$t = -2.50, P = 0.02, df = 30$	Laboratory fish, Anchor fish earlier entry date
Condition (Fulton's)	$t = -1.92, P = 0.06, df = 30$	Laboratory fish, Anchor fish higher condition
Age 1		
Size (FL)	$t = -5.95, P < 0.01^a, df = 889$	Measured fish, Anchor fish larger
Age 2		
Size (FL)	$t = -3.36, P < 0.01^a, df = 182$	Measured fish, Anchor fish larger
Comparisons between estuary signatures		
Condition (Fulton's)	$F = 13.12, P < 0.01^a, df = 103$	Fish with signature had higher, less variable condition
Dry weight	$F = 3.34, P = 0.07, df = 103$	Fish with signatures had higher, less variable dry weight
Capture date	$F = 5.14, P = 0.02, df = 103$	Fish with signatures showed later entry dates
Size (FL)	$F = 5.75, P = 0.02, df = 103$	Fish with signatures showed larger, less variable size

^aData are shown for all tests, Dunn-Sidak $\alpha = 0.013$ for significant tests.

FIGURE 5. Fulton's condition factor for Coho Salmon shown by signature group and collection data from laboratory analyzed fish captured in the Fox River (upper panel) and Anchor River (lower panel) estuaries.

and these patterns of use differed between the two estuaries. The smaller, Anchor River estuary fed by snowmelt and spring water had larger, older fish that overwintered in the estuary or nearshore environments, and these fish used the estuary for shorter and earlier summer season periods prior to outmigration than did juveniles in the Fox River estuary. Fish in the larger, more complex, glacially fed Fox River estuary were composed of younger age-classes with longer summer residence times and few estuarine overwintering fish. Direct measurements of residence of older age-classes (ages 1–2) previously described were substantially shorter than those in our findings: up to 16 d (Chittenden et al. 2008) to 18 d (Miller and Sadro 2003).

Our observation of estuarine and nearshore overwintering juvenile Coho Salmon has theoretical implications regarding life history variability throughout the species range, though our observations are restricted to a central Alaska coastal population. This estuarine–marine overwintering life history pattern may be simply random movement or a response to a saturated or poor quality lower-river rearing habitat (Murphy et al. 1997) or, conversely, high estuarine habitat quality. Alternatively, it could represent exploitation of higher coastal productivity, forage, and nearshore habitat quality. All of these factors are expected to differ over the species range, even among adjacent systems within the same region. We note that incorporation of materials into the otolith matrix and our sampling regime do not allow us to distinguish between overwintering in the estuary channels themselves or the near shore environments of Kachemak Bay and Cook Inlet. The possibility exists that Coho Salmon enter nearshore

marine environments and rear by moving between a number of fjords and estuary habitats such as those that exist along the shoreline of Kachemak Bay and Cook Inlet. Further research is necessary for an understanding of the drivers and full range of overwintering areas used by these estuarine-resident juveniles.

Although we did not examine the mechanisms driving differential patterns of estuarine habitat use, we speculate that differences in timing of use among estuaries may be due to spatial variability in water turbidity, temperature regimes, and environmental factors that affect channel depths. Use of channels by juvenile salmon is often associated with water depth (Miller and Simenstad 1997; Webster et al. 2007; Hering et al. 2010), which in the glacially fed Fox River estuary increased gradually from mid-June to late August. The glacial run-off led to cooler and less variable water temperatures. Anchor River estuary channels are deepest in early spring during peak snowmelt and become most shallow and warm in mid-July and early August, cooling thereafter with fall rains. We captured most fish in late August in the Anchor River and in late July in the Fox River, suggesting a suitable combination of water temperature and channel depth to accommodate most estuary use.

Our findings also suggest variable use of estuaries by young-of-year and older age-classes of Coho Salmon. Miller and Sadro (2003) and Koski (2009) discuss the potentially important role of the “nomad” or young-of-year Coho Salmon that spend up to 8 months in the upper estuary ecotone and then return to freshwater to overwinter. Although a large proportion of young-of-year migrants exhibited summer season patterns of movement between freshwater and estuaries, we found no evidence of movement to freshwater environments to overwinter. The discrepancy here could be due to differences in the relative size and the definition of the estuary ecotones between our study and others or differences in methods. We defined the upper and middle estuary ecotones in which the sampling sites were located as the intertidal zone (point from highest to lowest tidal fluctuations) and may contain some channels with lower mean salinity levels at the upstream region of the intertidal zone. This may result in fewer fish from lower-salinity channels showing estuary use. We did examine the point measures of salinity across the tidal inundation zone and found that the most upstream channel of the Fox River estuary had generally low salinity (average, <2 mS/cm) with the exception of the spring tidal periods. However, we do not believe this biased our results because the sample size of fish was small and the relative proportion of fish with estuary signatures; i.e., fish lacking estuary signatures was similar to the overall sample (1:5 upper channel, 24:73 in the Fox River sample). Additional differences in our study may result from the variability of the tidal range (>8 m) because the Cook Inlet region is most likely very different from locations where other studies have been completed in lower latitudes. Finally, the methods we employed to determine estuarine residency were direct measures of Sr : Ca ratios (salinity of environment) and fish growth, as determined from the otoliths. Many other studies provide inference from mark–recapture work, which may be

biased to shorter periods and short-distance movements in areas where fish can be efficiently recaptured (Gowan et al. 1994).

Our study raises several interesting questions regarding the importance of the freshwater environment and watershed characteristics and their influence on exploitation of the estuarine environment—a point for future investigation. The influence of the watershed type and availability of suitable upstream rearing habitat may play a role in estuary use. Murphy et al. (1997) discuss the importance of lower-river freshwater areas in large glacial river systems for juvenile salmon rearing. We noted that the Fox River lacks the lower-river freshwater areas discussed by Murphy et al., whereas the Anchor River has ample lower-river habitats. The Anchor River estuary had a large proportion of older, larger resident fish with early entrance dates and shorter summer residence times, whereas the Fox River estuary had a smaller proportion of younger residents entering later and staying longer. This suggests that more suitable and extensive freshwater rearing habitat upstream may exist in the Anchor watershed (to allow for greater growth prior to estuary entry) and that temperature differences (cold glacier melt water versus warmer snowmelt and spring water) may contribute to patterns in growth and emergence timing. All but two of the Anchor River age-2 fish exhibited estuary overwintering during their second winter, implying an important role for the estuary, despite its small extent.

We did not determine the overall proportion of fish using the estuary during the juvenile phase in each population. It is possible that fish using the estuary for any amount of time may only contribute small numbers to the overall population within each river; it is probable that this varies from year to year. Simultaneous study of emigrating juvenile populations in the Anchor River (Gutsch 2012) noted a sudden drop in average length of Coho Salmon juveniles from approximately 100 mm to 80 mm toward mid-summer. These smaller individuals may overwinter within the estuary rather than move to the oceanic environment during a suboptimal period or body size—another possibility that warrants investigation. Regardless of the proportion of the reproductive population that these strategies compose, they contribute a unique suite of behaviors that increase trait diversity of each river's Coho Salmon population, diversity that represents adaptive potential that could contribute to population resilience to environmental change (Schindler et al. 2010).

Some interesting directions for future work include investigating the mechanisms for the differences in length, condition, residence times, and age composition found between fish using contrasting estuaries. We note that a possible nonlinear relationship between fish condition and time may exist in both estuaries (Figure 5). Though we are unable to address this question with our study sample, the possibility of influences of other estuarine environmental conditions on smolt condition (such as temperature and salinity) raises interesting questions for further investigation. A broader understanding of the importance of estuaries to different runs of salmon could be ascertained by determining the proportion of estuary residents in adult returns and how this

proportion varies over space, time, and estuarine complexity. Additionally, an understanding of the connections between the watershed, estuary, and near-shore environments during early marine rearing in Coho Salmon will facilitate strategic and knowledge-based management of these fragile and dynamic areas, thereby providing for resilient fisheries.

Prolonged use of estuary habitats (months during the summer and throughout the winter) may represent a distinct life history strategy that contributes to the overall population life history portfolio (Schindler et al. 2010). It follows, then, that pristine, functioning estuary habitats can contribute to resilience of salmon populations to environmental changes in two ways: (1) by providing a place for some individuals to increase in length and condition prior to ocean entry to improve survival, and (2) by providing for alternative life history strategies. Maximizing both the availability of supplemental habitats and life history diversity is particularly important given increasing human populations that stress land and water resource development and fishery resource use. Gaps in our understanding of environmental influences on life history expression arise from the fact that many of the highly studied salmon ecosystems in the Northeast Pacific are disturbed or substantially altered in some manner that has caused loss of variability in life history traits within populations (Miller and Simenstad 1997; Cornwell et al. 2001; Magnusson and Hilborn 2003; Bottom et al. 2005b; Healey 2009). Managers require a thorough understanding of the suite of environmental factors that influence the structure and survival of exploited fish populations to make decisions that provide the greatest benefit to all stakeholders (Bottom et al. 2009). This need stresses the importance of understanding functioning watersheds to inform management of endangered or threatened stocks.

ACKNOWLEDGMENTS

This work was completed as part of student graduate research and much appreciation is expressed to University of Alaska School of Fisheries professors Franz Mueter and Megan McPhee for their review and guidance of the dissertation work leading to this manuscript. Kachemak Bay National Estuarine Research Reserve provided staff support, facilities, and equipment for completion of this study. Research team members Angela Doroff, Ori Badajos, and Jasmine Maurer provided much appreciated assistance with equipment, data management, and editorial review. We thank volunteer assistants Janet Fink, Jason Neher, Charles Owens, and Michelle Gutsch. Additional staff and equipment support came from U.S. Fish and Wildlife Service, U.S. Geological Survey Alaska Science Center, and the University of Alaska School of Fisheries and Ocean Sciences. Portions of this work were performed at the Advanced Instrumentation Laboratory, University of Alaska Fairbanks, and we thank Karen Spaleta for her guidance in the laboratory. We especially thank Charles Simenstad for his guidance on the project and review of this manuscript and the two

anonymous reviewers for their helpful suggestions. This research was conducted in the National Estuarine Research Reserve System under an award from the Estuarine Reserves Division, Office of Ocean and Coastal Resource Management, National Ocean Service, National Oceanic and Atmospheric Administration. Additional funding was provided by State Wildlife Grants to KBRR, the University of Alaska Fairbanks, and Alaska Experimental Program to Stimulate Competitive Research. All work involving use and handling of animals was completed under the University of Alaska Institutional Animal Care and Use Committee approved sampling plans. Use of trade, product, or firm names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

PROJECT TITLE: Estuary Habitat Use by Juvenile Chinook and Coho Salmon in a Kenai Lowlands (Anchor) River.

PROJECT AUTHORS: Coowe Moss Walker and Brianna Pierce

Project Objectives:

The purpose of the project: This project investigates key aspects of juvenile salmon use of estuaries in south-central, Alaska, including patterns of movement and residence in different estuary habitats.

Objective 1: Research demographic patterns of juvenile Chinook and Coho Salmon movement and residence through different reaches and channel systems in the estuary.

Objective 2: Identify characteristics (metrics) of tidal channels that potentially relate to fish occupancy, residence and feeding.

Summary of Project Accomplishments:

This project explores key aspects of juvenile salmon estuarine habitat use in a snowmelt, groundwater supported estuary of south-central Alaska. We investigated patterns of juvenile fish movement and residence in estuary habitats (objective 1), including different marsh channels and mainstem sites along a tidal gradient, through repeated fish sampling at the sites, tagging, recaptures and antenna detections. Features of those habitats that related to fish use (objective 2) were investigated through stationary loggers and point sampling. Our results revealed distinct environmental characteristics of the different habitats, with dissolved oxygen and water stratification explaining much of the variability between marsh channels and mainstem sites. Eight fish species were regularly captured in the estuary, including Chinook Salmon (*Oncorhynchus tshawytscha*), Coho Salmon (*O. kisutch*), Dolly Varden (*Salvelinus malma*), Sockeye Salmon (*O. nerka*), staghorn sculpin (*Leptocottus armatus*), starry flounder (*Platichthys steallatus*), steelhead (*O. mykiss*), and three-spine sticklebacks (*Gasterosteus aculateatus*). Fish community assemblages differed between the habitats. In 2016, juvenile Chinook Salmon characterized the middle and upper mainstem habitats; however chinook were rarely captured in 2015, likely due to the low adult return of the previous year. After excluding highly abundant young of the year sticklebacks, juvenile Coho Salmon were the most abundant species in the estuary in both 2015 and 2016, averaging at least 25% of the total catch in all of the habitats. Small, age 0 Coho Salmon continued to enter the estuary from June through November. Marsh channel habitats were utilized by juvenile Coho Salmon, and to a lesser degree by juvenile Chinook Salmon. These marsh channels were characterized by large numbers of staghorn sculpin and three-spine sticklebacks in addition to the salmon. Starry flounder and staghorn sculpin were most

characteristic of the lower mainstem site. Data from tagged, recaptured and antenna detected salmon revealed juvenile Coho Salmon residing in the estuary for nearly 11 months, and juvenile Chinook residing for nearly 1 month. Both juvenile Chinook and Coho were documented moving upstream and downstream throughout the estuary, between mainstem and marsh channel habitats. Collectively, project results demonstrate that juvenile salmon use on a broad array of habitat types within the estuary, and highlight the importance of even small estuaries to juvenile salmon growth and resilience.

Study Site:

The Anchor River is located at the southern end of Cook Inlet (Figure 1), where there is a large tidal range (> 8 m depth) that can potentially create broad ecotones of habitat conditions within estuaries. Hydrology in the Anchor River watershed is driven by snowmelt and shallow ground water. The watershed encompasses over 580 square kilometers, including 266 river kilometers accessible to anadromous fishes (Kervliet *et al.* 2013). The estuary at the mouth of the Anchor abruptly transitions into the marine environment of Cook Inlet after flowing through an expansive marsh habitat, protected from maritime storms and erosion by a gravel and sand bar that extends along the shoreline. Measured from high-water tide line to the confluence with Cook Inlet, the estuary is nearly 3 km in length (Hoem Neher *et al.* 2013b).

We established five sites within the Anchor River estuary, representing a range of conditions, including two marsh sites, one located at the lower extent of the vegetated marsh, and one located in a mid-marsh area, and three sites along the river mainstem (Figure 2).

Figure 1. Overview of the middle marsh area of the Anchor River estuary in mid-summer.

Figure 2. Aerial image of the Anchor River estuary, showing sampling locations. Sampling sites: orange stars = estuary marsh habitat; blue stars = mainstem river sampling sites along a gradient from the upper extent of saltwater influence (light blue) to the lower extent of marsh vegetation (dark blue).

Methods

We collected data in 2015 and 2016, at the five established sites. In 2015, sites were sampled approximately once per week from late-July to early-September, with additional sampling in October and November. In 2016 sites were sampled every other week beginning in late May and continuing through September. Continuous depth, temperature and salinity data were collected from stationary loggers placed in each of the marsh channel habitats (Solinst TM 3001 level loggers, Solinst Canada Ltd., Ontario, Canada), calibrated with a Solinst TM 3000 barologger set onsite. Level loggers were set at 15-min recording intervals and placed in 5 × 25 cm plastic housings attached to steel fence posts driven into the substrate. Point measurements were taken for each sampling event at all of the sites to collect data on maximum depth, flow, temperature, salinity, and dissolved oxygen, taken at three points in the water column (just below the surface, mid-water column, and just above the substrate) using a YSI model 30. Turbidity data were collected using a YSI 6600 series data sonde, with a YSI 6136 turbidity sensor (YSI Instruments Inc.)

Fish were sampled by seining; in the marsh channels, block nets (0.3 cm mesh) were placed at both ends of the 25 m reach and fish were captured in three passes with a pole seine (2.2 × 6 m, 0.3 cm mesh). At mainstem sites, a pole seine was pulled 25 m parallel to the bank in the upstream direction in 2015; and in 2016, we used a 20 ft beach seine, pulling either upstream, or across the channel (Figure 3). Fish were counted, identified to

species, weighed, measured, and returned to the channel. Salmon over 55 mm in length received a Passive Integrated Transponder (PIT) tag, and a subset of fish had their stomach contents sampled via gastric lavage. Fish were held in recovery pens in the channel prior to release.

PIT tag reading antennas were established in four sites in 2015, reduced to three sites for 2016 due to one of the sites becoming too dry (Figure 4). Each antenna array consisted of two antennas so that direction of movement could be detected. Antenna efficiency was calculated for segments of time between each sampling event by dividing the number of unique tags detected at the antenna by the number of tags known to have passed through (as determined by detection or recapture) (Table 1).

To compare fish catch samples across sites, we used log transformed catch per unit effort (CPUE), using the first pass from each sampling event.

$$CPUE = \frac{\text{\#fish per area sampled}}{\text{area sampled}}$$

*area sampled = transect length*net curved-width for mainstem sites and
transect length*average channel width for marsh channels.
average channel width = mean wetted width at 5m intervals along the transect at low tide.
CPUE was log transformed*

Figure 3. Fish were captured using pole seines in block-netted marsh channels (A), or beach seining in the mainstem (B). Salmon > 55 mm in length were PIT tagged (C); gastric lavage was used to collect stomach samples from representatives of all age classes of juvenile Coho and Chinook Salmon (D); fish recovered in protected in-stream pens (E).

To estimate the standard growth rate (SGR) of PIT tagged Coho Salmon and staghorn sculpin, we measured the length and weight of recaptured fish (excluding recaptures within ten days of tagging):

$$\text{Standard Growth Rate} = \ln(\text{recap weight}/\text{initial weight})/\text{days since tagging}$$

Figure 4. PIT tag reading antenna locations, shown as yellow bars.

Results

Channel metrics

Environmental conditions varied temporally and spatially in the different estuary habitats (Figure 5). Mainstem sites were consistently deep (~1 m), with stronger flows (> 20 cm/s), salinities near zero, and consistently high dissolved oxygen levels (> 10 mg/L). Both marsh channels had consistently low flows. Marsh channel B (closest to the river mouth), showed a marked response to extreme tide events, with higher and more variable salinities. This is likely due to each channel's connectivity to the mainstem, where a silt sill at the mouth of the channel requires the tide to reach approximately 4.5 m before the channel is inundated. The mid marsh channel, Marsh channel A, by contrast, is always connected to the mainstem. This physical feature enables Marsh channel B to maintain environmental stability during low and moderate tides. Temperatures at all sites generally increased over the course of the field season, although July rains lowered the temperature and correspondingly increased turbidity in mainstem sites, but not in the marsh channels. At times during mid-summer temperatures in mainstem sites consistently exceeded 15°C. Marsh channel sites were generally cooler (rarely exceeding 15°C), and had much lower dissolved oxygen levels, with the mid marsh channel (A) dropping below 4 mg/L in August.

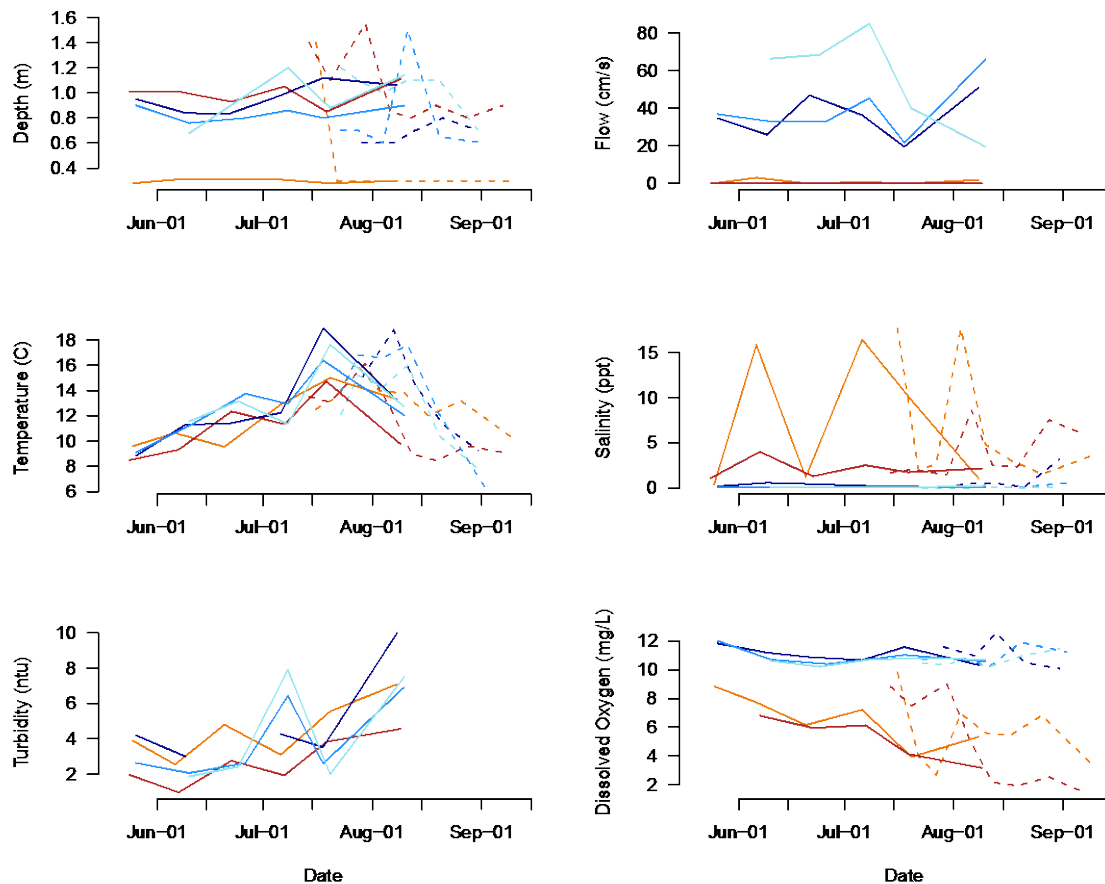

Figure 5. Point measurements of environmental variables over time at each sampling site in 2015 (dashed lines) and 2016 (solid lines). Line colors correspond to sites as indicated in Figure 2 (red = Marsh A, orange = Marsh B, purple = lower mainstem, dark blue = middle mainstem, light blue = upper mainstem). Note: Turbidity and flow were not recorded in 2015.

A Principle Components Analysis (PCA) of environmental variables for 2015 and 2016 revealed that the two marsh channels were distinct from each other, and from the mainstem sites (Figure 6). Substantial variability in the two marsh channels contrasted with the mainstem sites, where the environmental conditions were much more stable. In both years, higher dissolved oxygen levels in the mainstem, and a greater degree of water stratification in the marsh channels were primary drivers of differences in environmental conditions between the different habitats.

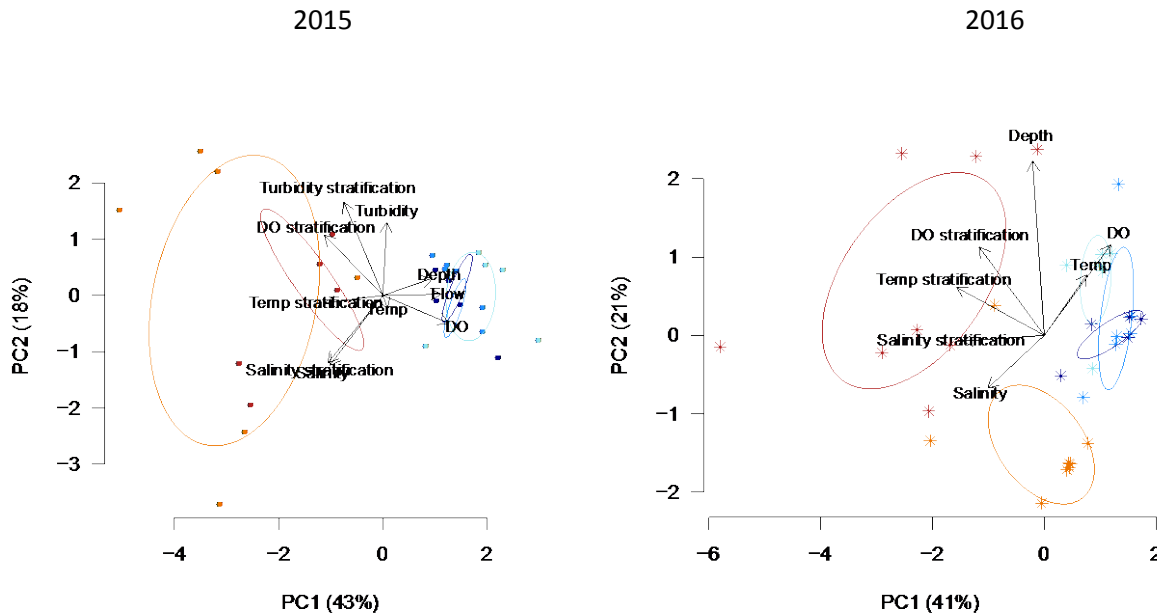

Figure 6. Principle components analysis (PCA) of environmental variables collected during each sampling event for 2015 (left) and 2016 (right). In both years, PC1 explains significantly more variability than would be expected from the null distribution ($p < 0.01$). PC2 is not significant. Points represent individual sampling events and are colored by site, corresponding to colors indicated in Figure 2. Ellipses denote the standard deviation from each site centroid. The association of environmental variables with the principle component axes is illustrated by the vector arrows, with the length of arrow proportional to the variance explained. DO = dissolved oxygen, Temp = temperature. Point readings were taken at three points in the water column (bottom, middle, and surface).

Fish

Similar to other estuaries in Alaska, the Anchor River estuary has relatively low fish diversity. Of the over 16,400 fish sampled, fifteen species were represented, nine of which were present at multiple life history stages, including large numbers of young of the year (< 20 mm) staghorn sculpin and three-spine sticklebacks (Figure 7).

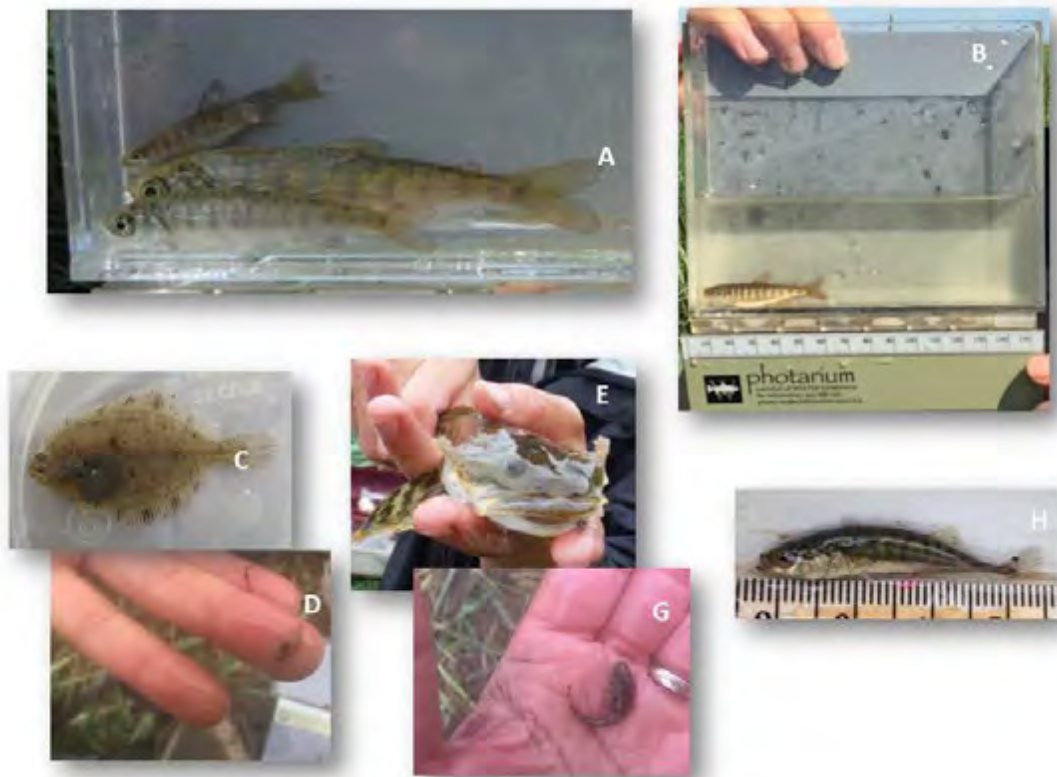

Figure 7. The most abundant captured fish included three age classes of juvenile Coho Salmon (A), juvenile Chinook Salmon (B), starry flounder (C) including young of year (D) staghorn sculpin (E) including young of the year (G), and three-spine stickle backs (H) including young of the year.

Species composition varied across the sites (Figures 8 and 9). Coho Salmon were abundant in all sites, comprising on average nearly three-quarters of the total catch in the mid marsh channel (Marsh A), but only 25% in marsh channel B. In the mainstem channels, Coho were most abundant (although much less so than Chinook Salmon) in the middle mainstem site during late June. Two main pulses of Coho Salmon, one in early June and one in early August, occurred in the marsh channels, and to a lesser degree in the lower mainstem channel, and small, age 0 Coho Salmon continued to enter the estuary into November (Figure 15). Chinook Salmon comprised less than 1% of the catch in 2015, but were commonly found in mainstem sites in 2016. They were abundant early in the season at the upper mainstem site and to a lesser degree in Marsh channel A, with another pulse of juvenile Chinook Salmon at the upper mainstem site in late August. The highest abundance of Chinook Salmon (densities of 4 fish/m²), were in the middle mainstem site in early June. Staghorn sculpin were most abundant in the lower marsh channel (Marsh B), where they increased from June to July, reaching and maintaining densities of 3 fish/m² through early August. Starry flounder were most abundant in the lower mainstem site, and lower marsh channel (Marsh B), with a marked increase in abundance in early August in both marsh channel habitats, as well as the upper mainstem. Dolly Varden were only present in small numbers in the mainstem sites, and three-spine sticklebacks were only present, but in large numbers, in the marsh sites. Small numbers of Sockeye Salmon were captured in all sites, except for the lower mainstem, although they were most abundant in the marsh channels, and Steelhead were found only in the upper and rarely in the middle mainstem site.

Overall, the two marsh channel habitats generally had higher densities of fish than the mainstem sites, with the exception of the middle mainstem site, which had high densities of Chinook Salmon in early June, steadily decreasing throughout the summer. Trends in abundance appear relatively consistent between 2015 and 2016;

**FEDERAL ASSISTANCE

PO Box 115526
Juneau, AK 99811-5526

with the exception of Chinook Salmon, which were only present in very small numbers overall in 2015, and juvenile steelhead, which were rare in 2016.

Figure 8. Average species composition at each site (2015 and 2016 data combined) based on log-transformed catch per unit effort. Staghorn = staghorn sculpin, Threespine = three-spine stickleback.

Figure 9. Boxplot of catch per unit effort of the primary fish species at each site (2015 and 2016 data combined). Staghorn = staghorn sculpin, Threespine = three-spine stickleback.

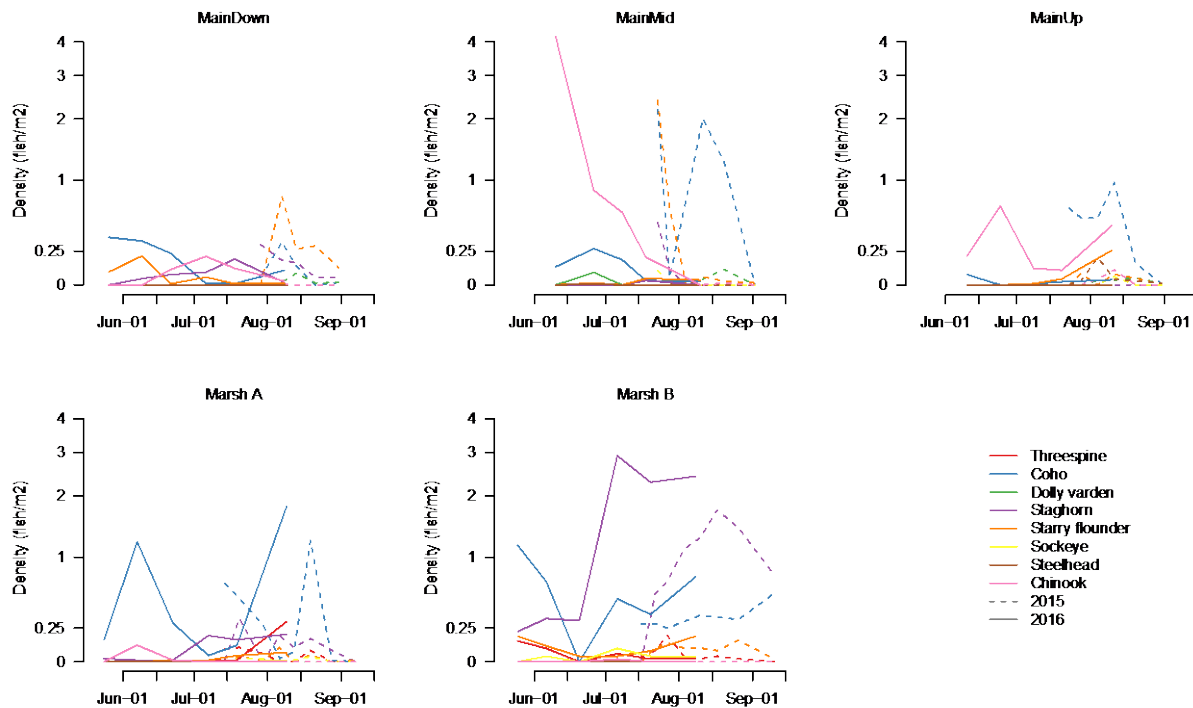

Figure 10. Catch per unit effort over time at each site for the primary fish species. Note log scale on the y-axis. Staghorn = staghorn sculpin, Threespine = three-spine stickleback. Dashed lines are 2015 data, solid lines are 2016 data.

A non-metric multidimensional scaling (NDMS) analysis of relative fish species abundance revealed distinct differences that remained fairly consistent for the two marsh habitats and the lower mainstem habitats. Newly hatched three-spine sticklebacks numerically dominated the fish community in the mid marsh site (Marsh A), staghorn sculpins dominated the lower marsh site (Marsh B), and a mix of staghorn sculpin and starry flounder typified the lower mainstem site (Figure 11). The middle and upper mainstem sites were characterized by Coho Salmon and steelhead in 2015; however Chinook Salmon were the characteristic species for these two sites in 2016 (Figure 11). The middle mainstem site exhibited the most variable fish assemblage in both years, as evidenced by the wide spread of sample points.

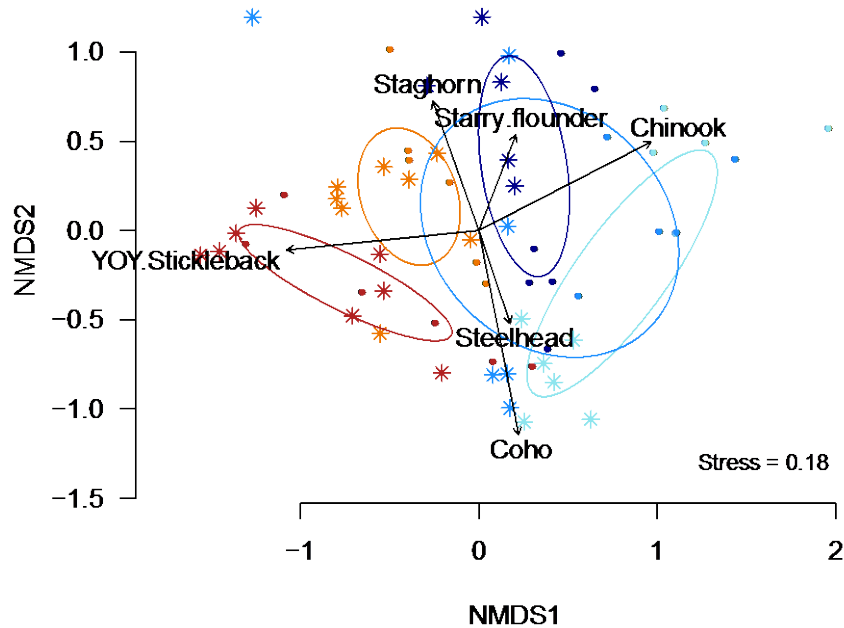

Figure 14. Two-dimensional nonmetric multidimensional scaling plot of relative species abundance for 2015 (stars) and 2016 (points) using Bray-Curtis dissimilarity. CPUE was log-transformed because the data were heavily right-skewed, and then row-standardized to compare relative species abundance across samples. Points represent samples and are colored according to site as indicated in Figure 2. Ellipses represent the dispersion of each site, and are based on the standard deviation to the site centroid. Vectors indicate the magnitude and direction of species loadings (variable weights) on the composite axes. Only those species that significantly contribute to the ordination ($p < 0.01$) are displayed. YOY = young of year sticklebacks (< 20 mm fork length), Staghorn = staghorn sculpin.

In both 2015 and 2016, three age classes of Coho Salmon were present in the estuary habitats. Length frequency distributions for 2015 and 2016 indicates that small, age 0 fish continue to enter the Anchor River estuary throughout the summer and fall (June – November) (Figures 15 and 16).

Movement and residence

Unfortunately, the PIT tag detecting antenna arrays were rarely working in synchrony in 2015, and were inoperable during the winter due to severe icing and tidal movement of large pieces of wood debris. Antenna operation was re-established in April 2016, and we calculated detection efficiencies for each antenna that was consistently operational as the number of unique tags detected by the antenna divided by the number of tags known to have passed through (as determined by detection or recapture). As Table 1 shows, detection efficiencies were marginal during most periods (Connolly *et al* 2011).

Table 1. Detection efficiencies for each PIT antenna in 2016 in approximately two-week intervals corresponding to tagging events at each site.

Data range	Marsh A up	Marsh A down	Marsh B up	Marsh B down
Late May – early June	0.381 (8/21)	0.532 (25/47)	0.571 (16/28)	0.571 (8/14)
Mid June	0.097 (3/31)	0.419 (13/31)	0.533 (8/15)	0.00 (0/2)
Late June – early July	0.654 (17/26)	0.442 (19/43)	--	0.500(2/4)
Mid July	0.714 (5/7)	0.000 (0/4)	0.500 (8/16)	0.00 (0/5)
<i>Overall efficiency</i>	<i>0.388 (33/85)</i>	<i>0.456 (57/125)</i>	<i>0.542 (32/59)</i>	<i>0.400 (10/25)</i>

Over three-hundred Chinook Salmon, the majority of which were in the upper and middle mainstem sites, as well as approximately sixteen-hundred Coho Salmon, the majority of which were tagged in the marsh channels, were PIT tagged between 2015 and 2016; (Figure 17). Although recapture rates of PIT tagged fish were low, they appear to reflect the size distribution of tagged fish, indicating that recapture is not biased by fish size (Figures 15 and 16).

Figure 17. Distribution of PIT tags by site and species in 2015 and 2016. Data extends through 9/2/16.

Through a combination of antenna data and recaptures, we were able to detect fish movement between sites. Although fish were commonly recaptured in the same site that they were first tagged in, they were also frequently recorded in other habitats, indicating a broad range of movement, including upstream and downstream, from the mainstem into marsh channels, and from marsh channels into mainstem habitats (Figure 18).

Figure 18. (left top) A chord diagram indicating the number of recaptured Coho Salmon and their movement among sites (colored by original tagging location); and (right) generalized observed patterns of movement.

Recaptured juvenile Coho Salmon and staghorn sculpin showed an average standard growth rate (% increase in body weight per day) of 1.43% and 3.06%, respectively, over the 2016 season. In terms of length, this corresponds to approximately 0.37 mm/d for Coho Salmon and 0.91 mm/d, for staghorn sculpin (Figure 19).

Figure 19. Growth of recaptured fish over time. Each line segment refers to an individual fish indicating its length when it was initially tagged and subsequently recaptured. Data presented here are from 2016 only, extending through 9/2/16.

Discussion

Coho and Chinook Salmon have different life history types, with some individuals spending considerable portions of their life cycle (1-3 years) in freshwater and estuarine environments before migrating to open ocean. It is believed that this diversity in life histories results in high resilience of these salmon populations to environmental variability and change (Bottom *et al.* 2011). Results from this project show that distinct environmental conditions can exist even within a rather small estuary, such as the Anchor, and that juvenile salmon are present across a broad range of habitats. Juvenile Coho Salmon were present in marsh channels and mainstem habitats, with pulses of small, age 0, fish coming into the estuary throughout the summer and fall. The longest record of estuary residence from this study was a Coho Salmon that was initially tagged in mid-June of 2015 in a small channel near the upper mainstem site that went dry soon after the tagging event. Although we thought that the fish present at that site would be trapped by low river flows, it is likely that high tide events allowed the fish to escape, enter the mainstem, and eventually make its way to the mid marsh channel, where it was recaptured 327 days later (mid-June 2016). Residing nearly a year in the estuary, this fish illustrates the long term use of estuary habitats that may be a distinct life history strategy for juvenile Coho Salmon (Miller and Sadro 2003; Koski 2009, Hoem Neher *et al* 2013a). This adds to the growing recognition that estuaries may support alternative life history strategies of Coho Salmon that contribute to overall population resilience and health (Schindler 2010; Hoem Neher *et al* 2013a; Hoem Neher *et al* 2013b).

Chinook Salmon were predominantly present in mainstem sites, although there was some movement into the marsh channel sites as well. In general, Chinook Salmon had lower residence times within the estuary than Coho Salmon, with the longest record being a juvenile Chinook that was tagged in the middle mainstem site in

early July, and was detected at a PIT antenna nearly 30 days later in the mid marsh channel. Interestingly, two other species; staghorn sculpin and Dolly Varden, also exhibited long residence times within the estuary (189 days, and 231 days, respectively). Few Chinook Salmon were captured in 2015, which is likely due to the very low adult returns of the previous year. In 2014, roughly 2,500 adults returned, whereas in 2015, over 10,000 adults Chinook Salmon returned to the Anchor River, with the result that far more juvenile Chinook Salmon were rearing in the estuary in the 2016 season.

The range of environmental conditions present at the different sites in the Anchor, including fast flowing mainstem sites that are well mixed, with high dissolved oxygen levels, to marsh channel sites that have low flows, and a high degree of stratification, provide a broad suite of conditions, and juvenile salmon apparently take advantage of their ability to move between habitats, as evidenced by the observed movement patterns. Further study is needed to understand the drivers of movement. The presence of other fish species likely has some influence on juvenile salmon. For example, small staghorn sculpin were observed as prey for juvenile salmon, yet will become predators of juvenile salmon when they are larger.

The high densities, prolonged residence, movement and growth of juvenile salmon in the Anchor River estuary support the importance of even relatively small estuaries to juvenile salmon rearing. The amount of movement among estuary habitat types supports the concept of conservation for the entire estuary in order to maintain full habitat potential and resilience.

Subject: Proposed gravel pit on Danver street in Anchor Point

Bruce Wall, My wife and I are another couple who are very disturbed by this proposed gravel pit.

We would first ask you to put yourself in our and our fellow neighbors positions of having a mining operation in our back yard. How would you feel about this for you and your family?? Any other state I have lived in this proposal would not have a chance. This is an area of private homes, not of commercial enterprise! The key points you will consider as I understand it are: dust, noise, and visual impacts. All these are inarguably detrimental to all of us around this proposed mining operation and they can not be minimized.

The destruction of our visual enjoyment of our property can not be minimized because we are on a hill overlooking the proposed mine about 80 feet up, a 6 foot berm is not going to hide this operation. We will then have our retirement home overlooking the Anchor River, Cook Inlet and a gravel Pit! It is also obvious there is nothing they can do to minimize the dust, How?? Excavators, Loaders, rock crushers, dump trucks etc = dust and lots of noise. I hope you will consider your fellow neighbors when making this decision.

thanks for your time and consideration of this matter,

Sincerely,

Joseph and Denise Sparkman

Wall, Bruce

From: Lorri Davis <homesteadart@gmail.com>
Sent: Thursday, July 12, 2018 1:01 PM
To: Wall, Bruce
Subject: Gravel pit at Danver and beach access, Lorri Davis

My comments concerning the proposal for a gravel pit on Danver and the beach access road.

I am a resident of Anchor Point. I was shocked when I heard of a plan to operate a gravel pit in an area where it is quite obvious it is a well established *residential* and *recreation* area. It makes no sense to put one persons desire to run a business of this kind in the area where it will have an impact on all people coming to recreate and live in that area. Anchor Point is a beautiful and bountiful location for families and fisherman. It has been this way for years and a gravel pit right in the middle of it all will become a deterrent to people visiting and enjoying the area. It would adversely affect the economy of Anchor Point in many ways from small businesses, to the boat launch and campgrounds. Here are the reasons I see to not permit this gravel pit.

1. We have well established campgrounds, one that borders on this property and others close by, run privately. A gravel pit next to or near by makes no sense. The noise and dust would be a great downer to anyone trying to enjoy these areas. These businesses will suffer because of it and how can a business so opposite to fishing, wildlife, and recreation fit in this area? This would no longer be a place for recreation. It is like oil and water. They do not mix. It will change the whole perception of the entire area.
2. The beach access road or Anchor Point Rd. will not be able to handle the traffic of large boats, large RV"s and gravel trucks going back and forth. Right now, a person walking on the road is taking their lives into their own hands. The road is somewhat narrow, not to mention the bridge is basically a one lane bridge. Recently there was a gas pad proposal approved on private property just up the hill off the Old Sterling Hwy that will increase truck traffic going back and forth. I am not sure this was even considered with that proposal but I see a huge increase of big trucks on these small windy roads is a disaster waiting to happen.
3. I feel heartsick for the residents who already established homes in the area of the pit. I am sure they never thought they would wake up one day to find their backyard of vegetation, trees and wildlife are to be scoured to unearth gravel. The noise is another factor. Who doesn't enjoy the sound of trucks and machinery over the sound of the ocean and peace and quiet? Many, many of us! I think it is really irresponsible and shows lack of respect for neighbors living in Anchor Point. This will have an impact on everyone's home prices and business prices for sure.
4. The environmental impact to the area is not known but it is not a positive step forward. The Kachemak Bay Bird Festival draws lots of people, every year, from out of state, to the area. One of the areas they encourage Birders to drive to, to observe all kinds of migrating birds is Anchor Point. We all have wildlife sharing our beaches and properties. Take out many acres from this very sensitive area and it will have a direct impact to the amount of wildlife. Noise, dust and loss of habitat is not a positive thing. Personally this is a big concern of mine. I am an artist and have been working on establishing children's art academy for Anchor Point that focuses on introducing kids to the habitat and beauty of Anchor Point. I was looking to purchase a small property in the area for a studio but have now reconsidered due to lack of support for the environment coming from all the proposals that seem to want to change Anchor Point to an industrial area. Frankly, I am really discouraged about the mindset. We have a world class area of recreation known for fishing in the Anchor River and ocean and it seems we would sooner destroy it all for a few people to make financial gains. It goes counter to all groups trying their hardest through volunteer time to their own finances to preserve the river and ocean at Anchor

Point. These are not "tree huggers". They are people wanting to see the area preserved in a way that supports the beauty, wildlife and small businesses that are springing up in Anchor Point that cater to those using the area. The focus is not on gravel for everyone.

In closing, I would like to say there are other profitable things Mr. Trimble can do with that land. It takes getting creative sometimes but subdividing for small cabins or something else that fits in with the mindset when people think of Anchor Point. This would be best for EVERYONE! Gravel pits are a dime a dozen around our area. We do not need more gravel pits! Just take a look at google maps to see all the properties scoured into gravel pits along the Anchor River and other locations. We need the planning committee to understand there are lots of people living in Anchor Point trying to develop a beautiful area for this world class fishing area that draws people to the area including the winter months. I frequent the beach year round and find many others do as well. This is a beloved area and space for people around Ak including those who live out of state but especially those who in live in Anchor Point. Please do not allow this proposal to go forward.

Thank you,
Lorri Davis

Bruce,

Thank you for the opportunity to comment with respect to public water system (PWS) sources. Given the location(s) provided, work associated with this CLUP application is near an active registered PWS source (see attached "DEC_PWS_Map.JPG" and summary table below). For this reason, we ask that the applicant please adhere to the attached **Recommendations for General Construction Projects**, where applicable. Also, because this project is associated with a rock/gravel extraction project, we ask that the applicant adhere to the requirements and recommendations in the "[ADEC User's Manual: Best Management Practices for Gravel/Rock Aggregate Extraction Projects](#)" (Revised September 2012).

- Other Protection Areas

Alaska DEC/Division of Environmental Health-Drinking Water Program

Recommendations for General Construction Projects associated with, or near, a Public Water System (PWS)

1. Identify on a legible map the location of existing public water system (PWS) drinking water protection areas (DWPA) for PWS sources (e.g. springs, wells, or surface water intakes) that intersect the boundary of the proposed project/permit area. The DWPAs can be found using the interactive web map application, "Alaska DEC Drinking Water Protection Areas", located at <http://dec.alaska.gov/das/GIS/apps.htm>. Basic instructions for using this web map can be found at http://dec.alaska.gov/eh/dw/DWP/protection_areas_map.html.
2. Where the project/permit intersects a PWS DWPA, notify the PWS contact. PWS contact information can be obtained using the online application, *Drinking Water Watch*, <http://dec.alaska.gov/DWW/>, by entering the appropriate 6-digit PWS ID (e.g. 220025).
3. Within the identified DWPA, control stormwater discharge.
4. Within the identified DWPA, restrict project/permit activities that could significantly change the natural surface water drainage or groundwater gradient.
5. All data related to the project/permit, including but not limited to, water quality results (field and lab), survey data, water levels, subsurface lithologic descriptions and depth, and groundwater flow direction and gradient information, should be made available to the permitting agency upon request.
 - a. When associated with the development, construction, modification, or operation of a PWS, all water quality sampling and hydrologic data collection should be accomplished under the supervision of a qualified professional and follow a written sampling plan approved by the permitting entity.
6. Limit the amount of equipment storage, maintenance and operation, and other potential sources of contamination, within the following DWPAs:
 - a. Zone A DWPA (several-months-time-of-travel for contributing groundwater, or 1,000-foot buffer of the contributing surface water body and its immediate tributaries);
 - b. Zone E DWPA (1,000-foot buffer of the contributing surface water body and its immediate tributaries for a source using groundwater under the direct influence of surface water (GWUDISW)); or
 - c. *Provisional* DWPA (1,000-foot radius around a PWS source).
7. Implement best management practices where equipment storage, maintenance and operation, or other potential sources of contamination are located within a PWS DWPA and that will minimize the potential for contamination to enter the water source used by a PWS.
8. Immediately notify the nearby PWS of any identified potential contamination, such as spills or excess erosion.

Subject: Gravel permit hearing Monday July 16,2018

Kenai Peninsula Borough Planning Commission
 144 N Binkley St Soldotna, Ak 99669

July 12, 2018

Greetings to the Planning Commission Members,

I am an Alaska resident of Anchor Point and a land owner. This letter is regarding the notice we received concerning a Conditional Land use Permit Application for sand, gravel and peat extraction on their beachfront property of 41.72 acres - proposed excavation is 25.6 acres over a 15 year period by Beachcomber LLC which is owned by Emmett and Mary Trimble of Coastal Realty Anchor Point.

The proposed area is located on Anchor Point Road right in the central recreation area of the Anchor River and the Anchor Point Beach area.

Public Hearing Monday July 16, 2018 7:30pm

A gravel pit operation in this location would negatively impact our neighborhood, our community and the Anchor Point Recreation area. 15 years is a very long time to have a gravel pit operation in our residential area and in the Anchor River, Anchor Point Beach Recreational area!

I would Hope the Commission members would drive to this area before even voting on the application and studying the surrounding map of the area.

In the KPBAK code of ordinances 21.29.040.

Standards for sand, gravel or material sites. A. These material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. Only the conditions set forth in KPBAK 21.29.050 may be imposed to meet these standards:1-6.

1. Protects against the lowering of water sources serving other properties.

Concerning #1

The one test hole that was dug on the North end of the property indicates the the groundwater is 18 feet but does not indicate which way the ground water is moving. The question needs to be proved -does the ground water re- charge the Anchor River?

Also will the gravel pit affect the nearby residential water wells?

On the map made by the McLane Consulting Engineering.....

5 of the Clup Development Notes states.....

Wells within 100' and/or 300' of the excavation area are shown hereon

Excavation below the water table may be proposed at a future time.

Ground water is indicated at 18 ft and proposed excavation is 10 ft deep.

2. Protects against physical damage to other properties

Concerning #2

Lowering the area's properties value seems to me to be "physical damage".

3. Minimizes off-site movement of dust

Concerning #3

The dust will be on a gravel site and the winds in the area will be blowing dust into residents homes, campsites, rv parks.

4. Minimizes noise disturbance to other properties

Concerning #4

I am a year round resident living up the hill from this proposed gravel pit area.

The neighbor hood around the proposed gravel pit is a very quiet area where we can hear the eagles and seagulls even the ocean surf at times carries up the hill.

The Alaska State Halibut Campground is within hearing distance of where the equipment will be operating.

5. Minimizes visual impacts

Concerning #5

Many residents live above this proposed area so we all will be "visually affected".

There are many homes above this property that look out over this area towards the inlet view. A 6ft berm will not be able to cover the gravel pit from the hillside and hill top residents. The gravel pit area is surrounded immediately by residents and an RV park on the North side.

Further impact is the State Parks on the Anchor Point Road which is the only route for the trucks to haul the sand, gravel, and peat from this proposed gravel site. Campers and visitors to the Anchor River and Anchor Point Beach walk this road with their families and children walk and bike along the Anchor Point road back and forth to the beach area very close by.

6. Provides for alternate post-mining land uses

Concerning #6

Alternate land uses were not listed.

According to the Material Site PermittingCulp.....Conditional Land use permits are valid for only 5 years. This permit is requested for 15 years.

I want to state again:

A gravel pit operation in this location would negatively impact our neighborhood, our community and the Anchor Point Recreation area.

I sincerely Hope that you as members will not allow this gravel pit permit application.

Thank you kindly for reading and listening to our concerns for our community.

Teresa Ann Jacobson Gregory
PO Box 904
Anchor Point, Alaska 99556
907-399-0063

I am adding pictures of the area.....the highlighted area is the property proposed for the gravel pit. As you can see the Anchor River and the State recreation areas are very close.

In the second picture you can see all the residential lots in the area where our homes arethese are on a hill above the proposed gravel pit.

The bottom picture shows they have already begun to remove gravel.

To: Wall, Bruce
Subject: KPB CLUP Material site App AKA Beachcomber LLC GRAVEL PIT

Dear Mr. Bruce Wall

Bruce ,

Thank you for fielding and organizing all the public comments in the permitting process, for Beachcomber LLC gravel pit request. It is not an easy job, in my mind.

Therefore, I too appreciate the chance to submit my (our) concerns with regards to the material extraction...IE: Gravel pit. I see staff recommendation is to approve this permit, it appears to be a boiler plate request, but I ask you to reconsider that assessment for the following reasons.

I am aware of section 21.29.040 and .050 list regulations meant to protect the surrounding areas.

So Resolution 2018-23 Section 1 of Finding the Facts

Paragraph 10 item D states water is below 20 Ft, with intention to dig to only 18'

- Permit requester advocates he can dig down 40' for all the gravel he wants. The borough never checks. Thus my concern is to have water holes for swimming, or teenage hang outs bringing increased crime to the area.

Paragraph 10 item E, does not allow the removal of said water.

- Thus in a round about way the Borough has approved these potential water pits. Yes pumping it would bring habitat issues that would allow contaminated water to end up directly into the neighboring property and the Anchor River itself. Thus I also disagree with Nancy Carver that there is no habitat concerns, the loss of gravel will no longer cleanse the ground water that runs to and into the Anchor River, thus this brings us to damages.

Paragraph 11, Other property damage.

- Damage comes in two ways, physical and financial, it has been noted that the connecting property values will decline, while that gravel pit's value will have increased.

- Will the loss of tax revenue from the existing home/property owners be offset by the increase tax revenue from this pit? In this case it is likely that even the Borough will have some damages (monetary) if approving this permit.

➤ There is a complete buffer now in one section next to Beachcomber street and a new camp ground. To tear down those trees only to replace it with a berm for visual buffer, will cause revenue damage since a treed back drop is one reason campers stay there.

Paragraph 12, Dust control:

- As noted in the permit, Danver Road is the haul out road, Danver road is gravel road so calcium chlorides or water would be sufficient, HOWEVER this borough road is not the only haul out road to be used. Danver Road is a dead end road. In order to reach the Sterling Highway, trucks must travel the Anchor Point Beach access road. This is a paved 2 lane no shoulder road. Calcium Chloride does not work on pavement and to continually wet this road would only create a muddy and slippery surface for the other road users. And this does not address the Anchor River Bridge, which cannot support the load.

Paragraph 13 and 14 Minimizing noise and visual impacts

- Other Road users will be extremely impacted with both noise, sights and added dangers from the haul trucks. The Anchor Point Road (beach access road) is a road that is loved to death. It is a highly used road, kids, bikes boats, pets, tourists, 4th of July parades, but not eligible for much financial or DOT support. Heavy commercial use on this already loved to death road will meet its end or someone on it will.
- It is the only way in and out for the families from their home and for beach goers that utilize the boat launch plus there are 5 Camp grounds on this road. And if anything bad happens, no evacuation could occur and no emergency vehicles could get in. There needs to be an alternate route to take out the gravel.
- The vegetation berms, are good, but only if you live at the flat ground level, any one who has a home that looks to the ocean also will have to watch equipment, rock crusher, gravel shaker, the full blown commercial operation.

For these reasons I don't think it passes the grade of the Code,-but each has there own interpretation, do I think it could pass, yes with a bit of fine tuning, versus a standard boiler plate permit version, as it appears now.

Lastly, yes everyone is of the nature that "not in my back yard", so it is easy to protest and complain, but hard to have a solution. Progress comes with a price, and heck who does not have a gravel drive, or pad on their lot, **I simply ask** that the commission post pone the approval until an alternate route can be established. And some of the concerns listed be fined tuned to allow the permitting, Currently there is another gravel pit on the docket, so getting gravel should not be a hardship, and if the Borough needed a reason to finish Danver Road to the south, well that time is now.

Respectfully

Shirley Gruber

Subject: groundwater flow paths south of the Anchor River estuary
Attachments: AnchorEstuaryFlowpaths.jpg

Good morning.

I am attaching an image showing groundwater flowpaths associated with the Beachcomber gravel site and the Anchor River. Parcels owned by Beachcomber LLC are outlined in blue, the Anchor River watershed is outlined in yellow, and groundwater flowpaths supporting the river are shown in purple. It will be very important to not disrupt the flowpaths and keep all potential gravel operations out of the Anchor River watershed, meaning no operations north or east of the yellow line.

Please let me know if you have any questions, or would like more information.

From: Linda and Mike Patrick
34897 Fisher Ct.
Anchor Point, Ak.
Phone: 907-299-2165
Subject: Beachcomber LLC proposed surface mining project

We object to the development of the site on the following grounds:

1. At a public meeting in Anchor Point(July 11, 2018), the Owner of the said Beachcomber LLC. , did not demonstrate much knowledge of the water sources in this area. Water sources are complex, full of wells at different depths and underground springs flowing towards the inlet. In my opinion, this site requires a lot more scrutiny than some other possible inland sites. I cannot prove it will interfere with water supplies, nor can Beachcomber LLC prove that it won't. * Should we not do more than drill one hole in the ground to determine the water ecology in this area due to the close proximity to residential area, Cook Inlet, and the Anchor River.
2. How does this plan protect against damage to other properties? For example, 50,000 cubic yards of material, equates to approximately 5,000 truck loads at about 52,000 pounds each, will this not damage Danver/River Road intersection, River Road itself (which is already falling apart), and a very fragile bridge over the Anchor Point river. This pathway is not only essential to Anchor Point residents, tourists from all over the world, charter businesses, campers in the State Park, and the safety of all who use the narrow road for access to their homes, State Parks, Cook Inlet, and the farthest westerly point on the United States highway system.
3. What is the plan to minimize off-site movement of dust? Regular residential traffic on Danver Rd. stirs up dust. I cannot imagine the amount of dust that will be generated by 1000's of dump trucks, gravel processors, excavating machinery, and gravel loaders. This area is subject to a sea breeze and a land breeze cycle. Sea breezes blow the dust towards residential areas and

land breezes directs dust towards beach habitat where eagles, gulls, shore birds, and marine mammals frequent, not to mention birders and other beachcombers roam. These breezes are substantial. Exactly how is the dust going to be abated and who will monitor this? Will the dust have an effect on human inhabitants near the site? Will dust affect the salmon/trout that swim nearby to enter the river and leave the river? Will dust enter the river itself and effect the reproduction of said fish? Will the dust impact plants, birds, moose, and domestic animals. Will the quality of water in Danver Lake directly across the street from the proposed site be impacted? Will the water level in that lake be impacted? Will lakes be created similar to Danver Lake during land reclamation by Beachcomber LLC. Do these lakes serve as expanded breeding grounds for mosquitoes?

4. Noise pollution abatement plan?

Land structure around the Anchor Point area in question is like an amphitheater, I can hear dogs barking on the bluffs across the river, a rooster crow just down the hill, neighbors talking on their porches, and the surf falling on the beach. I can't imagine how loud the noise would be from a gravel mine a few hundred yards away. How pleasant will it be for people to camp at the state campground with dump trucks roaring by, dust permeating the air from the operating pit and dust blowing off the trucks themselves. And yes, there is a private RV park adjacent to the proposed gravel mine. Several residences are nearby and elevated above the site, 18 foot berms (permit indicated 6ft berms) would not impact sound transmission to elevated residences. My house is about 200 yards away and approximately 80 feet above the tract of land in question. Over the past 26 years I have witnessed over 2 dozen moose born on or adjacent to my property. Will this level of noise impact the moose population in the Anchor Point area?

5. Visual impact? What is the plan to spare the several homes that overlook this area from a higher elevation from an unobstructed view of the pit?
6. Property values? The owner of Beachcomber LLC, a real estate agent, stated this permit would improve the value of his land and in response to another question, he said it could decrease the

value of the surrounding view properties. There were approximately 50 people there at the meeting at the VFW in Anchor Point on the 11th of July. Very few of them were happy.

****** This permit should not be issued for this area because of a lack of healthy infrastructure to support it. It will create an safety hazard to all that travel the River Road and Danver Road. It will impact living organisms (humans, plants, animals) in a negative way with its noise and dust. Keep in mind that this will impact thousands of people who visit this area during the summer. And, it will destroy the property of the Alaskan people in the form of the state maintained road and bridge at a time when the state is in financial turmoil and cannot afford to fix this infrastructure.**

July 12, 2013

Planning Commission Chairman
144 N. Binkley St.
Soldotna, Alaska 99669

RE: Addendum to our written Testimony dated July 9, 2018, Regarding Beachcomber LLC's Application for a Permit for Sand, Gravel, and Peat Extraction on A Portion of Parcel Number 169-010-67, Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104), Location: 74185 Anchor Point Road

Dear Planning Commission:

We attended a meeting last night with Emmitt Trimble at the Anchor Point VFS, who we found out was owner of the land, and Beachcomber LLC's. At the meeting he said, that he had not had anyone come to him about his plan for the above Gravel Pit. He also mentioned he had given his mineral rights over to some (he was not specific on who) oil and gas company, and he only planned to do a small amount of extraction at this time and as neighborhood persons attending this meeting, we should trust him. When asked why he was then asking for these permits covering the whole area, he said he was asking for this permit as there were suppose to be a changes to Kenai Peninsula Borough more stringent regulations sometime in September for Gravel Pits. He wanted to get the permits to cover so he'd have the permit before any new requirements were made.

At the meeting we were told the Planning Board made your determination as to if a party could get these permits was by satisfying the current Regulations: "21.29.040. - Standards for sand, gravel or material sites."

A. These material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. Only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards:

1. Protects against the lowering of water sources serving other properties: (if an oil and gas company took this property area, this might be a factor, which Mr. Emmitt has the right to sell it to.) Plus, the wetland areas, water birds, etc. would be affected by this. Water is like "gold" here to make it drinkable.

2. Protects against physical damage to other properties; our way of exit from Anchor point is from Danver and the State Road, Anchor Point Road, and the Borough Roads, of the old Sterling Highway. (The problems of the roads and physical damage is covered in our original message Under **Public Safety**. We know you aren't interested in hearing about the State road; however, Danver is very important to us. Actually, our road Seabury Court is more a trail then a road in the borough.

3. Minimize the off-date movement of dust: that is pretty hard to do and would require a lot more water, etc. to do this. We lived in an apartment near a gravel area with trucks moving a lot, and the extra dust in the house is tremendous even with care. This can cause more upper respiratory conditions.

4. Minimizes noise disturbance to other properties. In our original written testimony we address that under **General Comments, and Environmental Impact Statement**. The proposed gravel pit site is centered in a large bowl enclosed by 50 to 100 foot hill sides on two sides and most of a 3rd side on the South side. We can hear loud noises in the Park area throughout the summer so we know a large gravel operation to include a major rock crushing operation will disturb us. Heavy trucks that now infrequently use the Anchor River Road and Danver Ave. create noise levels that already create a disturbance. The increased use of heavy trucks and a rock crusher will make our peace and quiet a thing of the past. When asked, if the development of a gravel pit where it is proposed will lower all the homeowner property values at a meeting with him last night, he admitted that all our property values will be lowered due to such activity. The application proposes to operate the gravel pit from 6:00 a.m. to 10:00 p.m.

July 12, 2013

This is unacceptable to us as a private property owners. The idea that a 50 foot buffer on some of the sides of the project is ludicrous. We already know how periodic noise from heavy duty trucks and road graders negatively effect our enjoyment of our property. And thats before the applicant has even removed more trees and natural habitat in the proposed gravel pit area. What are we to do when the applicant himself admits that a gravel pit where he proposes to place it will lower all our property values? It seems this regulation is the only one that has any hope of protecting us from the noise pollution the gravel pit will create.

5. Minimizes visual impacts..even a 12 foot berm is not something to eliminate or minimize the visual impact. (Our testimony on Property Value and General Comments talks to that.)

6. Provides for alternate post-mining land uses. Selling the area to an Oil and Gas Company or another big Gravel Pit company could be done, etc. The permitting doesn't talk to that.

Sincerely,

Gary L. Sheridan

Subject: Opposition to Denver Gravel Pit Project

Dear Sir,

This letter constitutes my wife and I's objection to the placement of a gravel pit at the southwest corner of the intersection of Denver Road and Anchor Point Beach Road. We are property owners and taxpayers at 73734 Seaward Avenue, Anchor Point, Alaska 99665. In our opinion, Beachcomber, LLC has not shown, and has no intention of showing any good faith as a responsible gravel pit owner/operator at this location. The myriad concerns brought up during a recent public meeting at the Anchor Point VFW were met with very negative remarks by Beachcomber, LLC, and with no attempts at offering any solutions to any of the concerns. Our wish would be that Beachcomber, LLC NOT be granted a permit to continue with this venture. Thank you in this matter.

Sincerely,

Tom and Patty Alexander

Re: Conditional Use Permit application for a Material Site by Beachcomber, LLC, at Parcel Number 169-010-67

Dear Mr. Martin:

Reeves Amodio, LLC, submits comments on a Conditional Use Permit application for a Material Site by Beachcomber, LLC, at Parcel Number 169-010-67, on behalf of Robert Baker II as Trustee for the R O Baker II Revocable Trust ("Baker"). Baker owns Parcel Number 169-230-19, at 74160 Seaward Avenue, Anchor Point, AK 99556 ("Baker Parcel"). The Baker Parcel is one of six residential properties bordering Parcel Number 169-010-67, 74185 Anchor Point Road, Anchor Point, AK 99556 ("Beachcomber Parcel") to the south. Beachcomber LLC ("Beachcomber") owns the Beachcomber Parcel.

Baker opposes Beachcomber's application for a Conditional Use Permit for a gravel pit on the Beachcomber Parcel ("Application").

1. A gravel pit at this location cannot be adequately regulated to protect the environment.

The Beachcomber Parcel is bounded to the west by a Cook Inlet beach where eagles regularly feed, seals and sea otters rest and swim, Boy Scouts camp, and local homeowners regularly picnic. To the north is a large undeveloped Bureau of Land Management Parcel (which itself backs up to the Anchor River State Recreation Area), and immediately across the Anchor Point Road is a world-class estuary for the Anchor River itself, which supports three anadromous salmon (king, silver, and pink salmon) plus Dolly Varden and steelhead trout.

Dewatering and drainage will impact groundwater flowing downgradient from the pit and into the Anchor River. The current Application proposes to provide a 2' vertical buffer to groundwater, half of the 4' vertical separation between extraction operations and

the seasonal high water table¹ recommended by the Alaska Department of Environmental Conservation (ADEC). Increasing the risk to groundwater even further, the Application also states that Beachcomber intends to modify the permit and enter the water table in the future. This seems likely to mean that Beachcomber will be dewatering the pit, altering groundwater flow. Fish are sensitive to such alterations, including both dewatering and flooding activities.²

Beachcomber's application is misleading regarding depth to groundwater. Beachcomber drilled its well at essentially the highest point in the parcel,³ adjacent to the lowest point in the parcel.⁴ We believe that sampling at this location, due to the extreme differential from the embankment, provides insufficient data to accurately measure depth to groundwater. In fact, we question whether groundwater is at a 20' depth. Considering that most of the property is at around 40' in elevation, with the highest portion to the southeast, the groundwater is likely to be encountered at much shallower depths throughout most of Beachcomber's property.

Coastal erosion is also factor. Development of this gravel pit adjacent to the beach will exacerbate erosion. Kenai Peninsula Borough (KPB or Borough) records show that the adjacent beach is eroding at a rate of between 0.5-0.9 feet per year. Although Beachcomber is suggesting a buffer of at least 50' to the beach, over the development's lifespan that buffer is estimated to be cut down by up to 13.5'. Climate change and rising sea levels will only exacerbate this erosion. Water is likely to eventually spill into the pit and erode into other adjacent properties.

The Beachcomber Parcel itself holds numerous nesting sites, and our client observed one or more eagle nests. The noise from equipment, traffic, and the crusher, which is likely to exceed 90 dB(A),⁵ the equivalent of operating a lawnmower or a motorcycle,⁶ will harass wildlife and drive it away. Developing a gravel pit at this site will also destroy the high habitat values of the parcel.⁷ Fugitive dust also will be driven by wind from the gravel pit into the estuary, potentially adversely affecting water quality in the Anchor River. Calcium chloride and water will be used to reduce dust generated by trucks and mining operations within the pit, but it cannot be used in winter. Furthermore, calcium chloride will do nothing to address dust generated by operating

⁷ While clearing the trees will also destroy habitat, even a residential development will destroy significantly less habitat, and will ultimately provide continued space for wildlife corridors.

equipment such as the crusher and/or aggregate separator. The Coastal Zone Management Plan adopted by the Borough as a planning document states that, in siting facilities and development activities, the KPB should “[s]ite developments away from highly sensitive wildlife habitats and use area including . . . waterfowl and shorebird nesting, molting, and staging areas; . . . [and] marine mammal haul-outs”⁸

2. A gravel pit at this location will undermine recreational values.

As earlier discussed, noise and habitat destruction could drive wildlife away not only from the Beachcomber Parcel, but also from adjacent federal and state lands, including the Anchor River State Recreation Area. Anchor Point’s economy is significantly influenced by seasonal recreation, in the summer, when construction activities and the gravel pit’s operations will be heaviest. Anglers fishing on the Anchor River only 1500’ away will be negatively affected by equipment noise and fugitive dust. Similarly, campers in the Anchor River State Recreation Area campgrounds, as close as 750’ away, will be affected. With wildlife being pushed away, the opportunities to observe and photograph birds and marine mammals will also be gone.

The Anchor Point Road is the public access to the Anchor River State Recreation Area and the tractor launch permitted by Alaska State Parks. This road is extremely narrow and not designed to withstand the regular use from heavy dump trucks.⁹ Nonetheless, Beachcomber proposes to use the Anchor River Road, adding its dump trucks to the existing car, boat and motor home traffic. It is easy to foresee incidents between local residents or tourists with trucks. There is no shoulder on this road, and it is bordered by ditches. There is a legitimate safety concern.

3. A gravel pit at this location will destroy the residential character of the neighborhood.

Beachcomber is proposing to place a 27.7-acre industrial site in the center of a residential neighborhood. KPB records show 13 “residential” classified parcels either bordering the Beachcomber Parcel or very near to it. Without including the dozen or so parcels classified as “undeveloped” and likely destined to have houses, there are approximately 40 “residential” parcels within 1500’ of Beachcomber’s proposed pit.

There are wetlands in the parcel’s extreme northeast corner. Beachcomber’s only access route will be down Danver Street (which presently serves only residences), onto the Anchor River Road and to the Old Sterling Highway. Danver Street does not satisfy ADEC’s best management practices for access to material extraction sites because it is not a dedicated haul road and it is too narrow.¹⁰ Further, there are well over 100 residences that depend on the Anchor River Road for access. Each of those home owners and their families will be forced to compete with heavy dump trucks in trips to and from their homes, in addition to the summer seasonal traffic. Although the

⁸ CZMP, *supra* n.2, at 114.

⁹ The road suffers significantly just from the existing traffic; even after being paved, the increased seasonal recreational traffic with the tractor launch’s opening, combined with the lack of quality underlayment, causes substantial cracks, ruts, and dips in the road even today.

¹⁰ ADEC USER MANUAL, *supra* n.1 at 46.

Anchor River Road is maintained by the State, Danver Street is a maintained by the Borough. The Borough will see increased road maintenance costs.

Beachcomber proposes only 6' high berms as a buffer for the adjacent residential parcels. This berm will do very little to impede noise into those homes, especially since most were built above grade with crawlspaces because of the high-water tables in the area. A house built on a 3' crawlspace places the top of the berm at a homeowner's waist height. Noise will travel directly to and through windows and doors, even on a first floor. As noted above, noise will exceed 90 dB(A). The windows on the second floors will provide a clear views of Beachcomber's industrial activities; namely, the rock crusher.

A berm will do nothing to prevent children from crossing into the industrial area. It will be an attractive nuisance. Children could play in or on the equipment, creating a public safety hazard. The Beachcomber Parcel is less than a mile from Chapman Elementary School, and children ride bicycles and ATVs to/from the school (as a play area when it is closed) and to and from the Anchor Point beach. Children using the school playground could also be affected by fugitive dust, and, perhaps more significantly, the learning environment will be disturbed by noise from the gravel pit's operation.

Recent testimony before the Materials Site Working Group documented how winds carry gravel fugitive dust from pits onto adjacent residences. One commenter in particular described how in the winter, extreme winds effectively sandblast his home, vehicles, etc. Given the proximity to Cook Inlet and the Anchor River flats, which is located within a HUD wind classification Zone III,¹¹ even a generous application of water or calcium chloride will not stop a 110 mph wind from blasting dust throughout the area.

A person's home is his family's largest financial investment. During recent testimony before the Material Site Working Group, the Borough Assessor stated that although a gravel pit nearby does not automatically reduce an assessment, any comparable sales that show a reduction in home value based on the gravel pit will cause the assessor to reduce assessments for all homes near the operation. Families do not want to live next to an industrial operation, particularly one that runs nearly continuously during the summer. Residents along Danver Street can expect their property appraisals (and assessments) to fall by approximately 36%¹² if the Planning Commission approves the Application.

While Baker recognizes Beachcomber's right to develop its property, he reasonably did not expect a 27.7-acre industrial facility adjacent to his backyard and within his view shed. Based on the development patterns off Danver Street, he reasonably expected low-density rural residential and/or recreational property development for the Beachcomber Parcel. This would

¹¹ FEDERAL EMERGENCY MANAGEMENT AGENCY, WIND ZONE COMPARISONS G-3 (2013), available at https://www.fema.gov/media-library-data/20130726-1501-20490-5921/fema_p85_apndx_g.pdf (last accessed July 13, 2018).

¹² See DIANE HITE, SUMMARY ANALYSIS: IMPACT OF OPERATIONAL GRAVEL PIT ON HOUSE VALUES, DELAWARE COUNTY, OHIO 2 (2006).

July 13, 2018

Page 5

bring more neighbors, more back yards and houses. Under no circumstances is it reasonable to replace those houses with a large industrial complex.

Fundamentally, gravel pits are not pretty. While the 50' buffer the staff recommends may alleviate some of the impacts to the east, it does nothing for Baker and others on the Seaward Avenue parcels to the south. Even the proposed 12' high berm, with no buffer, will not mitigate fugitive dust or muffle sound in second story bedrooms. If it issues a permit, the Planning Commission should require both a 12' high berm and a 50' vegetated buffer around the entire Beachcomber Parcel as a permit condition under its authority in KPB 21.29.050(A)(2)(c).

The staff recommends prohibiting operation of rock crushing equipment between 10:00 p.m. and 6:00 a.m. This condition does not help residents who work nights. Baker, for example, travels to and from his work assignments at odd hours. Furthermore, the noise and dust from a rock crusher operating between 3:00 p.m. to 5:00 p.m. will interfere with after-school activities, including play and homework. Noise and dust from 5:00 p.m. to 10:00 p.m. interferes with families' evening activities (reading, watching television, or conversing with family over dinner). Certainly, 90 dB(A) of noise eliminates the possibility of enjoying any outdoors time in the backyard.

4. Anchor Point does not need an additional gravel pit.

As the Planning Commission is certainly aware, gravel pit development is rampant, and permitting such pits has been a hotly contested issue in the Anchor Point community in the past. KPB records show at least 50 parcels in the area that either qualify as a Prior Existing Use pit or have a Conditional Land Use Permit to operate a gravel pit. While the availability of low cost gravel and a few jobs in the materials industry could be important for a small community, Anchor Point is flush with gravel sites. Many of these pits are in more rural areas. There is no need to authorize a new gravel pit in a residential and recreational area close to Anchor Point's downtown core. There is much gravel already available locally.

5. The Application should be denied until the Kenai Peninsula Borough implements recommendations from the Material Site Work Group.

Earlier this year, the KPB adopted Resolution 2018-004, establishing a Material Site Work Group. The resolution discusses the fact that the last code update took place over 12 years ago and that members of the public expressed many concerns "about dust, noise, water, and negative secondary impacts of material sites." The KPB Assembly's stated intent was to collaborate with the public and industry to discuss changes to the material site code. Numerous homeowners living near existing gravel pits voiced concerns regarding their individual experiences with ruined water, flooding, noise (both from crushers and hauling), and dust. Although the Material Site Work Group took public testimony and considered reclamation, buffers, noise, dust, roads, public safety, and quality of life for home owners, it took no action and adjourned for the summer of 2018 *at industry request* due to the construction season.

Beachcomber wishes to avoid the public concerns being addressed by seeking authorization *while* the changes are being addressed. The Planning Commission should not allow

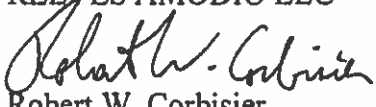

July 13, 2018
Page 6

Beachcomber to use industry's requested delay to avoid community concerns. Rather than grant the application, the Planning Commission should deny or stay the application and process it only after the Material Site Work Group's recommendations are considered and acted upon by the KPB Assembly.

If the Planning Commission is unwilling to deny or stay the Application, it should only approve Beachcomber's Phase I development: the 6.2-acre area in the northeast. At Beachcomber's proposed cumulative acreage disturbance plan over 15-year life, it would take 3.3 years to develop Phase I. This would give the Material Site Working Group and the KPB enough time to develop and implement a comprehensive regulatory scheme that addresses homeowner concerns.

CONCLUSION

For the foregoing reasons, Baker urges the Planning Commission to deny the permit. If it issues any permit, even for the limited Phase I development, the commission should require additional conditions to restrict operational times and require Beachcomber to provide a 50' or greater vegetated buffer along the southern border along with the 12' high berms.

Sincerely,
REEVES AMODIO LLC

Soldotna, AK 99669

To Whom It May Concern:

Thank you for the opportunity to comment on the purposed conditional land use permit for parcel 169-010-67 (applicant Beachcomber LLC).

I am the current owner of Sleepy Bear Cabins LLC located at 34053 North Fork Road, Anchor Point, AK 99556. I have the following concerns and proposals:

1. **Issue - Negative impact to the Anchor River State Recreational Area:** The Anchor Point Community and its businesses rely heavily on the recreation area. Whether directly or indirectly the residents and businesses will be negatively impacted by the noise pollution and industrial traffic the location of this gravel pit will cause. The recreational area is financially vital to the Anchor Point tourism industry. My business as well as others rely on the tourist activity that the park brings for the river, boat launch, and beach. The additional noise of the heavy equipment coming from the gravel pit will disrupt the visitors and park guests. This will drive down the number of tourists wishing to visit the recreational area and therefore Anchor Point, which will financially impact and potentially devastate our local businesses and economy.
2. **Issue - Condition of and safety issue with the Anchor Point Road:** Due to its current condition, the Anchor Point Road is currently not equipped to handle the additional industrial trucks and heavy equipment. The road does not have adequate shoulders or any sidewalks / bike paths for pedestrians and bicyclists. There is great potential not only for the road to be devastated and therefore access to the recreational area to be heavily impacted, but also an increase for accident and injury.

Proposals:

1. **Postpose a decision on this permit:** Allow more time for the Planning Commission as well as residents to further investigate and understand the overall impact to residential property, the Anchor Point Road, the state recreation area, and the Anchor Point community as a whole, and better determine additional requirement that must be met in order for the permit to be issued. the location of the property is unique and therefore poses unique issues. The application appears to abide by the regulations currently in place. However, the current regulations do not take into account the uniqueness of the surrounding properties and recreation area.
2. **If the permit is approved the following additional requirements should be considered:**
 - a. Larger vegetation buffer: The minimum buffer should be more than 50 feet
 - b. All berms should be 12 feet
 - c. The entire property should be required to have vegetation buffers and 12-foot berms (with the exception of the access point to the property)
 - d. The minimum distance from waterbodies should be more than 100 feet and digging below the water table should not be permitted

- e. The applicant should voluntarily restrict operation days and hours to include digging, processing, and hauling as to not impede the quality of life for residents and recreational area visitors (i.e. operating hours 9am-6pm, no operation on weekends, etc.)
- f. Improvements to Anchor Point road should be done to correct the before mentioned issues prior to the permit being approved. A maintenance / repair provision on the part of the applicant should be in place as well

When I moved back home to Alaska four years ago and chose Anchor Point as my new permanent home, I did so to live back in a rural community where nature and the wild of Alaska are out my front door. I am not one to impede another's ability to prosper and do as they wish with their land. However, I do find I am put in a position to speak up when it impedes myself and others from doing the same.

As a community we need to find ways to work together to resolve conflicts of interest to ensure harmony with our neighbors. What is best for one may not be what is best for the majority or the community. Open communication and cooperation are needed to ensure a healthy community. Like myself, I don't believe the majority here wish to live, work, and play in an industrial area.

Thank you for taking the time to read and carefully / thoughtfully consider my comments and proposals.

Sincerely,

Teresa Cosman

Subject: Beachcomber LLC Gravel Pit Anchor Point

Dear Mr. Wall,

I am writing to provide public comment on the proposed material site permit on parcel 169-010-67. As the owner of property adjacent to the proposed material site, I was disappointed that I did not receive a mailed notice from the borough. I did however attend a locally organized public meeting at the VFW at which there was nearly universal opposition to proposed material site.

My primary concerns for the permit are based around safety along Anchor Point Road. As you know, the proposed material site is in the middle of the Anchor River State Recreation Area which is heavily used during the summer months. The community has already met with Representative Seaton, Assemblyman Dunne, Mayor Pierce, and various representatives from the State of Alaska to address the safety issues along Anchor Point Road. We have heavy pedestrian and vehicle traffic on the shoulder-less Anchor Point Road during the summer months, and adding heavy traffic to the road in the form of dump trucks will just exacerbate an already dangerous situation. I have had to move off the road very quickly to avoid being hit multiple times already this year. Adding even more heavy traffic with drivers who are motivated to make quick runs is a recipe for disaster.

This is especially concerning as we've already met with representatives at all levels of the government, and explained our concerns. We have made this concern public via meetings and the press:

http://www.homertribune.com/article/1728anchor_point_petitions_for_state_help

I also thought that it was a bit ironic that as I was driving to the community meeting about the material site, I was tailgated on Anchor Point Road by a 14 yard dump truck. I would ask the planning commission to please solve the access issue (or at least investigate options) prior to issuing a material site permit.

Kind Regards,

David Driggers

Subject: Gravel pit application by Beachcomber llc. on Denver St.

Planning Commission Chairman

Mr Chairman,

I am David Gregory. I live on Seaward Ave where my wife and I own our home, and within 1/2 mile of the proposed sand gravel and peat operation proposed by Beachcomer LLC.

The first and foremost reason I oppose the permit for this operation is the possibility for it to alter the well water activity of wells in the area. This operation would be in the lowest possible point in the area and could cause a lowering of water level in nearby wells.

Secondly is the noise and dust created by machinery and equipment necessary to operate the operation.. Noise travels upward very well. A 6 ft berm is totally insufficient to control that noise. Nor will it control the dust created. Dust is a health hazard to many people and will travel a great distance with the prevailing winds, which quite often blow very strong in that area.

The increase of heavy truck traffic will only increase the undesirable noise and dust. It will also be destructive to the road surfaces.

July 13, 2018

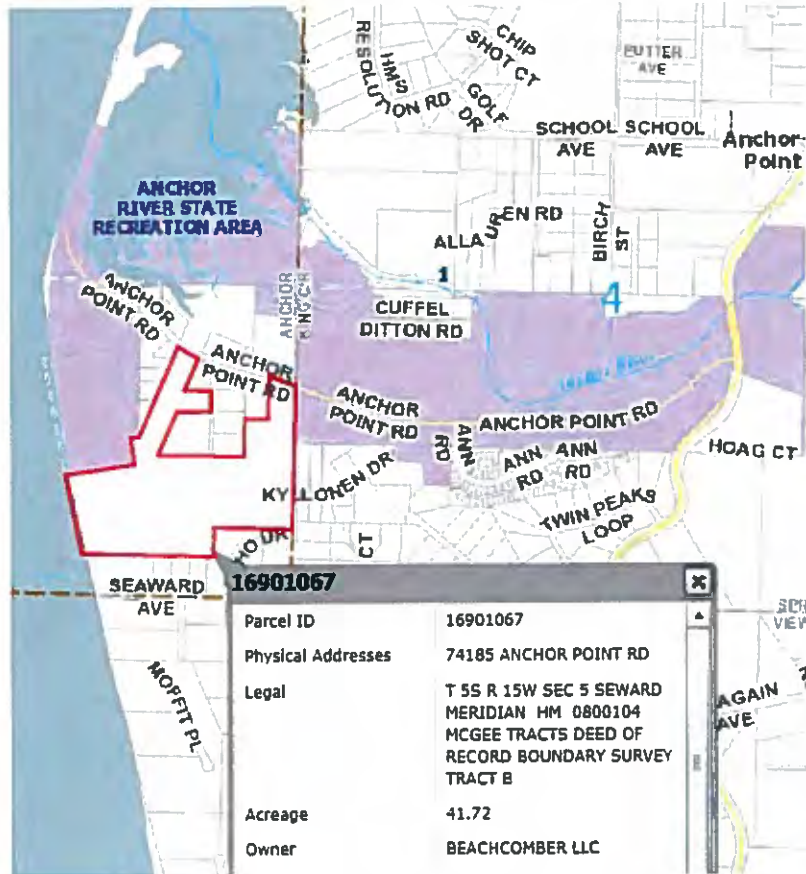

Dear Borough Planning Commission members

At its monthly meeting on July 11, the Homer Soil and Water Conservation District was asked to comment on the Notice of Public Hearing for a Conditional Land Use Permit for a material site. The site is located on parcel number 16901067 and is outlined in red in the map below. Homer Soil and Water supports responsible development of peninsula resources.

We note that the landowner who made this request was given less than a week to submit comments from the date they received the notification in the mail.

Homer Soil and Water Conservation District Board of Supervisors identified a number of questions, issues, and concerns related to the Land Use Permit application. Although the board took no further action at its meeting, it emphasizes that this location for a gravel pit is unique on the peninsula, as outlined below, and that proper vetting of this project is essential.

The LUP site presents unique challenges because of its proximity to the Cook Inlet coast and to coastal processes, including saltwater intrusion, storm surges, and tsunamis. The site is also unique because of its proximity to the mouth of the Anchor River. Finally, the site is adjacent to the Anchor River State Recreation Area (see above). Two campgrounds are very near the parcel.

The Board recommends that the Borough Planning Commission take the extra time it needs to properly consider the unique features of this site before making a final decision on the LUP application. The commission may want to seek information from entities such as the Anchor Point Chamber of Commerce, Alaska Division of Parks and Outdoor Recreation, Alaska Department of Fish and Game, and Alaska Department of Environmental Conservation (because of possible saltwater intrusion impacts to water quality in wells close to the gravel pit). Homer Soil and Water would also urge the Borough Planning Commission to take such comments into full and careful consideration during its decision making.

"To provide education and leadership in the conservation and sustainable use of soil- and water-related resources through cooperative programs that protect, restore and improve our environment."

Thank you for this opportunity to comment, and below is the list of questions, issues, and concerns identified during our board meeting.

- What impacts to the gravel pit are likely given its vulnerability to winter storms and storm surges?
- Specifically, what design features of the proposed coastal berm have been included to prevent storm surges from eroding the berm and causing its collapse?
- Has the applicant identified increased traffic volumes and weight likely on Anchor Point Road as a result of material site operations? How will road impacts be addressed?
- What information has been gathered to determine the likelihood of saltwater intrusion into gravel pit subsoils as a result of reductions in hydraulic pressure caused by removal of gravel?
- Is the gravel pit site within the historic Anchor River floodplain and, if so, what impacts to the river system might occur if the mainstem channel migrated into the gravel pit, for example, during 100-year or larger storm events?
- What information about local rates and impacts of sea level rise have been considered during project planning?
- Is there a long-term goal to establish a harbor at this site? If so, what comprehensive, integrated planning process is now underway to evaluate the long-term use of the area?
- What data have been collected about local noise levels from proposed gravel operations, including gravel trucks, and the effects of noise on campers and residents? Will noise-generating activities be restricted to certain hours?
- Are site-specific reclamation plans available for public and agency review?
- Have the potential economic impacts to tourism been evaluated by the applicant or any other entity?
- As shown in the maps and elevation profile below, much of the site is between 30 and 40 ft above sea level. What will be the greatest depth of material excavation above sea level? What impacts will removal of this overburden have on groundwater levels and nearby water quality?

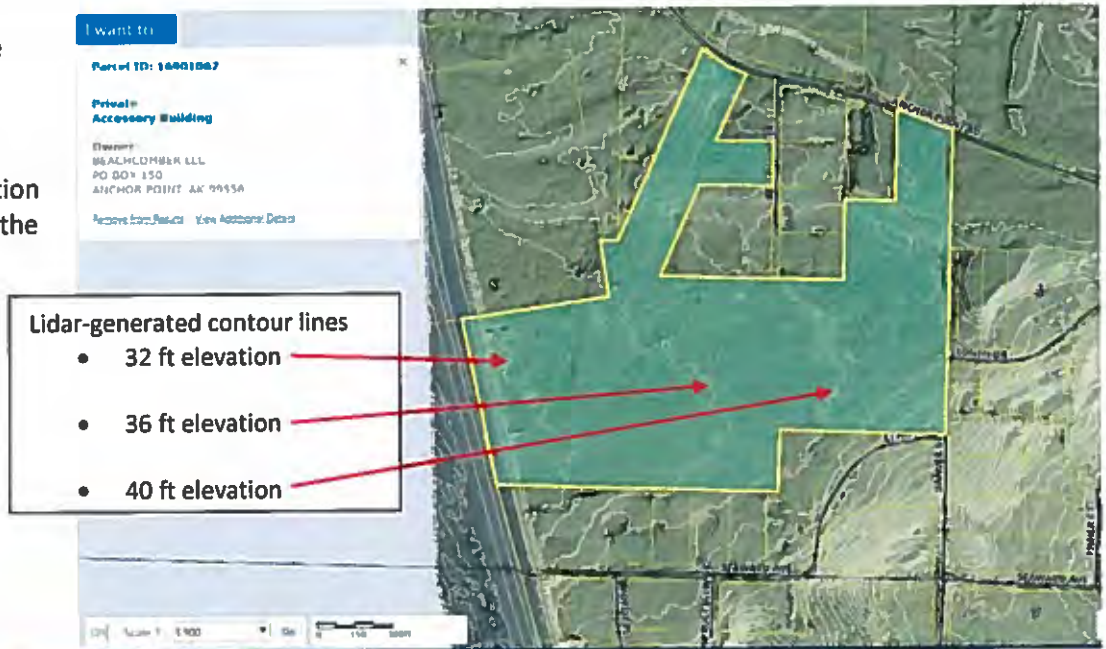

Finally, the borough maintains outstanding geographic information resources readily accessible to the public. Two of these were used to develop the maps included here: the kpb parcel viewer at <http://mapserver.borough.kenai.ak.us/kpbmapviewer/> and the terrain viewer at

<https://gis.kpb.us/map/index.html?viewer=terrain>. Other outstanding kpb gis sites include the anadromous habitat viewer at https://maps.kpb.us/gc/Html5Viewer/Index.html?viewer=P_KRCViewer (which shows recently mapped anadromous stream channel locations in blue, as on the Anchor River above) and the wetlands viewer at <http://maps.kpb.us/wetlands/>.

Providing links to these resources in public notifications, or even better, including such information in notification packets, would enable the public to provide much more informed comments.

Thank you again for this opportunity to comment.

Cc: Hans Bilben
Subject: Gravel mining of Beacomber LLC Tract B McGee Tracts Plat (80-104)
Attachments: Gravel Pit Pictures.zip

To the Planning Commission Chairman,

My name is Lawrence (Rick) Oliver and a longtime resident of Anchor Point. My property is directly adjacent to, and above, the proposed mining sight. Enclosed are pictures of the sight as it is today, as taken from my front deck, and additional pictures of the smaller parcel (adjacent to the proposed plat) from which the applicant has already removed significant material. It is my understanding that the applicant must adhere to certain standards for the removal of material from the proposed sights.

#1 of said standards addresses the lowering of water sources serving other properties. The existence of the substantial lake just below my property indicates that a major mining operation can't help but affect the water source of my property. I'm told there is significant additional information regarding this standard to be presented.

#3 addresses the "minimization of dust to off-site areas". Due to the proposed placement of the processing equipment, ANY on shore breeze will bring that dust to my home, directly across the street.

#4 addresses the noise disturbance to other properties. According to the radii shown on the application, the processing equipment is to be set much less than 300' from my front door. How can the noise and vibration from this equipment be, in any way, "minimized" in my home ?

#5 addresses (again) the "minimization" of visual impact. I'll let the pictures tell that story.

For the record, let it be known that my family and I (along with the other several hundred other people residing in this area vehemently oppose the granting of this permit.

Sincerely,

Lawrence R. Oliver

OPPOSITION TO THE PROPOSED MATERIAL EXTRACTION ON
MCGEE TRACTS

APPLICANT: BEACHCOMER LLC

We, the undersigned adamantly oppose the proposed permit for material extraction in the McGee Tracts / Anchor Point area.

The community of Anchor Point is heavily dependent on recreational use for its annual revenue. There are 5 state campgrounds providing 136 campsites and 31 day use parking and a private RV park providing 58 spaces. During the season there are approximately 40 boats launched each day. The main access to these campgrounds and the boat launch is the Anchor River Beach Road.

Sharing the road with the estimated additional truck traffic will negatively impact the fragile structure of the Anchor Point Beach Road. The proposed seasonal removal of approximately 50,000 cubic yards of material equates to 5,000 truck loads, each weighing 52,000 lbs. The road surface is not such that could withstand this heavy use.

In addition the pedestrian traffic safety would be in jeopardy. The road does not have the standard 2 foot shoulder.

Subject: Beachcomber LLC proposed surface mining permit

We object to the issuance of the permit: for the following reasons:

1. Have Mary and Emmitt Trimbull submitted their reclamation plan to DNR as of 7/6/2018?
2. Regarding the hours of 6: AM to 10:00 PM for the use of the machinery, we consider that time period being excessive because this is a residential area. For example Dibble Creek's hours of operation are 9:00 AM to 4:00 PM.
3. In regard to the P code 21.29.040, what is the plan to protect the water aquifer and road damage. One test hole does not seem adequate. Also the current river road is falling apart. How will that be addressed?
4. What is the seasonal high water table level? How was it determined?
5. We are concerned about this highly congested residential and recreational area in the summer. There are literally thousand of people that live and visit this area.
6. In regard to the water filtration, removal of gravel and topsoil will effect filtration properties of the surface water as is exhibited in "Danver Lake". Will it possibly contribute pollutants to the Anchor River?
7. What is the definition of waiver in regard to the North property line? Staff does not recommend approval of the processing distance waver request. Why?

Subject: Anchor Point Road gravel pit

Dear Mr. Wall,

I am writing today to oppose the gravel pit permits being requested on Anchor Point Rd. I strongly disagree to the possibility of having a gravel pit right by the Anchor River. I believe that area should be under some kind of protection from any kind of ground disturbances.

The people of Anchor Point rely on the tourism and fisheries of this this river and gravel pits and drilling rigs put the area at risk.

A great way to kill a town is to make it ugly and kill the river.

People invest in this Anchor Point because of the fishery and it's peaceful.

I am fed up with our state and borough passing out permits that impact people's livelihoods and investments to line the pockets of the few.

Concerned AP citizens

Subject: Anchor Point Gravel Pit

I just got word that about the prospect of a gravel pit somewhere in the vicinity of Danver street in Anchor Point. I strongly object to this project due to its location in a residential and recreational area. Please carefully consider other options elsewhere for this activity!

Thank you,
Carla J. Milburn

July 10, 2018

Dear planning commission,

I am writing this letter to express grave concerns and objection to the proposed Gravel Pit permit that is pending for Beachcomber LLC. here in Anchor Point. I have listened to many folks speak of the noise and the lost view that will impact their homes, but my concern goes beyond a personal level.

This gravel pit has no business being allowed with the Anchor River flowing within 200 yards of the Northside of the property. The fisheries are a resource that many enjoy and the potential for damages to our water is real and likely. The roadway that follows the anchor river is a rural, narrow, road and is in need of repair. The State and the Borough, both do not have the funding to fix this recreational road, let alone, allow heavy equipment and trucks to run the road daily.

There are many gravel pits in the Anchor Point area, several are taken good care of, but there are others that are an absolute mess and eye sore. I read the regulations and they state that ADEC and others enforce the rules. I find that interesting since the North Fork road has open, unsightly pits at this very minute. Who will tell Beachcombers LLC, to fix the roads and waterways when they violate these rules, how can we be sure that we don't end up with one of those less maintained areas?

The coastal water runs on the edge of this property, and the area is wet normally, the chances of hitting ground water and mixing the surface and ground water is huge. Surely, you do not think that this group will self-report that they have violated the water rules before it becomes a massive expensive cleanup?

I find this permit request surreal. The level of greed that this landowner demonstrates is of no benefit to the community. The fact that the borough could allow one person to effect so many taxpayers and landowners in one area, is shocking. I have heard the tale that this landowner could not sale the land and that is why he is requesting to have this permit. I did my homework and he was offered money for that land several times and each time he quoted an unreasonable amount , this information alone indicates that this individual had another plan and a one sided plan it is!

Gravel pits are not meant to be dug in river bottom areas especially along a fishery such as the Anchor River. This is a disastrous plan and will effect generations of citizens if allowed to move forward. Please consider the ramifications and reject this permit.

Respectfully

Mark and Lee Yale

This message is for Syverine Bentz, and perhaps any other commissioner with an interest regarding the above referenced item.

Good Afternoon, Syverine

My name is Shirley Gruber, and through contact with W. Dunne, he has suggested that I reach out to you with regards to the subject gravel permit request.

Currently at this point, I am sending my comments that were already submitted, but did not see them included in the meeting packet. I guess I just want to make sure they are available and perhaps considered in the decision process. Yes, they were submitted in time...

Please note that I am not really in support of a gravel pit, but then who is, but an alternative product removal route would really ease some of the stress myself and the community are experiencing. I understand, progress brings compromise.

I wish to thank you in advance for any consideration you can give to address my concerns.

Regards

Shirley Gruber

Subject: KPB CLUP Material site App AKA Beachcomber LLC GRAVEL PIT

Dear Mr. Bruce Wall

Bruce ,

Thank you for fielding and organizing all the public comments in the permitting process, for Beachcomber LLC gravel pit request. It is not an easy job, in my mind.

Therefore, I too appreciate the chance to submit my (our) concerns with regards to the material extraction...IE: Gravel pit. I see staff recommendation is to approve this permit, it appears to be a boiler plate request, but I ask you to reconsider that assessment for the following reasons.

I am aware of section 21.29.040 and .050 list regulations meant to protect the surrounding areas.

So Resolution 2018-23 Section 1 of Finding the Facts

Paragraph 10 item D states water is below 20 Ft, with intention to dig to only 18'

- Permit requester advocates he can dig down 40' for all the gravel he wants. The borough never checks. Thus my concern is to have water holes for swimming, or teenage hang outs bringing increased crime to the area.

Paragraph 10 item E, does not allow the removal of said water.

- Thus in a round about way the Borough has approved these potential water pits. Yes pumping it would bring habitat issues that would allow contaminated water to end up directly into the neighboring property and the Anchor River itself. Thus I also disagree with Nancy Carver that there is no habitat concerns, the loss of gravel will no longer cleanse the ground water that runs to and into the Anchor River, thus this brings us to damages.

Paragraph 11, Other property damage.

- Damage comes in two ways, physical and financial, it has been noted that the connecting property values will decline, while that gravel pit's value will have increased.
 - Will the loss of tax revenue from the existing home/property owners be offset by the increase tax revenue from this pit? In this case it is likely that even the Borough will have some damages (monetary) if approving this permit.
 - There is a complete buffer now in one section next to Beachcomber street and a new camp ground. To tear down those trees only to replace it with a berm for visual buffer, will cause revenue damage since a treed back drop is one reason campers stay there.

Paragraph 12, Dust control:

- As noted in the permit, Denver Road is the haul out road, Denver road is gravel road so calcium chlorides or water would be sufficient, HOWEVER this borough road is not the only haul out road to be used. Denver Road is a dead

end road. In order to reach the Sterling Highway, trucks must travel the Anchor Point Beach access road. This is a paved 2 lane no shoulder road. Calcium Chloride does not work on pavement and to continually wet this road would only create a muddy and slippery surface for the other road users. And this does not address the Anchor River Bridge, which cannot support the load.

Paragraph 13 and 14 Minimizing noise and visual impacts

- Other Road users will be extremely impacted with both noise, sights and added dangers from the haul trucks. The Anchor Point Road (beach access road) is a road that is loved to death. It is a highly used road, kids, bikes boats, pets, tourists, 4th of July parades, but not eligible for much financial or DOT support. Heavy commercial use on this already loved to death road will meet its end or someone on it will.
- It is the only way in and out for the families from their home and for beach goers that utilize the boat launch plus there are 5 Camp grounds on this road. And if anything bad happens, no evacuation could occur and no emergency vehicles could get in. There needs to be an alternate route to take out the gravel.
- The vegetation berms, are good, but only if you live at the flat ground level, any one who has a home that looks to the ocean also will have to watch equipment, rock crusher, gravel shaker, the full blown commercial operation.

For these reasons I don't think it passes the grade of the Code,-but each has there own interpretation, do I think it could pass, yes with a bit of fine tuning, versus a standard boiler plate permit version, as it appears now.

Lastly, yes everyone is of the nature that "not in my back yard", so it is easy to protest and complain, but hard to have a solution. Progress comes with a price, and heck who does not have a gravel drive, or pad on their lot, **I simply ask** that the commission post pone the approval until an alternate route can be established. And some of the concerns listed be fined tuned to allow the permitting, Currently there is another gravel pit on the docket, so getting gravel should not be a hardship, and if the Borough needed a reason to finish Danver Road to the south, well that time is now.

Respectfully

Shirley Gruber

To: Hans <catchalaska@alaska.net>

File No.: 3130-4R Private-Jeanne Bilben
 2018-00873

Ms. Bilben,

The Alaska State Historic Preservation Office (AK SHPO) received your request for information regarding known historical sites in the area of a proposed gravel mine. Upon review of the Alaska Heritage Resources Survey (AHRs) database there are two reported cultural resource sites in the area of the proposed mining.

- SEL-00280, prehistoric site, reported to consist of two house pits. Location is represented as a large polygon, exact location of features is unknown but current projected boundaries are within the proposed mining area.
- SEL-00281, historic graves and possible cache pits, reported to consist of 5 graves that at one time had grave markers, depressions tentatively described as cache pits were reported north of the graves. Location is represented as a large polygon, exact location of features is unknown but current projected boundaries are within the proposed mining area.

In Alaska there are two historic preservation laws that *may* apply unless the project is entirely private in nature:

- Alaska Historic Preservation Act (AHPA): State law requires all public construction or improvement activities conducted by, or requiring licensing or permitting from, the State of Alaska to comply with the Alaska Historic Preservation Act (AS 41.35.070). This also

includes required reporting of historic and archaeological sites on lands covered under contract with or licensed by the State or governmental agency of the State. This would include any material sources used under contract with the State.

- **National Historic Preservation Act (NHPA):** If there is Federal involvement (financial assistance, permit, license or approval) with the project it is the statutory obligation of the lead Federal agency to comply with Section 106 (36 CFR § 800) of the National Historic Preservation Act, which requires the Federal agency to take into account the effects that their undertaking may have on historic properties.

Were either of those laws to apply, our office would be likely to request that an archaeological survey is conducted to verify the site locations and assess the potential effects of the project pursuant to the applicable historic preservation law. In addition, there are State laws regarding the discovery and/or intentional disturbance of human remains, this pertains to ALL lands in Alaska, including private. I have attached our handout regarding human remains.

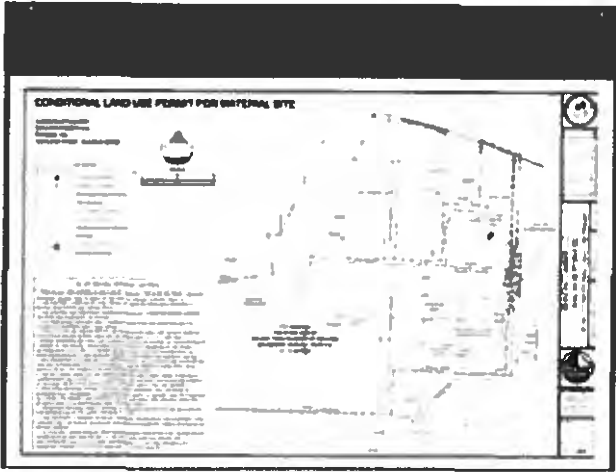

Due to the lack of clear information regarding the site locations our office strongly encourages the use of a qualified cultural resource professional to verify the site locations/boundaries, and offer recommendations to avoid adverse impacts to cultural resource sites by the proposed gravel mine. I have attached a list of cultural resource professionals for your reference if a survey is chosen to be conducted.

Thank you for contacting our office, if we can be of further assistance please let me know. Our website may also provide useful reference at <http://dnr.alaska.gov/parks/oha/index> .

GUIDELINES

Laws and Protocols Pertaining to the Discovery of Human Remains in Alaska

The treatment of human remains following inadvertent discovery is governed by state and federal laws, land status, postmortem interval (time since death), and biological/cultural affiliation. First and foremost, the site of discovered remains should be regarded a potential “crime scene” until a person with appropriate expertise and authority determines otherwise.

State Laws:

Several State laws are applicable to the discovery of human remains in Alaska. The State Medical Examiner (SME) has jurisdiction over all human remains in the state (with rare exceptions, such as military aircraft deaths), regardless of age.

AS 12.65.5 requires immediate notification of a peace officer of the state (police, Village Public Safety Officer, or Alaska State Trooper [AST]) and the State Medical Examiner when death has “been caused by unknown or criminal means, during the commission of a crime, or by suicide, accident, or poisoning.”

In this regard, contact the Alaska State Troopers in the applicable region first. (See list of contacts on following page.) The AST has interpreted notification procedures as applicable to all remains, including ancient remains.

AS 11.46.482(a)(3), which applies to all lands in Alaska, makes the “intentional and unauthorized destruction or removal of any human remains or the intentional disturbance of a grave” a class C felony.

AS 41.35.200, which applies only to State lands, makes the disturbance of “historic, prehistoric and archeological resources” (including graves, per definition) a class A misdemeanor.

AS 18.50.250, which applies to all lands in Alaska, requires permits for the disinterment, transport, and reinterment of human remains. Guidance and permits are available from Health Analytics & Vital Records (see attached list of contacts).

Federal Laws:

On Federal lands and Federal trust lands, the unauthorized destruction or removal of archaeological human remains (i.e., more than 100 years old) is a violation of 16 USC 470ee (Archeological Resources Protection Act). If human remains on federal or federal trust lands are determined to be Native American, their treatment and disposition are also governed by the Native American Graves and Repatriation Act (NAGPRA) of 1990 (PL 101-601; 25 USC 3001-30013; 104 Stat. 3048-3058; 43 CFR 10). NAGPRA also applies to Native American human remains from any lands if the remains are curated in any institution that receives federal funds.

General Guidance:

Your first contacts should be the regional Alaska State Troopers, the Alaska State Medical Examiner’s Office, local law enforcement, AST/Missing Persons Clearinghouse, the Alaska Office of History and Archaeology, and the landowner.

In many instances, the field archaeologist must make a judgement call regarding the age of the remains, his/her level of confidence in the evaluation, and whether further investigation by a specialist is warranted. While notification under State Law is required, peace officers and the SME generally regard archaeologists competent to make these type determinations and welcome input that may assist with the investigation. With regard to ancient remains (> 100 years old), the SME and AST will generally defer to the opinion of the field archaeologist and require no further criminal investigation. However, the remains and a surrounding buffer area should not be disturbed until appropriate reporting and consultation have occurred.

To: Wall, Bruce <bwall@kpb.us>
Subject: Denver Gravel Pit

Dear Mr Wall,

It has come my attention that I must address the land valuation issue concerning a gravel pit owned by Emmitt Trimble on Denver Street in Anchor Point. A neighbor mentioned they were just sold a piece of land (of high value) and was never informed by the realtor, Coastal Realty, Mr Trimble, that he owned a gravel pit nearby. A terrible breach of ethics concerning our new community members! This is not the only neighbor expressing concern.

As any prospective land owner would have considered for this neighborhood on Denver Street, I would not have chosen to buy land at the value I purchased it at had I known it would be devalued by the installation of a gravel pit in this vicinity.

There is an older gravel pit owned by Buzz Kyllonen that has caused much controversy in the area. The care for it has been problematic and dangerous. The pond there has high sides with little slope and no attempt to warn or protect the public of the whereabouts or dangers contained therein. Furthermore, the Beach Rd is considered a lower category highway, too narrow for heavy traffic.

It is my observation that many of the land owners with \$.25million or more homes in this area would be displeased at the prospect of a gravel crusher in their front yard. The Kenai Peninsula Borough may find themselves looking at potential lawsuits concerning this matter.

Respectfully Yours,
Paul Roderick

Kenai Peninsula Planning Department
144 N. Binkley St.
Soldotna AK. 99669

Dear Planning Commission,

Kachemak Bay Conservation Society (KBCS) is a nonprofit grassroots organization with over 80 members who live and work in the area of Kachemak Bay at the southern end of the Kenai Peninsula. For over 35 years KBCS has come together to work for protection of the environment of the Kachemak Bay region and encourage sustainable use and stewardship of local natural resources through advocacy, education, information, and collaboration. Please accept the following comments on behalf of the members of KBCS.

The proposed Resolutions 2018-22 & 2018 13, before you this evening have major ramifications to the health of the Anchor River Drainage and fishing industry that depends on the Anchor River. The fact that the proposed Resolution 2018- 22 spans the North Fork of the Anchor is appalling. The question of water quality ramifications has certainly not been answered nor has a ground water flow been considered. The effects of these two developments is not understood nor considered at this point.

Fort the above reasons it is prudent, and paramount that these Resolutions, 2018-23 & 2018-22 be rejected or postponed.

With the Borough looking at new Gravel Pit Extraction Regulations in the near future it would be prudent to put off any decision until such time as this is accomplished and a better understanding of the effects these pits could have on the surrounding ecosystem is understood.

The Kachemak Bay Conservation Society (KBCS) which represents all it's members on this issue strongly states that more thought has to go into these two resolutions and hopes that NO Action will be taken to move these forward at tonights meeting.

Sincerely,
Roberta Highland
President, Kachemak Bay Conservation Society

Hartley, Patricia

Subject: Comments for tonight's meeting
Attachments: Comments for tonights meeting.docx

Good afternoon,

Please give these comments to tonight's meeting on Beachcomber LLC's proposed gravel pit. Comments are attached.

Thank you,
Christy Elmaleh

Dear Kenai Peninsula Borough Planning Committee,

I am unable to make it to tonight's meeting because of my work schedule, but I wanted to submit my comments on Beachcomber, LLC's proposed gravel pit.

I am opposed to this gravel pit.

My husband, two young children, and I own a property on Seabury. I take my dog, infant, and six year old walking past that property on a regular basis. Sadly, if this proposed gravel pit is approved, the increase in traffic will prohibit me from being able to safely take my children on a walk down that road.

I am also opposed to this gravel pit because it will lower the property values in our neighborhood.

Another reason I am opposed to this gravel pit is that it is right across the road from a state recreation campsite. Revenues that the state gathers from this campsite will be lowered, as many people prefer not to camp across for an industrialized area.

My family bought our house specifically because of the proximity to the state recreation area. We want our children to grow up in a natural, peaceful, and safe part of town.

Please join me in opposing Beachcomber LLC's request for a gravel pit. Thank you for your consideration.

Sincerely,

Christina Elmaleh

Re: Resolution 2018-23; Beachcomber LLC Proposed Gravel Pit & Milling Operation at the Mouth of the Anchor River (KPB Parcel No. 16901067)

Dear Mr. Best & Planning Commission Members:

Please accept these comments on the above-referenced gravel pit and milling operation proposed at the mouth of the Anchor River.

Cook Inletkeeper is a community-based nonprofit group formed by concerned Alaskans in 1995 to protect the Cook Inlet watershed and the life it sustains. Inletkeeper is intimately familiar with gravel pits and their potential impacts: over the past twenty-plus years, Inletkeeper has reviewed many dozens of gravel pit proposals, and responded to many groundwater, surface water, habitat and other concerns regarding gravel pits.

Gravel pits provide an invaluable service to our community; we all use gravel and it's literally and figuratively a foundation for our local communities. At the same time, gravel pits highlight some of the thorniest conflicts between allowable uses, because in the alluvial systems found on the Kenai Peninsula, extractable gravel resources often lie in close proximity to the lakes, streams and wetlands that support our wild salmon. And wild salmon drive our local economies, and in many ways, define what it means to be Alaskan.

The current KPB Material Sites Ordinance is woefully inadequate to protect the water and wetlands resources that support our salmon, and other local, state and federal laws and rules fall far short too. That said, the current application fails to meet even current KPB gravel pit standards.

The Material Site Ordinance is “intended to protect against aquifer disturbance...to protect[] against the lowering of water resources serving other properties.” KPB Ordinance 21.29.040(A)(1). For all Conditional Land Use Permits (CLUPS), the applicant must maintain a two-foot vertical separation from the “*seasonal high water table*.” KPB Ordinance 21.29.050(A)(4)(c) (emphasis added). Yet the application merely states groundwater depth was determined by “[t]esthole on parcel and exposed surface water to the north.” The application does not indicate the timing of the test hole, and whether it accurately reflects the “seasonal high water table.” As a result, the application is incomplete and should be rejected because it fails to provide the information needed to “protect against aquifer disturbance” as required by KPB Ordinance.

The complexity of our salmon systems cannot be overstated, and the interplay between surface water and groundwater near the mouth of the Anchor River is vitally important for the health of our wild salmon. The comments from the National Estuarine Research Reserve highlight the connectivity between the proposed gravel pit site and the Anchor River estuary, and reveal the importance of the estuary to salmon at various life stages. These issues take on additional importance because the application states a desire to mine into the water table at some point in the future.

While many believe the Planning Commission has its “hands tied” by the KPB Material Site Ordinance, the fact is that the Planning Commission has broad delegated authorities to investigate and make recommendations to the Assembly:

Investigation and recommendation authority. The planning commission may consider and investigate subject matter tending to the development and betterment of the borough and make recommendations as it considers advisable to any department of the borough government and to the assembly. The commission may make or have made surveys, maps or plans.

KPB Ordinance 2.40.050.

Accordingly, the Planning Commission has considerable discretion here, and due to the considerable public controversy surrounding this application, and in light of its close proximity to the mouth of one of the most recognized salmon streams on the Kenai Peninsula, we recommend the Planning Commission undertake additional investigations to answer the following questions:

- What is the seasonal high water level?
- What is the rate and direction of groundwater flow?
- What effects will flow from the removal of peat and other vegetation with regard to surface runoff?
- How much dust and dirt will enter the Anchor River through airborne deposition from gravel extraction, milling and hauling activities under prevailing conditions?

These are but a sampling of questions which need to be answered if we hope to maintain the ecological integrity of the Anchor River. As we all know, the Anchor River is under incredible stress, and piecemeal development, warming stream temperatures, overharvest and habitat impacts are playing out the "death by a thousand cuts" problem that has plagued wild salmon systems elsewhere.

Therefore, in addition to the request to reject this application – or at least defer it for future consideration until the application is complete - we call on the Kenai Borough Assembly and the Planning Commission to put a moratorium on all gravel pit authorizations until the Material Sites Task Force has completed its work and adopted enforceable standards that will protect our public land, water and fish resources.

Thank you for your attention to this important issue, and please do not hesitate to contact me with any questions at 907.299.3277 or bob@inletkeeper.org

Yours for Cook Inlet,

ADDITIONAL INFORMATION

Petition to Reject Proposed Sand, Gravel, and Peat Extraction near Danver St., Anchor Point, Alaska

We, the citizens of the town of Anchor Point, petition the Kenai Borough to reject the proposed sand, gravel, and peat extraction permit application submitted by Mary and Emmitt Trimble of Beachcomber LLC.

The negative impact to the surrounding residential properties renders the proposed operation intolerable with regard to noise, dust/dirt, damage to roadways, decrease in property values, and devastation of the natural beauty of the view we currently enjoy.

We respectfully demand that the Kenai Peninsula Planning Commission reject the proposed permit. We hope that the Trimbles will find a more suitable location for their excavation business.

 2018-00873

Ms. Bilben,

The Alaska State Historic Preservation Office (AK SHPO) received your request for information regarding known historical sites in the area of a proposed gravel mine. Upon review of the Alaska Heritage Resources Survey (AHRIS) database there are two reported cultural resource sites in the area of the proposed mining.

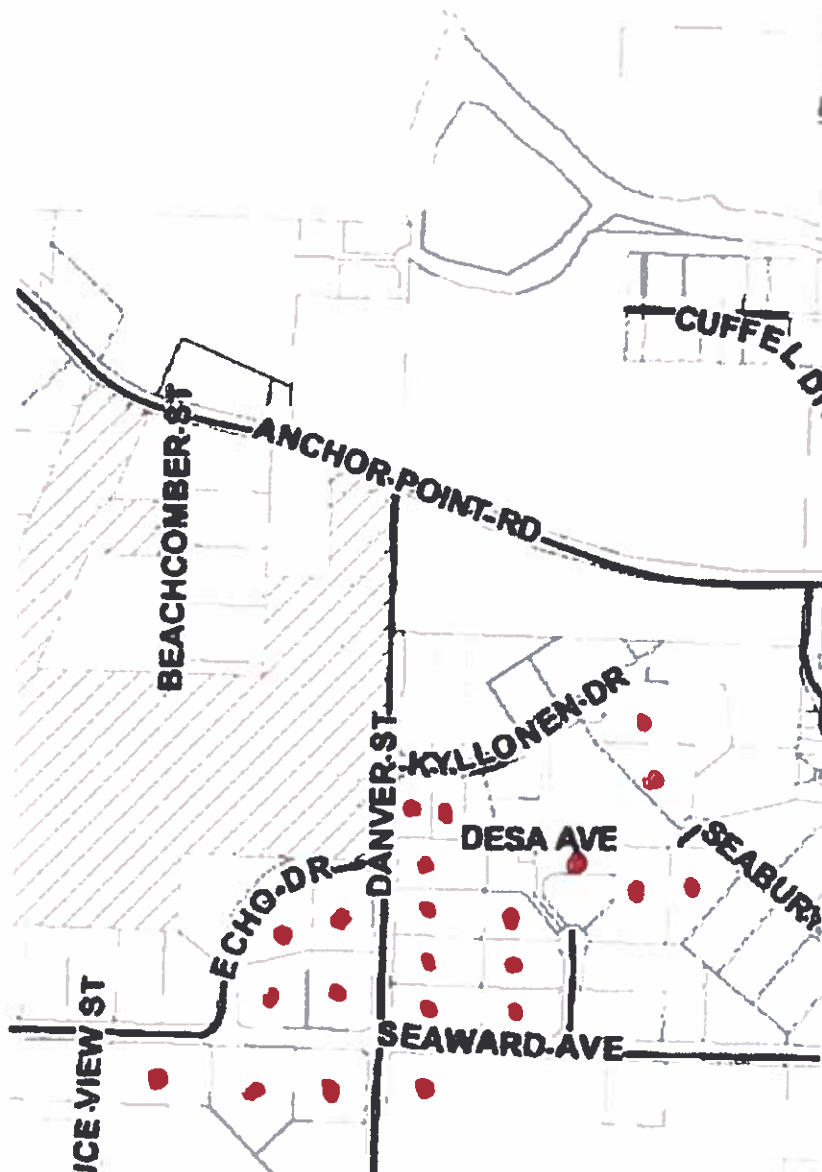

- ✓ ● SEL-00280, prehistoric site, reported to consist of two house pits. Location is represented as a large polygon, exact location of features is unknown but current projected boundaries are within the proposed mining area.
- ✓ ● SEL-00281, historic graves and possible cache pits, reported to consist of 5 graves that at one time had grave markers, depressions tentatively described as cache pits were reported north of the graves. Location is represented as a large polygon, exact location of features is unknown but current projected boundaries are within the proposed mining area.

In Alaska there are two historic preservation laws that *may* apply unless the project is entirely private in nature:

- Alaska Historic Preservation Act (AHPA): State law requires all public construction or improvement activities conducted by, or requiring licensing or permitting from, the State of Alaska to comply with the Alaska Historic Preservation Act (AS 41.35.070). This also includes required reporting of historic and archaeological sites on lands covered under contract with or licensed by the State or governmental agency of the State. This would include any material sources used under contract with the State.
- National Historic Preservation Act (NHPA): If there is Federal involvement (financial assistance, permit, license or approval) with the project it is the statutory obligation of the lead Federal agency to comply with Section 106 (36 CFR § 800) of the National Historic Preservation Act, which requires the Federal agency to take into account the effects that their undertaking may have on historic properties.

Were either of those laws to apply, our office would be likely to request that an archaeological survey is conducted to verify the site locations and assess the potential effects of the project pursuant to the applicable historic preservation law. In addition, there are State laws regarding the discovery and/or intentional disturbance of human remains, this pertains to ALL lands in Alaska, including private. I have attached our handout regarding human remains.

Due to the lack of clear information regarding the site locations our office strongly encourages the use of a qualified cultural resource professional to verify the site

Hi Bruce,

This was done yesterday in 3 hours, and can be reproduced each time I would expand to the south, where at most 5 homes have a very limited view of the area now.

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

Public notice is hereby given that a conditional land use permit application has been received for material extraction on a parcel in the **Anchor Point** area. This notice is being sent to landowners located within ½ mile of the subject properties. All members of the public are invited to comment. The projects under consideration are described as follows:

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road
Proposed Land Use: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

KPB Code: Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or at: kpb.us

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, July 16, 2018**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the assembly chambers of the borough administration building located at 144 N Binkley St, Soldotna.

Public Comment: Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to: Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: bwall@kpb.us. Please provide written statements by Friday July 13, 2018. Aggrieved persons, who participate in the public hearing, either by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of notice of the decision.

The application and staff report will be available on the Planning Commission website a week prior to the meeting. For additional information or to obtain a copy of the application materials earlier, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Borough).

Planner

ABBREVIATED STAFF REPORT

PC MEETING: July 16, 2018

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

The submitted site plan indicates that the material site haul route will be Danver Street, which is a Borough maintained road. The site plan and application proposes the following buffers:

North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
South: 6-foot high berm.
East: 6-foot high berm.
West: Greater than 50-foot vegetated buffer.

The application indicates that the depth to groundwater is 18 feet and that the depth of the proposed excavation is 10 feet. The groundwater depth was determined by a test hole on the property and exposed surface water to the north. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.

The application states that reclamation will be completed annually before the growing season ends (September) and that seeding will be applied as necessary each season to areas that achieve final grade in order to minimize erosion and dust. The applicant estimates a life span of 15 years for the site with an approximate annual quantity of less than 50,000 cubic yards.

STAFF RECOMMENDATION

It is anticipated that staff will recommend that additional buffers be required in the southern portion of the site where a 6-foot berm may not be sufficient to provide visual and noise screening of the proposed use. It is anticipated, that with the additional buffer requirement, that the six standards contained in KPB 21.29.040 will be met and that staff will recommend that the Planning Commission approve the conditional land use permit with the conditions listed in the full staff report.

ADDITIONAL INFORMATION

The application and complete staff report, including staff recommended findings and conditions, will be available on the Planning Commission website a week prior to the meeting. For additional information or to obtain a copy of the application materials earlier, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Borough).

Hi Bruce,

Firstly, I hope that you had a pleasant holiday week!

Secondly, I have forwarded your email below onto counsel.

Thirdly, as the week unfolds you will continue to hear from me. A request, please. Would you furnish a list of all of those individuals and entities to whom you had your office send the Notice of Public Hearing. For example, several residents did not receive same and, entities such as CIRCAC, ADEC, and CIRI are unaware of the notice.

I look forward to hearing from you

Yours,

Bob

Subject: RE: Question about a conditional land use permit??

Hans,

Thank you for your email. I became aware that he was extracting material from his property a year or two ago. Somebody else contacted me a couple of months ago concerned about the extraction on this property. I visited the site both times and have determined that he is not in violation of the Borough code. The Borough code exempts extraction that disturbs less than an acre from the requirements to obtain a permit. I spoke to Emmitt Trimble about this in the past and I will continue to keep an eye on the property before and after he obtains a permit.

Thanks,

Subject: Question about a conditional land use permit??

Hi Bruce,

My name is Hans Bilben and I live at 35039 Denver Street in Anchor Point. I want to find out if Emmit Trimble (Beachcomber LLC) is in violation of Borough Code by selling gravel and transporting it from the parcel he owns on Denver Street. I believe he is! Emmit has applied for a CLUP on this parcel and the hearing will be held on July 16th. I would certainly hope that his blatant disregard of the rules (which has always been his standard operating procedure) will be taken into consideration when reviewing his application. The pictures I have attached were taken today, July 27. You can see that he has hauled several hundred yards of material from the site, and has been doing so for several months, as recently as yesterday. I would appreciate hearing back from you on this matter. Thanks, Hans

Subject: RE: Beachcomber LLC

Bruce,

You can expect revised submittal today to address the surface water protection.

Other items:

1. North boundary – you already sorted.
2. The Borough mapping is not correct. I knew you would ask, so we went through the plats/easements/re-tracing before submittal.
3. Process waiver. Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-02-208 is not developed.
4. South buffer. It seems like a berm is the best option due to the limited vegetation at the south boundary. We could propose a higher berm but I'm not sure that makes sense either.

Revisions to follow....if my phone quits ringing. (I start this email 2 hours ago)

Thanks

Gina

Disregard this paragraph. Now that I looked at the plat ... it all makes sense to me.

I was unable to determine the north boundary along Anchor Point Road near Danver Street during my site visit. There were no stakes along Anchor Point Road except one on the south side of the road near the NW corner of that portion of the property, but it was marked as property line rather than property corner. There was also a stake on the north side of the road near the NE corner of the property but it did not appear to line up with the stakes along Danver Street and it was not labeled at all. I suspect that the Borough's mapping is incorrect in this case. Can you help me better understand the staking?

From: Wall, Bruce
Sent: Wednesday, June 20, 2018 3:23 PM
To: Gina Debardelaben; 'emmitttrimble@gmail.com'
Subject: Beachcomber LLC

Gina,

KPB 21.29.030(A)(8)(i) states that the site plan must include the following:

Surface water protection measures for adjacent properties, including the use of diversion channels, interception ditches, on-site collection ditches, sediment ponds and traps, and silt fence; provide designs for substantial structures; indicate which structures will remain as permanent features at the conclusion of operations, if any;

I don't see this on the site plan. Am I overlooking something?

Parcel 169-022-08 is shown as abutting the subject parcel. The Borough's GIS shows it being separated by a portion of Parcel 169-022-04. Is the Borough mapping incorrect?

I was unable to determine the north boundary along Anchor Point Road near Danver Street during my site visit. There were no stakes along Anchor Point Road except one on the south side of the road near the NW corner of that portion of the property, but it was marked as *property line* rather than *property corner*. There was also a stake on the north side of the road near the NE corner of the property but it did not appear to line up with the stakes along Danver Street and it was not labeled at all. I suspect that the Borough's mapping is incorrect in this case. Can you help me better understand the staking?

The application is requesting a waiver of the 300-foot processing distance requirement. Because of recent feedback from the planning commission I am undecided about how I will handle the request in my staff report.

The site plan and application proposes a 6-foot high berm along the south property line. However, some of the houses south of the property sit several feet higher than the subject property. It does not appear that the 6-foot high berms will provide sufficient visual and noise screening in some of these areas.

Wall, Bruce

From: Steve Thompson <stevethompson1961@yahoo.com>
Sent: Saturday, July 7, 2018 9:07 PM
To: Wall, Bruce
Subject: Proposed gravel pit , Anchor Point

Dear Mr. Walls , This letter to you is to let you know that I am against the proposed gravel pit , just off Danver street in the Anchor Point area. This gravel pit will ruin what is currently a beautiful view of the inlet and the land leading up to the beach. It is also in close proximity to the river as well as the beach. The noise and dust this pit will create would not be too pleasant. This is primarily a residential area , and I would think that this land would be put to better use as future homesites. I've seen some of the other gravel pits on the peninsula and most of them aren't located right in the middle of residential area's. I am currently out at work and am not scheduled to be off until the 19th. So , unfortunately can't attend the meeting.

sincerely yours: Steve Thompson (resident)@34900 Danver St. Anchor Point , Alaska 99556

UNAPPROVED MINUTES

AGENDA ITEM A. CALL TO ORDER

Chairman Martin called the meeting to order at 7:54 p.m.

AGENDA ITEM B. ROLL CALL

Commissioners Present

Syverine Abrahamson-Bentz, Ninilchik / Anchor Point
 Paulette Bokenko-Carluccio, City of Seldovia
 Cindy Ecklund, City of Seward
 Diane Fikes, City of Kenai
 Blair Martin, Kalifornsky Beach
 Virginia Morgan, East Peninsula
 Robert Ruffner, Clam Gulch / Kasilof
 Franco Venuti, City of Homer
 Paul Whitney, City of Soldotna

With 9 members of a 13-member Commission in attendance, a quorum was present.

Staff Present

Max Best, Planning Director
 Patti Hartley, Administrative Assistant
 Scott Huff, Platting Manager
 Holly Montague, Deputy Borough Attorney
 Jordan Reif, Platting Technician
 Bruce Wall, Planner

AGENDA ITEM F. PUBLIC HEARING

4. Conditional Land Use Permit for a Material Site; Anchor Point Area

Staff Report given by Bruce Wall

PC MEETING: July 16, 2018

Applicant: Beachcomber LLC

Landowner: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

The submitted site plan indicates that the material site haul route will be Danver Street, which is a Borough maintained road. The site plan and application proposes the following buffers:

North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
 South: 6-foot high berm.
 East: 6-foot high berm.
 West: Greater than 50-foot vegetated buffer.

The application indicates that the depth to groundwater is 20 feet and that the depth of the proposed excavation is 18 feet. The groundwater depth was determined by a test hole on the property and exposed surface water to the north. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. Staff does not recommend approval of the processing distance waiver request.

The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area. The site plan indicates 100-foot setback from the wetlands area located in the northeast corner of the property and that this setback will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, Best Management Practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska, will be utilized as a guideline to reduce potential impacts to water quality.

The application states that reclamation will be completed annually before the growing season ends (September) and that seeding will be applied as necessary each season to areas that achieve final grade in order to minimize erosion and dust. The applicant estimates a life span of 15 years for the site with an approximate annual quantity of less than 50,000 cubic yards.

Much of the vegetation was removed from this property 20-30 years ago. The neighboring properties adjacent to the southeast corner of the proposed material site are at a higher elevation than the subject property. The proposed 6-foot high berm alone will do little to minimize the visual impact or noise disturbance to other properties. Staff recommends that a 50-foot vegetated buffer be required adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer. Staff also recommends that a 50-foot vegetated buffer be required adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer. Staff recommends that a 12-foot high berm be placed along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm should take place prior to removing the existing vegetation in the western portion of the material site.

With the proposed 6-foot berm, staff was not able to state that the standards in KPB 21.29.040 had been met but with the addition of the 50-foot vegetated buffer in portions of the property staff then was able to draft the findings stating that the standards had been met. This decision concerning buffers is entirely up to the Planning Commission. The code states, *"The vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission."*

PUBLIC NOTICE: Public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their Post Office. Public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News.

Numerous letters from adjacent property owners and agencies were received.

KPB AGENCY REVIEW: Application information was provided to pertinent KPB staff and other agencies on July 6, 2018.

ATTACHMENTS

- Conditional Land Use Permit application and associated documents
- Aerial map
- Area land use map
- Ownership map
- Contour map

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed disturbed area is approximately 27.7 acres.
6. A public hearing of the Planning Commission was held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
7. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the

- proposed processing area; this parcel is owned by the applicant's daughter. A 200-foot separation distance to the property boundaries for the processing area is not sufficient to minimize noise disturbance to other properties.
8. The proposed extraction meets material site standard 21.29.040(A1); "Protects against the lowering of water sources serving other properties", as evidenced by:
 - A. Permit condition number 6 requires that the permittee not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 - B. The submitted site plan shows several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.
 - C. Permit condition number 7 requires that the permittee maintain a 2-foot vertical separation from the seasonal high water table.
 - D. The application indicates that the depth to groundwater is greater than 20 feet and that the depth of the proposed excavation is 18 feet.
 - E. Permit condition number 8 requires that the permittee not dewater either by pumping, ditching or any other form of draining.
 9. The proposed extraction meets material site standard 21.29.040(A2); "Protects against physical damage to other properties". There is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
 10. The proposed extraction meets material site standard 21.29.040(A3); "Minimizes off-site movement of dust", as evidenced by:
 - A. Permit condition number 13 requires that the permittee provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 11. The proposed extraction meets material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
 - A. Permit condition number 2 requires that the permittee maintain the following buffers that will reduce the noise disturbance to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
 - B. Permit condition number 5 requires that the processing area be located greater than 300 feet from the property boundaries.
 12. The proposed extraction meets material site standard 21.29.040(A5); "Minimizes visual impacts" as evidenced by permit condition number 2 that requires that the permittee maintain the following buffers that will reduce the visual impacts to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.

- 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
13. The proposed extraction meets material site standard 21.29.040(A6); "Provides for alternate post-mining land uses" as evidenced by:
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C3) is necessary to meet this material site standard.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.

STAFF RECOMMENDATION

In reviewing the application staff has determined that the six standards contained in KPB 21.29.040 will be met and recommends that the Planning Commission deny the processing distance waiver request, approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the following:

1. Filing of the PC Resolution in the appropriate recording district after the deadline to appeal the Planning Commission's approval has expired (15 days from the date of the notice of decision) unless there are no parties with appeal rights.
2. The Planning Department is responsible for filing the Planning Commission resolution.
3. The applicant will provide the recording fee for the resolution to the Planning Department.
4. Driveway permits must be acquired from either the state or borough as appropriate prior to the issuance of the material site permit.

REVISED STAFF RECOMMENDATIONS

The staff report in the packet recommends approval of the conditional land use permit, however, because of the amount of written materials staff recommends conducting the public hearing and continuing the hearing to the next meeting of August 13 to allow time to read the written comments that have been received.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.

These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts

- adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
 6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
 8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
 9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
 10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.
 16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
 17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
 18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A "party of record" is any party or person aggrieved by the decision where the decision

has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the \$300 filing and records preparation fee. (KPB Code 21.25.100)

END OF STAFF REPORT

Chairman Martin opened the meeting for public comment.

1. Rob Corbisier, Attorney

Mr. Corbisier is a resident of Anchor Point and was representing Rob Baker of the R.O. Baker Trust who is an adjacent property owner.

Mr. Corbisier gave the following points:

- There was no way that a conditional use permit in this location could adequately protect the environment. Fugitive dust was going to be coming off of the gravel pit into the adjacent wetlands, the Anchor River and the estuary.
- There are going to be drainage and dewatering issues although the applicant has stated at this time that he will be staying above the water table. The application states that sometime in the future, he intends of going into the water table. The well location itself is deceptive in that the gradient of where the test hole was dug is at a high point in the area adjacent to the bluff that drops way off. Naturally there will be a lower water table at the spot. This also violates the ADEC Best Practices Manual which suggests having a four-foot separation.
- There will also be noise that will damage wildlife habitat. This proposal violates the Borough's Coastal Zone Management Plan.
- Also, this will not be able to preserve recreational values. There are two State Park campsites adjacent to the area. Anglers fishing on the Anchor River and camping on the beach and campsites are going to be able to hear the noise. The heavy truck traffic will interfere with recreational traffic going to and from the beach and tractor launch site.
- That road is quite narrow which will be ripe for disaster.
- It was going to impact residential values dramatically. There are 13 classified residential classified parcels that are adjacent to this proposed site. There are approximately 40 within 1,500 feet. A 6-foot berm was not going to be sufficient for either visual separation or auditory separation especially when there are second story houses.
- This is going to create and attract nuisance. There is the Chapman Elementary School which is not far from this location. Children go down and play near the beach all the time.
- In the Borough's working group on the Material Site regulations there was testimony describing that winds in the wintertime turn vacant gravel pits into sand blasting facilities that absolutely knock out someone's house next door. In this location, it is adjacent both to Cook Inlet and the Anchor River flats. There will undoubtedly going to be high winds.
- It will impact property values. He understood the Borough Assessor does not necessarily drop property values based on the existence of a gravel pit, however studies in the lower 48 show a documented drop of around 33 or higher percent when a gravel pit was developed.
- Although staff has recommended a buffer on the east and north side, there is not a buffer that was being recommended on the south side. There will still be residential parcels with nothing other than a 6-foot berm.
- Danver St does not comply with the ADEC Best Management Practices for a dedicated access point.
- This material site is not needed. There are approximately 50 parcels in the greater Anchor Point area either off the Old Sterling Highway, the Sterling Highway or the North Fork Road that either have conditional land use permits or are existing prior use gravel pits.
- The borough should just wait until the new regulations come out. There is no reason for the Planning Commission to improve this application right now. Let the process that has been started by the Assembly finish before the conditional use permit was authorized. If the Planning

Commission felt a need to do something, then the alternative that should be considered would be to only develop the Phase 1 portion of the project and then allow the applicant to come back for the other phases after the new regulations are in place.

His client asked him to make the following additional points at this meeting.

- To his knowledge, the applicant has no experience operating a gravel pit. Beachcomber LLC is a brand new LLC and has no business history.
- There are questions about what the financing was for the extraction, the startup costs, the ability for the applicant to post a requisite bond, what was the insurance going to be like, and what was the LLC solvency in the event that the LLC was to become insolvent. There is a potential of an outside operator to come in and continue to decimate the mouth of the Anchor River.

Mr. Corbisier was available to answer questions.

Chairman Martin asked if there were questions for Mr. Corbisier. Hearing none the public hearing continued.

2. Michael Brantley, 74057 Anchor Point Rd.

Mr. Brantley stated that his property is 300 feet west of Danver Rd which was going to be the access road for this pit. He just retired after 41 years working for the Federal Government of which 31 years of that working history had been working with gravel pits and quarries.

Mr. Brantley has seen and heard a lot of noise. He expressed concern that these gravel pits create carcinogens which is cancer. Imagine someone with their family driving down with their RV or SUV with their windows down and their children breathe in all this air.

Mr. Brantley also expressed the concern of the traffic problem on the beach road. To be exact that road is a disaster and hazard. His opinion is that it's a liability to the Kenai Peninsula Borough that needs to be rectified.

This proposed pit is on the back side of his lot and borders it on the north of the applicant's line. Mr. Brantley stated that he has spent hundreds of thousands of dollars to build his dream, his business which is a fly tying shop and now there was a pit going in next door. He has guests that get up at all hours to fish because they go according to the tide and weather so he felt that if they are going to put a berm up then they should also put up a wall.

Mr. Brantley commented that they will need to have regular ADEC inspections if this was going to happen. He has 12 certificates dealing with hazardous waste working for the Air Force so he has experience in all this.

Mr. Brantley felt that this is not right for the neighborhood. He has spent tens of thousands of dollars to get his ADEC engineer approved water system installed. Four wells have been drilled right next to one that was producing 26 gallons a minute. Mr. Brantley went down a few hundred feet and still couldn't find water. Fortunately for him, the Borough came back and changed the regulations and now his well is classified as private however that well is only 38 feet deep. He stated that ADEC has approved his system.

When Mr. Brantley first bought his property he found out an interesting story about it. His property was previously owned by Albert & Dawn Magee from Oregon. The story was that they had a son that had passed away so he buried his son on the subject property. He has been in contact with the family members to verify this and will inform the Commission with what he finds out.

Chairman Martin asked if there were questions for Mr. Brantley.

Mr. Wall asked if his well was approved as a public water supply system. Mr. Brantley replied yes. Mr. Wall asked when that was approved. Mr. Brantley replied that he received approval a couple of weeks ago.

Mr. Brantley stated that the ancestry of the deceased son that was buried on the property was Cherokee. He hoped the commission would make the right decision on this application. The community can't have this. If this was going to be pushed through then he would like the road to be completely redone from the boat launch all the way to the bridge.

There being no further comments or questions, the public hearing continued.

3. Gary Cullip, Seabury Ct.

Mr. Cullip overlooks this whole proposed gravel pit area. The applicant may meet all of the regulations but thought there was circumstantial evidence that was involved that the Commission really needs to take a hard look at. He thought this needed to be tabled to the August 13 meeting.

Mr. Cullip expressed concerns regarding the condition of the road. He knows the Borough does not have the money to rebuild the road. If that has to happen then there needs to be a condition on the permit to make the permittee liable for it. The number one safety issue is that the road is the main access for people to get from the State Parks down to the beach. There are all kinds of foot traffic on a very, very narrow road. There are up to 40 boats traveling that road to get launched every day. It will be a disaster to include the dump truck traffic in that. This is a very different permit that is being talked about since it is in the middle of a residential area. Lots and lots of people will be affected by it.

Mr. Cullip recommended tabling this at this time, get all the information and then make a wise decision at the next meeting.

Chairman Martin asked if there were questions for Mr. Cullip. Hearing none the public hearing continued.

4. William Michael Patrick, 34897 Fisher Ct, Anchor Point

Mr. Patrick ran away from the Lower 48 in 1990 and came up here and taught in rural Alaska for a long time. He came to Anchor Point because it was a beautiful place. Mr. Patrick picked a lot on a hill. When he looks out his front window he can see Mt. Iliamna, when he looks out his side window he can see Mt. Redoubt and then he goes to his neighbor's house and they can see Mt. Augustine.

Over the past six years he has had the pleasure, the ecstatic pleasure of a lifetime, a quality of life to see three sets of twin calves born in his front yard. In the fall, there are Sand Hill Cranes that fly above the amphitheater bowl that is at the mouth of the Anchor River. They land on the hillside and down in the very area where the pit is going to be. Mr. Patrick stated that he can drive down to the beach and see people walking on the beach and enjoying it. There is much beauty there so this is a very unique area. It is not down some dirt road. He stated that this is the farthest westerly point on the America Highway system is right here.

Mr. Patrick stated that he doesn't begrudge anyone making money or doing business. Below are a few questions that he asked as a Science teacher.

- Is the groundwater subject to pollution when people develop gravel pits and let them fill up with water because it was now in contact with the atmosphere?
- What attractive nuisance is there when they allow them to dig that out and put a pond in there?
- Would the gradient in the pond be too steep if a neighbor kid or a moose falls in there so they couldn't get out of the hole that was covered up with water so that the gravel operator didn't have to reclaim it?
- What types of viruses or bacteria would be there? Would they be helpful or harmful?
- What happens when they are made airborne on dust particles and they blow around.

Mr. Patrick's house sits at a 110-foot elevation which is about 150 yards from the entrance of this pit. The pit was at 44-foot elevation. They would have to put a dome over it to keep him from seeing into it. He also stated that Mt. Iliamna and Mt. Redoubt would disappear which might cause a big stir in the National Geographic Society.

The sea and land breezes cause dust to blow on his property and on the surrounding properties. As someone comes up his private road, he had three more neighbors and these people are closer than 150 yards. There is a rise in elevation of approximately 66 feet.

Mr. Patrick has two wells at his house. When he drilled his first well he ran into an underground stream which was perfect water but it gave out in a couple of years so he had to drill another well which is about 70 feet down. If they go 70 feet down from his house into the aquifer that he is in that puts the ground level estimate to be about 4 feet above the water table. He suggested that the applicant dig more than one hole to determine the validity of the water table in that area. Particularly in that area because it has many underground streams. The gravel filters water and that water runs down toward the Anchor River.

Mr. Patrick stated that he was going to get the noise, dust and visual impacts. He was going to be subjective to safety by pulling out of his road and not getting run over by a dump truck and so are many of other people. He has seen the kids at the elementary school on walking field trips on this road. The bridge that services that Anchor River road is currently condemned.

Chairman Martin asked if there were questions for Mr. Patrick.

Commissioner Bentz asked what the depth of his first well. Mr. Patrick replied that it was 20 feet.

There being no further comments or questions, the public hearing continued.

5. Todd Bareman

Mr. Bareman lives on the Old Sterling Highway in Anchor Point and owns the tractor launch at the beach. He stated that the road needs some addressing. It was in terrible shape, that's not what they were here for but they were here to not make it any worse and cut into the recreational use.

Mr. Bareman stated that if this pit if was permitted then there would be a crusher where five campgrounds, a trailer park and two RV parks that would be able to hear it. He wondered how the recreational people were going to get along with that much less than all the residents that have a problem with it.

Mr. Barman also stated that they are at this meeting because there are not enough regulations. He felt this should be tabled until new regulations are in place. This is not a normal gravel pit and is not in a normal area.

Mr. Barman asked that the commission be a little bit lenient about people testifying since this was very personal because it was their property and their livelihood that are going to be affected.

Chairman Martin asked if there were questions for Mr. Bareman. Hearing none the public hearing continued.

6. Linda Patrick, 34897 Fisher Ct.

Ms. Patrick expressed concern with the noise level that would be created by the gravel pit. There is currently excavating going on at the north corner of the designated area. There is digging already going on and trucks going in and out of there which starts sometimes at 7:00 a.m. and runs all day. They can close their doors and windows but that noise still permeates their house. She questioned where their hearing and safety protection was.

Chairman Martin asked if there were questions for Ms. Patrick. Hearing none the public hearing continued.

7. John Girton, Twin Peaks Loop

Mr. Girton stated that he was about a mile from this proposed gravel site so it wouldn't affect him as much. There are at least two graves in the middle of this site; one is the son of John & Gladys Dandona and the other is a son of the McDonald's.

Mr. Girton moved to Anchor Point 25 years ago for the use of the beach road and launch because he fishes. That road is so bad that someone is going to get killed the way it is now. Three times in the last 25 years, he has had gravel trucks that hit his boat and his tow vehicle. There is not a lot of room to move over to make room for these gravel pit trucks and boats. Also there is no place to go now that the berm was dug out. He stated that there are sometimes up to 125 boats down that road plus there are the campers and motor homes. It is going to be a very serious problem when these trucks start moving as there are a lot of walkers, kids and bicyclers.

Mr. Girton recommended that they put in a restriction that there be no Jake brakes if this gets approved which he hoped would not get approved. Those trucks that go down the hill on the Old Seward Highway use their Jake brakes and it is horrible. There is no enforcement. He had a couple of gravel pit operators tell him that once they get the permit then they can do whatever they want.

Mr. Girton felt that this would be signing a death warrant for Anchor Point if this gets approved. He also felt that if the tractor launch cannot continue to operate because of the road conditions and the lack of boats going down to launch then there will be nothing to do in Anchor Point. It is a very serious thing they were going to do to Anchor Point if they allow this gravel pit to go in. Safety is his whole concern.

Chairman Martin asked if there were questions for Mr. Girton. Hearing none the public hearing continued.

8. Hans Bilben, 35039 Danver St.

Mr. Bilben has resided at his home for the last 15 years. He presented a handout that was distributed to the Planning Commissioners.

Mr. Bilben read the following statement which sums up why they and most of the people reside in Anchor Point: *"The natural beauty, the authenticity of the people, the adventure and the peaceful life come together to make Alaska a place to realize dreams."* The funny thing about that statement is that it was the first paragraph from the Coastal Realty website which is the company that is owned by the same people who want to destroy the lifestyle that they claim to promote. They want to develop a mine in the very heart of Anchor Point.

Mr. Bilben felt there were an unlimited number of well qualified reasons not to have a gravel pit in this location but greed was truly the only driving force for its creation. They realize that the Planning Commission is bound by the borough code of ordinances in their decision making process but unfortunately these codes are severely lacking and vague in some areas. The six standards that the applicant must satisfy are pretty skimpy but that is what the commission has to live by for now. In the case of this application there was no possible way that the applicant can meet those standards due to the topography of the area surrounding this proposed mine. No amount of berming or vegetated buffer will meet the standards pertaining to minimizing noise or visual impact on other properties and other homes as required by the code because of the steep rise in elevation to the north, east and south of the proposed mine. He stated his property is 500 feet south of the proposed area and 75 feet above the existing floor. From their property they have clear view and ear shot of the large percentage of the proposed site.

Mr. Bilben referred to the two photos that were in his handouts which shows what they look at out their window. There are a lot of people that are much more impacted by this pit than they are. Recently he and a friend walked through and talked with neighbors and actually looked at the view from the area. He referred to his handout which had red dots on the parcels in the map. The red dot indicates properties at elevations that cannot be protected from noise or visual impacts by berms or buffers. They counted 22 homes and most of those people will be impacted by visual and noise because no amount of berming could cover that up.

Again, Mr. Bilben referred again to a photo in his handout which shows his friend, Mr. Oliver in the picture. The vegetated buffer is shown in the photo which is the one tree to the left. The road that he is standing on is the access road to the pit which will be to the processing plant. Mr. Oliver walked onto Mr. Trimble's property about 50 feet. He was standing with a 10 foot 2x6 board. The trees

behind him will all be lost because it will be part of the pit. Mr. Bilben noticed that Mr. Oliver's house will be impacted by the visual, noise and dust of the proposed pit.

Mr. Bilben stated that Mr. Trimble handed out a handout with pictures before the meeting which stated that it took only 3 hours to do what he did and that only 5 homes have limited view now. He questioned how many homes do they need to destroy and decimate before they say no to a gravel pit.

The truth of the matter is that this doesn't have anything to do with homes but has to do with properties. People who own property there are going to lose value and will be impacted by the visual and noise of the gravel pit. There is no way he can get around it because of the topography of the area.

Mr. Bilben stated that the proposed mine is within the heart of a residential recreational gem which is called Anchor Point. This property could be a very desirable addition to the community if this property is properly developed. It is the function of the elected and appointed officials to represent and hold up these ordinances and not merely to rubber stamp this application. He felt this pit is in the wrong place and has no business getting this far in the process.

Chairman Martin asked if there were questions for Mr. Bilben. Hearing none the public hearing continued.

9. Pete Kinneen, 34969 Danver St.

Mr. Kinneen was at the meeting with a slightly different take. He was an Irishman and was as passionate as anyone else however he was going to put that to the side.

Mr. Kinneen stated that there are reasons that the commission can cite to not approve this application. It does not meet the six standard conditions. There are valid concerns about the safety of the road but that was not within the toolbox that the commission could use to make a decision. He thought that none of the conditions could be met just going on the ordinance and the exact interpretation of the code. If this was not a permit of right, then they must come and ask permission and comply with the conditions. Mr. Kinneen suggested that if this were to pass then there would be no other operation in the Kenai Peninsula Borough because of the uniqueness of the area then they might as well rip up the ordinance and say they can do anything they want. Title 21.29.050A(2)(c) states that "*Buffer requirements shall be made in consideration of and in accordance with existing uses of adjacent property at the time of approval of the permit.*" He stated that shall is a mandatory word and is not permissive. The commission must do that and they must keep this in mind. The road and the kids getting run over is real but it was not what the commission used to make their decision.

Mr. Kinneen stated that the tall bluffs were the uniqueness of this area with an amphitheater that inundates right there on the subject property which was caused by the outflow of the Anchor River. It is a small flat area surrounded by a bathtub type shape. The noise comes in from the water and the noise cannot be minimized. He felt there can be all the buffers but it will not minimize the noise.

Mr. Kinneen handed out photos of the area that was taken from his living room. They are pictures that look out over the top of the trees. Just beyond the house with the blue roof is the material site property. A 6 foot or 12-foot fence and a buffer of 50 feet or 150 feet will not make a difference with visual and sound. He felt this was a unique situation all the way around.

Mr. Kinneen felt that the stated intent was found in Title 21.29.040(A) which states, "intent". He questioned what the intent was and wondered if the intent was just to shovel out to anyone who comes in and asks for a gravel mine anywhere and at any time. That was not what the intent says. The intent says protect. It is the six conditions that gives protection against dust, noise and visual impact. If there ever was a gravel mine application that should be denied this is it because of the uniqueness of this area. He doesn't understand how a permit could be issued for this under these ordinances.

Mr. Kinneen invited Mr. Wall to come to his home to look at the site. There are a lot of people that will be impacted by this. He could see the entire mine from his house and questioned how they could protect them per the ordinance. There are original, vibrant, green mature spruce trees up to Echol Rd

because of the atmospheric conditions. Past that and coming up the hill doesn't because the ecosystem that comes in behind them was the uplands forest that has been decimated by the beetle kill.

Mr. Kinneen was available for questions. He felt this permit application could be denied because all they need is one condition not being met. As he challenged and asked Mr. Wall how they follow the intent of the code. They are open to ideas but a 50-foot buffer wasn't going to do anything at all.

Chairman Martin asked if there were questions for Mr. Kinneen. Hearing none the public hearing continued.

10. Rick Oliver, 34880 Danver St

Mr. Oliver stated that his home was above and somewhat directly opposite of the proposed site. The activity allowed by this application will totally decimate the property value of their home as well as the quality of life that they now enjoy. They are definitely not alone in this regard. Obviously, the standard set for the sand, gravel and material site are set to protect against aquifer disturbance, road damage, visual damage to adjacent properties dust, noise and visual impacts. He stated unequivocally that the proposed setbacks, berms, vegetation, buffers, etc. will not and cannot protect their homes from these disturbances.

Mr. Oliver made the following statements:

- Number 1 of said standards addresses the lowering of water sources serving other properties. The existence of the substantial lake just below my property indicates that a major mining operation can't help but affect the water source of my property. I'm told there is significant additional information regarding this standard to be presented.
- Number 3 addresses the "minimization of dust to off-site areas". Due to the proposed placement of the processing equipment, ANY on shore breeze will bring that dust to my home, directly across the street.
- Number 4 addresses the noise disturbance to other properties. According to the radii shown on the application, the processing equipment is to be set much less than 300' from my front door. How can the noise and vibration from this equipment be, in any way, "minimized" in my home? He explained the photo of him holding the 10' tall board which shows the concern he has with "minimizing" visual impact from my house with a 6' berm. He was standing 50' inside the newly designated property line.
- Number 5 addresses (again) the "minimization" of visual impact.

Mr. Oliver stated that Mrs. Trimble approached a neighbor of his after the informal meeting last Wednesday and stated that she and her husband had walked the property and said that they could only see six houses. This does not include other properties as addressed by the code that could at some point be developed. He questioned how many homes does the project have to decimate in order to convince this body that it should not happen.

For the record, let it be known that he and his family along with the other several hundred other people residing in this area vehemently oppose the granting of this permit.

Chairman Martin asked if there were questions for Mr. Oliver. Hearing none the public hearing continued.

11. Jeanne Bilben

Ms. Bilben is the wife of Hans Bilben who has already testified. She gave a handout that includes information that they discovered. She stated they love this beautiful recreation area. Some of them have bought and built homes there. They own land there just as the permit owner owns land but they are not digging a gravel pit in his front or back yard.

Ms. Bilben stated that they are not against a gravel pit but they do not want them in their neighborhoods. She thought that they would have just as many rights as a gravel pit since they also pay their taxes.

Ms. Bilben commented that this so called gravel pit will be disturbing the peace of their beautiful area. She understood that once this permit was issued then it goes with the land no matter who owns it making it even more valuable to the owner and making their property values go down.

Ms. Bilben stated that this was not only is a recreational area but it was also a historic area. They have been in contact with the State Historic Preservation Office that there is a highly potential historic archeological site at this location. She asked that they stop this permit and keep this area away from mining and gravel. The State Recreational area in Anchor Point is where people come to see the beauty and history of this part of the world.

Ms. Bilben questioned if they really want a gravel pit in this place for them to see. She requested that the commission keep gravel pits away from their neighborhoods, historical lands and recreational areas.

Chairman Martin asked if there were questions for Mr. Bilben. Hearing none the public hearing continued.

12. Jim Reid, 73820 Seaward Ave.

Mr. Reid was a retired paramedic and fire fighter and stated that his issue had to do with the safety factor. He stated that in the wintertime someone is not stopping when the gravel trucks come down off that hill down Danver because of the iced over road. Everybody in the neighborhood has complained about it.

Mr. Reid expressed that his other concern had to do with the kids. There are five parks in the area where gravel trucks have to pass by three of them with every load. They are not talking about a couple hundred trucks a year but about 5,000 trucks. With the amount of aggregate that the applicant wants to take out of there, there would be 10 yards a truck at 5,000 trucks. This is not a little operation. He stated that no matter what happens he would write a letter on this. This is what he did and he does not like picking up kids.

Mr. Reid stated that one day he believed he saw Mr. Trimble's daughter walking with his grandson as he was coming out with his boat to go to Homer. There was another car coming down the road when he was leaving and he had to stop and he saw the woman push her kid off the side of the road because it was too narrow to walk and have cars go by. He felt this was really a serious problem.

Mr. Reid stated that someone has to turn right and go out 7 or 8 miles to the Sterling Highway since the bridge was condemned. That road is like a snake so staff should have included notice to all those people that live down that road who are going to be looking at those 5,000 trucks. He reiterated that the road is dangerous.

13. Susan Reid, 38720 Seaward Ave.

Ms. Reid stated that they stand there in support of all of their friends and neighbors as well as the community to let the commission know that they are really opposed to this proposed gravel site. She stated they object to the applicant for all the reasons everybody stated from the bridge that will not hold the weight, from the property values of the properties. She assumed that if their property values do go down then the borough would be very happy to lower their taxes. In addition, she assumed that if the commission approves the permit then the road will be widen because right now it was not wide enough for all of this traffic. It will probably cost the borough about 1½ million dollars to fix the road.

Mr. Reid interjected that right now the trucks that are empty go across the bridge. They just lowered the weight to 11 tons, which is 22,000 pounds. Right now they are not abiding by the law with an empty truck weighing about 26,000-28,000 pounds.

Ms. Reid stated that the road is a highly, highly congested residential area. She stated that all of the residents want the commission to know that they are not taking this. They do not want the commission to approve and grant the permit for this application.

Ms. Reid understood that the applicant has a right to make money off his land but years ago, they all bought into this beautiful neck of the woods because it was quiet with not a lot of noise. She has been hearing a beeping backup noise and did not care how much white noise alarms are put on the trucks, they are still going to hear it.

Ms. Reid thanked the commissioners for listening to them.

14. Don Horton, 34910 Echo St

Mr. Horton lives directly across the street from the proposed gravel pit. They bought this property 15 years ago for recreational purposes and maybe someday to build a house on when he retires. A month ago he retired and then gets a letter stating that he was going to be looking at a gravel pit. His only view is the field that will be used for the proposed gravel pit. He looks across this field and looks at Mt. Redoubt. If the applicant builds a 6, 8, or 12-foot berm then he will be looking at a berm, a gravel pit and Mt. Redoubt.

Mr. Horton felt that this proposal would virtually ruin the property. He would now never even consider building on it with what was going on now. Mr. Horton could never even give the property away. He has three sons, a daughter and a grandson that hopefully this property could be theirs someday, Mr. Horton would hate to see the commission ruin his little slice of heaven.

15. Eileen Sheridan, 34860 Seabury Ct., Anchor Point

Ms. Sheridan is a 50-year resident of Alaska. They have lived in Juneau, Sitka, Palmer and now lives in Anchor Point. She stated they are above this proposed gravel site area.

Ms. Sheridan understood the noise issue because they can feel the wind when it blows up and down that river. She felt there was no way berms or vegetation like that will take away that noise. It was so distracting when they had the oil gas people out there in the bay, running their sonograms all summer long so this gravel pit will be distracting too.

Ms. Sheridan stated that they put their retirement into this home and felt their property value will go down if this gravel pit goes in. Even Mr. Trimble said that a gravel pit would make the property values go down. They had hoped that their kids could enjoy this property later in life also. They have worked hard to do what they are doing so she understood him wanting to do something too but not a gravel pit that they have to live with.

Ms. Sheridan expressed concern regarding the dust that will be created by this gravel pit. She had terrible allergies up in the valley so they moved down here because her allergies were better here living right by the ocean instead of by the hay fields. Ms. Sheridan reiterated her concern regarding the noise and dust. They already get dust from their dirt roads. She stated that the trucks speed down that road so there is no other way that they don't get the dust from the roads. They lived next to a gravel pit when they were building their home and was very glad to get up to their peaceful house to look at Mt. Iliamna and Mt. Redoubt.

Ms. Sheridan realized that if the applicant receives the permit then he has the right to sell and maybe even have a bigger gravel pit in there. She noticed that there was only one test hole shown and was wondering if there was any consideration of the loss of vegetation and the lowering of water sources. It appeared that there were some wetlands in the area after she looked at the maps.

Ms. Sheridan said when they go down Danver to the right just across from this property there are ducks and moose have their babies there. She felt that if there is noise from the gravel pit then those moose mothers will get so disturbed that they could be leaving their babies.

Chairman Martin asked if there were questions for Ms. Sheridan. Hearing none the public hearing continued.

16. Gerald Blair, 73600 Twin Peaks Loop

Mr. Blair stated that most of what he was going to say has already been said by prior speakers probably far more eloquently than what he would have.

Mr. Blair stated that there was one issue that has not been covered which is not just the safety of the road but the cost of the road. What he has been able to determine is that the road started as a cat trail that went from the Sterling Highway out to the beach. It was never engineered or properly built so it has no base. It does not even have enough right-of-way to be any wider than it is in spots and that is barely wide enough. He felt that two trucks could lose their mirrors if they are not careful because there was no way to get off the road particularly with a loaded truck. An estimate to fix that road to where it will handle these dump trucks will cost in excess of \$2 million and bring it up to par. There will also be right-of-way work that will need to be done as well as achieving the necessary right-of-way to make the road wide enough.

Mr. Blair also stated that the trucks that he sees going up the North Fork weigh well in excess of 100,000 pounds. There are tractors pulling two side dump trailers that haul 20 yards of rock a piece which is about 60,000 worth of rock per trailer plus the truck and the trailers. Over the lifespan of this pit if the road isn't totally fixed in the beginning then they could spend \$6 million in maintenance maintaining that road for 15 years if the pit stops at 15 years. He doesn't know if the Kenai Borough has that kind of money laying around that they would want to put into that when all they are going to get is minimal separation fees which won't amount to much money.

Mr. Blair felt lucky enough to be far enough away from the pit that the dust and noise will be minimal. The truck noise will be there but by in large the cost to the Borough to maintain that road or to rebuild that road would not be a business that he would go into because it would cost \$2-\$3 million and would get back almost nothing.

Mr. Blair thought the bridge was going to be built anyway and did not know if the gravel pit will have much to do with that.

17. Bob Shavelson, Director of Advocacy for the Cook Inletkeeper

Mr. Shavelson stated he has heard many concerns from the property owners. It brings to mind the whole notion of private property, which is vital to their economic system. One of the central tenants of property rights is that someone can do what they want on their own property but cannot harm folks around them. It includes private and public property, which is the issue he wanted to address at this meeting.

Mr. Shavelson referred to the ground and surface water resources. Finding of Fact 8 states, "*The permittee must maintain a 2-foot vertical separation from the seasonal high water table.*" Again, he was going to come back to the issue that he raised the last time. There was nothing in the application that says that the test hole was drilled and monitored to ascertain the seasonal high water mark so he questioned how the planning commission or the staff could know what that level was. He felt they could not.

Mr. Shavelson felt that the permit could not be approved, if they want to abide by the ordinance. If the permit is approved, then it was just guesswork. They should not be gambling with the resources that they have in the estuary of the Anchor River. He referred to the scientist from the National Estuarine Research Reserve who provided them with the groundwater flow that shows that this parcel, at least partially flows into the Anchor River and that water plays a vital role in the life stage of various salmon. When he first thought about an estuary, he thought salmon goes down, goes through the estuary, and then comes back, and goes through the estuary again but it was a lot more complicated than that. They are just beginning to scratch the surface on this complexity. All the ecology of the salmon systems is kind of like fabric, when the threads are pulled then the fabric will unravel. He stated that they have to be really careful, this is one of the things that really concerns him.

Mr. Shavelson also stated that the ordinance states that it has to comply with other environmental laws and rules. There is something that he calls the myth of rigorous permitting. The myth of rigorous permitting is that there is this whole alphabet soup of Local, State and Federal laws and rules so if all the i's are dotted and all the t's are crossed then there will salmon habitat protection.

He has been doing this for 25 years and he can tell them that this is not the case. There is the 50-foot buffer on the salmon streams in the Kenai Peninsula Borough but he also knows that Mayor Pierce was looking actively to revoke some or all of those protections. There is Title 16 in the State law, which is the Habitat Protection law. It is one law in the State that protects habitat. It was one sentence long and was adopted at Statehood. There is an effort now to revise that in a ballot measure that was causing a lot of controversy but many people feel that there is this whole alphabet soup of laws and rules that don't protect the habitat.

Mr. Shavelson commented that this reminds him of a book entitled, "The King of Fish" by a professor named David Montgomery at the University of Seattle. Mr. Montgomery talks about the demise of salmon from Europe, to New England and to the Pacific Northwest. The thing that is taken from this book was that it was not neglect that led to the loss of salmon runs across the world but knowing the neglect. It was that they knew what they were doing was wrong but did it anyway. That is how he felt about these permits that continue to get rubber-stamped through this process.

Mr. Shavelson thought that many of the commissioners feel like their hands are tied. There is the ordinance that puts them in a strait jacket so they think they cannot do anything. He felt that the commission does have enormous discretion. They have discretion that was given to them by the borough. According to KPB Ordinance 2.40.050, the planning commission has broad discretion to investigate and make recommendations including to the Assembly.

Mr. Shavelson assumed this would be postponed to the August 13 so he encouraged the commission to ask the questions that need to be answered to do this right because the mouth of the Anchor River is a special place. He felt this body needed to represent the public interest. The private interest was always adequately represented and the public interest needs to be represented which he felt was the job of the Planning Commission.

Chairman Martin asked if there were questions for Mr. Shavelson. Hearing none, the public hearing continued.

18. Eldon Overson, 73976 Seaward Ave.

Mr. Overson gave a handout to the commissioners showing the view that he has from his property. He read the following statement into the record.

"I would like to thank you guys for hearing my thoughts on the proposed Beachcomber gravel pit that is being submitted by Emmitt and Mary Trimble in our community. I will thank even more after this meeting, if you reject the proposed land use permit that will decimate my neighbors' and my view for the next 15 to 20 years.

I was at work on the slope when I got the email for this planning meeting and I flew today and drove down from Anchorage, just for today. I have to drive up and fly back up to work tomorrow. I say this to show the importance that this proposed gravel means to me and how much I do not wish it to go forward. I feel that this is a very bad proposal and deserves more of his time and effort.

I bought my lot on the corner of Danver and Seaward about eight years ago and it's the spot that I would eventually build my dream home. I started to build a cabin on the lot to use for summertime camping, this winter. That picture is of me standing on my loft from that cabin. The red area that is marked is where the proposed gravel pit will be. I am approximately 65 feet above the gravel pit so I will be looking directly into it. The view of Iliamna, the ocean and the river was the main reason for me purchasing my property.

As the permit states, that the six-foot-high berm in the plan will offer little to no relief from the visual impact of the gravel pit. This is true for my lot, my neighbors' and many others. I don't feel that they have offered mitigating factors to lowering our value of the surrounding properties to increase his. Noise is also another factor that will keep me from using my property in the future

as I intended. The machinery that it will be working in the daytime hours will make me, basically not want to be there. There is no buffer between me and the gravel pit so I will have to hear the constant droning of the processing of the sand and gravel for the next 15 plus years. This was a very tranquil neighborhood and I enjoyed hanging out there in the summer months.

In closing, I find it very disingenuous and unethical that Emmitt & Mary Trimble have profited from selling many of the lots in our neighborhood and now singlehandedly want to undermine the enjoyment, the view and the property values of the same people that they sold the property to. I find it very disrespectful that they did not consider anybody but themselves and do not wish to accurately describe what they want to use the property for. I have heard from many of the neighbors from the meeting that they attended that they said that they only wanted to down 10 feet. The permit states that they want to go down 18 and then apply further in the future for going down even further.

I would like him to address those and also on the permit it says that this land was not intended for future subdivision which he also claims that's why he was only going down 10 feet to later subdivide the property which will also make all the septic's in that area lower to the water table.

The questions I have are:

- How could the Borough simultaneously tax him for my view while also approving a big eyesore right in the middle of it? In Homer, they have started to assess view on top of property.
- Will there be a waiver granted for all of them who are being impacted by this gravel pit and if so what was the loss revenue to the Borough?

I mention the campgrounds but that has already been addressed, better then he would have. Also, there is some incorrect or wrong statements on the permit concerning that there were no wells within 100 feet of the property boundary. I do believe, though that "We Tie Fly" has a well within 100 feet so that is inaccurate on the permit. I don't know how they can claim there was no wells within 100 feet of the property when there is.

Thank you for your time."

Chairman Martin asked if there were questions for Mr. Overson. Hearing none, the public hearing continued.

Chairman Martin called for a recess at 10:07 p.m. Chairman Martin reconvened the meeting at 10:15 p.m.

19. Phil Brna, 5601 E. 98th Ave, Anchorage

Mr. Brna spent a good number of his springs, summers and falls in Anchor Point for the last 24 years. He owns a cabin on the Anchor River inside the State Park and has a piece of property that is surrounded by the proposed gravel pit.

Mr. Brna stated that in the last 41 years he spent 21 years with the Alaska Department of Fish & Game as a Habitat Biologist and 14 years with the US Fish & Wildlife Service. He has retired from both so he has lots of experience with large development projects like Pebble Mine, Donlin Mine, and Chitina Mine. Mr. Brna was their fish and wildlife service biologist on all those projects. He stated that the science related to groundwater and the other gravel permit was a total joke. He has worked with some of the best groundwater hydrologists in the country and in Canada. It's pretty stunning that they are making decisions based on groundwater with no groundwater data other than one test hole that was dug who knows where. As former Governor Jay Hammond once said about Pebble Mine, "The only worse place for a mine would be in my backyard." This proposed gravel pit was in his backyard. In fact, it surrounds his one-acre property on three sides. Mr. Brna owned the last lot on Beachcomber. He bought the property to build a small house when he fully retired which he did two years ago. This proposal will pretty much destroy his plans to do that and will destroy his property value.

Mr. Brna thought that in 2018, it was ludicrous to think that someone could develop a gravel pit in the middle of a residential area and in one of the most heavily used recreational areas in Alaska. It was really unthinkable.

Mr. Brna expressed concern about the noise. When the property was being cleared and the other little gravel pit across the street was being built he could hear every truck that was backing up, every truck that was going down the road and the tractors. Someone can hear everything in that valley and it was not going to be any better with a gravel pit.

Mr. Brna also stated that there were archeological sites on his property. There were old cache pits and probably one house pits. He walked the gravel pit property a long time ago and there were a lot of house pits and cache pits on that property as well. There was an old wagon road that goes off the end Beachcomber that was built in the 1920's to get to an old homestead. It goes across his property and through the gravel pit.

Mr. Brna submitted written comments and asked the commission to read them. He hoped the Kenai Borough Planning Commission denies the proposal for this project because it was not good for Anchor Point, not good, for the people who live there and it's not good for the people that come there to recreate. There are people from all over the world that come to this area. He was fishing the Anchor River today and probably spoke to 20 people from all over the world. This is not a good thing.

Chairman Martin asked if there were questions for Mr. Brna. Hearing none, the public hearing continued.

21. Lynn Whitmore, 34680 Beachcomber

Mr. Whitmore's lives adjacent to the proposed project, which is literally in his backyard. When the applicant first bought the property, he was told that they were going to subdivide it and put homes on the property. He considered moving since he had a nice piece of the world to himself for a long time with just one neighbor.

Mr. Whitmore stated that when he was told it was going to be a gravel pit then he went to the staff who told him that this pretty much flies through if it meets the six conditions. Everybody he talked to said that the proposal was just going to fly through. It is a frustrating thing to watch all these people speak knowing that it was just going to fly through so he asked why was there a public hearing. He asked what the purpose was and what was being gained out of it, if the applicant meets the conditions. Maybe that would not be the best way to approach this thing to tell everyone that it was going to fly through.

Mr. Whitmore asked the commission that if there was a chance to consider their feelings and what they are going to listen to and what he was going to hear and listen to and they can reduce or stop that that then it would be a great benefit to him.

22. James Gorman, 73608 Twin Peaks Loop, Anchor Point

Mr. Gorman stated he looks right down on the beach road. He sees the things these people say every day. Mr. Gorman was a history major in college and read the following letter.

"The Alaska State Historic Preservation Office (AK SHPO) received your request for information regarding known historical sites in the area of a proposed gravel mine. Upon review of the Alaska Heritage Resources Survey (AHAS) database there are two reported cultural resource sites in the area of the proposed mining.

- *SEL-00280, prehistoric site, reported to consist of two house pits. Location is represented as a large polygon; exact location of features is unknown but current projected boundaries are within the proposed mining area.*
- *SEL-00281, historic graves and possible cache pits, reported to consist of 5 graves that at one time had grave markers, depressions tentatively described as cache pits were*

reported north of the graves. Location is represented as a large polygon; exact location of features is unknown but current projected boundaries are within the proposed mining area.

In Alaska there are two historic preservation laws that may apply unless the project is entirely private in nature:

Alaska Historic Preservation Act (AHPA): State law requires all public construction or improvement activities conducted by, or requiring licensing or permitting from, the State of Alaska to comply with the Alaska Historic Preservation Act (AS 41.35.070). This also includes required reporting of historic and archaeological sites on lands covered under contract with or licensed by the State or governmental agency of the State. This would include any material sources used under contract with the State.

National Historic Preservation Act (NHPA): If there is Federal involvement (financial assistance, permit, license or approval) with the project it is the statutory obligation of the lead Federal agency to comply with Section 106 (36 CFR § 800) of the National Historic Preservation Act, which requires the Federal agency to take into account the effects that their undertaking may have on historic properties.

Were either of those laws to apply, our office would be likely to request that an archaeological survey is conducted to verify the site locations and assess the potential effects of the project pursuant to the applicable historic preservation law. In addition, there are State laws regarding the discovery and/or intentional disturbance of human remains, this pertains to ALL lands in Alaska, including private. I have attached our handout regarding human remains.

Due to the lack of clear information regarding the site locations our office strongly encourages the use of a qualified cultural resource professional to verify the site."

Mr. Gorman was available to answer questions. He stated that the State Park owns both sides of the beach road and will not permit a widening of the road according to the recently retired chief ranger of the park system.

Chairman Martin asked if there were questions for Mr. Gorman. Hearing none, the public hearing continued.

22. Xochitl Lopez-Ayala, 34910 Echo; Corner of Danver & Echo

Ms. Ayala stated that she currently resides in Homer but her family owns the property directly across from the proposed gravel pit. They would be looking up at a berm if they were standing at the edge of their property. She submitted a photo of what their proposed view would look like if this goes through.

Ms. Ayala wanted the commission to see that everyone drove down from Anchor Point, Homer and Anchorage to attend this meeting. She wanted the commission to make that same commitment to them that they are making at this meeting. Since there is a proposal to postpone, Ms. Ayala asked the commission to drive down to Anchor Point and look at this proposed site. That way they would see what the neighborhood is so passionate about.

Ms. Ayala stated that this has been really great for the community since it has brought them all together and she has gotten to know many of the neighbors that she didn't know before. They have all grouped together and found one common thing that they have all loved which is Anchor Point.

Ms. Ayala felt this proposal should be designated as a mine and not a pit. A mine is not good for them and is not good for Anchor Point. She stated there is a lot of passion that is at this meeting and asked that the commissioners recognize that. There are tons of people who want to talk and want the commission to hear their testimony. She asked that they read over the information and understand and do what is right for the public, not necessarily just to a private owner because it is affecting all of them.

Ms. Ayala asked that they realize that it was kind of odd that there are a lot of gravel pits and mine proposals going up now that the new gravel pit ordinance has been pushed back a year. She asked how many more they were going to see which creates a lot of red flags that should be seen to make sure someone isn't trying to skirt around something or get past something. Ms. Ayala asked that they look into why they are trying to do this; are they trying to sell to a corporation up in Anchorage or sell to an out of state investor.

Ms. Ayala asked that they keep what they love which is why they moved here to the Peninsula. She and her husband just relocated here from Juneau and now they are going to get to look at a mine pit and a berm.

Ms. Ayala thanked the commission and for everyone who attended this meeting. She felt this was hard on everyone.

24. Josh Elmaleh, 34885 Seabury Ct.

Mr. Elmaleh stated that he and his wife looked over many properties over the last couple of years. They purchased their place a year ago overlooking several probably half a dozen to a dozen houses that were beautiful houses and beautiful land but they were close to a gravel pit. He expressed opposition to the proposed pit.

Mr. Elmaleh stated that he caught his first king salmon in the Anchor River. He wants that same thing for his four-month old son and for his six-year-old daughter. He wants them to be able to enjoy the things that he got to enjoy. This is a piece of heaven.

Chairman Martin asked if there were questions for Mr. Elmaleh. Hearing none, the public hearing continued.

25. Lauren Isenhour, 34737 Beachcomber St.

Ms. Isenhour is the daughter of Emmitt & Mary Trimble. She lives on three acres that borders this subject property so this project is in her backyard. Ms. Isenhour understood and respects everyone's concerns and opinions. Also she understood the scope of what the permit allows, which is a lot and again reiterated that she certainly understood and respects everyone's concerns.

Ms. Isenhour stated that she and her husband live at their location for all the same reasons that everyone else has chosen to live in Anchor Point. They recreate, walk on that road, go to the beach, do all the things everyone else does, and loves it there. She was born and raised in Anchor Point.

Ms. Isenhour's parents have been in Anchor Point for 40 years and have made a living in real estate by developing and improving land. They have a great reputation of improving land, selling it and caring for the land. They are very meticulous in how they care for things and everyone can see that because they look out at this beautiful property. Her parents have bought the property and invested \$60,000 into improving it by clearing all the stumps, burning the burn piles, mowing it and caring for this property because that is how they care for land. They have done it for a long time.

Ms. Isenhour's parents have other subdivisions that they have developed in Anchor Point that are on solid gravel but they chose not to develop that into a gravel pit. They are land developers and not pit developers. As someone mentioned they do not have equipment and don't have a plan for operating procedures as people have been asking for detail information about that. She understood the scope of the permit and the concerns.

Ms. Isenhour stated that there is obviously a benefit to gravel and everyone in that community has benefited by the road development in that subdivision. All the subdivisions back in there all have used the gravel for their driveways and foundations and the majority of it from a previous pit right off of Danver that has been reclaimed, subdivided, sold and now homes are on the property. There is a balance and a need for gravel in Anchor Point. She stated that gravel is a main cornerstone to the infrastructure of Anchor Point and for the families that are employed by road construction, building residential construction and by the equipment that operates in the area. There are a lot of families that not represented here that are employed by it.

Ms. Isenhour reiterated that she understood and respected everyone's concerns and they do represent a portion of Anchor Point but there is another portion of Anchor Point that is fine with pit development. They understand the balance of it and that is why there are the regulations. They do need gravel. She respects her parents' ability to develop land in such a strategic and thoughtful way. There is a way with the regulations that the borough set to excavate some gravel and reclaim it. There are pit developers like Mr. Walt who use the permit as soon as they get it and start immediately to excavate gravel.

Ms. Isenhour's stated that her parents' primary interest in this property is the property. Other land developers' primary interest would be the resource below the property for financial gain. She understood that they are requesting a permit with a large scope and that it could be a gravel pit.

Ms. Isenhour lives right there too and her parents would like to build a house on the property. It is in their best interest as real estate investors who have fought for a long time to help maintain property and home values in Anchor Point. They have roots in the community and have an invested interest in maintaining a quality of life in Anchor Point. Their first home in the 1970's was on Beach Access Rd when it was a dirt trail where they operated a tackle shop. They have had an invested interest in this area for many decades and they have managed to develop land and provide a living for them and their family in this small area. They have done that with great care for property and for land and is something, they have instilled in her and her sister which is care for the land.

Again, Ms. Isenhour reiterated that she understood the concerns in this room about the scope of the permit and what could potentially be there. This is her area too and she has a lot of respect for her parents and how they care for the land. Some previous speakers, Lynn Whitmore who has been a good friend of her parents for a long time and Phil Brna who has the property next door, neither chose to mention that her parents' voluntary built a 14-foot berm along their property at their own cost; to try to protect them when they were not required to do so. Her parents are the type of people to do those things.

Chairman Martin asked if there were questions for Ms. Isenhour.

Commissioner Carluccio asked if she was saying that her parents don't have any plans to develop this right now, that they just want to get this gravel pit on the books. Ms. Isenhour replied that she could speculate at what she thought their plans were. She understood that their primary plan for the property was to own it and what they want above all else is to own the property in its entirety. They have plans to subdivide it but that doesn't mean they are going to enact that plan. Her opinion is that they would like the permit to potentially do a gravel pit.

Commissioner Fikes understood that she was near the location of the mining and asked what kind of impact would there be on her personal well. She also asked how far her well was from this proposed pit. Ms. Isenhour replied that she wasn't sure.

Hearing no further comments or questions, the public hearing continued.

26. Gina DeBardelaben, McLane Consulting, Inc.

Ms. DeBardelaben was a principle engineer for McLane Consulting and was hired by the property owner to survey and prepare the permit application.

Ms. DeBardelaben pointed out that the Anchor River Road is a State owned and maintained road. DOT enforces the required gross vehicle weight measure on the bridge, speed, proper use of lane, shoulders, the health and use of the road. It doesn't apply to the borough CLUP permitting process.

Ms. DeBardelaben stated that there is a well within 100 feet of the property but not within the proposed extraction area. There are fine points about the permit that always needs to be read that sometimes isn't interpreted well in public meetings. She hoped that the commission would read the fine points and read the notes in the permit application.

Ms. DeBardelaben stated that gravel extraction from a material site is usually based on perspective sales as it is with this site. This site is not being permitted for a DOT or a commercial development project. The amount of material to be utilized is just a perspective, which is why the application states less than 50,000 square cubic yards. That number is usually based on the area and DNR permitting changes with greater than and less than 50,000 yards. The reality of 50,000 cubic yards coming out of this material site in a year is not very realistic. A large gravel sale in a rural area like this would be 10,000 yards or maybe 25,000 yards which would equate (it is still a lot) to less than 1,500 trucks, not 5,000 trucks. If they are going to sell a large amount of material, then they are not going to run it in a 10-yard end dump but would be running a side dump or belly dump.

Ms. DeBardelaben stated that there was one test hole dug at the time of application. There have been additional test holes dug since then. She continues to state that a developer or an operator continue test hole for groundwater and for different materials that meet specification as they enter the pit. All roads have a specification that the material has to meet. They are going to move around, dig test holes and constantly test groundwater if it varies. The whole requirement is that they stay 2 feet above it.

Ms. DeBardelaben stated that the owner would be installing monitor wells. She stated that it is a great benefit to the owner and the borough by putting monitor wells on the property. It gives them some comprehensive data on a quarterly or monthly basis of where the groundwater was. They are proposing that they might do that in the future even though this permit is not to enter the groundwater table.

Ms. DeBardelaben also referred to the other concerns of site buffers that were mentioned. She was available to answer questions.

Chairman Martin asked if there were questions for Ms. DeBardelaben. Hearing none the public hearing continued.

27. Ermitt Trimble

Mr. Trimble was the managing member of the Beachcomber, LLC and the principal applicant. He was available to answer questions as he did, voluntarily, in Anchor Point last Wednesday. There were a number of things that could be clarified but most of them were not pertinent to what the commission will be deliberating on so he was not going to try to counter those things.

Chairman Martin asked if there were questions for Mr. Trimble.

Commissioner Ruffner asked what his thoughts were on staff's recommendation for postponement. Mr. Trimble replied that he had no problem with postponement. Commissioner Ruffner stated that there will be the opportunity to ask further questions since staff was recommending postponement and the applicant had no problem with postponement.

Mr. Trimble stated that he gave some photos to staff that showed the berm that he put up. They were able to install an extensive berm in about three hours, mostly as a demonstration as to what could be done blocking those homes. There were about five homes that he could not see from the top level of excavation area with the berm, which could be replicated moving back. Mr. Trimble stated that he was not in the gravel business but it was part of the asset value of this property and it was incumbent upon him to protect his family and their investment to maximize that possible value. What he would like to do with the property was really his own business. He has a subdivision plan but he has no intention for preliminary approval, it is just that he wants to know that he has done his homework ahead of time. They have taken a few loads of gravel out of the pit for the ramp at the boat launch ramp and for the expansion of the parking area. He does intend to pursue this.

Commissioner Carluccio asked if he had intention of developing this property as a gravel pit. Mr. Trimble replied that they have already started developing this as a small gravel pit that was within the one-acre confines. He wants to go through this procedure, submit himself to the process, live up to the permit if and when he gets it so that he would be able to do whatever the permit will allow him to do. His plan was a small

scale being for local projects. All of those home and people have those properties because Buzz Kyllonen took a small pit, built all those roads and driveways, and provided the gravel for almost all of those people or those properties would not be there now. It was now one of the nicest looking properties in the area.

Commissioner Venuti asked if he heard the concerns from the people regarding the hazards of trucks on the haul road as well as the condition of the bridge that goes over the Anchor River. He presumed that any haul road out of the pit would go over the bridge. Mr. Trimble replied that it is not possible to go over that bridge now. It has been condemned which is why people are having to drive from the North Fork Road all the way to Eight Mile and back down the Old Sterling Highway to bring gravel to the beach. He stated that it was going to be rebuilt within a year or two. Right now, there are gravel trucks going up and down Danver all the time. Mr. Trimble stated that he has no problem with the big boats going up and down that road. He and Mr. Kyllonen got that road paved through a maintenance budget with DOT for \$150,000 because they gave them permission to go through their properties.

Hearing no further comments or questions, the public hearing continued.

28. Don Horton, 34910 Echo

Mr. Horton stated that his father said that the property was directly across the street from the proposed gravel pit. He asked if the permit was attached to the property or attached to the owners of the property if a permit is issued. If the property was sold, does the permit stay with the property.

Chairman Martin replied that the permit is attached to the property.

Mr. Horton stated that the applicant wants to maximize the value of his property while it was at the expense everyone's property around it. He thought that was not right.

29. Richard Carlton, 73500 Seabury Rd.

Mr. Carlton was a retired lineman and fell in love with the Anchor Point River area in 1996 when he started coming up here regularly. He and his wife purchased a piece of ground in 2007. Mr. Carlton stated that this was very emotional thing for him because he fell in love with the place which has a lack of noise. He spent 40 years hearing backup alarms and backhoes.

Mr. Carlton goes to his property and sits on his patio and looks out at Iliamna and drinks his coffee and he is in heaven. It is a wonderful thing. He has wonderful neighbors that care about one another. If they need something, then they help each other. If they are making too much noise, then they say something and they quiet down. It is a great life.

Mr. Carlton doesn't know why it matters who owns the road that goes to the beach. The bridge is condemned. The Old Sterling Highway is a hazard and if they take just a 10 -12-yard dump truck by itself and drive it up and down that road with its Jake brakes, that quiet goes away.

Mr. Carlton stated that there are all these RV Parks. The Buzz Kyllonen RV Park was where they fell in love with the area. They come here year after year and it's right across where one of the entrances is to this Beachcomber road. He would take a rubber boat out and catch a halibut and then drive down to southeast Washington and plan for next year to come back up here. That will all change if a big hole is dug.

Mr. Carlton was kind of like the other people, he doesn't begrudge anyone making a living but this proposal has no place where it's at. People raise concerns about the Pebble Mine but it's a long way away. Maybe it could trash a lot of streams and salmon runs but he doesn't see it so it's not personal to him.

Mr. Carlton stated that if he has to drive to the Post Office and has to come up Danver and hear backup alarms or white noise then he was not going to enjoy the place liked he used to. He thought the commission should be able to have an input on this project regarding the road, safety and all the things expressed even though the borough doesn't have any jurisdiction with the road because it's a State Road. He asked that the commission to the right things.

MOTION: Commissioner Ruffner moved, seconded by Commissioner Carluccio to suspend the rules so that public comment can be extended and to be able to finish the business beyond the normal closing time of 11:00 p.m.

VOTE: The motion passed by unanimous consent.

BENTZ YES	CARLUCCIO YES	ECKLUND YES	ERNST ABSENT	FIKES ABSENT	FOSTER ABSENT	ISHAM ABSENT
MARTIN YES	MORGAN YES	RUFFNER YES	VENUTI YES	WHITNEY YES		9 YES 3 ABSENT

30. Steve Haber

Mr. Haber felt that someone was going to die if this project goes through. He unfortunately had a high school incident with his son's school many years ago. A traffic light couldn't get installed until after three kids were killed. Mr. Haber stated that the commission might be under such tremendous pressure from the way they do this that this will be approved. This won't work with this beach road. Everything that everybody else has said about the views doesn't compare with the bike companies going up and down that road. The boat trailers are going 60 miles per hour who aren't obeying the laws either. He reiterated that somebody was going to die on that road but it could be prevented.

31. David Gregory, 73850 Seaward

Mr. Gregory lives near the proposed gravel excavation site, which is really a mine. He works at a mine and felt there was a place for mines. The mine that he works at is way out in a remote area.

Mr. Gregory expressed concern regarding noise and dust. The noise goes uphill where there are numerous homes. There may be only five homes that could be seen from one particular point but there are dozens up this hill that the noise will carry right up there as well as the dust. The dust can be carried by the wind or if the wind is still, it just hangs in the air.

Seeing and hearing no one else wishing to speak Chairman Martin closed the public comment period and opened discussion among the Commission.

MOTION: Commissioner Ruffner moved, seconded by Commissioner Bentz to postpone action and continue the public hearing until the next meeting of August 13, 2018.

Commissioner Ecklund stated that she would like to take action on this agenda item rather than postponing to the next meeting of August 13, 2018. They have heard the public and have read through the material prior to the meeting.

Commissioner Whitney concurred with Commissioner Ecklund.

There being no further comments or questions, Chairman Martin called for a roll call vote.

VOTE: The motion failed by majority consent.

BENTZ YES	CARLUCCIO NO	ECKLUND NO	ERNST ABSENT	FIKES NO	FOSTER ABSENT	ISHAM ABSENT
MARTIN YES	MORGAN NO	RUFFNER YES	VENUTI YES	WHITNEY NO		4 YES 5 NO 2 ABSENT

MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to approve the conditional land use permit application for a material extraction site on a parcel in Anchor Point.

Commissioner Ecklund believed they have sufficient findings to deny granting this permit based on the public testimony, the borough code as it is written now and the facts that were written in the staff report.

Commissioner Ecklund asked if they could even address this because the applicant requested a waiver for the processing portion of the pit and staff recommends denying the waiver request which would not allow them enough area for a processing plant. She asked if that would require a new submission of their application. Mr. Wall replied that the permit would be for the material extraction but to process the material there would be a narrow area within the material site. The material extraction would be approved but they would not be able to process outside of that narrow area which would be quite narrow if it was narrowed down to the 300 foot from the property lines. Commissioner Ecklund thought it would be 50 feet wide which would be a fairly narrow area.

Commissioner Ecklund stated that the motion was to approve the material site and asked if they had to address the waiver request. Mr. Wall understood the motion to approve as recommended in the staff report, which would include the denial of the waiver.

Commissioner Ruffner had hoped this would have been postponed as he had a couple of legal questions that he wanted to ask. He didn't think they had time to go through a memo that he was going to ask for. Commissioner Ruffner summarized where he believed they stood legally with looking at this and why he had to give this talk a number of times in an uncomfortable way. The Borough Assembly has given them the rules by which they are allowed as Planning Commission members to work under so they have put the sideboards up there that says what they can and cannot approve. The six criteria that staff have laid out which shows in their opinion that it meets those conditions. What he wanted to hear from his fellow commissioners is of those six criteria which ones, if they were going to vote against this, were not being met. That way he can understand where they would be deviating from what was presented in the staff report.

Commissioner Ecklund suggested the following findings.

Findings

1. Ordinance 21.29.040(A)(4), minimizes the noise disturbance to other properties. From the testimony she heard and the documents that have been submitted she felt the berms or the vegetated buffers will do justice to minimize the noise to other properties.
2. Ordinance 21.29.040(A)(5), minimizes visual impacts. She felt that the visual effects will not be reduced sufficiently with buffers and berms as they can't be built high enough.
3. The application was submitted without the seasonal high water determination. This was not sufficiently delineated in the application.
4. They need to determine if that well was within 100 feet of the material site.

Commissioner Ecklund stated that was her case and the vote would determine if they stated it in and if the motion failed to approve then there was follow up procedures that could be taken by the applicant.

Commissioner Ecklund asked what the appeal process would be for the applicant if this were denied. Mr. Wall replied that there is a 15-day appeal period once the notice of decision is issued. That appeal would go through the Clerk's office to a hearing officer. Anyone who testified or submitted written comments would have the ability to appeal. Commissioner Ecklund asked if the hearing officer would receive a transcript of any comments either those who verbally testified or submitted written comments. Mr. Wall replied yes, a transcript would be provided to the hearing officer.

Commissioner Ruffner explained the legal standing that they have at this meeting. They have the broad authority that has been given to the Planning Commission according to Borough Code. It is 240.050 which authorizes the planning commission to consider all the factors in everything they do and make a good determination. Later on, KPB 21.25 lays out the procedures for when they would authorize a conditional land use permit which has several steps. Now there is KPB 21.29 which is the code specifically relating to gravel pits. His understanding of their interpretations of how they have gotten to this point in the past has been that KPB 21.29 really lays out what can be done with buffers and what limitations they could put on a pit operator. Those are handed down to them from the Assembly. Previously, they have heard that the KPB 21.29 is the code that governs their decisions. Looking further up the code where they have broader latitude has not been afforded to them in the past. That has been his understanding and asked if legal counsel could give any clarification or corrections to that.

Ms. Montague replied that was a good summary. One thing that she would add would be that it was not just a matter of the ordinance that was adopted later in time but also the ordinance that was most specific to what they are reviewing which in this case is KPB 21.29. KPB 21.29 very specifically addresses materials sites so that has more weight than a very general purpose clause. For example, the Planning Commission can review the public health, safety and welfare. She stated that the very specific criteria in KPB 21.29 is how the Assembly has chosen to protect the public health, safety and welfare.

Commissioner Carluccio stated that KPB 21.29 says that 50 feet of vegetation and a ten-foot berm was one of the criteria yet the pit was lower than all the surrounding area so the 50 foot does not do anything. She asked if they have some authority to say that this is the letter of the law but was not the intent of the law because the intent of the law was to protect the surrounding landowners. Ms. Montague replied that the intent of the law was to protect the surrounding landowners in the way that the Assembly has laid out in the Borough Code.

Chairman Martin felt it was the unique topography that gets them in this corner right now. It is hard to foresee all the different ramifications of a crater.

Commissioner Carluccio agreed and stated that she would not be able to support the motion in granting approval of the permit.

Commissioner Bentz observed that the staff report states that the proposed extraction meets the material site standards in KPB 21.29, minimizing noise disturbance from other properties but she does not agree with that. She thought that these conditions would not minimize noise disturbance to other properties and will not minimize visual impacts.

Commissioner Morgan agreed as well and did not see how the 50-foot buffer or berms would minimize visual impact or sound impact because of the unique topography.

Commissioner Ruffner thought the commissioners did a good job of laying out the record of why and how they were going to vote. This will most likely be appealed if it is not approved. If it is appealed, then he thought the hearing officer will have a good record from the Planning Commission of why they thought it might not meet those criteria of being able to screen the vegetation.

There being no further comments or questions, Chairman Martin called for a roll call vote.

VOTE: The motion failed by majority consent.

BENTZ NO	CARLUCCIO NO	ECKLUND NO	ERNST ABSENT	FIKES NO	FOSTER ABSENT	ISHAM ABSENT
MARTIN YES	MORGAN NO	RUFFNER YES	VENUTI YES	WHITNEY NO		3 YES 6 NO 3 ABSENT

Chairman Martin thanked everyone for the effort and sacrifice it took to come to this hearing. He encouraged them to stay connected as a community.

AMENDMENT MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to attach the following findings to the denial of the conditional land use permit for the Anchor Point material extraction site.

Findings

1. Borough Code 21.29.040(A)(4), the noise will not be sufficiently reduced with any buffer or berm that could be added.
2. Borough Code 21.29.040(A)(5), the visual impact to the neighboring properties will not be reduced sufficiently.

VOTE: The motion passed by unanimous consent.

BENTZ YES	CARLUCCIO YES	ECKLUND YES	ERNST ABSENT	FIKES YES	FOSTER ABSENT	ISHAM ABSENT
MARTIN YES	MORGAN YES	RUFFNER YES	VENUTI YES	WHITNEY YES		9 YES 3 ABSENT

~~AGENDA ITEM G. ANADROMOUS WATERS HABITAT PROTECTION (KPB 21.18) - None~~

~~AGENDA ITEM H. VACATIONS NOT REQUIRING A PUBLIC HEARING – None~~

~~AGENDA ITEM I. SPECIAL CONSIDERATIONS - None~~

~~AGENDA ITEM J. SUBDIVISION PLAT PUBLIC HEARINGS~~

Chairman Carluccio reported that the Plat Committee reviewed and conditionally approved 5 preliminary plats.

~~AGENDA ITEM K. OTHER/NEW BUSINESS - None~~

~~AGENDA ITEM L. ASSEMBLY COMMENTS – None~~

~~AGENDA ITEM M. LEGAL REPRESENTATIVE COMMENTS - None~~

~~AGENDA ITEM N. DIRECTOR'S COMMENTS~~

Mr. Best reported that the Assembly did not have a meeting since the last Planning Commission meeting.

Chairman Martin asked if there were questions for Mr. Best. Hearing none, the meeting continued.

~~AGENDA ITEM O. COMMISSIONER COMMENTS~~

~~AGENDA ITEM P. PENDING ITEMS FOR FUTURE ACTION~~

~~AGENDA ITEM Q. ADJOURNMENT~~

MOTION: Commissioner Carluccio moved to adjourn the meeting at 11:24 p.m. Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

Page 4

1 will do little to minimize the visual impact or noise
 2 disturbance to other properties. Staff recommends that
 3 a 50-foot vegetated buffer be required adjacent to the
 4 section line easement on the east property line; that
 5 would be along Denver Road.
 6 Part of Denver Road is a half dedication.
 7 Part of it is not -- well, let me rephrase that. Part
 8 of it is -- Denver Road is platted, and the portion on
 9 his property is a section line easement. And then also
 10 the northern part, both sides of the roadway is a
 11 section line easement.
 12 So in simple terms, the staff is
 13 proposing that a 50-foot vegetated buffer be required
 14 along Denver Road beginning at the edge of the section
 15 line easement, and then a six-foot berm inside of that.
 16 And then down along Echo Drive and going
 17 to the west, the same buffer is being proposed by
 18 staff: 50-feet of vegetation and then a six-foot berm
 19 on the inside of the vegetated buffer. And then
 20 wrapping around to the south there, that little leg
 21 there adjacent to that parcel, the same buffer.
 22 And then from there to the west, there's
 23 a few subdivision lots down on the south side there and
 24 there's really no vegetation there at all. There staff
 25 recommends a 12-foot high berm to provide the visual

 5 **CHAIRMAN MARTIN:** We'll move to Item F4,
 6 Resolution 2018-23. Staff report, please.
 7 **MR. WALL:** Thank you, Mr. Chairman.
 8 This is an application for a conditional
 9 land use permit for a material site in the Anchor Point
 10 area. It is located at 74185 Anchor Point Road. The
 11 parcel number is 169-010-67. The applicant is
 12 Beachcomber, LLC. The site plan and application
 13 proposes the following buffers:
 14 On the north, a six-foot high berm,
 15 except along the east 400 feet where a 50-foot
 16 vegetated buffer is proposed; the south and east, a
 17 six-foot high berm; the west, greater than 50 feet of
 18 vegetation.
 19 Much of the vegetation was removed from
 20 this property 20 to 30 years ago. The neighboring
 21 properties adjacent to the southeast corner of the
 22 proposed material site are at a higher elevation than
 23 the subject property. This may be easiest to see on
 24 the contour map on page 119 of your packet.
 25 The proposed six-foot high berm alone

Page 5

1 impacts there.
 2 The west side, he's not excavating in the
 3 far west portion of the property, he's going to leave
 4 that vegetated. And then the berms as he proposed, a
 5 six-foot berm along the other property lines except for
 6 that in the northeast corner there where he's proposing
 7 natural vegetation.
 8 So with the proposed six-foot berm, I was
 9 not able to state in the staff report that the
 10 standards in KPB 21.29.040 had been met, but with the
 11 addition of the 50-foot vegetated buffer in portions of
 12 the property, I was then able to draft the findings
 13 stating that the standards had been met.
 14 Of course, this decision concerning
 15 buffers is entirely up to the Planning Commission. The
 16 code states, "The vegetation and fence shall be of
 17 sufficient height and density to provide visual and
 18 noise screening of the proposed use as deemed
 19 appropriate by the Planning Commission."
 20 While we are still on the map on page
 21 119, some of the property lines are not accurately
 22 depicted on these maps that I created. We've been
 23 updating the -- once I discovered the error, we've been
 24 updating the borough's mapping system, but I wasn't
 25 able to generate a new map for tonight's meeting.

Page 6

1 What I'm getting at there is Beachcomber
2 Street on the north portion of the property coming off
3 of Anchor Point Road, where it ends it looks like
4 there's a gap between that parcel -- at the end of
5 Beachcomber Street and the parcel, and that's
6 inaccurate.
7 To get a better representation of that
8 would be to go to the site plan on page 113 where you
9 can see that there's not that gap there. Like I say,
10 we're fixing that.
11 So now that we are looking at the site
12 plan, it indicates that the proposed processing area is
13 located 200 feet from the south of the last lot of
14 Beachcomber Street, which is currently undeveloped.
15 The parcel across the street from that one is developed
16 and it is located within 300 feet of the proposed
17 processing area.
18 This parcel is owned by the applicant's
19 daughter. A waiver is being requested for the 300-foot
20 processing distance requirement from this property
21 line. Staff does not recommend approval of the
22 processing distance waiver request.
23 We have numerous letters from adjacent
24 property owners and agencies in your desk packet
25 tonight. The staff report in your packet recommends

Page 7

1 approval of the conditional land use permit, however
2 because of the amount of written materials that you
3 have received tonight, I'm recommending that you
4 conduct the public hearing tonight and then continue
5 the hearing to your August 13th meeting to allow
6 yourselves time to read the written comments that you
7 have received.
8 That is the end of my report.
9 **CHAIRMAN MARTIN:** Thank you. Anyone here
10 wishing to testify? Please state your name and address
11 at the microphone.
12 **ROBERT CORBISIER:** This is the right
13 gravel permit?
14 **CHAIRMAN MARTIN:** Yes, sir.
15 **ROBERT CORBISIER:** Mr. Chairman, I do
16 apologize. I was working on my notes, and all of a
17 sudden I heard "materials site extraction," and I
18 wanted to jump. I was like, "Why isn't anybody else
19 saying anything?"
20 My name is Rob Corbisier. I do have
21 prepared statements. I would ask for ten minutes, I
22 think I can still get through it in five.
23 **CHAIRMAN MARTIN:** Go for it.
24 **ROBERT CORBISIER:** I am a resident of
25 Anchor Point, however, I'm an attorney here

Page 8

1 representing Robert Bob Baker on behalf of the R.O
2 Baker Trust. He is an adjacent property owner. I have
3 submitted written comments, I'd like to briefly
4 summarize them orally though.
5 I primarily make five points in the
6 written comments. First of all, there's no way that a
7 conditional use permit in this location could
8 adequately protect the environment. Fugitive dust is
9 going to be coming off of the gravel pit into the
10 adjacent wetlands, the Anchor River, and the estuary.
11 There is going to be drainage issues.
12 There's going to be dewatering issues. Although the
13 applicant has stated at this time he's planning on
14 staying above the water table, the application does
15 state at some point in the future he intends on going
16 into the water table.
17 The well location itself is deceptive
18 when you look at the gradient of where the test hole
19 was dug. It is at a near -- it's at a high point in
20 the area adjacent to a bluff that drops way off, and so
21 naturally you are going to have a lower water table at
22 that spot. It also violates the ADEC best practices
23 manual, which suggests having a four-foot separation.
24 You are also going to have noise that is
25 going to damage wildlife habitat and it violates the

Page 9

1 borough's Costal Zone Management Plan.
2 Second, it's not going to be able to
3 preserve recreational values. There are two state park
4 campsites adjacent to the area. Anglers fishing on the
5 Anchor River and camping on the beach and in the
6 campsites are going to be able to hear the noise, and
7 the heavy truck traffic is going to interfere with
8 recreational traffic going to and from the beach and
9 the tractor launch site. That road is quite narrow,
10 that is going to be ripe for disaster.
11 It is going to impact residential values
12 dramatically. There are 13 classified -- residential
13 classified parcels that are adjacent to right next to
14 it. There are -- I counted approximately 40 within
15 1,500 feet.
16 A six-foot berm is not going to be
17 sufficient for either visual separation or auditory
18 separation especially when you consider second-story
19 houses.
20 This is going to create an attractive
21 nuisance. You have Chapman Elementary School that is
22 not far from that. Children go down and play near the
23 beach and in that area all the time.
24 In the borough's working group on the
25 material site regulations there was testimony

Page 10

1 describing how winds in the wintertime turn otherwise
 2 vacant gravel pits into sandblasting facilities that
 3 absolutely knock out somebody's house next door.
 4 In this location, it is adjacent both to
 5 Cook Inlet and the Anchor River flats there, there is
 6 undoubtedly going to be high winds. It is the highest
 7 level HUD wind zone.
 8 It is going to impact property values. I
 9 understand the borough assessor does not necessarily
 10 drop property values just based on the existence of a
 11 gravel pit; however, studies in the Lower 48 show a
 12 documented drop of around 33 or higher percent when a
 13 gravel pit is developed.
 14 Although staff has recommended a buffer
 15 on the east side and the north side, there is not a
 16 buffer that is being recommended even on the south
 17 side. And so you are still going to have residential
 18 parcels with nothing other than a six-foot berm.
 19 Lastly, for residential values, Danver
 20 Street does not comply with the ADEC best management
 21 practices for a dedicated access point.
 22 Third, this is not needed. There are
 23 approximately 50 parcels in the greater Anchor Point
 24 area either off the Old Sterling Highway, the Sterling
 25 Highway, or the North Fork Road that either have

Page 11

1 conditional use permits as gravel pits or are existing
 2 prior uses.
 3 So lastly, the borough should simply just
 4 wait for the regs to come out. There's no reason for
 5 the Planning Commission to approve this application
 6 right now. Let the process that has been started by
 7 the assembly finish before the conditional use permit
 8 is authorized.
 9 If the Planning Commission feels a need
 10 to do something, an alternative that should be
 11 considered would be only developing the Phase 1 portion
 12 of the project allowing then the applicant to come back
 13 for later phases after the regulations are in place.
 14 Now lastly, my client asked me to make
 15 several additional points here at this meeting. To his
 16 knowledge, the applicant has no experience operating a
 17 gravel pit. I mean, simply from an LLC standpoint,
 18 Beachcomber, LLC is a brand new LLC, it has no business
 19 history.
 20 He has questions about what -- what is
 21 the financing for the extraction? The start-up costs?
 22 The ability for the applicant to post a requisite bond?
 23 What is the insurance going to be like? What is the
 24 LLC's solvency?
 25 In the event that the LLC is to become

Page 12

1 insolvent, there is a potential for an outside operator
 2 that could come in and continue to decimate the mouth
 3 of the Anchor River and its recreational values in the
 4 event that there's a sale.
 5 Thank you very much. I will otherwise
 6 defer to my comments. Are there any questions?
 7 **CHAIRMAN MARTIN:** Any questions?
 8 **ROBERT CORBISIER:** Thank you.
 9 **CHAIRMAN MARTIN:** None at this time.
 10 Thank you. Next testifier, please.
 11 **MICHAEL BRANTLEY:** Good day, ladies and
 12 gentlemen of the assembly. You are here today to
 13 represent --
 14 **CHAIRMAN MARTIN:** Name and address for
 15 the --
 16 **MICHAEL BRANTLEY:** Pardon me?
 17 **CHAIRMAN MARTIN:** Name and address for
 18 the record.
 19 **MICHAEL BRANTLEY:** Yes, ma'am -- yes,
 20 sir.
 21 My name is Michael Brantley. My address
 22 is 74057 Anchor Point Road, 300 miles west -- I mean,
 23 300 feet west of Danver Road, which is going to be the
 24 access road for this pit.
 25 I just retired after 41 years and three

Page 13

1 months working for the federal government. 31 years of
 2 that working history I worked gravel pits and quarries.
 3 I've seen a lot of noise, or heard a lot of noise too
 4 actually, and these things create carcinogens, and
 5 carcinogens is cancerous.
 6 Imagine somebody with their family
 7 driving down with their RV or SUV, windows down, and
 8 their children breathing in all this air every day that
 9 this is going on. Just imagine that.
 10 We have a traffic problem as it is on the
 11 beach road. And to be exact, that road is a disaster,
 12 it is a hazard, it is a liability to the Kenai
 13 Peninsula Borough as of this day, that is my opinion.
 14 This needs to be rectified.
 15 This pit is on the backside of my lot, it
 16 borders it. I am north of his line there. I spent
 17 hundreds of thousands of dollars the past couple of
 18 years to build my dream, my business down there, a
 19 fly-tying shop. And now I will have a pit going in
 20 next door.
 21 I've got guests that gets up at all types
 22 of hours to fish, you all know that, they go according
 23 to the tide and the weather. So if they are going to
 24 put a berm up there, they better also put up a wall.
 25 They also need to have DEC inspections if

Page 14

1 this is going to happen, and I mean on a regular basis.
 2 I had 12 certificates dealing with hazardous waste
 3 working for the Air Force, so I have experience in all
 4 of this, and I'm telling you that it's not right for
 5 the neighborhood.
 6 I've spent tens of thousands of dollars
 7 to get my DEC engineer-approved water system put in.
 8 That was quite the experience. I drilled four wells
 9 right next to one that was producing 26 gallons a
 10 minute. I went down a few hundred feet and still
 11 couldn't find water. Fortunately for me the borough
 12 came back and changed the regulations and now my well
 13 is classified as private, so therefore I can use it.
 14 However, the well is only down 38 feet. And I'll let
 15 you know again, Kenai Peninsula Borough/DEC has
 16 approved this.
 17 There is something that came to my
 18 attention some time ago when I first bought this
 19 property. The property was previously owned by Albert
 20 Don Magee from Oregon. Now some time ago I heard a
 21 story, so I did some inquiring. The story I understand
 22 was that he had a son that had passed away and he
 23 decided to bury his son on this property that we are
 24 talking about today. I have been in contact with the
 25 family members down there trying to get verification of

Page 15

1 this as we speak, and as I get this information I will
 2 pass it on to the appropriate people.
 3 And this is all I have to say. Let me
 4 check my notes.
 5 **CHAIRMAN MARTIN:** Do you have any
 6 questions?
 7 **MR. WALL:** Mr. Chairman, if I could.
 8 **CHAIRMAN MARTIN:** Yes.
 9 **MR. WALL:** You mentioned that you have
 10 well. Did you indicate that's approved as a public
 11 water supply system?
 12 **MICHAEL BRANTLEY:** Yes, sir.
 13 **MR. WALL:** And when was that approved?
 14 **MICHAEL BRANTLEY:** Here I got -- finally
 15 got the approval last -- a couple weeks ago.
 16 **MR. WALL:** Okay. Because I was going to
 17 say that doesn't -- in our comment letter from DEC they
 18 didn't mention that.
 19 **MICHAEL BRANTLEY:** Sure.
 20 **MR. WALL:** So I'll do some follow up with
 21 them. Thank you.
 22 **MICHAEL BRANTLEY:** Sure, sure, that's
 23 fine. I appreciate that.
 24 Something else I want to talk about this
 25 possible deceased son that possibly could be buried on

Page 16

1 that property. It so happens to be his ancestry is
 2 Cherokee.
 3 I shall leave you with that, and you all
 4 have a good evening. I hope you make the right
 5 decision on this. The community can't have this.
 6 If you are going to put this in and you
 7 push it through, there's three things that I want. I
 8 want that road to be completely redone from the boat
 9 launch all the way to the bridge.
 10 The borough came down the other day and
 11 did some shoulder work. There is no shoulder on one
 12 side of that road half the way down. If you fall -- if
 13 you go over that line, white line, you are down four
 14 feet, your car is ruined, and you guys will get a bill.
 15 I've seen a lot of foot traffic. I got
 16 photos. I have a photo of a woman pushing three babies
 17 in a cart down that road. I have one of two babies. I
 18 have a group of six people. Unfortunately, rushing
 19 here from my place, I left all that information there,
 20 but I'll gladly dig it up and send it to any one of you
 21 that want to look at that.
 22 **CHAIRMAN MARTIN:** Thank you.
 23 **GARY CULLIP:** My name is Gary Cullip and
 24 I'm a resident there. I'm up on the end of Seabury
 25 Court, and I overlook this whole area for the gravel

Page 17

1 permit.
 2 My biggest concerns I have -- he might
 3 meet all of the regulations, but I think there's
 4 circumstantial evidence that's involved here that you
 5 really need to take a hard look. I think you really
 6 need to table this, take it up on your August 13th
 7 meeting.
 8 My biggest concerns I have is the
 9 condition of the road, number one. I know the borough
 10 does not have the money to go rebuild that road. So if
 11 that has to happen, you need to put a condition to the
 12 permit to make the permittee liable for it.
 13 And I don't know how in the world anybody
 14 could really address the safety issues. Number one
 15 safety as I see, is that road is the main access for
 16 people to get from the state parks down to the beach.
 17 So you have all kinds of foot traffic on a very, very
 18 narrow road as is. You have up to 40 boats traveling
 19 that road to get launched every day, and you are going
 20 to put these dump trucks and stuff in there, it's going
 21 to be a disaster. It really, really -- you people need
 22 to take a hard look at it.
 23 And like I said, it's a very different
 24 permit that we are talking about here. This is in the
 25 middle of a residential area, lots and lots of people

Page 18

1 to be affected by this.
 2 Now if you at all can find yourselves to
 3 go ahead and table this, take all the rest of the
 4 information that you are going to receive from all
 5 these people that are here and then make a wise
 6 decision. Thank you.
 7 **CHAIRMAN MARTIN:** Thank you. Any
 8 questions? None at this time. Next testifier, please.
 9 Name and address for the record.
 10 **WILLIAM PATRICK:** William Michael Patrick
 11 at 34897 Fisher Court in Anchor Point.
 12 I'm a coward. I ran away from the Lower
 13 48 in 1990 and came up here and taught in rural Alaska
 14 for a long time. I came to Anchor Point because it's a
 15 beautiful place. I picked a lot on a hill. I look out
 16 my front window and I can see Mt. Iliamna. I look out
 17 the side window, I see Mt. Redoubt. I go over to my
 18 neighbor's house across the street and we can even see
 19 Mt. Augustine.
 20 Over the past six years I've had the
 21 pleasure, the ecstatic pleasure of a lifetime -- talk
 22 about quality of life -- to see three sets of twin
 23 calves born in my front yard. I actually got to see
 24 them coming out, and I got to enjoy them running around
 25 on the front lawn.

Page 19

1 In the fall, sandhill cranes fly about
 2 that amphitheater bowl that we have there at the mouth
 3 of the Anchor River, and they are just squawking, and
 4 the way sounds carry there it sounds like they are in
 5 your living room. They will land on the hillside and
 6 down in the very area where this pit is going to be and
 7 they walk around. They are a majestic bird to see.
 8 I can drive down by the beach and I can
 9 see people walking on the beach, enjoying it. There is
 10 much beauty there. This is a very unique area. It's
 11 not down some dirt road. The farthest westerly point
 12 on the American highway system is right down there, and
 13 I can just see the tourist now, "Hey, I drove out as
 14 far west as I can in the United States and there's a
 15 gravel pit there." You know, "Go West, young man, go
 16 West." I guess you have to go farther west to get away
 17 from the gravel pits.
 18 I don't begrudge anybody making money, I
 19 don't. As a school teacher, I wish I could have found
 20 a way to make a little more money, but I don't begrudge
 21 business, any of that, but I do have some questions as
 22 a science teacher.
 23 You guys are talking about water tables.
 24 When these people make gravel pits and they let them
 25 fill up with that water, does that subject your

Page 20

1 groundwater to pollution? Because it's in contact with
 2 the atmosphere now.
 3 When you allow them to dig that out and
 4 put a pond in there, what about attractive nuisance?
 5 Let's say a neighborhood kid falls in there. Is the
 6 gradient on the pond steep enough to where he can't get
 7 out? Or you've got moose walking around, they'll -- if
 8 you've ever watched a moose, he'll walk right into
 9 something like that. Would he end up drowning because
 10 he can't get out of the hole in the ground that's
 11 covered up with water so that the gravel guy didn't
 12 have to reclaim it? I don't know.
 13 Flora and fauna, very unique. You've got
 14 a collision between freshwater systems and saltwater
 15 systems. What is on the ground there? What type of
 16 viruses? What types of bacteria? Are they helpful?
 17 Harmful? And what happens when you make them airborne
 18 on dust particles and they blow around? I personally
 19 am allergic to dust.
 20 But my house sits at 110 feet elevation
 21 about 150 yards from the entrance to this pit. The pit
 22 is at 44 feet elevation. You can't -- you'd have to
 23 put a dome over there to keep me from seeing into it.
 24 But then you would also make Mt. Iliamna and Mt.
 25 Redoubt disappear and that might cause a big stir in

Page 21

1 the National Geographic Society.
 2 But sea breezes, land breezes. We always
 3 get a sea breeze. Sometimes it's hurricane force. But
 4 when that sea breeze comes in every evening, guess
 5 what, it blows the dust right on my house, but not just
 6 mine, I've got a neighbor just to the right of me, I've
 7 got a neighbor behind me. Mr. Cullip there lives just
 8 within 100 yards of me.
 9 As you come up my private road, Deesa
 10 (ph) Road -- it's not really a road, it's kind of a
 11 path, but I have one, two, three more neighbors there.
 12 And on the left-hand side I have another neighbor
 13 there.
 14 These people are even closer than 150
 15 yards. But picture that, over 150 yards you have a
 16 rise in elevation of, like, 66 feet.
 17 Now I have two wells at my house. The
 18 reason I have two wells is I drilled the first one and
 19 I ran into an underground stream, an underground
 20 stream. Perfect water, okay.
 21 But through happenstance it gave out in
 22 just a couple of years, so I had to drill another well.
 23 Now that's 70 feet down. Now if you go 70 feet down
 24 from my house into the aquifer that I'm in --
 25 **CHAIRMAN MARTIN:** Could you wrap up?

Page 22

1 That's five minutes.
 2 **WILLIAM PATRICK:** All right. Could I
 3 just --
 4 **CHAIRMAN MARTIN:** Yes.
 5 **WILLIAM PATRICK:** -- you carry that over,
 6 that puts the ground level estimate down there at four
 7 feet above the water table. That's just an estimate.
 8 But I would suggest that you would have
 9 to drill more than one hole to determine the validity
 10 of the water table in that area, particularly in that
 11 area because it has many underground streams. Gravel
 12 filters water. That water is running down towards the
 13 ocean and towards the Anchor River.
 14 So, you know, scientifically if you look
 15 at these things it's fine, but I'm going to get the
 16 noise, I'm going to get the dust, I'm going to have the
 17 visual impact. I'm going to be subjected to safety
 18 pulling out of my road and not getting run over by a
 19 dump truck and so are many, many other people.
 20 I've seen the kids at the elementary
 21 school down there on walking field trips. And the
 22 bridge that services that Anchor River Road is
 23 condemned, it's condemned.
 24 **CHAIRMAN MARTIN:** Thank you.
 25 **WILLIAM PATRICK:** Thanks.

Page 23

1 **CHAIRMAN MARTIN:** Questions? Ms. Bentz?
 2 We have a question, sir.
 3 **COMMISSIONER BENTZ:** What was the depth
 4 of your first well?
 5 **WILLIAM PATRICK:** 20 feet.
 6 **COMMISSIONER BENTZ:** Thanks.
 7 **CHAIRMAN MARTIN:** Thank you.
 8 **TODD BAREMAN:** My name is Todd Bareman,
 9 and I live on the Old Sterling in Anchor Point, and I
 10 own the tractor launch down there at the beach.
 11 I would like to say that that road does
 12 need some addressing. It's in terrible shape. That's
 13 not what we are here for, but we are here to not make
 14 it any worse and cut into the recreational use that's
 15 going on down there.
 16 This pit, if it's permitted, there will
 17 be a crusher that five campgrounds are able to hear, a
 18 trailer park and two RV parks.
 19 How are recreational people going to get
 20 along with that, much less all the residents here that
 21 do have a problem with it.
 22 I'd like to say we are here because
 23 there's not enough regulations and that's why you are
 24 changing this permit process. And I think it should be
 25 tabled until you get some new regulations. This is not

Page 24

1 a normal gravel pit and it's not in a normal area as
 2 you can see by this testimony.
 3 And I would ask that you be a little bit
 4 lenient about people here testifying. This is very
 5 personal, because this is their property and their
 6 livelihoods that are going to be affected here.
 7 That's all I have.
 8 **CHAIRMAN MARTIN:** Thank you. Any
 9 questions? No questions at this time. Next testifier,
 10 please.
 11 **UNKNOWN SPEAKER:** Come on, stand right
 12 behind me. Come on, stand here.
 13 **LINDA PATRICK:** My name is Linda M.
 14 Patrick, I live at 34897 Fisher Court. That was my
 15 husband that spoke earlier.
 16 And I too want to mention all of the
 17 points that he mentioned, however, I'm going to stick
 18 to just one, and that's the noise level.
 19 Now there is excavating going on
 20 presently at that north corner of the designated area,
 21 already been dug out, consistently digging and hauling
 22 gravel and trucks in and out of there right now. That
 23 can sometimes start by 7:30, 7:00 in the morning -- the
 24 other day it was 7:00, and it runs all day. We can
 25 hear it. We can close our doors and our windows; that

Page 25

1 noise still permeates our house. Where is our
 2 protection? Where is our safety, our visual, our
 3 hearing? I just want to know, where is our protection?
 4 **CHAIRMAN MARTIN:** Any questions? None.
 5 **JOHN GIRTON:** Hello, my name is John
 6 Girton, and I live on Twin Peaks Loop. I'm about a
 7 mile from this construction site, so it's really not
 8 going to affect me much as far as what most of the
 9 people here are concerned about.
 10 Before I get into my concern, there is at
 11 least two graves in the middle of this site. One is
 12 the son of Joe and Gladys Dandona, their son is buried
 13 there. And I think there's another one, I think the
 14 McDonalds' have a son buried there also. I can't take
 15 you right to where it is, but it's definitely right in
 16 the middle of this plot.
 17 I'm moved to Anchor Point 25 years ago,
 18 and for one reason, the use of the beach road and the
 19 beach launch because I fish. And that road is so bad
 20 that somebody is going to get killed on it the way it
 21 is now.
 22 Three times in the last 25 years I have
 23 had gravel trucks coming down Danver from a project up
 24 there that hit my boat and my tow vehicle. Once it
 25 took my left-hand mirror off and twice it hit the back

Page 26

1 of my trailer. There's not enough room to move over to
 2 make room for these boats and the gravel pit trucks.
 3 And believe me, the gravel drivers are
 4 not going to get out of way of the boats, they just
 5 push us off. Now that they put in -- they dug out the
 6 berm, there's no place to go.
 7 And my boat is wide, my boat is 11-foot
 8 wide. And somebody said 40 boats a day. There are
 9 days when there are 100, 125 boats down that road.
 10 There's a lot of traffic. Plus you have the campers
 11 and the motorhomes that, you know, they need room. And
 12 these trucks, when they start rolling, it's going to be
 13 a very, very serious problem.
 14 There's a lot of walkers, a lot of kids,
 15 a lot of bicyclers, and it's -- right now when you
 16 drive onto the beach or back, you always have to move
 17 over to the side of the road to make room for the
 18 people walking along the road.
 19 I don't know if you've ever been down
 20 there. I mean, maybe you guys all live up here and
 21 don't know this road and don't know the problems, but
 22 you should get down and take a look at it before you
 23 make a decision, because it's a very serious problem.
 24 The road is in very, very bad shape and somebody is
 25 going to get killed.

Page 27

1 If you do approve it, which God, I hope
 2 you don't, you put in one of these restrictions. One
 3 of the restrictions should be no Jake brakes, because
 4 those trucks go down that hill on the Old Seward
 5 Highway down the left hand appearing to the beach, and
 6 they run those Jake brakes, and it is horrible where I
 7 live.
 8 I only live 150, 200 feet off the Old
 9 Sterling Highway, but it's a big problem when they do
 10 that. And they all do it, and there's no -- there's no
 11 enforcement. I mean, you guys can tell them not to do
 12 it, but nobody is going to enforce it.
 13 Just like -- I've had a couple of gravel
 14 pit operators tell me -- they just laughed. They said,
 15 "Well, once we get the permit we do anything we want.
 16 We come to this, we get our permit, and they tell us
 17 what we can do and what we can't do, but we do it
 18 anyway once we have it."
 19 And that really concerns mem especially
 20 with some of the people involved in this project.
 21 So I really hope you do not approve this.
 22 It's like -- it's just like signing a death warrant to
 23 Anchor Point if you do, because if that tractor and
 24 launch cannot continue to operate because of the road
 25 conditions and the lack of boats going down to launch,

Page 28

1 there's nothing else in Anchor Point to do. That is,
 2 like, 95 percent of our commerce in Anchor Point. It's
 3 a very serious thing you are going to do to Anchor
 4 Point if you allow this gravel pit to go in.
 5 Todd was going to expound it a lot more
 6 on what it would do to his business, but I guess he's
 7 just more of a gentleman than I am. But I'll tell you,
 8 it will be devastating if -- to that whole community if
 9 we lose that beach launch. That is the only thing
 10 anybody -- that's the only thing Anchor Point has. We
 11 don't even have a restaurant anymore. We have a beach
 12 launch, and you take that away from us, you are going
 13 to hurt a lot of people.
 14 **CHAIRMAN MARTIN:** Thank you.
 15 **JOHN GIRTON:** I guess that's all.
 16 **CHAIRMAN MARTIN:** Any questions? No
 17 questions at this time. Thank you for your testimony.
 18 **JOHN GIRTON:** Safety is my whole thing.
 19 I don't know anything about that pit. I'm not going to
 20 live by it and I'm not going to smell it, I'm not going
 21 to get the dust from it, it's the safety of that road.
 22 Thank you.
 23 **CHAIRMAN MARTIN:** Thank you.
 24 **HANS BILBEN:** We have some handouts to
 25 hand out to -- for the Commission.

Page 29

1 **CHAIRMAN MARTIN:** Patty will take care of
 2 it for you.
 3 **HANS BILBEN:** My name is Hans Bilben. I
 4 live at 35039 Danver Street where we built our home,
 5 and we've resided there for the past 15 years.
 6 I'm going to read a little statement here
 7 that kind of sums up why Jeanne and I, as well as most
 8 people in Anchor Point, live where we do.
 9 The statement says, "The natural beauty,
 10 the authenticity of the people, the adventure and the
 11 peaceful life come together to make Alaska a place to
 12 realize dreams.emm
 13 Funny thing about that statement, it's
 14 the first paragraph from the Coastal Realty website.
 15 That's the company that's owned by the same people who
 16 want to destroy the lifestyle that they claim to
 17 promote in their website. They want to develop a mine
 18 in the very heart of Anchor Point.
 19 There's an unlimited number of
 20 well-qualified reasons not to have a gravel pit in this
 21 location, while greed is truly the only driving force
 22 for its creation. We realize that the Planning
 23 Commission is bound by the Borough Code of
 24 Ordinances -- pardon me -- okay.
 25 We realize that the Planning Commission

Page 30

1 is bound by the Borough Code of Ordinances in their
 2 decision making process, and unfortunately these codes
 3 are severely lacking and vague in some areas. The six
 4 standards that the applicant must satisfy are pretty
 5 skimpy, but that's what you guys have to live by for
 6 now.

7 In the case of this application, there's
 8 no possible way that the applicant can meet those
 9 standards due to the topography of the area surrounding
 10 this proposed mine. No amount of berming or vegetated
 11 buffer will meet the standards pertaining to minimizing
 12 noise or visual impact on other properties and not
 13 other homes, as Emmitt would like to say, as required
 14 by the code because of the steep rise in elevation to
 15 the north, the east, and the south of the proposed
 16 mine.

17 Our property is 500 feet south of the
 18 proposed area and 75 feet above the existing floor.
 19 From our property we have clear view and earshot of a
 20 large percentage of the proposed site. If you look at
 21 page 2 and 3 on that handout, it shows some not so good
 22 pictures of what we look at out of our window. But you
 23 can see where the proposed area would be down below us.
 24 There is a lot of people that are much more impacted
 25 than we are.

Page 31

1 Recently myself and a friend walked
 2 through and talked with neighbors and actually looked
 3 at the view from the area. On the first page of my
 4 handout -- and you can see that one that has a bunch of
 5 little red dots all over it -- okay, that crosshatched
 6 area is the mine, proposed mine area.

7 The red dots, when we walked through the
 8 neighborhood and talked with neighbors and looked at
 9 them -- and we didn't really just look at homes,
 10 because the code doesn't say you can't impact homes, it
 11 says you can't impact other properties.

12 We counted -- on the red dots you can see
 13 on this thing, we counted 22 homes and talked to those
 14 people in most of those places, and they were impacted,
 15 and they will have visual and noise impact because no
 16 amount of berming can cover that up. You'd have to
 17 build a 100-foot berm down there to block that view.

18 Let's see. And in talking about this
 19 berm thing again and the vegetated buffer, the picture
 20 that we handed out to you -- and again, I'm a little
 21 premature on that, but this one right here, this is my
 22 neighbor Rick Oliver, he lives on Danver Street, he's
 23 going to speak here in a few minutes, but you can see
 24 the vegetated berm is that one tree to his left.

25 Now Rick lives on Danver, you can see the

Page 32

1 edge of Danver Street in the picture, okay. The road
 2 he's standing on or the cleared area that he's standing
 3 on is the access road to the pit, which would be to the
 4 processing plant, which would be right in front of his
 5 house.

6 Rick walked in 50 feet on Emmitt's
 7 property, and he trespassed probably. He is standing
 8 there, he's almost six feet tall he claims, and he's
 9 got a ten-foot two-by-six or something in his hand.
 10 The trees behind him will all be lost to excavation,
 11 they will be part of the pit. So what do you think
 12 about the visual impact, the noise impact, and the dust
 13 impact on Rick Oliver's house? Okay.

14 One thing -- we just got here a few
 15 minutes ago, Emmitt handed out a little handout and he
 16 says, "In only three hours we did this. Only five
 17 homes have been -- they have a limited view now." How
 18 many homes do we have to destroy or decimate before we
 19 say no to a gravel pit? Only five homes?

20 And the truth of the matter is it doesn't
 21 matter if it's 50 homes, it doesn't have anything to do
 22 with homes, it has to do with properties. People that
 23 own property up there are going to lose value, they are
 24 impacted by the visual and the noise part of that
 25 thing, and there's no way he can get around it because

Page 33

1 of the topography of that area. It's like being in an
 2 amphitheater when you go there.

3 The property, the proposed mine is in the
 4 heart of a residential recreational gem, and we call it
 5 Anchor Point. This property could, if properly
 6 developed, could be a very desirable addition to the
 7 community.

8 **CHAIRMAN MARTIN:** That's five minutes.
 9 **HANS BILBEN:** Okay.
 10 **CHAIRMAN MARTIN:** Can you wrap up?
 11 **HANS BILBEN:** I need about one more
 12 second.

13 **CHAIRMAN MARTIN:** Yep.
 14 **HANS BILBEN:** It's the function of our
 15 elected and appointed officials to represent and hold
 16 up these ordinances and not merely to rubber stamp this
 17 thing. This pit is at the wrong place and it has no
 18 business even getting this far in the process.

19 **CHAIRMAN MARTIN:** Any questions? None at
 20 this time. Thank you. Yep, name and address for the
 21 record.

22 **PETE KINNEEN:** Name is Pete Kinneen, and
 23 I live at 34969 Danver just behind Echo overlooking
 24 this proposed mine.
 25 And I'm here with a slightly different

Page 34

1 take. I'm an Irishman and I'm as passionate as anyone
 2 else is, however I'm going to put that aside, save you
 3 from my passion, and strike strictly to the reasons
 4 that you cannot approve this tonight.
 5 It does not meet the conditions. And
 6 the -- you know, the valid concerns about the safety of
 7 the road, et cetera, et cetera are not within your
 8 toolbox to use to make the decision. So just going on
 9 the ordinances and the exact interpretation of them, I
 10 don't think any of the conditions can be met.
 11 In fact, if this were to be -- first of
 12 all, this is not a permit of right. You do not have a
 13 right to do it, you must come and ask permission, and
 14 there's conditions.
 15 And I'm going to suggest, because of the
 16 uniqueness of this, if this were to be passed, there is
 17 no other operation in the Kenai Peninsula Borough --
 18 you might as well just rip up the ordinance and say,
 19 "Pshh, you can do anything you want."
 20 But the way it stands right now in Title
 21 21.29.050(A)(2)(a)(iie) says specifically, "Buffer
 22 requirements shall be made in consideration of and in
 23 accordance with existing use of neighboring property at
 24 the time of approval of the permit."
 25 "Shall" is a mandatory word, it is not

Page 35

1 permissive. You must do this, you must keep this in
 2 mind. The road and kids getting running over and all
 3 that is real, but it's not what you are to use in your
 4 decision, but "shall," that you will consider all of
 5 us.
 6 And the uniqueness of this is that if you
 7 were in a helicopter flying up the coastline, you would
 8 see tall bluffs for a mile after mile almost all the
 9 way in from Homer and far north.
 10 The exception is there's a little
 11 amphitheater or bathtub that inundates right in here,
 12 and that was caused by the outflow of the Anchor River.
 13 And it's a small flat area surrounded by a bathtub, and
 14 the noise comes in primarily from the water.
 15 The atmospheric conditions of the body of
 16 water right there play havoc with the sound. I mean,
 17 sometimes you can hear any little thing and other times
 18 you don't hear. But the noise cannot be minimized,
 19 there's virtually nothing you can do. You can have all
 20 the buffers you want.
 21 And in the photos that I've included here
 22 for your perusal, they were taken from my living room
 23 inside the house and they look out over the tops of the
 24 fully matured trees and they look out over -- you will
 25 see just a corner of a blue roof, it's a 20-something

Page 36

1 foot home, and everything behind it is part of this
 2 proposed mine.
 3 And there is -- I don't know, you can put
 4 up six-foot or 12-foot fence, you can make the buffer
 5 50 feet wide, 100 feet wide, 150 feet wide, it doesn't
 6 matter. And so this is a unique situation all the way
 7 around.
 8 The stated intent, which is your guide,
 9 is found in Title 21.29.040 and (A) clearly says
 10 "intent". What is the intent? Is the intent just to
 11 shovel out to anybody who comes in here and asks for a
 12 gravel mine anywhere at any time? That's not what the
 13 intent says. The intent says protect against six
 14 different conditions, including dust, noise, and visual
 15 impact.
 16 So with all due respect, because of the
 17 uniqueness of this area, if there's ever been a gravel
 18 mine application that should be denied, this is it.
 19 And I don't understand, I really do not understand how
 20 a permit could be issued for this under these
 21 ordinances and any interpretation of it.
 22 So at my invitation, Bruce Wall came to
 23 the house -- and again, all these photos were taken
 24 from my living room or the deck -- and he and I stood
 25 there and I said, "Here you go." And basically the

Page 37

1 entire floor of this bathtub or amphitheater, except
 2 for the estuary of Anchor River itself, virtually
 3 everything else is in this proposed mine. And I said,
 4 "Bruce, look, show me what you could do. I mean, we
 5 are open for ideas, all of us."
 6 And incidentally, there's a lot more than
 7 five houses. I mean, that's just probably an
 8 indication of the people who are proposing this. You
 9 know, Hans found over 20 houses that are impacted by
 10 this, I found more. So there's a lot of people
 11 impacted.
 12 And so anyway, I'm standing there with
 13 Bruce and I said, "Here it is. I can see the entire
 14 mine from left to right. And how can you protect us
 15 per your ordinance -- 'you shall' -- and this is the
 16 intent?"
 17 And I think he was kidding around. He
 18 just kind of jumped over here and said, "Well, you
 19 know, I can't see it now." That was a tree that was
 20 there in front of the house.
 21 And incidentally because of the
 22 atmospheric conditions right up to Echo Road does have
 23 original, vibrant, verdant, green, mature spruce trees.
 24 Past that and coming up the hill it doesn't, because
 25 the ecosystem that comes in behind us is the uplands

Page 38

1 boreal forest, and that's just been decimated by the
2 beetle kill.

3 **CHAIRMAN MARTIN:** It's been five minutes.
4 Could you --

5 **PETE KINNEEN:** All right, I'll wind it up
6 here in just a second. I appreciate it, sir.

7 I'm open to questions. But again, all
8 you need is one condition not being met. And as I
9 challenged Bruce Wall -- very nice guy, gentleman, I
10 like him -- I said, "How can you follow the intent?
11 Please show us how you can do it."

12 And you just saw a picture from Hans, of
13 the guy right down on Danver, and I'm like way up
14 there, and Hans looks over my house.

15 So I guess we are open to ideas, but a
16 50-foot buffer along the road, parallel height isn't
17 going to do anything at all. What it is is we're
18 looking down on a box.

19 And the bad thing is normally on a flat
20 plane when you are going down the road, you put up the
21 fence, you know, about the height of eye level and that
22 works. This doesn't work.

23 **CHAIRMAN MARTIN:** Thank you. Are there
24 any questions? None at this time. Thanks for your
25 testimony.

Page 39

1 **PETE KINNEEN:** Okay. Great.

2 **CHAIRMAN MARTIN:** Next testifier, please.

3 **RICK OLIVER:** Good evening. My name is
4 Rick Oliver. My address is 34880 Danver Street. Our
5 home is somewhat above and directly opposite the
6 proposed Danver Street -- I'm sorry, site on Danver
7 Street. The activity allowed by this application will
8 totally decimate the property value of our home as well
9 as the quality of life that we now enjoy.

10 We are most definitely not alone in this
11 regard. Obviously the standards set for the sand,
12 gravel, or material sites are said to protect -- again,
13 I'm saying the same thing everybody else has said --
14 against aquifer disturbance, road damage, visible
15 damage to adjacent properties, dust, noise and visual
16 impact.

17 I can state unequivocally that the
18 proposed setbacks, berms, vegetation buffers, et
19 cetera, will not and cannot protect our homes from
20 this -- from these disturbances.

21 No. 1 of said standards addresses a
22 lowering of water sources serving other properties.
23 The existence of substantial lake just below my
24 property indicates that a major mining operation cannot
25 help but affect my water source. I'm told there's some

Page 40

1 more significant and additional information regarding
2 that water standards to be presented.

3 No. 3 addresses the minimization of dust
4 offsite areas. Due to the proposed placement of the
5 proposed -- of the processing equipment, any onshore
6 breeze will bring dust to my home directly across the
7 street.

8 No. 4 addresses the noise disturbance to
9 other properties. According -- excuse me. According
10 to the radii shown on the application, the processing
11 equipment is roughly set 300 feet from my front door.

12 I'm close to six feet -- well, kind of
13 close, used to be closer. I'm holding in this picture,
14 of which you guys now have a copy, is a ten-foot board
15 just to show you how a six-foot board would -- so you
16 could see how a six-foot berm will minimize the visual
17 impact, which is not at all.

18 Mrs. Trimble approached a neighbor of
19 mine after the informal meeting last Wednesday and
20 stated that she and her husband had walked the property
21 and said they could see only six houses. This does not
22 include other properties as addressed by the code that
23 could at some point be developed. This begs the
24 question as to just how many homes does the project
25 have to decimate in order to convince this body that it

Page 41

1 should not happen?

2 For the record, let it be known that my
3 family and I, along with the dozens of other families
4 residing in this area, vehemently oppose the granting
5 of this permit.

6 Enough said. Thank you.

7 **CHAIRMAN MARTIN:** Thank you. Any
8 questions? Next testifier, please.

9 **JEANNE BILBEN:** My name is Jeanne Bilben.
10 I'm the wife of Hans Bilben that just spoke. And I
11 won't take very long, I just have a few things to say.

12 With the papers that I've handed out is
13 just regarding some of the information that we
14 discovered.

15 We love this beautiful recreation area.
16 Some of us have bought and built homes here. We own
17 land here just as the permit owner owns lands, but we
18 are not digging a gravel pit in his front or back yard.

19 We are not against a gravel pit, but we
20 do not want them in our neighborhoods. You would think
21 we have just as many rights as a gravel pit. We pay
22 our taxes too.

23 This is called gravel pit -- this
24 so-called gravel pit will be disturbing the peace of
25 our beautiful area. We know once this permit is issued

Page 42

1 it goes with the land, no matter who owns it, making it
 2 even more valuable to the owner and making our property
 3 values go down.
 4 Not only is this a recreational area,
 5 it's also a historic area. We have been in contact
 6 with the State Historic Preservation Office and there
 7 are documents like the ones that you have that there is
 8 a highly potential historic archeological site and
 9 that's the documents I have of historic graves,
 10 possible cache pits, et cetera.
 11 So I'm asking to stop this permit and
 12 keep this area away from mining and gravel. The state
 13 recreational area in Anchor Point is where people come
 14 to see the beauty and the history of this part of the
 15 world. Do you really want a gravel pit in this place
 16 for them to see?
 17 Please keep gravel pits away from our
 18 neighborhoods, historical lands, and recreational
 19 areas. That's all. Thank you. That's all we ask.
 20 Thank you.
 21 **CHAIRMAN MARTIN:** Thank you. Any
 22 questions?
 23 **JEANNE BILBEN:** Any questions?
 24 **CHAIRMAN MARTIN:** None at this time.
 25 Thank you.

Page 43

1 **JEANNE BILBEN:** I dropped it again. I'm
 2 old, I can't do this.
 3 **JIM REID:** Hi. My name is Jim Reid. I'm
 4 a retired paramedic, fire lieutenant, metro Dade, Miami
 5 Dade, and my address is 73820 Seaward Avenue.
 6 And my issue is the safety factor. Okay.
 7 This is what I did for 30 years, and I can tell you
 8 that that road that they are talking about, both roads,
 9 when they come down off of that hill down Danver, if
 10 you are coming down there in the winter time and a dump
 11 truck -- and that gravel truck pulls out, you are not
 12 stopping. Everybody in the neighborhood has complained
 13 about it. I mean, there's just nothing you can do. It
 14 gets iced over and you are going. That part.
 15 The other part is there's kids, and
 16 that's what I deal with, okay. And you've got four
 17 parks there or five parks, but you got three of them
 18 that them trucks have to pass with every load. And you
 19 are talking five -- you're not talking a couple hundred
 20 trucks a year, you're talking 5,000 trucks is what they
 21 are talking about.
 22 With the amount of aggregate they want to
 23 take out of there, you are talking five -- ten yards a
 24 truck, just figure it real quick, it's 5,000 trucks.
 25 We're not -- this is not a little thing. And I'll tell

Page 44

1 you right now, whatever happens, I will write a letter
 2 on this, because this is -- you know, this is what I
 3 did, and I don't like picking up kids.
 4 But even the gentleman who is trying do
 5 this, I believe it was his daughter and grandson, they
 6 were walking down there, and we were coming out with a
 7 boat trying to go down to Homer and there was another
 8 car coming the other way, and we had to stop, and she
 9 had to push the kid off the side of the road. All
 10 right. So I was there.
 11 And I can tell you, usually when I face
 12 12 people it's called a jury and I don't like that, so
 13 I don't normally get up and do anything like this, but
 14 this is really a serious problem. Okay.
 15 Aside from the bridge is condemned, so we
 16 really kind of left a bunch of people off. Well, they
 17 have to turn right and go out seven or eight miles to
 18 get back out to Seward Highway (sic).
 19 **UNKNOWN SPEAKER:** Sterling.
 20 **JIM REID:** The Old Seward (sic) --
 21 **UNKNOWN SPEAKER:** Sterling, Sterling.
 22 **JIM REID:** Sterling, I mean.
 23 That's like a snake. So we should have
 24 included all of those people who live down that road
 25 that want to get to look at them 5,000 trucks. That

Page 45

1 road is dangerous anyway. They run off that road for
 2 whatever reason.
 3 Okay, folks, thank you.
 4 **MS. REID:** I want to say -- my name is
 5 Susan Reid and I'm at 73820 -- where am I -- Seaward
 6 Avenue.
 7 We stand here with all of our friends and
 8 our neighbors and our community to let you know that we
 9 are really opposed to this and we object to the
 10 applicant for all the reasons everybody has stated,
 11 from bridge repair that's not going to hold their
 12 weight, from the property value of us going down. I
 13 assume if our property value does go down you would be
 14 very happy to lower our taxes, I'm assuming that you do
 15 that.
 16 **JIM REID:** Yeah, I'm sure.
 17 **SUSAN REID:** I'm assuming if you let him
 18 have this -- if you let him have this permit you are
 19 going to widen that road. Because right now it's not
 20 wide enough, like Mr. Cullip said, for all of this
 21 traffic. That's probably going to cost you a million
 22 and a half to fix the road.
 23 **JIM REID:** Well, right now all the dumps
 24 trucks that are empty go right out across that bridge.
 25 Well they just lowered from -- to 11 tons, which is

Page 46

1 22,000 pounds. And an empty dump truck weighs how
 2 much -- he should know that right off hand -- about
 3 26-, 28,000 empty. So right off the bat they are not
 4 abiding by the law right now.
 5 **SUSAN REID:** It's a highly, highly
 6 congested --
 7 **JIM REID:** That bridge is very dangerous.
 8 **SUSAN REID:** -- residential area.
 9 **CHAIRMAN MARTIN:** Yeah, one at a time.
 10 We are almost done.
 11 **SUSAN REID:** Okay. It's a highly
 12 residential -- it's a highly residential area, and all
 13 of us as the residents just want you to understand
 14 we're not taking this -- we're taking it very harshly
 15 here. We don't want you to do it, we don't want you to
 16 pass the permit.
 17 I know he has a right to try to make
 18 money off of his land, that's why he bought it, but
 19 years ago we all bought in this beautiful neck of the
 20 woods because it was quiet, not a lot of noise. I'm
 21 hearing beeping backup noises right now. I don't care
 22 how much white noise stuff you put on these trucks, you
 23 are still going to have this.
 24 Thank you for listening to us and I hope
 25 we aren't too emotional about it.

Page 47

1 **CHAIRMAN MARTIN:** Thank you. Next
 2 testified, please.
 3 **DON HORTON:** Hi. My name is Don Horton,
 4 and I live on 34910 Echo Street, directly across the
 5 street from this proposed gravel pit.
 6 We bought this property 15 years ago for
 7 recreational purposes and maybe some day to build a
 8 house on it when I retire. A month ago I retired and I
 9 get -- a month later I get a letter stating that I'm
 10 going to have -- look at a gravel pit directly across.
 11 My only view is this field. I look across this field
 12 and I see Mt. Redoubt.
 13 So if you build a 12-foot berm, six-foot
 14 berm, eight-foot berm, I'm going to look at berm, a
 15 gravel pit, and then Mt. Redoubt, so that -- it's going
 16 to virtually ruin my property. I would never build on
 17 it now, it's -- not even with a consideration of this
 18 going in, never could I build on it. I could never
 19 even give the property away.
 20 I have three sons and a daughter that
 21 hopefully someday this -- and a grandson now --
 22 hopefully that someday this will be his property.
 23 Well, I'd hate to see you guys ruin my
 24 little slice of heaven. Thank you.
 25 **CHAIRMAN MARTIN:** Thank you.

Page 48

1 **EILEEN SHERIDAN:** There's no place to
 2 sign. Next page?
 3 **UNKNOWN SPEAKER:** Just carve your name in
 4 the wood there.
 5 **UNKNOWN SPEAKER:** Better save room for
 6 the rest of us.
 7 **EILEEN SHERIDAN:** Right here, if you will
 8 take that page, yeah.
 9 While she's changing that, I'm Eileen
 10 Sheridan, I am around a 50-year resident of Alaska.
 11 We've lived in -- we've lived in Juneau, Sitka,
 12 beautiful places.
 13 **CHAIRMAN MARTIN:** And your current
 14 address?
 15 **EILEEN SHERIDAN:** We've lived in Palmer.
 16 We now live in 34860 Seabury Court, Anchor Point.
 17 We're above this area. We're secondary families, we
 18 live right near these people right here.
 19 We understand the noise, because if
 20 you've ever been out there when the wind is going 125
 21 miles-an-hour, you can feel it whooshing up that river.
 22 You talked about the cliffs and it coming up, and
 23 definitely there's no way berms or vegetation like that
 24 is going to take away those noises.
 25 When they had that oil/gas people out

Page 49

1 there in the Bay making their sonogram things all
 2 summer long, that was distracting. This gravel pit
 3 will be distracting too.
 4 We put our retirement into this home.
 5 It's going to go down in value. There's no way -- even
 6 Emmitt has said at the meeting the other night that,
 7 yeah, a gravel pit would make the value of your
 8 property go down. We had hoped that our kids could
 9 enjoy this later in life also. We've worked hard to do
 10 what we are doing, and so we understand him wanting to
 11 do something too, but not a gravel pit that we have to
 12 live with.
 13 And the dust, I had terrible allergies up
 14 in the Valley. We moved down here, because every time
 15 we brought our boat down or our trailer down, my
 16 allergies were halfway better living right there by
 17 ocean instead of up in the hay fields. And even though
 18 it was beautiful up there, we retired down here.
 19 So for -- if you are looking at how it's
 20 going to be a noise area, minimizing the dust, we
 21 already get dust from our dirt roads that are up there.
 22 Right now our Seabury Court road is just
 23 mainly a trail, a road trail. We have to go up to
 24 Seaward or down Deesa -- they said it's Deesa Avenue
 25 now onto a dirt road.

Page 50

1 The trucks speed down that road and
 2 there's no other way, you know, except to go and pick
 3 up dust, so you get the extra dust from a gravel pit.
 4 We lived next to one when we were -- while we were
 5 building this home and I was very glad to get up on my
 6 peaceful house to look at Mt. Iliamna and out at Mt.
 7 Redoubt.
 8 And I realize that if he gets these
 9 permits that he has the right to sell and have maybe
 10 even a bigger gravel pit put in there.
 11 Lowering of water sources, we noticed
 12 that there was only one test hole shown and was
 13 wondering if there's any consideration of loss of
 14 vegetation and resulting water rises from this.
 15 There seems to be, looking at the maps,
 16 some wetlands in there. We watch as we go down Denver
 17 to the right just across from that property the ducks
 18 that come in, they have their babies, the moose have
 19 their babies down there. If you get that noise in from
 20 the gravel pit, those moose mothers, they get so
 21 disturbed. They could be leaving their babies too.
 22 **CHAIRMAN MARTIN:** That's five minutes.
 23 **EILEEN SHERIDAN:** Thank you.
 24 **CHAIRMAN MARTIN:** Any questions? None at
 25 this time. Thank you for your testimony.

Page 51

1 **EILEEN SHERIDAN:** Pardon?
 2 **CHAIRMAN MARTIN:** Thank you. There's no
 3 questions.
 4 **EILEEN SHERIDAN:** Yes. I hope that you
 5 will reconsider and maybe think about looking at the
 6 new resolutions you're thinking about.
 7 **UNKNOWN SPEAKER:** There's two more spots
 8 there.
 9 **GERALD BLAIR:** Good evening. My name is
 10 Gerald Blair, I live at 73600 Twin Peaks Loop.
 11 Most of what I might have said this
 12 evening has already been said, probably far more
 13 eloquently than I would have, by prior speakers.
 14 But there is one issue that has not been
 15 covered, and that is not just the safety of that road,
 16 but the cost of that road. What I've been able to
 17 determine is that that road started life as a Cat trail
 18 that went from the Sterling Highway out to the beach,
 19 and that it was never engineered or properly built so
 20 it has no base.
 21 It doesn't have even enough right-of-way
 22 to be any wider than it is in spots, and that is barely
 23 wide enough. Two trucks could lose their mirrors if
 24 they are not careful because there's no way to get off
 25 the road, particularly with a loaded truck.

Page 52

1 Estimates. If you are going to fix that
 2 road to where it will handle these dump trucks -- and
 3 some of the trucks I see going up the North Fork weigh
 4 well in excess of 100,000 pounds. They are a tractor
 5 pulling two side dump trailers that haul 20 yards of
 6 rock a piece, and that's about 60,000 worth of rock per
 7 trailer plus the truck and the trailers.
 8 Guesstimates to fix that road to bring it
 9 up to par is in excess of \$2 million, because you get
 10 to rip it all up and rebuild it all, plus you've got to
 11 go in a do right-of-way work and achieve right-of-way
 12 to make the road wide enough.
 13 Over the lifespan of this pit, if the
 14 road isn't totally fixed in the beginning, you could
 15 spend \$6 million in maintenance maintaining that road
 16 for 15 years, and that's if the pit stops at 15. I
 17 don't know if the Kenai Borough has that kind of money
 18 laying around that they would want to put into that
 19 when all they are going to get is some mineral
 20 separation fees, which is not going to amount to very
 21 much money.
 22 So to me, I'm lucky enough to be far
 23 enough away from that that the dust and the noise, it
 24 will be minimal. The truck noise will be there. But
 25 by and large, the cost to the borough to maintain that

Page 53

1 road or to rebuild that road, it's -- it would not be a
 2 business I would go into, because you would spend 2- or
 3 \$3 million and you'd get back almost nothing.
 4 That's all I have to say. Thank you.
 5 **CHAIRMAN MARTIN:** Thank you.
 6 **UNKNOWN SPEAKER:** Don't forget the
 7 bridge.
 8 **GERALD BLAIR:** Well, I think the bridge
 9 is going to be built anyway. I don't know that the
 10 gravel pit will have much to do with that.
 11 **CHAIRMAN MARTIN:** All right. Thank you.
 12 Next testifier, please.
 13 **BOB SHAVELSON:** Thank you. Again, my
 14 name is Bob Shavelson, I'm the Director of Advocacy for
 15 Cook Inletkeeper. And I'm hearing a lot of concerns
 16 from property owners around here, and it brings to mind
 17 the whole notion of private property, which is
 18 obviously vital to our economic system.
 19 But one of the central tenets of property
 20 rights is that you can do what you want on your own
 21 property, but you can't harm folks around you, okay,
 22 and that includes private property and that includes
 23 public property, and that's the issue that I'm here to
 24 talk about tonight is the public property and, again,
 25 the ground and the surface water resources.

Page 54

1 And when I look at the staff report and
 2 the findings of fact, Finding of Fact 8C says, "You
 3 shall keep two feet above the seasonal high water
 4 mark." And again, I'm going to come back to the issue
 5 that I raised the last time, but nothing in the
 6 application says that the test hole was drilled and
 7 monitored to ascertain the seasonal high water mark.
 8 So how can you, as the Planning Commission, how can the
 9 staff know what that level is? You cannot.
 10 And so I would say that you can't approve
 11 the permit if you want to abide by the ordinance. And
 12 I'd say if you do, then it's just guess work, and we
 13 shouldn't be gambling with the resources that we have
 14 in the estuary of the Anchor River.
 15 And I'll also go back and refer to the
 16 scientist from the National Estuarine Research Reserve,
 17 and they provided you with a groundwater flow that
 18 shows that this parcel -- excuse me -- at least
 19 partially flows to the Anchor River, and that water
 20 plays a vital role in the life stage of various salmon.
 21 And when I first thought about an
 22 estuary, you know, I think I'm like a lot of people, I
 23 think, well, salmon goes down and it goes through the
 24 estuary, and then comes back and it goes through the
 25 estuary again.

Page 55

1 It's a lot more complicated than that,
 2 and we're just beginning to scratch the surface on this
 3 complexity.
 4 As I mentioned before, you know, our
 5 ecology of these salmon systems is kind of like a
 6 fabric, and when you start to pull at the threads of
 7 that fabric it will unravel. So we've got to be really
 8 careful here.
 9 One of the things that really concerns
 10 me, and when I looked at the ordinance it says you have
 11 to comply with all these other environmental laws and
 12 rules. And there's something that I call the myth of
 13 rigorous permitting.
 14 And the myth of rigorous permitting is
 15 that there's this whole alphabet soup of local, state,
 16 and federal laws and rules, and if you dot all the i's
 17 and cross all the t's, then, viola, you are going to
 18 have salmon habitat protection.
 19 But I've been doing this for 25 years,
 20 and I can tell you that that's not the case. You know,
 21 we've got a 50-foot buffer on our salmon streams in the
 22 Kenai Peninsula Borough. We know that Mayor Pierce is
 23 now looking actively to revoke some or all of those
 24 protections.
 25 We have what's called Title 16 in our

Page 56

1 state law, that's our habitat protection law. We have
 2 one law in the state that protects habitat protection.
 3 It's one sentence long and it was adopted at statehood.
 4 There's an effort now to revise that in a ballot
 5 measure that's causing a lot of controversy.
 6 But a lot of people feel that there's
 7 this whole alphabet soup of laws and rules out there;
 8 they don't protect our habitat. This is one of the
 9 ways that you can.
 10 And it reminds me of a book that some of
 11 you might have read, it's called the King of Fish by a
 12 professor named David Montgomery at the University of
 13 Seattle, and he talks about the demise of salmon from
 14 Europe to New England to the Pacific Northwest.
 15 And the thing that you take from it is
 16 that it wasn't just neglect that led to the loss of
 17 these salmon runs across the world, it was knowing
 18 neglect, okay. We knew what we were doing was wrong
 19 and we did it anyway, and that's how I feel about these
 20 permits that just continue to get rubber stamped
 21 through this process.
 22 And I'm coming to the end of my time, but
 23 I'll just say I think a lot of you feel like your hands
 24 are tied. There's this ordinance and it puts you in a
 25 straight jacket and you can't do anything, but you have

Page 57

1 enormous discretion. You have discretion that's given
 2 to you by the borough. And if you look, and I provided
 3 this in my written comments, but under Kenai Peninsula
 4 Borough's 2.40.050 you have broad discretion to
 5 investigate and make recommendations, including to the
 6 assembly.
 7 And so I sense that this is going to be
 8 deferred to your August 13th meeting. I would
 9 encourage you to ask the questions that need to
 10 answered to do this right, because the mouth of the
 11 Anchor River is a special place, it's why you have this
 12 room packed tonight, and I think this body needs to
 13 represent the public interest.
 14 The private interest is always adequately
 15 represented, the public interest needs to be
 16 represented, and I feel like that's the job of the
 17 Planning Commission.
 18 Thank you very much.
 19 **CHAIRMAN MARTIN:** Thank you. Any
 20 questions? Next.
 21 **ELDON OVERSON:** I'd like to apologize, I
 22 didn't make enough copies of my picture, but that is
 23 the view from my property from which I built a cabin
 24 this winter.
 25 I have a statement that I would like to

Page 58

1 read, and then I have a few questions if that's all
2 right with the Committee. Is that acceptable?
3 **CHAIRMAN MARTIN:** Yes.
4 **ELDON OVERSON:** Okay. I would like to
5 thank you guys for hearing my thoughts on the proposed
6 Beachcomber gravel pit that is being submitted by
7 Emmitt and Mary Trimble in our community.
8 I will thank you even more after this
9 meeting if you reject the proposed land use permit that
10 will decimate my neighbors' and my view for the next 15
11 to 20 years.
12 I was at work on the Slope when I got the
13 e-mail for this planning meeting, and I flew today and
14 drove down from Anchorage just for today, and I have to
15 drive up and fly back up to work tomorrow. I say this
16 to show the importance that this proposed gravel pit
17 means to me and how much I do not wish it to go
18 forward. I feel that this is a very bad proposal and
19 deserved more of my time and effort.
20 I bought my lot on the corner of Danver
21 and Seaward about eight years ago, and it's the spot
22 that I would eventually build my dream home. I
23 started, like I stated, to build a cabin on the lot to
24 use for summertime camping this winter, and that
25 picture is of me standing on my loft from that cabin.

Page 59

1 The red area that is marked is where the proposed
2 gravel pit will be. I'm approximately 65 feet above
3 the gravel pit, so I will be looking directly into it.
4 The view of Iliamna, the ocean, and the
5 river was the main reason for me purchasing my
6 property. And as the permit states, that -- the
7 six-foot high berm in the plan will offer little to no
8 relief from the visual impact of the gravel pit. This
9 is true for my lot, my neighbors', and many others.
10 I don't feel that they have offered any
11 mitigating factors to lowering our value of the
12 surrounding properties to increase his.
13 Noise is also another factor that will
14 keep me from using my property in the future as I
15 intended. The machinery that will be working in the
16 daytime hours will make me basically not want to be
17 there. There is no buffer between me and the gravel
18 pit, so I will have to hear the constant droning of the
19 processing of the sand and gravel for the next 15-plus
20 years. This was a very tranquil neighborhood and I
21 enjoyed hanging out there during the summer months.
22 In closing, I find it very disingenuous
23 and unethical that Emmitt and Mary Trimble have
24 profited from selling many of the lots in our
25 neighborhood, and now single handedly want to undermine

Page 60

1 the enjoyment, the view, and the property values of the
2 same people that they sold the property to.
3 I find it very disrespectful that they
4 did not consider anybody but themselves and do not wish
5 to accurately describe what they want to use the
6 property for. I have heard from many of the neighbors
7 from the meeting that they attended that they said that
8 they only wanted to go down ten feet. The permit
9 states that they want to go down 18, and then apply
10 further in the future for going down even farther. So
11 I would like to hear him address those.
12 And also on the permit that it says that
13 this land was not intended for future subdivision,
14 which he also claims that that's why he's only going
15 down ten feet was to later subdivide the property,
16 which will also make all the septs in that area lower
17 to the water table.
18 The questions I have, I'll skip to those.
19 I would like to ask how could the borough
20 simultaneously tax me for my view while also approving
21 a big eyesore right in the middle of it? I know that
22 in Homer they've started to assess views on top of
23 property. So I was just wondering, will there be a
24 waiver granted for all of us that are being impacted by
25 this gravel pit, and if so, what's the loss revenue to

Page 61

1 the borough? Does anybody want to speak to that?
2 **CHAIRMAN MARTIN:** This is your night to
3 speak.
4 **ELDON OVERSON:** All right.
5 **CHAIRMAN MARTIN:** If you could wrap it
6 up, you've had five minutes.
7 **ELDON OVERSON:** I thought if I requested
8 longer, I could have longer.
9 **CHAIRMAN MARTIN:** How much more are
10 you --
11 **ELDON OVERSON:** I just have a few other
12 things.
13 **CHAIRMAN MARTIN:** Okay.
14 **ELDON OVERSON:** I won't -- I won't
15 mention the campgrounds, but it's already been
16 addressed, I think, better than I would have.
17 And then also there is some incorrect and
18 wrong statements on the permit concerning that there
19 were no wells within 100 feet of the property boundary.
20 There is -- I do believe the We Tie Fly has a well
21 within 100 feet, so that is inaccurate on the permit.
22 So I don't know how they can claim that there's no
23 wells within 100 feet of the property when there is.
24 And also -- I think that's all I had.
25 Thank you for your time.

Page 62

1 **CHAIRMAN MARTIN:** Thank you. Any
 2 questions?
 3 **UNKNOWN SPEAKER:** Mr. Chairman.
 4 **CHAIRMAN MARTIN:** Yes.
 5 **UNKNOWN SPEAKER:** I apologize, I didn't
 6 get your name.
 7 **ELDON OVERSON:** Eldon Overson, and my
 8 address is 73976 Seaward Avenue.
 9 **CHAIRMAN MARTIN:** I'd like a show of
 10 hands of how many more we have left to testify. I'm
 11 going to declare a five-minute recess.
 12 (Recess - 10:07 p.m. - 10:15 p.m.)
 13 **CHAIRMAN MARTIN:** All right, we are ready
 14 to go.
 15 **PHIL BRNA:** My name is Phil Brna. I live
 16 at 5601 E. 98th Avenue in Anchorage, but I've spent a
 17 good part of spring, summers, and falls in Anchor Point
 18 for the last 41 years. I own a cabin on the Anchor
 19 River inside the state park, and I also have a piece of
 20 property that's surrounded by the proposed gravel pit.
 21 In the last 41 years I spent 21 years
 22 with the Alaska Department of Fish & Game as a habitat
 23 biologist, and 14 years with U.S. Fish & Wildlife
 24 Service. I'm retired from both. I have lots of
 25 experience with large development projects like Pebble

Page 63

1 Mine, Donlin Mine, Chulitna Mine to name a few. I was
 2 the Fish & Wildlife Service biologist on all of those.
 3 I just want to make an aside here that
 4 the science related to groundwater here and the other
 5 gravel permit is a total joke. I have worked with some
 6 of the best groundwater hydrologists in the country and
 7 in Canada, and it is pretty stunning how you are making
 8 decisions based on groundwater with no groundwater data
 9 other than one test hole that's dug who knows where.
 10 Anyway, as former governor Jay Hammond
 11 once said -- former governor Jay Hammond once said
 12 this is about Pebble Mine. "The only worse place for a
 13 mine would be in my back yard."
 14 Well, this proposed gravel pit is in my
 15 back yard. In fact, it surrounds my one-acre property
 16 on three sides. I'm the last lot on Beachcomber. I
 17 bought the property to build a small house when I fully
 18 retired, which I did two years ago, and this proposal
 19 will pretty much destroy my plans to do that, my wife
 20 and I, and it will destroy my property value. I'm not
 21 going to go on and on because most things have been
 22 said.
 23 In 2018, I think it is ludicrous to think
 24 that someone could develop a gravel pit in the middle
 25 of a residential area and one of the most heavily used

Page 64

1 recreational areas in Alaska. It's really unthinkable.
 2 As far as the noise, when the property
 3 was being cleared and when the other little gravel pit
 4 across the street was being built, from my cabin I
 5 could hear every truck backing up, I could hear every
 6 truck going down the -- down the road, I could hear
 7 Todd's tractors backing up. You can hear everything in
 8 that valley, and it's not going to be any better with a
 9 gravel pit.
 10 There's also archeological sites on my
 11 property, there's old cache pits, and probably at least
 12 one house pit. I walked the gravel pit property a long
 13 time ago, and there's a bunch of house pits and cache
 14 pits on that property as well.
 15 There's also an old wagon road that goes
 16 off the end of Beachcomber that was built in the 1920s,
 17 I believe, to get to an old homestead, and it goes
 18 across my property and it goes through the -- through
 19 the gravel pit.
 20 I've submitted written comments, I guess
 21 I have enough time to read them, but I won't. If you
 22 promise to read them, I won't read them.
 23 So I hope the Kenai Borough Planning
 24 Commission, or whatever you are, I'm not even sure,
 25 denies the proposal for this project because it's not

Page 65

1 good for Anchor Point, it's not good for the people
 2 that live there, it's not good for the people that come
 3 there to recreate.
 4 There are people from all over the world.
 5 I was fishing the Anchor River today, and I probably
 6 talked to 20 people from all over the world, and this
 7 is kind of not a good thing. Thank you.
 8 **CHAIRMAN MARTIN:** Thank you.
 9 **PHIL BRNA:** Questions?
 10 **CHAIRMAN MARTIN:** Do you have any
 11 questions? Not at this time.
 12 **LYNN WHITMORE:** My name is Lynn Whitmore.
 13 I live at 34680 Beachcomber Street. And the proposed
 14 project is literally in my back yard and is adjacent to
 15 my property.
 16 When I first -- when the applicant first
 17 bought the property he told me he was going to
 18 subdivide it and put homes back there. And I
 19 considered moving since I had that nice piece of the
 20 world to myself for a long time with just one neighbor.
 21 And when he told us it was going to be a
 22 gravel pit, then I went to the staff, and the staff
 23 said this pretty much flies through if he can meet
 24 those six conditions.
 25 And so everybody I talked to said, "Well,

Page 66

1 Lynn, it's just going to fly through." And it's a
 2 frustrating thing to watch all these people speak
 3 knowing that it's just going to fly through. So why
 4 are you having this hearing? What is the purpose?
 5 What do you gain out of that if he meets
 6 those conditions and it flies through? So maybe that
 7 wouldn't be the best way to approach this thing is tell
 8 everybody it's just going to fly through. And I've
 9 heard from the neighbors that they were told the same
 10 thing.
 11 So if there is a chance to consider their
 12 feelings and what they are going to listen to and what
 13 I'm going to hear and listen to and we can reduce or
 14 stop that, that would be a great benefit to me. And I
 15 feel like you guys have had enough time with everybody
 16 talking here, so I'll keep it short. Thank you.
 17 **CHAIRMAN MARTIN:** Thank you.
 18 **JAMES GORMAN:** Good evening. My name is
 19 James Gorman, I live at 73608 Twin Peaks Loop, Anchor
 20 Point. I look right down on the beach road. The
 21 things these people say, I see them every day.
 22 I was a history major in college, maybe
 23 you will appreciate this letter. This comes from the
 24 Alaska State Historical Preservation Office:
 25 In receipt of your request for

Page 67

1 information regarding known historical sites in the
 2 area of a proposed gravel mine, upon review of the
 3 Alaska Heritage Resource Survey database there are two
 4 reported cultural resource sites in the area of the
 5 proposed mine.
 6 One I've referenced as SEL-00280,
 7 prehistoric site reported to consist of two house pits.
 8 Location is represented as a large polygon on the
 9 site -- you can see that -- exact location of features
 10 is unknown, but current projected boundaries are within
 11 the proposed mining area.
 12 Second one is SEL-00281, historic graves
 13 and possible cache pits reported to consist of five
 14 graves that at one time had grave markers.
 15 Depressions, tentatively described as cache pits, were
 16 reported north of the graves. Location is represented
 17 as a large polygon. Exact location of features is
 18 unknown, but current projected boundaries are within
 19 the proposed mining area.
 20 In Alaska, there are two historical
 21 perseveration laws that may apply unless the project is
 22 entirely private in nature.
 23 The first one is the Alaska Historic
 24 Preservation Act: State law requires all public
 25 construction or improvement activities conducted by or

Page 68

1 requiring licensing and permitting from the state to
 2 comply with the Alaska Historic Preservation Act, AS
 3 41.35.070. This also includes required reporting of
 4 historic and archeological sites on lands covered under
 5 contract with or licensed by the state or government
 6 agency of the state. This would include any material
 7 resources used under contract with the state.
 8 And secondly, the National Historic
 9 Preservation Act: If there is federal involvement,
 10 financial assistance, permit, license, or approval with
 11 the project, it is the statutory obligation of the lead
 12 federal agency to comply with Section 106, 36 CFR-800
 13 of the National Historic Preservation Act which
 14 requires the federal agency to take into account the
 15 effects that their undertaking may have on historic
 16 properties.
 17 Were either of those laws to apply, our
 18 office would be likely to request that an
 19 archaeological survey is conducted to verify the site
 20 locations and assess the potential effects of the
 21 project pursuant to the applicable historic
 22 preservation law.
 23 In addition, there are state laws
 24 requiring the discovery and/or intentional disturbance
 25 of human remains. This pertains to all lands in

Page 69

1 Alaska, including private. I have attached our handout
 2 regarding human remains.
 3 Due to the lack of clear information
 4 regarding the site locations, our office strongly
 5 encourages the use of a qualified cultural resource
 6 professional to verify the site.
 7 Questions? I'll leave you a copy of this
 8 if you'd like.
 9 **CHAIRMAN MARTIN:** Any questions?
 10 **UNKNOWN SPEAKER:** We got it.
 11 **JAMES GORMAN:** You've got a copy.
 12 **CHAIRMAN MARTIN:** Thank you.
 13 **JAMES GORMAN:** Oh, and one more thing.
 14 According to the recently retired chief ranger of the
 15 park system, the park owns both sides of the beach road
 16 and they will not permit a widening of that road.
 17 Thank you.
 18 **CHAIRMAN MARTIN:** Next testifier.
 19 **XOCHITL LOPEZ-AYALA:** Hello, my name is
 20 Xochitl Lopez Ayala. I currently reside in Homer, but
 21 my family owns the property directly across from this
 22 proposed gravel mine at 34910 Echo.
 23 It is on the corner of Danver and Echo,
 24 so right literally standing at the edge of our property
 25 we will look up to a berm. We will actually submit a

Page 70

1 picture for you so you can see what our proposed view
 2 will look like here if this goes through.
 3 I did want to bring up to you all that --
 4 I want you to see that everyone here drove from Anchor
 5 Point or Homer or Anchorage, and we want you to make
 6 that same commitment that we are here to commit to you.
 7 And, you know, since this is proposed to
 8 be shelved, is drive down to Anchor Point, drive down
 9 to that road, look at this site, because you will see
 10 what we are all so passionate about.
 11 And I want you all to know that although
 12 all this negative talk about this, it's actually been
 13 really great in terms of the community. I've gotten to
 14 know people that I didn't get to know before, and we've
 15 all really kind of grouped together and found one
 16 common thing that we all love and that's Anchor Point.
 17 That's why we go there.
 18 And this mine, which is should be
 19 described as a mine, not a pit, a mine, is not good for
 20 us, it's not good for Anchor Point. And you just have
 21 a lot of passion in this room and we want you to
 22 recognize that.
 23 And I know you guys are glossing over,
 24 it's getting late. So, you know, thank you for staying
 25 here. But there's tons of people who want to talk and

Page 71

1 want you to hear their testimony, so please read over
 2 our information that we are trying to send you and
 3 understand that, you know, it's -- do what's right for
 4 the public, not necessarily a private owner, because
 5 it's affecting all of us.
 6 And I also wanted you to realize that --
 7 don't you think it's kind of odd that there's a lot of
 8 gravel pits and mine proposals going up now that
 9 this -- now that this ordinance has been pushed back a
 10 year? I mean, you approved two earlier today, and now
 11 a third. Like, how many more are you going to see?
 12 Obviously, that's a lot of red flags that
 13 you should see that if people are doing this, obviously
 14 they are trying to skirt something or get past
 15 something, and really look into why they are trying to
 16 do this. Are they trying to sell to a corporation up
 17 in Anchorage? Are they trying to sell to an
 18 out-of-state investor?
 19 You know, why -- why don't we just keep
 20 what we love, and why we moved down here, why we moved
 21 to the Peninsula.
 22 My husband and I just relocated here from
 23 Juneau, and now I get to look at a fricken mine and a
 24 berm. So, yeah, I'm kind of disappointed in that.
 25 So, you know, thank you all. And, you

Page 72

1 know, thank you all, everybody, for coming here, even
 2 Emmitt and his family. You know, it's hard -- it's
 3 hard on all of us, a lot of tears, a lot of anger, and
 4 it really means a lot to us. So thank you.
 5 **CHAIRMAN MARTIN:** Thank you.
 6 **BRUCE WALL:** Mr. Chairman. Ma'am, could
 7 I get you to do me a favor and put your name and your
 8 address on the sign-up sheet?
 9 **XOCHITL LOPEZ-AYALA:** Oh, sure.
 10 **BRUCE WALL:** Thank you.
 11 **CHAIRMAN MARTIN:** Who is next?
 12 **JOSH ELMALEH:** Hi. My name is Josh
 13 Elmaleh, I own the property 34885 Seabury Court. My
 14 wife and I looked over many properties over the last
 15 couple of years, and we purchased our place a year ago,
 16 overlooking several -- probably half a dozen to a dozen
 17 houses that were beautiful houses, beautiful land, but
 18 they were really close, within earshot of a gravel pit.
 19 And we strongly oppose it.
 20 My first king salmon I caught in the
 21 Anchor River probably half a dozen years ago, and I
 22 want that same thing for my four-month-old son, I want
 23 that same thing for my six-year-old daughter. I want
 24 them to be able to enjoy the things that I got to
 25 enjoy. It is a piece of heaven. And I'm terrified to

Page 73

1 talk up here, so I'm done.
 2 **CHAIRMAN MARTIN:** Any questions? Thank
 3 you. Who is next? I think we've heard from you --
 4 **UNKNOWN SPEAKER:** Am I permitted to talk
 5 for another minute?
 6 **CHAIRMAN MARTIN:** No, we are going to run
 7 out of time. Everybody -- we need everybody to be as
 8 quick -- as punctual as possible.
 9 **UNKNOWN SPEAKER:** All right. I just
 10 wanted you to know that sound travels up and the wind
 11 blows it the other way.
 12 **LAUREN ISENHOUR:** Hello. My name is
 13 Lauren Isenhour, I own -- I live at 34737 Beachcomber
 14 Street, which is three acres that borders this
 15 property. Mary and Emmitt are my parents.
 16 I understand everyone's concerns and I
 17 respect everyone's opinion in here. This is my back
 18 yard too, so I definitely understand the concern.
 19 And I understand the scope of what the
 20 permit allows is a lot, and I certainly understand and
 21 respect everyone's concerns.
 22 My husband and I live there for all the
 23 same reasons that everyone else in this room has chosen
 24 to live in Anchor Point. We recreate, we walk on that
 25 road, we go to the beach, we do all those things too

Page 74

1 and love it there.
 2 I was born there and grew up in Anchor
 3 Point. My parents have been in Anchor Point for 40
 4 years and have made a living in real estate by
 5 developing and improving land. And they have -- I'm
 6 sure everyone in the room will scoff at it, but they
 7 have a great reputation of improving land.
 8 **UNKNOWN SPEAKER:** (Indiscernible).
 9 **LARUEN ISENHOUR:** I feel I'm respectful
 10 to others' opinions, so I'd appreciate the same.
 11 They have made a living for 40 years
 12 improving land and selling it and caring for the land,
 13 and they are very meticulous in how they care for
 14 things. And everyone here can see that because they
 15 look out at this beautiful property that my parents --
 16 they bought it and then they invested \$60,000 into
 17 improving it by clearing all the stumps, burning the
 18 burn piles, and they mow it and care for this property,
 19 because that's how they care for land. And they've
 20 done it for a long time.
 21 They have other subdivisions that they've
 22 developed in Anchor Point that are on solid gravel, and
 23 they chose not to develop that to a gravel pit. They
 24 are land developers, not pit developers. And as
 25 someone mentioned, they don't have equipment, they

Page 75

1 don't have a plan for operating procedures as people
 2 have been asking detailed information about that, and
 3 they don't have that. And I understand the scope of
 4 the permit and the concerns.
 5 There is obviously a benefit to gravel,
 6 and everyone in that community has benefitted by the
 7 road development in that subdivision. All the
 8 subdivisions back in there, all their driveways and
 9 their foundations have all been built with gravel, and
 10 the majority of it from a previous pit right there off
 11 Denver that's been reclaimed and subdivided and sold
 12 and now homes are on that.
 13 And there is a way, a balance. There is
 14 a need for gravel, and in Anchor Point, above others,
 15 gravel is a main cornerstone to the infrastructure of
 16 Anchor Point and the families that are employed by road
 17 construction, by building residential construction, by
 18 equipment operating. There's a lot of families that
 19 are not represented here who are -- I respect and
 20 understand everyone's concerns here, and they do
 21 represent a portion of Anchor Point for sure, but there
 22 is another portion of Anchor Point that is fine with
 23 pit development and understands the balance of it, and
 24 that's why there are the regulations, too.
 25 We do need some gravel. I respect my

Page 76

1 parents' ability to develop land in such a strategic
 2 and thoughtful way that there is a way with the
 3 regulations that the borough sets to excavate some
 4 gravel and reclaim it.
 5 And unlike some other pit developers, and
 6 like Mr. Walt who came and presented earlier, who
 7 that's what they do and they have equipment and they
 8 are -- immediately when they get the permit they are
 9 going to go and use the permit and use the gravel.
 10 My parents' primary interest in that
 11 property is the property, and other land developers it
 12 wouldn't. Their primary interest in a pit -- or a
 13 property with that much financial gain in it would be
 14 the resource below the property, but my parents'
 15 primary interest there is the property itself.
 16 I understand they are requesting for a
 17 permit with a large scope and that it could be a gravel
 18 pit. I live right there too. My parents would like to
 19 build a house down on the property.
 20 And again, everyone in this room will
 21 scoff at it, but as real estate professionals, it's in
 22 their best interest, and they fought for a long time to
 23 help maintain property and home values in Anchor Point,
 24 and they have roots in the community.
 25 And not just because I live there,

Page 77

1 they've lived there and invested interest maintaining a
 2 quality of life in Anchor Point. Their first home in
 3 the area in the '70s was on Beach Access Road when it
 4 was a dirt trail, and they operated a tackle shop right
 5 there.
 6 They've had an invested interest in this
 7 area for many decades, and they've managed to develop
 8 land and provide a living for them and their family in
 9 this small area and done so with great care for
 10 property and for land. And something they've instilled
 11 in myself and my sister is care for the land.
 12 And I can -- I can understand the
 13 concerns in this room about the scope of the permit and
 14 what could potentially happen there.
 15 **CHAIRMAN MARTIN:** Can you -- can you
 16 summarize?
 17 **LAUREN ISENHOUR:** Oh, sure.
 18 **CHAIRMAN MARTIN:** Kind of wrap up.
 19 **LAUREN ISENHOUR:** I was just, I guess,
 20 looking at the time, not the amount left.
 21 Yes. I just wanted to, I guess, say I
 22 understand the concerns. It's my area too. And I have
 23 a lot of respect for my parents and how they care for
 24 the land.
 25 Some previous speakers, Lynn Whitmore has

Page 78

1 been a good friend of my parents for a long time, and
 2 also Phil, who has the property next door, neither
 3 chose to mention that my parents voluntarily built a
 4 14-foot berm along their property at their own cost,
 5 they believe at \$10,000 worth of cost, voluntarily
 6 built a large berm there to try to protect them when
 7 they weren't required to do so. They are the type of
 8 people to do those things. Thank you.
 9 **CHAIRMAN MARTIN:** Thank you. Any
 10 questions? Next. Oh, we had one -- we had a question.
 11 I'm sorry, we did -- there was a question after all.
 12 **COMMISSIONER CARLUCCIO:** So my question
 13 is are you saying that your parents don't have any
 14 plans to develop this right now, that they just want to
 15 get this gravel pit on the books?
 16 **LAUREN ISENHOUR:** I can't really say. I
 17 can speculate at what I think their plans are. And I
 18 can say their primary plan for the property is to own
 19 it, and what they want above all else is to own the
 20 property in its entirety.
 21 They have plans to subdivide it, a plat,
 22 a plan, but that doesn't mean they will enact that
 23 plan. And they would like the permit to potentially do
 24 a gravel pit. This is my opinion of theirs, so
 25 please --

Page 79

1 **COMMISSIONER CARLUCCIO:** Okay. Okay.
 2 That's all right. Thank you.
 3 **LAUREN ISENHOUR:** Okay.
 4 **COMMISSIONER FIKES:** I have a question.
 5 **CHAIRMAN MARTIN:** Yes.
 6 **COMMISSIONER FIKES:** You say you are near
 7 the location of the actual mining itself. What kind of
 8 impact on your personal water well? How close is your
 9 well to the site?
 10 **LAUREN ISENHOUR:** I don't know. You
 11 could look on the map. I guess it probably shows in
 12 the development where my well is in relation. I
 13 couldn't tell you, I'm sorry.
 14 **CHAIRMAN MARTIN:** Any other questions?
 15 All right. Thanks. Next, please. Is anyone else in
 16 the audience wishing to testify?
 17 **GINA DEBARDELABEN:** This is my third
 18 time. My name is Gina DeBardelaben, I'm with McLane
 19 Consulting. I'm a principal engineer with McLane, and
 20 I was hired by the property owner -- my firm was hired
 21 by the property owner to survey the property and
 22 prepare the permit and exhibits and application.
 23 Just a few points really quick. We've
 24 been through a lot. You've had a plethora of public
 25 comments and a packet to read.

Page 80

1 A few things that have kind of come up I
 2 just kind of want to point to is that Anchor River Road
 3 is state owned and maintained, not borough owned. So
 4 requirement -- you know, DOT enforces, requires the
 5 gross vehicle weight measure on the bridge, which is
 6 actually on Old Sterling, speed, proper use of lane,
 7 shoulders, the health and use of the road, and it
 8 really doesn't apply to the borough CLUP permitting
 9 process.
 10 Some other things that have come up
 11 tonight were questions about wells being within --
 12 within -- one well being within 100 feet of -- yes,
 13 within the property, but not within the extraction
 14 area, the proposed extraction area. So there's fine
 15 points about the permit that always need to be read
 16 that sometimes isn't interpreted well during public
 17 meetings. And so I hope that you -- that as you always
 18 do your due diligence, read the fine points, and read
 19 the -- read the notes in the permit.
 20 Gravel extraction for a material site is
 21 always based on -- is usually based on a prospective
 22 sales as is -- it is with this site. This site isn't
 23 being permitted for a DOT project like we see sometimes
 24 or a commercial development. So the amount of material
 25 to be utilized is just a prospective. That's why it

Page 81

1 says, you know, less than 50,000 cubic yards.
 2 That number is one that we kind of always
 3 choose based on the area. And DNR permitting changes
 4 with greater than and less than 50,000 yards. The
 5 reality of 50,000 cubic yards coming out of this
 6 material site in a year is -- is not very realistic.
 7 You know, a large gravel sale in a rural
 8 area like this would be 10,000 yards or maybe 25,000
 9 yards. And, you know, that would equate to -- it's a
 10 lot still. It would equate to less than 1,500 yards --
 11 1,500 trucks, not 5,000 trucks.
 12 You know, if you are going to sell -- if
 13 you are going to sell a large amount of material you
 14 are not going to run it in a 10-yard end dump. You are
 15 going to be running a side dump or a belly dump, which
 16 is 17 yards, it separates out your weight on your axle
 17 load and such.
 18 So other test hole information, there was
 19 one test hole at the time of application. There has
 20 been additional since then. And as with -- as I
 21 continue to point out at material site hearings is that
 22 as a developer or an operator enters a pit, they
 23 continually test hole for groundwater and for different
 24 materials that meet specification for whatever they are
 25 trying to sell, whatever they are trying to make.

Page 82

1 All roads have a specification that the
2 material has to meet, and maybe, you know, 200 feet
3 over here it meets it, but over here it doesn't, so
4 they are going to test hole, they are going to move
5 around and will constantly be checking, you know,
6 groundwater if it varies.
7 The whole requirement is that you stay
8 two feet above it, so that's -- you know, it's not that
9 it's at 20 feet, it's two feet above.
10 I think I just have just a couple of
11 other little notes here. Yes, the owner has in their
12 permit that they plan on installing monitor wells for
13 potentially -- potentially a different permit, but, you
14 know, that's again, that's prospective. They do want
15 to put -- putting in monitor wells on a material site
16 is a great benefit to the owner and also to the
17 borough.
18 It gives you some comprehensive data on a
19 quarterly basis or a monthly basis of where the
20 groundwater is at. So they do -- they are proposing
21 that they might do that in the future even though this
22 permit isn't to enter the groundwater table.
23 There's other concerns regarding site
24 buffers and such, we've heard lots of those.
25 Do you guys have any questions for me at

Page 83

1 this time?
2 **CHAIRMAN MARTIN:** Any questions? None at
3 this time.
4 **GINA DEBARDELABEN:** Okay. Thanks.
5 **UNKNOWN SPEAKER:** I have a question.
6 **CHAIRMAN MARTIN:** Who is the next
7 testifier?
8 **UNKNOWN SPEAKER:** I have a question.
9 **CHAIRMAN MARTIN:** You've had your chance.
10 You've had your five minutes. We are trying to get --
11 make sure everybody gets at least five minutes.
12 **UNKNOWN SPEAKER:** I heard something I
13 don't like. Don't I get a right to ask a question?
14 No? Yeah, that (indiscernible).
15 **EMMITT TRIMBLE:** I'm Emmitt Trimble,
16 managing member of the Beachcomber, LLC and the
17 principal applicant.
18 Just as I did in Anchor Point voluntarily
19 last Wednesday opening myself for some questions and
20 anything that you would like clarified.
21 There were a number of things here that
22 could be clarified tonight, but most of them were not
23 pertinent any way to what you will be deliberating on,
24 so I'm not going to try to counter those things. But
25 if you have questions for me, I'm here.

Page 84

1 **CHAIRMAN MARTIN:** Mr. Ruffner.
2 **COMMISSIONER RUFFNER:** Thank you, Mr.
3 Chairman.
4 Mr. Trimble, so we heard at the beginning
5 the staff report that their recommendation was, given
6 the volume of information that's come in recently, some
7 of it is kind of technical and science in nature, their
8 recommendation was to postpone this or put it off at
9 least until the August meeting.
10 So, you know, I hoping that you are in
11 concurrence with that so that -- I mean, it's a
12 complicated thing that we want to chew on a little bit.
13 So I just kind of wanted to ask what your thought on
14 that were.
15 **EMMITT TRIMBLE:** I have no problem with
16 that at all.
17 **UNKNOWN SPEAKER:** Mr. Trimble, I have a
18 question.
19 **CHAIRMAN MARTIN:** This is -- we have
20 certain steps that we do. No, sir, we're not in that
21 part of the meeting.
22 **COMMISSIONER RUFFNER:** So I'll follow up,
23 because there's a couple of people that still have
24 stuff they want to want to say.
25 **EMMITT TRIMBLE:** Sure.

Page 85

1 **COMMISSIONER RUFFNER:** I get that. And I
2 guess what I would say is that, given that the staff's
3 recommendation is for us to postpone this, and even the
4 applicant himself said he's willing to put this off for
5 a month, so that's going to give you a chance to ask
6 those questions that you have of staff or of us, you
7 know. I just wanted to put that out there for you.
8 **CHAIRMAN MARTIN:** Thank you, that was
9 really helpful.
10 **EMMITT TRIMBLE:** I will offer that, you
11 know, I sent some pictures to Mr. Wall over the
12 weekend, and I did say in about three hours we put up a
13 pretty extensive berm, just mostly as a demonstration
14 as to what could be done blocking those homes.
15 There's about five homes that have any
16 way to see into any of the property, and, you know, I
17 could not see any of -- from the pit itself, not the
18 floor of the pit, but the top level of excavation, I
19 couldn't see any of those homes. That can be
20 replicated moving back.
21 I don't -- I'm not in the gravel
22 business, but it is part of the asset value of this
23 property, and it's incumbent upon me to protect my
24 family and our investment to maximize that possible
25 value.

Page 86

1 Now, what I would like to do really is my
2 own business, my family's business as to what we would
3 like to do. I have a subdivision plan, but I have no
4 intention of submitting it for preliminary approval,
5 it's just I want to know that I've done my homework
6 ahead of time.
7 And it's the same way, we've taken a --
8 we took a few loads of gravel out of that pit of less
9 than an acre to take to -- down to the boat launch to
10 put the ramp in. We took some more down to expand a
11 parking lot, and that's the kind of thing that's
12 happening. But I do intend to pursue this for the
13 entire property that we permitted -- or we're applying
14 for.
15 **CHAIRMAN MARTIN:** Any questions for the
16 applicant? Ms. Carluccio.
17 **COMMISSIONER CARLUCCIO:** Yes, thank you
18 for testifying. I think it was your daughter who spoke
19 before --
20 **EMMITT TRIMBLE:** Yes, ma'am. Quite proud
21 of her.
22 **COMMISSIONER CARLUCCIO:** -- that I asked
23 what -- so you right now have no intentions to develop
24 this as a gravel pit? You just want to get it on the
25 books?

Page 87

1 **EMMITT TRIMBLE:** I've already started
2 developing a small pit that was within the one-acre
3 confines. So I want to go through this procedure,
4 submit myself to the process, live up to the permit if
5 and when I get it, and I would be able to do whatever
6 the permit allowed at that time.
7 My plan is pretty small scale. It's for
8 local projects. All of those homes, all of these
9 people have those properties because Buzz Kyllonen took
10 a small, like less than two-acre pit that built all of
11 those roads and built all of those driveways and
12 provided the gravel for almost all of those people up
13 there or those properties wouldn't be there now to be
14 concerned. And it's now one of the nicest looking
15 properties in the area. It's directly across the road
16 from mine.
17 **COMMISSIONER CARLUCCIO:** So I'm sorry, it
18 doesn't really pertain. I was going to ask you if that
19 property was originally yours and you subdivided it,
20 but that doesn't --
21 **EMMITT TRIMBLE:** Which one?
22 **COMMISSIONER CARLUCCIO:** That really
23 doesn't pertain to what we're talking about, so...
24 **EMMITT TRIMBLE:** No, the other property,
25 that was -- that was in 1975 when I first came there,

Page 88

1 and I've owned property there since then, there was a
2 small half-acre pit that Ralph Miller had. And Buzz
3 Kyllonen bought from him, developed all the
4 surrounding -- paid for the Silver King Village, all of
5 the subdivisions from that gravel pit, and it's now a
6 lake and it's very nice. We have it listed for sale.
7 **COMMISSIONER CARLUCCIO:** Okay. Thank
8 you.
9 **EMMITT TRIMBLE:** Thank you.
10 **CHAIRMAN MARTIN:** Any other questions for
11 the applicant? Mr. Venuti.
12 **COMMISSIONER VENUTI:** Thanks for coming,
13 Mr. Trimble.
14 **EMMITT TRIMBLE:** Yes, sir.
15 **COMMISSIONER VENUTI:** So you heard
16 concern from the people who testified --
17 **EMMITT TRIMBLE:** Sure.
18 **COMMISSIONER VENUTI:** -- about the hazards
19 of trucks on the road, on the haul road, and also there
20 was a mention of the condition of the bridge that goes
21 over the Anchor River.
22 I would presume that any haul road out of
23 your pit, if this comes to be a pit, would go over that
24 bridge. Is that going to --
25 **EMMITT TRIMBLE:** Well, that's not

Page 89

1 possible now. It's been condemned, so that's why
2 people are having to drive from the North Fork Road all
3 the way to Eight Mile and back down the Old Sterling to
4 go down and bring gravel down to the beach. You can't
5 go across the bridge now. But they are going to
6 rebuild that within a year or two here.
7 **COMMISSIONER VENUTI:** Okay. That was a
8 concern.
9 **EMMITT TRIMBLE:** Yeah, and there are
10 trucks -- there are gravel trucks going up and down
11 Danver all the time right now. And, you know, I have
12 no complaint about those big boats going up and down
13 that road.
14 Buzz Kyllonen and I got that road paved
15 through a maintenance budget with DOT for \$150,000
16 because we gave them permission to go through our
17 properties where there's not a right-of-way to this
18 day.
19 So those people that are worried about
20 that road, we would have loved to have had them there
21 by our side helping us back then.
22 **COMMISSIONER VENUTI:** Thank you very
23 much.
24 **EMMITT TRIMBLE:** You bet.
25 **CHAIRMAN MARTIN:** Anyone else?

Page 90

1 **EMMITT TRIMBLE:** Thank you.
 2 **CHAIRMAN MARTIN:** Not at this time.
 3 Thank you.
 4 Is there anyone else in the audience
 5 wishing to testify? Please.
 6 **DON HORTON:** Hi. My name is Don Horton,
 7 my family owns property at 34910 Echo. Like my father
 8 said, it is directly across the street from that
 9 proposed gravel pit.
 10 I just had a couple of quick questions
 11 for, I guess, you guys. If a permit is issued for this
 12 property, is it attached to the property or is it
 13 attached to the owners of the property? Like, if it is
 14 sold, does the permit stay with it?
 15 **CHAIRMAN MARTIN:** With the property.
 16 **DON HORTON:** With the property, okay,
 17 that's what I thought.
 18 The Trimbles, they spoke on -- the last
 19 guy that spoke, he just spoke that he wants to maximize
 20 the property value of his property that he owns by
 21 applying for this permit while it is at the expense of
 22 everyone's property around it, I want everyone to
 23 realize that. I don't think that's right.
 24 That's mainly what I wanted to ask.
 25 Thank you for your time.

Page 91

1 **CHAIRMAN MARTIN:** Next. Did we get your
 2 name and address?
 3 **DON HORTON:** No pen.
 4 **CHAIRMAN MARTIN:** Is there anyone else?
 5 Please.
 6 **RICHARD CARLTON:** I am a retired lineman.
 7 I fell in love with the Anchor Point River area in 1996
 8 and started coming up here pretty regularly. The wife
 9 and I purchased a piece of ground in 2007, it's 73500
 10 Seabury Road. We go up Danver to Seaward and then take
 11 a right and go to our house.
 12 It's kind of an emotional thing for me,
 13 because I fell in love with the place and the lack of
 14 noise. You know, these people talk about machinery and
 15 things like that.
 16 I had 40 years with backup alarms and
 17 backhoes, you know, and noise. And I go up there and I
 18 can sit on my patio and look out at Iliamna and drink
 19 my coffee and I'm in heaven. It's a wonderful thing.
 20 I've got wonderful neighbors that all
 21 give a shit about one another. And if they need
 22 something, they help each other. And if they are
 23 making too much noise, they say something and you quiet
 24 down. It's a great, great life.
 25 I don't know why it matters who owns the

Page 92

1 road that goes to the beach. The bridge is condemned,
 2 the Old Sterling Highway is a hazard, and if you take
 3 just a 10-yard, 12-yard dump truck by itself and drive
 4 it up and down that road with its Jake brakes, that
 5 quiet goes away.
 6 There is all these RV parks. Buzz
 7 Kyllonen's RV Park was where we fell in love with the
 8 area. We'd come here year after year, and it's right
 9 across where one of the entrances to this Beachcomber
 10 Road is. We'd take a rubber boat out and catch a
 11 halibut, and then we'd drive all the way down to
 12 Southeast Washington and plan for next year to go back
 13 up here. That will all change if they dig a big hole.
 14 And I'm kind of like some of these other
 15 people. You know, I don't begrudge anybody wanting to
 16 make a living, but this has no place where it is at. I
 17 mean, you know, people raise hell about Pebble Mine.
 18 Well, it's a long ways away. It's, you know, it's --
 19 maybe -- maybe it does -- it could trash a lot streams
 20 and salmon runs and things like that, but I don't see
 21 it so it isn't personal to me.
 22 But if I have to drive when I go to the
 23 post office, and I got to come up Danver and I got to
 24 hear backup alarms or white noise, I'm not going to
 25 enjoy the place like I used to.

Page 93

1 And so I really think the road safety and
 2 these things, even though maybe the borough doesn't
 3 have any jurisdiction over the road because it's a
 4 state road or the Old Sterling Highway, I really think
 5 you guys should be able to have some input on this
 6 project and do the right thing. Thank you.
 7 **CHAIRMAN MARTIN:** Thank you. Any
 8 questions?
 9 **THE CLERK:** Mr. Chairman.
 10 **CHAIRMAN MARTIN:** Yes.
 11 **THE CLERK:** Could he state his name?
 12 **CHAIRMAN MARTIN:** Did you state your name
 13 and address?
 14 **RICHARD CARLTON:** Yes, I did.
 15 **CHAIRMAN MARTIN:** In the record, in the
 16 microphone? It helps if she gets it recorded as well.
 17 **THE CLERK:** Could you please state your
 18 name. I didn't catch it.
 19 **RICHARD CARLTON:** Yes. It is Richard
 20 Carlton, 73500 Seabury Road. I did -- we did send a
 21 letter in, too.
 22 **CHAIRMAN MARTIN:** Okay. Thank you. Mr.
 23 Ruffner.
 24 **COMMISSIONER RUFFNER:** Mr. Chairman, at
 25 this time I would like to vote to suspend the rules so

Page 94

1 that we can extend any public comment beyond our normal
 2 closing time at 11.
 3 **COMMISSIONER CARLUCCIO:** Second.
 4 **CHAIRMAN MARTIN:** Is there any opposition
 5 to the motion? Seeing none, the motion to extend the
 6 rules passes.
 7 And I will ask another time for the next
 8 testifier.
 9 **STEVE HABER:** My name is Steve Haber.
 10 Sorry, it's late. I just want to tell you all I was
 11 at -- on the beach road this morning, and everyone who
 12 knows it mentioned it before, someone is going to die
 13 if this project goes through.
 14 I unfortunately had a high school
 15 incident with my son's school many years ago, and we
 16 couldn't get a traffic light put in at a very famous
 17 school in the desert, and three kids got killed, you
 18 know, several weeks later. And then, of course, the
 19 whole town went crazy and put the light in. That's
 20 what's going to happen here.
 21 And you may be under such tremendous
 22 pressure from the way you do it that you are going to
 23 approve this. This won't work with this road, beach
 24 road. Everything that everybody else has said about
 25 the views and stuff doesn't compare to the bike

Page 95

1 companies going up and down. The boat trailers are
 2 going 60 miles an hour themselves -- I mean, the boats
 3 that are going to get put in the water. They are not
 4 obeying the laws either.
 5 I was trying to hitch from one campground
 6 to the other this morning, and it was crazy. There was
 7 two kids being pulled in a deal and being wheeled up
 8 there. Someone is going to die. You remember I said
 9 this tonight, every one of you. You are sitting here,
 10 you can prevent it.
 11 And I don't mean to think you are bad
 12 people. Someone is going to die on that road and then
 13 you are all going to change your mind. Thank you.
 14 **CHAIRMAN MARTIN:** Anyone else?
 15 **DAVID GREGORY:** Okay. My name is David
 16 Gregory. I live on 73850 Seaward, which is just up
 17 Danver around the corner from this proposed pit.
 18 We are calling it a pit, a gravel
 19 extraction area, which is actually a mine as it was
 20 mentioned earlier.
 21 I work at a mine, and there's a place for
 22 mines, but the mine I work at is way out in a remote
 23 area.
 24 And I've sent an e-mail several days ago,
 25 and noise and dust is one of my big concerns. And then

Page 96

1 as it was mentioned, the noise goes uphill, and there's
 2 numerous homes. Maybe there's only five that could be
 3 seen from one particular point, but there are dozens up
 4 this hill that the noise will carry right up there, as
 5 well as the dust. And the dust can be carried by the
 6 wind or if it is -- if the wind is still, it just hangs
 7 in the air.
 8 Now at the mine where I work, the whole
 9 ground for a large area, in the wintertime especially
 10 so you can see it, fresh snow will only stay fresh for
 11 a day or two and it's got a dark color, crusty, dirty
 12 look for a big area around the mine. So this is one of
 13 my biggest concerns at this point is the noise and the
 14 dust. Thank you.
 15 **CHAIRMAN MARTIN:** Thank you. Anyone
 16 else? This will be the last call for public comment
 17 this evening. Hearing and seeing no further requests,
 18 we close public comment and bring it back to the
 19 Commission for a motion. Mr. Ruffner.
 20 **COMMISSIONER RUFFNER:** Thank you, Mr.
 21 Chairman. Move to postpone action on this item until
 22 next meeting and hold public comment open.
 23 **COMMISSIONER BENTZ:** Second.
 24 **CHAIRMAN MARTIN:** Discussion. Ms.
 25 Ecklund.

Page 97

1 **COMMISSIONER ECKLUND:** I really would
 2 like to take action on this tonight. We've heard the
 3 public. I would -- you know, if we did bring it back
 4 on August 13th, I would hope that they would all be
 5 back again and we'd hear it again.
 6 I did have opportunity to look through a
 7 bit of the material prior to the meeting, but I believe
 8 what I've heard tonight and I think it would be just
 9 verified in these documents. And I think I would like
 10 to take action on this conditional use permit tonight
 11 rather than postpone it until August 13th.
 12 **CHAIRMAN MARTIN:** Mr. Whitney.
 13 **COMMISSIONER WHITNEY:** I concur with
 14 that. I had an opportunity to read through everything,
 15 and I just as soon do it tonight and get it over with.
 16 **CHAIRMAN MARTIN:** Roll call, please.
 17 **THE CLERK:** Thank you, Mr. Chairman.
 18 This was a motion to postpone action until the next
 19 meeting or to continue the public hearing. Carluccio?
 20 **COMMISSIONER CARLUCCIO:** No.
 21 **THE CLERK:** Ecklund?
 22 **COMMISSIONER ECKLUND:** No.
 23 **THE CLERK:** Fikes?
 24 **COMMISSIONER FIKES:** No.
 25 **THE CLERK:** Martin?

Page 98

1 **CHAIRMAN MARTIN:** Yes.
 2 **THE CLERK:** Morgan?
 3 **COMMISSIONER MORGAN:** No.
 4 **THE CLERK:** Ruffner?
 5 **COMMISSIONER RUFFNER:** Yes.
 6 **THE CLERK:** Venuti?
 7 **COMMISSIONER VENUTI:** Yes.
 8 **THE CLERK:** Whitney?
 9 **COMMISSIONER WHITNEY:** No.
 10 **THE CLERK:** Bentz?
 11 **COMMISSIONER BENTZ:** Yes.
 12 **THE CLERK:** Four yes, five no.
 13 **CHAIRMAN MARTIN:** So the motion to
 14 postpone fails.
 15 Ms. Ecklund.
 16 **COMMISSIONER ECKLUND:** To put this on the
 17 floor, I would like to make a motion to approve the
 18 conditional use permit for a material extraction site
 19 in the Anchor Point area.
 20 **COMMISSIONER CARLUCCIO:** Second.
 21 **CHAIRMAN MARTIN:** Discussion. Ms.
 22 Ecklund.
 23 **COMMISSIONER ECKLUND:** I believe that we
 24 have sufficient findings to deny this permit based on
 25 the public opinion or the public testimony and the

Page 99

1 borough code as it is written now and the facts that
 2 were written in the staff report.
 3 I do have a question for staff, for Mr.
 4 Wall at this time, to know if we can even address this
 5 because they requested a waiver for the processing
 6 portion of the pit, and you recommend denying that
 7 waiver, which would then not allow them enough area for
 8 a processing as submitted tonight. Would that require
 9 a new submission of their application?
 10 **MR. WALL:** The permit would be for the
 11 extraction, they could certainly extract. To process
 12 the material, it would still leave them a narrow area
 13 within the proposed area, within the material site to
 14 do some processing.
 15 But the material extraction would be
 16 approved, but they wouldn't be able to process outside
 17 of that narrow area that would be -- and I'd have to
 18 put my scale to it, but it would pretty narrow if we
 19 narrow it down to the 300 foot from the property lines.
 20 **COMMISSIONER ECKLUND:** Yeah, I think it
 21 would be 50-foot wide or so, so it would be a pretty
 22 narrow area.
 23 So then the motion -- the motion was to
 24 approve this. Do we have to address that waiver or do
 25 we just take your recommendation?

Page 100

1 **MR. WALL:** Right. If you -- the motion,
 2 it sounded like it was to approve as recommended in the
 3 staff report, which includes the approval -- I mean,
 4 the denial of the waiver.
 5 **COMMISSIONER ECKLUND:** Okay. Okay.
 6 Thank you.
 7 **CHAIRMAN MARTIN:** Further discussion? Go
 8 ahead, Mr. Ruffner.
 9 **COMMISSIONER RUFFNER:** Thank you, Mr.
 10 Chairman.
 11 So I was kind of hoping to put this off
 12 because I had a couple of legal questions that I would
 13 have wanted to ask. I don't think we have time to go
 14 through kind of a memo that I was thinking about asking
 15 for.
 16 So I will try to summarize what I know
 17 about where we stand legally with looking at this and
 18 why I had to give this little talk a number of times in
 19 an uncomfortable way, is that, you know, the borough
 20 bssembly has given us the rules by which we are allowed
 21 as Planning Commission members to work under.
 22 And so they've kind of put the side
 23 boards up there that says what we can and can't
 24 approve. And the six criteria that staff has laid out
 25 shows that, in their opinion, that it meets those

Page 101

1 conditions.
 2 So what I would want to hear from my
 3 fellow commissioners, is of those six criteria, which
 4 ones you -- if you are going to vote against this, you
 5 know, which ones you don't think we're meeting in the
 6 discussion so that I can at least understand where you
 7 would be deviating from what's been presented to us in
 8 the staff report.
 9 **CHAIRMAN MARTIN:** Ms. Ecklund.
 10 **COMMISSIONER ECKLUND:** Yes. With the
 11 findings that I've drafted, the first one addresses
 12 current Ordinance 21.29.040(A)(4). That states that
 13 the noise -- let me find it on page 101 -- that states
 14 "...minimizes the noise disturbance to other
 15 properties."
 16 And from the testimony I've heard tonight
 17 and the documents that have been submitted, I don't
 18 think that the berms or the vegetation buffers will do
 19 justice to minimize the noise disturbance to other
 20 properties. We've been handed out maps with properties
 21 identified, so I think that's one finding.
 22 Another finding right along with that is
 23 21.29.050(A)(5), and I don't think that the visual
 24 effects will be reduced sufficiently with buffers,
 25 berms. I don't think they could build them high enough

Page 102

1 for that.
 2 The application was submitted without the
 3 seasonal high water determination. I don't think that
 4 was sufficiently delineated in the application.
 5 And I don't know if this is a finding or
 6 not, but I think we need to determine if that well that
 7 was mentioned several times tonight is within 100 feet
 8 of the pit as designated in the application.
 9 **CHAIRMAN MARTIN:** It comes down to did
 10 you state your case?
 11 **COMMISSIONER ECKLUND:** So I guess that
 12 would be -- that's my case.
 13 **CHAIRMAN MARTIN:** That's your findings.
 14 **COMMISSIONER ECKLUND:** And then the vote
 15 would determine if we stated it. And if we fail this
 16 motion to approve it, then there's followup procedures
 17 that could be taken by the applicant, as I understand,
 18 is that correct, through the chair to staff?
 19 **MR. WALL:** So your question was is if it
 20 is denied, what the applicant's recourse is?
 21 **COMMISSIONER ECKLUND:** Yes, if you could
 22 explain that for us.
 23 **MR. WALL:** Yes. There is a 15-day appeal
 24 period once the decision is made, once the notice of
 25 decision is issued, and that appeal would go to the

Page 103

1 hearing officer. And that would be -- anybody that
 2 testifies tonight or has written -- submitted written
 3 comment would have the ability to appeal.
 4 **COMMISSIONER ECKLUND:** Just to follow up.
 5 So anyone that testified and any comments, the hearing
 6 officer would get a transcript of the comments tonight
 7 as well for their review?
 8 **MR. WALL:** That is correct. The
 9 transcript is provided to the hearing officer.
 10 **COMMISSIONER ECKLUND:** Okay. Thank you.
 11 **CHAIRMAN MARTIN:** Mr. Ruffner.
 12 **COMMISSIONER RUFFNER:** So I thank my
 13 fellow commissioner for kind of laying out what will be
 14 the findings, I think, attached if it goes that way.
 15 So I'll just summarize. And I think this
 16 would be good if it were to be appealed just to have
 17 this on the record as my understanding of kind of how
 18 we get to where we feel like, as commissioners, our
 19 hands are tied. And, I mean, I think we heard it from
 20 the public that you've heard that our hands are tied in
 21 a number of cases.
 22 So as best I can, I can lay out what my
 23 understanding of the legal -- legal standing that we
 24 have is here, and we have an attorney here that can
 25 correct me if I run astray here.

Page 104

1 So one testifier talked about the broad
 2 authorities that have been given to the Planning
 3 Commission very early on in borough code at 240.050,
 4 which authorizes the Planning Commission to kind of
 5 consider all the factors in everything that we do and
 6 make a good determination, so that's very high in our
 7 code.
 8 Then later on in 21.25 it lays out the
 9 procedures for when we would authorize a conditional
 10 land use permit, and there are several steps in there.
 11 And then later in the code is 21.29,
 12 which is the code specifically for gravel pits. Now my
 13 understanding of -- or interpretations of how we've
 14 gotten to this point in the past has been that 21.29
 15 really lays out what you can do with buffers and what
 16 you can't do with -- what limitations you could put on
 17 a pit operator, and those are handed down to us from
 18 the bssembly.
 19 Previously I think I've heard that the
 20 21.29 says it's the most recent set of code is that
 21 that's the ones that are supposed to govern our
 22 decisions. And then looking further up the code where
 23 we have broader latitude has not been afforded to us in
 24 the past.
 25 So that's been my understanding, and if

Page 105

1 there's any clarification or corrections to that, I
 2 mean, I would like to hear that from counsel.
 3 **MS. MONTAGUE:** That was a good summary,
 4 Mr. Ruffner. The one thing I would add is it's not
 5 just a matter of the ordinance that is adopted later in
 6 time, but also the ordinance that is most specific to
 7 what you are reviewing.
 8 And in this case, the KPB 21.29 is the
 9 ordinance that very specifically addresses material
 10 sites. So that has more weight than a very general
 11 purpose clause, for example, that just says that the
 12 Planning Commission can review the public health,
 13 safety, and welfare. The very specific criteria in
 14 21.29 is how the assembly has chosen to protect the
 15 public health, safety, and welfare.
 16 **CHAIRMAN MARTIN:** Ms. Carluccio.
 17 **COMMISSIONER CARLUCCIO:** If 21.29 says
 18 that a 50-foot berm or 50 feet of vegetation is one of
 19 the criteria and a ten-foot berm, but yet the pit is
 20 lower than all of the surrounding area, and the 50 foot
 21 doesn't do anything, don't we have some authority to
 22 say that this is the letter of the law, but it is not
 23 the intent of the law, because the intent of the law is
 24 to protect the surrounding land owners?
 25 **MS. MONTAGUE:** The intent of the law is

Page 106

1 to protect the surrounding land owners in the way the
2 assembly has laid out in the borough code.
3 **CHAIRMAN MARTIN:** It's the unique
4 topography that -- what gets us into this corner right
5 now. It's hard to foresee all the different
6 ramifications of a crater.
7 **COMMISSIONER CARLUCCIO:** That's true, but
8 I would not be able to support this at the time -- at
9 this time anyhow.
10 **CHAIRMAN MARTIN:** Ms. Bentz.
11 **COMMISSIONER BENTZ:** Yeah, I would just
12 like to follow up on that with just an observation that
13 in our staff report it says that the proposed
14 extraction meets the material site standards from 21.29
15 minimizing noise disturbance from other properties, but
16 I don't agree with that. I don't think these
17 conditions will minimize noise disturbance to other
18 properties and the conditions won't minimize visual
19 impacts either.
20 **COMMISSIONER MORGAN:** I have to agree as
21 well. I don't see how the 50-foot buffer or berms are
22 going to minimize visual impact or sound impact because
23 of the unique topography.
24 **CHAIRMAN MARTIN:** Are we ready to -- Mr.
25 Ruffner.

Page 107

1 **COMMISSIONER RUFFNER:** I just want to say
2 one more thing. I think we've done a good job of
3 laying out the record of why -- why we're going to vote
4 the way we are or not. And likely, you know, if it
5 doesn't be approved it would likely be appealed, and so
6 the Board of Adjustment will have a good record from us
7 about why -- why we thought that it might not meet
8 those criteria of being able to screen or vegetation.
9 So at least it's all there for the process.
10 **CHAIRMAN MARTIN:** Yes, thank you. Roll
11 call, please.
12 **THE CLERK:** Thank you, Mr. Chairman. The
13 motion was to approve the conditional land use permit
14 application for a material extraction on a parcel in
15 Anchor Point.
16 Carluccio?
17 **COMMISSIONER CARLUCCIO:** No.
18 **THE CLERK:** Ecklund?
19 **COMMISSIONER ECKLUND:** No.
20 **THE CLERK:** Fikes?
21 **COMMISSIONER FIKES:** No.
22 **THE CLERK:** Martin?
23 **COMMISSIONER MARTIN:** Yes.
24 **THE CLERK:** Morgan?
25 **COMMISSIONER MORGAN:** No.

Page 108

1 **THE CLERK:** Ruffner?
2 **COMMISSIONER RUFFNER:** Yes.
3 **THE CLERK:** Venuti?
4 **COMMISSIONER VENUTI:** Yes.
5 **THE CLERK:** Whitney?
6 **COMMISSIONER WHITNEY:** No.
7 **THE CLERK:** Bentz?
8 **COMMISSIONER BENTZ:** No.
9 **UNKNOWN SPEAKER:** Three yes, six no.
10 **CHAIRMAN MARTIN:** The motion fails.
11 I'd like to -- I would like to thank
12 everyone for the effort and sacrifice it took to come
13 to this hearing. And I want to encourage you to
14 continue to stay connected as a community and make the
15 most of your community, and thanks for coming.
16 Yeah, we are still going. Down while the
17 gang is working on the findings. Okay.
18 **COMMISSIONER ECKLUND:** Do you want me to
19 read them into the record?
20 **CHAIRMAN MARTIN:** Yes, ma'am.
21 **COMMISSIONER ECKLUND:** Okay. I move that
22 we attach the following findings to the denial of
23 the --
24 **CHAIRMAN MARTIN:** We can hear. We can
25 hear.

Page 109

1 **COMMISSIONER ECKLUND:** -- conditional use
2 permit for the Anchor Point material extraction site,
3 that the Borough Code 21.29.040(A)(4), we find that the
4 noise will not be sufficiently reduced with any buffer
5 or berm that could be added.
6 Borough Code 21.29.040(A)(5), that the
7 visual impact to the neighboring properties will not be
8 reduced sufficiently.
9 **MR. WALL:** Mr. Chairman, can I go close
10 the door real quick?
11 **CHAIRMAN MARTIN:** Yes. Mr. Wall
12 interrupted to close the door, because --
13 **COMMISSIONER ECKLUND:** Okay.
14 **CHAIRMAN MARTIN:** -- they weren't -- they
15 weren't clueing in.
16 **COMMISSIONER ECKLUND:** Do you think
17 you've got those?
18 **CHAIRMAN MARTIN:** The recording?
19 **COMMISSIONER ECKLUND:** Thank you. All
20 right.
21 **COMMISSIONER CARLUCCIO:** Second.
22 **CHAIRMAN MARTIN:** Discussion on the
23 motion. Any opposition of adding these findings?
24 Seeing no opposition, the motion passes unanimously.

RESOLUTION 2018-23

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 where public comment was taken and the Commission denied the approval of the conditional land use permit; and
- WHEREAS,** the denial was appealed, a subsequent appeal hearing was held, and the hearing officer remanded the application to the Planning Commission; and
- WHEREAS,** a public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News; and
- WHEREAS,** at the March 25, 2019 meeting, the Planning Commission continued the hearing to May 28, 2019, which was later rescheduled for June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on Jun 10, 2019 where public comment was taken;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.

6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. A public hearing of the Planning Commission was held on June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
13. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
14. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
15. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
16. *Parcel boundaries.* All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
17. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent

- properties.
- J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - R. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
18. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
19. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
20. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
21. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast

- corner of the property.
- D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
22. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 - A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
 23. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
 - A. The submitted site plan indicates that the material site haul route will be Danver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
 24. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
 - A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
 25. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 26. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
 27. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
 28. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
 29. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the

permittee and approval of the planning commission.

- A. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - B. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimize the noise impacts of the material site.
 - C. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
 - D. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
 - E. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.
 - F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.
 - G. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.
30. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
- A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the

addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.

16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.
21. The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to also include:
 - Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
 - Saturday, Sunday, and Monday if July 4th is on a Tuesday
 - Saturday, Sunday, and Friday if July 4th is on a Thursday

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON THIS 24th DAY OF JUNE, 2019.

Blair J. Martin, Chairperson
Planning Commission

ATTEST:

Julie Hindman
Administrative Assistant

AGENDA ITEM G. PUBLIC HEARING

4. Conditional Land Use Permit for a Material Site; Anchor Point Area

STAFF REPORT

PC MEETING: March 25, 2019

Applicant: Beachcomber LLC

Landowner: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

On July 16, 2018, the Planning Commission denied the approval of this Conditional Land Use Permit application based upon the following findings:

1. The noise will not be sufficiently reduced with any buffer or berm that could be added.
2. The visual impact to the neighboring properties will not be reduced sufficiently.

The Planning Commission's decision was appealed to a hearing officer in accordance with KPB 21.20. The hearing office has remanded the decision to the Planning Commission with the following instructions:

The Commission shall reevaluate the application with respect to the mandatory conditions listed in KPB 21.29.050, as well as any voluntary conditions that Beachcomber may agree to. The Commission shall conduct a second public hearing at which it shall issue findings of fact, pertaining to the mandatory conditions listed in KPB 21.29.050, and shall reference specific evidence in the record in support of those findings. In issuing its findings, the Commission must comply with both local and common law requirements, which require the Commission to both issue findings supported by substantial evidence and to "articulate the reasons for their decisions."

Following are excerpts from the hearing officer's decision regarding the Planning Commission's discretion:

While the Code requires applicants to submit significant documentation in order to obtain the permit, the Code does not provide the Commission discretion to deny such a permit when the application has been properly submitted. Instead, the Code preserves the unrestricted nature of the rural zoning district and limits the Borough to the imposition of certain conditions to extraction. (Hearing Officer Decision, p.10.)

A CLUP actually imposes greater rather than fewer restrictions upon the permitted parcels. While the rural zoning district is primarily unregulated and unrestricted, an applicant's parcels are subject to specific and express conditions that are not automatically imposed on other parcels in the same district. Thus, the government must ensure that the application of greater restrictions upon the applicant are in fact justified and imposed in a fair and objective way. The Code preserves this fairness by granting the Borough staff, the Commission, and a hearing officer very limited discretion in denying and even conditioning CLUPs. (Hearing Officer Decision, p.12.)

While the Commission's concerns may be valid, the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code. Instead, the Assembly, in adopting the Code, only granted the Commission authority to impose these conditions and ensure that any application complied with the application requirements. In other words, under the law as it currently stands, the Commission may only apply conditions under KPB 21.29.050 when issuing a material site conditional use permit. It may not impose additional conditions despite the positive impact such conditions may have in the rural zoning district or the community at large. To the extent the parties disagree with these limitations, it is the Borough Assembly, through the local legislative process, and not this hearing officer, that holds the power to change the permit approval process. (Hearing Officer Decision, p.13.)

The complete decision of the hearing officer is included with this staff report.

The submitted site plan indicates that the material site haul route will be Danver Street, which is a Borough maintained road. The site plan and application proposes the following buffers:

- North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
- South: 6-foot high berm.
- East: 6-foot high berm.
- West: Greater than 50-foot vegetated buffer.

The application indicates that the depth to groundwater is 20 feet and that the depth of the proposed excavation is 18 feet. The groundwater depth was determined by a test hole on the property and exposed surface water to the north. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. There is adequate room elsewhere on the parcel to accommodate processing while complying with the 300-foot setback. Staff does not recommend approval of the processing distance waiver request.

The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area. The site plan indicates a 104-foot setback from the wetlands area located in the northeast corner of the property and that this setback will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, Best Management Practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska, will be utilized as a guideline to reduce potential impacts to water quality.

The application states that reclamation will be completed annually before the growing season ends (September) and that seeding will be applied as necessary each season to areas that achieve final grade in order to minimize erosion and dust. The applicant estimates a life span of 15 years for the site with an approximate annual quantity of less than 50,000 cubic yards.

Following is a summary of the buffers proposed by staff:

- North: 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area; a six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 12-foot high berm along the rest of the northern boundary.
- South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
- East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
- West: Greater than 50-foot vegetated buffer along the western most parcel boundary.

PUBLIC NOTICE: Public notice of the application was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their Post Office. Public notice of the application was published in the March 14, 2019 & March 21, 2019 issues of the Homer News.

ATTACHMENTS

- Planning Commission packet from July 16, 2018
- Public comments submitted at the July 16, 2018 meeting
- Excerpt from the minutes of the July 16, 2018 meeting
- Hearing Officer's decision dated December 26, 2018
- Hearing Officer's reconsideration decision dated February 4, 2019
- Staff recommended buffers map

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
13. *Parcel* boundaries. All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
14. *Buffer zone*. A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.

- D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
15. Processing. Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback:

“Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant’s daughter & 169-022-08 is not developed.”

- C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
16. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
17. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
18. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.

- H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
19. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
20. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
21. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
22. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
23. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
24. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.

- C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
25. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
- A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
26. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
- A. No additional conditions have been volunteered by the applicant.
27. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
- A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

STAFF RECOMMENDATION

The Planning Commission should review the application, site plan, staff report, and comments received and determine if the mandatory conditions contained in KPB 21.29.050 will be met. The Planning Department recommends that the Planning Commission deny the processing distance waiver request, approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the following:

1. Filing of the PC Resolution in the appropriate recording district after the deadline to appeal the Planning Commission's approval has expired (15 days from the date of the notice of decision) unless there are no parties with appeal rights.
2. The Planning Department is responsible for filing the Planning Commission resolution.
3. The applicant will provide the recording fee for the resolution to the Planning Department.
4. Driveway permits must be acquired from either the state or borough as appropriate prior to the issuance of the material site permit.
5. The 100-foot buffer adjacent to the riparian wetland and floodplain shall be restored to a vegetative state prior to the issuance of the permit.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.

These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.

4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A “party of record” is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the filing fee and records preparation fee. (KPB Code 21.25.100)

END OF STAFF REPORT

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 where public comment was taken and the Commission denied the approval of the conditional land use permit; and
- WHEREAS,** the denial was appealed, a subsequent appeal hearing was held, and the hearing officer remanded the application to the Planning Commission; and
- WHEREAS,** a public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site

- once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
 3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
 4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
 5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
 6. The proposed disturbed area is approximately 27.7 acres.
 7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
 8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
 9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
 10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
 11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
 12. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
 13. *Parcel boundaries.* All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
 14. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.

- E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
15. Processing. Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property

line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.

- E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
16. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
17. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
18. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
19. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to

minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.

- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
20. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Danver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
21. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
22. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
23. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
24. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
25. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
- A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
26. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
- A. No additional conditions have been volunteered by the applicant.
27. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.

- A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations,

those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.

17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON
THIS _____ DAY OF _____, 2019.

**HEARING OFFICER'S DECISION AND ORDER ON
MOTION FOR RECONSIDERATION**

On Wednesday, January 9, 2019, two parties filed timely motions for reconsideration in this matter: the R O Baker II Revocable Trust and Hans Bilben. The Kenai Peninsula Borough Code ("Code") provides that a party may request reconsideration

only on the following criteria:

1. The hearing officer overlooked, misapplied, or failed to consider a code provision directly controlling;
2. The hearing officer overlooked or misconceived a material fact;
3. The hearing officer overlooked or misconceived a material question in the case; or
4. Fraud or misrepresentation by a party."¹

The hearing officer requested responses from other parties to the case. Applicant Beachcomber, LLC and the Kenai Peninsula Borough ("KPB") filed the only responses to the motion for reconsideration. The hearing officer considered both motions for reconsideration and both responses carefully, and denies the motions for the following reasons.

¹ KPB 21.20.350(A).

Baker II Trust Motion for Reconsideration

The Baker II Trust's motion challenges the hearing officer's decision to uphold the Planning Commission's ("Commission") denial of the conditional land use permit, arguing that the Code gives the Commission the authority to deny a permit, and that the Commission's findings of fact were sufficient.² Though the Baker II Trust does not specifically identify the criteria in KPB 21.20.350(A) upon which it motions for reconsideration, the hearing officer will assume the Baker II Trust intends to invoke KPB 21.20.350(A)(1) and (A)(2), relating to the hearing officer overlooking or misapplying of code provisions and material facts.

The Baker II Trust argues that the Code provisions governing material site permit conditions in KPB 21.29 "do not restrict the Commission's power under Chapter 21.25 to disapprove a permit where terms and conditions cannot 'protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts,' as required by KPB 21.29.040(A),"³ citing *South Anchorage Coalition v. Coffey*⁴ in support of its argument. In that case, a Court found "the use of the terms 'may approve' indicates that the Commission also has discretion to deny the permit even if it finds that the standards are met."⁵ However, the language and purpose of the Anchorage Municipal Ordinance interpreted in *Coffey* is very different from the local code provisions at issue in this appeal. The property in *Coffey* was in a non-commercial residential zone, which allowed natural resource extraction as a conditional use.⁶ In contrast, the KPB Code "preserves the unrestricted nature of the rural zoning district and limits the Borough to the imposition of certain conditions to extraction."⁷ Using the Anchorage ordinance language as an analogy in this case is not appropriate.

KPB Code Chapter 21.25 contains the "general provisions applicable to all conditional land use permits," and "where the provisions of this chapter and a CLUP chapter regulating a specific use conflict, the more specific chapter shall control."⁸ Chapter 21.29 regulates a specific use, namely, material sites. Therefore, a provision in Chapter 21.29 that applies to a specific situation will take precedence over the general provisions in Chapter 21.25. The Commission may only apply the conditions listed in KPB 21.29.050 when determining whether to deny a material site conditional use permit. In this case, the Commission's findings were not sufficient to determine whether the denial was properly within the Commission's authority. Remand for further findings is an appropriate remedy for lack of sufficient findings.

⁷ Hearing Officer's Decision and Order, p. 10

⁸ KPB 21.25.010.

The Baker II Trust's second argument is that "[t]hese findings are sufficient for the Applicant and any reviewing body to understand the Commission's reasoning...[d]etailed findings are not required where the basis of the decision is clear."⁹ The Baker II Trust does not point to any specific material fact that it alleges the hearing officer overlooked or misconceived. Therefore there is no basis for reconsideration on this point.

Hans Bilben Motion for Reconsideration

Mr. Bilben argues that the hearing officer overlooked and misapplied KPB 21.25.050(B), which, according to Mr. Bilben, "explicitly and expressly grants the Planning Commission authority to disapprove a permit application and, through 21.25.020, requires that the Planning Commission find that the permit meets the applicable *standards* before approving an application."¹⁰ As Mr. Bilben's motion acknowledges, "KPB Code 21.29.040 sets forth the specific *standards* that apply to CLUPs for material sites."¹¹ That provision states that "only" the conditions in KPB 21.29.050 may be imposed to meet the standards listed in KPB 21.29.040. Therefore, KPB 21.29.040 and KPB 21.29.050 control over language in KPB 21.25.050(B) granting the Commission authority to "find at a minimum that the proposed activity complies with the requirements of this chapter," because the more specific language of Chapter 21.29 controls over the more general language of Chapter 21.25.¹² The hearing officer's decision and order therefore properly applied and interpreted KPB 21.25.050(B).

Mr. Bilben also argues that the hearing officer overlooked and misconceived a material fact, namely, the testimony of Bruce Wall, the Borough Planner.¹³ Mr. Bilben quotes Mr. Wall's testimony at the public hearing:

So with the proposed six-foot berm, I was not able to state in the staff report that the standards in KPB 21.29.040 had been met, but with the addition of the 50-foot vegetated buffer in portions of the property, I was then able to draft the findings stating that the standards had been met. Of course, the decision concerning buffers is entirely up to the Planning Commission.¹⁴

Mr. Wall's testimony does not present a material fact. It provides his reasoning behind his recommendations in the staff report, and acknowledges that his recommendations are just that. As Mr. Wall noted, the decision about the buffers required by KPB 21.29.050(A)(2) is up to the Commission. The hearing officer therefore

⁹ Baker II Trust's Motion for Reconsideration, pp. 3-4.

¹⁰ Hans Bilben's Motion for Reconsideration, p. 3, emphasis in original motion.

¹¹ Hans Bilben's Motion for Reconsideration, p. 3, emphasis in original motion.

¹² KPB 21.25.010.

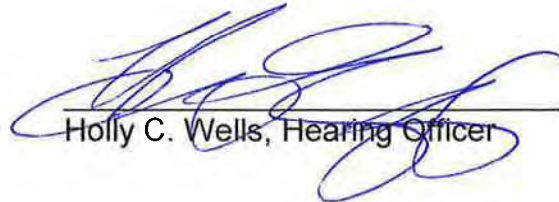

¹³ Hans Bilben's Motion for Reconsideration, p. 4.

¹⁴ Hans Bilben's Motion for Reconsideration, p. 5.

did not overlook or misapply Mr. Wall's testimony. In this case, the Commission denied the permit application and made findings of fact, however those findings were not specific enough to permit full review of their decision. Remand is appropriate so that the Commission can fully articulate its decision and issue detailed findings of fact.¹⁵

For these reasons, the motions for reconsideration filed by the Baker II Trust and Hans Bilben are DENIED.

Dated this 5th day of February, 2019.

Holly C. Wells, Hearing Officer

Right to Appeal

The filing of a motion for reconsideration suspends the time in which an appeal must be taken to Superior Court. The time period in which to file an appeal shall begin when the hearing officer issues the decision on the motion for reconsideration, or 10 days after the motion for reconsideration is filed if the hearing officer does not issue a decision on the motion.

This Decision and Order on the Motion for Reconsideration is a final decision. An appeal from this decision may be filed in the Alaska Superior Court within 30 days after the date of distribution of this decision and is governed by Part 6 of the Alaska Rules of Appellate Procedure. This decision remains in effect while an appeal is pending unless stayed by the Alaska Superior Court. See KPB 21.20.350 and KPB 21.20.360.

¹⁵ See Hearing Officer's Decision and Order, p. 9.

HEARING OFFICER DECISION AND ORDER

I. INTRODUCTION

On December 6, 2018, a hearing was held before the undersigned hearing officer in the above-titled appeal. Appellant Beachcomber LLC, through owners Emmitt and Mary Trimble ("Beachcomber," or "Appellant"), appealed the Kenai Peninsula Borough Planning Commission's ("Commission") denial of its application for a conditional land use permit ("CLUP" or "material site permit") for a material site on KPB Parcel 169-010-67. Appellant, through counsel, filed an opening statement challenging the decision issued by the Borough Planning Commission. Gina M. DeBardelaben of McLane Consulting, Inc. and the Kenai Peninsula Borough planning staff also filed opening

statements supporting Appellant's position. Conversely, over 25 parties entered appearances and filed opening statements supporting the Commission's decision.¹

Based upon review and consideration of the Record, arguments presented by the parties and their representatives both at the hearing and in writing, and applicable law, the Commission's findings of fact are not supported by substantial evidence. The Commission's decision is therefore remanded for further proceedings, fact finding, and conclusions under KPB 21.20.320(2)-(3) and KPB 21.20.330 and in accordance with directions provided in this decision.

II. PROCEDURAL AND FACTUAL BACKGROUND

On June 4, 2018, Beachcomber filed an application with the Kenai Peninsula Borough for a conditional land use permit to extract peat, sand and gravel from its property (the "Application").² Beachcomber also owns the property on which the proposed material site would be located, 74185 Anchor Point Road³ (KPB Tax Parcel 169-010-67), an irregularly shaped parcel of 41.72 acres.⁴ The site plan and associated documents attached to the Application stated that extraction would be limited to the

Oliver, Donald L. Horton, William Patrick, Linda Patrick, Shirley Gruber, Vickey Hodnik, G. George Krier, Paul Roderick, Mike Brantley, David D. Gregory, Teresa Ann Jacobson Gregory, Joseph Sparkman, Nathan Lynn Whitmore, Susan Reid, James Reid, R O Baker II Revocable Trust, represented by counsel Robert W. Corbisier, Steven Perry Thompson, Eldon Overson, Marie Carlton, and Richard Carlton.

² R. 11.

³ Local residents also refer to this road as the Beach Road, Beach Access Road, or Anchor River Road.

⁴ R. 19.

eastern 27.7 acres of the parcel and that the site haul route would be via Denver Street, a Borough maintained road, to Anchor Point Road.⁵

Borough Planning Department staff (“Staff”) reviewed the Application and supporting documents to determine whether it complied with Kenai Peninsula Borough Code (“Code”) requirements. While conducting its review of the Application, Staff made site visits to the subject property.⁶ As a result of these visits, Staff recommended additional conditions to protect the neighboring parcels. In response, the Applicant submitted a revised site plan.⁷ Ultimately, Staff determined the Application met KPB requirements and recommended approval of the Application, subject to certain conditions, which included additional berms and buffers.⁸

Applicant proposed a six-foot high berm along most of the northern, eastern and southern property boundaries of the proposed material site, where there is no vegetation to provide screening.⁹ The neighboring properties on the southeast corner of the proposed material site are at a higher elevation than the site.¹⁰ The staff report therefore recommended a 12-foot high berm in this area because a six-foot high berm would do little to minimize the visual impact or noise disturbance to neighboring properties.¹¹ Staff recommended a 50-foot vegetated buffer in addition to the proposed

⁹ R. 5.

¹⁰ R. 19.

¹¹ R. 19-20.

six-foot high berm for the remaining southern and eastern boundaries, where there was some existing vegetation to provide screening.¹²

Staff prepared 13 proposed findings of fact for the Commission's consideration.¹³ The proposed findings of fact state that the proposed material site meets the standards imposed by KPB 21.29.040(A)(1) through (6). Finding No. 7 states that "A 200-foot separation distance to the property boundaries for the processing area is not sufficient to minimize noise disturbance to other properties."¹⁴ Findings No. 11 and 12 states that noise and visual impacts will be reduced and minimized by the requirements of permit condition 2, which imposes buffer requirements as detailed below.¹⁵

Staff also recommended 20 permit conditions.¹⁶ Recommended condition No. 2 contains conditions that vary from the standard conditions in KPB 21.29.050 relating to buffers and berms. Condition No. 2 requires a combination of vegetated buffers and berms in different configurations depending on the boundary.¹⁷ Staff recommended denying the processing buffer waiver request, and approving the application with the proposed conditions.¹⁸

On July 16, 2018, the Commission held a public hearing on the Application. The hearing was well attended. Almost 30 individuals spoke against the permit as did a representative of Cook Inletkeeper, a nonprofit association that advocates for the

protection of the Cook Inlet watershed. Those testifying raised concerns primarily based on increases in traffic volume, decreased traffic safety, negative impacts on surface and subsurface water quality, decreases in property values, degradation of the residential nature of the area, reduced recreational values, negative visual impacts, increased noise and dust, and destruction of wildlife habitat. Testimony was also presented challenging the hours of operation and opposing the permit due to the existing number of material sites in the area.¹⁹ In addition to those testifying against the permit, Emmitt Trimble appeared in support of his Application alongside his daughter and neighbor, Lauren Isenhour, as well as Beachcomber's engineer, Gina DeBardelaben.²⁰ Staff also made a presentation, explaining to the Commission the basis for its recommended findings and conditions.²¹

In light of the substantial testimony against the Application presented at the hearing and Staff's recommendation for approval subject to certain conditions, Staff urged the Commission to continue the hearing to provide the members the opportunity to consider the evidence before making a decision.²² Despite Staff's recommendation, the Commission did not postpone²³ the hearing and instead moved into deliberations on the record.²⁴

²⁰ T. 19-24.

²¹ T. 2-3; T. 7.

²² T. 7.

²³ T. 25-26.

²⁴ T. 3.

While the Commission's deliberations were brief,²⁵ the Commission did discuss the buffer zone provisions of the Code and whether the buffers in the Application would minimize noise disturbance and visual impacts to other properties.²⁶ Several Commissioners expressed the opinion that the buffers and berms would not minimize noise and visual impacts.²⁷ The Commission then voted on the motion to approve the Applicant's CLUP application, which failed by a vote of six to three.²⁸ The Commission adopted the following findings:

1. Borough Code 21.29.040(A)(4): The noise will not be sufficiently reduced with any buffer or berm that could be added.
2. Borough Code 21.29.040(A)(5): The visual impact to the neighboring properties will not be reduced sufficiently.²⁹

The written notice of decision was issued July 21, 2018³⁰ and Beachcomber filed the appeal on August 2, 2018.³¹

III. STANDARD OF REVIEW

Pursuant to the Kenai Peninsula Borough Code of Ordinances, the following three standards apply to an appeal of the Commission's decision:

1. The hearing officer may exercise independent judgment on matters that relate to the interpretation or construction of ordinances or other provisions of law; however, due consideration shall be given to the

²⁵ The Commission's deliberations were less than 20 minutes. See discussion on T. 24-25 extending the time for public comment past 11:00 pm. The meeting adjourned at 11:23 pm. T. 28.

²⁶ T. 28.

²⁷ T. 26-28.

²⁸ T. 28.

²⁹ T. 28.

³⁰ R. 16-18.

³¹ R. 249-250.

expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21.

2. The hearing officer shall defer to the judgment of the planning commission regarding findings of fact if they are supported in the record by substantial evidence.

3. The hearing officer may revise and supplement the planning commission's findings of fact. Where the hearing officer decides that a finding of fact made by the planning commission is not supported by substantial evidence, the hearing officer may make a different finding on the factual issue, based upon the evidence in the record developed before the planning commission if it concludes a different finding was supported by substantial evidence, or may remand the matter to the planning commission as provided in KPB 21.20.330(B).³²

Additionally, KPB 21.20.330 specifies the three situations in which, following an appeal, the hearing officer is required to remand a case to the Commission based on inadequate factual findings. These situations include:

A. Changed circumstances. An appeal alleging changed circumstances or new relevant evidence, which with due diligence could not have been presented to the planning commission, shall be remanded to the planning commission.

B. Lack of findings. Appeals from planning commission decisions which lack findings of fact and conclusions by the planning commission or contain findings of fact and conclusions which are not supported by substantial evidence shall be remanded to the planning commission with an order to make adequate findings of fact and conclusions.

C. Findings for remand. The hearing officer shall make findings of fact and conclusions setting forth the basis for the remand and shall include instructions to the planning commission regarding whether additional evidence, notice, hearing or findings are required.³³

The above standards both define and limit a hearing officer's authority.

³² See KPB 21.20.320

³³ See KPB 21.20.330

IV. PRELIMINARY MOTIONS

In addition to Beachcomber's substantive points on appeal, the parties raised several procedural and preliminary matters at the hearing. These matters were addressed at the hearing but reiterated within this decision for ease of reference and review. The R O Baker II Revocable Trust filed a motion to strike portions of the Borough's reply statement that refer to an unrelated material site CLUP application. The Trust argued that because no opening statement of any party referred to the facts of that permit, it was impermissible for the Borough to cite to Commission comments at that unrelated hearing. The motion to strike was denied. However, the hearing officer noted that any reference to previous Commission decisions would not have precedential value in this case and, to the extent the Borough's reply contains new factual evidence, that evidence would not be considered.

The second preliminary motion requested permission for Pete Kinneen to represent two of the parties of record, namely Philip Brna and John Girton at the hearing. Kinneen does not have standing and is not a party to this appeal but he was selected as an advocate for parties Brna and Girton. Thus, Kinneen was permitted to testify on behalf of parties Brna and Girton so long as he understood that doing so did not make him a party to the appeal.³⁴

In addition, Michael Brantley requested to present a PowerPoint presentation to the hearing officer in support of his statement opposing the Application. His presentation was permitted for illustrative purposes only and with the understanding that any new evidence submitted in the PowerPoint presentation would be disregarded.

³⁴ R. 554. The dismissal order was not challenged.

V. FINDINGS AND DECISION

After reviewing the statements of the parties, the record, and the relevant law, it is my determination as the hearing officer for this appeal that the Commission exceeded the scope of its authority in denying the permit based upon its determination that the conditions would not afford adequate protection from noise and visual blight. Further, the findings issued by the Commission did not provide substantial evidence in support of its denial and were not adequate. Although I may sympathize with the concerns expressed by the Commission and reiterated during the appeal hearing by numerous witnesses, these concerns fall outside the discretion afforded both the Commission and this hearing officer, as a matter of local law.

That said, the nature of the hearing and the substantial amount of testimony presented at the hearing but unaddressed by the Commission makes it impossible to determine whether or not there were other considerations by the Commission that were not expressed in its deliberations or its decision, but that may have warranted denial of the permit on appropriate grounds. The Commission's lack of adequate findings warrants remand so that the Commission may articulate its findings and the reasons for its denial if there is such a reason that falls within the Commission's scope of authority.

A. Limitations of the Borough Code

The basis for remand in this case arises mainly from the limitations of the Code provisions governing the material site permit process and the counterintuitive restrictions that process places on the Commission. The Borough has, for the most part,

transferred zoning authority to the cities within its borders. While the Borough does maintain zoning authority over areas outside the regulatory arm of the cities, but within Borough boundaries which constitute the Borough's rural zoning district, the Borough Assembly permits almost wholly unrestricted use of these areas and has limited restrictions on use to only those expressly provided in the Code.³⁵

Among the few restrictions that apply to the rural zoning district, KPB 21.29 requires users to obtain a permit for material extraction in certain situations.³⁶ While there are different permit requirements depending upon the nature of the extraction, a CLUP is required for material extraction disturbing more than 2.5 acres or entering the water table.³⁷ In order to obtain such a permit, an applicant must submit an application that provides information identified in the Code.³⁸ The Code actually requires significant documentation of the intended extraction on site, including but not limited to, plans regarding the life span of the extraction, a buffer plan, a reclamation plan, and so on. While the Code requires applicants to submit significant documentation in order to obtain the permit, the Code does not provide the Commission discretion to deny such a permit when the application has been properly submitted. Instead, the Code preserves the unrestricted nature of the rural zoning district and limits the Borough to the imposition of certain conditions to extraction.³⁹

³⁵ See KPB 21.04.010(B).

³⁶ See KPB 21.29.020.

³⁷ See KPB 21.29.020(B).

³⁸ See KPB 21.29.030.

³⁹ See KPB 21.29.040.

Specifically, the Code provides that:

These material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. *Only* the conditions set forth in KPB 21.29.050 may be imposed to meet these standards:

1. Protects against the lowering of water sources serving other properties;
2. Protects against physical damage to other properties;
3. Minimizes off-site movement of dust;
4. Minimizes noise disturbance to other properties;
5. Minimizes visual impacts; and
6. Provides for alternate post-mining land uses.⁴⁰

The differences between the traditional purpose of a “conditional use permit” and the CLUP required by the Borough further highlights the limited authority granted to the Borough to regulate extraction within the rural zoning district. Although the Borough has entitled its extraction permit a “conditional use permit,” the permitting process differs greatly from the traditional “conditional use” permitting process. Generally, a conditional use permit is designed to *permit* certain uses otherwise prohibited in a zoning district. For example, a local residential zoning district may permit day care facilities within that district but only where a conditional use permit is obtained. The community with zoning authority may expect its planning commission to grant or deny the conditional use permit after balancing several factors identified by ordinance, including the best interest of the district and the community. In such cases, the permit at issue grants the permit applicant greater rights than other land owners in the zoning district at issue.

⁴⁰ See KPB 21.29.040 (emphasis added).

Consequently, the permitting community would have an obligation to ensure that the district's interests warrant granting one landowner more freedom of use than another.

Here, the Borough's CLUP process has the opposite effect. A CLUP actually imposes greater rather than fewer restrictions upon the permitted parcels. While the rural zoning district is primarily unregulated and unrestricted, an applicant's parcels are subject to specific and express conditions that are not automatically imposed on other parcels in the same district. Thus, the government must ensure that the application of greater restrictions upon the applicant are in fact justified and imposed in a fair and objective way. The Code preserves this fairness by granting the Borough staff, the Commission, and a hearing officer very limited discretion in denying and even conditioning CLUPs.

In this case, the Commission did not take issue with the Applicant's compliance with the Application requirements. Instead, the Commission's findings suggested that the permit requirements failed to protect against the visual and noise impacts of the specific material site.⁴¹ Commissioner Ecklund explained her reasoning in disagreeing with the staff's recommendations:

from the testimony I've heard tonight and the documents that have been submitted, I don't think that the berms or the vegetation buffers will do justice to minimize the noise disturbance to other properties...and I don't think that the visual effects will be reduced sufficiently with buffers, berms...I don't think they could build them high enough for that.⁴²

⁴¹ T. 27-28.

⁴² T. 26-27.

Similarly, Commissioner Bentz remarked that “I don’t think these conditions will minimize noise disturbance to other properties and the conditions won’t minimize visual impacts either.”⁴³ Commissioner Morgan agreed, commenting “I don’t see how the 50-foot buffer or berms are going to minimize visual impact or sound impact because of the unique topography.”⁴⁴

While the Commission’s concerns may be valid, the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code. Instead, the Assembly, in adopting the Code, only granted the Commission authority to impose these conditions and ensure that any application complied with the application requirements. In other words, under the law as it currently stands, the Commission may only apply conditions under KPB 21.29.050 when issuing a material site conditional use permit. It may not impose additional conditions despite the positive impact such conditions may have in the rural zoning district or the community at large.⁴⁵ To the extent the parties disagree with these limitations, it is the Borough Assembly, through the local legislative process, and not this hearing officer, that holds the power to change the permit approval process.

B. The Lack of Adequate Findings

While the Commission’s findings exceeded its authority under local law, affirmation of the Commission’s decision may still be appropriate if the Commission’s other findings of fact and conclusions warranted denial. By way of example, if the

⁴³ T. 28.

⁴⁴ T. 28.

⁴⁵ See KPB 21.29.050.

Commission determined an applicant failed to submit a proclamation plan and it issued adequate findings supporting that conclusion, such findings would support denial of a permit. In the case at hand, however, the Commission's findings that noise and visual impact would not be sufficiently reduced by berm or buffer⁴⁶ do not support a finding that the Application fails to meet the legal requirements in the Code, even when these findings are given due deference. More specifically, the Commission did not identify any evidence that Beachcomber failed to meet the CLUP application requirements.

Looking to the language of KPB 21.29.040, it is clear that *only* the conditions in KPB 21.29.050 may be imposed to "protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts." The plain meaning of the word "only" is "alone of its or their kind"... "and no other and no (or nothing) more; solely; exclusively..."⁴⁷ Thus, the conditions in KPB 21.29.050 are the "sole" or "exclusive" conditions that may be applied to minimize noise and visual impacts, which were the two foremost concerns facing the Commission in the hearing on Beachcomber's application.

Given that only the conditions in KPB 21.29.050 may be applied to minimize noise and visual impacts, the Commission's findings of fact are insufficient in that they do not address how Beachcomber's Application failed to meet the mandatory conditions imposed by KPB 21.29.050. Although the Commission members who voted against approving the Application discussed their belief that the buffers and berms as proposed in the staff report would not minimize noise and visual impacts, they did not discuss

⁴⁶ T. 28.

⁴⁷ Webster's New World Dictionary of the American Language (Second College Edition), 994.

whether the Application actually met the conditions required by KPB 21.29.050. The Commission's findings state merely that the Application does not meet the standards set out in KPB 21.29.040, without reference to the mandatory conditions in KPB 21.29.050.

During the hearing and throughout the appeal process, many argued that the Application should be denied due to concerns regarding health and safety. While preserving and protecting the health and safety of Borough residents and visitors is undoubtedly important, the Commission and this hearing officer are limited by the Borough Code when reviewing conditional use permits and cannot, as a matter of law, deviate from the criteria identified in the Code. However, the narrow scope of this review does not prevent interested parties from taking action under other federal and/or state laws, to the extent such laws apply. Similarly, the hearing officer's limitations do not prevent interested parties in raising concerns regarding the permitting process before the Borough Assembly.

VI. INSTRUCTIONS TO COMMISSION ON REMAND

On remand, the Commission may reopen the record and take additional testimony either by written comments or oral testimony. The Commission shall re-evaluate the Application with respect to the mandatory conditions listed in KPB 21.29.050, as well as any voluntary conditions that Beachcomber may agree to. The Commission shall conduct a second public hearing at which it shall issue findings of fact, pertaining to the mandatory conditions listed in KPB 21.29.050, and shall reference specific evidence in the record in support of those findings. In issuing its findings, the

Commission must comply with both local and common law requirements, which require the Commission to both issue findings supported by substantial evidence and to "articulate the reasons for their decisions."⁴⁸ Specific and detailed findings of fact that explain the adjudicative decisions "facilitate judicial review, insure careful administrative deliberation, assist the parties in preparing for review, and restrain agencies within the bounds of their jurisdiction."⁴⁹

VI. ORDER

For the reasons stated above, Appellant Beachcomber's request for the hearing officer to issue the permit is DENIED. The Commission's decision to deny the CLUP is hereby REMANDED for further proceedings in accordance with this order.

Holly C. Wells, Hearing Officer

Right of Reconsideration

Pursuant to KPB 21.20.350, any party that participated in the hearing may request reconsideration of this decision by filing a motion for reconsideration with the Borough Clerk within fourteen (14) days after the date of distribution of this decision. A motion for reconsideration is governed by and shall comply with the requirements of KPB 21.20.350 (A)-(D).

⁴⁸ *S. Anchorage Concerned Coal., Inc. v. Coffey*, 862 P.2d 168, 175 (Alaska 1993).

⁴⁹ *City of Nome v. Catholic Bishop of N. Alaska*, 707 P.2d 870, 875 (Alaska 1985).

Right to Appeal

This Decision and Order is a final decision. An appeal from an officer decision may be filed in the Alaska Superior Court within 30 days after the date of distribution of this decision and is governed by Part 6 of the Alaska Rules of Appellate Procedure. This decision remains in effect while an appeal is pending unless stayed by the Alaska Superior Court. See KPB 21.20.360.

Subject: Attention: Blair Martin

Dear Blair,
My wife Ann and I own two lots and a cabin on Danver St. overlooking the proposed gravel pit by Beachcomber LLC. Our cabin address is:

34926 Danver St.
Anchor Point, AK 99556

If you have any questions or comments for us, my email is above, or you can contact us by phone at (907) 715-7237.

I am sending an open letter about the proposed gravel pit and the upcoming hearing out to neighbors, news outlets, and other concerned KPB residents. I thought it would be favorable and desirable to inform you of all of its contents before I send it out. It is attached for your review. In it, I implore the Planning Commission to come to our neighborhood and see for yourself just how devastating this proposed pit will be. As far as we know, no members have yet done so. Rather than base your decision on what we or anyone else says, personal observation of the location would be much more valuable. I would presume you give the utmost veracity to the Planning Department, who have actually visited the area (Bruce Wall); however, Bruce stood on Pete Kineen's deck with Pete, Hans Bilben, and myself, maneuvered behind a tree, then stated he couldn't even see the site from there! You are invited to go anywhere on our property, and I'm sure any of the concerned neighbors would also welcome your personal visit to observe for yourself why we are so worried.

Thank you for your consideration.

Richard and Ann Cline

atch. Open Letter

An open letter on the upcoming KPB Hearing to consider the application of Beachcomber LLC for a gravel extraction land usage permit.

We, and our fellow residents of Anchor Point in the vicinity of the proposed gravel pit, have been devastated since last summer over the very real threat of a noisy, dangerous, unsightly gravel pit in the middle of our serene neighborhood that currently enjoys fantastic views of Cook Inlet and the Alaska Range. We have come out with one voice opposing the granting of the permit because we know what it would do to the area. Homeowners around existing gravel pit extraction operations know only too well just what they have to look at and listen to each day, and we certainly don't want that here.

The Kenai Peninsula Borough Planning Commission listened to our concerns last summer, and immediately denied the permit, based on the obvious non-compliance with two of the required six conditions that had to be met for approving a permit, even though the previous 96 applications had been granted a seemingly rubber-stamped approval without a single denial. Beachcomber LLC, their legal representation, and their hired engineering company who were all very experienced in the "conditions" and history of prior applications, expected a rapid approval and business as usual. When the permit was denied, they quickly filed an appeal, again expecting the usual approval through a Borough process heavily favoring the gravel operators over residents. In their arguments, they stated themselves that the non-compliance of those pesky conditions are expected to be overcome with the usual waiving of the conditions by the Commission.

The hearing officer denied the reversal of the original decision, but instead of a correct confirmation of the Commission's denial, ordered the entire process to be repeated. Now the Commission is holding another hearing to again hear both sides in the approval or denial process.

The Commission, so far, has simply listened to concerned parties on both sides, with a vast majority urging denial. It's our neighborhood at stake here. Beachcomber LLC owners don't live anywhere near the site, nor do their lawyers or the engineering firm they hired. But more importantly: *neither do any of the Commissioners!* During this entire period, the Commission has relied on testimony of upset residents telling them their concerns of what the operation would do to the view, the noise, the dust,

the water table, the wildlife, the property values, and their health; and of course to the other sides' testimony basically scoffing at the whole thing and urging a simple waiving of existing legislative conditional requirements.

The answer here is for the Commission to simply visit the area *for themselves*. They should also visit existing gravel extraction operations that have an operating rock crusher so they experience for themselves just what we are all worried about. They will witness just how well berms and buffers "mitigate" the sounds and dust of these operations. They will see the concerns we have from our properties because the proposed site is in plain view and actually abuts existing homes. They will see the already poor road conditions, the proximity of the Anchor River and State campgrounds, and how the noise would be magnified by our topography.

We implore the Commission to make an informed decision on this case without emotion, without reliance on testimony from either worried residents or unconcerned developers by taking the time to make the one-hour drive to see all of this *for themselves* and not rely on deceptive photographs. They are welcome on our property. We want them to look out from our deck and hopefully visit adjacent properties to confirm what a dangerous, ugly, polluting eyesore this proposed open pit would be.

Ann and Richard Cline

Soldotna, Alaska 99669

RE: Statement of Ann Cline for the hearing of the land use permit application of Beachcomber LLC on Parcel No. 169-010-67

Dear Mr. Chairman,

I am writing to you on behalf of our small community of Anchor Point neighbors who are upset about a proposed sand, gravel, and peat extraction permit submitted by Emmitt and Mary Trimble of Beachcomber LLC/Coastal Realty. The 40+ acre property in question is located on the west side of Danver St. between Anchor River Road and Echo. I respectfully request that you deny the proposed permit.

I am very sorry I cannot be present at your public hearing to be held March 25, 2019 in Soldotna at 7:30 P.M. Unfortunately, I am already obligated in Washington State, but I hope that this letter can be read to those present at the meeting. The following are my key concerns:

[1] Visual enjoyment of property

Currently, the hillside view overlooking the proposed gravel pit is of a lovely green meadow, spruce and alder trees, and spectacular Cook Inlet and Alaska Range beyond. A dusty gravel pit is not what we had in mind when we purchased our lots here through the Trimble's Coastal Realty in 2013 and 2016. Neighbors who abut the property are naturally quite concerned about the loss of property value as well as the aesthetics of losing their Alaskan green space.

Of course we would all be thrilled to have the monetary resources to purchase enough acres to completely ensure our privacy and solitude. Not being in a financial position to do so, we trusted our realtors to speak the truth about the land we considered purchasing. We now trust the borough officials to protect our interest and desire to live peacefully with our neighbors. We hope that we can together find a solution that will render everyone contented.

When Mary and Emmitt Trimble trespassed on our property on November 19th, 2018, our video surveillance cameras recorded their actions and verbal communication. They stood on our deck and saw and took photographs and video of their excavated land. In one of the recordings, Mr. Trimble said, "There's the berm." By his own admission, the gravel excavation that has already started is in plain sight from our property. The fact is no berm nor physical barrier could be constructed either by height or width to sufficiently reduce the visual impact to neighboring properties.

[2] Noise

Most Alaskans take pride in the beauty of their land. Some, like my husband and I, love the pastoral setting and mountain views afforded by a hillside home. Others prefer the quiet solitude of a cabin nestled hidden among spruce and alder. **ALL** of us are adamantly opposed to an unpleasant drone of gravel excavators, machinery, and dump trucks next door. Several years ago when the Trimbles cleared their property, there was a constant obnoxious noise from heavy equipment, easily heard from all surrounding properties. As you review the proposed three phases of sand, gravel, and peat extraction, we implore you to consider thoughtfully the full import of your decision on our neighborhood as well as the precedent it could set for future Kenai Peninsula communities. It is ludicrous to think that noise from the proposed Danver St. gravel/mining operation could be sufficiently reduced with a buffer or berm.

[3] Dust

My husband and I built our cabin over the past four summers. We experienced first hand the weather and winds here in Anchor Point. We can appreciate the dismay of Marie Drinkhouse, Lee and Mark Yale, and Bob Baker (to name a few) when they were apprised of the proposed permit application. The Anchor Point winds would carry excavation dust, dirt, and debris straight south to their houses. All of us within at least a half-mile would be negatively affected by the dust pollution created by such an operation. I hate to imagine what the air would smell, taste, look, or feel like with an excavation project underway.

To support my claims listed above, I researched existing statistical impact analyses and gravel pit studies completed in Alaska and elsewhere in the United States and Canada. The research I conducted solidified and confirmed my belief that the Kenai Borough Planning Commission should unequivocally deny the Beachcomber LLC permit. There are a plethora of cases in every state with accompanying guidelines and public considerations.

It is not realistic to think that our Anchor Point neighborhood would invest in a sound-monitoring device to record decibel levels and hours of operation to submit as evidence during the Trimble's Beachcomber LLC excavations over the past months. Our neighborhood endured the drone of the excavation equipment, trucks, etc. It was annoying and embarrassing to me when friends and families came to enjoy our "quiet Alaskan solitude and beauty."

Most people agree that sand and gravel are significant non-renewable resources that contribute to our society and enhance our economy. The location is the concern. In Alberta, for example, gravel pit construction and operations posed so many potential negative environmental and social impacts to residents and their municipalities that numerous cases and protests resulted. One gravel pit proposal, ironically almost identical to ours in Anchor Point, was submitted and after reviewing the application, the Alberta Council turned down the proposal despite an endorsement by the Municipal Planning Committee. This is one of many cases I identified where residents and concerned environmental agencies gathered in opposition and rightfully protested gravel pit applications.

The most common impacts of gravel pit development and operations worldwide are the lack of conservation of reclamation materials, erosion, dust and noise nuisances, impacts to road conditions, negative visual aesthetics, and water and soil contamination. Lack of conservation of reclamation materials, particularly topsoil (stripping and handling) is a common result of pit operations. Gravel pit operations, including extraction, excavation and transportation may lead to soil erosion. Wind facilitates removal of sand and other smaller particles from pits and may cause siltation of rivers, ponds and other bodies of water. Our nearby Anchor River is not a resource with which we would like to experiment. Depleted salmon runs in the future are not the time to feel remorse. We must be proactive now for future generations of fish, wildlife, and those humans who enjoy them.

On-site dust is caused by excavation of topsoil, aggregate processing, hauling of gravel and the movement of heavy equipment. Dust has been shown to cause health problems, safety concerns in relation to driving, and can affect the cleanliness of personal property both indoor and outdoor. Dust can vary in size. Large particles tend to settle quickly whereas smaller particles carry great distances. The smaller the particles, the more dangerous to health they are. Fine particulate matter, 10 microns or less in diameter, can be inhaled and are considered toxic, and smaller particulate matter, less than 2.5 microns in diameter, is even more harmful. The particulate matter can lodge deep within the lungs and tissues of the body and there is no biological mechanism for clearing it from the body. Recent studies have shown that fine particulates pose a greater danger to our health. Dust particles may lead to increases in cardiopulmonary disease, asthma, bronchitis, emphysema, pneumoconiosis and

premature death in those with pre-existing conditions. (Gravel Water Ontario, 2010). Crystalline silica dust is commonly found in gravel operations and is also a known carcinogen (Gravel Water Ontario, 2010). Because of the elevation of our home located at 34926 Danver, we are in direct line of prevailing winds. We encourage you to come and stand on our deck to witness this concern for yourself.

The crushing and trucking of gravel are two of the most common noise pollution issues associated with a gravel pit operation. In my research, noise from the heavy equipment used in gravel pit operations is often the source of complaints and irritation to adjacent neighborhoods. The direction of wind can also influence the level of noise pollution from the operation. Wind exacerbates the noise problem especially when the wind is blowing from the operation towards a residence. My husband and I can certainly attest to this as well as our neighbors who live over and behind the hill on Danver to the south, well past the proposed excavation site!

Hauling gravel impacts road traffic and road conditions. Frequent usage of roads can overburden the borough financially as the borough may have to re-gravel or reconstruct damaged roads. As taxpayers, this is a big concern in Anchor Point. In addition, gravel trucks generate a larger volume of traffic on highways and rural roads and as a result, lead to increased safety concerns particularly for tourist families who are not familiar with the area. One of our neighbors invested in an on-site camping business for tourists and Anchor Point fishermen. His property line is shared by the bulldozed area of the Beachcomber LLC. This past summer, he suffered significant financial loss already!

A gravel pit is considered an eyesore, as it is often aesthetically displeasing. Anchor Point residents agree that a gravel pit in our neighborhood would lower our property values and quality of life. One of the research documents I read offered advice to gravel excavation business owners. It stated, "Nobody wants to live near a gravel pit. The dust and noise from the operation is a problem for many individuals. The "NIMBY" (Not In My Back Yard) attitude is common and the general public will normally oppose such an operation." The solution offered was to provide vegetative buffers and fences around operations. [Source: Grimshaw Gravels Aquifer Technical Report, 1998] It is ludicrous to think that in our case a fence or berm could be erected that could prevent us from viewing the unsightly scars of the proposed Beachcomber LLC gravel mine! I ask you to please come stand on our deck and calculate the height necessary to obscure our view!

As correctly stated by the Commission in their original decision on conditions 5 (visual impact) and 4 (noise), the standards can NEVER be met by the proposed location. I was thankful that Mr. Bruce Wall took the time after the July, 2018 public hearing to come to Anchor Point and view the proposed site from our deck.

At that time, he felt that the Planning Department would not support reversing the commission's decision. What a disappointment when the opposite occurred! Our entire community felt betrayed.

It's been said, "When given the choice between being right or being kind, choose kind." In this instance, I hope you will find that the citizens of our Anchor Point neighborhood are both right and kind. My husband Richard and I mean no disrespect toward Mary and Emmitt Trimble. We hope that the Trimbles will find a more suitable location for their new business that will be profitable for them while not negatively impacting adjacent landowners. It has been rumored that the Trimbles plan to sell the property to a gravel company and then move out of state to avoid unpleasant repercussions. I hope that is not the case. I want to greet every Anchor Point resident with a smile and the knowledge that I try to be a good neighbor to all. I would hope that you and the Trimbles feel the same.

Regardless of the personal outcome of this permit issue, I would like to exhort the Kenai Peninsula Planning Department to consider enacting designated zoning regulations as do most areas of the United States. Zoning protects all parties. With regards to our area in Alaska, folks who purchase land for a quiet cabin won't have to worry about noisy, unsightly businesses encroaching in the future. Our specific neighborhood in Anchor Point enjoys spectacular views of the Cook Inlet and surrounding snow-covered mountains. As I implored in an earlier letter, our lots and those around us should be zoned residential. Other areas along the main highway should be zoned commercial for real estate offices, emergency road crews, restaurants, police, fire departments, schools, etc.

We hope that as you deliberate and examine the concerns, goals, and plans of all parties involved, you also include the honorable aspect of this issue. When all is said and done, it is our hope that everyone will feel good about the outcome. We have traveled the Kenai Peninsula with our friends and family and noted that there are many existing gravel, sand, and rock mining excavation sites that have easy ingress and egress from the main highway and are completely set apart from homes. Perhaps someone can offer the Trimbles assistance in locating a more suitable location for the business of sand, gravel, and peat. In the end, we are neighbors and a community that wants the best for each and every citizen.

I would like to thank you for listening to us and all our neighbors who appreciate this beautiful state and in particular, love our little corner of the world in Anchor Point. Please feel free to contact me should you need further input to support your good work. Thank you so very much for helping us to preserve our scenic view and tranquility.

Respectfully submitted,
Ann Cline

Statement of Richard L. Cline for the hearing of the land use permit application of Beachcomber LLC on Parcel No. 169-010-67

I want to thank you for the opportunity to provide my views on this case. I also want to thank all of our great neighbors in the Anchor Point community who have given so much of their time, money, and efforts to show the Borough commission just why they should deny the disastrous gravel pit permit application in our neighborhood.

If this permit application were to be approved, the consequences to the neighborhood would be catastrophic. The original decision of an errant planning department individual to recommend approval in the first place has already devastated property values. I would like to list all of the facts and issues that would be detrimental, such as the negative impact on local wildlife, the further deterioration of dangerous road conditions, the constant lines of large trucks traveling to and from the site, for example.

I would like to list and expound on all of these issues, but unfortunately, according to existing Borough directives, they have no bearing on this decision. The only things that have bearing on this hearing are the requirements stated as needing to be in compliance in order to grant the permit. Everyone involved knows there are SIX requirements that have to be satisfactorily met in order to obtain a permit for sand, gravel, and peat extraction. Everyone involved here also is intimately aware that if any ONE of those requirements is not met, the commission is obligated to deny the permit.

We have shown as a group, with incontrovertible evidence, that both the negative visual impact, and the detrimental noise impact have not, can not, and never could possibly be met by this location. Mr. Bruce Wall himself stood on our deck, viewed the proposed pit location in

RECEIVED
R301 793 407

plain view himself, and stated that if he had it all to do over again, he would not have recommended approval. He made an additional comment that same day that he did not expect the planning department would continue to support approval when the original hearing recommended denial and it was appealed.

The entire residential population around the proposed gravel monstrosity are very grateful the Kenai Peninsula Planning Commission originally disapproved this conditional land use permit. We absolutely agreed that they had correctly concluded the noise could not be sufficiently reduced with any possible buffer nor berm; and the total destruction of our view due to the visual impact of an open sore gravel pit in plain sight of our houses absolutely required disapproval. The application submitted by Emmitt and Mary Trimble is an absolute farce, full simply of claims that they have "satisfactorily complied" with all conditions. Their argument included the suggestion that if a condition wasn't satisfactorily met, the Commission should simply waive all of the requirements!

This past summer we enjoyed many visitors to our home on Danver overlooking the Trimble land. I can submit names and contact information of these individuals to the Commission if needed. Every single one of them agreed that allowing a gravel/rock/sand development on that tract would:

1. Destroy our view;
2. Subject us to a constant aggravating and obnoxious noise- and dust-creating operation;
3. Destroy the value of our cabin and land;
4. Add to the deterioration and danger of Anchor River Road; and

5. Negatively impact the watershed of an already-endangered salmon stream.

These add confirmation to the facts; the FACTS, that the visual impact and the noise of this proposed pit alone can NOT be sufficiently mitigated to allow approval. And pretending a massive extraction effort "might" not negatively affect local water table and the Anchor River fish habitat is foolishness of the highest order.

As for the impact of the view and the noise that has already happened, I took a video of the view from our deck on August 29th during the Trimble's rubber-stamp expansion of their current pit this past summer. In it you can clearly see the impacted area as well as the area into which they want to expand, and hear the obnoxious noise of just one bulldozer pushing rocks and dirt.

The Trimbles themselves decided to trespass on our property on Nov 19, and were recorded by our security video system walking back and forth to take pictures and video, and commenting that they could see the berm area and the land of the proposed pit. Those security videos were presented as evidence to the Alaska State Troopers, and a trespassing complaint was filed.

Any of the videos can be made available to the Commission if needed.

I urge the Commission to look at all the overwhelming evidence we have presented to support the denial of the conditional use permit. These are facts. Beachcomber has no justifiable petition for approval. The most telling component of the weakness of their argument is when during their first appeal, they admitted the

visual and noise requirements can NOT be met, so the Borough should simply waive those requirements. Even though that has unfortunately been the case in the past, it is time to protect the environment and welfare of ALL people.

Thank you for your consideration.

Subject: Beachcomber LLC on Parcel No. 169-010-67

Attention: Blair Martin, Planning Commission Chair

I am writing in concern over the mining permit being requested and previously denied in Anchor Point. This location borders my property on two sides. I do feel that the wind would not allow any berm to protect me from either dust or sound. Nor could a berm allow the vacationers in the parks, also very near, to have fond memories of their stay at Anchor Point camp grounds. The noise from the truck traffic and the safety involved with that movement would also be a negative affect on the continued use of those campgrounds. Yes, this would probably have a negative affect on my land value but worse yet I fear it would have a negative affect on the visitors that come and stay a brief period at Anchor Point. This little town has so little going for it and this land use approval would harshly affect its shining star (camp grounds, fishing stream and peaceful vistas) all located at or very near the proposed site. The borough is a large area and these mining assets are valuable but there has to be a better location with much less affect on two of our most valuable state resources, namely tourist and fishing.

Thank you for your serious consideration.

Beachcomber Appeal Letter

Dec 6, 2018

1. On May 27, 1778 Captain Cook on the HMS Resolution lost a kedge anchor off of Anchor Point, and the name stuck.
2. In 1786 there were Russian Shelikov Co. placer mines between Homer and Ninilchik.
3. In May 1890 Miners under Robert Michaelson met at Anchor Point to change some mining district rules.
4. US Census in 1890 reported 3 men sluicing beach gravel at Anchor Pt. on the subject property. They had constructed a 2 mile long ditch to supply water from a pond for sluicing for gold \$7/Day/Man very fine gold.
5. 1895 Harry Spalding, G.T.W. Bramen and other wealthy Boston investors put up \$100,000 and sent A. Pennock to investigate rumors of immense gold bearing deposits on the East shore of Cook Inlet. They found evidence of gold from grassroots to bedrock.
6. The Boston and Alaska Company formed, and on March 1, 1897 filed with the US Surveyor General's office in Sitka, Alaska, Mineral Survey No. 259 Lot No 37 in the Sitka Land District as a plat of the claim of the Boston and Alaska Company, known as the California Placer Mining Claim, in the Anchor Point Mining District, Cook Inlet County, Alaska, containing 104.7 acres, including the subject property, surveyed August, 1896.
7. On April 1, 1896 Austin and Della Banks arrived in Homer with 21 horses, 6 hydraulic mining machines, and 200,000 board feet of lumber. In May they went to Anchor Point to begin building houses for placer mining. Michael J. Heney a young engineer set up the No. 1 Giant hydraulic mining installations at Anchor Point on or adjoining the subject property.
8. In August, 1896, a reported three day cleanup at Anchor Point produced \$3000-\$4000 worth of gold.
9. By the fall of 1897 the Anchor Point claim had proven not to be profitable and all but a few men moved on up the Inlet to Sunrise and Hope taking with them most of the mining equipment, pipe, and remaining building materials. Joseph M. Cooper 1896-1897 was one of the few men who remained and continued sluice mining at Anchor Point with diverted water from Anchor River (aka Laida River) living in the remaining homes and cabins scratching out a living. He died in 1900 and is buried in Anchor Point.
10. In 1946 a missionary group including Ruth Kyllonen and her teenage son Buzz homesteaded the Anchor River Valley. Buzz rekindled the exploration of the mineralization of their homestead (subject of permit application) by hand digging for his Mother, with a shovel, a bucket, and a rope, a water well by their cabin through 40' of rock, sand, and gravel before accessing the aquifer that provided them with potable water at that level.
11. Within a couple of years the Territory established a "work camp" just south of the river to excavate gravel and work on the north end of that segment of the Sterling highway between Homer and Anchor Point. In 1950 the existing steel bridge spanned the river below the forks completing the connection to the north and connecting the other new homesteaders on the north side of the river, where there were even greater gravel and sand resources in the north half of section 4 to Milo Fritz Road.
12. The territory developed a gravel source where the existing borough transfer site is and John Collie developed a private sand and gravel source south of that out to the bluff above the river, and Ralph Miller developed a small pit fronting on what would become Denver, just off the

beach road, which was later purchased and expanded by Buzz Kyllonen. Utilizing the sand and gravel from that pit Buzz over a number of years developed the RV Village and all of the other lots to the south of the beach road including construction of Denver, Seaward, Echo, Kyllonen Dr., Fisher Ct, Seabury Ct. and Rd., Desa and other unnamed private roads, driveways, and pads. At one time he had an active rock crusher in that pit right along Denver. All of this growth and development happened after my family purchased our first property in the valley in 1975 and first utilized the gravel sources nearby.

13. This specific area was first settled in 1890, 129 years ago, exclusively for the value of the minerals discovered there, and continues to prosper as a result of the commercial utilization of those resources. The four nearby gravel pits have operated in harmony with the town and valley community for the last 68 years more or less. They have provided the access to the river, Parks and beach for residents and visitors alike.
14. There is residential development in this unincorporated, un-zoned, multi-use area as a result of the preexisting industrial and commercial resource development. Regardless of legislated noise and sight conditional standards in the ordinance, a pre-existing real standard has been set by the community, and specifically this immediate neighborhood and its property owners. ALL of them drove past four PEU gravel pits within one mile of our site, in order to view their property prior to purchase, most importantly the one on Denver between the Beach Rd and Kyllonen Dr. owned and continuing to be operated by Mr. Kyllonen. This pit is 60 feet from our existing pit that is almost 3 years old and the subject of these proceedings. After executing whatever "DUE DILIGENCE" those buyers chose, they voted with their dollars and happily purchased their "dream property" contemporaneously with the existence and operation of that gravel pit with regard to the existing levels of negative visual and noise impact, which they accepted by their willing purchase.
15. We did the same in 1975, 1978 and 2015. This property is a legacy property for my family and we intend to build a home on the beach for our extended family and to pasture our livestock there, no matter how much noise the dogs, goats, and chickens make, to the displeasure of some of our neighbors.
16. We have been developing residential subdivisions from east of Homer to Anchor Point, the North Fork Rd and Happy Valley since 1975, 43 years. We have created over 200 homesites for families as well as our own. One of our largest costs of development is sand and gravel for roads and driveways. We hope to be able to keep this large parcel intact without subdividing and selling portions, but we do want to be prepared to do so, if necessary. We would expect to utilize most of the excavated material offsite in other developments. In order to do so we must permit the property for material extraction and transfer, with concurrent reclamation of areas where extraction occurs, in order to realize the full value of the remainder. We have a track record of being good stewards of the land in all of our projects. The 2 nicest and well cared for properties in the neighborhood are the 2 gravel pit properties.
17. The public hearing with the Planning Commission lasted over 2 ½ hours of repetitive emotional testimony with little or no substantial evidence provided to refute the professional Planning Department's staff report that recommended issuing of the permit since the application met all of the required conditions. Not one question was addressed by the Planning Commission to any

of the complainants and the only question directed to the applicant was "so Mr. Trimble you just want the permit, you may not really operate the pit". Some of the Planning Commissioners didn't want to continue the hearing to another meeting, they wanted to vote right then in the absence of any discussion regarding any issues raised. The permit was denied and subsequently the staff was requested to come up with supposed findings of fact to justify the decision that had already been made. No voluntary conditions were ever discussed at that hearing, and complainant testimony was apparently accepted without question or investigation.

18. "Minimize", whether sound or site, means to do the most possible to reduce the negative impact. Do the best you can. By their actions, not their words, these property owners have shown that an existing operating gravel pit was not of sufficient negative impact to deter them from purchasing their property and utilizing the products extracted. Nothing that can be done on our property can block the existing view of the Mountains, volcanoes, and Cook Inlet. The view of our property does not belong to them, and they have no right to it at all. Insulated window blinds that lift from the bottom up could wholly eliminate any negative sight impact from their homes. Gravel trucks, water trucks, fuel trucks, sanding trucks, septic pump trucks, graders and earth moving equipment move up and down Denver on a daily basis. Gravel trucks from our pit would only be moving north on Denver away from the sounds of a growing neighborhood.
19. Prior to applying for a conditional use permit I was approached by Cook Inlet Construction who was bidding on a gravel pad project for Hilcorp about 2 miles from our pit. They considered our material to be of superior quality to alternate sources and significantly closer, they offered \$8.50/yard for an estimate of 9,500 yards, \$80,000 more or less. After the CULP was denied I applied immediately for a counter permit for 2.5 acres that required the same Planning Department scrutiny for approval. That permit was approved and issued, but it was disclosed to the complainants that there was a contract to provide that material for Hilcorp. A concerted effort and a barrage of complaints and threats to Hilcorp management in Houston erupted immediately, and though work had already begun in our pit by CIC, Hilcorp eventually capitulated and instructed CIC to get the material from another source 22 miles away +/- over 3 separate state roads necessitating the use of many additional belly dumps, side dumps and end dumps with pups hugely increasing the traffic flow. The altered project cost Hilcorp an additional \$120,000. That Tortious interference with a commercial transaction between CIC and Beachcomber LLC by the complainants has succeeded in damaging my family significantly and caused us to postpone planned development projects that leaves three separate contractors and their families to look for scarce other winter projects.

**Response to Mr. John Crouse Regarding the Potential Health Consequences of
Exposure to Fugitive Dust from Gravel Mining**

March 10, 2017

Dear Mr. Crouse:

Gravel extraction is permitted at the borough level. If gravel extraction is authorized, the potential impact on neighboring populations should be mitigated via a dust control plan, and residents may file complaints to the borough if activities adversely impact them in spite of existing restrictions and mitigation measures. Alaska residents should contact the Alaska Department of Environmental Conservation (ADEC) with questions about State laws pertaining to their potential exposure to environmental pollutants due to any mining activities.

Air Pollution due to Particulate Matter and Human Health

From a human health standpoint, gravel mining activities are known to result in the creation of particulate matter (PM) that is <10 microns (μm) in diameter (PM₁₀), which is an air pollutant. Dust concentration in air and particle size depends on several criteria such as the volume and speed of traffic, vehicle weight, the condition of the road, moisture content of the road surface material, silt fraction in the road surface, wind speed and direction, and distance from the road. Consequently, the potential impact of the emission of fugitive dust from a site can only be accurately evaluated by accounting for these factors. While air pollution due to particulate matter (PM) can adversely impact human health, the adverse health effects are more strongly associated with fine to ultrafine particles (diameter: <2.5 μm and <0.1 μm , respectively) generated by combustion processes rather than the coarse particles (diameter: 2.5–10 μm).

Fine and ultrafine particles are usually produced by motor vehicles, wildfire smoke or other combustion sources. Long-term exposure to this kind of PM has been associated with respiratory diseases like asthma and chronic obstructive pulmonary disease (COPD), as well as cardiovascular mortality and morbidity, and even all-cause mortality. They are likely more toxic than coarse particles because they include metals, carbon, sulfates, and nitrates, and can adsorb potentially toxic chemicals (Pope and Suh, 2006). They also tend to penetrate deep into the lungs and reach the alveoli, where they can access the blood stream. Furthermore, fine particles remain suspended in the atmosphere for longer periods of time (days to weeks), travel longer distances (100s to 1000s of miles), and infiltrate in the indoor environment (Wilson and Suh, 1997).

Coarse particles, with a diameter of 2.5–10 μm , are often emitted from crustal material by activities such as vehicle traffic on unpaved roads, rock crushing and grinding, and natural windblown dust. They represent the main fraction of fugitive dust, with a PM_{2.5}/PM₁₀ ratio of 0.1 (EPA, 2005). Coarse particles settle much more rapidly than fine particles with atmospheric residence times of minutes to hours, and they only travel short distances from less than a mile to tens of miles at the most (Wilson and Suh, 1997).

Coarse particles are usually trapped by the mucociliary lining of the upper respiratory tract and cleared from the body by coughing, sneezing or swallowing, but they can cause eye, nose and throat irritation. Toxicology studies of exposure to coarse particles have produced conflicting results ranging from no observed effects to effects seemingly associated with the presence of a given marker such as silica (Schelsinger et al., 2006), suggesting that the unique molecular composition of particles is likely to play a role in their toxicity. Epidemiologic studies have also produced inconsistent results. Although most studies show no correlation between coarse particle exposure and all-cause mortality, a few studies indicate a weak association with cardiovascular mortality (McDonnell et al. 200; Mar et al., 2000; Ostro et al. 2000). The association between coarse particle exposure and morbidity is also debated. Although some investigations do not show any appreciable health impact of coarse particles, others show that short-term exposure to coarse particles (e.g., from dust storms and windblown dust) is linked to an increase in hospital admissions due to asthma, COPD and cardiovascular issues (Brunekreef and Frosberg, 2005; Cheng et al. 2015). Data are still lacking on long-term exposure.

Fugitive Dust Studies in Alaska

One peer-reviewed study conducted in Anchorage showed significant effects of PM₁₀ on outpatient visits for asthma, bronchitis, and upper respiratory tract infections. Because the PM₁₀ in Anchorage is composed primarily of crustal material and volcanic ash, it was assumed that most of the PM₁₀ was composed of coarse particles, which were responsible for the observed effects (Gordian et al., 1996).

ADEC studied the level of fugitive dust emissions from unpaved roads in eight villages in Alaska's Northwest Arctic Borough during the summer seasons of 2003, 2004, and 2005. They observed that events characterized by a high concentration of PM smaller than 10 μm were associated with reports of heavy dust conditions to ADEC and anecdotal information from local hospitals of increased visits related to respiratory and cardiovascular issues (ADEC, 2006). One can assume that PM₁₀ investigated in this study consisted of coarse particles. No other data could be found on the impact of fugitive dust on Alaska residential areas.

Conclusion

About 90% of fugitive dust consists of coarse particulate matter, i.e. particles with a diameter between 2.5–10 μm . Contrary to fine particles with a diameter <2.5 μm , most of these particles tend to be cleared from the body through coughing, sneezing and swallowing. Although long-term exposure to coarse particles has not been well studied, there is evidence that short-term exposure can be associated with an increased risk of respiratory and cardiovascular disease.

Gravel pits tend to generate coarse particulate matter. As such, mitigation measures are usually implemented to limit the transport of dust away from the operation site. In Alaska, the implementation of such mitigation measures is regulated by the borough.

NATIONAL ASSOCIATION OF REALTORS®

Code of Ethics Video Series

The Preamble to the Code of Ethics

Under all is the land. Upon its wise utilization and widely allocated ownership depend the survival and growth of free institutions and of our civilization. REALTORS® should recognize that the interests of the nation and its citizens require the highest and best use of the land and the widest distribution of land ownership. They require the creation of adequate housing, the building of functioning cities, the development of productive industries and farms, and the preservation of a healthful environment.

Such interests impose obligations beyond those of ordinary commerce. They impose grave social responsibility and a patriotic duty to which REALTORS® should dedicate themselves, and for which they should be diligent in preparing themselves. REALTORS®, therefore, are zealous to maintain and improve the standards of their calling and share with their fellow REALTORS® a common responsibility for its integrity and honor.

In recognition and appreciation of their obligations to clients, customers, the public, and each other, REALTORS® continuously strive to become and remain informed on issues affecting real estate and, as knowledgeable professionals, they willingly share the fruit of their experience and study with others. They identify and take steps, through enforcement of this Code of Ethics and by assisting appropriate regulatory bodies, to eliminate practices which may damage the public or which might discredit or bring dishonor to the real estate profession. REALTORS® having direct personal knowledge of conduct that may violate the Code of Ethics involving misappropriation of client or customer funds or property, willful discrimination, or fraud resulting in substantial economic harm, bring such matters to the attention of the appropriate Board or Association of REALTORS®. (Amended 1/00)

Realizing that cooperation with other real estate professionals promotes the best interests of those who utilize their services, REALTORS® urge exclusive representation of clients; do not attempt to gain any unfair advantage over their competitors; and they refrain from making unsolicited comments about other practitioners. In instances where their opinion is sought, or where REALTORS® believe that comment is necessary, their opinion is offered in an objective, professional manner, uninfluenced by any personal motivation or potential advantage or gain.

The term REALTOR® has come to connote competency, fairness, and high integrity resulting from adherence to a lofty ideal of moral conduct in business relations. No inducement of profit and no instruction from clients ever can justify departure from this ideal.

In the interpretation of this obligation, REALTORS® can take no safer guide than that which has been handed down through the centuries, embodied in the Golden Rule, "Whatsoever ye would that others should do to you, do ye even so to them."

Accepting this standard as their own, REALTORS® pledge to observe its spirit in all of their activities whether conducted personally, through associates or others, or via technological means, and to conduct their business in accordance with the tenets set forth below. (Amended 1/07)

11/01/07

GROUNDWATER IN THE AGGREGATE INDUSTRY

Groundwater is a renewable resource that is in constant motion as part of the hydrologic cycle. Above-water pits and quarries have little or no effect on water levels or the flow of groundwater.

What is Groundwater?

Just as the name implies, groundwater is water contained in the pores and fissures of the earth. Groundwater is a renewable resource. It is in constant motion, part of the hydrologic cycle (see Hydrologic Cycle on the cover page). Rainfall and snowmelt infiltrate into the earth to recharge groundwater, which then flows as baseflow into streams and lakes. Evaporation from open water, and transpiration from plants, returns water to the atmosphere to complete the cycle.

A common misconception is that groundwater flows in underground rivers and lakes like surface water. Instead, groundwater seeps very slowly through the pore spaces and small fissures in the soil and rock. Materials such as clay have a low permeability, and hence very slow groundwater flow, while sand and gravel, or highly fractured rock, have high permeability and permit groundwater to flow faster. These more permeable layers are called aquifers.

The water table is the depth at which the soils or rock become completely saturated with groundwater. If a hole were dug, and left to stand for a while for groundwater to seep in, the water level in the hole would represent the water table. The water table elevation is not static, though, and it can fluctuate in different seasons and from year-to-year, depending on the amount of recharge. Natural depressions can intersect the water table to form lakes, ponds and wetlands.

Water Wells

Groundwater is a critical resource in Ontario - nearly one quarter of us rely on wells for our water supply. Some of these are municipal wells serving urban communities, but the vast majority are private water wells, mainly in the rural parts of the province. Two common types of wells are shallow dug wells which draw water from the water table, and bored or drilled wells which draw water from deeper aquifers.

The *Ontario Water Resources Act* and the *Environmental Protection Act* both serve to protect the quality and quantity of groundwater. They are administered by the Ontario Ministry of the Environment, which will respond to public complaints regarding interference with water wells. The Ministry has several excellent publications available to

Fact Sheet

Groundwater at Pits and Quarries

- Groundwater is a renewable resource.
- Water wells are protected under provincial legislation.
- Above-water pits and quarries can have a beneficial effect on groundwater and aquatic resources.
- Below-water pits and quarries can be operated without significant groundwater impacts if they are carefully designed and operated.
- Permits to Take Water ensure that aggregate wash plants do not harm water resources.

Aggregate extraction and processing is a clean industry that does not provide groundwater contaminants.

homeowners on subjects including proper water well construction and maintenance, protecting water quality in wells and managing water shortages (1-800-565-4923 or www.ene.gov.on.ca).

Wells and their associated equipment require ongoing maintenance. Even with the best maintenance, though, they still tend to degrade naturally over a period of years, through mechanical wear and clogging of the well screen, pump and pipes, .

Can Pits and Quarries Affect the Flow of Groundwater?

The answer depends on the type of pit or quarry.

Above-Water Pits and Quarries

Most of Ontario's sand and gravel pits, and a few of its rock quarries, are excavated entirely above the water table. This type of operation has little or no effect on water levels or the flow of groundwater because there is no direct, physical alteration of the water table or any aquifers. Monitoring programs at above-water pits and quarries across Ontario have confirmed that groundwater is unaffected.

In some ways, above-water pits and quarries can actually be beneficial to groundwater. They create a "bowl" that captures and infiltrates all rainfall and snowmelt rather than allowing some of it to run off across the ground surface. A study on the Oak Ridges Moraine documented a number of benefits related to this extra groundwater recharge (Hunter/Raven Beck,

1996). One of the important benefits is to reduce direct run-off to surface water streams and increase cold groundwater baseflow which is critical to fish habitat.

Below-Water Pits

Below-water pits usually use large excavators or draglines to dredge sand and gravel from the *pit ponds* that form below the water table level. Generally, this type of extraction does not have major impacts because most of the groundwater remains in the pit, or drains back into the pit. This type of pit also captures surface water run-off and promotes more groundwater recharge, but these benefits are offset by the increased evaporation that will occur from the surface of a pit pond. Minor water losses also occur due to residual moisture contained in the aggregate products that are shipped from the site. Finally, the removal of solid sand and gravel particles from below the water table has the effect of temporarily lowering the water level in a pit pond (imagine removing a rock from a bucket of water).

The water surface in very large below-water pit ponds will stabilize at a uniform level, whereas the groundwater table before extraction may have been irregular or sloping. Therefore, the water table around the pit will have to “adjust” to the water level in the pit pond, possibly resulting in slightly different groundwater flow patterns. Fortunately, there is a simple solution where this may be a problem – digging several smaller pit ponds rather than one large pond (Ostrander *et al.*, 1998).

When all of these factors are combined, the net effects of below-water extraction are normally minor and very localized. However, in certain circumstances they could still be significant if there are sensitive features such as wetlands or shallow wells in close proximity. As a result, a detailed and careful hydrogeological study is necessary when licencing this type of pit (Ministry of Natural Resources, 1997), and mitigation (solutions) to any negative impacts will be required. An ongoing groundwater monitoring program may be required.

Below-Water Quarries

Most quarries that extract from below the water table pump water out of the excavation so that the work of blasting and recovering the bedrock can be done on a dry floor. *Dewatering* usually does affect groundwater levels and flow patterns around the site, since it artificially lowers the water table to at least the base of the quarry. Hydrogeologists call the area around the quarry that is affected by the dewatering the *drawdown cone* or the *radius of influence*. Wells, streams, wetlands, or other sensitive features within

this area must be carefully studied to predict the impacts and devise mitigation measures before the quarry can be licenced (Ministry of Natural Resources, 1997) and a groundwater monitoring program will normally be required.

There are many locations in Ontario where below-water quarries are successfully operated while sensitive water uses continue nearby – it depends very much on the specific hydrogeological setting. Recently, some innovative technologies have been introduced in Ontario to lessen the effects of quarry dewatering, such as pumping the water from the quarry back into the groundwater system around the quarry to artificially recharge the water table. This has so far proven to be quite successful (Gartner Lee Limited, 2001).

Other Water Takings

Pits and quarries have uses for water, similar to other businesses, such as supplying offices and shops with drinking water, watering lawns and gardens, etc., but these tend to be relatively minor. Most types of aggregate processing, such as crushing and screening, are dry operations and do not require water supply.

However, to minimize dust (which is a byproduct of excavation in a pit or quarry) spray water is used on internal haul roads, processing equipment, stockpiles and trucks.

One exception is aggregate washing plants, which are used at some sites, and do require relatively large quantities of water. Most plants recycle wash water through a “closed loop” series of holding ponds and settling ponds (i.e., the water is re-circulated, with no off-site discharge), so that the amount of water actually consumed in the process is usually less than about 10%. This *make-up water* normally comes from local groundwater or surface water sources. A common configuration would be to have a well that would be used occasionally during the production season to “top up” the ponds.

These water takings are regulated separately from the pit licence under the *Ontario Water Resources Act*, and controlled through Permits to Take Water. The applications and related hydrogeological studies are carefully reviewed by the Ministry of the Environment, other government agencies, and the interested public through the Environmental Bill of Rights process to ensure there will be no unacceptable impacts from these water takings, before the permit is issued.

GROUNDWATER IN THE AGGREGATE INDUSTRY

Can a Pit or Quarry Contaminate Groundwater?

It surprises some people to learn that aggregate extraction is a clean industry. Processing aggregates is a purely mechanical process of crushing, screening, blending, and sometimes washing (with water), without the need for chemicals. At most sites, fuels and lubricants for the equipment are the only potential sources of groundwater contamination, and these are closely regulated under the *Technical Standards and Safety Act*. A spills contingency plan is a standard condition of every new aggregate licence.

Bacteriological contamination of the type responsible for the Walkerton tragedy comes from human and animal wastes. Aggregate extraction and processing is not a source of this type of contamination.

As a result, water quality in and around pits and quarries is not normally an issue. This was confirmed through a study in 1989 as part of the Ontario government's MISA program, where monitoring at a selected number of pits and quarries found good water quality, with only sporadic traces of organic compounds at some sites that might indicate the use of petroleum products (SENES, 1989). In addition, there are many site specific monitoring programs in place at aggregate operations.

What About Water Temperature?

Water temperature concerns are occasionally raised in conjunction with below-water pits. A pit pond warmed through the summer months could result in a flow of warmer groundwater to nearby points of baseflow discharge and, in turn, affect cold water fisheries resources. An analysis conducted on behalf of the Credit

Valley Conservation Authority in 1998 concluded that pit ponds have minimal impact on groundwater temperatures, and that these minor effects are completely dissipated within a few hundred metres from a pit (Ostrander *et al*, 1998). Field monitoring has also confirmed that groundwater returns to its normal background temperature within tens of metres of pit ponds (Harden Environmental, 1995).

As a result of the research to-date, thermal effects of pits and quarries is not considered to be a major issue in most cases. However, where there are cold water fisheries close to a pit pond, appropriate investigations and studies are required, and the setbacks and buffer zones will be adjusted accordingly.

“Highest and Best Use”

Highest and Best Use is the likely use, selected from a number of available choices, to which an area of land or a building may be put, based on what is physically possible and in compliance with zoning and building regulations and which, at the time of an appraisal, produces the most profitable present value of the land. The legal use of land or improved property which, at any point in time, is likely to produce the highest return to an investor.

When it comes to valuing land – one of the most important factors in getting this number reasonably accurate is to understand the “highest and best use” for a property.

The question of a property's highest and best use is something all appraisers aim to address – and the issue is particularly relevant to appraisers and investors who are working with vacant land.

When a vacant lot doesn't have any pre-existing improvements on it, there can be many potential uses for the property (depending on how the owner wants to use it, and what the local zoning regulations will allow), but even when there are several possibilities, there is only ONE highest and best use.

The Four Criteria

To keep things simple, let's assume we're looking at rural land with *no improvements* and *no history of environmental contamination*.

According to the Appraisal Institute, the four standard criteria points we'd be looking at are:

- Legal Permissibility
- Physical Possibility
- Financial Feasibility
- Maximum Productivity

Legal Permissibility

According to the local zoning and planning department (typically at the county or city level), *what are you allowed to do with this property?*

Furthermore, are there any particular uses that are **disallowed** by government regulations and/or prohibited by covenants, deed restrictions or other issues covered in the [property's title history](#)?

In some cases (for instance, if a property is situated in a Home Owners Association), there may be additional rules that govern what can and can't be done with a property – even beyond what the city or county will allow.

While in some cases, it may be possible to change the zoning of a property to suit your purposes, or even negotiate with the HOA to get their permission for the specifics of what you want, this can be a complicated, convoluted process that is anything but guaranteed... so for the purposes of this article, we're going to assume that changing the legal uses of a property is NOT in the cards.

Physical Possibility

When considering what can be done with a property, it's important to recognize what is **physically possible** – taking into account the physical attributes of the property (its size, shape, location, terrain, legal easements, and a lot more).

For example, if you've got one acre of [land located in a swamp](#), *you shouldn't assume the property is buildable*. Likewise, if you've got one acre of land in the middle of the desert, you shouldn't assume the property can be used as a marina... because it's just not physically possible.

Of course, both are ridiculous examples – but they illustrate the point of taking the property's physical attributes into account when determining what the property may be used for.

Financial Feasibility

When taking any kind of construction or improvements into account (whether you plan to build a house or a skyscraper), it's important to ensure that the intended use can either:

- a. Generate enough revenue to justify the cost of the improvements (in the case of a commercial project or business endeavor).
- b. Create enough additional value to justify the cost of construction for the homeowner and/or make a profit for the investor.

To use another ludicrous example, you wouldn't spend \$10 million to buy a high-end parcel of land in downtown Manhattan, only to run a lemonade stand that earns \$10 a day – right?

If you're going to pay this kind of cash (and even more to develop it), you need to be confident it will create enough value or generate enough revenue for this kind of investment to actually make sense.

Maximum Productivity

To determine a property's maximum productivity, it's important to know which use is likely to generate the highest return on investment (ROI) for the investor.

For example, let's say we have a 10-acre parcel of land that could be used to build either of the following:

- Movie Theater Complex
- Self-Storage Facility

We can follow a simple equation to determine which of these scenarios is most likely to be the “maximally productive” use.

Movie Theater Complex

Cost of Land Purchase: \$100,000

Cost of Construction: \$1,400,000

Market Value of Finished Building: \$1,700,000

Profit for Developer: 13%

Self-Storage Facility

Cost of Land Purchase: \$100,000

Cost of Construction: \$1,100,000

Market Value of Finished Building: \$1,500,000

Profit for Developer: 25%

Even though the movie theater complex would give us the *highest market value*, the self-storage facility provides the *highest ROI to the investor*, and this is what makes it the maximally productive use.

Another important factor to consider is the local supply and demand for such buildings and businesses. It may not make sense to build a self-storage facility right next to another pre-existing self-storage facility, or a movie theater complex two doors down from another movie theater complex. If the presence of similar buildings in the area interferes with the feasibility of the property use, this also needs to be considered.

(© Phoenix Center for Advanced Legal & Economic Public Policy Studies, George S. Ford and R. Alan Seals (2018).)

Abstract: A large literature exists on the impact of disamenities, such as landfills and airports, on home prices. Less frequently analyzed is the effect of rock quarries on property values, and what little evidence is available is dated and conflicting. This question of price effects is a policy relevant one, with one study in particular used frequently to support “not in my backyard” campaigns against new quarry sites. In this POLICY PAPER, we revisit the literature and conduct a new analysis of the price effects of quarries, estimating the effect of quarries on home prices with data from four locations across the United States and a wide range of econometric specifications and robustness checks along with a variety of temporal circumstances from the lead-up to quarry installation to subsequent operational periods. We find no compelling statistical evidence that either the anticipation of, or the ongoing operation of, rock quarries negatively impact home prices. Our study likewise highlights a number of shortcomings in the empirical methodologies generally used to estimate the effect of disamenities on real estate prices. First and foremost, many existing studies are naïve as to the empirical conditions necessary to identify a causal relationship and do not establish credible strategies to estimate the counter-factual outcome. Second, the inclusion of “distance to the site” regressors in hedonic models is shown to be an unreliable statistical method. Using the method of randomized inference, the null hypothesis of “no effect” of placebo quarries is rejected in as much as 93% of simulations.

I. Background

Odds are that underneath your feet is a construction material made of sand, crushed stone, and gravel. These construction materials are an essential ingredient into nearly every construction project, from residential housing, office buildings, retail outlets, entertainment structures, to the roads that connect them.¹ Sand, rock and gravel are literally the foundation of economic development, but their extraction process can generate dust, noise, vibration, and truck traffic. While modern technologies and methods have greatly reduced quarries' impact, the environmental and economic consequences of quarry operations receive considerable attention, often in the form of "not in my backyard" (or "NIMBY") campaigns opposing quarry expansions or new sites. Choosing a quarry site is a delicate task. While a quarry may be best located far from residential density on NIMBY concerns, it also needs to be near the final point of demand due to its high transportation cost. Quarries must balance the need to be both "near" and "far," so they are typically found on the outskirts of cities and towns.

A key NIMBY complaint in the siting and expansion of quarries is the effect of the operations on nearby home values. According to Census data, housing amounts to about 70% of the average American's net wealth, so naturally homeowners are sensitive to any adverse effect, real or imagined, on property values.² Despite NIMBY opposition, nearly all the evidence on quarry operations finds no price effect. Frequently mentioned studies include Rabianski and Carn (1987) and Dorrian and Cook (1996), both of which find no relationship between appreciation rates of property values near to and far from quarries.³ An

even earlier study conducted for the U.S. Bureau of Mines in 1981 also found no consistent relationship between quarry operations and the prices of nearby homes.⁴ There are a number of consulting reports on the question, and none report price attenuation attributable to a quarry.⁵

Opposition to quarries based on home valuations relies universally on a report by Professor Patricia Hite (2006).⁶ This brief, 250-word study (hereinafter the “*Hite Report*”) analyzes data from a few thousand homes sales (apparently in the mid-to-late 1990s) around a single quarry in Delaware, Ohio. Using an unconventional regression model and data on transactions occurring decades after the quarry opened, the *Hite Report* finds a positive relationship between home prices and distance from the quarry. Based on that evidence, the *Hite Report* concludes that quarries reduce home values. Yet, the *Hite Report*’s methods and data do not support a causal interpretation.

As economic development marches on, new quarries will be required to satisfy the demand for basic building materials. In light of the mostly dated and conflicting evidence on the effect of quarries on housing prices, this POLICY PAPER offers new evidence, and a review of old evidence, on the relationship between housing prices and rock quarries. First, given its frequent use by NIMBY opposition to quarries, we revisit the *Hite Report*, analyzing home sales data

Operations on Value of Nearby Housing, Prepared for the Davidson Mineral Properties (August 25, 1987).

⁶ D. Hite, *Summary of Analysis: Impact of an Operational Gravel Pit on House Values: Delaware County, Ohio*, Working Paper (2006). We assign the date “2006” as is conventional, but that year is merely the recording stamp date on the document when it was filed in some type of proceeding. We do not know whether a more detailed analysis was provided at some point. We have never seen such a document cited and were unable to locate it.

around the same Delaware-Ohio quarry. Despite replicating both the location and methods of the *Hite Report*, our regression analysis finds that prices *fall* – not rise – as distance from the quarry increases. This result conflicts with that appearing in the *Hite Report*, so we look for more evidence by analyzing data on homes sales near a quarry outside of Murfreesboro, Tennessee, over the same time interval. Again, we find prices *fall* as distance from the quarry increases.

We are reluctant, however, to claim this evidence implies quarries raise home prices. Rather, we conclude, based on the method of randomized inference and other tests, that the *Hite Report's* method is unreliable. Using a simulation of pseudo-treatments, we find that the null hypothesis that home prices rise or fall in distance from a *randomly selected location* is rejected in no less than 67% of cases at the 10% nominal significance level. Estimating price-distance relationships, especially without explicitly considering selection bias, is a highly-unreliable statistical procedure. The nature of real estate markets do not permit the effect of quarries to be identified with such naïve empirical tests.

Second, using data on home sales near a relatively new quarry in Gurley, Alabama, we augment the Hite-style analysis with a difference-in-differences estimator, which quantifies the price-distance relationship both before-and-after operations begin. By exploiting the timing of the quarry buildout and the location of home sales with respect to the quarry, we can credibly identify a causal relationship, at least in theory. Unlike the analysis for Delaware and Murfreesboro, home prices rises in distance from the Gurley quarry site, but do so *before* the quarry becomes operational. After operations begin in 2013, the positive effect of distance is attenuated, again suggesting a positive effect of quarries on housing values.

One critique of our Gurley analysis is that market participants shift price forecasts downward in response to the prospect of a quarry so that the deleterious effects of the quarry could be realized before the quarry opens. Quarry site approvals normally take a decade or so, providing ample time for anticipatory responses to valuation fears. To address this concern, we analyze transactions near a recently approved quarry in Madera County, California. Using a difference-in-differences estimator in conjunction with Coarsened Exact Matching, we test for the anticipatory effect of the proposed quarry on nearby housing prices located along the major roadways serving the site. We find no evidence the quarry reduced housing prices. If anything, relative home prices rose near the quarry site.

While our evidence suggests that quarries do not reduce, but may increase, home prices, our analysis suggests more than anything that the identification of

the effect of quarries on prices is a very difficult problem, facing many conceptual and practical obstacles. We do not resolve all these difficulties. That said, we can conclude the evidence strongly implies the *Hite Report* and its methods are unreliable. Further analysis is, as usual, encouraged.

This paper is outlined as follows. First, we discuss the empirical requirements of quantifying a plausibly causal relationship between property values and quarry operations. Second, we revisit the *Hite Report*, estimating the price-distance relationship for the same quarry in Delaware, Ohio, and replicating the analysis for a quarry near Murfreesboro, Tennessee. Using a simulation method, we demonstrate the futility of estimating the price effects of quarries using the method proposed in the *Hite Report*. Third, we turn to the estimation of causal effects using the difference-in-differences estimator for quarry sites in Gurley, Alabama, and Madera County, California. Across multiple methods, we find, if anything, that home prices near quarries rise, not fall. In all, however, we believe our analysis best supports the hypothesis of “no effect” of quarries, or the announcement of quarries, on home prices. Conclusions are provided in the final section.

II. Empirical Framework

Disamenities such as landfills, airports, windfarms and prisons may plausibly reduce the prices of nearby homes. Such effects have been widely studied.⁷ Modern empirical methods for observational data based on the Rubin Causal Model, however, suggest that much of the work may offer biased estimates of such disamenities because much it looks only at prices after the “treatment,” making it difficult to address selection bias.⁸ To conclude that a disamenity reduces home values, the researcher’s interest must be in the *causal effect* of an amenity or disamenity on property values. Using only post-treatment prices is problematic since the locations of amenities and disamenities are not randomly selected, and

⁷ Other disamenities that may affect property values, airports and waste disposal, are frequently opposed by homeowners. See, e.g., J.P. Nelson, *Airport and Property Values: A Survey of Recent Evidence*, 14 JOURNAL OF TRANSPORT ECONOMICS AND POLICY 37-52 (1980) (available at: http://www.bath.ac.uk/e-journals/jtep/pdf/Volume_XIV_No_1_37-52.pdf); J.B. Braden, X. Feng, and D. Won, *Waste Sites and Property Values: A Meta-Analysis*, 50 ENVIRONMENTAL AND RESOURCE ECONOMICS 175-201 (2011).

⁸ Excellent resources on the modern methods of causal inference for economic analysis include G.W. Imbens and J.M. Wooldridge, *Recent Developments in the Econometrics of Program Evaluation*, 47 JOURNAL OF ECONOMIC LITERATURE 5-86 (2009); J.D. Angrist and J. Pischke, *MOSTLY HARMLESS ECONOMETRICS: AN EMPIRICIST’S COMPANION* (2008); and J.D. Angrist and J. Pischke, *MASTERING ‘METRICS: THE PATH FROM CAUSE TO EFFECT* (2015).

disamenities are typically located away from residential density to minimize impact and to placate NIMBY resistance.

The non-random selection of a quarry site greatly complicates the quantification of a quarry on housing prices due to selection bias. Finding that housing prices rise at increased distance from a quarry may merely reflect the economics of site choice (i.e., real estate is cheaper per unit in less densely populated areas on the outskirts of town) rather than any causal effect on property values. Also and consequently, empirical work may be frustrated by the lack of housing density near the site, rendering small sample sizes, which may, in turn, lead to the undue influence of outliers. Many quarries, especially new ones, have almost no housing within a mile or two of the site (the typical distance within which negative effects are claimed), as shown in the maps provided in the Appendices. And, given the lengthy approval process, if a quarry does affect housing prices, then such effects may occur prior to operations by an “announcement effect.” In conducting empirical work on quarries and housing prices, the researcher must address, and deal with the theoretical and empirical consequences of, the non-random nature of site location.

A. *Quantifying the Effect of a Quarry on Housing Prices*

Resistance to new quarry sites (or the expansions of old ones) based on property values rests exclusively on the *Hite Report*. In that report, the effect on prices is quantified by comparing the mean, quality-adjusted transactions prices around the quarry outside of Delaware, Ohio, as the home’s distance from the quarry increases. This “experiment,” however, has little hope of accurately measuring the effect of quarries on home prices.

To better grasp the nature of the problem, let there be two types of residential locations: (1) locations proximate to and potentially affected by quarry operations (labeled N , for “near”); and (2) locations distant from and entirely unaffected by quarry operations (labeled F , for “far”). Also, let there be two periods: the period prior to ($t = 0$) and after ($t = 1$) the initiation of quarry operations. For now, assume the approval process is instantaneous and that the quality and type of homes in the two locations are very similar (or, that such differences can be accounted for by statistical methods).

Prior to quarry operations homes sell for the average price P_0^N if near the future location of the quarry and P_0^F otherwise. (A numerical example is provided later.) For various reasons, these prices need not be equal. After quarry operations begin, the average, quality-adjusted prices for houses are P_1^N and P_1^F . The

differences in the prices across time ($P_1 - P_0$) are δ^N and δ^F . Other things constant, the effect of the quarry operations can be measured as,

$$\Delta = \delta^N - \delta^F = (P_1^N - P_0^N) - (P_1^F - P_0^F), \quad (1)$$

where Δ is the difference-in-differences (“DiD”) estimator.⁹ The DiD estimator looks for a difference in outcomes after the treatment that is difference than the differences in outcomes before the treatment (thus, explaining the term difference-in-differences). Under certain conditions, the DiD estimator plausibly measures the causal effect of the quarry.

Many studies of the effect of amenities or disamenities on housing values looks only at the difference between *near* and *far* locations in the *post-treatment* period, or the difference in P_1^N and P_1^F (or δ_1). This post-treatment approach is the one used in the *Hite Report*, where all the data is from sales decades after the quarry operations began. If, however, there is a difference in prices before the quarry operations begin, this post-operations difference is clearly not a measure of the effect of proximity to the quarry. A numerical example may prove helpful.

B. A Numerical Example

Before a quarry opens, assume the average, quality-adjusted price for a home near the quarry site is \$80,000, but the average price is \$100,000 for homes far from the future quarry site. Thus, there is a \$20,000 or 20% difference in prices prior to quarry operations, perhaps reflecting the lack of locational rents for homes far from residential density. Plainly, since quarry operations have not begun, this difference cannot be attributed to the quarry. In fact, the quarry site may have been chosen because of the lower property values or lack of residential housing in the area.

As a benchmark case, say that the quarry operations once initiated have *no effect* on property values and the sales prices of homes are unchanged after quarry operations begin (\$80,000 and \$100,000, respectively). If a researcher were to

⁹ See, e.g., B.D. Meyer, *Natural and Quasi-Experiments in Economics*, 13 JOURNAL OF BUSINESS & ECONOMIC STATISTICS 151-161 (1995); J.D. Angrist and A.B. Krueger, *Empirical Strategies in Labor Economics*, in HANDBOOK OF LABOR ECONOMICS Vol. 3A (eds., O. Ashenfelter and D. Card) (1999); S. Galiani, P. Gertler, and E. Scharfrodsky, *Water for Life: The Impact of the Privatization of Water Services on Child Mortality*, 113 JOURNAL OF POLITICAL ECONOMY 83-123 (2005); D. Card, *The Impact of the Mariel Boatlift on the Miami Labor Market*, 13 INDUSTRIAL AND LABOR RELATIONS REVIEW 245-257 (1990).

simply compare prices based on distance from the quarry after operations begin, then a difference of 20% would be found. Yet, that difference existed prior to the quarry's opening, and thus the quarry did not *cause* that difference, implying any causal claim made about that difference is mistaken. The truth (by assumption) is that the quarry had *no effect*. The DiD estimator (Δ) is, in fact, zero, correctly identifying the causal effect of the quarry [= (80,000 - 80,000) - (100,000 - 100,000)].

Assume instead that the quarry does reduce prices for nearby homes. Let the post-quarry average prices be \$70,000 near and \$100,000 far from the quarry, other things constant.¹⁰ Prices near the quarry fall by \$10,000 and those far from the quarry are unchanged. The DiD estimator accurately quantifies the effect of the quarry, which is a \$10,000 reduction in value [= (70,000 - 80,000) - (100,000 - 100,000)]. Looking at data after the quarry operations begin, alternately, which is the *Hite Report's* approach, would find an effect size of \$30,000 [=70,000 - 100,000], or three times the true effect. Selection bias accounts for the \$20,000 error in the estimated effect.

Ideally, then, to properly identify the causal effect of a quarry operation, the researcher must observe prices both before and after the quarry may reasonably be expected to affect housing prices (among other considerations such as the similarity in pricing trends prior to the treatment). The analysis of transactions occurring well after the quarry opens offers little hope for quantifying the effect of the quarry, absent unique circumstances. Certainly, the empirical demands are considerable, and the identification of the causal effect must be explicitly set forth and proper empirical methods applied.

C. Key Assumptions for Estimating Causal Effects

With regard to the location of homes and quarries, we do not have the luxury of experimental data. Rather, the data is observational and the data generation process occurs over many decades. The observational nature of the data is crucial: quarry site and housing locations are non-random and not independent of economic activity near the site or each other. Thus, research on the price effects of quarry sites must pay careful attention to selection bias, which is caused by the non-random process by which sites are chosen to avoid residential density but still

¹⁰ For instance, a large condominium complex may have built near the quarry. The researcher must adjust for the difference in average prices resulting from this changing mix of household types).

remain close to the point of demand for aggregates (i.e., sand, stone and gravel). Thus, the “treatment” and “outcome” are related through observed and potentially unobserved factors.¹¹

As explained by Imbens and Wooldridge (2009), when estimating the causal treatment effect in observational studies the researcher must be alert to two key concepts stemming from selection bias: (1) unconfoundedness (or the conditional independence assumption) and (2) covariate overlap (or common support).¹² Unconfoundedness implies that, conditional on observed covariates X , the treatment assignment probabilities are independent of potential outcomes. If we have a sufficiently rich set of observable covariates, then regression analysis including the variables X leads to valid estimates of causal effects. Since the X must be observed to be included in the regression model, this approach is often referred to as *selection on observables*. It is difficult to know and impossible to test whether the observed and included X are sufficient to guarantee unconfoundedness (so the regression error and treatment are uncorrelated), though some guidance is available through pseudo-treatment tests (as applied later).

The conditional independence assumption (or *unconfoundedness*) implies that the observed factors included in the statistical analysis fully account for all the differences in the types of homes sold both near and far from the quarry (or other site of interest).¹³ In quantifying the effect of education on income, for instance, it is not enough to simply compare the incomes of persons with and without a college education. Work ethic, for instance, affects both the probability that a person will obtain a college degree and his or her future income. A hard-working person may earn a higher income even without a college education. If work ethic cannot be observed, then a comparison of average incomes across those with and without a college degree does not measure the true value of a degree. The difference is a positively biased estimate of the payoff of education.

¹¹ In regression analysis, this problem appears as a correlation between the regression residual and the treatment variable.

¹² *Supra* n. 8.

¹³ That is, the regression model includes all the regressors needed to make the conditional *near* and *far* prices equal prior to the treatment.

The second factor to consider for the measurement of the causal effect is covariate overlap, which Imbens and Wooldridge (2009) observe is, after unconfoundedness, the “main problem facing the analyst.”¹⁴ This condition implies that the support of the conditional distribution of X for the control group overlaps completely with the conditional distribution of X for the treatment group. That is, the covariate distributions for the treated and untreated groups are sufficiently alike, thereby lending credibility to the extrapolations inherent to regression analysis between groups. If the characteristics of untreated observations (homes *far from* the quarry) are very different from the treated observations (homes *near to* the quarry), then the projections from the controls to the treated units will be a poor one.

Say, for instance, that a sample used to assess the effect of an experimental cancer treatment includes only persons over 65 years old in the experimental treatment group (or simply treatment group) and only persons below 45 years old in the non- treatment group (or control group). The purpose of the control group is not simply a counterweight to the treatment group. Rather, the control group measures the outcomes for the treated group if that group did not receive the treatment. To fix ideas, what we actually want to estimate is what would the treatment group have looked like had they not been treated, which is the sole purpose of a control group. It is unreasonable to expect, we believe, that the survival outcomes of 45 year-old persons provides an approximation of survival outcomes of persons 65 years and over that did not receive the experimental treatment. To extrapolate this discussion to the case of housing values, if the control group includes almost all homes in a golf course community with swimming pools and the treatment group—the properties near some disamenity—includes mostly one-bedroom condominiums, then the difference in sale prices between the two is a nearly meaningless statistic. Regression models are powerful tools, but they cannot make up for such large differences in characteristics across treatment and control groups (even if observable and included in the regression model as explanatory variables), which is important given that the control group is being “projected” onto the treatment group.

A number of statistical techniques are used to address confoundedness and covariate imbalance in observational studies. In a housing study, for instance, a researcher may choose the control group by finding a group of homes comparable to the treatment group—that is, similar square footage, amenities, lot sizes—from a population of homes unaffected by the treatment. This approach, which we

¹⁴ Imbens and Wooldridge, *supra* n. 8 at 43.

employ here, ensures that the characteristics of homes in the treatment and control groups are sufficiently similar, adding credibility to the control group as a suitable “stand in” for the treatment group if it had not received the treatment.

The *Hite Report* is silent on both of these key assumptions, and there is good reason to suspect the analysis fails on both counts. All the pricing data is for home sales occurring long after the quarry operation began and the regression model is quite basic, so the experiment is almost certainly plagued with selection bias. As for covariate overlap, from what few descriptive statistics are provided in the *Hite Report* we observe that the range of home prices within 0.5 miles of the quarry has a minimum of \$80.1 and a maximum of \$178.9 (in thousands). In contrast, the range of prices for homes further from the quarry is \$60 to \$798.6. This difference in the maximum prices is sizable, suggesting that the homes near the quarry may be very much unlike those far from the quarry, thus risking biased results of the effect of distance.

III. Revisiting the *Hite Report*

In NIMBY campaigns challenging quarry development, the *Hite Report* is the sole empirical analysis supporting the claim that quarries reduce housing prices. Subsequent works by Erickcek (2006), the Center for Spatial Economics (2009), Smith (2014), among others, conduct no new empirical analysis, choosing instead to extrapolate the *Hite Report*'s results to different locations (a questionable practice on its own).¹⁵

¹⁵ G.A. Erickcek, *An Assessment of the Economic Impact of the Proposed Stoneco Gravel Mine Operation on Richland Township*, W.E. Upjohn Institute for Employment Research (August 15, 2006) (available at: <http://www.stopthequarry.ca/documents/US%20Study%20on%20the%20impact%20of%20pits%20quarries%20on%20home%20prices.pdf>); *The Potential Financial Impacts of the Proposed Rockfort Quarry*, Center for Spatial Economics (February 26, 2009) (available at: http://wcrpc.org/FinancialImpacts_RockfortQuarryCanada.pdf); G. Smith, *Economic Costs and Benefits of the Proposed Austin Quarry in Madera County*, Report (October 23, 2014) (available at: <http://www.noaustinquarry.org/wp-content/uploads/2016/08/Austin-Quarry-Economics-Report.pdf>). Other works relying on the *Hite Report* (directly or indirectly) include, e.g., M. Conklin, et al., *The Quarry Proposed by St. Marys Cement Inc. for a Location Near Carlisle, Ontario Should Not be Permitted: Proponents' Brief*, 5 STUDIES BY UNDERGRADUATE RESEARCHERS AT GUELPH (2011) (available at: <https://journal.lib.uoguelph.ca/index.php/surg/article/view/1338/2345>); *Business Suirvey and Economic Assessment of Locating a Quarry and Asphalt and Cement Plants within Aeortech Park*, Group ATN Consulting, Inc. (October 13, 2014) (available at: http://stopthefallriverquarry.com/wp-content/uploads/2015/10/GATN_Aeortech_Park_FINAL_Report_Oct_13_2015-2.pdf); M.A. Sale,

This uniform reliance on the *Hite Report* is somewhat surprising. On the face of it, the report is a seven-page document consisting of 1.5 pages of double spaced text (about 250 words) along with a few tables and figures. It is more an “abstract” than it is a “study.” Moreover, even a brief review of the *Hite Report* points to a number of serious problems that should give any researcher pause. First, there are almost no details regarding model specification and few details on the data used. Not even descriptive statistics are provided. Second, the choice of model specification is entirely ad hoc, treating nearly identical variables (distance) differently with respect to functional form and using a non-standard and unnecessary estimation procedure. Such inconsistent, unconventional and inconvenient choices are symptomatic of ends-driven analysis. Third, no explanation is provided as to how the chosen model and analysis of transactions occurring decades after the quarry operations began might identify the effect of *that particular* quarry (or any new quarry) on housing prices. Selection bias is clearly a concern, but it is neither mentioned nor addressed. Fourth, no analysis is provided to suggest that the homes near the quarry are sufficiently similar to those distant from the quarry to provide reliable estimates of the effect of distance (i.e., covariate overlap). Comparing prices of the homes in rural areas on the outskirts of town to those near the local university risks confusing the vagaries of real estate development with the impact of the quarry.

Setting aside the question of causality for the moment, whether the relationship estimated in the *Hite Report* can be replicated is an important first step in evaluating the report’s credibility and the suitability of the methods used to answer this policy-relevant empirical question. To that end, we collect data on home sales within five-miles of the same quarry in Delaware, Ohio, evaluated in the *Hite Report*.¹⁶ It appears the data from the *Hite Report* was from the 1990’s (though it is impossible to be certain given the lack of detail), so we collect data on

Quarry Bad for Area, THE NEWS & ADVANCE (September 28, 2008) (available at: http://www.newsadvance.com/opinion/editorials/letters-to-the-editor-for-sunday-september/article_ca388ca4-14c7-534b-9b17-1b78d1cecc40.html).

¹⁶ Data is obtained from www.agentpro247.com. For all our analysis, we limit the prices to greater than \$25,000 and less than \$1,000,000, and look only at the “full” sales of single-family homes not in distress. The National Lime & Stone Quarry near Delaware, Ohio, is located near Latitude 40.281005 and Longitude -83.135828.

sales over the ten-year period 1998 through 2007.¹⁷ These data appear to immediately follow that used in the *Hite Report* but precedes the housing market crash in 2008 and the broader economic malaise that followed.¹⁸ For further analysis, we also collect data on sales near a quarry outside of Murfreesboro, Tennessee, over the same ten-year period.

A. A Review of Empirical Methods

To reproduce the *Hite Report's* analysis, we obtain transactions prices on 2,114 single-family homes between 1998 through 2007 that are located within five miles of the National Lime & Stone Quarry near Delaware, Ohio. Using latitude and longitude coordinates, distance from each home to the center the quarry (D) is calculated. Other explanatory variables used the *Hite Report* include, for each transaction, the sale date ($DATE$), the distance to Delaware City (DDC), the house-to-lot size ($H2L$), the number of bathrooms ($BATH$), and the number of total rooms ($TOTR$). We measure the sale date as the year of sale; the *Hite Report* does not indicate how the sale date is measured.¹⁹

The regression model of the *Hite Report* takes the following general form,

$$p_{it} = \exp(\delta_1 \ln D_i + \beta_0 + \sum_{j=1}^k \beta_j X_{j,i}) + \varepsilon_{i,t}, \quad (2)$$

where p_{it} is the transaction price (in thousands) for home i at time t , $\ln D$ is the natural log of distance from the quarry (in miles), and X_j are the k regressors listed above (with coefficients β_j as coefficients).²⁰ For reasons unexplained in the *Hite Report*, only the distance from the quarry is transformed by the natural log

¹⁷ See also D. Hite, *The Impact of the Ajax Mine on Property Values*, ARMCHAIRMAYOR.CA (March 5, 2015) (available at: <https://armchairmayor.ca/2015/03/05/letter-the-impact-of-the-ajax-mine-on-property-values>) (stating that the analysis was completed in 1996-1998).

¹⁸ Our data source does not offer data in the early-to-mid 1990s, so we cannot replicate the same time period as the *Hite Report*. We are trying to obtain such data for further analysis.

¹⁹ It is preferred to measure $DATE$ as a fixed effects, as this specification requires prices to rise monotonically over time.

²⁰ The variables in the model are listed at *Hite Report*, *supra* n. 6 at p. 3. A similar specification is used in D. Hite, *A Hedonic Model of Environmental Justice*, Working Paper (February 14, 2006) (available at: https://papers.ssrn.com/sol3/papers.cfm?abstract_id=884233).

transformation; distance from the city center (DCC) and the other regressors are not transformed. The specification seems purely ad hoc.

Equation (2) is non-linear in the parameters and must be estimated by Non-Linear Least Squares (“NLS”). This specification is highly irregular in econometric practice. Normally, hedonic models of housing prices are estimated by Ordinary Least Squares (“OLS”). A regression model quite similar to Equation (2) and very common in hedonic analysis is,

$$\ln p_{i,t} = \delta_1 \ln D_i + \beta_0 + \sum_{j=2}^k \beta_j X_{j,i} + v_{i,t}, \quad (3)$$

where the dependent variable is the natural log of price and where the X s might be transformed to logs as well.²¹ While Equation (3) is typical of hedonic price functions, we are unable to find the estimation of Equation (2) anywhere in the literature. In fact, we were unable to locate a single instance where even the author of the *Hite Report* estimates a hedonic price function using Equation (2), but plenty of instances where Equation (3) is used.²² As detailed later, a test of functional form can inform us as to whether the natural log transformation of the dependent variable is a better approach and infinitely more common.

²¹ Note that Equation (3) is not simply the log transformation of Equation (2) because of the additive error term in Equation (2).

The coefficient of primary interest in the *Hite Report* is δ_1 , which measures the percent change in the transaction price for a percentage change in distance from the quarry (D), but only *after* the quarry operations began (see Eq. 1). In this specification (and also for Eq. 3), this elasticity is constant across the full range of distance. With data on 2,812 sales, the *Hite Report* estimates the coefficient δ_1 to be 0.125, where the positive sign indicates the average sale price of homes is higher the further away the homes are from the quarry (statistically significant at the 1% level). The *Hite Report* concludes, as do subsequent reports that adopt the result, that this positive coefficient implies quarries reduce the price of nearby homes. As detailed above, the positive sign on the coefficient δ_1 cannot reasonably be interpreted in this manner since the data is for sales occurring long after quarry operations began, among other concerns.

B. National Lime & Stone Quarry in Delaware, Ohio

Replication is the essence of science. Even if the estimated price-distance relationship from Equation (2) lacks a causal interpretation, it is worth evaluating whether the *Hite Report's* findings can be confirmed. We do so by estimating Equation (2) using data on 2,114 transactions in the same area over the period 1998-2007. Figure 1 offers the kernel density of the distribution of transactions by distance from the quarry. The thinness of the market very near the quarry is plain to see, which is also apparent from a map of the area surrounding the quarry (see Appendix 1).

Regression results from Equation (2) are summarized in the first column of Table 1, along with descriptive statistics for the full sample and the sample divided

into homes closer to the quarry than two miles and those further than that distance. The model has a Pseudo-R² of 0.25, which is very close to that reported in the *Hite Report* (0.254).²³ Five of the seven estimated coefficients (including the constant term) are statistically different from zero at the 1% level or better.

Table 1. Regression Results and Descriptive Statistics

Statistical Significance: *** 1%, ** 5%, * 10%

Despite using exactly the same regression model and data on sales around the same quarry, we find that the transaction prices of homes *decrease* (not increase) as the distance from the quarry increases. The negative coefficient (-0.141) is similar in size *but different in sign* from that found in the *Hite Report* (0.125) and is statistically significant at the 1% level. The estimated coefficient implies a 1% increase in distance reduces home average, quality-adjusted home prices by about 0.14%. Since the coefficient is less than unity, the price-distance relationship is subject to diminishing marginal returns.²⁴ Figure 2 illustrates the relationship

²³ The Pseudo-R² is the squared correlation coefficient between the predicted value of the regression and the dependent variable.

²⁴ For any fixed change in mileage, the percentage change falls as distance increases.

between sale prices and distance from the quarry, revealing sizable reductions in average prices as distance from the quarry increases.

Table 2 summarizes the average predicted prices and price effects at varying distances from the quarry. Interpretation of the table is straightforward. A home sold 3 miles from the quarry will have a price 22% lower than that of a home sold within 0.5 miles of the quarry, or 16% lower than the average home sold within 1.5 miles of the quarry. At two miles, the differences are 18% and 11%; at five miles, the differences are 28% and 22%. These are sizable effects.

Table 2. Home Values by Distance from Quarry

	<i>Distance in Miles from Quarry</i>							
	0.5	1.0	1.5	2.0	2.5	3	4.0	5.0
Avg. Price ('000)	169.8	153.9	145.4	139.6	135.2	131.8	126.5	122.6
Reduced Value (from 0.5 miles)	...	-9%	-14%	-18%	-20%	-22%	-25%	-28%
Reduced Value (from 1.5 miles)	-11%	-14%	-16%	-19%	-22%

These estimates and their predicted effect on prices are based on the estimation method (Eq. 2) used in the *Hite Report*. There are other equation specifications and estimation methods that are more consistent with standard practice in the analysis of housing prices (hedonics). In order to assess the robustness of the result, we offer alternative analyses below.

1. *Alternative Estimation Approaches*

As discussed above, Equation (2) is a non-standard method to estimate the relationship of interest. Normally, a researcher would avoid the non-linear Equation (2) and use the natural log of price to estimate Equation (3) by OLS. Statistical testing (such as the Box-Cox test of functional form) may be used to evaluate whether the linear or log-form of the dependent variable is preferred.²⁵ Other advantages of Equation (3) over Equation (2) is that the linear equation is amenable to estimation by Median Regression (“MReg”) and Robust Regression (“RReg”), both of which are less sensitive to outliers in the data than is NLS or OLS.²⁶ Outliers are common in home sales data, so it is sensible to evaluate the effect on the estimates by these alternative estimation procedures, especially when the results are used in a policy relevant setting that may have significant financial implications.²⁷ We summarize the results from both methods.

Modern research on housing prices increasingly accounts for the spatial nature of real estate markets using new spatial methods.²⁸ We estimate the price-distance

We truncate the distance at 0.5 miles.

Results for the alternative estimation methods are summarized in Table 3.³⁰ Across all four alternatives, the price-distance relationship is negative and statistically different from zero at the 1% level or better. Plainly, the negative price-distance relationship is robust to estimation method. The price-distance elasticity is a good bit larger for OLS and MReg, but similar to that estimated by Equation (2) for both the RReg and SReg methods (in the full sample). Note that more of the regressors are statistically significant in MReg and RReg, suggesting these estimation alternatives are worth consideration.

2. Coarsened Exact Matching

Thus far, we have paid no attention to whether homes near the quarry are like those far from the quarry (i.e., covariate overlap). What evidence is available in the *Hite Report* suggests that in her sample the types of homes sold near the quarry may have been very different than those sold at a distance from it. While distance from the quarry is a continuous variable, we can consider covariate overlap by comparing the characteristics of homes near to and those far from the quarry, using a two-mile cutoff. In Table 1, we do observe some meaningful differences between homes within two miles of the quarry and those further away especially in the year sold and the number of bathrooms and total rooms.³¹ To ensure we are comparing like homes, we apply Coarsened Exact Matching (“CEM”) to the data and match on these three variables.³² All 184 transactions within two miles of the quarry are matched to 1,277 (of 1,930) homes further than

³⁰ The Box-Cox test statistic for the Delaware County data is 64.1, which is statistically significant at better than the 1% level. The test statistic is distributed $\chi^2(1)$ with a critical value of 2.71 at the 10% level. The natural log transformation, consistent with Equation (3), is preferred to the specification estimated in the *Hite Report*. Or, we might say the problem is not so much in the estimation by NLS rather than OLS but that the natural log transformation of the dependent variable is the better specification.

³¹ Standardized differences (the absolute value of the means difference divided by the square root of the summed variances) are used. See Imbens and Wooldridge, *supra* n. 8 at p. 24. The rule of thumb for a large difference is a standardized difference exceeding 0.25. For the DATE variable, the standardized difference is 0.51, and about 0.30 for bathrooms and total rooms.

Porro, *Causal Inference without Balance Checking: Coarsened Exact Matching*, Working Paper (June 26, 2008) (available at: <https://ssrn.com/abstract=1152391>), later published *Causal Inference without Balance Checking: Coarsened Exact Matching*, 20 POLITICAL ANALYSIS 1-24 (2012) (available at: https://gking.harvard.edu/files/political_analysis-2011-iacus-pan_mpr013.pdf).

two miles from the quarry. The weights created by the CEM procedure are then used to estimate Equation (3) by weighted OLS.

Results for the CEM-weighted regression are reported in the final column of Table 3. The estimated coefficients are comparable in most respects to the other models.³³ Most significantly, the price-distance relationship remains negative (-0.147) and statistically different from zero. While we do not present the results in the table, we note that when estimated using the non-linear Equation (2) with CEM-weighted data the price-distance relationship is negative (-0.053) but not statistically significant, a difference we will return to later.

C. Rogers Group Quarry near Murfreesboro, Tennessee

It is reasonable to expect that the relationship of home prices to distance from a quarry might vary by location. Earlier research suggests this is so in other contexts.³⁴ To further evaluate the results reported in the *Hite Report*, we collect data on home sales around the Rogers Group Quarry near Murfreesboro, Tennessee.³⁵ Transaction data is again collected for years 1998 through 2007 and the sample includes 2,311 transactions. Given differences in data availability, we replace the total number of rooms with square footage (*SQFT*). Distance from the city center (*DCC*) is measured from Murfreesboro. We apply the same methods as before, estimating Equation (2) by NLS and then Equation (3) by OLS, MReg, RReg, and SReg. Results are summarized in Table 4. We do not observe large differences between the characteristics of home sold near to and far from the quarry, so we do not apply CEM for this quarry.

³³ CEM-weighting often alters the coefficients and their significant levels since the data is better matched.

³⁴ See *supra* n. 7 and citations therein.

³⁵ The quarry is located at coordinates: 35.884699, -86.530625.

Statistical Significance: *** 1%, ** 5%, * 10%					

The fit the regressions (R^2 is around 0.60) is much higher than for the Delaware data, but the negative coefficients on distance are seen again. For the NLS model, the price-distance relationship is -0.0655 and the coefficient is statistically different from zero at better than the 1% level. Across the alternative specifications and estimation methods, the price-distance relationship is consistently negative and statistically different from zero, save one exception. Only in spatial regression is the price-distance relationship not statistically significant, though the coefficient is negative and similarly sized to the other models.

Additional evidence also leads to questions about the negative views of quarries. If quarries were a disamenity, then we might expect people to avoid living around them. Figures 3A-3C in Appendix 3 demonstrate population movements for Rutherford County, Tennessee, with emphasis on the Rogers Group quarry. Population is measured using U.S. Census Bureau population data for years 1990, 2000, and 2010. These figures show population density increasing

dramatically over this time period in the same census block as the Rogers Group quarry. These population movements toward the quarry in conjunction with the econometric results further indicate the Murfreesboro quarry is not a great disamenity, if a disamenity at all.

D. *Randomized Inference and the Implausibility of the Model*

Our analyses of home prices near the quarries in Delaware, Ohio, and Murfreesboro, Tennessee, find a negative and statistically significant relationship between home prices and distance from a rock quarry in most specifications and estimation methods. Consequently, we find no evidence that supports the findings of the *Hite Report*, despite using the same model and, in one instance, the same quarry from that earlier study. We fear, however, that these estimated relationships are mainly the consequence of the *Hite Report's* poor experimental design than they are a measure of any real effect of the quarry. Indeed, we question whether the quantification of the effect of a disamenity or amenity can be plausibly estimated by a price-distance relationship. In Delaware County, for instance, it is not hard to find a statistically-significant price-distance relationship (using Eq. 2) from just about anywhere: the Church of the Nazarene off Highway 101 ($\delta_1 = -0.058$, $t = -2.79$); The Greater Gouda gourmet grocery on North Sandusky Road ($\delta_1 = 0.268$, $t = 6.92$); and the Foot & Ankle Wellness Center off South Hook Road ($\delta_1 = -0.043$, $t = -2.99$).

Given patterns in real estate development, it seems plausible that a positive or negative price-distance relationship would be observed from almost any location. A sensible way to evaluate the reliability of the distance-based hedonic regressions is to apply the method of randomized inference (a type of pseudo-treatment).³⁶ In this procedure, the location of a “disamenity” or “amenity” is randomly chosen in the geographic area under study. Given the random assignment of location, we might expect the price-distance relationship to be statistically significant in proportion to the alpha-level of the statistical test (say, a 10% significance level) due to random variation. That is, a valid statistical test conducted at the 10% level

³⁶ R.A. Fisher, *THE DESIGN OF EXPERIMENTS* (1935); P.R. Rosenbaum, *OBSERVATIONAL STUDIES* (2002); M.D. Cattaneo, B.R. Frandsen, and R. Titiunik, *Randomization Inference in the Regression Discontinuity Design: An Application to Party Advantages in the U.S. Senate*, 3 *JOURNAL OF CAUSAL INFERENCE* 1-24 (2015); T. Fujiwara and L. Wantchekon, *Can Informed Public Deliberation Overcome Clientelism? Experimental Evidence from Benin*, 5 *AMERICAN ECONOMIC JOURNAL: APPLIED ECONOMICS* 241-255 (2013).

will reject the null hypothesis 10% of the time even if the null is true (e.g., Type I error).

We conduct such tests using the following simulation. First, a random location (latitude, longitude) within the Delaware area is chosen (see Appendix 4 for an illustration of the process). Second, the distances from this location to all home sales is computed. Third, we replace in the regression model the variable measuring distance from the quarry (D) with this alternate distance measure (D'). Fourth, we estimate a regression of price on the same variables as above, obtaining the coefficient, t-statistic and its probability on δ_1 . Fifth, this process is repeated 1,000 times. Finally, from these 1,000 simulations, we can compute how often the null hypothesis of “no effect” is rejected.

At the threshold significance level of 10%, the null hypothesis is rejected in a whopping 67% of the simulations for the data from Delaware County, sometimes with positive and sometimes negative coefficients. Conducting the same simulation for Murfreesboro, the rejection rate is an even larger 93%. Given the random selection of locations in the simulation, this result is a powerful indictment against the sort of model employed in the *Hite Report*. A researcher may pick just about any location and find a statistically-significant price-distance relationship. We conclude based on this analysis that the addition of a distance variable to a hedonic model in an effort to identify the effect of a quarry on home prices is a poor experimental design with grossly inaccurate inference tests, especially when using asymptotic critical values for hypothesis testing and only data on post-operation transactions. In fact, we suspect many of the hedonic studies using distance from disamenities may be similarly unable to identify an effect of interest, but leave that question to future research.

Another problem with estimating the price-distance relationship is that unlike square footage, distance from a quarry is not unidimensional but occurs on a coordinate plane. A house may be located to the east or to the west, to the north or to the south, of a quarry, and moving closer to or away from the town center, a university, a landfill, or any other site that may influence prices. To see this, we divide the transaction data near Murfreesboro into four quadrants around the quarry (northeast, northwest, southeast, and southwest) and estimate a price-distance relationship unique to each quadrant (using Eq. 2). Results are summarized in Figure 3.

From Figure 3, we see that the price-distance relationships are not equal across quadrants but rather differ substantially by the direction of the movement away from the quarry. From Table 4, we know that the average price-distance relationship from this quarry is negative (and statistically significant). Yet, from Figure 3, we see that the price-distance relationship in the Northwest quadrant is positive, but negative in all other quadrants. All the estimated price-distance relationships are statistically different from zero at the 10% level or better. It appears, therefore, that there is no “price-distance relationship” but many “price-distance relationships” from any given site. We believe these results are more evidence of the spurious nature of the price-distance relationship estimated using hedonic models of housing prices.

In light of our randomized inference procedure and additional evidence, we conclude, for now, that the type of model and experimental design used in the *Hite Report* is entirely unsuited to the task of identifying the price impact of quarries. Our results from replication efforts, which consistently find a negative price-distance relationship, are no less implicated by the defect than those of the *Hite Report*. Identifying the effects of quarries on housing prices requires a different experimental design, and careful attention to selection bias, covariate overlap, and the numerous ramifications of thin markets around the site. We attempt to offer some better evidence below.

E. *Spurious Regression and the Search for Results*

In light of the evidence that a statistically significant price-distance relationship is found for no less than seven-out-of-ten randomly chosen locations,

we conclude the *Hite Report*'s experimental design is incapable of quantifying the effect of quarries on house prices. The results from such models are spurious. Consequently, we expect that the price-distance relationship will be sometimes positive, sometimes negative, sometimes statistically significant and sometimes not for any given quarry. Statistical significance is the flip of a coin heavily weighted toward the rejection of the null hypothesis. Our analysis also shows that the choice of estimation method may alter the estimated coefficient and its significance, a common trait of spurious regression.

The fact different quarries and different estimation methods produce different results advises caution in conducting and assessing such studies, especially in a policy-relevant context when economic development is at stake. Inference errors may be inadvertent, or an advocate may exploit the spurious nature of the relationship by searching for a location, model specification, and time period to produce an outcome supporting a favored policy position. We can demonstrate the risks of such an ends-driven search by looking at more recent data for Delaware, Ohio, using data on prices for the five-year period 2012 through 2016 (1,429 transactions). The models and variables are measured in the same way as above.

Table 5 summarizes the results from a few estimation methods. For expositional purposes, we present only on the price-distance relationship. Using the unconventional Equation (2) from the *Hite Report*, we find that the price-distance relationship for this period is positive – a statistically significant result (by asymptotic convention). The result is opposite of that estimated for the data from the 1998-2007 period, even though the location is the same. Without any constraint on the choice of time period to analyze, an unscrupulous advocate is free to choose data from different periods in search of results to support his or her position.

Model selection and variable choice may also be used in an ends-drive search for results. As shown in Table 5, estimating Equation (3), a standard functional form for hedonic regressions, the positive coefficient is now a sixth the size of that estimated by Equation (2) and is no longer statistically different from zero at standard levels.³⁷ Also, Median, Robust and Spatial Regression do not find statistically significant price-distance relationships. In fact, the only model that produces a statistically-significant positive effect is the non-standard regression equation used in the *Hite Report*. Moreover, if we replace the *TOTR* variable with the *SQFT* variable in the NLS model, the price-distance relationship shrinks to 0.02 (one-sixth the size) and the coefficient is no longer statistically significant. Again, a researcher may pick-and-choose model specification, along with time period analyzed and regressors, to obtain a desired result. Skepticism is warranted for any analysis of the price effects of quarries (and amenities or disamenities generally) absent robustness analysis across time and model specifications.

As another check on robustness (or a lack thereof), we combine the data from 1998-2007 and 2012-2016, excluding those years when the housing market and economy generally were in turmoil (2008-2011). Results on the price-distance relationship are summarized in Table 6. Now, Equation (2) estimated by NLS reports a statistically insignificant (but positive) coefficient for the price-distance relationship. The other estimation methods, however, all confirm the negative and statistically significant relationship consistent with the results in Tables 1 and 3. It appears, therefore, whether or not quarries affect prices hinges on model selection and dates selected, which simply demonstrates the spurious nature of these sorts of experiments. Plainly, care must be given to model selection, and robustness analysis should be thorough and explicit. And, in light of the randomized

³⁷ The Box-Cox test indicates a preference for the transformation ($\chi^2 = 40.7$).

inference and quadrant analysis above, the utility of the price-distance relationship for quantifying the effects of quarries and disamenities should be regarded as defective, at least until further research demonstrates otherwise.

The analyses presented here, we believe, offers compelling evidence that the *Hite Report's* experimental design is a flimsy method, easily manipulated to produce nearly any desired result through the selection of location, model specification, estimation technique, and the time period analyzed. The *Hite Report's* findings cannot be reliably replicated and conflicting results are readily obtained. The spurious nature of the price-distance relationship from such experiments is clearly demonstrated, and the defective approach allows for nearly any result imaginable. Using data long after a quarry opens poses no limits on the selection of time period, enhancing the risk of the exploitation of spurious regression for economic and political advantage.

IV. A Difference-in-Difference Approach

As detailed above, to quantify the effect of a quarry on home prices the researcher ideally needs pricing data both before and after quarry operations begin.³⁸ With this data, statistical analysis can determine how the relationship between price and distance from the quarry *changes* after the quarry opens, thus quantifying, under some well-known assumptions, a plausible causal effect.

There are some potential shortcomings with a simple before-and-after analysis, however. New quarries take years to get approval and normally we expect equity prices to reflect new information quickly, so price effects may precede that event. In this section, we offer two before-and-after analyses of the effect of a quarry on home prices. First, we evaluate pricing activity around the Vulcan quarry in Gurley, Alabama, which began operations in 2013. Gurley is a rural area not far from the city of Huntsville, Alabama. Consistent with the analysis above, we use the general format of the *Hite Report* (and several

³⁸ Another possible identification strategy involves exploiting policy experiments with respect to residential distance from a quarry. For example, if some states required houses to be a certain distance away from a quarry while other states did not, then a credible counter-factual could be constructed allowing the researcher to estimate the effect of quarry distance on home prices. A regression discontinuity design could be used to identify the price-distance relationship if regulations required potential home buyers to be informed of the quarry for homes within a certain distance. Homes just inside and just outside this cut-point would be used as treatment and control units to identify the causal price-distance relationship.

alternatives) to test for a *change* in the price-distance relationship after the quarry opens.

Second, we evaluate the price effects of the contested Austin Quarry in Madera, California, which was approved in 2016.³⁹ Located in the southwest corner of the intersection of Highway 41 and Highway 145, the site is proximate to two subdivisions, one located on Highway 145 and the other on Highway 41. Thus, not only are the subdivisions proximate to the quarry, but both are expected to deal regularly with the quarry’s traffic flow. Though first proposed in 2010, media coverage and public protest did not begin until 2013, at which time the new quarry might be expected to affect home prices through an announcement effect.⁴⁰ A control group is chosen using CEM from homes sales in subdivisions not too far from the quarry site but beyond the range of influence. We find no statistically significant effect of the quarry in either model, though in both cases the estimated coefficients indicate, if anything, the quarry raises property values.

A. *The Empirical Model*

For these analyses, we employ the standard regression model for the DiD estimator. Using a log-linear form common to hedonic regressions, the regression equation is,

$$\ln p_{it} = \Delta T \cdot N_i + \delta_0 N_i + \beta_0 + \sum_{j=2}^k \beta_j X_{j,i} + v_{it} , \quad (4)$$

where T is dummy variable equal to 1.0 after the treatment and N_i is a dummy variable for homes near the quarry site (or a continuous measure of distance from the quarry). The estimated coefficient δ_0 measures the difference in average sale prices for homes near the quarry (or the effect of distance from it) *prior to the treatment*. After the treatment, the difference in price between homes near and far from the quarry is $\Delta + \delta_0$. The difference between the two effects is Δ , which is the DiD estimator, as defined in Equation (1), or $\Delta = \delta_1 - \delta_0$. The t-test on the coefficient

³⁹ J. Rieping, *Controversial Quarry Up for Vote*, MADERA TRIBUTE (July 16, 2016) (available at: <http://www.maderatribune.com/single-post/2016/07/16/Controversial-quarry-up-for-vote>); M.E. Smith, *Austin Quarry Approved in 3-2 Vote*, SIERRA STAR (July 20, 2016) (available at: <http://www.sierrastar.com/latest-news/article90713132.html>).

⁴⁰ Lexus-Nexus search conducted on February 20, 2018. B. Wilkinson, *Concerns Over Truck Traffic on Road*, SIERRA STAR (February 21, 2013).

Δ is, therefore, a direct test of the statistical significance of the effect of a quarry on home prices.

As an alternative, we estimate,

$$\ln p_{it} = \Delta T \cdot N_i + \beta_0 + \sum_{j=2}^k \beta_j X_{j,i} + \lambda_t + v_{it} \quad (5)$$

where the continuous *DATE* variable is replaced with year fixed effects (λ_t), which is a somewhat standard treatment of time in the DiD regression. Due to collinearity with the fixed effects, the $\delta_0 N$ term is no longer included in the regression, but the interpretation of Δ is unchanged.

For consistency with the earlier analysis, we also estimate the model specification of the *Hite Report*, adding as a regressor the interaction of a treatment dummy variable for years 2013 and later (T). The regression model is,

$$p_{it} = \exp(\delta_0 \ln D_i + \Delta \ln T \cdot D_i + \beta_0 + \sum_{j=2}^k \beta_j X_{j,i}) + \varepsilon_{it} \quad (6)$$

where the variables are defined the same way as the Murfreesboro analysis (i.e., total rooms is replaced with square footage). The coefficient δ_0 quantifies the price-distance relationship prior to the initiation of quarry operations in 2013. Starting in 2013, the price-distance relationship is measured by $\delta_0 + \Delta = \delta_1$, where Δ measures the *change* in the slope of the price-distance relationship. If the quarry reduces home values near the quarry, then Δ should be positive and statistically significant. Equation (6) is estimated by NLS.

B. *Vulcan Quarry in Gurley, Alabama*

As with the earlier analysis, data is obtained on home sales within a five-mile radius of the quarry location in Gurley, Alabama. The quarry began operations in 2013, and our data spans 2005 through portions of 2017. The sample includes 593 transactions, but we note only 83 are for sales prior to 2013.⁴¹ Since there is no “city

⁴¹ The low samples are likely the consequence of the rural nature of the market and data collection in such areas. We cannot exclude the possibility the sample is peculiar in some respect.

center" in the area, the DCC variable is measured as the distance from the WalMart Supercenter in the nearby town of Big Cove.

Statistical Significance: *** 1%, ** 5%, * 10%

Results are summarized in Table 7.⁴² Many of the coefficients are statistically significant and similar to those estimated using the Murfreesboro data. First, for Equation (6) estimated by NLS, we find that housing prices rise as distance from the quarry increases (the coefficient on lnD is positive), but this positive effect is observed *prior to the beginning of quarry operations*. After the quarry opens, the positive (though statistically insignificant) price-distance relationship is attenuated; the estimated Δ coefficient is -0.103 and the null hypothesis of "no effect" for the DiD estimator is rejected at the 5% level. Prior to 2013, the price-

⁴² Since we do not observe large differences in the characteristics of homes near to and far from the quarry, we do not apply CEM.

distance elasticity is 0.088 (δ_0), but after 2013 it is -0.033 (δ_1), a small effect that is statistically indistinguishable from zero (F-stat = 0.16, prob = 0.69).

Turning to Equation (4), the price-distance relationship is again positive (and much larger than with NLS) but is now statistically significant prior to the beginning of quarry operations. The Δ coefficient is -0.054, which while negative is no longer statistically different from zero at standard levels. The positive price-distance relationship is attenuated after the quarry began operating, but not to a statistically significant degree. The results are similar for Equation (5). Though not summarized in the table, we note that for MReg and RReg neither of the quarry-distance coefficients is statistically different from zero. The SReg results, also not presented in the table, are not wholly unlike the OLS estimates of Equation (4); the coefficient δ_0 is positive (0.331, $t = 4.45$) and statistically significant, but the Δ coefficient is negative (-0.055, $t = 0.98$) and not statistically different from zero.

The lack of robustness to specification leads us to conclude that the most likely effect of the quarry is no effect at all. Also, we acknowledge that the defects in the *Hite Report's* empirical strategy is as relevant here as before: our randomized inference simulation computes a rejection rate on δ_0 of 65% and for Δ of 67% (at a nominal 10% significance level). While we recognize the limitations of the data and the methods, on whole the results are entirely at odds with the claim that quarries reduce housing prices. If anything, the effect is the opposite.

C. Austin Quarry in Madera County, California

Quarry sites often take years for approval. Our model of the Gurley quarry presumed that prices do not reflect the quarry operations until after the quarry is operational. A reasonable argument may be made, however, that home prices might adjust before the quarry opens when the local population becomes aware of the future quarry site. We consider that possibility now.

The Austin Quarry in Madera, California, was approved in September 2016 despite a substantial NIMBY effort.⁴³ A search of news outlets reveals that public attention to proposed quarry initiated in early 2013 and was very active is

⁴³ M. Smith, *Supervisors Approve Austin Quarry 3-2*, SIERRA STAR (September 12, 2016) (available at: <http://www.sierrastar.com/news/local/article101492412.html>).

subsequent years.⁴⁴ Thus, we define the treatment dummy T as having values of one in years after 2013 (and also consider other years). Data is collected for the ten years preceding the treatment date, so the data spans 2007 through 2016.

The Austin Quarry site is well outside of town, but there are two subdivisions proximate (less than three miles) to the site: Bonadelle Rancheros-Madera Ranchos and Bonadelle Rancheros Nine. Both subdivisions abut the major highways (Highways 41 and 145) servicing the quarry site. If any homes are to be affected by the quarry, then these are the most likely candidates, and they represent our treatment group. The dummy variable N takes a value of 1 for these subdivisions (zero otherwise). Visual inspection of the area points to a number of subdivisions in the vicinity that are neither on the major highways serving the site nor within ten miles of the site: Madera Estates, Madera Country Club, Lake Madera Country Club, Chuk Chanse, Valley Lake Ranchos, Madera Acres, Madera Knolls, and Madera Highlands. A control group will be selected from home sales in these subdivisions.

Estimation of the DiD estimator employs Equation (5). Regressors include the age of the home at the sale data (AGE), square footage ($SQFT$), the number of bedrooms (BED) and bathrooms ($BATH$), a dummy variable indicating whether the home a two story home ($STRY$), a dummy variable indicating the presence of a fireplace ($FIRE$), a dummy variable indicating whether the home has a swimming pool ($POOL$). Year fixed effects are included.

Regression results are summarized in Table 9. For comparison purposes and to illustrate the important effects of covariate balance, estimates for both the full and CEM-weighted samples are provided. The models fit the data well for both samples. For the full sample, which we caution does not rely on balanced data, the estimated δ_0 coefficient (0.117) indicates that prices in the treated group were about 12% higher [$\exp(\delta_0) - 1$] in the pre-treatment period. After the treatment, the prices were even higher ($\Delta = 0.166$), a statistically significant result of about an 18% increase. The remaining coefficients are sensibly sized and many are statistically different from zero. A swimming pool, for instance, raises price by about \$38,000.

Turning to the CEM-weighted model, the price difference before the treatment is a bit larger ($\delta_0 = 0.128$), and the difference is statistically significant at standard

levels. As in the full sample, the DiD estimator Δ is positive (0.100), but now it is not statistically significant. For the balanced sample, we cannot reject the null hypothesis that the quarry's announcement effect is zero, though the coefficient is relatively large and the t-statistic is much larger than 1.00. In contrast, for the CEM-weighted MReg, prices are higher in the treated area during both the pre-treatment and treatment period, and both coefficients are statistically different from zero at better than the 1% level.

In the final column of Table 9, we summarize the results from SReg using the full sample. The spatial terms are statistically significant at the 1% level. The results are comparable to the others. Prices are higher in the treated area before the treatment, but we do not see a statistically significant change is seen after the treatment. The DiD estimator Δ is positive and relatively large (0.09), but statistically significant only at the 20% level.

Finally, we can estimate the Δ coefficient for each year beginning with our chosen treatment date (2013), thereby assessing whether that choice is influencing the estimate.⁴⁶ The results by year are summarized in Table 10. Large positive coefficients are observed in years 2013 and 2016 (the latter close to being statistically significant), and smaller positive coefficients for the other years. These results are consistent with those reported in Table 9.

Notably, we do not estimate a price-distance relationship in these equations. Distance from the quarry site is not a regressor. Unlike the distance-based model, the rejection rates for randomized inference (assigning the homes in the treatment group randomly from those in the sample) are very close to the nominal level of the test (11% rejection rate versus 10% nominal test level). The statistical reliability

⁴⁶ The coefficients are year specific and do not quantify the average after the treatment year, as do the results from Table 9.

of this approach is much superior to the price-distance approach used in the *Hite Report*.

Taken together, we conclude from these results indicate that the effect of the quarry may very well be zero, at least in the form of an announcement effect. If there is any effect, it is positive. Whether or not the quarry will affect prices, either positively or negatively, after operations begin (assuming they do) is unknowable at this time. In light of the evidence presented here and in prior research, the expectation must be that there will be little to no effect on home prices and, if anything, that effect may be positive.

V. Conclusions

We estimate the effect of rock quarries on home prices with data from four quarry locations across the United States, a wide range of econometric specifications and robustness checks, and a variety of temporal circumstances from the lead-up to quarry installation to subsequent operational periods. We find no compelling statistical evidence that either the anticipation of, or the ongoing operation of, rock quarries negatively impact home prices. While our study extends the literature on estimating the effects of “disamenities,” primarily as a critique of existing methods, the empirical problem is difficult and likely requires advanced research methods beyond what we provide here. The primary obstacle to estimating these effects is the lack of data and that lack of data is actually driven by the quarry site selection process, which limits our ability to infer a causal relationship. Thin markets and a subsequent lack of sales data are a serious problem since quarries are today (and typically in the past) located, by design, away from residential density.

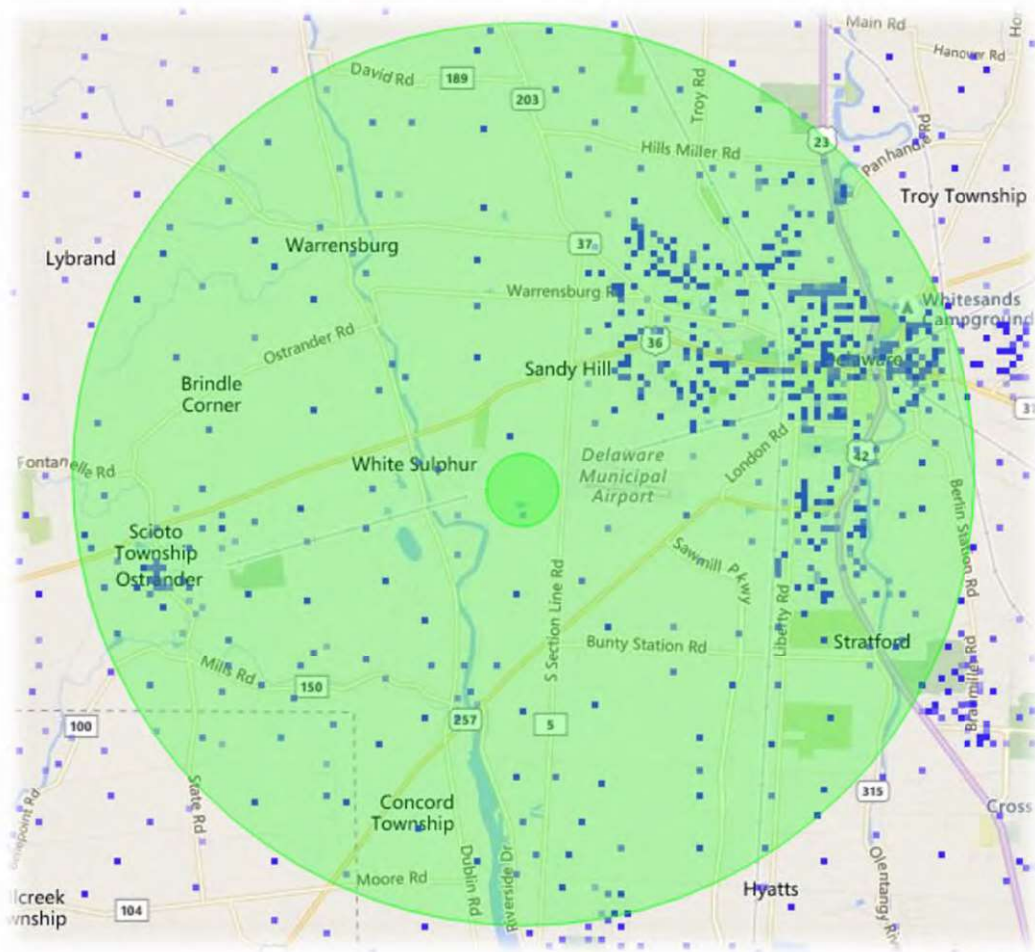

Our study highlights a number of shortcomings in the empirical methodologies generally used to estimate the effect of disamenities on real estate prices. First and foremost, the vast majority of studies do not (or even attempt to) identify the causal effect of disamenities. That is, existing studies are naïve as to the empirical conditions necessary to identify a causal relationship and do not establish credible strategies to estimate the counter-factual outcome – i.e., how the real estate around quarries would have looked, on average, without a landfill or other disamenity. To evaluate the credibility of existing studies and their methodologies, we first employ permutation tests to examine whether or not the existing methodologies yield higher than expected rejection rates of the null hypothesis. We accomplish this by randomly assigning a location in our sample space with a “disamenity” (i.e., a placebo quarry) and then estimate the effect on surrounding home prices. The null hypothesis of “no effect” of the placebo

quarries is rejected in no less than 7 out of 10 simulations, and at a rate as high as 9 out of 10 simulations.

In an attempt to produce a meaningful counter-factual we employ a difference-in-differences estimation strategy which exploits the timing and placement of a quarry. We use this strategy in two different contexts: (1) before and after operations of a quarry in Gurley, Alabama; and (2) before and after local debate (and subsequent approval) of a quarry in Madera County, California. The first exercise estimates the effect of quarry operations on home prices and the second exercise estimates the anticipatory effect of a quarry on home prices. Neither exercise yields evidence of a negative impact on home prices. Given a number of data concerns and model limitations (since our interest is primarily in replication), further research is advised.

MEMORANDUM

TO: Blair Martin, Chairman
Members, Kenai Peninsula Borough Planning Commission

FROM: Max Best, Planning Director 
Holly Montague, Deputy Borough Attorney 

DATE: March 25, 2019

RE: Planning Commissioner Conflict/Bias

Two issues regarding planning commissioner conflict or bias have been raised. Conflicts of interest and bias are two separate concepts. The principles regarding conflict of interest and bias are found in pages 12-15 of the planning commission training manual which are attached. KPB 2.58.040 "voting on certain questions prohibited: is also attached. To be clear the issues raised here have nothing to do with the individual integrity of the planning commissioners.

Following are the facts as staff understands them; the Planning Commissioner involved should correct any factual errors:

1. After the Planning Commission heard the Beachcomber CLUP application in July 2018 and prior to Jeremy Brantley being appointed to the Planning Commission, Hilcorp hired Cook Inlet Construction ("CIC") on a project which required a gravel source. Commissioner Jeremy Brantley is a principal in CIC. The initial gravel source for the Hilcorp project is the same parcel owned by Beachcomber that is currently subject to the CLUP application. A counter permit had been issued to Beachcomber for the extraction work by CIC. The area subject to the counter permit lies within the area subject to the CLUP application. CIC through Jeremy Brantley commenced work on the project and cleared land and established berms. Surrounding land owners complained about the material site. Hilcorp informed CIC to use a different gravel source. CIC terminated work on the parcel. While the relationship between CIC and Beachcomber was apparently terminated, CIC had direct contact with the applicant and worked on the property giving the commissioner intimate knowledge of the parcel not of record with the rest of the commission. Therefore, while reasonable minds can differ on these issues staff believes the better avenue would be for Mr. Brantley to recuse himself from hearing the Beachcomber CLUP application.

2. The Mayor's office received the attached email with an allegation that Commissioner Venuti's business "could" have a relationship with Beachcomber principle Emmitt Trimble. Staff has no knowledge of Mr. Venuti's relationship, if any, with Emmitt and Mary Trimble. There are no statements by Mr. Venuti indicating bias in this matter to staff's knowledge. It is staff's view that Commissioner Venuti should state the nature of any relationship on the record and whether he has an open mind on the question of the permit. If he has made his mind up regarding the permit in advance of hearing the case, he should recuse himself from voting; if he has an open mind and can remain impartial he should hear the matter.

On Mar 14, 2019, at 6:30 PM, Marie Carlton <seaburyroad@live.com> wrote:

Good morning Mayor Pierce. I trust this note finds you and your family well. In concern for the upcoming Planning Commission hearing slated for March 25, 2019, at 1930 at the Borough, I would like you to consider this move for improved balance, proper oversight and fairness. As Venuti and Associates established in 1981 for Inspection and fixed facilities, I am troubled by the potential favoritism to Emmitt and Mary Trimble (Beachcomber LLC, Coastal Realty).

Mr. Franco Venuti's career could have established a close, inappropriate relationship with Emmitt and Mary Trimble over many years resulting in future unethical behavior as a member of the Planning Commission. The possibility of historical and continued contact with Emmitt and Mary Trimble may and could be realized as slanted or partisan support. I believe Mr. Franko Venuti should be recused from any further involvement in current or future issues with Emmitt and Mary Trimble involving the Anchor Point gravel pit decisions. An imbalance in this scenario, moving forward would possibly create inequality and nefarious decisions in nature. Please review and consider this option. Thank you again for the privilege of your time.

Marie Carlton

2.58.040. - Voting on certain questions prohibited.

- A. No assembly member or member of any service area board or commission may vote on any question on which he or she has a substantial direct or indirect financial interest unless an assembly member is not excused from voting as provided in KPB 22.40.140.
- B. The following do not constitute a vote on a question on which an assembly member, a service area board member or commission member has a substantial financial interest:
 - 1. A vote to adopt or approve a variance request, a conditional use request, or an amendment to a zoning text or map, unless the assembly member, service area board member or commission member is directly or indirectly the applicant initiating the request;
 - 2. A vote on the question of recommending, approving or directing a condemnation proceeding;
 - 3. A vote on a question of granting or modifying a franchise, or a vote on a question of setting the rates charged or charged by a corporation, firm or partnership whether under franchise or not and whether authorized by law, ordinance or contract to set or alter such rates, provided the assembly member, service area board member or commission member has an interest in such franchise or rate-setting solely by reason of employment as an officer or employee of such corporation, firm or partnership, and the remuneration of such employment will not be affected as a result of such franchise grant or modification or such rate-setting, and the duties of such employment do not directly or indirectly involve the negotiation or setting of the terms of the franchise or rates; or
 - 4. Provided he has an interest solely by reason of the ownership of stock in the corporation if it is listed on the New York or American Stock Exchanges ownership direct or indirect of less than 5 percent of the outstanding stock or shares in the subject corporation.

(Ord. No. 99-74, § 2, 1-18-00; Ord. No. 83-65, § 1(part), 1983)

7. When should a planning commission member be recused from voting due to bias?

Bias is prejudging a matter. There is not a borough ordinance prohibiting bias. However, quasi-judicial decisions resulting from prejudice, arbitrary decision making, or improper motives may be invalidated under case law. The integrity required of public office holders demands that even an “appearance of impropriety” be avoided. Whether bias requires recusal may vary depending on whether the planning commission is performing a quasi-judicial function as opposed to a quasi-legislative function.

Not all prejudgment eliminates a commissioner’s ability to debate and decide issues. Often the planning commission serves in an advisory capacity on legislative issues, e.g., recommending the passage of a code ordinance which the commission helps administer. For this advisory and quasi-legislative role, it is expected that commissioners have preconceived notions regarding issues of law and policy. For example, planning commissioners are often selected by region because of their familiarity with local conditions and concern regarding land use issues. This type of familiarity is likely to result in the formation of opinions on the ordinances, resolutions, and policies that will be placed before the board or commission, and it is not generally grounds for recusal, but is rather seen as an advantage as the commissioner can educate his colleagues about issues in his district.

The planning commission is acting in a quasi-judicial capacity when it applies adopted laws and policy to an individual’s application. When acting in a quasi-judicial capacity, it is analogous to a judge who must fairly hear and weigh the evidence received and objectively apply the established standards to the facts of the case. Commissioners who have prejudged the facts of an individual case pending before it to the extent that they can no longer be impartial are biased, and their participation in decisions may invalidate the commission’s decision. A commissioner voicing a general opinion regarding certain types of issues does not necessarily mean he will judge a particular application regarding that type of issue without regard to the applicable standards. However, land use decisions are particularly prone to bias because commissioners are drawn from the immediate geographical area and because of the legislative, adjudicative, and political nature of the land use and zoning process.

The bias test is whether a commissioner has actually made up his mind regardless of any argument that might have been advanced at the hearing. Indicators of prejudgment include a commissioner making a clear statement suggesting that a decision has already been reached. The test is objective and queries whether a disinterested observer would conclude that the commissioner has in some measure adjudged the facts as well as the law of a particular case in advance of hearing it. Some cases indicate that the *appearance* of bias, rather than actual bias, disqualifies the board member or commissioner.

Following are types of acts that have been found to constitute bias: (1) ex parte contact with board or commission members;¹ (2) making public statements or authoring letters regarding a particular case prior to the case coming before the board or commission;² (3) paying expenses of board member to make a site visit; (4) vote-trading; (5) soliciting persons to testify for or against a permit or application and (6) gifts given to influence a vote.

It is recommended that commissioners keep an open mind. Commissioners should judge the permit or application based on whether it meets the standards in the borough code or other applicable law or policy which the board or commission is expected to apply. Commissioners should not make conclusory statements on or off the record about someone's application or permit before the close of hearing and the matter being turned over to the board for discussion and decision. Commissioners should ask the applicant, interested parties, and staff questions about the permit application and how it relates to the applicable standards. Planning commissioners should explain their reasons on the record for voting for or against an application. The reasons should relate to the applicable standards.

If a commissioner feels strongly about an individual permit one way or another so that the commissioner cannot keep an open mind and apply the general standards to the individual application, the commissioner should recuse himself from voting.

If a commissioner has made statements that indicate prejudgment of an individual permit or application, those statements should be declared on the record and the commissioner should indicate that he has an open mind and will still apply the applicable standards to the permit or application. Caution: Whether this will cleanse the bias will depend on how strong the statements made were, when and where they were made, and how controversial the particular permit or application is. Since even the "appearance of impropriety" should be avoided if statements indicating bias have been made it may be in the best interest of the decision-making process for a commissioner to recuse himself even if he thinks he can still be fair and impartial. Recusal will best protect the decision's credibility and avoid reversal on appeal based on bias.

¹ Ex parte contact occurs when a commissioner has discussions or correspondence with a party interested in a matter pending before the board outside the application and hearing process. While such private contacts are appropriate and even encouraged in advisory and legislative matters, such contact can fatally undermine a fair hearing process in a quasi-judicial matter.

² Please note that even when the remarks were made prior to the commissioner or board member's appointment, they may still constitute bias. Also, a letter written or statement made in an individual capacity, rather than as a commissioner or board member, showing prejudgment of a particular case may still result in disqualifying bias.

8. When should a planning commission member recuse themselves due to a conflict of interest?

Conflict of interest differs from bias. Bias is prejudgment of an issue pending before the planning commission, i.e., the potential inability to keep an open mind. Bias is not governed by any statute or ordinance. The borough has an ordinance governing conflict of interest which occurs when a planning commission member or an immediate family member has a financial interest in a matter pending before the planning commission. KPB Chapter 2.58 disallows a planning commissioner from entering a contract with the borough unless certain code requirements are met which involve filing a "notice of intent to do business" form with the borough clerk ten days before entering the contract disclosing the conflict, the nature of the business relationship, and specifying the department involved in the contract. Filing a notice of intent to do business, however, does not allow the affected member to vote on a matter where the member has a substantial direct or indirect financial interest in a matter pending before the board. A substantial financial interest is a pecuniary or material benefit accruing as a result of a private, business, or professional transaction with the borough. A planning commissioner is deemed to have an interest in the business affairs of your spouse, spousal equivalent, minor children or dependents, certain companies of which you are a member, employee, officer or director, or if you own more than 5 percent of the stock of a corporation. There are exceptions to the "substantial financial interest" provision including (1) where the planning commission member is only deemed to have an interest because they are an officer or employee of the contracting entity but their pay will not be directly affected by the contract and their duties do not directly involve obtaining, preparing for, or performing the contract duties; (2) where the contract was entered before the planning commission member's appointment, but this would not authorize renewing the contract; (3) where the only interest is stockholdings and the stock is listed on the NY or American stock exchanges or less than 5 percent of the outstanding stock of the corporation is owned or controlled directly or indirectly by the official; and (4) a contract or sale where the total amount paid during the fiscal year does not exceed \$100.00.

Conflict issues are often not crystal clear. There are times where a conflict issue may be raised either by a commissioner about himself or by someone else about a commissioner. The chair can rule on whether the planning commission member has a substantial financial interest or refer the question of the commissioner's participation to the planning commission for a determination. If it is ruled that a commissioner has a conflict because of a substantial financial interest he must not vote on the issue.

RE: CLUP for Material Site, Beachcomber LLC, Parcel Number 169-010-67, 74185 Anchor Point Road

Dear Chairperson,

I own property in the area and I enjoy the peaceful serenity of the Anchor River with the State Parks' camps that are situated on Anchor Point Road. I enjoy riding my bike from the bridge all the way to the end at the beach. I love to ride through the Halibut Campground near the proposed pit, then back up Anchor Point Road.

I read KPB Code 21.25 and 21.29 for the CLUP. Even though they are extremely lacking in substance for such a sensitive environmental habitat, I am strongly opposed to this permit for the following reasons:

1. It will create an unsafe roadway with gravel trucks going up and down the road all day. In the summer it's a congested area with tourists (who don't know where they are), RVs, campers, and boats, pedestrians, strollers, dog walkers, and bicyclists.
2. Gravel flies out of gravel trucks and breaks windshields.
3. The environmental damage to the area - Erosion is bad enough already in the area, and we don't have any information on the impact on wildlife. The dust will be awful - air quality will be diminished.
4. The roads are narrow and have plenty of pot holes and ruts. Heavy, loaded dump trucks will make it much worse.
5. The noise of the operation – digging, loading trucks, equipment running, dump trucks going back and forth within hearing and view of my property.
6. Decreased property values.

I am opposed to this permit. Thank you for hearing my comments.

Sincerely,

Angela Roland

Subject: Anchor Point Conditional Use Permit

Planning Director Max Best and KPB Planning Commission;

This letter is in regards to the 15 Year Conditional Land Use Permit for Beachcomber LLC that is being considered at the March 25th KPB Planning Commission meeting.

I am a resident of Anchor Point. I encourage the Planning Commission to vote NO on this permit.

I have studied the map of the **location** of this proposed conditional use permit to extract gravel over the next 15 years. Anchor Point State Park adjoins this property!

The economy of Anchor Point is already struggling. Our biggest asset and best course for recovery is visitors to our community who recreate in our State Park.

The fishing charters and personal boats launched from the State Park that adjoins this proposed gravel pit are a large draw during the summer season. Gravel pit equipment noise, trucks on the roadway from 6AM to 10PM will certainly disrupt the peaceful beauty of our park visitors and drive them away. Access to the proposed gravel pit is questionable as well.

Anchor Point Beach Road is already too narrow, in abysmal repair and funds for maintenance are non-existent. Gravel trucks on that road will further damage it, making it difficult, at best, for recreational traffic to access the State Park.

A gravel pit will NOT bring prosperity to our community, but only to one party - the owner of the property, Beachcomber LLC. Please encourage the land owner to develop their property in a more meaningful way that will bring them income AND enhance the economy of our community.

Thank you for voting NO on this proposed permit.

Deena Benson

nosnebaneed@gmail.com

PO Box 243, Anchor Point.

Planning Commissioners:

In 1972, Emmitt and I became Alaska residents and in 1975 we bought a homestead near Homer and started the process of creating homesites for the other newcomers. In 1976, we bought a tourist business on the Anchor Point Beach Road, living there for 3 years while also investing in other properties in the area and continuing our business of developing land. We created around 150 parcels for people wanting to live or invest in a small town near the Anchor River and Cook Inlet Beach. It was possible partially because of successful gravel businesses and related jobs that were an integral part of the Anchor Point economy then, and are even more important to our town today.

We take pride in what we have accomplished in our many years here and that we have managed to survive the ups and downs of the economy. Emmitt and I currently own 32 parcels of residential land, 9 residential homes, 1 commercial building and 9 commercial properties for a total tax assessed value of \$3,210,900. In 1991, we started Coastal Realty in order to help others buy and sell real estate. Preserving property values is important to us. We are obviously heavily invested in Anchor Point and we care about the town. We raised our family here. We have one daughter, who is building homes in Anchor Point, and her young family who live adjacent to the proposed material site who will benefit from the CLUP.

We purchased the McGee Tracts in 2015 after managing it for many years. We immediately cleaned up 20 acres of stumps and slash piles to make it the beautiful green pasture for our horses that the neighbors enjoy and want to claim rights to. We also opened up a small bluff area on Denver St, across from a PEU pit, where we found and exposed gravel and built a pad in order to access and use the gravel. It was obvious to anyone passing by what we were doing. Interestingly, at least 7 people that bought their property after seeing that small pit and not inquiring about it, are now opposing our project.

We are long standing members of the National Association of Realtors. The Realtor Code of Ethics, which we abide by, states that we are to “recognize that the interests of the nation and its citizens require the highest and best use of the land and the widest distribution of land ownership.” Highest and Best Use is defined as the likely use, selected from a number of available choices, to which an area of land may be put, based on what is physically possible and in compliance with zoning and regulations and which produces the most profitable present value of the land and likely to produce the highest return to an investor.

KPB 21.29 attempts to balance a variety of public needs, including residential area protection, a private party’s right and ability to use their land to its highest and best use, and the public’s need for gravel. Whether one agrees or not with KPB 21.29, it is the law and standards that control what the Planning Commission can or can’t do. This is about ensuring there is a fair process that abides by the existing code. If a governmental body acts in violation of the code or statute the rule of law is undermined and that is harmful to the overall democratic process.

There has been testimony and letters from the “organized opposition” containing hearsay, inaccurate, untruthful, unsubstantiated assertions about our application, the neighborhood, and issues unrelated to the code and potential effects that may or may not result from our mining project. It is disturbing the lengths some people have gone to – gross exaggerations and disparaging remarks about us and the Borough. Claims that fishing and tourism is the life blood of Anchor Point and that the town would dry up without it is simply not true. It is a huge insult to the many year round hardworking people and businesses such as the grocery stores, restaurants, gravel businesses, contractors, thrift and pawn shops, gas stations and more that are the real contributors.

This has been a very costly and unpleasant experience for all concerned, much of it unnecessary. The process is obviously flawed as shown by the fact that unsworn testimony containing unsubstantiated claims can sway the Planning Commission to go against the code, the professional staff recommendations and the borough attorney's opinion. It is a fiduciary obligation of the Planning Commissioners to thoroughly read and listen to what is presented, dismiss any irrelevant information, and make an informed decision based solely on the code and substantiated facts.

With the CLUP we will only be a small "Mom and Pop" business and are not intending, able or willing to even try to compete with the large operations. It just isn't practical. The 27.7 acres that would be permitted, less the buffers, is actually less than 20 acres and is planned in 3 phases and will be reclaimed as progress is made as stated in our application and is required by the state. As mentioned before, our prime use for the gravel will be to improve our other properties and sell some gravel to the limited local area market.

We believe in "Rights with Responsibilities" and this is a situation where we are agreeing to take on responsibility in exchange for the right to excavate gravel on our property. The "opposition" wants the right to protect their property but are unwilling to consider/accept the fact that they have a responsibility to do what they can to minimize visual and noise, if it is bothersome, by building a fence or berm on their property and/or installing blinds that raise up from the bottom so they still have their Inlet view. They do not have rights to our land, so we should not bear all the responsibility for mitigating their perceived discomfort for how we use it.

We are responsible stewards of the land, we have a good track record of that, and believe we have a right and duty to use our property in a responsible way that results in its "highest and best" use. Our commitment to putting the berm closest to the excavation site, as suggested in the staff report, will eliminate any visual issue that the few neighbors might have, that are at a higher elevation.

This unique parcel is a legacy property for our family and we desire to build a home on it. We would like to continue improving it and other properties we own but in order to do that we need the CLUP so we can use the gravel resource this property contains.

So, this is who we are and what we are about. We want a future here for our grandchildren. We are builders/constructors, who have spent a life time building and now are up against destroyers/destructors that want to impede or stop legitimate development and accept no responsibility for mitigating their perceived issues on their own property.

At this hearing on the 25th, you will again be bombarded with the same type of rhetoric you have heard before - emotional testimony with unsubstantiated claims from the same people and those they have recruited who are uneducated to the facts of the code. They are sure they can overwhelm you again and you will believe them again. It is the responsibility of the Planning Commission to abide by the borough code when it is complied with, by the Applicant, Beachcomber LLC.

Respectfully submitted,

Mary Trimble, Trustee

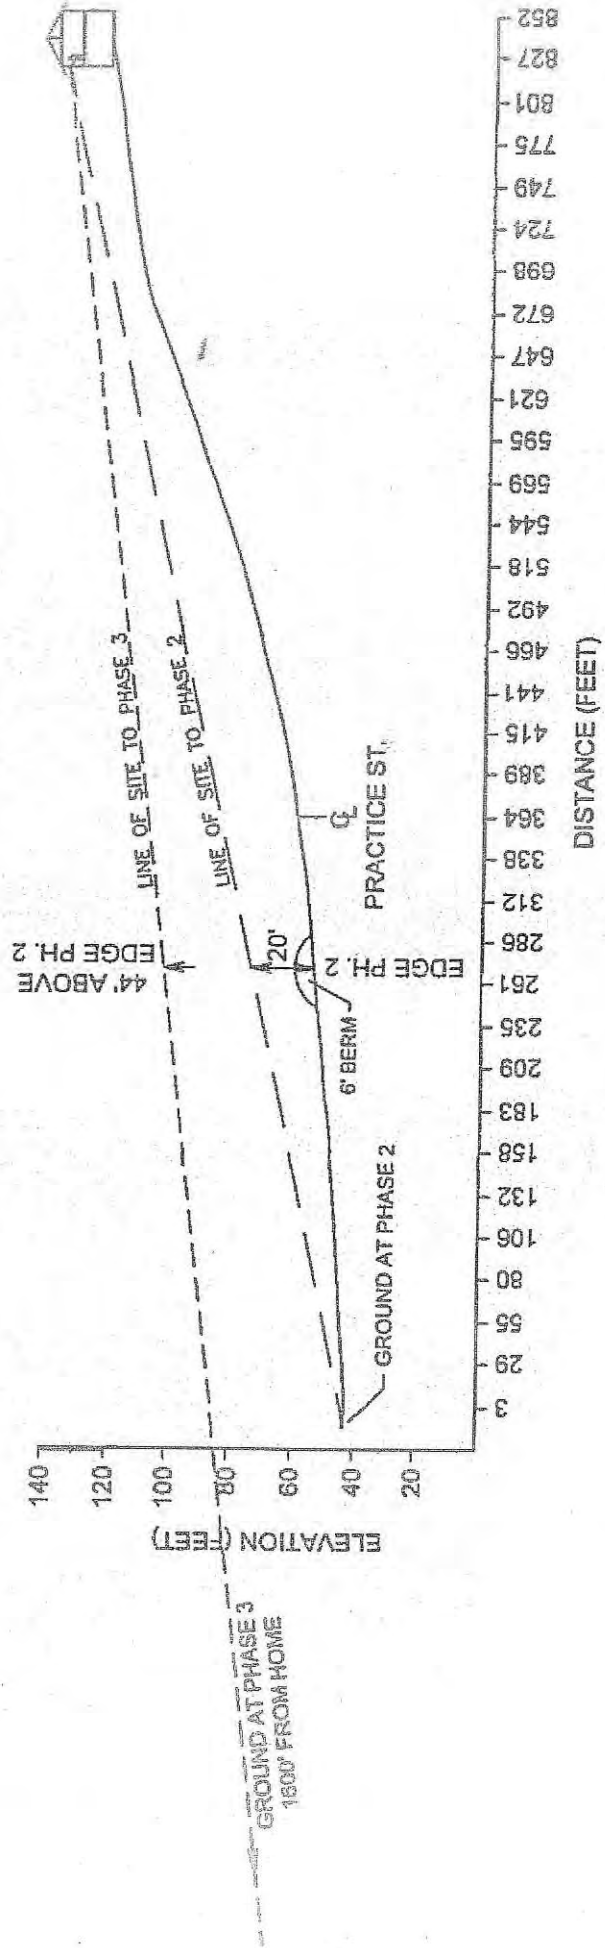

Beachcomber LLC

There is an elevation map in attached that clearly shows that the subject area is not akin to a bathtub or an amphitheater.

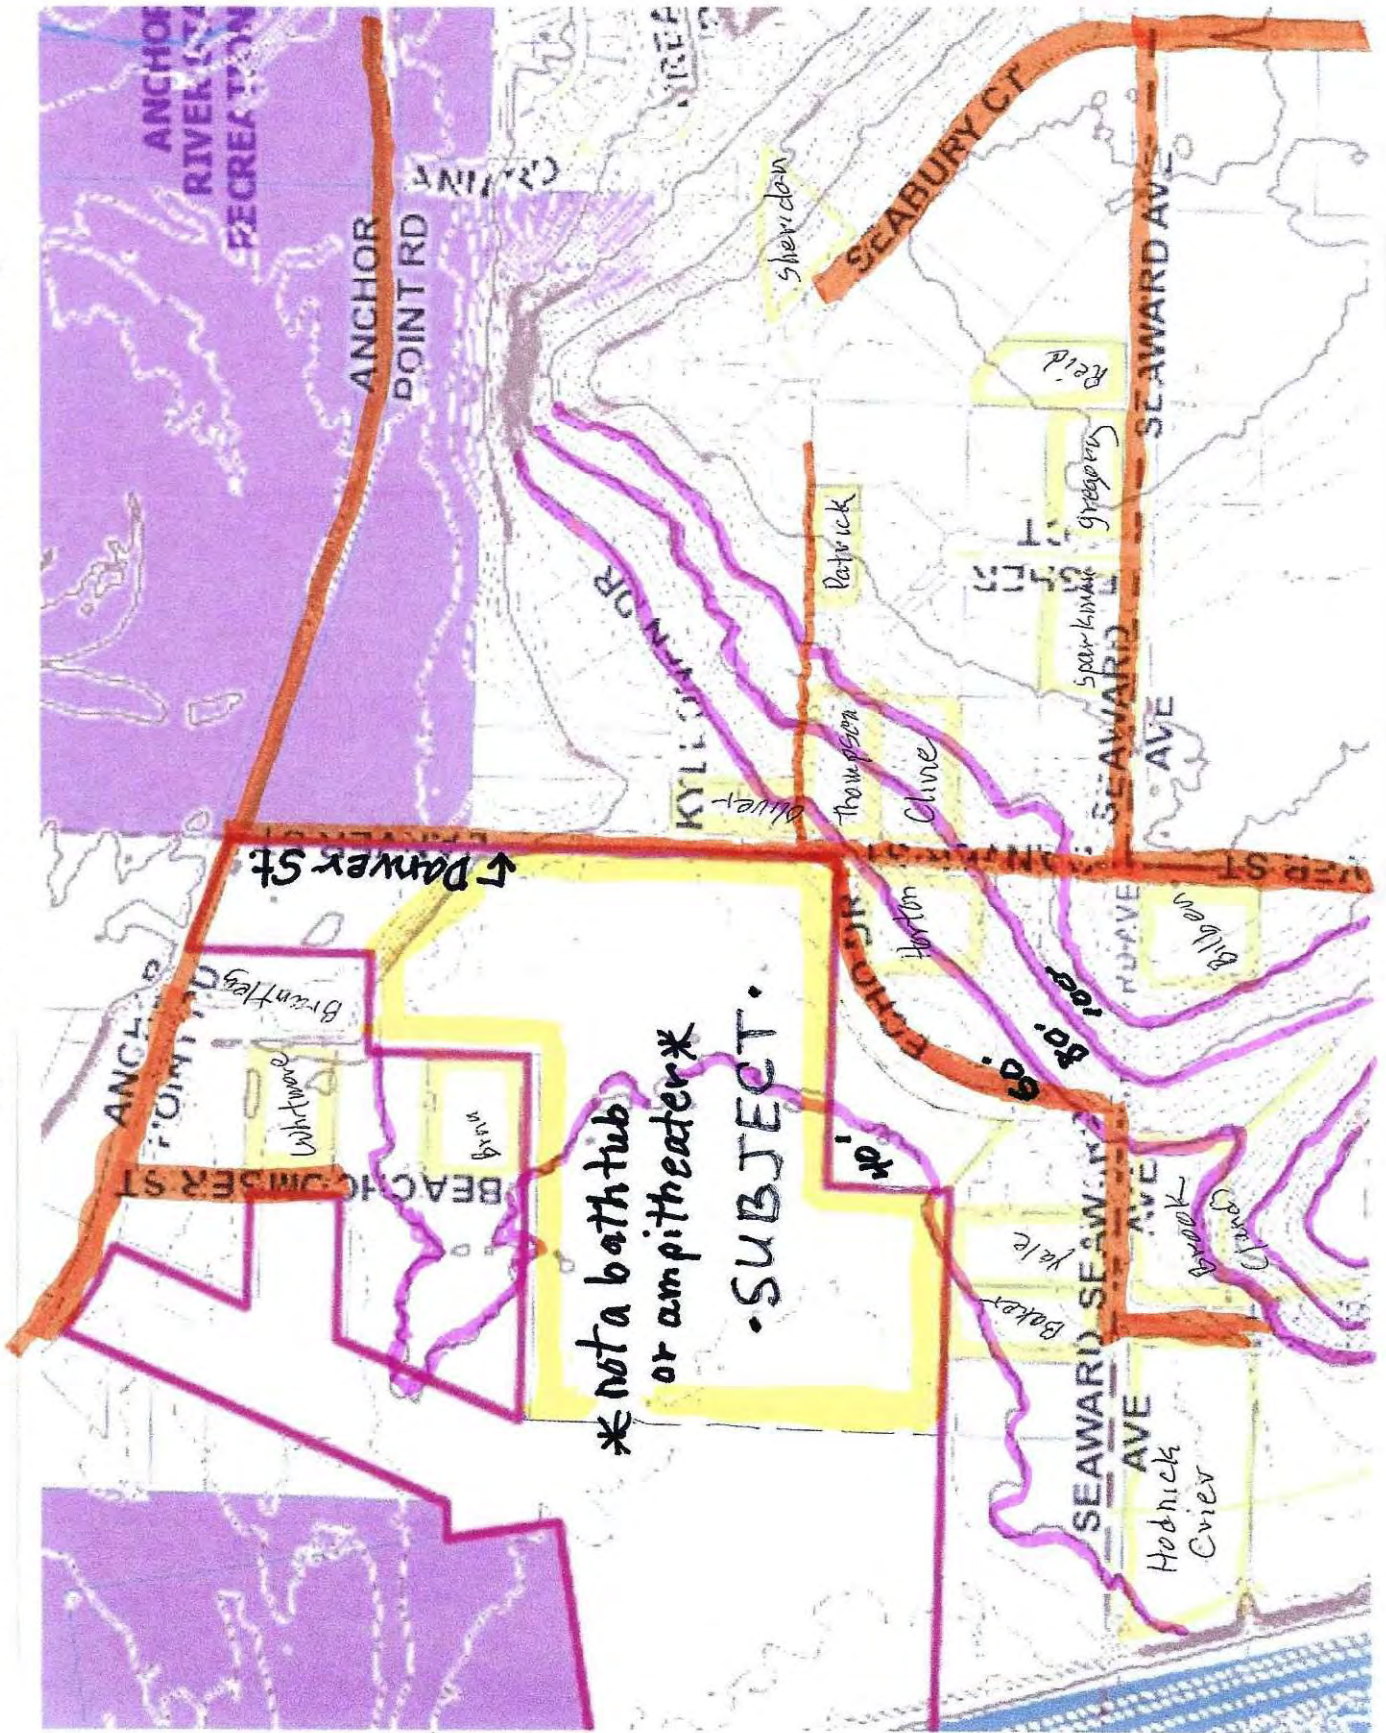

Also, in your packet is a drawing submitted and created by members of the opposition that intends to show that a 6' berm at the property line would do little to minimize visual and noise impact, when in fact the staff recommendation (see #14G and J) is to place a 12' berm between the extraction area and the vegetative buffer which will effectively minimize sound and visual impacts.

Subject: Beachcomber comments

To Planning Commission Members:

Emmit Trimble always likes to talk about all of the stupid neighborhood people who purchased view property (often from or through his company) next to an operating PEU gravel pit. The listing below is that “operating” pit. Think he might be stretching the truth just a bit... We purchased our land on Denver Street in 2003 and since then the owner of that property did some landscape work and made the “lake” deeper, but there has been no commercial mining there since we bought our property 16 years ago. Denver Lake Retreat, as it is now called, was the only property on Denver Street that had visible signs of gravel mining, it is less than two acres, and it was for all practical purposes mined out decades ago.

One thing Trimble points out in his comments is absolutely the truth—this area is a historical gem. Since the days of Captain Cook white settlers and adventurers have moved through here and prospered. Prior to that time there is evidence that Native populations spent time living on this very parcel that he wants to turn into an industrial gravel mine. Archeologists have confirmed that this parcel is rich in history, and contains both artifacts and burial sites.

The mentality of a person who would permanently disfigure this historical gem in the middle of what has now become a residential area in the middle of a recreational Mecca becomes apparent through his words and his actions. In his comments he advises existing neighbors overlooking his “mine” to invest in heavy insulated blinds if they don’t want to see his atrocities—I think that’s his idea of a “good neighbor” policy! One common complaint about gravel pits is that they eventual become dump grounds and depositories for any number of unwanted, or undesirable commodities. Well, it seems that Trimble isn’t going to disappoint anyone there. The bottom picture is taken from Denver Street looking west at his land. The pile you see was deposited by Trimble last year and you can see what a good steward of the land he is by the contents—got old crab pots and other crap to get rid of, that’s easy, just dump it in the “pit”!

Yes, the KPB Code spells out conditions that are required for issuance of a CLUP, and what I have written here addresses none of them! My point being that there are hundreds of legitimate reasons to not allow a gravel mine that is so detrimental to neighboring property owners and to the thousands of visitors who come to this area every year—BUT—the Planning Commission has the authority, and the mandate to stop this ill conceived project by recognizing and enforcing the conditions of KPB 21.29.050 which can not be achieved with improperly designed buffers and berms.

RE: Comments on Conditional Land Use Permit for Material Site; Beachcomber LLC; 169-010-67; Remand on Appeal

I am again providing comments on the referenced Land Use Permit application. I originally provided comments on July 12, 2018 and I testified at the Planning Commission Hearing on July 16, 2018. I also filed notice in support of the original Commission decision in response the applicant's appeal.

First, I want to note for the record that I am disgusted with the KPB gravel pit regulations and the actions of Planning Department staff. The regulations and the process are stacked against adjacent property owners and meaningful public comment in favor of gravel pit developers. The regulations do little to protect property values or uses adjacent to gravel pit locations. Many property owners go outside in the winter, and they are therefore unable to fully participate in hearings or meetings. Additionally, Planning Department staff have been less than honest with adjacent property owners.

I am opposed to development of a material site and approval of a land use permit at this location. I request that the KPB deny the permit application.

I am the owner of the residential parcel (PID 169-022-08), which is immediately to the north of the proposed processing area and which is bordered by the proposed material site on two sides.

I purchased this property in 2001 and installed an access road and pad several years later. My intent was to build a cabin at this location when I retired and spend a good portion of the year there. I fully retired in 2015, and I began investigating building a cabin on my property at PID

169-022-08. However, I put those plans on hold when I first heard about the proposed gravel pit. I discussed this with the applicant's daughter who told me that her parents had no plans to develop a gravel pit. At about the same time the applicant began mining gravel on a portion of his property.

I offer the following specific comments with regard to compliance with Borough regulations at 21.29.

1. According to KPB 21.29.040.A, "These material site regulations are intended **to protect against** aquifer disturbance, road damage, physical damage to adjacent properties, **dust, noise, and visual impacts**. Only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards: 1. Protects against the lowering of water sources serving other properties; 2. Protects against physical damage to other properties; 3. Minimizes off-site movement of dust; 4. Minimizes noise disturbance to other properties; 5. Minimizes visual impacts; and 6. Provides for alternate post-mining land uses." These regulations are internally inconsistent in that they are intended to "protect against dust, noise and visual impacts," yet the individual standards only require off-site movement of dust be minimized, that noise disturbance to other properties be minimized, and that visual impacts be minimized. Therefore, in my comments which follow, I will focus on the more stringent requirement which is "**to protect against**."
2. Approval of the proposed material site application will preclude me from building a cabin because of noise, dust and visual disturbances which is contrary to the regulations. Nothing can **protect** my property other than no gravel pit. Additionally, a material site will significantly diminish my property value and will impact my ability to sell this property. Development of a material site at this location effectively constitutes a taking of a significant portion of my property value and my enjoyment of this property. Imposition of the conditions set forth in the regulations are not sufficient to **protect** my property.
3. The idea that construction of berms or retention of vegetative buffers, as required by the code, can protect my property or other adjacent properties against the noise, dust, or visual effects of a gravel pit is ludicrous. The only method available to mitigate the adverse effects of noise, dust, and visual effects as required by the code is no pit or increased and adequate distance. In this case increased distance is impossible which leaves only the no pit alternative.
4. The proposed onsite processing area is located 200 feet south of my parcel 169-022-08. I disagree with the statement in the public notice that my parcel is "undeveloped." I have constructed a road and building pad. I have not proceeded with construction of a cabin because of the threat of gravel pit development. I am caught in a "catch 22 situation." I would be an idiot to build a cabin for spring, summer and fall use, which is exactly the period of time when gravel would be mined. I also note that while I presently do not camp on this parcel, I do let friends camp there during the summer, and I camped there many times in the past.
5. According to KPB 21.29.050.A.2.c, "At its discretion, the planning commission may waive buffer requirements where the topography of the property or the placement of natural barriers makes screening not feasible or not necessary. Buffer requirements shall be

made in consideration of and in accordance with existing uses of adjacent property at the time of approval of the permit. There is no requirement to buffer the material site from uses which commence after the approval of the permit." As I previously noted, I put my cabin construction plans on hold because of the threat of gravel pit development, but I did construct a road and pad, and friends camp on my property. Therefore, my recreational use of my property has proceeded the application for a gravel pit, and therefore buffer waivers are not appropriate.

6. According to KPB 21.29.050.A.3, "In the case of a CLUP, any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries. At its discretion, the planning commission may waive the 300-foot processing distance requirement, or allow a lesser distance in consideration of and in accordance with existing uses of adjacent property at the time." The planning commission should not waive the 300-foot processing distance requirement from my property boundary because it would further preclude my use and enjoyment of my property. As mentioned in the previous paragraphs, my use of my property has proceeded the gravel pit proposal.
7. According to KPB 21.29.050.5, "Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission based on the following: a. Certification by a qualified independent civil engineer or professional hydrogeologist that the excavation plan will not negatively impact the quantity of an aquifer serving existing water sources. b. The installation of a minimum of three water monitoring tubes or well casings as recommended by a qualified independent civil engineer or professional hydrogeologist adequate to determine flow direction, flow rate, and water elevation. c. Groundwater elevation, flow direction, and flow rate for the subject parcel, measured in three-month intervals by a qualified independent civil engineer or professional hydrogeologist, for at least one year prior to application. Monitoring tubes or wells must be kept in place, and measurements taken, for the duration of any excavation in the water table. d. Operations shall not breach an aquifer-confining layer." Compliance with this condition cannot presently be determined because the applicant has not yet gathered the required the required data or conducted the required studies.

I also offer the following additional comments.

1. This is a residential and recreational area and it is inappropriate for the KPB to allow development of a material site at this location. A material site will significantly impact property values and use and enjoyment of residential and recreational property, including the Anchor River Recreational Unit, a part of the State Park System. A material site will conflict with existing residential and recreational use of the area.
2. There is considerable recreational use of the Anchor Point Road and Denver Street by people, including children, walking, running, walking dogs, bicycle tours, and riding bikes in the summer. Use of these roads by gravel trucks is a disaster waiting to happen.
3. Relative to the effects of a gravel pit on adjacent property values, I am no expert on this subject. However, I wonder how many planning commission members, borough staff,

- or anyone in their right mind, would purchase property or build a cabin adjacent to an active gravel pit which is allowed to operate between the hours of 6:00 am and 10:00pm for 15 years? If there is anyone, I would be happy to sell them my property.
4. I believe the material site contains historic and archeological resources of concern. There is an old homestead wagon road on my property which goes on to the material site property. I have observed house and cache pits on the material site property in years past. I have heard there are also old graves on the property. I believe the Borough should further investigate this issue.
 5. If the applicant had decided to subdivide his property and put in residential lots, no one would have said anything. We could all live and recreate in peace, and we would have all saved a lot of money and aggravation.
 6. The staff report was posted to the Planning Commission website on March 18, 2019 (or that is when I first saw it). I have not had adequate time to review the 332 page report. I do know that it contains one report on the effects of material sites on adjacent property values. A quick glance at the report titled "Quarry Operations and Property Values: Revisiting Old and Investigating New Empirical Evidence" by Ford and Seals, leads me to believe this paper was not published in a peer reviewed, scientific journal and that is a propaganda piece for the industry. I further note that one of the studies cited in the report was related to a material site about 3 miles from several subdivisions, and not 300 feet. I have not had time to research this issue, and it is likely that other studies might show that material sites have a detrimental effect on adjacent property values. I can also say that I have absolutely no confidence that bought staff has adequately researched this issue.

Thank you for taking my comments under consideration.

Sincerely,

A handwritten signature in blue ink, appearing to read "Philip J. Brna". The signature is fluid and cursive, with the first name "Philip" being the most prominent part.

Philip J. Brna

To: KPB Planning Commission
From: Linda and Mike Patrick, Anchor Point parties of interest
Subject: Proposed Beachcomber LLC gravel pit
Date: March 18, 2019

*?? Notice From Planning Department: Planning Commission will approve permit and it includes the gravel processing area previously denied? Should we even bother to write this? Has the Commission considered getting input from **the Anchor Point Advisory Commission, which is now functioning with a quorum?** I am sure they have not had time to thoroughly read the 300+ pages just put out. I would guess that the other parties of standing won't have ample time to digest it nor will the Planning Commission themselves have the time.*

Aquifer Protection: We would really appreciate some expert opinion (Hydrologist) to verify no damage to water table and natural springs in the immediate area. I am sure you are all aware of the existence of the spring fed water system that is in the area. How about a clear determination of seasonal water levels?

Physical Damage to Adjacent properties (*Big question here*) Two real estate representatives told us that our property will be devalued. The first was Emmitt Trimble of Coastal Reality. To verify that he was being truthful, I had a property evaluation done by Kachemak Realty on our house and two lots. The agent estimated a 30% reduction in value because of a pending gravel pit being so close, compounded by it being located in direct line with the spectacular view. **Estimated damage to our properties \$140,000. Who would be responsible for this damage? KPB or Beachcomber LLC?**

Road Damage: **All traffic**, homeowners, tourist, campers, fishermen, people on foot and bicycles have only one route here. (River Road & Denver Rd) Has the Planning Department obtained written assurances from DOT that Anchor River Rd is safe for this heavy commercial traffic and that its already crumbling surface will not be destroyed by this large increase in heavy vehicle traffic? Also, has the Planning Department presented an estimate to you of the cost for increased grading and repair for the Denver Rd. in the area of the pit entrance and the intersection with Anchor River Road? Has the Planning Department requested additional money for warning signs and modifications to Denver Rd to allow dump trucks to make the turn off of and on to Anchor River Road without crossing into oncoming lanes?

Noise is defined as an unwanted sound. Do any of you want the sound of a fully operational gravel pit in your neighborhood? I am going to guess that 99% of you don't want it were you live. Therefore, gravel pits produce noise. No matter how you craft your legal language this pit will bring noise to this Anchor River residential, recreational, tourism area. (Imagine camping next to an operating gravel pit.) The

pit will be a point source of noise and dust, while operating gravel trucks will be a mobile source of noise and dust that will move through much larger areas of the neighborhood. There is only one route to this proposed pit location, it is also the only route to tourist attractions at the beach, public and private campgrounds, beach launching for fishing charters and to our homes. This route also has foot traffic and bicycle traffic. In addition, these mobile platforms, average width at the mirrors is 9.5 ft., will move down a road that is narrow, with no shoulders, and literally crumbling apart. These trucks will then turn on to a gravel road that requires frequent grading by the Borough with just normal community traffic. (Note: you wouldn't believe the noise the grader makes.) These mobile sources of noise will also add **Particulate Matter** to the air as they travel on Denver Rd. They will add **PM** all along the route including the Old Sterling Hwy. (Note: Old Sterling Highway has a very steep grade, many sharp curves, several driveway entrances and intersections, little to no shoulders, and several homes lining the road.)

This area of the Peninsula's coast provides natural land contours, cool moist air at sea level, and wind. These conditions serve to increase the speed and amplitude of sound. The commission is aware of the phrase amphitheater effect in verbal and written statements submitted to you. Noise that escapes the pit will reflect off of the hillsides above the 44ft pit level (Note: land around the pit site rises up to over the 100ft level.) these hillsides provide large sound amplifying structures. The unwanted sound, AKA Noise, will reflect off these hills, off houses located there and even tree trunks will contribute. When the noise reflects it will collide with other sound waves causing constructive interference. *This type of interference will serve to amplify other sound waves, which increases the noise level. These factors explain why noise will not be minimized.* This noise will become even more disturbing with the added noise of the mobile noise emitting diesel-powered dump trucks. Don't forget the haul trucks high frequency back up beepers, we can all agree they are truly unwanted sound.

Why don't we talk about negative health effects of noise and dust? Ask your planning department to provide you with data on this subject. Check out the web and see what the AK DEC says about dust in rural Alaska. Read up on the new name for dust, Particulate Matter, especially, *PM_{2.5} and PM₁₀*. Did you know that diesel engines are major producers of PM_{2.5} and that it can transport in the air 30 to 100 miles? In addition, both of these PM's when breathed in can be very harmful, particularly to children and older people.

Questions:

1. Are there any old people that live near the pit?
2. Can short-term exposure to these particles be harmful?
3. If somebody camps near a gravel pit for a few days can it be considered a short-term exposure?
4. Is there an elementary school located within 2 miles of this pit site?

5. Are there daily sea breezes that blow up the river that are capable of carrying PM to the Anchor River Inn, Chapman School, Dental Office, Trooper Station, New SVT Health Clinic, Blue Bus, Ramiro's, Warehouse Store, *Costal Reality*, and the thousands of people who travel to Homer in the summertime?

6. Will the pit negatively affect 100's of people or 1000's of people? **By the way, how many pits are concentrated in the area?**

7. Will the noise and dust nuisance affect the moose, eagle, gull, and magpie populations?

8. Will the pit have any negative affects on the nearby Anchor River or the microorganisms along Cook Inlet?

9. Is there anything remarkable about the location proposed for the Beachcomber pit?

10. Have any of the commissioners visited this site to gather first hand impressions of what our objections are? Please come. People here would appreciate your interest. Break bread with us, look at where we live, maybe you will understand why we are committed to this issue and will not give up.

11. Do the material site codes protect the people who live here from the negative affects of gravel pits or do they just protect the gravel pits from people who just want to live here? (Hint: How many permits have been approved vs. denied?) THE PIT IS MOVING INTO AN EXISTING NEIGHBORHOOD. THE PIT IS THE NUSIANCE THAT THE COMMISSION AND THE ASSEMBLY ARE REQUIRED TO PROTECT RESIDENTS FROM!

21.29.040 A States the following:

These material site regulations are **intended to protect against** aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. The next statement, in my opinion, is absurd in the real world. "Only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards:" This statement implies that every physical location on the Kenai Peninsula has the same characteristics. **It is very safe to say that the Peninsula is not identical in terms of topography, wind currents, temperature, soil content, infrastructure access, population density, recreational opportunities, tourism, etc.... Perhaps this is why KPB has a material sites committee investigating the code. Maybe the ASSEMBLY should not allow any new pits to be grandfathered in until this process is completed and thoroughly reviewed by all interested parties.**

I applaud the Planning Commission for recognizing immediately in the first permit review of the Beachcomber pit request at this location is not feasible for gravel mining. This location does not permit the **intent to protect concept** of 21.29.040 to be carried out, the laws of physics cannot be denied when it comes to light (visual) and sound. Basically, all you need are eyes and ears to gather data on these two areas of concerns. The Commission was presented with hours of testimony and 100's of pages of objections presented in advance by parties of interest who have both the eyes and ears to collect data on sight and sound. The planning commission was correct in its conclusion. The decision was sound and based on solid testimony and written submissions of persons with standing in this matter. If these presentations, both written and oral, don't have legitimate standing, why is this process even here? Is the KPB legal advisor working with the commission or against it?

Paradox: Where is the data that supports the pit will not impact this area as per the six areas of protection? Yet they argue the pit permit must go forward because the motion was not worded correctly, not because the Planning Department has gather sufficient data to insure the protection that is supposed to be provided by 21.29.40. A paradox exists when the hypothetical solutions of 21.29.50 can't account for real observations. The topography of the land is a major factor that won't allow protection from visual and noise impacts to the neighborhood. The topography and prevailing sea and land breezes will drive PM into our homes, parks, businesses, school, and health services. Show us the research and data that this won't happen. At least show us how these concerns were investigated. You should have to convince the citizens not the other way around! Now, the Pl. Department has informed us that the permit will more than likely be approved at the next hearing in advance of the hearing and that the rock processor that was denied at the last hearing is back in. Wow, now more noise is being added. **Why did KPB send out letters to notify people and entities that a permit was being sought and if you had objections come forward? Apparently, pit permits can't be denied and therefore the people have no say in their own lives!**

According to a 2006 public document from Dibble Creek to then Mayor Williams of the Kenai Borough, once the permit is issued the Borough becomes liable for the protections in 21.29.040. If gravel pit interests say you are liable for what they might do, then you have the right to say no on our behalf because we, KPB, can't provide protections to the people of Anchor Point at this particular location due to special circumstances. Take some time to answer some of the questions we have asked. It might help you define specific reasons. **Please! "Do the right thing."**

Respectfully Submitted,

Linda and Mike Patrick

Subject: Gravel Pit near Danver road

Hello Bruce,

I'm writing with regards to the Danver Road gravel pit application.

The proposed gravel pit goes against borough codes for a conditional land use permit. The buffer and berms would be inadequate against dust and noise, on top of being a eyesore to residents that live nearby. Residential property values would decline if this gravel pit were granted. I urge you to stop this project from happening.

Respectfully,

Mark Schollenberger

RE: Anchor Point Beach Access Road

To whom it may concern:

I am a lifelong Alaska resident, born 4/1/1954 in Fairbanks. In 1979 I purchased property off the North Fork Road. Before the bridge was built crossing the Chakok River, I built a small log cabin with my land partner, crossing the river by walking across a fallen cottonwood tree and hiking a mile to the cabin site. Obviously, Anchor Point has changed a lot since then.

I'm now very concerned about a gravel pit being planned off the beach access road near the mouth of the Anchor River. The road from the Anchor River Inn to the beach is heavily used throughout the year, and especially in the summer by families, fishermen and local residents. It provides access to the beach, several campgrounds and residences. The road is narrow. And though paved, is not a road that should be used by heavy truck traffic.

The gravel pit proposed by Emmitt and Mary Trimble, and the resulting large truck and excavating equipment traffic, poses a hazard to visitors and residents who visit, fish, camp, and live in the area. I would encourage the Planning Commission to deny a conditional use permit for excavating and hauling gravel and fill in this area. Thank you.

Sincerely,

David S. Anderson

Subject: Emmitt pit application

This is gary and sandy cullip at the end of seaburry. we own 2.5 acres over looking the site where the proposed pit is located. There is no way you can issue this permit as there is two conditions that no way can be met. The noise and visual parts cannot be met for any of us many property owners so please pay attention to the current regulations for gravel pit applications as they are very specific as need to be met!!!!

Thank you gary cullip

Sent from my iPad

Dear Borough Planning Committee,

You are about to *reconsider* the permit for the Trimble/Danver gravel pit, to start operating right in the middle of our main recreation sight with world class steel head fishing, beaches, camping sites and small businesses, all related to recreational activity in Anchor Point.

By allowing this mining industry to go ahead, you would be, at the same time, condemning many other established businesses in Anchor Point to dismal futures. There are people, before Mr. Trimble and his pit idea that have put their savings into ventures of their own, related to the interests and betterment of Anchor Point. These businesses invite people into our town and utilize restaurants, food stores, bait shops, Air BNB's, Inns, campsites and boat launch. By allowing a mine to come into Anchor Point tells all these already established proprietors that what they envision for Anchor Point matters less to you than Mr. Trimble's enterprises.

We all know there are some businesses that are NOT appropriate or compatible operating next to others. A gravel pit like the one proposed is one of these types of businesses. A gravel pit operation does not stay within its property lines. Its affects go way beyond to miles around, i.e. noise, dust, water, esthetic pollution. What Anchor Point stands to get with this gravel pit is:

1. Large amounts of dust to our town as the wind blows which is pretty steady at the beach. (Certainly not a good place to be outside)
2. Pollution to the already vulnerable Anchor River without proper study and guidelines for the pit
3. Traffic problems and damage to road and bridge with huge gravel trucks traveling back and forth while boats head to the

beach for launch, also, more danger to pedestrians walking along the beach road who are utilizing the camping areas.

4. The bottom line of other businesses will be adversely affected.

5. Anchor Point will become a less desirable destination and you may as well head on down to Homer.

6. Loss of habitat for birds and wildlife in the area of the pit boundaries and way beyond the pit with noise air and water pollution.

Permits like this should not take a lot of thought or even a second consideration. As a resident of Anchor Point, I feel we seem to always be in defense mode just trying to maintain our quality of life from more and more gravel pits, Hilcorp drilling within residential areas, property theft, drug trafficking and now the possible closure of Chapman school. I feel like every other month there is something new we need to defend and protect our quality of life and homes against in this community and so far it really seems like we are not winning.

The decisions you make on this committee are very impactful to the viability and growth of Anchor Point. I have personally had second thoughts on my business idea and even whether to continue living here. I encouraged many other people looking outside of Homer for residency to join us in Anchor Point but they changed their minds, every time, because of the large amounts of gravel pits and drilling and the lack of authority we have as citizens of Anchor Point to do anything about it. Just because someone comes to the committee with an idea for a business like this does not mean it is good for the entire community or supports the community and other businesses. Do not allow this permit to go through and shut it down for future consideration once and for all. Do we really need ANOTHER gravel pit? Do a Google search and see what you

think. I think gravel is pretty well covered now in our area. Mr. Trimble, being a realtor, could develop this land a lot better than this or sell it and let someone else do it, and become an asset to the rest of the community instead of destroying acres and affecting the all the residents of the Anchor Point so adversely.

Anchor Point is full of good, hard working people who deserve better consideration from the committee when it comes to permitting. We like the beach, the river, quiet starry nights, great fishing and wildlife. We also want the chance to see our town develop with new, clean, businesses that do not destroy the environment.

I would just like to add; it is well known this area is a big draw for birders. There are large amounts of birds that migrate and nest in this area. People come year round to Bird. Every year there is an influx of 3 to 4 thousand people to Homer and Anchor Point during the Shore Bird Festival. Anchor Point Beach and marsh ponds along the Old Seward Hwy are ALWAYS highly recommended to those birders...gravel pits are not compatible to bird life and bird viewing.

Subject: Anchor Point Danver rd gravel pit proposed by Beachcomber LLC

Kenai Peninsula Borough Planning Commission
144 N Binkley St Soldotna, Ak 99669

March 19, 2019

Greetings to the Planning Commission Members,

Regarding the CULP for Beachcomber LLC in Anchor Point Ak on Danver Rd.

As you can see from the map below it is pristine area filled with State campgrounds and Rv parks.

My husband and I live in Anchor Point above (100 ft above) the proposed gravel pit area. We are Alaska residents.

Before you again is the Conditional Land use Permit Application for sand, gravel and peat extraction of 25.6 acres over a 15 year period by Beachcomber LLC which is owned by the realtors Emmett and Mary Trimble of Coastal Realty Anchor Point.

We are Very Thankful that you listened to us at the first Planning Commission and denied this CULP permit to Beachcomber LLC. Since it is before you again we Hope You all will go thru each and every letter and picture and deny the permit again based on conditions that it is not possible to “minimize.”

Definition of minimize is:

reduce (something, especially something unwanted or unpleasant) to the smallest possible amount or degree.

Minimizes off-site movement of dust

Minimizes noise disturbance to other properties

Minimizes visual impacts

As for Code number 2.....

Protects against physical damage to other properties.

The our property value will decrease which is “physical damage” to each of us property owners.

This CULP permit will destroy our Anchor Point neighborhood, the State Parks and beach area of the recreation area of Anchor Point.

The Borough sent out letters to approximately 200 landowners and residents within a 1/2 mile of this area. There are numerous others to be affected from this devastation of the Anchor Point area.

Gravel operations run during the warmer days and summer time in Alaska as you all know. Permitted hours are from 6am to 10pm. These hours of operation in this area would shatter the Peaceful quiet and serene Beauty of this area all along the Anchor River and Anchor Point Beach area.

I have copied from the Department of Natrual Resources website about the Anchor Point Campgrounds.....

As Planning Commissioners under the Administration Planning Commission code
Ch 2.40.010
which says:

2.40.050. Investigation and recommendation authority.

The planning commission may consider and investigate subject matter tending to the development and betterment of the borough and make recommendations as it considers advisable to any department of the borough government and to the assembly. The commission may make or have made surveys, maps or plans.

(Ord . No . 73-34, §§ 1(part) and 2(part), 1973 ; Ord . No . 15, § 1(part), 1966 ; KPC § 20 .10 .005(e))

As I stated at the beginning I live 100 feet above this proposed Gravel Pit area.

On August 29, 2018 when Beachcomber LLC - Emmett and Mary Trimble Coastal Realty Owners - were using caterpillars to move the dirt on the gravel pit area i could hear the equipment running and the back up alarms very clearly from my deck and inside my house with the doors closed. I cannot "see" the pit area but hear everything. I can hear when he had dump trucks back into his area and drive away.

If you do not stop this gravel pit you will be changing the Anchor Point Recreation area forever.

A business and gravel pit owner needs to take the responsibility and the cost to provide a Environmental Noise Report to submit with their permit. Visual colored and drone pictures of the area they want to put a gravel pit and update drone pictures yearly for the Kenai Peninsula Borough to keep track of the pits and regulations. It should not be at the Boroughs expense but the gravel pit owners expense. If you research gravel pits are rarely denied in the Kenai Peninsula Borough. We need gravel pits but not in a recreational area or a pristine residential area. **There is access to gravel without destroying recreation areas and homes that people have worked all their lives to save for and retire.**

I Hope you will take the responsibility of your position as a Planning Commissioner of the Kenai Peninsula Borough and vote to DENY this CULP permit.

Thank you for reading and listening to our concerns for our Kenai Peninsula Community.

Anchor River

State Recreation Area

The first written descriptions of the land and people of the Kenai Peninsula are found in the 1778 journals from the British sponsored expedition of Captain James Cook. According to legend, Anchor Point got its name when Captain Cook lost an anchor near the mouth of the river.

Homesteaders began to settle in the Anchor River area in the early 1900's. They came from Homer, to the South, and Kenai and Ninilchik, to the North, and survived by hunting, fishing, and farming. They were a hardy lot and many of them and their descendants still live in the area.

Wildlife abounds around the Anchor River, with moose, beaver, mink, bald eagles, a variety of ducks along the river, harbor seals, sea otters, and beluga whales near shore in the Cook Inlet.

Across the Cook Inlet from Anchor Point, three of seven volcanoes bordering the inlet can be seen: Mount Augustine to the South, then Mount Iliamna, and Mount Redoubt to the North. Mount Augustine's last eruption ended in March 2006; Mount Redoubt's latest eruption ended around July 2009. No eruption of Mount Iliamna has ever been recorded.

Anchor Point, where Anchor River State Recreation Area is located, is the most westerly point on the U.S. Highway System.

Driving Directions:

Take the Seward Hwy South, bear right at the Seward Cut-off onto the Sterling Hwy. Located at milepost 157 of the Sterling Hwy.

Mission Statement

"The Division of Parks and Outdoor Recreation provides outdoor recreation opportunities and conserves and interprets natural, cultural, and historic resources for the use, enjoyment, and welfare of the people."

Beachcomber Gravel Permit

To Members of the KPB Planning commission, and Planning Staff.

The gravel operation mentioned by name above has surely created more work for the KPB and its staff than anything that has come before it. That should tell you how important both you the Commission and the Planning staff are to your community. With every task and every decision you make, you take on the responsibility to preserve and protect your community and its members, like me, a lowly voter, or my neighbor, scraping by just to live in Anchor Point, or the last of the homesteaders who cherish what the Anchor Point community holds deep in their heart, that last small portion of true Alaskan Values: Clean water, Safe neighborhoods and streets, family.

So therefore, I ask " If not **you**, then **who**?

Who will listen to the community,

Who will work to interpret the KB Code, and use that code as it was **intended**, to be a guide for a better future of the KPB, and not a legal tool to destroy it. After all, did you not choose to either work at the KPB, or be a member of the Planning Commission, or seek election as **OUR** representative to protect the community; if you are not there for those reasons then **WHY** do you choose this profession?

Who will stand with community for the sake of the Many, over the few. I am sure you see how many deem this gravel permit as unacceptable compared to the few who do not. That alone should resonate with all of you. So again I ask, **if not you then who** can see the disproportionate attention required of the many for the sake of a few.

Sadly, this permitting process is again back in yours, the Commission's hands, but only one side seems to have to prove that the permit, even with all the 20 added conditions, fail to meet the code: Per the hearing officer who states only Code 21.29.050 can apply.

Therefore: Fact: the existing topography will not allow standard barriers to be sufficient to reduce or eliminate the impact, from noise (#4), dirt, (#3) and visual impacts (#5), even Planning had to add 20 conditions to make it work...seriously, perhaps that was a hint to the fact that this permit should not be granted, but it is not the planners decision, is it?

Therefore: Fact, aquifer disturbance (#1) this gravel extraction could harm the recently approved DC water well, one for human consumption, and the adjacent wells that are only as deep as the water tested by the permit requester. Does anyone want to put residents at risk with "lets wait and see, maybe it won't affect them"..Good drinking water is hard to come by in Anchor Point, high iron, high mineral and now this too.

Therefore: Fact, the Post land use (#6), questions arise regarding its remediation plan, primarily the follow through, since the permit requester testified that he believes the small cabin next to an old pit, (non-remediated) is prime lake front property. After-all he even listed it as such and indicates that we should all be excited to have this pit and a new pit of polluted water in our neighborhood. We just don't know how good it is.

Therefore: Lastly, property damage, (#6) well that would primarily be the Anchor Point Road, and per the KPB, they were not concerned since it is a state road, and well frankly the state never helps out the borough so it would be deserving, to turn a KPB issue into a State one.

Finally and in summary:

The question remains, if not **You than Who...** has the authority, are we as community members asking the wrong parties to prevent the destruction of a neighborhood. Per the the hearing officer decision and order, it states; that the hearing officer can not make the determination, the commission cannot deny the permit and per the communication with our own district representative, W. Dunne, that he can not step on the rights of the Commission, therefore he too will not interfere with what he believes to be the commission's jurisdiction.

So I ask once more, **if not you than who....**just because a permit can meet the planning requirement, in form but not substance, it is said the commission cannot deny that permit, thus if the commission cannot deny a permit, then when would we need them to approve one.

This is a slippery slope for our community, because if someone chose to have a CLUP, like a nuclear waste site, and the planning department listed 13 findings and gave 20 conditions, and they met them on paper..but not substance.... we would have a nuclear waste site... This gravel permit is no different.. We will all have to be vary wary of who we elect and allow to be appointed to represent us in the future.

So if not you than who????

Sincerely

Shirley Gruber / Lanny Kelsey
Anchor Point

3-17-19

To whom it may concern,

I am writing to greatly discourage the Planning Commission to pass the Conditional Land Use Permit to Emmett and Mary Trumble for a gravel pit near the Campground at the mouth of the Anchor River.

Many families recreate there every summer, locals and tourists alike. The gravel pit operation would create noise pollution and gravel trucks steadily driving up and down the narrow road would present a danger.

Please reconsider this abomination to a popular recreational area. Thank you

Sincerely

Detricia Hahn

RE: Beachcomber LLC gravel extraction land usage permit hearing

I am writing today to oppose the Beachcomber project. My husband Bill and I are Anchor Point residents and we moved here because AP was a quaint fishing village and we greatly enjoy the fishing lifestyle. We also own a business that is reliant on this town continuing to be a quaint fishing village!

We live on the Sterling Hwy by Stariski Creek and our first few years here were very peaceful. Now across the street we have a gravel pit with trucks going in and out early and late... jake braking down the hill which noise decibels has set off my security system in our house. On the opposite side of us now contains the 40 acre oil fracking field in front of our beautiful ocean/mountain view.

Needless to say I am disgusted with the noise, dust and light pollution and am greatly impacted by what the KPB has approved in the past for projects in this neighborhood. The absolute last thing the Anchor Point community needs is an unsightly noisy gravel pit on the Beach Road. I also want to point out that is particular road is crucial in the summer for the fishing tourism that this community thrives on.

Also this beach road is already in desperate need of repaving and would be extremely dangerous if big heavy gravel truck were to use it as well. My other major concern is for the health of the Anchor River and the fish!

PLEASE PLEASE PLEASE consider the people and businesses in the small community of Anchor Point and not just one business owner who doesn't care about the thriving of the community as a whole.

Gravel pits need to be out of site of any community to maintain the Kenai Peninsula and Anchor Point as an attractive place for tourism and peaceful living.

Thank you for hearing my concerns and I urge you to vote NO on the Beachcomber permit.

Sincerely,

Leah and Bill Scott

Subject: Anchor Point - Gravel pit

Hello Mr. Wall , My name is Steve Thompson and I am writing to you , to express my view as to the proposed gravel operation on Denver Street / Road. There isn't a berm that could be built that would be enough to block the mess from the view off my deck. I work in the mining industry and have for 34 years. I do know the permitting process is a lot more stringent than that of these small gravel pits that are all over the State of Alaska. If you take a drive along the Knik river or just drive to Anchorage and count all the old stripped gravel operations along the road there are many.

I would hope should we get through this atrocity of an idea to permit a gravel operation in the middle of a residential and recreational area , that there might be some legislation in the future dealing with gravel permitting , locations and reclamation mandates. There are too many of them all throughout the State. It's kind of like , you see a can on the side of the road , and say to yourself... Why would someone just throw that on the side of the road. But , when you see lot's of them on the side of the road. You might say , when are we going to do something about this. Well , The Time is Now. I am totally against this Gravel operation and I know full well they can't meet the sight , noise and dust suppressions that would be needed in a residential area.

Just getting this out to you , so you are aware of my position on this matter. Thank You !
Sincerely yours , Steve Thompson 34900 Denver St. Anchor Point , Alaska 99556

Planning Commission, KPB

RE: Beachcomber LLC, Parcel # 169-010-67, Tract B, McGee Tracts, 74185 Anchor Point Road. Mary and Emmitt Trimble. Gravel pit mine - land use permit

I oppose and strenuously object to a land use permit allowing a gravel pit mine to operate in close proximity to my home. My property is nestled quietly alongside State Park land, tourist and local use campgrounds, vacation fishermen, tourist season small business owners, and community householders. My home and property will suffer severe negative effects if a gravel pit operates so close to my home.

My home and property address is 74155 Anchor Point Rd. Beachcomber Heights Sub. Lot 1 (of three). My property fronts onto Anchor Point Rd., and is close to Denver Rd.. The proposed gravel pit area map shows this gravel pit beginning at Anchor Point Road, up along the side of Denver Rd., and then enlarging behind Beachcomber Heights Sub. Lot 3.

My property on Lot 1, and my neighbor's property on Lot 2 and 3, will suffer greatly from the operation of a gravel pit mine so close to home. Our personal health, as well as our neighbors' will suffer from dust and particulates generated from a gravel pit extraction. Our quality of life would be greatly diminished. Can you personally imagine living next door to the unrelenting noise of a gravel crusher, all day?

In the summer, we engage with and welcome vacationers, foreign and local, who simply want to spend their vacation time near the River or Cook Inlet to fish, camp out, be with family. Children riding bikes, visitors walking along the road from fishing to the campsites. The Anchor River and Cook Inlet beach host mating eagles in the spring. This area is a pristine area of Alaska that is worth saving away from industrial gravel extraction. We have visitors, needful tourist dollars, coming into Anchor Point every summer. This land use, in place for years, is not compatible with the idea of gravel trucks taking over the road to the exclusion of everyone else.

What will happen to our homes and air quality when the gravel pit is sending up clouds of dust and particulates into our breathing air? What does the Parks Dept. have to say about this gravel pit ?

While KPB decides to allow this land use permit, does it also include language that requires damage reparations to compensate homeowners who live in near proximity. Obviously I can not sell my home now that there is even a rumor of a gravel pit on my backdoor.

What are the damage reparations in place for the rebuilding and annual resurfacing after even one season of gravel trucks on that strip of road? The beach road will be ruined from the weight of gravel trucks. This means people who routinely drive this road will have constant problems with gravel trucks, falling stone fragments breaking headlights and windshields. Car body damages from thrown stones. If children are walking along the summertime vacation holiday and are hit by gravel truck chips from tires? Bicycles on the side of the road hit by gravel from those trucks?

What damage reparations are in place for annual cleaning of my house and land due to dust and particulates from

the gravel pit operations?

What lowered real property values will I suffer as result of a gravel pit next door? Is there a Lowered property value in my area as a whole, given the nearness of his 20+ acres of low value real estate gravel extraction land.

Is this a purpose built gravel pit, with a previous contract in place? Can this contract purchase gravel in a different location?

Mary Barnett
property owner, Anchor Point Road

Please do not allow a gravel pit near my home at the Anchor River.

Subject: Trimble gravel trip

Dear Planning Commission Board,

I am a life long resident of Anchor Point, a wife, and a mother of three young children that I intend to raise in Anchor Point. I completely understand what has built Anchor Point and most of Homer. It was Anchor Point gravel. My husband is superintendent of a local construction company specializing in dirt work. He works with Emmitt Trimble regularly. Emmitt Trimble has completed several jobs that have improved our small town. This type of work is my families' lively hood, as well as many other hard working Anchor Pointers.

I feel the Trimbles have every right to develop their land in the proposed gravel extraction plan. This would bring revenue to our small community. And once the gravel extraction is complete they would finish out the property to increase property values of neighboring lots. I received a flyer informing me of the opposition to the gravel pit. The only actual concern I could find was gravel trucks on the beach road. My family uses the Anchor Point Recreational area regularly and don't see this gravel pit having much impact on our ability to enjoy ourselves there. Trucks travel that road every spring hauling gravel to repair the tractor launch ramp. Which is a job my husband has personally done several times. No one had issue with those trucks hauling gravel to provide the tractor launch to operate. Emmitt's gravel pit may have more trucks and more often but still just trucks. And not forever. The RVs the frequent the beach road are much larger. I also wanted to point out that there was a existing gravel pit already on Danver Rd. It was turned into a lake and little cabins built around it.

I don't feel that our tourism income is more than our gravel income. The Anchor River fishing numbers are down. Our camper fees go to the state, not our community. We have a restaurant and store right at the top of the beach road that was a failing business. Tourism income did not save it. Our small town was built on the backs of these gravel hauling men. This source of revenue surpasses any other in town. Please don't vote to hamper how we support ourselves because of a few annoyed individuals. People that live in houses built on top of gravel. I believe it would have far greater negative affects on our fragile economy. I trust the Trimbles to execute this job responsibly and see it to benefit the community. Thank you for your time to listen to my point of view.

Sincerely,
Maria Bernier

To Whom It May Concern:

Re: Proposed Denver Gravel Pit/Emmitt & Mary Trimble

I wish to voice my opposition to the proposed gravel pit on Denver. I recently purchased a home a half mile from the proposed gravel pit.

Some reasons I feel this to be a very poor decision are as follows:

1. Traffic in a heavily traveled recreational tourist area is already heavy during the summer months. Foot traffic, trucks pulling boats, campers, motorhomes, as well as 4-wheelers, horses, etc. The last thing we need on that road is more traffic.
2. Noise in a residential, recreational, and park-like neighborhood. People are camping and recreating close by. Some folks live right there.
3. Wear and tear on that road. The beach road is already breaking up. Further heavy traffic will cause more damage.
4. Properties near that gravel pit were sold by Mr. Trimble without him sharing with them the information that he intended to have a gravel pit there.
5. The beach road and the Old Sterling are both heavily traveled, especially in summer months, and are narrow already. There are bicyclists that use the Old Sterling and the beach road during the summer. A LOT of them. It is already dangerous for pedestrians and bicyclists due to the narrowness of the road, without adding larger vehicular traffic.
6. This is the crown jewel of Anchor Point, and the last stand for tourism dollars to support our community. People come to enjoy the beauty and the peace, not to deal with big trucks, gravel pit equipment and racket, as well as the dust and dirt associated with it. They come to enjoy the beauty there, and a gravel pit of this size, in this location may very well be the nail in the coffin for tourism. The RV park just across the street will be heavily impacted.

While I certainly support gravel pit operators and I understand the necessity for gravel pits, there are much better places to have a pit than in the center of a very popular recreational area for tourists and locals alike.

Thank you for taking the time to listen to my concerns.

Sincerely,

Chandra Caffroy
34980 Seabury Court
Anchor Point, AK 99556

To Whom It May Concern:

Re: Proposed Gravel Pit on Danver

I am writing to OPPOSE the proposed gravel pit on Danver, in Anchor Point, Alaska. My daughter recently purchased a home there, and my family and I live on the Old Sterling, just up the hill from the bridge.

My family and I own lots of property near other gravel pits, and one of my family members owns a gravel pit. I am not against gravel pits. However, this particular proposed gravel pit is in a very bad spot.

Here are some reasons I oppose this pit:

- 1) This area is a heavily used, year-round recreational area, for tourists and residents alike. The road is heavily traveled, with foot traffic in the summer, as well as trucks pulling boats, campers, trailers, and the residents who live there, work there, or just want beach access.
- 2) A few years ago, a friend of mine was walking with her dog on the beach road. A vehicle almost hit her, but ended up hitting her dog, and the dog lost one leg. The road is way too narrow to support the traffic it has in the summer months, already. A bunch of gravel trucks would make it much, much worse.
- 3) Noise. I used to live near a gravel pit. I got used to the noise, and it doesn't bother me so much. But if you have traveled down from Anchorage for some relaxing times, peace & quiet, near the beach ... the last thing you want to hear is the gravel pit. There are two RV parks directly next to or adjacent to that pit. They will lose business if that gravel pit is opened up.
- 4) The road itself is already in need of repair. More vehicular traffic in the form of heavy dump trucks will exacerbate the problem.
- 5) The Old Sterling is also a very narrow and winding road, also in need of lots of repair. The Old Sterling is used by bikers almost daily in the summer months, as well as by pedestrians, old and young alike. Adding heavy gravel trucks will create safety issues, in my opinion, as well as further degrade that road.
- 6) Bridge work is being done soon, on the Anchor River bridge just before the beach road. It will cause further congestion and safety concerns to add more traffic on the Old Sterling, especially when and if they completely close the bridge like they did last year, and we all have to drive the long way around. Sharing that narrow, winding road with big gravel trucks is intimidating, to say the least.

I want to be clear that I don't oppose gravel pits, per se. Just this one.

Sincerely,

Deanna L. Chesser

Subject: Regarding Beachcomber proposed gravel pit
Attachments: 05-01-01_Landings.pdf; 05-01-01_chapter1190_Sight_Triangle_Minimum.pdf

Dear Mr Wall,

The gravel pit permit application submitted by Beachcomber LLC to the Borough brings up some concerns for the Alaska Department of Transportation. As the owner of Anchor River Road, directly adjacent to Danver Street, as well as Old Sterling Highway and the Sterling Highway, we have recommendations and requests to the eventual permitting of this proposed gravel pit.

As you know the Anchor River Bridge is currently load restricted and we expect the replacement bridge to be constructed in 2020 at the earliest. The pavement itself on Anchor River Road and on Old Sterling Highway is in extremely poor condition and additional heavy truck travel along these routes will only hasten further deterioration. Given these serious considerations we request the KBP to:

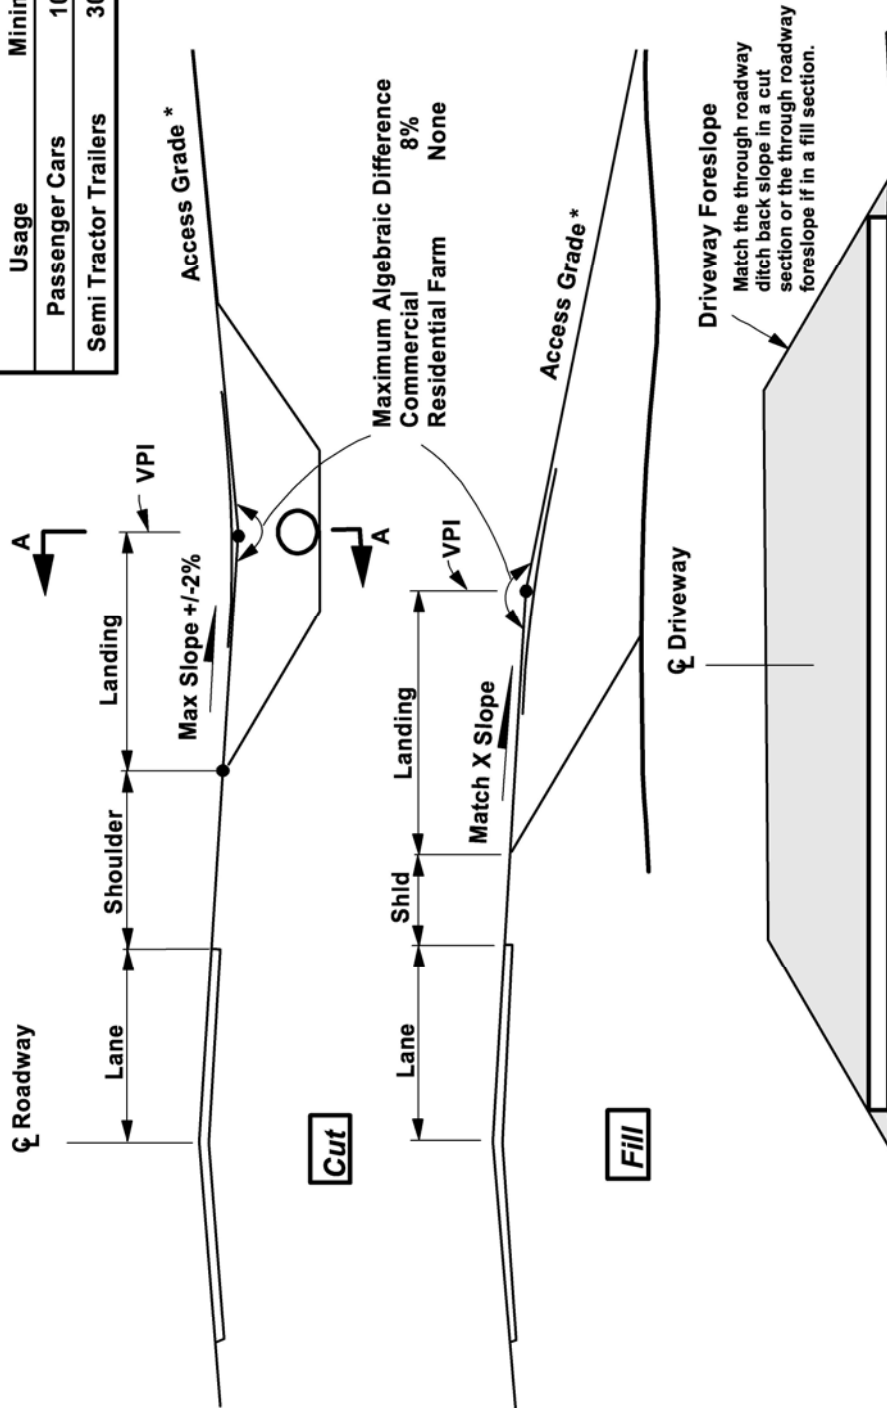

1. Verify sight triangles at the Danver Street STOP sign per attached detail. Verification is by an engineer, surveyor, or KBP Public Works official. KBP public works can coordinate with DOTPF M&O when reviewing sight triangles.
2. Verify the landing of Danver Street is suitable for trucks – 30 feet staging at the STOP signs, per attached detail.
3. Require dust control or sweeping in the event truck hauling creates obvious pavement debris on Anchor River Road.
4. Require pavement repair on Anchor River Road by KBP in the event truck hauling creates obvious potholes, rutting, or pavement damage.
5. Require a traffic control permit from DOTPF when truck hauling meets or exceeds 25 trucks per hour.

Absent these considerations being addressed through the Borough, we object to this application for a permit.

Thank you,

Joselyn Biloony

Subject: Anchor Point Gravel Pit

Dear Planning Commission Board,

I am writing about the gravel pit being considered on Danver Road in Anchor Point. I support development and believe the jobs created by the gravel business are very important to our whole Peninsula. I want the roads to continue to be sanded and maintained and I want gravel available to me and my family and friends when we want to build and develop our land. I do not want the planning commission to deny applications that meet the code or new regulations that cause the cost of gravel to go up so much that we can not afford to built or maintain our properties or our public amenities the way we want and need them to be.

I believe that a gravel pit provides a necessary commodity to our communities. Gravel pits already have strict regulations and laws to control what they can and can not do. The only business ventures in our borough that are regulated are gravel pits and marijuana operations. There are zero regulations for junk yards, dog lots, trailer parks or any other businessor personal property usages that some neighbors argue could lower their property values.

The borough does not have zoning. Personally, I do not want to be zoned, but putting stiffer regulations on a gravel pit and allowing the rest of the borough to have junky yards and do whatever they please with their property and be totally unregulated is not fair. Gravel pits actually provide a needed service to all of us, including you and your neighbors. Please take this in to consideration to make sure that needed service stays available!

Thanks for listening

Gary Drake

Subject: Beachcomber material extraction permit

My name is Gary Gordon my wife and I have three parcels of property affected by this pit development, parcel ID# 16923026 shown below (green arrow) looks directly over the extraction area. There is no way any of us on the hill can be visually protected; nor, can any of us be protected from noise, dust and smoke. The second diagram below shows my sight of view. It would take a forty foot berm to block my view, and there is no berm high enough to block the dust and smoke from a screening/crushing plant or an asphalt plant. Is it necessary to state both of these are hazards to our health?

WE ARE OPPOSED TO THE BOROUGH GRANTING THIS PERMIT

I thought we paid taxes to the borough to be protected and to be provided services that make our ownership more enjoyable and comfortable? If you grant this extraction permit, you will be failing your duty miserably.

I am a gravel pit owner at mile 6.2 Aleknagik Lake Road in Dillingham, Alaska. Over a million yards of gravel have been mined from my pit. I know the hazards of open pit mines, noise, dust, and smoke.

I have a set of truck sales at my pit. In the latest undated Planning Department notice letter, back page map does not designate a scale area. That leads me to the question, how over weight will the gravel trucks be? This should be of concern to the borough? As stated above, our taxes are used to protect and maintain our roads. Being good stewards, one would also assume your concern over the paved Beach Road? I understand this road base still has logs from original cord a roy type road. Lots of improvements to this road over the years still yields a pour road. Repeated legal loads would demolish this road, but over weight unregulated loads will push what road base we have into the swamp it is built on. This road is going to come apart!

Is the borough concerned about the financial strength of Anchor Point? When the beach access road becomes impassable, no tourists, no boat launch, no campers, all results in reduced sales for our whole community. Not to mention all us owners in your chambers towing tantrums, even worse than Emmitt Trimble because we can't get to our property. This is not a place in our community for an open mine pit! This is our tourism market.

I'm invested in Anchor Point. I have two more view lots further up Danver between Parkinson's and High Seas Court, ID# 16925135 & 134. I also have a commercial lot on the Sterling Highway right in Anchor Point ID# 16551005.

Your decision in this matter involves us local owners severely; however, it will impact our whole community in a negative way. The only up side I see for granting this permit is Trimble's will make more money. Trimble is not a contractor or gravel pit operator. I am very confident once the extraction site is permitted, Trimble will sell this property. That is what he does, sells property. If this permit is allowed, Trimble will make money, at the expense of Anchor Point and the Borough. Our property value is going to decline, if this permit is granted. In a few years, after several land and home sales, the reduced sale values will allow us tax payers to negotiate our assessed values. In the meantime, your road maintenance costs will be rising.

Gary Gordon 907-229-8914
PO Box 876130

March 21, 2019

KPB Planning Commission
Regarding: Parcel 169-010-67
Tract B, McGee Tracts
74185 Anchor Point Road, Anchor Point, Ak
Beachcomber LLC, Emmitt and Mary Trimble

Planning Commission,

We come before you with our plea to understand that the standards expressed for gravel, 21.29.040, number 1 and number 2 cannot be met by anyone wanting to remove gravel where Beachcomber, LLC proposes to open a pit.

The neighborhood surrounding this parcel is over 100feet higher than the proposed site and there are no berms or setbacks that can conceal the work being done in the said pit. The area that I am talking about is in a semicircle and covers the east and south sides opposite of the proposed pit. None of these homeowners will be able to be shielded from the operations going on 24hrs/day all summer. Our group has used very specific devices to calculate the angle of the line of visiondevices that the borough own, and have proven that it is not possible to hide the excavation site. Why is it that the planning department does not use it's own equipment to show, honestly, that 6ft berms won't work. If that was done upon inspection of the site we wouldn't be here today with questions about the validity of granting that permit.

Alaskans wait anxiously for spring and summer to arrive so we can be outside and garden, fish, walk, BBQ and generally enjoy the land we own and be refreshed in the sun and warm weather that the season brings. Our neighborhood now dreads the concept that our summers will be ruined with 24hr/day mining operation noises. In the amphitheater - type of topography that we have near the proposed mining site the noise will be lifted to each neighbor for the entire day. If we can hear chickens, goats, dogs and people speaking already what will heavy equipment bring to our ears. How did we earn this reward? If there are 200 parcels surrounding this proposed site why would his expectations be met before the 200 land owners surrounding his site? Please consider that some proposed sites are absolutely not appropriate to create a mining site.

Some in our neighborhood have health problems that will be exacerbated by more dust being created. If anyone thought they could endure a road trip where there would be some dust is one thing, but to imagine it is being brought near your home, and it will be there 24 hours a day, all spring, summer and fall. If it is life and death situation with their health, that person may have to consider moving. Is that fair to anyone to have to move from their home because a gravel pit choses to move into a neighborhood? This is real life in our neighborhood not a possible example. After living in the state of Alaska and on their property for years.....they may have to choose to leave to accommodate their new

neighbor. Who is protecting the average citizens? I will definitely say that it isn't our borough.

Please consider that the applicant has almost the lowest assessed value on his property and has owned it for about four years. The surrounding property is assessed at nearly \$8 million.....who have been the greater supporter of the borough with their tax dollars. Why are our voices not being heard?

The other four material site regulations don't fit either and since all of the requirements for the permittee are minimized, it only "appears" that these requirements have been met. The planning department is very impressed with their record of passing any and all request for permits and they truly have nothing to be proud of. Gravel is essential and I am quite sure it can be found on the government land that is available for the state and borough governments to make available to the gravel people. To imagine that neighborhoods should be ruined by gravel mining operations is barbaric. There should be a complete investigation of the planning department that will assure the tax paying citizens that all people are protected and thought of. I would have to think that we aren't seeing the real reasons why all permits are being granted.

Please read our heartfelt complaints and vote on this decision with a concept of home ownership. Our sincerest appreciation of your task at hand,

Vickey Hodnik and George Krier

Subject: KPB Land use concerning gravel pits

Mr. Wall,

I was given your email to send my concerns about the Borough requirements for permitting gravel pits. Below is my statement.

Dear Planning Commission Board,

I am writing about the gravel pit that is up for consideration on Denver Road in Anchor Point. I support development and believe the jobs created by the gravel business are very important. I do not want the planning commission to deny applications that meet the code. Nor do I want to see new regulations that cause the cost of gravel to go up so much that we can not afford to build or maintain our properties. Not to mention pits being closed and families lose income needed to live here.

I believe that a gravel pits provide a necessary commodity to our communities. Gravel pits already have strict regulations. The only activities regulated by the Borough are gravel pits and marijuana operations. There are zero regulations on junk yards, trailer parks ect. that could potentially lower property values.

Gravel pits provide a needed service in the community. The gravel industry is how many make a living in Anchor Point. Creating more regulations will hurt the local community who rely on this industry to feed their families. I ask that the Borough keep the current regulations and work with pit owners to find a balance that works for both parties. Thank you for your time.

Regards,
John McCullough

Subject: Re: Beachcomber LLC - Proposed material site

Do you realise how confusing your letter is? No matter who reevaluated the decision by the PC, is someone within the KPB going to be responsible for all the damage and impact this will have in the Anchor Pt. area? Especially regarding the issues of property value (that's a big concern), water quality, wildlife preservation, a material site quota and traffic safety. Which you are claiming is not your consideration. Whose consideration is it? What department is overseeing this? So if the PC exceeded the "scope of it's authority", and this permit was denied, under whose authority will it again be denied? Your staff? They are recommending additional buffers. How do they know what size or amount of buffers should be put in place? Are they qualified for that?

It's not just about the noise and dust!!

It seems to us KPB PC has already decided to approve this gravel permit. The PC is choosing to ignore all the input from hundreds of very concerned people within a half mile radius. Not to mention all the residents along the old Sterling hwy. who received no letter (and should have) and who will be inundated with traffic...because that's the route that will be used.

The list we all have falls on deaf ears. Very sad for the PC. I suppose the want of the one for the permit outweighs the wants of the many on all counts.

Has anyone from the PC come out to see said area? And how much will be affected re: the boat launches, who have to use this road, the foot traffic, the campgrounds, both private and state and the local traffic?

We as taxpayers have every right to ask the PC to deny this permit. The timing is perfectly suited for Beachcomber LLC. The parks and boat launch is closed, local traffic is minimal and the summer folks aren't back yet. What about a delay til the summer residents return?

Hoping you will make the right decision. Respectively, James and Susan Reid.

CAUTION:This email originated from outside of the KPB system. Please use caution when responding or providing information. Do not click on links or open attachments unless you recognize the sender, know the content is safe and were expecting the communication.

I'm going to make this short, as I believe we're at a point where we're reiterating the same points. I believe we have made it clear that the points of visual impact, noise, and dust can not be minimized (see my previous letter). The position of the applicant seems to be that there is only one resolution listed for these problems and that they will comply with that remedy even though it DOES NOT MINIMIZE the intent of the listed visual, noise, dust application REQUIREMENTS. Words mean things, just because there isn't a listed remedy that would ACTUALLY MINIMIZE doesn't mean that you should let the applicant get away with NOT satisfying the intent of the application rules. This oversight if not dealt with fairly now will create problems in the future. I recently asked the borough appraisal department to lower my appraisal 30% for my property taxes as national statistics show is the average impact of a mine in a residential community. They said, at this time, they didn't have any data at this point to support this but I could have a formal reevaluation. I asked if they had any data on residential neighborhoods and mines. They said the data they had showed no devaluation in property values. I asked which was there first there, the mine or the neighborhood? answer....the mine, they had no data where the neighborhood was there first. After a few houses sell and we can prove this loss we'll be back in civil court with the applicant and others to recoup our 30% loss. In closing, I ask you to EMPATHIZE with us and truly put yourself in our position. You would not want tis in your backyard!! If you would argue this please call me. Sincerely, Joseph and Denise Sparkman

Subject: Anchor Point Rd pit

This letter is being written to voice opposition to the proposed gravel pit on parcel number [169-010-67](#). Location is [74185 Anchor Point Road, Anchor Point, Alaska](#).

It's important for us to state that our opposition stems from the location of this proposed pit only and is in no way directed against Beachcomber LLC or Mary and Emmitt Trimble. We would oppose this pit no matter who was trying to obtain the permit.

We would also like to state we are not against gravel pits as a whole. We realize they are important, necessary and have value. We have many pits in this area, and many more will continue to be approved and developed. Therefore the Anchor Point Rd pit is not necessary or critical to supply gravel to this area.

We oppose this pit for many reasons. It will have a negative impact on the many homeowners in the immediate area by lowering property value with the noise, dust and the unsightly view they will have to endure. This pit will have a horrific impact on the immediate residences, but will have a far reaching negative impact on the community of Anchor Point. It will effect the visitors from neighboring communities of Homer and Ninilchik. We also have visitors from all around Alaska, from every state in the United States and from around the world. ALL will be negatively impacted. These visitors come to enjoy the beauty of this area. They use the campgrounds and surrounding areas. They help our economy. How does a gravel pit fit into this equation? There is no way the noise of this pit can be controlled. The dust created by this operation cannot be controlled. No berm can be made large enough to block the unsightly view of this gravel pit. The safety of motorists, pedestrians, bicyclists, as gravel trucks travel up and down the narrow beach road is a recipe for disaster. This is a critical habitat area. This pit will adversely effect wildlife, and consideration should be given to protect this important ecosystem. We can not express strongly enough the far reaching negative impact this pit will have to thousands, and thousands of people.

Anchor Point has been our home for over 38 years. We love our community and have much concern about this project. The Anchor River is the heartbeat of Anchor Point and is critical to our community. It is here that we fish, recreate, and often gather to celebrate many of life's meaningful events. For those of us that are fortunate enough to call this area home we have celebrated birthdays, weddings, gathered to mourn deaths, have gone on many school field trips to the Anchor River / Anchor Point beach area. It is here that we have our parades and countless other community activities. The Anchor River is a place to walk and enjoy nature, a place to contemplate, and a place that fills our soul with peace. It is why we live here. It is why we have worldwide visitors. All of this is in jeopardy by putting a gravel pit in this very sensitive, critical area.

This is a very unique area and the far reaching negative implications of this proposed pit need to be considered. You have the power and responsibility to support and represent the thousands of people that use this area. We respectfully ask you to deny this permit.

Thank you for your time and service,
Richard and Loretta Stapel

Subject: Gravel Pit Permit/Beachcomber LLC Anchor Point

TO: Kenai Peninsula Borough Planning Commission

RE: Beachcomber LLC, Parcel # 169-010- 67, Tract B, McGee Tracts, 74185 Anchor Point Road, Mary and Emmitt Trimble

I strongly oppose the proposal for and permitting of the gravel pit at the above located address for the following reasons:

- 1) There are plenty of gravel pits in the Anchor Point area already with better existing locations than this proposed pit - which is the primary recreational area for tourism and residential use. I believe it will deter a major source of income to the area if this pit is allowed to open.
- 2) Anchor Point Road is a residential and recreational use road at present and is barely wide enough for personal size trucks with boat trailers to pass each other. It is NOT in good enough condition to bear the weights and sizes of 18-wheelers carrying heavy loads nor to allow safe passage of on-coming traffic.
- 3) The dust and sound levels will definitely be a detriment to tourism, residents and wildlife.
- 4) Traffic from the pit will definitely pose a danger to people walking along the road to access the river, campgrounds and the beach. We are told that the Planning Commission does NOT take in to consideration public safety. This is incomprehensible to the people of the area! I beg the Commission to re-consider this position before a death or accident occurs. Safety should be a primary consideration by everyone in the borough. You serve US,,not the other way around and NOT special interests!

Respectfully,

Linda Stevens

RE: 15 year Conditional Land Use permit by Beachcomber LLC, Gravel Pit Mine, Emmitt and Mary Trimble of Coastal Realty

Greetings Kenai Peninsula Borough Planning Commission,

Wherever you are when you read this, we're confident that you got there and stand or sit there upon something built upon a layer of gravel. Gravel is an imperative in the world whether for nature's purposes or man's. The quality of the gravel is important, and the distance to deliver is most relevant.

All functions of the Anchor Point Recreation Area depend on gravel, as much as they do to taxation. A well ran gravel pit is not for the lazy, it is effort for everyone's well being, providing much needed product and income through use and recycling of natural resources. Nature used the rock for its purposes and dumped it there, they are just planning on using and rearranging the dump site, modifying the shape of the rocks for use, and dump some of it somewhere else. No big deal.

As long as the shared resources of the access roads are respectfully used and maintained, and general 'good neighbor/good steward' practices are in effect, we whole-heartedly support the gravel mine permit for Beachcomber LLC.

Sincerely,

Alan L. Ballance

Comments for Planning Commission 3/25/2019 Concerning Denver Street CLUP Application

1.

The Code speaks to the protection of the **health, safety, and welfare** of the residents of the Borough. From the attachment below I have documented the property values in the area surrounding the proposed gravel mine. The word **welfare** can be defined as “**the health, happiness, and fortunes of a person or group**”. I seriously doubt that anybody reading this can state that a gravel mine in a neighborhood is healthy—dust, noise, water table contamination, road safety, and a multitude of other health issues. The only happy person is the one who makes money from the material, for the rest of the neighborhood the happiness level and the total quality of life will be diminished for the life of the mine—in the case of this application that would be fifteen years. The fortunes of all neighbors are seriously diminished by the loss in dollar value they will all see in what is for most people the largest investment they will ever make—their home!!

2.

The Code in KPB 21.25.050 states that the Planning Commission shall either approve, modify, or disapprove an application, and they must at a minimum ensure that the application meets the requirements of KPB 21.29. This application is nowhere near meeting the mandatory conditions spelled out in KPB 21.29.050 (A)(2)(c and e). The berms and buffers are not constructed in consideration of, and in accordance with existing uses of neighboring properties—that existing use is several properties with houses, many of which are at elevations 40 feet to 100 feet above the proposed mine area. Some of the houses are multi-story which are gladly taxed by KPB Assessors for every square inch of every level. The berms and buffers are not of sufficient height or density to provide visual and noise screening of the proposed use as required in the Code. For example, the line-of-sight from our house is 90 feet above the proposed mine. It would take a 45 foot berm to come close to meeting the conditions of KPB 21.29.050 as opposed to the 6 foot or 12 foot berms in the application. As for the 50 foot vegetated buffer, the application states that around 40% of that space is vegetated—of that 40% the existing vegetation is not of sufficient height and/or density to screen visual or noise impacts. The 60% that is not vegetated is, well, not vegetated!

3.

While there are dozens of legitimate reasons not to have a gravel mine in the very heart of a recreational/residential neighborhood, they should just be considered as supporting evidence for the denial of this application. The Code clearly gives protections to neighboring properties—minimal

they are—but the Planning Commission is mandated by Code to ensure that these protections are granted, and this application needs to be DENIED again based upon the applicants inability to meet the mandatory requirements as written in KPB 21.29.

Hans Bilben
35039 Danver Street
Anchor Point

When is a Gravel Mine Really in the Best Interests of the Borough and Neighboring Properties???

The KPB assessed valuation for **land only** on 45 Properties (59.17 acres) surrounding the Beachcomber property (proposed gravel mine) near Danver Street in Anchor Point is \$1,738,000, which works out to an average value of **\$29,373 per acre**. Some of this land is unimproved—raw land, and much is residential. The 41.72 acres of Beachcomber land—with ocean frontage—is assessed at \$301,400 which means an average value as per KPB assessment of just **\$7,224 per acre!**

Neighbors are assessed at an average of \$29,373 per acre for 45 of their properties versus \$7,224 per acre for the land that they all live next to!

The KPB assessed value (**including improvements**) for our 45 properties is \$7,813,200 and the total assessed value for Beachcomber is \$305,700. If this mine becomes a reality, appraisers have told neighbors we can expect our property values to drop by 30% to 40%. Using the low (30%) number, KPB should expect a drop in assessed valuation of \$2,343,960 for the 45 neighbors, not to mention what we all lose when its time to move on! The Beachcomber mine will remain forever as raw land which is taxed at the lowest level, in this case \$7,224 per acre.

Benefit to the borough if this mine is permitted is a **potential loss** of **\$2,343,960** in taxable property value, **plus** what the Beachcomber property might have generated over time if it were properly developed.

For example: The site is just under 42 acres of prime, desirable real estate in the heart of the Anchor River State Recreation Area.. Using the average KPB assessed value from the rest of the neighborhood at \$29,373 per acre, the land should be assessed today at **\$1,233,666** (not \$301,400 as it is). If it was divided into four high dollar ocean front lots and the remaining 27 acres into nine three acre lots, with improvements to the land (**houses etc.**) which could conservatively be \$250,000 per lot, that equates to another \$3,250,000. Potential assessed value for Beachcomber land and improvements is \$4,483,666.

Potential loss in KPB assessed value in the neighborhood is conservatively \$6,521,926 if this mine is permitted. And the Benefit is???????? Maybe the Borough should add this number to the assessed value of the mine....

Subject: Re: FW: Beachcomber LLC - Proposed material site

Due to various issues related to my health, I will not be able to attend the March 25, 2019 planning commission meeting to testify about the Beachcomber gravel pit proposal which abuts my property. I therefore request a continuance of the March planning commission hearing scheduled for next Monday. I have not previously requested a continuance. I request that the continuance be scheduled for the May 28, 2019 planning commission meeting. This will allow me and other local residents who will be effected by the proposed pit to be present.

Subject: Statement for the March 25, 2019 Planning Commission Meeting

Hello, I am Marie Carlton. I reside in Anchor Point in the affected area of the Beachcomber LLC proposed gravel pit operation site. Issues have changed since the July 16, 2018 Planning Commission Meeting. However, critical concerns remain. These are the issues of long term noise and sustained ,unavoidable negative visual impacts to surrounding and contiguous homes of the Anchor Point area. In Mr. Trimble's appeal statement of 12/06/2019, I was struck by a statement of his documented history of Cook Inlet and surrounding area. A portion of number 18 states, " Insulated window blinds that lift from the bottom up could wholly eliminate any negative sight impact from their homes." End quote. That statement, I believe, was disrespectful and does not represent nor does it reflect the totality of our concerns or our efforts to protect a residential, recreational area with five campgrounds, one day use area supported by a failing, narrow, dangerous Anchor River Road which will be, by percentage, the haul route for pit operations. History is interesting, however, the incontrovertible truth remains that situations, populations and settlements change. A focus on our local health, safety and welfare is paramount to children and adults of Anchor Point. No berm will be tall enough to protect against the negative visual impact to established homes which are above the proposed long term gravel operation site. The long term pit operation will produce and deliver continued, sustained particulate matter to contiguous and surrounding homes and campgrounds for an extended period of time. Who would want this exposure? This proposed pit is not in an isolated area but it is in our neighborhood and the local area again will experience another season of increased tourist population, congestion of cars, boats on trailers not appropriate for a long term gravel operation. I would also ask the Planning Commission to allow, in the interest of equality, transparency, proper oversight and honesty to grant a continuance to May 28,2019 so to allow more local citizens the opportunity and ability to attend the hearing, especially due to the refusal from the Borough to allow the Anchor Point Advisory Committee to disseminate information at the local level but a continuance would allow residences who return from a winter break to voice their opinions and concerns. I stand adamantly opposed to the proposed long term gravel pit operation in an effort to protect the health, safety and welfare of our neighborhood and surrounding recreational areas of Anchor Point Thank you for the opportunity to allow me a voice. Marie Carlton seaburyroad@live.com

Kenai Peninsula Borough Planning Commission

144 N Binkley St Soldotna, Ak 99669

March 21,2019

Greetings to the Planning Commission Members,

My name is David Gregory.

My wife and I live on our property on Seaward Ave, close to the proposed gravel pit that Beachcomber LLC is applying for a Conditional Land Use Permit.

There is NO WAY that the noise of a gravel operation in the proposed location can be mitigated!

I can hear the surf of the Beach, which is just beyond the proposed gravel operation,at my house.

How then could the noise of Loaders, Dozers, Excavators, and a Crusher, and all the backup alarms be mitigated?

A berm, even a fairly large one, would only deflect the noise UP..... UP AND OVER, and up the AMPHITHEATER type topography to the South and East of the proposed gravel operation, where my home and so many others are.

It would be TOTALLY IRRESPONSIBLE (codes permitting or not) for the Commission to approve the application of Beachcomber LLC for this gravel operation which is SO CLOSE to the BEACH, the ANCHOR RIVER, and 5 STATE CAMPGROUNDS,

* Coho Campground

* Silverking Campground

* Slidehole Campground

* Steelhead Campground.

* Halibut Campground

the Heart of the ANCHOR RIVER WORLD CLASS RECREATION AREA

Support Letter

To the Planning Commission Chairman,

I grew up in Anchor Point in the '80's and '90's and spent a lot of time on the Anchor River fishing and camping in the camp grounds. It was a great place to grow up and still is. I now live in Homer and take my family there in the summer to play.

There are people that are saying that a gravel pit on Danver will harm the parks and tourism. I don't think that will be the case at all. Even though the park and campgrounds are nice there is much of the summer that no one is camping or fishing because of the river being closed or the fishing is not good. When I was a kid, the old gravel pit across the street from the one the Trimble's are trying to get permitted, was an active permit that was being worked. There was no obvious issue with negative noise or anything concerning that pit then so I don't think there will be problems with the one up before you. Plus I don't believe that campers and fishermen spend money in Anchor Point because they bring supplies from home so even though they enjoy a nice vacation they don't add to the local economy.

Many people jump to the worst place when they are against something and not willing to listen to compromise or reality. They need to realize that a permit comes with laws that need to be followed that help protect the neighborhood. As everyone knows, there is no gravel in Homer so of course I will support a new pit in Anchor Point that might in some way help me or my friends build or improve our property. Also, I support my friends, many that I grew up with, that have good paying jobs because of gravel pits.

Thank you for listening to my point of view. I support the Trimble's gravel permit.

It has come to our attention as citizens of this KPB that we are no longer represented. No longer able to live without fear of our government and not yet willing to sit back and have our government destroy the values of our homes, our health, our businesses , or our lives.

What you are proposing to turn Anchor Point into will help to destroy our lives and the life of our river. It will cause our tourists to run from the once peaceful park lands that will be dangerous for children and prohibit walking down the peaceful river road due to gravel trucks and dust (which will also impact the river). The noise alone is a deterrent.

The audacity of the KPB to think that only the people living directly adjacent to the pit are effected. WE live here. WE PAY our taxes. WE vote and we the people of the KPB are effected whenever something happens to OUR area, our neighbors (that you feel you can dictate your ideas to , are not happy about using OUR tax dollars to fight us .

Forty two years ago I moved to this town to avoid the noise and pollution of the cities and to live with the american ideal for Life Liberty and the Pursuit of Happiness. Violating the rights of others to have these simple needs too important to ignore. The planning commission is supposedly there for OUR benefit and not to put money in the hands of the good ol' boys or friends behind closed doors.

I went to a few meetings this last week where scores of my neighbors actually came out to find out how we can direct our government to stop denying our rights as humans in this borough and act for the good of us all. Please understand the very high emotional tension you cause when you threaten to destroy our property values(the only thing you seem to care about yet willing to destroy anyway) (the reasons are known but not discussed) and our quality of life (which is no concern to you at all yet top on OUR list)

Sincerely,

Linda Feiler

Re: McGee Tracts Line of Sight Drawings:

Dear Mr. Trimble,

Please find attached two drawings (plan and profile) that show the line of sight from a point on Lot 3, Parkinson Tracts - Del Mar Addition (85-102 HRD) along two vectors to points within Tract B, McGee Tracts Deed of Record Boundary Survey (80-104 HRD).

The plan drawing shows two vectors originating at the Bilben property (Lot 3). This point is the approximate location of the house on Lot 3 as determined from the Kenai Peninsula Borough fixed wing imagery as shown on their Geocortex Viewer. The plan drawing shows the boundaries of the existing Beachcomber, LLC counter permit gravel extraction area as well as the proposed three phase conditional land use permit material site area that is under consideration by the borough.

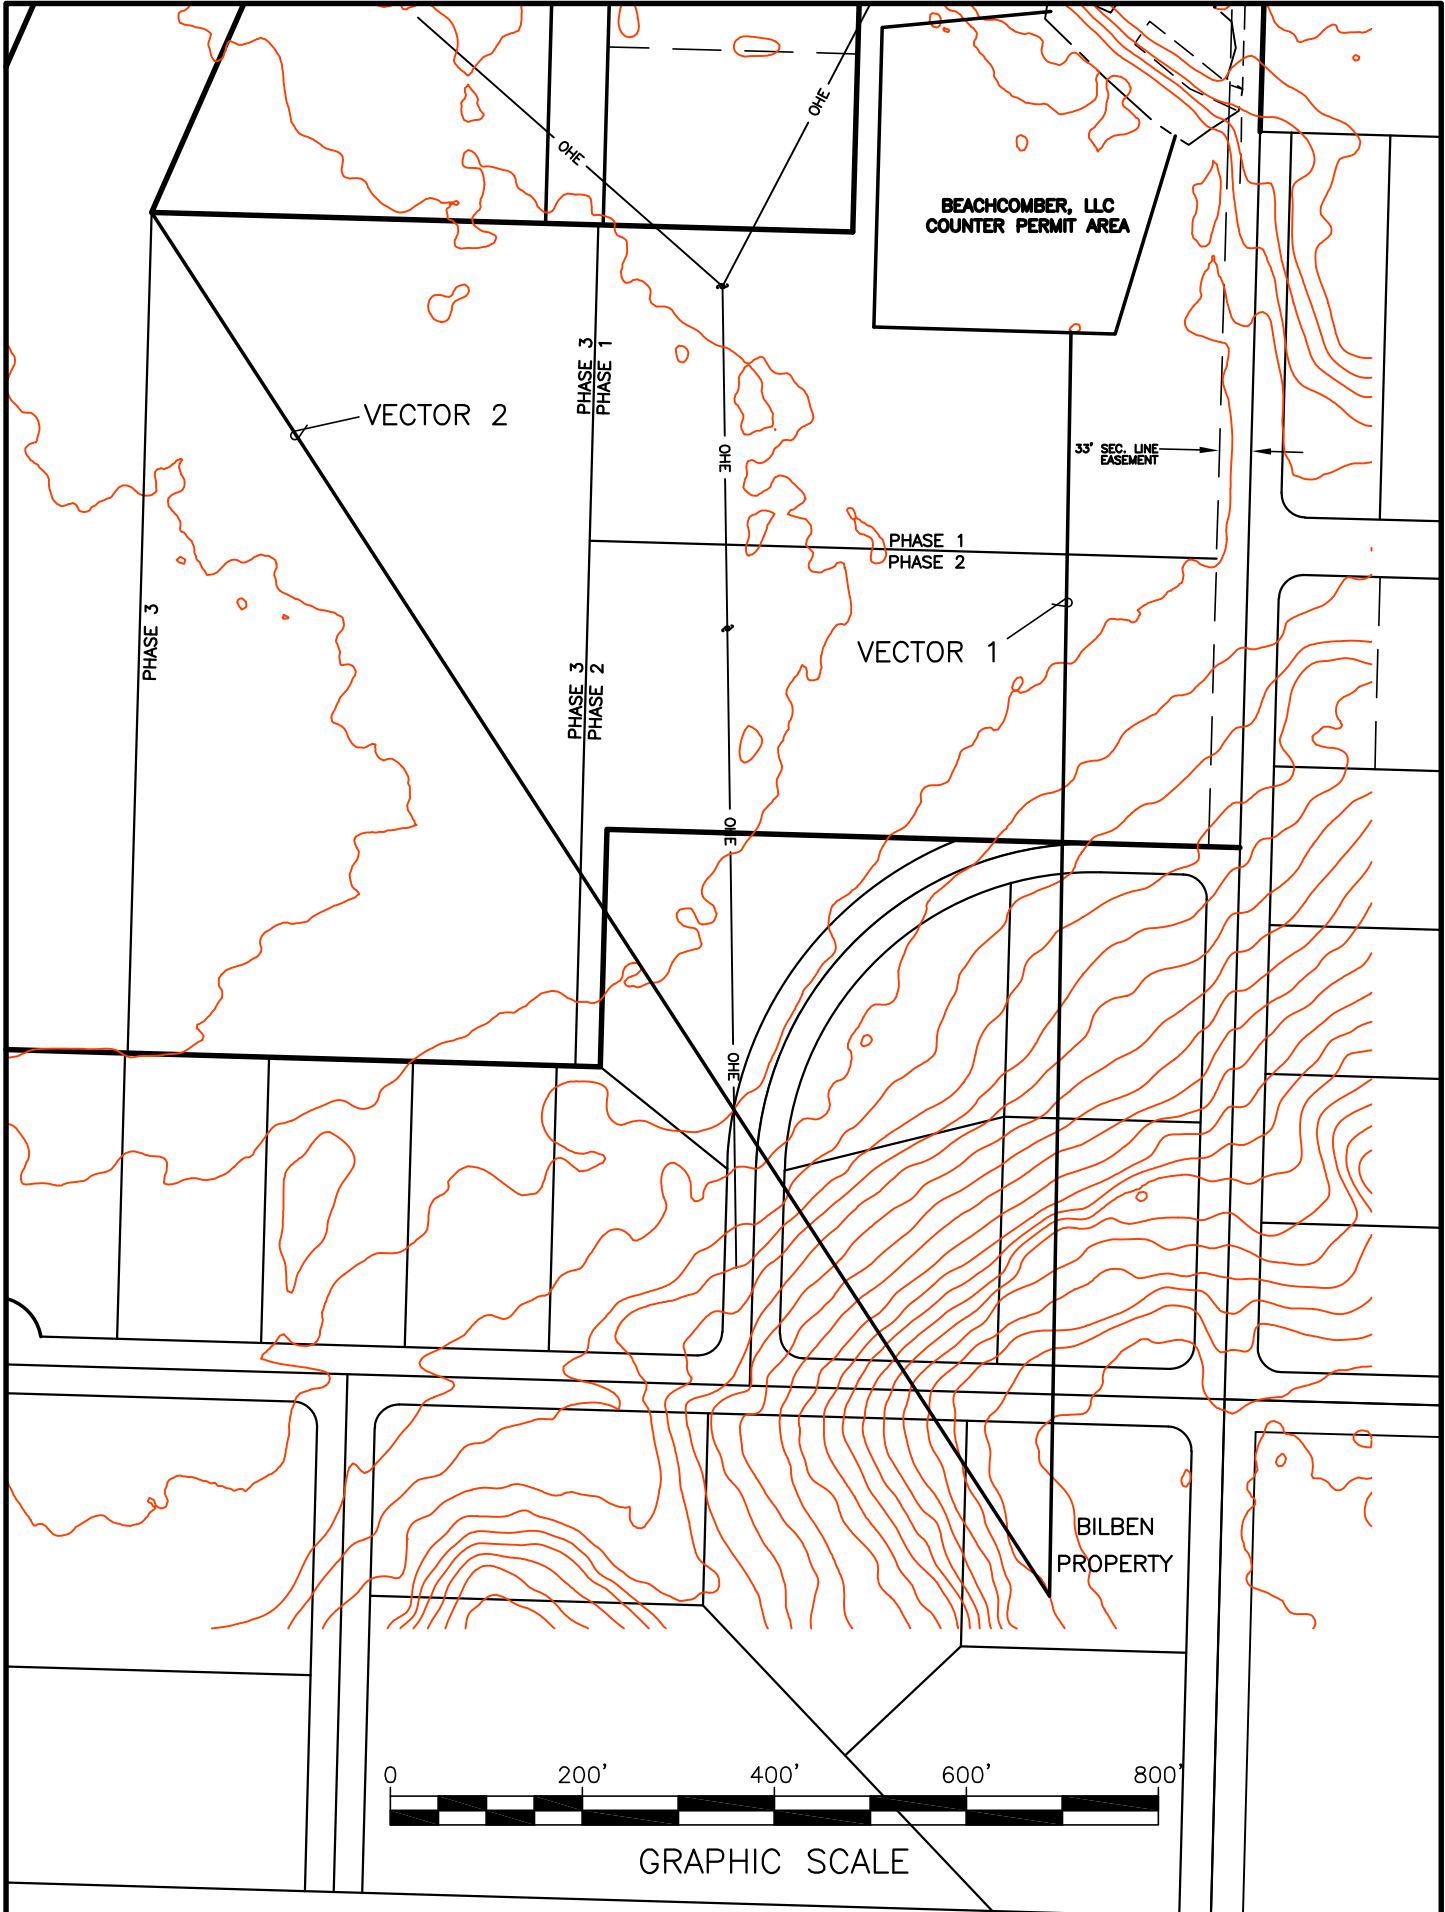

The contours shown are 4 foot interval LiDAR contours downloaded from the Kenai Peninsula Borough Terrain Viewer. The LiDAR data is in the Alaska State Plane Coordinate System (NAD83).

The representation of the property boundaries of Lot 3, Parkinson Tracts - Del Mar Addition and Tract B, McGee Tracts Deed of Record Boundary Survey is from a retracement survey conducted by me in 2017. The retracement survey was done utilizing GPS methodology. The basis of coordinates for the retracement survey was the Alaska State Plane Coordinate System (NAD83) determined from a GPS static observation on a control point that was submitted to OPUS (Online Positioning User Service) for processing.

The profile drawings show line of sight from a point 20 feet above existing ground at the approximate location of the house on Lot 3, to two points within Tract B (Vector 1 and Vector 2). The original ground profile is interpolated from the 4 foot interval LiDAR contours along the two vectors. The horizontal to vertical relationship on the profile drawings is 1 to 1. If you have any questions, please feel free to call me at (907) 399-4345.

Sincerely,

Stephen C. Smith P.L.S.

Subject: Fwd: Gravel Pit Support

As I can't be at the hearing on March 25th I send this e-mail to state my views.

I have known the Trimble family for many years and feel that Emmitt would be a responsible owner of the proposed pit. As a person who has built many homes in the past forty seven years in the Anchor Point area I know the importance gravel

plays in all our lives and how important it is to the local community.

If it wasn't for the jobs in the gravel and related industries Anchor Point wouldn't even be a wide spot in the road.

Respectfully Jim Halverson

Bruce Wall, please submit this as my support testimony for the Beachcomber CLUP. It is my response to a facebook post that Willy Dunne made on the topic of gravel pits. Thank you,
Lauren M Isenhour

Willy Dunne I am not an expert and this is just my personal opinion. The only people motivated to engage in this conversation are the ones emotionally charged and immediately affected (mainly the neighbors who don't want the gravel pit). All the thousands of other local residents who aren't directly affected or don't adamantly oppose the pit won't/don't take the time to write letters, drive to Soldotna for the Planning Commission meetings, call Borough Assembly members to say "hey, I'm fine with it," so it feels like a bias representation of the 'community.' I am very familiar with the Danver Rd gravel pit you spoke of, and I was at the planning commission meeting where the permit was presented. There were hundreds of us that received a notice from the Borough of the proposed permit adjacent to our properties and the only people who took the time to drive up to the meeting were those that passionately oppose it, my parents (the applicants), and me. There were countless more neighbors who did not take the time to respond to that Borough notice. I recently received a similar notice from the Borough of a proposed gravel pit adjacent to a lot I own in the Stariski area. I'm fine with it, don't oppose it, and I did not take the time to write a letter or appear at the Planning Commission meeting to say 'I'm fine with it.' In my opinion, of course you are only hearing from the people worried about the negative effects. They are the only ones passionate enough to make that effort. The rest of us who don't passionately oppose don't take away from the other important demands of our lives to say 'I'm fine with it.' I am a community member - I care about my community, its success and longevity. I love my quiet, rural, rustic Alaskan life. I care about the environment and the wildlife. I also care about all my friends and fellow community members who work related to the gravel industry; it is the literal foundation of Anchor Point. I don't believe that caring about the environment and caring about industry and development have to be in opposition. I feel an overwhelming division between the people who work in/with gravel, and the ones who oppose it, which makes no sense to me because we are ALL the community who are the gravel consumers. Terms like 'raping and pillaging the land,' or 'exploiting the land' are commonly used, and those who oppose it often demonstrate a level of contempt or disgust for gravel pit owners/operators as being greedy destroyers. Again, this is just my opinion based on my own experiences. Even your comment 'yes some people don't mind living next to a gravel pit. Many others, though prefer not to have the peace and quiet of their rural residential neighborhoods disturbed by the noise, dust, traffic, etc' implies that every gravel pit creates these problems and it's just that some of us have lower standards of living, so we may not mind those inevitable problems as much as the 'others'. This divisiveness is a serious problem, in my opinion. We ALL need gravel, whether you're a community member who likes maintained roadways and sanded parking lots, or if (like me, working in construction) your industry depends on it. I would argue that the majority of families who live in Anchor Point (that are not retirees or snow birds) work in some fashion related to gravel: equipment operators, truck drivers, construction workers. The pit operators I know go above and beyond the standard Borough regulations to do everything they can to mitigate sound, dust etc to keep their neighbors as happy as possible. They've been willing to work with their neighbors to do things like improve the neighborhood roads, expand privacy berms, discount or gift gravel, in some cases even shorten hours of operation.....maybe some of these examples are reasons these community members

commenting here are saying they don't mind living next to gravel pits? Gravel exists where it is, it can not be created in a more 'ideal' location further from residential locations, and large parcels of land suitable for a pit are not as plentiful as some people must think. The further away a pit is from the residential market that purchase the gravel, the higher the cost due to travel. Gravel pits provide a needed and necessary commodity to the community and are already highly regulated and controlled by the borough. I agree with you that there needs to be more open dialogue. I'm not against fine tuning the regulations, but I believe people often think that more regulations equal more protection for them but neglect to think of the potential negative effects of more regulating and how costly that can be. Gravel prices have to go up as the process to extract it becomes more difficult/involved. It is a misconception that there are currently more than enough gravel sources, and at a certain point it could become too prohibitive for a pit operator to stay in business, and that would negatively effect us all. This article you linked is not relevant to our community. None of us are familiar with the laws or regulations in Canada, but most of what I read about this particular woman's experience in Calgary is already regulated against and would not be the case here in our Borough. If you're motivation here in this forum is really to hear from more of the community than just those individuals who've reached out to you with complaints/concerns, there are better and less biased ways than linking an article like this one. How about simply posing a discussion like 'Hey community members, I've heard a fair amount of concerns about the negative effects with gravel pit development. Is there more to this discussion? Are there any other community members who would like to weigh in on this topic?' I can only speak for myself, but I would have responded a lot more positively to an approach such as that, than I am feeling about the approach you ultimately chose.

Regarding the request from applicant Beachcomber, recommended by staff, to postpone decision in this matter I recommend, and ask for this matter to be postponed to May 28, 2019.

This will not in any way prejudice party applicant Beachcomber while helping balance scales of justice with rights to be effectively heard by the literally HUNDREDS of adjacent neighbors.

March 25, 2019 Hearing should be postponed in its entirety and heard entirely and on a more comprehensive manner on the May 28, 2019 meeting.

Thank you for your judicial decision.

Subject: What unzoned does NOT mean

Dear KPB Planning Commission Members:

You are being incorrectly told that gravel mining in unzoned portions of the Borough give a right to landowners to open mine gravel and other minerals as an “as-of-right.”

You are also being incorrectly advised that you do not have authority to impose anything more than “berms & buffers” to mitigate impact to adjacent existing homeowners.

Officially zoned or unzoned designations of lands confer special positive traits to specific lands while restricting certain activities on other lands.

A one acre gravel pit is an “as of right” activity on all sites not specifically prohibited through formal zoning.

More than 2.5 acre mining is Prohibited on all lands without special permission through your authority. The Planning Department does not have that authority.

You alone hold that authority over staff and, despite what they would have you believe, may not approve such permit until the applicant has met your approval in meeting the standards as clearly laid out in KPB code.

You rule, the code rules, staff, inc atty, do not!

Subject: Anchor Point Gravel

Good Afternoon Mr. Wall,

I would like to give you my input on the possible gravel development in Anchor Point. Gravel as you are aware, is required for such projects as driveways, garages, green houses, or outbuildings, for their base; before building a house, putting down the foundation, landscaping, pathways, dry creek beds, and planter boxes to name a few areas.

I am a resident of Anchor Point; owning three properties there, and have used/required gravel from a local gravel business for numerous projects at both houses, including at one property, widening my parking area and drive to the barn; a new driveway for the other property, and concrete mixing for the new house. Thankfully, the local gravel business we went with had what we needed, yet, they are slammed with business orders in the Spring and Summer, so it took a bit of time to have everything delivered, which slows down projects. Many of the building contractors get their gravel from Anchor Point also. Another gravel pit business in Anchor Point to serve AP, Homer and the surrounding area is needed.

I am fine with responsible gravel development in Anchor Point, Alaska.

If you have any questions, I am happy to discuss.

Thank you,

Daphane Maxon

KPB and Trimble in their Opening Statements both claim that no substantial evidence was submitted by the neighboring property owners to support the Planning Commissions decision. I beg to differ!

The picture is taken from my bedroom window. Grade level for my property is approximately 20 feet above grade level for the mine, and my house is classed as a 1 1/2 story with a basement—this would put the view from my bedroom window at approximately 34 feet above the top of the 6 foot berm! The view from my living room would be approximately 24 feet above the top of the berm. I believe that the Borough must consider my bedroom to be “property” as evidenced by the fact that the assessed valuation of my “property” is based in part on the number of levels in the structure. Bruce Wall (KPB Planner) has been to my property, and he has seen this picture. He obviously does not see any dust, noise, or visual impact that might affect my, or any other neighboring property. My property is located directly east of the proposed gravel mine, across Denver Street (which shows at the bottom of the photo). I am six feet tall +or- an inch, and I am standing fifty feet inside the proposed mine. Planning Staff has concluded that a 50 foot vegetated buffer and a 6 foot berm will sufficiently minimize the dust, noise, and visual impact to my property. **All** trees behind me in the picture are located in the mine area and will be **GONE**—that leaves **one tree in the 50 foot vegetated buffer**, and a six foot berm to protect my property! I am also standing on what would become the primary access road to the mine and the potential 10,000 dump trucks that would travel it annually for the next fifteen years. No noise impact there! 250 feet behind me is the proposed location for the rock crusher. KPB and Trimble apparently don’t consider this to be “Substantial Evidence”! I have to think a **reasonable** mind might conclude differently...

To approve this application in light of this “substantial evidence” would have been a direct contradiction of 21.29.050(2E) which states that: “*Buffer requirements shall be made in consideration of and in accordance with **existing** uses of adjacent property at the time of approval of the permit*”, and 21.29.050(2C) which states

that “*The vegetation and fence (or berm) shall be of **sufficient height and density** to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission or planning director*”. As such, the Planning Commission was justified in their denial of this application, and their findings of fact were correct.

The proposed buffering is neither in “consideration of existing use”, or of “sufficient height and density to provide visual and noise screening” as required by Code. One tree does not constitute sufficient density, and sufficient height cannot be obtained to minimize visual or noise impact. Truck traffic alone would generate noise impact that would not be minimized by any type of buffer.

My property is at a substantially lower elevation than all other adjacent properties east of Denver Street, and at a substantially lower elevation than two or more impacted adjacent properties that are west of Denver Street and south of the proposed mine. All properties that are at higher elevation in the neighborhood are even more affected by the visual and noise impact that this mine will inflict because of the fact that berms and buffers of any practical height are well below their line of site and their line of earshot. Standards 21.29.040 (A4) & (A5) which are required by Code **can not** be met, and the Planning Commissions Findings of Fact are correct and appropriate.

March 22, 2019

Re: Written Testimony- Beachcomber LLC Proposed Gravel Pit, Anchor Point, AK

Dear Planning Commission Chairman and Commission Members

We live within 1/2 mile from the Beachcomber LLC proposed gravel pit in Anchor Point, Alaska. Our physical address is 34860 Seabury Court, Anchor Point, Alaska 99556

We are opposed to the proposed gravel pit in our back yard and appeal to your sense of fair play in your deliberations over this sensitive subject. More specifically, we oppose the approval of the gravel pit permit application for the following reasons:

- 1) The Planning Commission's action to deny the original Beachcomber LLC was based on materials facts related to noise and visual impact. The Hearing Officer's attempt to cut the Planning Commission's authority to deny a gravel pit permit is contrary to the Code that specifically states that the Planning Commission has such authority, under 21.15.050.
- 2) Noise Impact - There are no actions that Beachcomber LLC can do to eliminate or reduce the noise from their operations that won't negatively effect adjacent homeowner properties and the public who use the State Slide Hole campground across the Anchor River Road from the proposed gravel pit. In fact, many of the public who camp in it during the summer use tents. Tent fabric will do little to block the noises of loaders, dump trucks, and a proposed rock crusher. The topography surrounding the gravel pit does act like an "amphitheater" in that the gravel pit area is mostly a level area surrounded by upward sloping ground. Any noise created by the gravel pit operations is amplified by this physical phenomena, with noise rising to all the homeowner properties surrounding it. Last fall, when the Beachcomber LLC was working their gravel pit we could hear their loader dumping gravel into the gravel trucks, and we are well above the pit with trees and foliage between our home and the pit. Additional buffers at the pit site will not reduce or eliminate the noise disturbance their equipment produces.
- 3) Visual Impact - Our home is located back from a surrounding hill (approximately 100' elevation within 1/2 mile of the gravel pit) that overlooks the proposed gravel pit site, thus, we can't see into the gravel pit since we are a secondary lot. However, our three next door neighbor's homes are closer to the edge of the hill and look directly down into the gravel pit. At a 100' elevation no proposed buffers and/or berms will screen off the gravel pit from disturbing their view.
- 4) Dust - In the work of such a large commercial gravel pit operation, it will be impossible to reduce dust from the operation to a level acceptable to adjacent homeowners, the nearby Slide Hole Alaska Public Camp Ground, other R/V parks, and including our home which has an "air system" which can't handle that fine dust. This factor is because as a large front end loader empties its load into the dump trucks, dust and particulate matter will be blown by the wind. No matter which direction the wind is blowing there are homes or public locations that will be negatively affected. While dust suppression methods are available, it is impossible to treat the ground where the front end loader is digging from. Gravel trucks moving sand, gravel, and other material from the proposed gravel pit along the haul route, i.e., Danver Street and the Anchor River Road, will be subject to blowing dust and matter all along the haul route. It will be almost impossible to water down the trucks enough to stop the dust from escaping the trucks. Two to four times a year, we have really strong wind storms. You can see how storm has affected the parking lot at the boat launch. The wind sweeps up the river and more dust will fall on homes from the pit.
- 5) Physical Damage to Other Properties -The owner has stated he plans to use Danver Street as his haul route, while in fact, he will also be using the Anchor River Road (ARR) to access

other higher class roads to move materials to their final destination. The Anchor River Road, a State road, is already deteriorated to the point vehicle traffic dodges swells, holes, and serious cracks on the roadway to navigate it. Long stretches of the ARR have significant cracking along the road edges with the very edges breaking off. Due to their width, heavily loaded tandem axle gravel trucks will have to travel over an already damaged roadway, thus increasing the road's deterioration. Experts in highway construction familiar with the ARR have told us that up to 50 fully loaded gravel trucks per day will soon make the ARR almost impassable (the Beachcomber LLC Permit Application states he plans to move up to 50,000 cubic yards of gravel each year for 15 years. This translates into moving 5,000 cubic yards per day with approximately 100 work days in the season, thus 5,000 cubic yards hauled by a 10 cubic yard dump truck equals 50 loads per day plus return trips equals 100 trucks over the ARR per day). The ARR simply can't withstand that much heavy trucking traffic in its present condition.

- 6) Protecting Damage to Other Properties, Safety - While the code is ambiguous about public safety, we believe the Planning Commission is accountable to implementing the code to protect the public from harm. The Code states under 21.25.020. - Purpose. This part of the code states, in part, "...impose...standards for certain land uses which may be potentially damaging to the public health, safety, and welfare, in a manner that recognizes private property rights." We believe that the Planning Commission must look at the proposed gravel pit operation in terms of the public's health, safety, and welfare even though code 21.29.040 may be vague. Most cases of unclarity would move to the basis of what a "prudent person" would do or have done. In this case, the purpose of the Code would guide the Planning Commission if the code is so narrow that some would deem it non applicable. Therefore, the Planning Commission is obligated to look at the safety of the public along the haul route where the gravel pit owner's trucks will travel and that is the Anchor River Road (ARR). During the summer, the ARR gets significant pedestrian and bicycle traffic throughout its length. The road shoulders, if they exist at all, are very narrow. Large vehicles will force pedestrians and bicycles to jump into the ditches some of which are very deep and often filled with water. As you know, many kids on bicycles believe themselves to be invincible; thereby, setting up a deathly situation with so much heavy dump truck traffic on the ARR. In addition, the ARR is used extensively by the Commercial Charter Boat fleet that traverse the ARR with "over width" boat/trailers. It is likely impossible for one of the gravel pit dump trucks, and one of the "over width" boat/trailers to pass on the narrow width ARR. Any pedestrian and, or bicycle traffic, will be at extreme danger of injury or even death in such circumstances. Since there are no other haul routes available for the gravel pit owner to move his gravel, the answer for the Planning Commission is to deny this gravel pit application. We hope you will apply the concept of "prudent persons" doctrine making the right decision.
- 7) Property Values - The code 21.25.020.-Purpose. States in part, "It is the purpose of this chapter...(to)...impose minimum standards for certain land uses which may be potentially damaging to the public...welfare...". The meaning of welfare is, "the provision of economic benefits." We maintain that the proposed Beachcomber LLC gravel pit will cause us irreparable economic harm. A public meeting at the VFW, in Anchor Point on July 11, 2018, was held to discuss the Beachcomber LLC's proposed gravel pit. Approximately 50 Anchor Point residents were at the meeting. Emmitt Trimble of Coastal Realty and owner of Beachcomber LLC attended the meeting and answered questions about the pit. I personally asked him, "Based on you being a long time Anchor Point Realtor, if you put a commercial gravel pit next to our homes will our property values go down?". Mr. Trimble stated, "Well absolutely. I don't know how much but they'll go down." At a Material Site Work Group meeting on February 27, 2019, the subject of how gravel pits adjacent to homes effect home values was discussed. Testimony was heard that home values would be devalued by 30% or more. Mr. Emmitt Trimble testified and stated, "This is being blown completely out of proportion. There won't be any negative effect to home values if a gravel pit is put in next to (existing) homes". His testimony at the February 27th Material Work

Group meeting was completely opposite from the statement he made in the public meeting he spoke at on July 11, 2019. Which is it? Do home values go up or down when a gravel pit is created next to existing homes? Mr. Trimble can't have it both ways. It is obvious Mr. Trimble will testify and say anything that will further his own personal agenda. This shows that he can't be trusted to state the truth if his testimony will further his own personal economic interest. In their written testimony dated March 17, 2019 to the KPB Planning Commission, Linda and Mike Patrick whose home overlooks the Beachcomber LLC's proposed gravel pit stated, "Two real estate representatives have told us that (if a gravel pit goes in adjacent to our property) our property will be devalued." "I had a property evaluation done by Kachemak Realty on our house and two lots. The agent estimated a 30% reduction in value...compounded by it being in direct line with the spectacular view. Estimated damage to our properties \$140,000." In our own case, at a 30% reduction in value we estimate at least a \$180,000 loss in our homes value. It is unconscionable, that Mr. Trimble can enjoy the monetary benefits of his proposed gravel pit while his neighbors lose 30% or more of their home values.

We wish to thank you for considering our written testimony. We hope you will again rule against the Beachcomber LLC's gravel pit application. We appreciate the difficult task you have, but we believe the Code will support your decision and explanation to deny the permit again.

Sincerely,

Gary and Eileen Sheridan

Subject: Denver Gravel Mine

I am writing to express my feelings on the Proposed Denver Gravel Pit mine in Anchor Point.

If this mine is approved it will become one of the largest travesties towards The Public's Safety and Wellbeing.

It seems that even though guide lines have not been met there is a conspiracy by Kenai board officials to grant the permit regardless of noncompliance by Beach comer.

It would be interesting to know if any board members have associations with the mining industry, such as gravel pits in general.

I live with in a ½ mile of the proposed pit and wonder if commonsense has be thrown out the window.

Does anyone believe that there is no potential of health concerns from dust, water run off our being hit by large trucks and equipment on a road that can hardly accommodate passenger vehicle's as it is.

Or listening to crushers and back up alarms all hours of the day.

It is true that large trucks use this road way now but on a limited basis.

This area is a pristine area and only a few feet from Start Parks land, Parks and recreation activities.

Do you not think that when folks quit using the recreational activities in this area because of noise, air Pollution and safety of there children that it will not adversely affect the economy for Anchor Point, Homer, Soldotna and elsewhere. Which one of you want to see a child injured or Killed because of a road that has no clear pedestrian right of way to get to the boat launch or other activities.

It seems to me that some of us that are responsible for the public's wellbeing is not playing with a full Deck.

I am sure when it comes time to make the conclusion on this matter that those responsible will make the correct discussion. Our faith is in you who represent us.

Sincerely

Dan Syme

Subject: Support letter for beachcomber CLUP

Dear Planning Commission Board,

I am a resident of Anchor Point, and I support responsible development for our small community to maintain our existence. I believe the infrastructure of our community is greatly tied to the natural resources we possess, gravel being a very important one. There is not a booming economy in Anchor Point, but there are many families who live here and are able to support their family and raise their children here because of the work related to gravel and the modest construction industry. If we eliminate those jobs, it drastically hurts our tiny community.

I believe there is an attainable balance between protecting the environment and surrounding property owners, while still allowing for the development that keeps our community viable. I do not believe it should be one side versus the other, but a respectful cooperation between the entire community is what is needed to ensure that we REMAIN a community. That is what the borough's permitting and regulation process is all about. Gravel pits are highly regulated. Hindering the development of gravel pits will hurt this community tremendously. There are many members of our community who are retirees or snowbirds who are worried that 'development' will ruin the quiet little town they enjoy recreating in, and are not concerned if jobs dry up, or if Chapman School closes, or if local businesses fail because they are only concerned with the peace and privacy of their own property. But there is also a large population of us that are trying to make a living in the Anchor Point area, raise children here, and depend on the jobs created by that 'development.' Like our retiree counterparts, we ALSO enjoy the peace and privacy of our properties and enjoy recreating in this wonderful environment. But we also care about the viability and longevity of Anchor Point for our future generations, and that requires a balance between development/job creation while still keeping Anchor Point a quaint recreational destination. We do not want to see our friends, families, neighbors forced to leave because our community become unsustainable. The presence of gravel is one of the few advantages Anchor Point has over surrounding communities. If you hinder/stop the responsible and regulated development of gravel, you make it really hard for our families to support our children here.

I appreciate the current regulations being implemented on the gravel industry, because they do protect our community and our residents. Thank you.

Dave Drake

Dear Planning Commission Board,

I am writing about the gravel pit being considered on Danver Road in Anchor Point. I support development and believe the jobs created by the gravel business are very important to our whole Peninsula. I want the roads to continue to be sanded and maintained and I want gravel available to me and my family and friends when we want to build. I do not want the planning commission to deny applications that meet the code or new regulations that cause the cost of gravel to go up so much that we can not afford to built or maintain our properties or our public amenities the way we want and need them to be.

I believe that a gravel pit provides a necessary commodity to our communities. Gravel pits already have strict regulations and laws to control what they can and can not do. The only business ventures in our borough that are regulated are gravel pits and marijuana operations. There are zero regulations for junk yards, dog lots, trailer parks or any other business or personal property usages that some neighbors argue could lower their property values.

The borough does not have zoning. Personally, I do not want to be zoned, but putting stiffer regulations on a gravel pit and allowing the rest of the borough to have junky yards and do whatever they please with their property and be totally unregulated is not fair.

Gravel pits actually provide a needed service to all of us, so personally I am willing to work with the pit owners and the current regulations to make sure that needed service stays available!

Thank you,

Danica High

Dear Planning Commission Board,

I am a resident of the Kenai Peninsula Borough and have lived here my whole life. I live in a house with a foundation built from gravel products, I have a septic system and driveway because of purchased gravel, I live on a maintained road built with gravel products, I benefit daily from our state and borough maintained roadways (both gravel and paved), our public buildings and parking areas, that are all built and maintained by gravel and gravel products (such as sand, rock, peat, top soil). I understand the need for such materials to maintain all of our everyday lives, let alone to allow for new growth and development. I know that the gravel industry provides a lot of jobs in our communities on the peninsula, and THOSE jobs help support the other local businesses such as stores and restaurants. I do, of course, expect gravel pit owners to follow the law and adhere to the regulations set in place by the borough, and I do appreciate the borough enforcing those regulations.

I understand the need for gravel pits and I am fine with the development of responsible gravel pits in the Anchor Point area.

Thank you,

Jake Wise

Subject: Support for Denver Gravel Permit

Planning Commission Chairman and Members,

I have heard a lot of negative comments about the proposed gravel pit on Denver Rd. Anchor Point is an unzoned area and not a city. If people want to have a controlled neighborhood then they should move into Homer city limits or move somewhere else. I believe if you own property and there are no covenants or zoning then you have the right to do whatever you want that is legal on your land. I live in a rural area so I do not want people to tell me what to do on my land and I don't tell my neighbors what to do on their property either.

People living in unzoned areas are subject to their neighbors using their property in any number of objectionable uses such as dog lots, junk yards, motor cross racing or any industrial use. Seems to me gravel pits are regulated and all those other 'objectionable' uses are not. Gravel pits provide a completely necessary resource to the entire community, AND they are regulated to protect the neighboring people. If a pit owner doesn't follow the regulations, they can loose their permit or be fined heavily.

I support the development of the pit on Denver Rd, as I would any other legal project that follows the regulations. If you let negativity over rule reason and law then we are all in big trouble. Decisions should not be made on emotional claims but on the codes and on the law.

Thank you for the opportunity to express my opinion,

Nick Finley

Dear Planning Commission Board,

I am a resident of the Kenai Peninsula Borough and have lived here many years and plan to raise my children here. I live in a house with a foundation built from gravel products, I have a septic system and driveway because of purchased gravel, I live on a maintained road built with gravel products, I benefit daily from our state and borough maintained roadways (both gravel and paved), our public buildings and parking areas, that are all built and maintained by gravel and gravel products (such as sand, rock, peat, top soil). I understand the need for such materials to maintain all of our everyday lives, let alone to allow for new growth and development. I know that the gravel industry provides a lot of jobs in our communities on the peninsula, and THOSE jobs help support the other local businesses such as stores and restaurants. I do, of course, expect gravel pit owners to follow the law and adhere to the regulations set in place by the borough, and I do appreciate the borough enforcing those regulations.

I understand the need for gravel pits and I am fine with the development of responsible gravel pits in the Anchor Point area.

Subject: proposed Beachcomber LLC gravel permit

Mr. Chairman,

For the record, I live within the effected area of this proposed permit on 73614 Twin Peaks Loop, Anchor Point, Alaska

Please add my family to the list of property owners in the effected area of the proposed Beachcomber LLC gravel pit, to your list of "opposed".

This particular proposed pit is in the totally wrong location for a huge pit such as it is proposed.

Many good gravel operators such as Dibble Creek and East Road Services and Johnson and Sons have planned their pits to be in areas that are beneficial to both them and the residents around their pits.

But this proposed gravel pit is completely surrounded by homes that were built and purchased knowing that the small yet significant area was in a peaceful residential area that is only yards from a State Park and a famous halibut boat launch and the world famous Anchor River fishing environment that people from Soldotna on the Kenai River to the people in Homer based around the Homer Spit enjoy! You would never allow this to happen next to he spit, would you?

As you well know, there are dozens of local gravel pits, with none I believe that were ever denied. Just because there are no "Restrictions of Record" if I worded that correctly, that the applicant cannot meet, I believe the rights of the many taxpaying landowners that are adjacent to it should have a high consideration in this special area.

If the adjacent property owners do not have any implied rights of record, and do not have a say in this proposal, then the Board should say this outright! If we do have an actual right of say in this matter, then it would be very hard for a reasonable person to find that this proposed gravel pit is in the wrong location having a disastrous effect on both the effected property owners lives and property values.

This is literally a total residential & tourist service based area, no less than the Homer Spit!

We all need and want the services of gravel, but not when they approach with the destruction that this proposed pit could do to its adjacent residences and their families!

This is not a situation where people move next to a gravel pit then try to shut it down. This is the opposite.

Thank you for your consideration in this matter

Tony Hoza

Subject: 74185 Anchor Point Road - sand/gravel/peat extraction permit application

Dear Mr. Chairman -

I would like to weigh in on this proposed gravel mine application. While my house is on the north side of the river and it would seem that I don't necessarily have a dog in this fight, I frequently travel along the Anchor River Road and I was also looking at one time at purchasing a residential lot nearby to the proposed gravel mine. This gravel mine seems very incompatible with the predominant use of residential lots in the area. Between the noise, dust, likely impact to groundwater used for drinking water, and almost certain negative impact to adjoining property values, I cannot see how the project benefits outweigh the adverse impacts to surrounding property owners. Tall berms around the pit may mute some of the noise and visual impact but it will not address the considerable heavy truck traffic around residential property owners. With a gravel mine at the location, there is certainly no way I would ever consider purchasing one of the lots there to build on. On top of that, the Anchor River Road is in poor shape and heavy trucks will only worsen the condition of the road.

I am by no means against gravel mining as this is a needed commodity by all of us however this location, given the existing development around it, seems completely inappropriate for this proposed use.

Thank you for your time and consideration of my comments on this matter.

3-25-19 Hearing

To the Planning Commission

Beachcomber LLC Permit

Mary Trimble, member Beachcomber LLC PO Box 193 AP

When we first started this permit application process we talked to the Mayor about it and he said simply "follow the rules". He did not tell us it was a contest to see who could generate the most testimony for or against. We have been following the rules. We hired an engineering firm to do the surveys, drawings and work with us and the staff to make sure our application was complete. Based on that, the staff recommended our permit for approval. Once again we have worked with the staff and are now clearly stating that our berms will be where they are most effective – between the vegetative buffer and the extraction site as we have intended to do all along. The staff is again recommending approval. The planning director, Bruce and the borough attorney have all visited the site and saw no issues with our plan. The borough attorney has, in her briefs, interpreted the code and stated case law to back up her position that the permit should be granted. These are professional, educated people who represent the borough interests and who interpret and enforce the code.

Emmitt and I became AP residents in 1976 and owned a tackle shop on the Anchor River. Even though our campgrounds and state park are a valuable resource that we all enjoy they contribute very little to our town's economy. The gravel industry is the economic driver that helps many year round businesses thrive. The trickle-down effect is huge. We could not have developed 150 residential homesites in the area without an affordable source of gravel close by. Currently, we own 32 residential and 9 commercial parcels, 9 homes and a commercial building for a significant combined tax assessed value. We also own a construction

company with our daughter and are building spec homes in town. Preserving property values is very important to us.

With this permit we will only be a "Mom and Pop" business and are not intending, able or willing to compete with the large operations. It just isn't practical. We don't have equipment so we will hire the local contractors that we know do a good job. The permitted 27.7 acres minus the buffers is actually less than 20 acres, planned in 3 phases and will be reclaimed when progress is made. Our prime use for the gravel will be to improve our other properties and sell to the limited local area market.

The contour of the surrounding area has been mentioned many times and erroneously described as an amphitheater or bathtub. I submitted a colored contour map showing the true situation. The area higher than our property runs in a straight NE SW direction.

We believe in "Rights with Responsibilities" and this is a situation where we are agreeing to take on responsibility in exchange for the right to excavate gravel on our property. The "opposition" wants the right to protect their property but are unwilling to accept the fact that they have a responsibility to do what they can to minimize visual and noise, if it is bothersome, by building a fence or berm on their property and/or installing blinds that raise up from the bottom so they still have their Inlet view. They do not have rights to our land, so we should not bear all the responsibility for mitigating their perceived discomfort for how we use it.

In fact, our land is not a wildlife refuge, a bird sanctuary or a state park. It is our private property and we have the right to put it to its highest and best use which is defined as the likely use, selected from a number of available choices, to which an area of land may be put, based on what is physically possible, in compliance with zoning and building regulations and which produces the most profitable present value of the land.

As has been said before – this is an amazing legacy property for our family. We desire to build a home there to be near our grandchildren.

Finally, KPB 21.29 attempts to balance a variety of public needs, including residential area protection, a private party's right and ability to use their land to its highest and best use, and the public's need for gravel. Whether one agrees or not with KPB 21.29, it is the law and standards that control what the Planning Commission can or can't do.

Planning Commissioners have a fiduciary obligation to thoroughly read and listen to what is presented, dismiss any irrelevant information, and make an informed decision based solely on the code and substantiated facts.

This is about ensuring there is a fair process that abides by the existing code. If this governmental body acts in violation of the code, the rule of law is undermined and that is harmful to the overall democratic process.

Respectfully,

Mary E. Trumble

To the Planning Commission

Beachcomber LLC Permit

Mary Trimble, member Beachcomber LLC PO Box 193 AP

When we first started this permit application process we talked to the Mayor about it and he said simply “follow the rules” and we have been following the rules. We hired an engineering firm to do the surveys, drawings and work with us and the staff to make sure our application was complete. Based on that, the staff recommended our permit for approval. Once again, we have worked with the staff and are now clearly stating in the permit that our berms will be where they are most effective – between the vegetative buffer and the extraction site as we have intended to do all along. The staff is again recommending approval. The planning director, Bruce and the borough attorney have all visited the site and saw no issues with our plan. The borough attorney has, in her briefs, interpreted the code and stated case law to back up her position that the permit should be granted. These are professional, educated people who represent the borough interests and who interpret and enforce the code.

Emmitt and I became AP residents in 1976 and owned a tackle shop on the Anchor River for 3 years so have firsthand experience in a tourist business there. Even though our campgrounds and state park are a valuable resource that we all enjoy they contribute very little to our town’s economy. The gravel industry is the economic driver that helps many year round businesses thrive. The trickle-down effect is huge. We could not have developed 150 residential homesites in the area without an affordable source of gravel close by. Currently, we own 42 parcels, 8 homes and a commercial building for a significant combined tax assessed value. We also own a construction company with our daughter and are

building new homes in town. Preserving property values is very important to us.

With this permit we will only be a “Mom and Pop” business and are not intending, able or willing to compete with the large operations. It just isn’t practical. We don’t have equipment so we will hire local contractors that we know do a good job. The permitted 27.7 acres minus the buffers is actually less than 20 acres, planned in 3 phases and will be reclaimed as required by the permit. Our prime use for the gravel will be to improve our other properties and sell to the limited local area market.

The contour of the surrounding area has been mentioned many times and erroneously described as an amphitheater or bathtub. I submitted a colored contour map, page 348 in your packet, showing the true situation. The area higher than our property runs in a straight NE SW line.

Emmitt and I believe in “Rights with Responsibilities” and this is a situation where we are agreeing to take on responsibilities in exchange for the right to excavate gravel on our property. The “opposition” has the right to protect their property but are unwilling to accept the fact that they have a responsibility to do what they can to minimize visual and noise, if it is bothersome, by building a fence or berm on their property and/or installing blinds that raise up from the bottom so they still have their Inlet view. They do not have rights to our land, so we should not bear all the responsibility for mitigating their perceived discomfort.

In fact, our land is not a wildlife refuge, a bird sanctuary or a state park. It is our private property and we have the right to put it to its highest and best use which is defined as: the likely use, selected from a number of available choices, to which an area of land may be put, based on what is physically possible, in compliance with zoning and building regulations and which produces the most profitable present value of the land.

we have
As ~~has been~~ said before – this is an amazing legacy property for our family. We desire to build a home there to be near our grandchildren.

Finally, KPB 21.29 attempts to balance a variety of public needs, including residential area protection, a private party's right and ability to use their land to its highest and best use, and the public's need for gravel. Whether one agrees or not with KPB 21.29, it is the law and standards that control what the Planning Commission can or can't do.

Planning Commissioners have a fiduciary obligation to the taxpayers to thoroughly read and listen to what is presented, dismiss any irrelevant information, and make an informed decision based solely on the code and substantiated facts.

This is about ensuring there is a fair process that abides by the existing code. If this governmental body acts in violation of the code, the rule of law is undermined and that is harmful to the overall democratic process.

Borough Opening Statement Appeal Discussion

1. This material site is located in the rural district of the borough. The rural district is unzoned. KPB 21.04.01 0. As such this is not a case where a conditional use is being allowed in a residential zone where it would normally be prohibited. Subject to some protections afforded surrounding property owners as set forth in the code, a material site can be placed almost anywhere in the rural district of the borough. Given the wealth of gravel deposits in the Anchor Point area it should not be surprising that this parcel would be utilized for a material site.

2..... some of those property owners will be more protected by their distance from the material site and the proposed buffers. However, there will always be at least some noise and visual impacts to adjacent properties from a material site operation.

3. In the history of the material site ordinance there has not been an interpretation that all surrounding properties must not be able to see or hear the material site at all. Rather, the interpretation over the course of the 96 material site permits that have been issued since 1996 is a reduction in certain negative impacts is the goal of the material site regulations. Full elimination of negative secondary impacts has never been discussed or required, nor is it feasible. Attempting to judge whether a permit should be denied based on how many people claim they are not sufficiently protected ultimately will lead to arbitrary decision making. Rather than relying on evidence this approach relies on surrounding property owners stacking the hall-whether a permit is approved or denied becomes a numbers game. Such "negative community sentiment" is not a valid reason to deny a permit.

4. In the case of the material site code a list of standards is provided and a set of mandatory conditions associated with those standards are imposed along with a sentence that specifically states only the mandatory conditions may be imposed to meet the standards. Little flexibility is given to the planning commission. Denials are possible. However, generally denials are not probable given the language of the code.

5. Given the mandate from the assembly that material sites be subject only to certain mandatory conditions a denial based on a conclusory statement that the buffers are insufficient to protect against noise and visual impacts cuts against the grain of the code. Rather, if the buffers that can be fashioned are entirely useless to protect surrounding uses the answer is a waiver of the buffer requirements under KPB 21.29.050(E), not an unauthorized denial of the permit.

6. Staff did not believe buffering would be useless and recommended enhanced buffers to afford increased protection over and above what the minimum buffers set forth in the code would require.

7. The planning commission's findings are required to be supported by the substantial evidence in the record. The "substantial evidence" in the record required to support the planning commission's findings is not the same as a substantial number of people opposing the material site. Substantial evidence is defined as relevant evidence that a reasonable mind might accept to support a conclusion.

8. One of nine commissioners indicated they read the information. One other commissioner indicated she had read "a bit" of the information and assumed it would be verified by what she heard in the testimony.

9. A superior court decision has upheld the borough assembly's authority to adopt an ordinance that favors material site operations. This order further held that it is the planning commission's responsibility to abide by the legislative standards the assembly has established

10. The assembly has specifically adopted ordinances that are protective of material site operators and rejected proposed ordinances that make it more difficult for the same to receive project approval. In adopting the material site code language, the Borough Task Force rejected language that placed a larger burden on the permit applicant

11. The Assembly could have chosen a policy that favors residential property owners, but instead it chose to adopt a policy that favors material site operators.

12. This is not to say a material site permit cannot be denied, but rather it cannot be denied based on inadequate buffers, when under the code either enhancing the buffers or waiving the buffers are the authorized resolution to a situation where buffers are not feasible. KPB 21.29 .050(1) (e) .

BOROUGH REPLY TO COMPLAINANTS

1. The briefs presented in opposition to the Beachcomber application are very similar in that they discuss the volume of people who attended the hearing who complained primarily about their viewshed being potentially ruined by the material site and also about potential noise, dust, road damage, diminishing property values, water quality and quantity. As discussed in the opening statement of the Kenai Peninsula Borough ("borough") the standards in KPB 21.29 .040 address only water quantity, road damage, physical property damage, dust, noise, visual impacts and reclamation. These are the adopted standards because these are the concerns that are raised about many, if not most of the material site applications. The complaints received about the Beachcomber material site are not unique. Repeating over-and-over again the same complaints about the same material site doesn't change the standards or conditions for material site approval set forth in KPB 21 .29.040-050.

Regardless of the evidence presented the material site code is not designed to support a permit denial based on the buffers not being feasible given the topography of the location. Where buffers are not feasible, a waiver of those buffers is in order under KPB 21.29.050(A)(2)(e). Staff, however, does not agree that the buffers are useless or not feasible but rather believes that they reduce the negative impacts of the material site. The borough further contends that it would be unrealistic to expect buffers to fully eliminate the negative impacts of noise and unsightliness which appears to be the position of the planning commission. Although the planning commission did not clearly articulate this interpretation of the code it is inferred from their findings that a denial was appropriate because the buffers would not minimize noise and visual impacts.

Reference is made to 200 pages of documents submitted. (Bilben brief, page 2.) However, documents that don't address the standards are not persuasive. Minimal questions were asked of the applicant and

testifiers regarding the standards applicable to the proposed material site. Evidence and fear are not synonymous. Much of what is referred to as evidence is actually voicing fear of what may happen if the material site is operated on the Beachcomber parcel. The borough inevitably hears complaints that wells will run dry and roads will be ruined by a material site. Yet there has never been a substantiated case of these deleterious results occurring after 96 permitted material sites. Fears and concerns, even though they may be real, are not evidence. There was no real discussion of these 200 pages of documents. This wasn't a thorough well-reasoned decision; it was a hasty reactionary decision made to accommodate the fears and concerns of the crowd.

The Girton brief references the peace, tranquility, natural beauty of the open meadows and the viewshed that will be destroyed by the material site. (Girton letter, page 1.) However, that open meadow is not a state or national park-that open meadow is a privately owned parcel in an unzoned area of the borough.

The RO Baker II Revocable Trust brief cites the *Wasilla v. Luperl* case and *South Anchorage Concerned Coalition v. Coffey*² case as supporting the denial of a conditional use permit. However, in both cases the applicant was attempting to conduct a use in a residential zone where the activity would generally be prohibited. The borough has not adopted the geographical zoning scheme authorized by AS 29.40.040(a)(1) but rather has adopted an ordinance to minimize unfavorable effects of material sites as authorized by AS 29.40.040(a)(3) consistent with the KPB comprehensive plan.³ A permit is required to operate a material site in the unzoned borough, but that permit requirement does not rely on the premise that material sites are in conflict or are generally prohibited in residential areas-a permit is required in the borough whether the nearest residence is across the street or across Kachemak Bay.⁴

The Bilben brief asserts there is substantial evidence in the record to support the planning commission's decision, but then goes on to argue that if there isn't substantial evidence the hearing officer should remand to the planning commission. Obviously, Bilben does not have confidence in the position that the substantial evidence in the record supports denial of the permit or he would not be suggesting a remand as an alternative.

The arbitrariness of the planning commission's decision is underscored by the fact that another material site in Anchor Point was heard by the same commission on the same night. The Blauvelt pit is 27.5 acres, while the Beachcomber pit is 27.7 acres. The testimony regarding Walt Blauvelt's material site was remarkably similar to the testimony regarding the Beachcomber material site. However, three people testified about the negative impacts of the Blauvelt material site, while approximately 30 testified regarding Beachcomber. The extreme difference between the two decisions the planning commission reached cannot be rationally explained. While some commissioners may not like the standards and conditions in the material site code it is not the planning commission's job to second guess the standards established by the assembly or ignore that the only conditions that may be placed on a material site are those set forth in KPB 21.29.050. KPB 21.29.040. The planning commission must work within the legislative standards established by the assembly.

Staff does not believe there is legal support for upholding the planning commission's findings of fact or conclusions of law. Indeed, the planning commission gave no explanation for its diversion from the legal requirements of KPB 21.29. The planning commission's findings were conclusory and inadequate to support abandoning the well-established approval process for material site CLUPs.

CONCLUSION

The denial of the material site based on perceived inadequate buffers is inconsistent with the many decisions issued by the planning commission where similar complaints have been raised. In those cases, the planning commission enhanced the buffers to the extent allowed by the code. The planning commission may change course as its expertise and experience suggests or requires, but when they do so they must provide a reasoned analysis indicating that prior standards and policies are being deliberately changed not casually ignored. The planning commission made no analysis of why it would deny this material site as opposed to other material sites with the same attributes, even a remarkably similar material site heard at the very same meeting. It was arbitrary and unreasonable for the planning commission to deny this material site permit. Rather than relying on its expertise and experience in administering KPB 21.29 it ignored that expertise and experience -- as such the hearing officer should not give consideration to the planning commission's interpretation of KPB 21.29 in this case. In fact, it would be difficult to give much consideration to the

planning commission's interpretation because they didn't discuss the ordinance, question staff or the witnesses in any meaningful way, or attempt to fashion more appropriate buffers.

Evidence the Beachcomber has met the CI UP Permit Conditions with Record Cites

<p>c. All CLUPS shall be issued with a condition which requires a two-foot vertical separation from the seasonal high water table be maintained.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 16; R5-R10; R13 Permit Condition 7; R22 Permit Condition 7.</p>

R480

<p>d. There shall be no dewatering either by pumping, ditching or some other form of draining unless an exemption is granted by the planning commission. The exemption for dewatering may be granted if the operator provides a statement under seal and supporting data from a duly licensed and qualified impartial civil engineer, that the dewatering will not lower any of the surrounding property's water systems and the contractor posts a bond for liability for potential accrued damages.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 16; R5-R6; R13 Permit Condition 8; R22 Permit Condition 8.</p>
<p>5. <i>Excavation in the water table.</i> Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission based on the following:</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 17; R5-R10; R13 Permit Condition 9; R22 Permit Condition 9.</p>
<p>a. Certification by a qualified independent civil engineer or professional hydrogeologist that the excavation plan will not negatively impact the quantity of an aquifer serving existing water sources.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 17; R5-R6; R13 No. 12; R22 No. 12.</p>
<p>b. The installation of a minimum of three water monitoring tubes or well casings as recommended by a qualified independent civil engineer or professional hydrogeologist adequate to determine flow direction, flow rate, and water elevation.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 17; R5-R6</p>
<p>c. Groundwater elevation, flow direction, and flow rate for the subject parcel, measured in three-month intervals by a qualified independent civil engineer or professional hydrogeologist, for at least one year prior to application. Monitoring tubes or wells must be kept in place, and measurements taken, for the duration of any excavation in the water table.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 17; R5-R6</p>

R481

<p>d. Operations shall not breach an aquifer-confining layer.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 16-17; R5-R6</p>
<p>6. <i>Waterbodies.</i></p>		
<p>a. An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains as defined in KPB 21.06. This regulation shall not apply to man-made waterbodies being constructed during the course of the materials extraction activities. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 18; R5-R10; R13 Permit Condition 9; R22 Permit Condition 9.</p>
<p>b. Counter permits and CLUPS may contain additional conditions addressing surface water diversion.</p>	<p>n/a</p>	<p>n/a</p>
<p>7. <i>Fuel storage.</i> Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 19; R13 Permit Condition 10; R22 Permit Condition 10;</p>
<p>8. <i>Roads.</i> Operations shall be conducted in a manner so as not to damage borough roads as required by KPB 14.40.175 and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 20; R14 Permit Condition 11; R23 Permit Condition 11;</p>

<p>9. <i>Subdivision.</i> Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit. The planning director may issue a written exemption from the amendment requirement if it is determined that the subdivision is consistent with the use of the parcel as a material site and all original permit conditions can be met.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 21; R14 Permit Condition 12; R23 Permit Condition 12;</p>
<p>10. <i>Dust control.</i> Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 22; R14 Permit Condition 13; R23 Permit Condition 13;</p>
<p>11. <i>Hours of operation.</i> Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 23; R14 Permit Condition 14; R23 Permit Condition 14;</p>
<p>12. <i>Reclamation.</i></p>		
<p>a. Reclamation shall be consistent with the reclamation plan approved by the planning commission or planning director as appropriate in accord with KPB 21.29.060.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 24; R 5-10; R14 Permit Condition 15; R23 Permit Condition 15.</p>
<p>b. As a condition of issuing the permit, the applicant shall submit a reclamation plan and post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.</p>	<p>n/a</p>	<p>March 2019 Staff Report, Finding of Fact 24(D); n/a</p>

<p>13. <i>Other</i> permits. Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives. Any violation of these regulations or permits reported to or observed by borough personnel will be forwarded to the appropriate agency for enforcement.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 25; Permit Condition 16; R23 Permit Condition 16.</p>
<p>14. Voluntary permit conditions. Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission for CLUPs or the planning director for counter permits. Such conditions must be consistent with the standards set forth in KPB 21.29.040(A). Planning commission approval of such conditions shall be contingent upon a finding that the conditions will be in the best interest of the borough and the surrounding property owners. Voluntary permit conditions apply to the subject parcel and operation, regardless of a change in ownership. A change in voluntary permit conditions may be proposed upon permit renewal or amendment.</p>	<p>Applicant is open to discussion</p>	<p>Applicant is open to discussion</p>

R484

<p>15. <i>Signage.</i> For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit, the permittee shall post notice of intent on parcel corners or access, whichever is more visible. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.</p>	<p>Condition met.</p>	<p>March 2019 Staff Report, Finding of Fact 17; R23 Permit Condition 17.</p>

Jeffrey Hunt
P.O. Box 208
Anchor Pt., AK

This letter is pertaining to the proposed Denver gravel pit.

My name is Jeffrey Hunt, a forty year resident of Anchor Point.

I would like to express my feelings about the Denver pit, I believe the pit will be a good thing for surrounding areas, it brings employment in all aspects to the A. P. area. It is a good location to service that area, especially with the condition of the Anchor River Bridge and not being able to cross with heavy loads. As far as the road being damaged, the roads in question were built by gravel trucks and built to withstand gravel trucks.

Anchor Point is a main supplier of gravel for all surrounding areas, and employs a great deal of the community in one way or another.

I also strongly believe that an individual should be able to do what he/she pleases with their land, as long as no laws are being broken.

I also believe that having a pit in that area could possibly help the community with road and path improvements which would be near impossible without a nearby source of gravel.

APPROVED MINUTES

CALL TO ORDER

Chair Pro Tem Foster called the meeting to order at 7:30 p.m.

ROLL CALL

Commissioners Present

Syverine Abrahamson-Bentz, Anchor Point / Ninilchik
Jeremy Brantley, Sterling
Paulette Bokenko-Carluccio, City of Seldovia
Cindy Ecklund, City of Seward
Robert Ernst, Northwest Borough
Diane Fikes, City of Kenai
Dr. Rick Foster, Southwest Borough
Virginia Morgan, East Peninsula
Franco Venuti, City of Homer
Paul Whitney, City of Soldotna

With 10 members of a 13-member Commission in attendance, a quorum was present.

Staff Present

Max Best, Planning Director
Marcus Mueller, Land Management Officer
Julie Hindman, Administrative Assistant
Jordan Reif, Platting Technician
Brue Wall, Planner
Karyn DeCino, Resource Planner
Scott Huff, Platting Manager
Holly Montague, Deputy Borough Attorney
Tom Dearlove, River Center Manager

Others Present

Douglas Clegg

****Approved by the Adoption of the Consent Agenda***

land sale.

Parcel 055-074-01

This is 160 acres on K-Beach in the Murwood area. The Planning Commission recommended it be removed from the sale list. The substitute ordinance reduces the proposed sale area to 120 acres. The 40 acres being removed from the 160 acres is near an Alaska Department of Environmental Conservation registered contamination site. The sale ordinance will require a residential deed restriction that will be superseded by the adoption of a residential local option zone district. The local option zone was heard by the Planning Commission at the March 11, 2019 meeting and the recommendation has been forwarded to the Assembly. The price was also adjusted based on the acreage to \$400,000.

Parcel 059-302-07

This is 20 acres in Soldotna. The Planning Commission recommendation on February 4, 2019 was to remove the parcel from the sale list. The substitute ordinance removes the parcel from the sale list.

Parcel 131-170-04

This is 40 acres near Tote Road. The Planning Commission recommended on February 4, 2019 to remove the parcel from the sale list. The ordinance substitute provides for the sale subject to a preservation deed restriction on the east half.

Parcel 055-0540-22

This is .46-acre lot in the Ciechanski area. This was part of group of three lots in the original ordinance. The substitute ordinance removes this lot from the sale to allow for a negotiated sale to the owner of adjacent Lot 5, Ravenwood Subdivision, which has a septic tank encroachment onto this parcel. The remaining two lots of the three lot group will be combine to .92 acres with a price adjusted to \$15,000.

END OF STAFF REPORT

Chair Pro Tem Foster opened the meeting for public comment. Seeing and hearing no one wishing to speak, the public hearing was closed and discussion was opened among the commission.

MOTION: Commissioner Bentz moved, seconded by Commissioner Carluccio to approve Ordinance 2019-03; An Ordinance Substitute authorizing the sale of certain parcels of Borough land by sealed bid followed by an over-the-counter sale.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

AGENDA ITEM G. PUBLIC HEARING

4. Conditional Land Use Permit for a Material Site; Anchor Point Area

Commissioner Brantley informed the Commission that he would be recusing himself from this item on the appearance of a conflict of interest. Chair Pro Temp Foster addressed that it appears that Commissioner Brantley may have a conflict of interest and asked if anyone on the Commission had issue with Commissioner Brantley recusing himself. Seeing and hearing no comments or discussion Commissioner Brantley was recused.

Commissioner Venuti addressed the memo and the letter that were included in the desk packet. The letter suggests that Commissioner Venuti has a conflict of interest on this issue. Commissioner Venuti stated that the letter accused him of unethical behavior. He does not feel like he has a conflict of interest and that he can make a fair decision on this item. Chair Pro Tem Foster asked the Commission if anyone had any issue or concern with Commissioner Venuti may have the appearance of a conflict of interest. Seeing and hearing no comments or discussion the Commission allowed Commissioner Venuti to remain and was deemed to not have a conflict of interest.

Staff Report given by Bruce Wall

PC MEETING: March 25, 2019

Applicant: Beachcomber LLC

Landowner: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

On July 16, 2018, the Planning Commission denied the approval of this Conditional Land Use Permit application based upon the following findings:

1. The noise will not be sufficiently reduced with any buffer or berm that could be added.
2. The visual impact to the neighboring properties will not be reduced sufficiently.

The Planning Commission's decision was appealed to a hearing officer in accordance with KPB 21.20. The hearing office has remanded the decision to the Planning Commission with the following instructions:

The Commission shall reevaluate the application with respect to the mandatory conditions listed in KPB 21.29.050, as well as any voluntary conditions that Beachcomber may agree to. The Commission shall conduct a second public hearing at which it shall issue findings of fact, pertaining to the mandatory conditions listed in KPB 21.29.050, and shall reference specific evidence in the record in support of those findings. In issuing its findings, the Commission must comply with both local and common law requirements, which require the Commission to both issue findings supported by substantial evidence and to "articulate the reasons for their decisions."

Following are excerpts from the hearing officer's decision regarding the Planning Commission's discretion:

While the Code requires applicants to submit significant documentation in order to obtain the permit, the Code does not provide the Commission discretion to deny such a permit when the application has been properly submitted. Instead, the Code preserves the unrestricted nature of the rural zoning district and limits the Borough to the imposition of certain conditions to extraction. (Hearing Officer Decision, p.10.)

A CLUP actually imposes greater rather than fewer restrictions upon the permitted parcels. While the rural zoning district is primarily unregulated and unrestricted, an applicant's parcels are subject to specific and express conditions that are not automatically imposed on other parcels in the same district. Thus, the government must ensure that the application of greater restrictions upon the applicant are in fact justified and imposed in a fair and objective way. The Code preserves this fairness by granting the Borough staff, the Commission, and a hearing officer very limited discretion in denying and even conditioning CLUPs. (Hearing Officer Decision, p.12.)

While the Commission's concerns may be valid, the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code. Instead, the Assembly, in adopting the Code, only granted the Commission authority to impose these conditions and ensure that any application complied with the application requirements. In other words, under the law as it currently stands, the Commission may only apply conditions under KPB 21.29.050 when issuing a material site conditional use permit. It may not impose additional conditions despite the positive impact such conditions may have in the rural zoning district or the community at large. To the extent the parties disagree with these limitations, it is the Borough Assembly, through the local legislative process, and not this hearing officer, that holds the power to change the permit approval process. (Hearing Officer Decision, p.13.)

The complete decision of the hearing officer is included with this staff report.

The submitted site plan indicates that the material site haul route will be Danver Street, which is a Borough

maintained road. The site plan and application proposes the following buffers:

- North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
- South: 6-foot high berm.
- East: 6-foot high berm.
- West: Greater than 50-foot vegetated buffer.

The application indicates that the depth to groundwater is 20 feet and that the depth of the proposed excavation is 18 feet. The groundwater depth was determined by a test hole on the property and exposed surface water to the north. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter. There is adequate room elsewhere on the parcel to accommodate processing while complying with the 300-foot setback. Staff does not recommend approval of the processing distance waiver request.

The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area. The site plan indicates a 104-foot setback from the wetlands area located in the northeast corner of the property and that this setback will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, Best Management Practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska, will be utilized as a guideline to reduce potential impacts to water quality.

The application states that reclamation will be completed annually before the growing season ends (September) and that seeding will be applied as necessary each season to areas that achieve final grade in order to minimize erosion and dust. The applicant estimates a life span of 15 years for the site with an approximate annual quantity of less than 50,000 cubic yards.

Following is a summary of the buffers proposed by staff:

- North: 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area; a six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 12-foot high berm along the rest of the northern boundary.
- South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
- East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
- West: Greater than 50-foot vegetated buffer along the western most parcel boundary.

PUBLIC NOTICE: Public notice of the application was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their Post Office. Public notice of the application was published in the March 14, 2019 & March 21, 2019 issues of the Homer News.

ATTACHMENTS

- Planning Commission packet from July 16, 2018
- Public comments submitted at the July 16, 2018 meeting
- Excerpt from the minutes of the July 16, 2018 meeting
- Hearing Officer's decision dated December 26, 2018
- Hearing Officer's reconsideration decision dated February 4, 2019
- Staff recommended buffers map

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.

2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
13. *Parcel* boundaries. All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
14. *Buffer zone*. A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same

- elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
- E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
15. Processing. Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter &

- 169-022-08 is not developed.”
- C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
16. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
17. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
18. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska

- DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
- I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
19. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
20. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
21. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
22. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
23. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
24. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB

21.29.060(C)(3) and as approved by the planning commission

- D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
25. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
- A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
26. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
- A. No additional conditions have been volunteered by the applicant.
27. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
- A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

STAFF RECOMMENDATION

The Planning Commission should review the application, site plan, staff report, and comments received and determine if the mandatory conditions contained in KPB 21.29.050 will be met. The Planning Department recommends that the Planning Commission deny the processing distance waiver request, approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the following:

1. Filing of the PC Resolution in the appropriate recording district after the deadline to appeal the Planning Commission's approval has expired (15 days from the date of the notice of decision) unless there are no parties with appeal rights.
2. The Planning Department is responsible for filing the Planning Commission resolution.
3. The applicant will provide the recording fee for the resolution to the Planning Department.
4. Driveway permits must be acquired from either the state or borough as appropriate prior to the issuance of the material site permit.
5. The 100-foot buffer adjacent to the riparian wetland and floodplain shall be restored to a vegetative state prior to the issuance of the permit.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts

- adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
 6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
 8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
 9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
 10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
 16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
 17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
 18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in

accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A “party of record” is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the filing fee and records preparation fee. (KPB Code 21.25.100)

END OF STAFF REPORT

Mr. Wall added that a waiver is being requested for the 300-foot processing distance requirement from the property line. Staff does not recommend approval of the processing distance waiver request. There is room elsewhere on the property for processing that meets the 300-foot setback requirement.

Due to the size of the packet Mr. Wall helped the commission by giving a breakdown of where items could be found in Volume 2 of the packet. Pages 42 through 115 contain the comments received for this hearing. Pages 116 through 303 contain the commission packet from the July meeting. This included the applications, site plan and public comments. Pages 304 through 331 are the minutes from the July meeting. An additional 53 comments were received since the packet was prepared and are part of the desk packet.

Mr. Wall also let the commission know that they each had a copy of a letter from the applicant’s representative requesting a continuance of the hearing due to unforeseen issues. Staff recommends that the public hearing be opened as advertised and then continue the hearing at the April 22, 2019 meeting.

Chair Pro Tem Foster opened the meeting for public comment and read the rules by which public comment may be taken.

1. Keri-Ann Baker, 59545 E. End Road, Homer

Ms. Baker is there on behalf of the applicant. She apologized because the request for continuance was due to a conflict that she thought would prevent her from being present. As a courtesy to this group as well as everyone present she did want to be there and they were prepared to continue forward but understand the recommendation for continuance. Some of the public may not be present due to the request. They would respect the decision of the Planning Commission.

2. Emmitt Trimble, PO Box 193, Anchor Point

Mr. Trimble read the following prepared statement that was taken from the opening statement for the appeal prepared by a Borough Attorney and Borough Staff.

“Borough Opening Statement Appeal Discussion

1. This material site is located in the rural district of the borough. The rural district is unzoned. KPB 21.04.01 0. As such this is not a case where a conditional use is being allowed in a residential zone where it would normally be prohibited. Subject to some protections afforded surrounding property owners as set forth in the code, a material site can be placed almost anywhere in the rural district of the borough. Given the wealth of gravel deposits in the Anchor Point area it should not be surprising that this parcel would be utilized for a material site.

2.some of those property owners will be more protected by their distance from the material site and the proposed buffers. However, there will always be at least some noise and visual impacts to adjacent properties from a material site operation.

3. In the history of the material site ordinance there has not been an interpretation that all surrounding properties must not be able to see or hear the material site at all. Rather, the interpretation over the course of the 96 material site permits that have been issued since 1996

is a reduction in certain negative impacts is the goal of the material site regulations. Full elimination of negative secondary impacts has never been discussed or required, nor is it feasible. Attempting to judge whether a permit should be denied based on how many people claim they are not sufficiently protected ultimately will lead to arbitrary decision making. Rather than relying on evidence this approach relies on surrounding property owners stacking the hall-whether a permit is approved or denied becomes a numbers game. Such "negative community sentiment" is not a valid reason to deny a permit.

5. Given the mandate from the assembly that material sites be subject only to certain mandatory conditions a denial based on a conclusory statement that the buffers are insufficient to protect against noise and visual impacts cuts against the grain of the code. Rather, if the buffers that can be fashioned are entirely useless to protect surrounding uses the answer is a waiver of the buffer requirements under KPB 21.29.050(E), not an unauthorized denial of the permit.

6. Staff did not believe buffering would be useless and recommended enhanced buffers to afford increased protection over and above what the minimum buffers set forth in the code would require.

7. The planning commission's findings are required to be supported by the substantial evidence in the record. The "substantial evidence" in the record required to support the planning commission's findings is not the same as a substantial number of people opposing the material site. Substantial evidence is defined as relevant evidence that a reasonable mind might accept to support a conclusion.

8. One of nine commissioners indicated they read the information. One other commissioner indicated she had read "a bit" of the information and assumed it would be verified by what she heard in the testimony.

9. A superior court decision has upheld the borough assembly's authority to adopt an ordinance that favors material site operations. This order further held that it is the planning commission's responsibility to abide by the legislative standards the assembly has established

10. The assembly has specifically adopted ordinances that are protective of material site operators and rejected proposed ordinances that make it more difficult for the same to receive project approval. In adopting the material site code language, the Borough Task Force rejected language that placed a larger burden on the permit applicant

11. The Assembly could have chosen a policy that favors residential property owners, but instead it chose to adopt a policy that favors material site operators.

12. This is not to say a material site permit cannot be denied, but rather it cannot be denied based on inadequate buffers, when under the code either enhancing the buffers or waiving the buffers are the authorized resolution to a situation where buffers are not feasible. KPB 21.29 .050(1) (e)

BOROUGH REPLY TO COMPLAINANTS

1. The briefs presented in opposition to the Beachcomber application are very similar in that they discuss the volume of people who attended the hearing who complained primarily about their viewshed being potentially ruined by the material site and also about potential noise, dust, road damage, diminishing property values, water quality and quantity, As discussed in the opening statement of the Kenai Peninsula Borough ("borough") the standards in KPB 21.29 .040 address only water quantity, road damage, physical property damage, dust, noise, visual impacts and reclamation. These are the adopted standards because these are the concerns that are raised about many, if not most of the material site applications. The complaints

received about the Beachcomber material site are not unique. Repeating over-and-over again the same complaints about the same material site doesn't change the standards or conditions for material site approval set forth in KPB 21 .29.040-050.

Regardless of the evidence presented the material site code is not designed to support a permit denial based on the buffers not being feasible given the topography of the location. Where buffers are not feasible, a waiver of those buffers is in order under KPB 21.29.050(A)(2)(e). Staff, however, does not agree that the buffers are useless or not feasible but rather believes that they reduce the negative impacts of the material site. The borough further contends that it would be unrealistic to expect buffers to fully eliminate the negative impacts of noise and unsightliness which appears to be the position of the planning commission. Although the planning commission did not clearly articulate this interpretation of the code it is inferred from their findings that a denial was appropriate because the buffers would not minimize noise and visual impacts.

Reference is made to 200 pages of documents submitted. (Bilben brief, page 2.) However, documents that don't address the standards are not persuasive. Minimal questions were asked of the applicant and testifiers regarding the standards applicable to the proposed material site. Evidence and fear are not synonymous. Much of what is referred to as evidence is actually voicing fear of what may happen if the material site is operated on the Beachcomber parcel. The borough inevitably hears complaints that wells will run dry and roads will be ruined by a material site. Yet there has never been a substantiated case of these deleterious results occurring after 96 permitted material sites. Fears and concerns, even though they may be real, are not evidence. There was no real discussion of these 200 pages of documents. This wasn't a thorough well reasoned decision; it was a hasty reactionary decision made to accommodate the fears and concerns of the crowd.

The Girton brief references the peace, tranquility, natural beauty of the open meadows and the viewshed that will be destroyed by the material site. (Girton letter, page 1.) However, that open meadow is not a state or national park-that open meadow is a privately owned parcel in an unzoned area of the borough.

The RO Baker II Revocable Trust brief cites the Wasilla v. Luperl case and South Anchorage Concerned Coalition v. Coffey2 case as supporting the denial of a conditional use permit. However, in both cases the applicant was attempting to conduct a use in a residential zone where the activity would generally be prohibited. The borough has not adopted the geographical zoning scheme authorized by AS 29 .40.040(a) (1) but rather has adopted an ordinance to minimize unfavorable effects of material sites as authorized by AS 29.40.040(a)(3) consistent with the KPB comprehensive plan.3 A permit is required to operate a material site in the unzoned borough, but that permit requirement does not rely on the premise that material sites are in conflict or are generally prohibited in residential areas-a permit is required in the borough whether the nearest residence is across the street or across Kachemak Bay.4

The Bilben brief asserts there is substantial evidence in the record to support the planning commission's decision, but then goes on to argue that if there isn't substantial evidence the hearing officer should remand to the planning commission. Obviously, Bilben does not have confidence in the position that the substantial evidence in the record supports denial of the permit or he would not be suggesting a remand as an alternative.

The arbitrariness of the planning commission's decision is underscored by the fact that another material site in Anchor Point was heard by the same commission on the same night. The Blauvelt pit is 27.5 acres, while the Beachcomber pit is 27.7 acres. The testimony regarding Walt Blauvelt's material site was remarkably similar to the testimony regarding the Beachcomber material site. However, three people testified about the negative impacts of the Blauvelt material site, while approximately 30 testified regarding Beachcomber. The extreme difference between the two decisions the planning commission reached cannot be rationally

explained. While some commissioners may not like the standards and conditions in the material site code it is not the planning commission 's job to second guess the standards established by the assembly or ignore that the only conditions that may be placed on a material site are those set forth in KPB 21.29.050. KPB 21.29.040. The planning commission must work within the legislative standards established by the assembly.

Staff does not believe there is legal support for upholding the planning commission's findings of fact or conclusions of law. Indeed, the planning commission gave no explanation for its diversion from the legal requirements of KPB 21 .29. The planning commission's findings were conclusory and inadequate to support abandoning the well-established approval process for material site CLUPs.

CONCLUSION

The denial of the material site based on perceived inadequate buffers is inconsistent with the many decisions issued by the planning commission where similar complaints have been raised. In those cases, the planning commission enhanced the buffers to the extent allowed by the code. The planning commission may change course as its expertise and experience suggests or requires, but when they do so they must provide a reasoned analysis indicating that prior standards and policies are being deliberately changed not casually ignored. The planning commission made no analysis of why it would deny this material site as opposed to other material sites with the same attributes, even a remarkably similar material site heard at the very same meeting. It was arbitrary and unreasonable for the planning commission to deny this material site permit. Rather than relying on its expertise and experience in administering KPB 21.29 it ignored that expertise and experience -- as such the hearing officer should not give consideration to the planning commission's interpretation of KPB 21.29 in this case. In fact, it would be difficult to give much consideration to the planning commission's interpretation because they didn't discuss the ordinance, question staff or the witnesses in any meaningful way, or attempt to fashion more appropriate buffers."

Mr. Trimble stated that a drawing and cover letter were submitted that provides a grid and profile to respond to the drawing submitted by the opposition. They feel the drawing, done by a licensed registered surveyor, is a more accurate representation. As long as the berm is placed close to the excavation site, as recommended by staff, it would have to be 24 feet tall at Echo Street. That is hundreds of feet away from where the berm is proposed which is right at the excavation site. It will last for 3-5 years without any movement since it is not a large scale operation.

Commissioner Carluccio wanted to know the location in the packet of the drawing Mr. Trimble mentioned. Mr. Wall stated that Mr. Trimble was referencing a letter from his surveyor that started on page 41.69 of the desk packet and goes through page 41.71.

Commissioner Ecklund noted that he did a large amount of reading and wanted to know if it was all from the borough staff and attorney presented during the hearing. Mr. Trimble said it was all from the borough staff and attorney. It was the opening statement for the appeal and the reply to the opponent's opening statement.

Commissioner Carluccio wanted to know if the berm he was referencing would be a moving berm that would move with the excavation and if it would be 12 feet or higher. Mr. Trimble stated it would be the recommended 12-foot berm. There is a currently a 14-foot berm that runs east to west with an area of about a half-acre that has been stripped. He is proposing to put a substantial berm, 14 foot if necessary, towards the back of the Phase 1 area. The area to the east has dense timber in a portion of that area and it was discussed with staff that a berm may not be needed there. The berm would be moved as necessary, keeping it close to the excavation. Commissioner Carluccio asked if the area that is vegetated would have the vegetation left there or if it will be taken down as the gravel pit moves. Mr. Trimble stated he has spent a lot of money making the vegetation look the way it does now. He does not

anticipate having a big operation so the berm will be close to the excavation site and the pastures and trees will remain just like they are now for an extended period of time. It will depend on the market for gravel. His primary use of the gravel is for his own projects.

Commissioner Venuti wanted to know the condition of the Anchor River bridge. Mr. Trimble stated that gravel trucks are not to be using it but others have been using it. He believes it has a 10,000 or 11,000-pound limit. It is proposed to be replaced but that may take 2 or 3 years. Commissioner Venuti wanted to know if Mr. Trimble will use the Old Sterling Highway to move his product. Mr. Trimble said yes.

3. Mary Trimble, PO Box 193, Anchor Point

Ms. Trimble read from a prepared document.

"When we first started this permit application process we talked to the Mayor about it and he said simply "follow the rules" and we have been following the rules. We hired an engineering firm to do the surveys, drawings and work with us and the staff to make sure our application was complete. Based on that, the staff recommended our permit for approval. Once again, we have worked with the staff and are now clearly stating in the permit that our berms will be where they are most effective - between the vegetative buffer and the extraction site as we have intended to do all along. The staff is again recommending approval. The planning director, Bruce and the borough attorney have all visited the site and saw no issues with our plan. The borough attorney has, in her briefs, interpreted the code and stated case law to back up her position that the permit should be granted. These are professional, educated people who represent the borough interests and who interpret and enforce the code.

Emmitt and I became AP residents in 1976 and owned a tackle shop on the Anchor River for 3 years so have firsthand experience in a tourist business there. Even though our campgrounds and state park are a valuable resource that we all enjoy they contribute very little to our town's economy. The gravel industry is the economic driver that helps many year round businesses thrive. The trickle-down effect is huge. We could not have developed 150 residential homesites in the area without an affordable source of gravel close by. Currently, we own 42 parcels, 8 homes and a commercial building for a significant combined tax assessed value. We also own a construction company with our daughter and are building new homes in town. Preserving property values is very important to us.

With this permit we will only be a "Mom and Pop" business and are not intending, able or willing to compete with the large operations. It just isn't practical. We don't have equipment so we will hire local contractors that we know do a good job. The permitted 27.7 acres minus the buffers is actually less than 20 acres, planned in 3 phases and will be reclaimed as required by the permit. Our prime use for the gravel will be to improve our other properties and sell to the limited local area market.

The contour of the surrounding area has been mentioned many times and erroneously described as an amphitheater or bathtub. I submitted a colored contour map, page 348 in your packet, showing the true situation. The area higher than our property runs in a straight NE SW line.

Emmitt and I believe in "Rights with Responsibilities" and this is a situation where we are agreeing to take on responsibilities in exchange for the right to excavate gravel on our property. The "opposition" has the right to protect their property but are unwilling to accept the fact that they have a responsibility to do what they can to minimize visual and noise, if it is bothersome, by building a fence or berm on their property and/or installing blinds that raise up from the bottom so they still have their Inlet view. They do not have rights to our land, so we should not bear all the responsibility for mitigating their perceived discomfort.

In fact, our land is not a wildlife refuge, a bird sanctuary or a state park. It is our private property

and we have the right to put it to its highest and best use which is defined as: the likely use, selected from a number of available choices, to which an area of land may be put, based on what is physically possible, in compliance with zoning and building regulations and which produces the most profitable present value of the land.

As we have said before - this is an amazing legacy property for our family. We desire to build a home there to be near our grandchildren.

Finally, KPB 21.29 attempts to balance a variety of public needs, including residential area protection, a private party's right and ability to use their land to its highest and best use, and the public's need for gravel. Whether one agrees or not with KPB 21.29, it is the law and standards that control what the Planning Commission can or can't do.

Planning Commissioners have a fiduciary obligation to the taxpayers to thoroughly read and listen to what is presented, dismiss any irrelevant information, and make an informed decision based solely on the code and substantiated facts.

This is about ensuring there is a fair process that abides by the existing code. If this governmental body acts in violation of the code, the rule of law is undermined and that is harmful to the overall democratic process."

4. Keri-Ann Baker, 59545 E. End Road, Homer

Ms. Baker wanted to speak on behalf of the applicant. She noted that the packet was very lengthy and it contains the application for the conditional land use permit with supporting documents. After the hearing they went back through the application materials and took a look at the permit conditions contained in 21.29.050. They reviewed the mandatory conditions that are set out in 21.29.050 as compared to her client's application together with their supporting documentation. When the personal attacks that have been made against her clients and the Commissioners is taken out, it all has to do with the standards that are contained in 21.29.050. Her client's position is that they have met the conditions in the code. They have met the buffer requirements, the water source separation, and the monitoring of wells. She had a document where she analyzed all the conditions in 21.29.050 and compared it to the materials submitted by her clients and to the staff reports that have been prepared by borough staff. The document will show exactly what pages in the record, she apologized as she used the hearing record, where the information is located that shows that her client has met the mandatory conditions in 21.29.050. If all the personal attacks and animosity is taken out of this case it comes down to if her client meets the mandatory conditions in 21.29.050 or not. They believe the record clearly shows substantial evidence that they do. They urge that at either this hearing or at the April 22, 2019, if it is continued, that the commissioner's take a look at the record. The commission should take out everything else and look at the conditions, her client's application and support materials, the staff report, and the staff permit conditions and it will be clear that her client has satisfied the mandatory conditions and under the law they have the right to receive this permit. The engineer, Gina DeBardelaben, is present to answer any technical questions.

5. Hans Bilben, PO Box 1176, Anchor Point

Mr. Bilben wanted to clarify that Mr. Wall advised them of the request for a continuance and stated that people that wish to speak tonight would be allowed to speak again at the next hearing. Chair Pro Tem Foster said yes they would.

Mr. Bilben stated that a mom and pop operation does not take out 50,000 cubic yards per year for 15 years. If it was a mom and pop operation they could probably deal with it but not 50,000 cubic yards a year. That is what the permit stipulates and it is a 15-year permit.

The applicant talks about buying and selling houses. A lot of the people that are upset are people that bought property through the Trimble's and will now, after investing their money, have a gravel pit in their front yard. That is not acceptable.

Mr. Bilben is a member of the Anchor Point Advisory Planning Commission. The chairman of the commission and himself have asked the Planning Department repeatedly to allow the group in Anchor Point to hear this application. They wanted the community to weigh in, make a recommendation to the Planning Commission and the request has been denied.

He had asked the borough planner how it was possible for the applicant, without any legitimate justification, to ask for a continuance and could dictate the date he feels up to defending his application. He said that he was told the applicant had special rights and paid the \$300 application fee. For \$300 the applicant has rights over and above the rights of 60+ neighbors that have asked for a continuance for this hearing on a couple of occasions and have been denied for the reason of it being a recreational residential area. There are a lot of residents of the area that are snowbirds. He requested that if there is a continuance that it would not be until May 28. That way the residents that are affected by this application will be able to speak in person. He feels that for \$300 the applicant lays claim to the planning department, the borough attorney, and unlimited financial backing. It boils down to the applicant having special rights but the neighbors don't, so there is something wrong with the system.

At the July hearing there was findings of fact from the Planning Commission, and he thanked the commission for making a good decision and it was a correct one, but there were some problems. The findings of fact said that the noise will not be sufficiently reduced with any buffer or berm that could be added, which is true. The visual impact to neighboring properties will not be reduced sufficiently, which is also true. The stated intent of these findings is very clear, the application does not meet the minimum requirements of the code. The exact wording and contents of the findings of fact were disputed by the hearing officer and probably rightfully so. The main reason she wanted a remand was to have these findings of fact linked to specific conditions from 21.29.050. and she wanted to see substantial evidence go along with it. He believes the deputy borough attorney was present and involved with the wording of those stated findings and she should be knowledgeable enough to advise the commission on correct contents. The Planning Commissioners handbook actually goes through what findings of fact should state and that was lacking.

This time they will propose adequate finding of fact for the commission to adopt along with the substantial evidence that was submitted from the findings in the previous hearing. The hearing officer further stated that the code does not afford the commission discretion to judge the effectiveness of the conditions identified in the code. He agrees with this. As Planning Commission members they cannot say that berms don't work. Berms work and everyone knows that. That is why they are a standard in the industry and that is why buffers and berms are used. What the Planning Commissioners need to determine from 21.29.050 if the berms are of sufficient density and height to screen neighbors from the proposed use. The answer in this case is absolutely not. There will be some drawings that will be submitted at the continuance of this hearing. Those drawings will show that from some of the houses the line of sight from the upper levels is 53 feet above the floor of the site. A 12-foot berm is not going to protect somebody 53 feet above the floor of the pit. The fact that in the initial application there were 6 foot berms to protect people is ludicrous. The Commissioners did the right thing and hopefully they will do it again.

The Commissioners are required to make their decision based on the law. In this case the law is the code that is written in plain English and adopted by the Borough Assembly. The hearing officer is certainly entitled to her opinion but it is just an opinion. She cannot change the law as adopted by the assembly. The code unfortunately favors material site applicants but there are a few protections in place for neighboring property owners. Those few protections need to be fiercely protected by the Planning Commission. There are not many things that the commission

can say that can help the residents in this neighborhood. It is stated in the code in 21.29.050 that berms and buffers have to be sufficient height and density. It will be seen through the evidence that is not the case. With all the supporting evidence presented in the past plus what will be seen and heard tonight the commission will see that this application is ill conceived and can't possibly comply with the mandatory conditions and standards set forth in the code and is just wrong for the Anchor Point community. If there was ever an application that should be justifiable denied because of the way the code is written, the way the application is written, and based upon the protections afforded neighboring property owners this application should be denied again by the Planning Commission.

Commissioner Carluccio noticed that he mentioned that he would be providing some findings of fact and documents that would substantiate the claim for not having this gravel pit and he was going to present it at the next meeting. She asked him to provide it to staff so that the commission would have time prior to the meeting to review the information. Mr. Bilben stated that they will have it at the next hearing and it will be only six pages. She stated it would be best to have it prior to the meeting.

6. Mark Claypool, Kenai

Mr. Claypool was present to represent Silver King RV Village in Anchor Point on Anchor Point River Road. He is the President of the Association there and has received a lot of calls from people that oppose this from inside the park. He also received calls from people that did not get their letters in time to get their email submitted by the 22nd. He would appreciate a continuance on their behalf. They will be back in the summer. They come back to enjoy a peaceful and quiet summer and now there will be dump trucks coming through the area.

It does not make sense to have this type of activity on a road that is already fractured and in poor shape. As a boat and RV owner he takes his boats and RV down to the beach and he has to drive slow because of the condition of the road. The dump trucks will not run 25 mph. They will be pushing hard and they run by the load and they will not be concerned about the noise. He read in the packet that there will be a bond put down in case the dust rises and Beachcomber will be held liable if the dust comes up and they are not watering the roads or if the noise is bad. He cannot hold hope that the state will contact him or come out if he calls them with concerns.

There are people that walk with their animals down to the beach. There is no place to get off the side of the road. He does not know what these people will do. The dump trucks are not going to be careful.

There are businesses on this road. A couple of businesses that are trying to make it. Now there is a business of a big guy that is going to knock the little guys out. It is not fair to these people, to the people that live on this road or for those from Denver to New Sterling. Yet they want this to happen and he doesn't see any reason for it and would like to ask for a continuation on this so that people can voice their own opinions when they come back.

Chair Pro Tem Foster asked if he was wanting the continuance to the April 22, 2019 meeting. Mr. Claypool said he would like to see it continued into May or possibly June. A lot of people do not return until June.

7. Dan Syme, PO Box 1457, Anchor Point

Mr. Syme voiced his concern that the commission needs to be looking out for the safety of the constituents that they represent. He has not heard very much about dust control. 12 foot berms will not hold the dust in. The road way was just mentioned. He wanted to know about the safety for all of the State parks that are along the road way and will be across the street from this gravel pit. There are kids out there all the time and he has not heard anything about the safety of the kids. He hopes that the commission really looks at this permit. It is time for a change. There has to be some give and takes on both sides. This is a pristine area, with boat

launches, state parks, residential area, people walking their dogs. To him special attention needs to be given to this. Public safety means something and he would like to see that happen with this council.

8. Richard Carlton, 73500 Seabury Road, Anchor Point

Mr. Carlton wanted to echo the safety issues. The Commission can approve an extraction facility following certain rules and guidelines that have to be met for people to make their application and for the commission to even look at the application. What is not on those applications is there are no shoulders on this primary haul road that gets them to the Old Sterling Hwy., which is already in pretty bad shape after HilCorp had their trucks running up and down it. This little stretch is about a half mile and no sides on it at all. He had to stop last summer because Mr. Trimble's daughter was pushing her baby in a stroller and he had to wait for the cars and boats to go by before he could go around her. It is just the fact of what makes sense and that doesn't seem to be applying to this particular event. A gravel pit amongst the state parks, RV parks, and business and all these people that wait all year long to come to this place to vacation. He realizes that there is no zoning but it is not right. Anybody can say that it is but they are just not looking. They are not going for a walk in this area.

9. Katie Elsner, 215 Fidalgo Ave., Suite 201, Kenai

Ms. Elsner is a local attorney that has been helping the people that have been impacted or will be impacted by this proposed site. She wanted to take some time to discuss a little bit of the law. She will be presenting proposed findings to the commission in advance of the next hearing and explain those findings at that point in time.

There has been some notion that the commission's authority is somewhat constrained. What the code does make clear is that the commission is the body that is both vested with the authority and the responsibility to determine what sight and noise impacts can be reduced sufficiently and whether or not those reductions are in fact sufficient. That is actually contained within the conditions which can be found in 21.29.050, which requires the commission, as the body that applies the facts to the law, to determine what vegetation and fencing will be of sufficient height and density to provide visual and noise screening of the proposed uses. The code requires that the commission determine the buffer and berming proposal is both sufficient and appropriate to screen the nearby landowners and nearby properties. In order to approve an application, the commission must find that these conditions allow the standards to be met. The standards that are being talked about are 21.29.040(A) 4 and 5, which requires that these conditions are sufficient and appropriate to minimize these noise and visual impacts. As far as the commission's ability to deny an application that authority is specifically being granted to the commission under 21.25.050(B) which states that before granting a permit the commission must find at a minimum that the proposed activity complies with the code. The commission must find that these minimum standards are clearly met. The conditions require that the berming and screening be both sufficient and appropriate. If the commission disagrees with the notion that they are not allowed to deny a permit when they cannot find that these conditions have been met or cannot find that these standards are met, they are allowed to break away from prior precedent. If the Commission believes that prior precedent is clearly erroneous the law does allow them to break away from prior precedent and prior interpretations of the code. She would ask the Commission not do that because an application that does not provide sufficient screening, sufficient noise screening, sufficient visual impact screening is actually just an incomplete application. In the event that the Commission finds the applicant's submission, that the conditions that the applicant is proposing in an effort to screen nearby neighbors and other properties that already exist is not sufficient and not appropriate then they can deny that application as it is an incomplete application because it does not meet the buffer requirements under the code. She will propose findings of fact for the commission's consideration in advance of the next hearing and will be available if there are any questions in support of those findings of fact.

10. Pete Kinneen, 34969 Danver St., Anchor Point

Mr. Kinneen stated that there is a major disconnect in this whole situation. Not just in this particular application but in what the commission is doing. It is a head on collision and this is the time to get it straightened out. The Commission is being told they are nothing but a rubber stamp. That they cannot deny the application because the Assembly has dictated that gravel pits get priority over everything else. They have queried most of the Assembly and they deny it. Nobody on the Assembly will admit to that. This is not a gravel pit. Gravel pits are typically a little backyard operation. This is a mine. This is a full blown processing mine with a proposed asphalt plant. That is what they have heard from the applicant in previous presentations. This is a really big deal. All that we are asking is that the Commission follows the law.

He has made a presentation before and it is in the packet under his name. The attorney just said in plain language that the code says that the Commission does have the authority to deny despite what they are hearing. This starts with the legislative intent from the Assembly. It is right in the code it says intent. Intent is to protect the preexisting properties. They are there mostly because they got buffaloed by the Trimble's. They have protective covenants and protective volunteered zoning and they were told by the Trimble's that this last little flat area at the bottom of the hill would be a high end subdivision and certainly not be motivated for gravel. They hear incessantly about rights. That this is unzoned and that the assembly is telling the Commission that unzoned means the wild west, that is not true.

When it comes to gravel there are three levels of gravel extraction. The first is one acre can be disturbed almost anywhere unless zoned out. The second is for an area up to 2 ½ acres with administrative approval. It very clearly says that more than 2 ½ acres cannot be disturbed without Commission approval. That is proactive approval and the code is incredible clear that the Commission cannot mandate something more than berms and buffers. It is the only mandatory thing the Commission can do but please go back and look at this and it says minimum 6 foot berms. They will have excellent evidence using the borough's own data that will show in this particular circumstance, because of the unique topography, that there are no berms and buffers that will met the code and therefore it cannot meet the code and it is the Commission's duty to deny.

11. Rick Oliver, 34880 Danver St., Anchor Point

Mr. Oliver stated that the Borough and the Trimble's in their opening statements claimed that no substantial evidence was submitted to support the Planning Commission's decision. He begs to differ. In the packet is a picture taken from his bedroom window. His house is classified as a 1 ½ story with a basement. This will be the view from his bedroom window at approximately 34 feet above the top of a 6-foot berm. He feels it is important that the commission understands what they will be looking at if the application is approved. The view from his living room is approximately 24 foot from the top of the berm. His property is located directly east of the proposed gravel mine, across Danver Street which shows through the bottom of the picture. He is short of six feet tall but is carrying a ten-foot board which will give a practical application of what his view will be if the permit is approved. Planning staff has concluded that a 50-foot vegetation buffer and a 6-foot berm will sufficiently minimize the dust, noise and visual impact to his property. He is incensed yet again that Mr. Trimble has the audacity to state that they should buy heavy curtains to eliminate this obscenity. All trees behind him in the picture are located in the mine area and will be gone. That leaves 1 tree within the 50-foot vegetative buffer and a 6-foot berm to protect his property. He is also standing on what would become the primary access road to the mine and the potential 5000 ten-yard dump trucks in and out that would travel annually for the next 15 years. 250 feet behind him is the proposed location for the rock crusher which will be about 300 feet from his front door. The borough and Mr. Trimble apparently do not consider this to be substantial evidence. He has a reasonable mind to conclude differently. To approve this application in light of the substantial evidence will be a direct contradiction of 21.29.050(2E) which states that buffer requirements shall be made in consideration of and in accordance with existing use of adjacent property and the time of the approval of the permit and 21.29.050(2C) which states the vegetation and fence or berm shall be of sufficient height and density to provide visual, noise and screening of the

proposed used as deemed appropriate by the Planning Commission or the Planning Director. As such the planning commission was justified in their denial of this application and the findings of fact were correct. The proposed buffering is neither in consideration of existing use or sufficient height or density to provide visual and noise screening as required by the code. One tree does not constitute sufficient density. Sufficient height cannot be obtained. He is not the highest property that is affected by this application. All properties that are at higher elevations in the neighborhood are even more affected by the visual and noise impact than his. The fact is the berms and buffers of any practical height are well below the line of sight which will be proven with more evidence that will be provided prior to the next meeting. Standards 21.29.040(A4) and (A5), which are required by the code, cannot be met and the Planning Commission's finding are correct and appropriate.

12. Michael Brantley, 74057 Anchor Point Road, Anchor Point

Mr. Brantley is the owner of a recently opened business called the Anchor River Fly Fishing. It is an RV park and cabins for fly fishing. He wanted to know if he could ask a question and if he could get a response. Chair Pro Tem Foster explained he could ask the question but the answer would have to wait until the Commission discusses the permit. Mr. Brantley wanted to know how many of the Commissioners have taken the initiative to drive down to the Anchor Point community and see what is occurring in the community besides the gravel pit. Actually look at the homes of all the people that have written the Commission asking them to deny this permit. There are very obvious reasons more than what he can come up with.

He asked if he could allow a previous speaker to use the remainder of his time. Chair Pro Tem Foster stated they want to allow others who have not spoken the opportunity to speak first.

Mr. Brantley continued that in all the records he has read there is a certain line that stands out. That has to be the health, safety and welfare of the community. That is what they are talking about, not just all the rules and regulations. He has contacted other departments regarding this issue. His opinion is that they need to be rewritten and these issues need to be applied. He had a fax sheet from OSHA of a new standard that has come out in marine industry for silica. He read the definition of silica. "Crystalline silica is a known carcinogen found in sand, stone and artificial stone. Exposure to silica dust can trigger sarcoidosis, a chronic disease that involves scarring of the lungs. OSHA estimates that 2.3 million workers are exposed to crystalline silica dust, about 2 million in the construction industry." This new standard went into effect sometime in February of 2018. His business is on the border of the northern property line. At the last meeting he had a thumb drive presentation. He has drafted and made it better with wording the Commission could understand. He left the drive with staff. These carcinogens and the noise will be present.

He is staying in the cabins now prepping them for summer and he can hear traffic going up and down Danver road. He thinks the cabins are well insulated. He has pictures to present at the next meeting that shows people with baby carriages, kids, and/or dogs walking up and down the road and traffic has to go around them. As described before that road is in horrendous condition. If they got permitted tomorrow and started tomorrow, he predicts that by the middle of July the road be closed due to heavy traffic. The carcinogens will be spread through the air. That embankment is a 2:1 slope. It is like a jet engine and when the wind hits it the dust will go up and will still travel. It is going to go up to the higher elevations and settle on his property and across the road which is the bird estuary. Those waters will become contaminated with the carcinogen dust and therefore it will flow over into the Anchor River and their sparsely reoccurring salmon return each year might get worse.

He wanted to make it perfectly clear that the commission stated that after he makes his testimony today that at the continuation he will be able to make another statement at that time. Chair Pro Tem Foster said he would be allowed another opportunity to speak. Mr. Brantley stated that his opinion was that the continuation should be into the latter part of May or first part of June so that everyone can prepare themselves. As stated before so all those coming back

to the RV village can attend. He heard a statement earlier in the back of the room that those people don't live here. They do live here. They bought here. They bring in taxes for the property they own here. Don't discourage their word. The Commission has to listen to the people. The Commission needs to come down and see this community and talk to the community.

13. Todd Bareman, PO Box 1462, Anchor Point

Mr. Bareman lives about a mile from the proposed pit but has a business within a half mile. He has the boat launch at the end of Anchor Point Road which will be the haul road and it makes him concerned. The only reason that road has not fallen apart more is that it is so bad that the motorhomes and boat traffic have to go very slow down the road. Everyone knows how fast and heavy gravel trucks are and that is a big concern. This is his eighth summer at the boat launch. They have been fighting to get the road fixed since before he started. There are no plans to fix the road. As far as he knows whoever hauls the gravel out is not liable if that road becomes destroyed. If the road cannot be safely traveled on with motorhomes or boat traffic during the summer, it will impact a lot of businesses.

He would like to ask for a continuation to the May 28th meeting. He does not feel that April is sufficient time. His peak time starts the end of May. That is when he knows the residents are back because he is launching their boats. That is why he would like to ask for a continuance. The Commission can hear from the people that are there for four months during the summer. They own property in the area.

He also questioned why they are not hearing from state parks. He is trying to get a comment from them. Vacation time is pretty important to working families and everybody else. There are 5 state campground that are really nice and 3 RV parks. They are all busy during the summer. If visitors wake up to a gravel crusher, an asphalt plant, dump trucks running up and down the road just ask yourself if you would come back to any of those campgrounds again. They are worried about it. This is not a 1 or 2-year permit. It is a long permit. Their economy is fishing, boat launch, the state parks and the RV parks. This is a big deal for them during the summer.

14. Linda Feiler, 73230 Tryagain Ave., Anchor Point

Ms. Feiler has lived in Anchor Point for the past 42 years or more. Anchor Point is a quiet town and most of them moved there because of the river and that river is their jewel. Hundreds of people come down from Anchorage and up from Homer to walk the beaches, fish the river, walk along the river and walk the river road. She personally goes to the beach very often with her dogs or with friends. They go for exercise and they walk along the road because it is quiet, deserted, and lovely. That is why a lot of them moved there.

HilCorp moved in next door and they are going to make a lot of noise and was not required to put in a berm. When they make noise it vibrates right through their bodies. They have had other gravel pits and they could hear them all the way from the Sterling Highway. The beeping noises every time something backups goes for 24 hours in the summertime. There is a rumor that HilCorp wants the gravel to put their berms around all the oil rigs that are being put in. They live in this town. It may be just a town to people or some kind of backwards area but a lot of the residents are very well educated. They moved there in order to not be within the city limits, in order to not have dog ordinances and everything else. It used to be if the neighbor's dog barked or someone was shooting off guns she could call the police and they would come and tell them to stop. Now she doesn't know if they have anything that protects them and keeps their home values and families safe. It scares her when she hears the rumors about what the commission says when discussing Anchor Point. When she moved to Anchor Point there were 200 people and now there is a lot more. They are walking on that road and use that road as their park, their exercise tract. They do not walk along the river because it is too muddy but do walk in the road because there is no traffic, because it is lovely. She thinks from now on when something happens in Anchor Point that the Commission take into consideration not the people that live 25 feet or 50 feet from the proposed item but how it is going to affect the town. They are a

town. They care about each other and many of them take care of each other. Many of them use the river and the river road.

She is also worried about the bridge. It was resurfaced but when those trucks come down hill I with a full load of gravel that bridge is a danger. It is not double wide. She hopes they take it all into consideration and remembers that they are part of their community.

Commissioner Carluccio wanted to know exactly what rumors have been heard about what the Planning Commission says about Anchor Point. Ms. Feiler said that little backwoods area, the little pain in the neck down there. Commissioner Carluccio said she wanted to know who on the Planning Commission would say something like that. Ms. Feiler said they only hear what filters down and they hear things at meetings and it is worrisome. They are not informed when something happens in their area. She went out to take care of her family and came back to HilCorp being there. They did not have to put up a berm. A six-foot berm would not help because she sleeps upstairs in her bedroom. The vibration goes through her chest and her neighbors are panicked about it. They were not notified or asked how they felt about it. Noise is a big issue. They can hear the highway noise. They stopped Jake brakes. She hears when the river breaks up and waves crashing and she is a good distance away. She is on Tryagain on the Old Sterling and she can hear the ocean, and hear the river. Commissioner Carluccio returned to the question of the rumors. Ms. Feiler said if she heard them again she would find out where it is coming from and let the Commission know.

15. Ed Martin III, 72200 Thomas, Sterling

Mr. Martin wanted to let the Commission know some things from previous testimony. The aforementioned boat launch was built with gravel from this site. He hears a lot about safety. He is the owner of Alaska Driving Academy which is a school that trains people to obtain their CDL and become good truckers. A lot of these people are talking about safety and the width of the road and that they don't have the room to walk up and down it with their various baby strollers. One thing to keep in mind is that the typical boat trailer is wider than a dump truck and is wider than a semi-truck. A boat trailer takes up more of the road and therefore is less safe if sharing that 12-foot lane on either side of this road. Wider is worse. Second, another thing is that they are concerned with safety but he keeps hearing that they got Jake brakes banned. Jake brakes are a safety device on a truck. Obviously they are willing to trade safety for noise degradation. As long as it sounds good they don't mind being as safe.

He is the elected President for the Kenai Peninsula Aggregate and Contractors Association that is in the process of being formed. He represents over 40 contractors and material site operators. He urges the Commission to approve Beachcomber's application based on the reasons of denial were invalid. The Commission's findings that noise and visual impact would not be sufficiently reduced are not a valid reason for denial. He would like to remind the Commission that their power of judgement lies within the code. They may impose conditions outlined in the code but cannot judge their effectiveness or impose conditions outside of the code. Therefore, the Commission must approve a permit that has met the standards set forth in the application. He urges the Commission to vote in favor of issuing a CLUP immediately. He believes further public comment will comprise no new findings as the public has had ample time to testify in past meetings. The Commission has already deliberated on this once. The construction and development season is short and delaying another month can be detrimental to a material site operator.

Commissioner Venuti asked what Mr. Martin knew about white noise back up alarms, what his opinion was on them, and if it is a good solution for the noise at this site. Mr. Martin stated that white noise alarms are a give and take. He has researched them thoroughly and there are several studies done on them. It is kind of another one of those avenues where you give up a little bit of safety for a little bit of noise degradation. So basically what he has found out about them is that they are only effective in certain areas behind whatever vehicle they are put on. They are only effective if the surrounding noise is one or two machines in a pit. As soon as a

screening plant or a crusher is put in that causes ambient noise levels to go up dramatically their effectiveness goes way down. Extremely down versus a multi tonal alarm or the old beep tone alarms. Those are the most effective and there have been studies in laboratories and in the field of their effectiveness. Mr. Venuti followed up wanting to know if Mr. Martin would recommend this as something an operator could use and what would be the typical cost. Mr. Martin said a typical cost to install a system like that ranges between \$400 and \$600 for a typical setup. It is more expensive on the newer machinery because they are computerized and the electrical system cannot be hacked into like it can with older machines. It depends on the operation, if it was just a gravel extraction operation where there is just one loader in a pit filling up dump trucks it would be an effective alarm. If there is a screening operation or a crushing operation, then it is not an effective alarm.

16. Larry Smith, 320 Artifact Street, Soldotna

Mr. Smith hoped to come up and testify and give the Commission the benefit of his knowledge of gravel pits. As a background he has been in the construction business in Alaska for 30-40 years. He and his brother own a construction company. They have built roads, streets and bridges throughout Alaska. They are currently under contract with the Kenai Peninsula Borough to build the Kenai Spur Highway extension. That project has approximately 200,000 tons of gravel which is about 100,000 yards.

He wanted to testify on behalf of the Trimble's and to ask the Planning Commission to approve their permit. He has bought gravel throughout the state from a number of different entities. He and his brother currently own three gravel pits. One in Ninilchik, one in Soldotna and one in Nikiski. He has heard a lot of testimony, read a lot of the letters and emails in opposition, and the hearing officer's decision. This is all about facts. He has heard a lot of testimony. Long on testimony, short on facts. Long on emotions, short of facts. The facts in his mind is that Mr. and Mrs. Trimble have met the requirements of the Kenai Peninsula Borough Ordinances as evidence by the staff's recommendation on not one but two occasions that the Commission approve this permit.

In reading through this packet he found something he wanted to read from page 72 and it has to do with the study of the value of homes. "Odd are that underneath your feet is a construction material made of sand, crushed stone and gravel." He said that under this building there is gravel and under the carpet is concrete which consists of gravel and other ingredients. "These construction materials are an essential ingredient into nearly every construction project, from residential housing, office buildings, retail outlets, entertainment structures to the roads that connect them. Sand, rock and gravel are literally the foundation of economic development, but their extraction process can generate dust, noise, vibration and truck traffic. While modern technologies and methods have greatly reduced quarries' impacts, the environmental and economic consequences of quarry operations received considerable attention, often in the form of "not in my backyard" (or NIMBY) campaigns of opposing quarry expansions or new sites. Choosing a quarry site is a delicate task. While a quarry may be best located from residential density on NIMBY concerns, it also needs to be near the final point of demand due to its high transportation costs. Quarries" or gravel pits "must balance the need to be both near and far." He imagines in a very perfect world the Trimble's would love to have their gravel pit somewhere else where it wouldn't impact on the view of their neighbors. What needs to keep in mind is that the neighbor's view is not their right. They do not own the view of the Trimble's land. It was talked tonight about putting some fencing up on their property. He believes when it comes to some of these conditions other conditions should be considered. However, that is not what the code allows. The code allows certain things and the Trimble's have met those requirements and he requests that the Commission approve the permit.

17. Lynn Whitmore, PO Box 358, Anchor Point

Mr. Whitmore is a next door neighbor to the proposed gravel pit. He brought an overhead presentation to make but for sake of expediency, he decided to wait to present it. He would like to repeat something that was heard several times. When this got remanded back to the

Planning Commission they asked the Planning Department to continue this until some of the affected neighbors were back. A lot of people are outside this time of year. It is fair to give them the chance to speak their concerns. They will try to get them to speak on findings of fact and not get too far from what is actually needing to be addressed. He hopes that it can be continued until May 28th to allow a chance to get everyone together.

18. Josh Elmaleh, 34885 Seabury Court, Anchor Point

Mr. Elmaleh is not far from the proposed gravel extraction site. There are a few things he would like to point out. The Commission made an excellent decision last time to deny Beachcomber LLC the right to extract gravel. The reasons for that were visual and noise impacts. He cannot see the property from his house but anytime they have a tractor or a bobcat running he can hear it at his house. This is over the hill, through trees, behind other neighbors' houses. Normally he cannot hear anything from his house in that distance but he can hear it clearly. Whenever a dump truck dumps or goes down the road the clang of the bed can be heard. This is going to happen whether or not it is on their property, it is a product of their excavation. There is a high wind in that area and it will kick up the dust that they will expose. That is going to create another visual impact. People will be driving by and a cloud of dust will hinder their vision. There is an impact on the road. This affects him, his family, his wife, his kids, his dogs and he tries to keep the dogs at the house but they are magicians and find a way out. They will find a way to that pit and somebody is going to run them over and he will not have control over that even if he tries his best. A lot of people might be better with their animals but he grew up with them and has always learned to do his best, teach them, and love them as best you can.

In previous testimony, many visual impacts that are going to happen were mentioned. When driving up or down the road what the Trimble's are doing will be seen. This is their property and they should have a lot of rights of what they do to but the Commission has six criteria that they have to meet. He agrees with the Commission's initial findings that visual and sound impacts will not be met no matter what they do. They are in a bowl and they all have a perched view so there is a lot of people that will be affected. Not just the neighbors but the tourist. The people that are close by, the people coming through. He said that Mr. Trimble has brought the community together, not in his favor but to resist the health and noise impact that his proposed mine will bring about. A lady mentioned vibrations. Anytime a truck goes by especially, in this type of neighborhood, there will be vibration through a person. It is a physical impact. Please stand to your initial finding.

19. Lauren Isenhour, 34737 Beachcomber St., Anchor Point

Ms. Isenhour read a prepared statement. "I believe that Anchor Point is a wonderful place to live for all the same reasons as these people here. I like having privacy and acreage. I like having control over what I can do on my own property. I love being able to walk to the beach and river with my kids and not be surrounded by lots of people. The success and longevity of Anchor Point is extremely important to me and my family, we actually depend on it. Maintaining a successful town structure, meaning keeping businesses open, keeping Chapman School open, keeping Anchor Point a recreational destination, keeping property values high. These things are very important to my family and to our livelihoods. I believe there is an attainable balance between keeping Anchor Point the quaint little town we all love while still allowing for the development that keeps our community viable. I see the word development used with a negative connotation a lot and I truly don't understand that. We all live in houses and drive on roads and that is development. Anchor Point due to its size and economy can only support a certain amount of development and I like that. With our construction company I could hire a crew and build ten houses a year only there is just not the population to buy them. In 2018 there were 30 home sales in Anchor Point. That is a really small market. Currently, I am building one to two houses a year and that size of development is a perfect fit for me and my family. I am proud of what I am accomplishing and for what I can help contribute to my town. I don't want to build in Homer or anywhere else. I want to live and work in Anchor Point. At my last build I benefited from contributions from at least 20 local Anchor Pointers employed through

local contractors that work year round and support their families with the income they make right here in our tiny town. Those laborers are the backbone of our town. Without their year round work and their year round contributions back to our community our town would dry up. I believe my parents are the perfect people to own this property for my neighborhood. They bought it because they love it and want to keep it fully intact and want to be able to keep it in the Trimble family for generations. They did not buy this property with plans to develop it. They bought it to keep it but it is expensive. I would rather see a controlled small scale gravel pit that provides needed gravel and jobs to local people and is then reclaimed to the highest standards and be able to stay one large vacant parcel maintained by the Trimble family for generations then I would to see it subdivided. I don't want 27 new neighbors with no regulations to control what they build or do on their new properties. Ironically my family and the neighborhood who oppose the permit both want the same thing. Which is for this beautiful parcel to remain vacant and remain one large piece of land. Once a parcel is subdivided and homes are built it will be that way forever. My parents are very interested in keeping property values high. It benefits their real estate business as a whole and benefits their own property investments. I have heard a number of comments that this permit will lower the surrounding property values. I don't agree with that. There are no regulations on anyone else's properties protecting us from our neighbors potentially having junk yards, tarped roofs or the like that we see. Gravel pits are strictly regulated and monitored and are required to be reclaimed. All over Anchor Point are properties that my parents have developed and sold and without a shadow of a doubt each one has been radically improved at their hand. This parcel is no exception prior to my parents purchasing it the field behind my house was so littered with stones and slash that you could hardly walk through it. My parents spent over \$60,000 to clean it up to the beautiful state it is currently in. That does not lend to the picture their opposition tries to paint of them as greedy destroyers of the land. They have been successful in land development for 40 years because they are exceptional excellent at it. They are meticulous and deliberate in their stewardship of the land. I have all the trust and confidence in the world not because they are my parents but because of their proven track record that whatever areas of this permitted land they do extract gravel from it will be reclaimed to the highest degree. The engineer who designed this permit application testified that for a large pit in this type of rural area 10,000 cubic yards is a more realistic amount of gravel to move a year. As I stated before Anchor Point is a small community that can only support a small amount of development. There just isn't the populous to purchase my potential 10 houses a year and there just isn't the populous to purchase 50,000 cubic yards of gravel a year. That is the number the maximum the permit would allow. That's not a realistic extraction amount in our community. I'd also like to address the safety and condition of the beach access road as stated I do walk the road with my kids and during the summer months there is a lot of traffic and boats and RV's, bikes and walkers and constant vehicle traffic. Wide load boats drive very slowly. RV's drive very slowly and with such a constant flow of vehicles traffic just moves slowly. Gravel trucks also drive that road all the time delivering gravel to the residents and I believe as a community we all work really well together to keep everyone safe on our road. So yeah when I am walking with my kids we step off into the ditch. Drivers do drive very slowly around us and we all wave at each other as we do this. We've worked together to keep everyone safe. Gravel trucks drive no differently than wide load boats or RV's. Just to be clear I support the presence of RV's and boats as well as gravel trucks. I believe there is an attainable balance between all of us in the community to keep Anchor Point, the quaint town we love, yet also keep the responsible amount development that keeps jobs in our community."

20. Gina DeBardelaben, McLane Consulting, PO Box 468, Soldotna

Ms. DeBardelaben works for the firm that was hired by Beachcomber LLC to survey the property and prepare the CLUP permit documents and exhibits. Field work for the permit was completed in May 2018 and the CLUP application was submitted in June 2018. This site has a driveway, a small gravel pad, and some berms established. The proposed material site parcel has a lot of relief to it and it would require some excavation and leveling for access, residential or commercial construction, all of which could have impacts similar to a material site. Just something to keep in mind that with an unlevelled site, there will always be larger impacts than a level site.

There were a few things brought up before in all the written comments and public testimony that she wanted to speak to. Some of these things are things that she regularly says at Planning Commission meetings for CLUP's but she thinks it's important for the commission and the public in attendance to hear it. One is noise concerns. It is unrealistic to think that buffers would or should fully eliminate impacts of noise and visual impacts. The code and the proposed buffers would minimize visual impacts and noise. That is the requirement. The code provides tools that are supposed to be used for buffers or barriers and that is what an applicant has to choose from at this point. That is how the code is written. An applicant does their best to pick from those tools provided. There is additional information provided by Geovera.

Noises can be deceiving. ANSI, MSHW and OSHA all have charts, comparable data and studies on noise. She cited some information on noise abatement from a US Bureau of Mines report regarding noise abatement for construction sites. A front end loader, which is the most common piece of equipment in a material site, emits between 85 and 91 decibels depending on the age of the equipment and the materials it is moving. It averages about 88 decibels from where the operator sits. As a comparison a gas lawnmower operates at a 100 decibels, a hairdryer at 85 decibels, and an uninsulated home dishwasher operates at 70 decibels. Separation distancing and locating noisy equipment behind a barrier are the two top recommendations for noise abatement. A noise barrier such as spoils berm drops the noise level at a curvilinear rate relative to the distance of the noise to the barrier. Separation of distance from a noise drops the impacts in a linear fashion. For every 10 feet of distance the noise drops approximately 6 decibels. Between the curvilinear and the linear analysis, a berm in combination with approximately 20 feet of separation drops the decibel levels of a front end loader to that of a dishwasher.

Another thing that has been brought up is the haul routes. The Anchor River Road and the Old Sterling are state maintained and meet the requirements of a state road. The Anchor River bridge has a GVW listed for it and is listed very low because the bridge is near being condemned. It is damaged and is slated for replacement in 2020. All users of these roads need to abide by DOT requirements for GVW, speed, proper use of lanes, shouldering, etc. The health of the Anchor Road is not applicable to the borough permitting process. DOT's letter regarding line of sight, landing lengths, sweeping, and traffic control permits are all standard to borough road to DOT access points and industrial traffic use. All borough material sites are required to maintain their borough haul routes, which would be a borough gravel road, and dust abatement for gravel haul routes.

Quantity of extraction is another item that is often brought up. Gravel extraction per year is based on an unknown quantity of material sales. This CLUP application lists 50,000 yards maximum, when in reality an extraction from a site like this is not likely to exceed 10,000 yards per year. For perspective a large borough road capital improvement project which is a typical 4,000-foot-long gravel road to be improved would not exceed 4,000 cubic yards for the project. Mr. Smith cited a very large project and cited 130,000 cubic yards for the project. That is for over 8 miles of new road construction. That is a huge project for our borough. It is not relative to a site like this. The 50,000 cubic yard maximum is utilized because that is DNR's threshold to determine how material sites are required to report to the state for extraction and for state bonding for reclamation. If above 50,000 yards there are different requirements. It is a cap to say that it will not be a huge extraction mining site.

The proposed extraction area is greater than 100 feet from all residential wells, surface wetlands, flood boundaries as per the borough code. There is no extraction proposed below the water table as part of this permit. Extraction will remain 2 feet above the ground water elevation as per the requirements. If the owner decides he wants to try to extract below ground water, there is another set of requirements that must be met and another meeting.

Mr. Kinneen has stated multiple times about an email correspondence between Mr. Wall and herself. Mr. Wall asked about proposing a higher berm. Her response was simply that some areas had sparse vegetation while other areas had more and that a higher berm could be proposed but she was not sure that it made sense. Interpretation of what she said was not the intent of the comment.

Commissioner Whitney wanted to know about the comments made regarding an asphalt plant being put in. Ms. DeBardelaben stated that as far as she was aware there is no planned sale of gravel from this site at this point.

Commissioner Ecklund wanted to know if Ms. DeBardelaben, or her firm, drafted the map on page 41.70 of the desk packet. Ms. DeBardelaben stated that it was prepared by Geovera. Commissioner Ecklund wanted to know if she knew how many miles the proposed site was from the Sterling Highway. Ms. DeBardelaben said she was not sure of that distance and it would depend because there are two routes.

Commissioner Fikes said that the applicant's proposal is roughly estimated at 10,000 cubic yards. Ms. DeBardelaben said the permit states less than 50,000 yards. In reality excavation is based on gravel sales. 10,000 yards is much more appropriate and likely in this area. Commissioner Fikes wanted to know what realistic hours of operations for this site would be. Ms. DeBardelaben was not sure but 10,000 yards is two or three projects most likely. A project would be four to six weeks depending on the size. It would also depend on the delivery schedule.

21. Eldon Overson, PO Box 1318, Anchor Point

Mr. Overson owns the property on the corner of Danver and Seaward. He thanked the Commission for their July decision. The piece of property that he bought he just started recently framing up a little cabin to use in the summer. He halted immediately once he found out this gravel pit was being planned. He halted his intended use of the property that he purchased.

He would like to address some of the misinformation that has been received from the opposition. First they say that they are a mom and pop business and are only going to take out a few yards here and there. When they were stopped from doing their additional 2 ½ acre permit they had a contract with HilCorp to extract 12,000 yards. That same 12,000 yards, when they were stopped, was given to another gravel company. They did that hauling of 12,000 yards to HilCorp in about 9 days. He feels the opposition is trying to paint this as a low impact.

His property sits at the top of hill and is 50 feet above the material site where there is almost no vegetation. A 50-foot vegetation buffer and a berm will do nothing for him. He will have a complete line of sight of the crusher location and most of the excavation area even with Beachcomber's proposal to move the berms as they go. He did submit a picture and a site plan from the deck of his cabin and it shows where the gravel pit will be. A 12-foot berm with no trees in line of sight from the gravel pit will provide a complete line of sight. The testimony that the berm will knock down the sound, it will not because he will have a direct line of sight. The visual and noise will not be stopped at his property. He hopes they will consider denying the permit.

22. Gregg Nieser, Seabury Rd., Anchor Point

Mr. Nieser has two properties on Seabury Road. He just recently moved to Alaska after visiting for 25 years. He visited all over the state but always came back to Homer and Anchor Point. One of the things that attracted him to the area was the people, the community, the adventurous opportunities and the nature. He finally fulfilled his dream and this past October he purchased his two properties which are 7/10 of a mile from the proposed gravel site. He was not included in any notification because the distance is ½ mile. It was a big surprise that his first week here that HilCorp with their loud noises and bright lights and that disturbance finally stopped. He is closer to this proposed site on Danver which will be even more noisy with trucks. After listening

to everyone he is now concerned with crushing. That sounds more impactful than just trucks going up and down the only recreational area in that part of the Kenai Peninsula. There are 5 campgrounds, a river with salmon, and ends at a beach where there are thousands of tourists that visit. He went to Homer and didn't see the eagles. He asked what happened and when he was told he found out the place to see them was in Anchor Point at low tide. They went and fell in love with the area. He moved to not have the light pollution, the sound and traffic and enjoy clean air and walk to the beach while not worrying about getting run over. He thought it was strange to sand the roads instead of salt. He was told it was to protect the vegetation and the wildlife and it doesn't eat the roads up. He sees the value of having a gravel pit. To have the sand and the ingredients as one testifier stated. The location itself is not in the best interest of the community for those that have invested. When he bought his property he didn't think when questioning his development options that one would be to not. First, it was HilCorp but then it stopped. Then, it is if the Chapman School will remain and now this. This is all within a mile and half of his new home. He is hesitant in investing in his property and hesitant to start a business in Anchor Point. He thanked the Commission for their consideration. He agrees that a lot of people may not have received notice or are out of the area so postponing would be in the community's best interest.

Mr. Elmaleh wanted to answer a question posed earlier regarding the distance to the Sterling Highway. Commissioner Ecklund was curious about the distance if turning onto Anchor Point Road to go to the material site. He stated that it would be about $\frac{3}{4}$ of a mile. Taking the Old Sterling it would be about 10 miles. Using the bridge is about a mile. Going back to Anchor Point it is between 15 and 18 miles.

Seeing and hearing no one else wishing to speak, the public hearing was closed and discussion was opened among the commission.

MOTION: Commissioner Carluccio moved, seconded by Commissioner Bentz to **continue** the hearing on the conditional land use permit application on a parcel in Anchor Point until brought back by staff.

Commissioner Whitney wanted to clarify if it should be brought back date certain or brought back by staff. Chair Pro Tem Foster stated it was to be brought back by staff. Commissioner Whitney stated that he would like to see it date certain and set it for May 28, 2019. Mr. Best confirmed that May 28, 2019 would be a Planning Commission meeting date but noted that it would be on a Tuesday.

AMENDMENT MOTION: Commissioner Whitney moved, seconded by Commissioner Venuti to amend the motion to May 28, 2019.

Commissioner Fikes asked if it was being postponed until May. Chair Pro Tem Foster stated it was not a postponement it would be a continuance of the public hearing.

Mr. Wall stated that he had a concern regarding the May 28, 2019 meeting. He is planned to be out of town the four weeks leading up to the May 28, 2019 meeting but could be present for the meeting. He is concerned with the continuity of processing the application if it is to be held on May 28, 2019. Chair Pro Tem Foster asked if Mr. Wall had a recommendation for the continuation. Mr. Wall stated that the April 22, 2019 would be his recommendation. Commissioner Ecklund felt that based on the applicant's representative they were ready to go forward. She believes that all of the application materials are prepared and she knows there will be more that come in but most of the work is already done. So she felt that his time off should not interfere with continuing on the May 28, 2019 meeting.

Explaining was done on the need to vote on the question before the motions could be voted on.

VOTE ON THE QUESTION PASSED: Roll call vote on the question, passed by unanimous vote.

AMENDMENT MOTION PASSED BY MAJORITY VOTE: 7 Yes, 2 No, 1 Recused, 2 Absent

Yes:	Bentz, Carluccio, Ecklund, Ernst, Morgan, Venuti, Whitney
No:	Fikes, Foster
Recused:	Brantley

Absent: Martin, Ruffner

Chair Pro Tem Foster addressed that the it will be continued at the May 28, 2019 meeting. At that time the public hearing will remain open and anyone wishing may come back. He asked that if anyone had anything to submit for the meeting to please submit it early.

SUBDIVISION PLAT PUBLIC HEARINGS

1. Commissioner Carluccio reported that the Plat Committee reviewed 6 preliminary plats. 5 were approved and 1 was postponed.

OTHER/NEW BUSINESS

1. New Plat Committee (April, May, June 2019)
Members – Brantley, Carluccio, Ecklund, Venuti, Whitney
Alternates - Fikes

ASSEMBLY COMMENTS

LEGAL REPRESENTATIVE COMMENTS

DIRECTOR'S COMMENTS

Mr. Best stated that a decision was received from the Hearing Officer for the approval for Diamond Willow Estates Subdivision. The Planning Commission's decision to approve was upheld by the Hearing Officer. The appeal time is still going and a copy of that decision will be available in the next meeting packet.

COMMISSIONER'S COMMENTS

Commissioner Venuti wanted to discuss the letter that accuses him of unethical behavior. He understands that people do not like change and folks in that community have his sympathy. He doesn't know how he would feel if he had a gravel pit moving next door to him. But to try to assassinate his character in a public manner is a lame stunt and wondered if they considered the liability issue they have put before him. The potential for a problem and he is uncomfortable about this. Obviously, these people do not know anything about him and he has been working at his profession in the Homer area for 40 years and nobody has ever said anything about unethical behavior. He refutes the claims entirely.

Commissioner Ecklund stated that due to the size of the packet she had issues with determining where items were located and where they began and ended. She wanted to clarify if the applicant's submission began on page 70 and ended on page 115. Mr. Best would review and let her know. Discussion was had on trying to arrange and note divisions in the packet better for the next meeting.

Commissioner Bentz noted that she would be absent for April 22, 2019. She also wanted to know if there was a date for the Comprehensive Plan. Mr. Best stated that there is not a date yet but it is getting closer.

ADJOURNMENT

MOTION: Commissioner Carluccio moved to adjourn the meeting at 10:36 p.m.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

APPROVAL OF REGULAR AGENDA AND ADOPTION OF THE CONSENT AGENDA

CONSENT AGENDA

AGENDA ITEM C. CONSENT AGENDA

- *5. Plat Amendment Request
 - a. Crestview Estates Subdivision
KPB File 2004-146A1 [Imhoff / Switzer]
Recording No. HM 2005-33
Location: On Kia Lane and Cozy Cove Drive, off Skyline Drive

STAFF REPORT

PC MEETING 4/8/19

After Crestview Estates Subdivision was recorded, an error was discovered. The surveyor requested permission to withdraw the original mylar for amending.

A distance label on the west lot line of Lot 8 is in error. The proposed amendment to this plat is:

1. Correct the distance label on the west lot line of Lot 8 from 365.46' to 368.46'.

Staff recommends the requested amendment be accomplished by striking through the incorrect label and adding the correct label.

STAFF RECOMMENDATIONS: Grant permission to surveyor to withdraw the original mylar to amend as requested, subject to the following:

1. Written approval by the State Recorder.
2. Refile the plat along with a surveyor's affidavit per State requirements.

NOTE: An appeal of a decision of the Planning Commission may be filed to the hearing officer, in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. An appeal must be filed with the borough clerk within 15 days of date of the notice of the decision; using the proper forms; and, be accompanied by the \$300 filing and records preparation fee.

END OF STAFF REPORT

****Approved with the adoption of the consent agenda.***

AGENDA ITEM C. CONSENT AGENDA

- *7. Commissioner Excused Absences
 - a. Vacant, Ridgeway

MOTION: Commissioner Carluccio moved, seconded by Commissioner Bentz to approve the consent and regular agendas.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

PUBLIC COMMENT / PRESENTATIONS / COMMISSIONERS

Chairman Martin opened the meeting for public comment.

1. Emmitt Trimble, PO Box 193, Anchor Point

Mr. Trimble wanted to make a request. At the last Planning Commission meeting procedures had been discussed and the possibility of a continuation. The date that was discussed was April 22, 2019 and that date worked for them. At that meeting there was a motion to continue to May 28, 2019 because several of their opponents stated they wanted to give time to the snowbirds to come back and be able to testify. The motion passed unanimously without any question if they would be available. They will not be in the country during that time and are not available for the continuation on May 28, 2019. They are available on April 22, 2019, which was their agreement with staff, or May 13, 2019. They are respectfully requesting that the issue be addressed and try to change the date of the meeting. They are not changing the date of their family vacation.

Commissioner Fikes wanted to point out that the motion did not pass unanimously.

Mr. Trimble also wanted to speak out about the vicious attack of a Commissioner in a written testimony from opponents. Commissioner Brantley recused himself and it was requested that Commissioner Venuti also recuse himself because they are real estate brokers and Commissioner

Venuti is an inspector. He wanted to apologize for the majority of Anchor Point for the suggestion that Commissioner Venuti was unethical and nefarious. He was offended.

Seeing and hearing no one else wishing to speak, Chairman Martin continued the meeting.

Chairman Martin told the commission they could address the request.

Commissioner Ecklund stated that the process to change a date that was set at a meeting is that the Commission has to make a motion to amend after adoption and the discussion of the change would take place at the next meeting. Commissioner Ecklund clarified that they cannot change the date at this meeting but make a motion to amend after adoption and then the item will be on the next meeting agenda for public notice.

MOTION: Commissioner Ecklund moved, seconded by Fikes to amend after adoption the date set for the Anchor Point - Trimble material extraction site to be publicly noticed for discussion at the next meeting.

Commissioner Brantley recused himself from this item.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

PUBLIC HEARINGS

AGENDA ITEM F. PUBLIC HEARINGS

1. Vacate the 30' wide public access easement adjoining the north boundary of Tract A, A. A. Mattox 1958 Addition, Plat HM 3746, as granted on the public access easement recorded at Serial Number 2018-003011-0, Homer Recording District. The public access easement being vacated is unconstructed and located within the NW1/4 SE1/4 SE1/4 of Section 17, Township 6 South, Range 13 West, Seward Meridian, Alaska, within the Kenai Peninsula Borough; KPB File 2019-026V.

Staff Report given by Scott Huff

PC Meeting: 4/8/19

Purpose as stated in petition: The easement is no longer necessary because Lot 8 and Tract A are being replatted into one lot.

Petitioner: Echo Trading Company LLC of Homer, AK.

Notification: Public notice appeared in the March 28, 2019 issue of the Homer News as a separate ad. The public hearing notice was published in the April 4th issue of the Homer News as part of the Commission's tentative agenda.

Fourteen certified mailings were sent to owners of property within 300 feet of the proposed vacation. Ten receipts have been returned when the staff report was prepared.

Public hearing notices were sent by regular mail to 34 owners within 600 feet of the proposed vacation.

Twenty public hearing notices were emailed to agencies and interested parties.

Nine public hearing notices were emailed or made available to KPB staff/Departments via a shared database.

Notices were mailed to the Homer Post Office and Homer Community Library with a request to be posted in public locations.

The notice and maps were posted on the Borough bulletin board and Planning Department public hearing

MEETING PACKET

DESK / LAY DOWN PACKET

APRIL 22, 2019

(Please note that some information has been dispersed throughout the record so that there was not duplicate information.)

AGENDA ITEM I. PUBLIC HEARING

2. Amend a Hearing Date After Adoption for a Conditional Land Use Permit for a Material Site

STAFF REPORT

PC MEETING: April 22, 2019

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicants wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

A public hearing was advertised and scheduled for March 25, 2019 for this application following a remand from the hearing officer. Prior to the hearing, the applicants' representative requested a continuance of the hearing due to unforeseen issues. Following public comments at the hearing, the Planning Commission voted to continue the hearing to May 28, 2019.

At the regular April 8, 2019 hearing of the Planning Commission, the applicants requested that the Planning Commission reconsider the decision concerning the date of the continuance. The applicants indicated that they will be out of the country on May 28, 2019 and will not be available on that date. They suggested April 22, 2019 or May 13, 2019 as alternate dates.

The Planning Commission, by unanimous consent, agreed to amend after adoption the meeting date with the date to be decided at the April 22, 2019 meeting.

April 22, 2019	Is not an option because public notice needs to be provided.
May 13, 2019	There is sufficient time to meet the public notice requirements for this meeting. However, Max Best, Planning Director and Bruce Wall, Planner will both be unable to attend this meeting.
May 28, 2019	The applicants have indicated that they will not be available on this date.
June 10, 2019	Max Best, Planning Director will be unable to attend this meeting.
June 24, 2019	Bruce Wall, Planner will be unable to attend this meeting.

PUBLIC NOTICE: Public notice of this meeting was mailed on April 10, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel.

To: KPB Planning Commission
From: William and Linda Patrick, parties of interest in Beachcomber LLC Gravel Pit Action.
Subject: Changing the May 28, 2019 set date for this issue.
Date: April 18, 2019

Honorable Members of the Planning Commission,

Issuing a permit for an unwanted gravel pit in a residential/recreational location like this is a very serious matter. The population density of this area during the summer would be more inline with the towns of the Kenai Peninsula. No reasonable person would put a gravel pit here.

That being said, my wife and I object to moving this set date to an earlier date. We also object to the appearance that Mr. Trimble is trying to deceive and confuse the parties of interest as to the timelines set by the Planning Commission. First it was a request, without reason, to delay the March 25 meeting. By the way, Mr. Trimble showed up at that meeting with his family and legal counsel. The Commission then reset the date to May 28, 2019. Now, Mr. Trimble is going to be "Out of the Country."

We thought the May 28th date was set to allow more of the persons of interest to be there. To move the date to early May appears to be counter productive to the positive decision you made about the May 28th date. Taking this into consideration, I would suggest that if the meeting agenda absolutely needs to be changed at Mr. Trimble's request, it be changed to a later date. I see there are proposed conflicts in June with the Planning Department, so perhaps it should be moved to July. It is my opinion that moving it to an earlier date would not be in the interest of the public to which this Commission serves. The gravel isn't going anywhere.

On a personal note, my wife and I cannot attend the May 13th meeting as I am undergoing cancer treatment in Arizona and will be out of state on that date. So, we request that the May 28th date be maintained or moved to a later date. I am willing to provide the Commission with documentation to verify my request, if necessary.

Respectfully Submitted,

William and Linda Patrick

Subject: Beachcomber reschedule

Please forward this to the Planning Commission for inclusion in the 4/22/2019 Packet.

Planning Commission members,

Once again the applicants for a proposed gravel mine in the heart of Anchor Point are attempting to manipulate the permitting process through deception and misleading statements. At the eleventh hour before the scheduled March 25th Hearing date applicants, through their attorney, requested and received a continuance. Reason given—“unforeseen circumstances”. Probable reason—two of three commissioners who voted in favor of applicant at original July 16, 2018 hearing had excused absence from March 25 meeting! No great surprise when the applicants, their entourage of out of town gravel operators, and their attorney all showed up ready to proceed, after those opposing the permit had been told by KPB Planning Department that there was no need to be present that evening.

At the request of several neighboring property owners the Commission voted to continue the hearing until May 28th. This was a legitimate and justifiable request which would allow affected property owners who winter in warmer climates to attend and give in-person testimony. Most of those summer residents have arranged their travel schedule to be here for the May 28th date. Any date prior to that will not allow many affected landowners the right to testify in person before the Commission. Additionally, the May 13th date does not work because both the Planning Director, and the KPB Planner will be absent and procedural questions will have no one qualified to answer.

If the applicants are genuine in their desire to move the process along they need to adjust their plans, or accept a date later than the scheduled May 28 hearing that was voted on by the Commission. Applicants have previously requested and received a continuance through very questionable circumstances, and now are attempting to again manipulate the process showing no regard for property owners who would be adversely affected for what is likely the rest of their lives.

Subject: Re: Beachcomber LLC vs. All the good people of Anchor Point

Hey Bruce,

I understand our favorite Realtor is attempting to move the date of the next meeting once again. Are the “unforeseen circumstances” that motivated him to ask for a continuance of the March meeting raising their ugly heads once again ?? OR, if he’s truly going to be “out of the country”, would a request of a copy of his “international itinerary” be out of line ??

Please put me down for a very negative vote as to moving the meeting unless we make it even later in the summer when all the snow dodgers have returned and Mr. Trimble has had a chance to recover from his travels.

Best Regards,

Sent: Thursday, April 18, 2019 10:20 AM
To: Wall, Bruce
Subject: Trimble request to change the next Beachcomber hearing date.

It is my understanding that Mr. Trimble has requested another change to the next planning commission meeting.

Trimble attended the April 8th Planning Commission meeting to convince them to move the date ahead for the hearing that was set for May 28th. The May 28 date was selected after Trimble previously requested a continuance from the March 25 meeting. Many of us had planned to attend that meeting. Numerous local citizens requested the May 28 meeting because many of us would not be available for an earlier meeting. I request that the planning commission stick with the May 28th meeting or move the hearing into June or later. I believe that the planning commission understands that they work for the general public and not for any individual developer. Therefore, they should attempt to accommodate the needs of the broadest range of citizens. It is not right or acceptable for the commission to respond to an individual without regard to the greater public need.

In my view, Trimble has not been honest in his dealings with potentially impacted neighbors or the commission. His latest request is just another attempt at manipulating the system to meet his needs with no consideration given to neighboring property owners whose quality of life is of no value to him. This is the same applicant who has stated on several occasions that neighbors who don't like what he wants to do should invest in insulated window shades, hearing protection, and build fences to block our view from his mine.

Trimble has already asked for, and received one continuance which inconvenienced the rest of us. I find this to be unacceptable. He should not be granted a second opportunity to reschedule the meeting to the detriment of adjacent property owners and other concerned citizens.

Mr. Wall,

My property is touching this proposed gravel site on two sides and I would like to attend the meeting and would like that date clarified. I thought May 28th was set but hear that it might change again. A later date would work but definitely not earlier. I so hope this sad little town of Anchor Point won't have a gravel pit next to it's only public attraction and state park.

Thank you,

Marie Drinkhouse

Subject: April 22, 2019 Planning Commission Meeting

Honorable Planning Commission members. I am Marie Carlton. I reside at 73500 Seabury Road, Anchor Point.

Initially Mr. Trimble asked for a continuance to April 22, 2019. However, previous to the March 25, 2019 Planning Commission Meeting, Mr. Bruce Wall (in a conversation with Hans Bilben) stated that Hans did not need to attend the March 25, 2019 meeting because it was possible neither Mr. Trimble or his counsel would be attending the 3/25 meeting. As I arrived to the said meeting Mr. Trimble, his wife and daughter, and their counsel were in attendance and appeared very prepared. I was troubled by Mr.Wall's suggestion to not appear, only to observe the opposite. We were not notified of this change. A brief e/mail would have been appropriate and respectful. There can be no surrogate for professional, transparent and honest communication. On April 12, 2019 I received the letter from the Borough for an April 22, 2019 meeting to consider rescheduling the approved by vote, May 28, 2019 continuance. This second request for continuance is troubling. In the interest of fairness and honesty please reschedule the continuance to June. That way the majority of locals will be here. With regards to the magnitude of Mr. Trimble's out of country request(for continuance for May 13, 2019), it would seem Mr. Trimble could have notified the commission well in advance of his plans, thereby avoiding further issues. "Out of country " plans are not typically short term or spur of the moment decisions. If Mr. Bruce Wall receives this letter first, please ensure the commission has time to consider my thoughts. Thank you for the privilege of your time. Marie Carlton

Hello Planning Commissioners of Kenai Peninsula Borough,

We received a letter from the Planning Department that the public hearing date will be re-scheduled on April 22, 2019 for the Beachcomber Conditional land use permit which was voted to be on May 28, 2019, since the applicant will be out of Country on that date.

We request that this meeting be scheduled for June 10, 2019 or June 24, 2019 during the regularly scheduled Planning Commission meetings.

I am including the map of the area where this gravel pit will impact the Anchor Point area and I know from the Borough codes you will be able to deny this Conditional land use permit.

2.40.050. Investigation and recommendation authority.

The planning commission may consider and investigate subject matter tending to the development and betterment of the borough and make recommendations as it considers advisable to any department of the borough government and to the assembly. The commission may make or have made surveys, maps or plans.

(Ord . No . 73-34, §§ 1(part) and 2(part), 1973 ; Ord . No . 15, § 1(part), 1966 ; KPC § 20 .10 .005

The Red area is the location of Beachcomber Llc Conditional Land Use permit.

Subject: Motion for Reconsideration at 4/22/19 meeting

Dear Planning Commission:

There is a motion for reconsideration regarding the properly scheduled May 28, 2019 public hearing in the Beachcomber matter.

I hereby request public input be allowed prior to your deliberations and vote. KPB sent out over 200 notices to the adjoining neighbors negatively affected by the proposed open pit mine. There are an additional several hundred neighbors also affected negatively but were just beyond the statutory distance for notice.

After your body accommodated the applicant by changing the date, the applicant wishes to change yet again. Before this matter, which affects literally hundreds and hundreds of adjacent neighbors, is decided justice dictates the rights of affected neighbors be given a moment to defend a denial of rescheduling yet another date change. Please allow a brief time to respond in person preceding your deliberations.

Thank you
Pete Kinneen

Subject: May 28 hearing - what's going on?

Dear Blair and Kenai Peninsula Commissioners, Max, and Bruce,
After re-scheduling our meetings, commitments, and travel
schedules, my husband Richard will be driving up from Washington
State to your meeting in Soldotna on May 28th. I must stay back in
Washington as I am in charge of a state memorial service June 2nd.
We made all our arrangements around your agreed upon May 28th
hearing date.

Now it appears that the Trimbles have decided to "not be present"
and wish to change the date yet AGAIN! This is preposterous, and I
feel rather disgruntled that you are now entertaining the notion of
changing the date yet again, particularly since you yourselves have
date conflicts! Is this just another ploy to confuse and keep the
Anchor Point citizens from coming to a meeting that the Trimbles
actually intend to attend as they did on March 25th? I would
appreciate your thoughtful consideration of the full import of your
decision. Maintain the date of May 28th. We citizens and
neighbors of Anchor Point are trusting you to do what is right and
honest for our borough. Thank you for your kind assistance.

Very truly,
Ann Cline

Subject: Re:previously re-scheduled May 28 hearing

KPB planning Commission officers and planners, When are you going to stop responding to ridiculous and obviously dishonest requests from Beachcomber to constantly demand personal, conflicting consideration over all others with regard to their disgusting permit application? Practically every current negatively affected Anchor Point resident has jumped through a lot of hoops to present our side in this potentially devastating threat. Beachcomber has tried every dirty trick they can think of to dishonestly present their side, hoping to ram this permit application through regardless of the disastrous impact it will have on an area they couldn't care less about! The single most telling example of the weakness of their argument, and their total disregard of what would normally and obviously be considered as what is right and fair, is their request to simply approve the permit by waiving Borough standards! The Trimbles are intimately aware they have an untenable position, opposed by the actual residents of the impacted area who will be devastated by the noise, the dust, the visible blight, the danger, and the destruction of our neighborhood. So they have engaged in physical threats, illegal trespassing, intimidation, and now even more dishonest re-scheduling attempts to try to circumvent your agreed-upon proceedings. They lied before about "not being able" to attend the March meeting, then showed up in full force, hoping their ploy had kept opposing residents away. When will you require them to comply with a schedule they have had plenty of time to consider? Hold to your May 28 schedule. Everyone involved has made a lot of plans in order to attend. If the Trimbles don't want to comply until they are sure we won't be there, fine. Let's schedule the hearing for the first meeting in June, 2050. They might be able to come up with some plan that is actually in compliance with Borough standards by then. I think we will be available.

Sincerely,
Richard Cline

Subject: Trimble Gravel Pit Meeting

Good Morning Bruce

I am writing in regards to another Planning Commission meeting date change. I have scheduled an important business conference during the currently proposed May 13th meeting date. I made this commitment after the Commission set the May 28th date. Furthermore I see that you and Max will be unable to attend the May 13th meeting. Even though you guys don't always agree with our perspective regarding this proposed material site I feel it's important that one or both of you be present to answer questions and be part of the discussion going forward. The outcome of the Commissioners decision may have a substantial effect on how your department deals with similar proposals in the future. It just seems unusual for neither of you to be there considering the importance of all this.

I suggest that we either stick with the May 28th date that was previously agreed to or continue the meeting on a future date in June or July when one of you can be present. Either way please ask the Commission to set a date and hold to it so folks can plan around that. The constantly changing dates makes it very difficult to hold to committed schedules.

Thank you...Lynn Whitmore

Subject: Trimble Fallacy

Please leave the May 28th date as agreed. If it needs to be moved, please move forward, so out of State tax payers can attend.

I personally don't believe Trimble's. They said they couldn't show up to the Last hearing, but they did, in full force and fully prepared. They even requested an approval vote. Do we really need Emmitt there to read to us? I say we have heard enough from them. They can send their attorney.

Let the impacted people have a presence and a chance to voice their concerns. Why oblige Trimble's Folly over the people? I do believe I pay more tax on my house at 34919 Fisher CT than Trimble's pay for the entire property they are requesting you to approve an extraction permit for. If my house does not cover it, my house and my other two view lots on Denver does.

Please vote to represent us, the people, keep the date or move it forward.

From: Mike Brantley
Sent: Friday, April 19, 2:09 PM
Subject: At the May 28, 2019 scheduled Open to the Public
To: Pete Kinneen and KPB PLANNING

To the KPB Planning Commission,

At the Planning Commission's March 25th, 2019, Open to the Public meeting. I specifically asked, if I will be able to speak again at the next Continuation meeting Open to the Public, the Planning Commission said YES. And the Planning Commission scheduled the Continuation of Open to the Public Hearing to the May 28, 2019 date.

Now, you're saying I cannot at the schedule Hearing on April 22, 2019 to Change again, to what Emmitt Trimble wants not what Anchor Point residents want! When is this Changing Game going to STOP by Emmitt Trimble and the KPB Planning Commision? You have already accommodated Emmitt Trimble's request to change the date once, and you did: May 28, 2019

My questions;

Did Emmitt Trimble asked for the May 13, 2019 date change by telephone or by a formal document with Proof as to why?

I respectfully request, that the rescheduled date approved by you on March 25, 2019, not be changed: May 28, 2019.

If it does get changed, I request it be rescheduled to June, 2019.

Subject: KPB Planning Commission Meeting April 22, Continuance Beachcomber LLC Public Hearing Date

Dear Ms. Broyles, please provide the following letter to the KPB Planning Commission for their Public Hearing on April 22, 2019, regarding a continuance for the date of the KPB Planning Commission's deliberations to disapprove or approve the Beachcomber LLC's gravel pit application.

Dear KPB Planning Commission Members:

We are writing to ask that you to reaffirm your earlier date of May 28, 2019, for your public hearing to discuss the disapproval or approval of the Beachcomber LLC's gravel pit application. Many of our neighbors who are property owners near the proposed gravel pit won't be back from their locations down south if the public hearing is scheduled any earlier. We understand that the principles of Beachcomber LLC is trying to move the public hearing date ahead due to some earlier plans they made. It would seem that if they believe their gravel pit application is of such importance they would find a way to reschedule their plans as we have all had to do to try to reach a conclusion to this serious issue.

Secondly, we understand the April 22, 2019, public hearing is only to determine a continuance date for the Planning Commission's deliberations for disapproval or approval of the Beachcomber LLC's gravel pit application. However, in one of your recent public meetings regarding this subject, we were lead to believe no other subject regarding the gravel pit would be allowed, only to find substantial testimony was indeed given to the Planning Commission by Beachcomber LLC and other gravel pit operators.

Therefore, if, during your April 22, 2019, public meeting, you elect to take up the pros and cons of the proposed gravel pit that may lead you to your disapproval or approval of the Beachcomber LLC gravel pit application, we wish to go on record that we want to testify in this public hearing. We are fearful you may make a final decision regarding the gravel pit application's disapproval or approval during this meeting without our chance to testify.

Thank you for your consideration of this matter.

Sincerely,

Gary and Eileen Sheridan

Subject: Beachcomber permit meeting change

Gentlemen:

This permit request and process has been an interesting affair to say the least....I have seen the KPB be pro development...which would be good if it was for the good of all not just a few. So far this process has only been good for one...for some reason...that only the borough seems to know ... this process is starting to display a perception of maybe bias for...or at least special treatment for the permit requested.

Now it is understandable that perception may not be reality...but I have to question why the KPB seems to immediately bend to the permitter's request..even after the same permitter made a fool out of planning department...asking for a continuance of a meeting only to show up anyway..unless the planning group already knew that was the plan...if that was the case then I am the fool in responding to Bruce as I did..and this performance is disrespectful to the planning commission themselves. Perhaps I hold all of you to higher standards, that maybe my error alone.

But more, importantly this same permit requester was out of compliance with his current permit (at least on 3/28...per Bruce himself), after all Bruce was going to call him....I wonder if Bruce does it for all the permit requesters...or is Beachcomber just special..most violations result in fines...not special phone call warnings...and then working so hard to issue new permits. This CLUP was for gravel extraction and remittigation...now it lists peat and sand removal too. Perhaps there would be a different planner.. other than Bruce, that could over see this permit. Doing that would show due diligence and impartiality.

Max, as the director of planning, you carry a great responsibility to the community.. and I have been reassured (by a mutual acquaintance) that you are an upstanding man.. a straight shooter. so please step back and look at this whole process and maybe reassure me (us in Anchor Point) that the planning commission actually means something for the community...that they are not just figure heads and will do anything for nothing..

Please leave the date as it stands May 28 afterall, that was already agreed to by everyone..including the surprise attendee Beachcomber. Therefore I respectfully ask you to keep the date and consider what I have written here today as well.

Respectfully

Shirley Gruber.

Re KPB Planning Commission Public Meeting, April 22, 2019, Beachcomber LLC Proposed Gravel Pit

Dear Planning Commission Chairperson and Commission Members:

In addition to our prior submissions, we are submitting the following documentation regarding the Beachcomber LLC's gravel pit application to help in your deliberations to either disapprove or approve their application.

More specifically, one is the "haul route" (or 'haul road') that is subject to the Beachcomber LLC's gravel pit application. The KPB Planning Department states that , "(The applicant's)...site plan indicates that the material site haul route will be Danver Road, which is maintained by the Borough, and then to the Anchor River Road, which is maintained by the state."

In speaking with a highway construction consultant for the Department of Transportation (DOT) , State of Alaska, we learned that DOT defines a gravel pit haul route to be from the gravel pit site to the gravel's destination or delivery point.

The KPB Planning Department's statement about what constitutes the haul route for the proposed gravel pit would have us believe that only Danver Street is the haul route under question, and not the Anchor River Road (ARR), and other roadways the gravel pit owner may use to deliver gravel.

However, in DOT's letter to Bruce Wall, KPB Planning Department dated March 21, 2019, (see Attachment I) they confirm that they consider the ARR to be part of the Beachcomber LLC's haul route. They state, "As the owner of the Anchor River Road, directly adjacent to Danver Street, as well as Old Sterling Highway and the Sterling Highway, we have recommendations and requests to the eventual permitting of this proposed gravel pit."

They further state in part, "The pavement itself on the Anchor River Road and on Old Sterling Highway is in extremely poor condition and additional heavy truck travel along these routes will only hasten further deterioration. Given these serious considerations we request the KPB to: ...3. Require dust control or sweeping in the event truck hauling creates obvious pavement debris on the Anchor River Road." And, "4. Require pavement repair on the Anchor River Road by KPB in the event truck hauling creates obvious potholes, rutting, or pavement damage." Further, they state, "Absent these considerations being addressed through the Borough, we object to this application for a permit".

It can't be made more clear. The Department of Transportation, State of Alaska will hold the Kenai Peninsula Borough accountable for any damage caused by Beachcomber LLC's gravel pit operations to the haul route (defined by DOT as the ARR, Old Sterling Highway, and Sterling Highway).

On April 14, 2019, I personally walked the Anchor River Road from it's junction at Danver Street easterly to it's junction with the Old Sterling Highway with the purpose of documenting photographically as much of current condition of the roadway as possible (Attachment II). I was truly amazed by the terrible condition the ARR is really in. I took a total of 96 photos that depict significant pavement surface cracking, slumping along the sides of the pavement (some as much as 6" or more lower than the surrounding roadway) almost the full length of the ARR, settling, holes, and deep depressions in the pavement.

One of the most grievous observations I made is that at least 80% of the complete distance from Denver Street to Old Sterling Highway has very little or no shoulders on the roadway. For the most part there is less than 18-24" of shoulder for pedestrians to get off the roadway for heavy trucks.

While the photos show the ARR to be in serious condition, I found it impossible to show how really serious it is. My photos don't clearly show how deep and wide the pavement slumping is along the sides. In many cases, I'm certain the roadway dips at least 6" or more from the adjacent level surfaces.

I have only included a few of the total photos taken (Attachment II); however, I can make the complete set of 96 photos available on request of the KPB Planning Commission, or Planning Department.

We know, without a doubt, that if Beachcomber LLC is allowed to use the ARR as their haul route, the ARR will completely deteriorate in a short period of time. We spoke with Mr. Gary Cullip, a long time Highway Heavy Construction Contractor, who lives in this area. He stated, "If the proposed gravel pit operator is allowed to run heavy gravel trucks over the ARR in it's present condition, they will chew the road apart". When told the gravel pit application calls for up to 50 full truck loads a day through the summer he stated, "That's absurd. There's no way the road can stand up to that kind of pressure from heavy gravel trucks." In fact, Mr. Cullip helped construct the Old Sterling Highway. He said he told them then it wasn't designed for heavy trucking use.

It appears clear that the Kenai Peninsula Borough will be held accountable for the repair of the Beachcomber LLC's haul route. **Borough tax payers should not be saddled with the cost of maintaining, repairs, or replacement of the ARR to the benefit of one individual who apparently wouldn't be held accountable at all.**

Based on these considerations, **we urge the KPB Planning Commission to disapprove the Beachcomber LLC's application for a gravel pit near Denver Street in Anchor Point, Alaska.**

We wish to thank you for your time and effort to resolve this difficult issue.

Sincerely,

Gary and Eileen Sheridan

Subject: Regarding Beachcomber proposed gravel pit
Attachments: 05-01-01_Landings.pdf; 05-01-01_chapter1190_Sight_Triangle_Minimum.pdf

Dear Mr Wall,

The gravel pit permit application submitted by Beachcomber LLC to the Borough brings up some concerns for the Alaska Department of Transportation. As the owner of Anchor River Road, directly adjacent to Danver Street, as well as Old Sterling Highway and the Sterling Highway, we have recommendations and requests to the eventual permitting of this proposed gravel pit.

As you know the Anchor River Bridge is currently load restricted and we expect the replacement bridge to be constructed in 2020 at the earliest. The pavement itself on Anchor River Road and on Old Sterling Highway is in extremely poor condition and additional heavy truck travel along these routes will only hasten further deterioration. Given these serious considerations we request the KBP to:

1. Verify sight triangles at the Danver Street STOP sign per attached detail. Verification is by an engineer, surveyor, or KPB Public Works official. KPB public works can coordinate with DOTPF M&O when reviewing sight triangles.
2. Verify the landing of Danver Street is suitable for trucks – 30 feet staging at the STOP signs, per attached detail.
3. Require dust control or sweeping in the event truck hauling creates obvious pavement debris on Anchor River Road.
4. Require pavement repair on Anchor River Road by KPB in the event truck hauling creates obvious potholes, rutting, or pavement damage.
5. Require a traffic control permit from DOTPF when truck hauling meets or exceeds 25 trucks per hour.

Absent these considerations being addressed through the Borough, we object to this application for a permit.

Thank you,

Joselyn Bloon
Area Planner

Subject: NO gravel pit in Anchor Point!

Dear Mayor Pierce and Planning Commissioners, I am writing in opposition to the proposed gravel pit mine which would be adjacent to the Anchor River recreational area and state campground sites as proposed by Emmitt and Mary Trimble of Breachcomber LLC. As a current Homer resident and past Anchor Point resident, my family, friends and I utilize this beautiful area all year long to fish, camp, walk and bike ride. If you allow the gravel pit in this location the noise, dust and crowded roads would greatly affect access and enjoyment of this pristine and important recreational area.

Unfortunately I cannot attend your meeting tonight due to my work schedule but ask that you again deny the permit for this gravel pit.

Thank you,
Amy Rattenbury

My photos don't clearly show how deep and wide the pavement slumping is along the sides. In many cases, I'm certain the roadway dips at least 6" or more from the adjacent level surfaces.

I have only included a few of the total photos taken (Attachment II); however, I can make the complete set of 96 photos available on request of the KPB Planning Commission, or Planning Department.

We know, without a doubt, that if Beachcomber LLC is allowed to use the ARR as their haul route, the ARR will completely deteriorate in a short period of time. We spoke with Mr. Gary Cullip, a long time Highway Heavy Construction Contractor, who lives in this area. He stated, "If the proposed gravel pit operator is allowed to run heavy gravel trucks over the ARR in it's present condition, they will chew the road apart". When told the gravel pit application calls for up to 50 full truck loads a day through the summer he stated, "That's absurd. There's no way the road can stand up to that kind of pressure from heavy gravel trucks." In fact, Mr. Cullip helped construct the Old Sterling Highway. He said he told them then it wasn't designed for heavy trucking use.

It appears clear that the Kenai Peninsula Borough will be held accountable for the repair of the Beachcomber LLC's haul route. **Borough tax payers should not be saddled with the cost of maintaining, repairs, or replacement of the ARR to the benefit of one individual who apparently wouldn't be held accountable at all.**

Based on these considerations, **we urge the KPB Planning Commission to disapprove the Beachcomber LLC's application for a gravel pit near Denver Street in Anchor Point, Alaska.**

We wish to thank you for your time and effort to resolve this difficult issue.

Sincerely,

Gary and Eileen Sheridan

Subject: Regarding Beachcomber proposed gravel pit
Attachments: 05-01-01_Landings.pdf; 05-01-01_chapter1190_Sight_Triangle_Minimum.pdf

Dear Mr Wall,

The gravel pit permit application submitted by Beachcomber LLC to the Borough brings up some concerns for the Alaska Department of Transportation. As the owner of Anchor River Road, directly adjacent to Danver Street, as well as Old Sterling Highway and the Sterling Highway, we have recommendations and requests to the eventual permitting of this proposed gravel pit.

As you know the Anchor River Bridge is currently load restricted and we expect the replacement bridge to be constructed in 2020 at the earliest. The pavement itself on Anchor River Road and on Old Sterling Highway is in extremely poor condition and additional heavy truck travel along these routes will only hasten further deterioration. Given these serious considerations we request the KBP to:

1. Verify sight triangles at the Danver Street STOP sign per attached detail. Verification is by an engineer, surveyor, or KBP Public Works official. KBP public works can coordinate with DOTPF M&O when reviewing sight triangles.
2. Verify the landing of Danver Street is suitable for trucks – 30 feet staging at the STOP signs, per attached detail.
3. Require dust control or sweeping in the event truck hauling creates obvious pavement debris on Anchor River Road.
4. Require pavement repair on Anchor River Road by KBP in the event truck hauling creates obvious potholes, rutting, or pavement damage.
5. Require a traffic control permit from DOTPF when truck hauling meets or exceeds 25 trucks per hour.

Absent these considerations being addressed through the Borough, we object to this application for a permit.

Thank you,

Joselyn Biloon
Area Planner

Subject: Meeting Dates

KPB Planning Commission,

We have been notified of an upcoming consideration to amend the hearing continuance date for the permit application of BeachComber LLC. This date was settled on and voted on some time ago. We have planned our vacations around dates set and agreed upon. BeachComber LLC should have set their dates by the schedule too. It appears that Bruce Wall has become their personal attendant and allows all contradictions raised by BeachComber LLC.

It is becoming difficult to depend on the borough. The date for the May 28th meeting was voted on and published for the public to schedule their lives around. The May schedule will allow our neighbors to attend and testify. Considering the huge opposition to this gravel pit I should hope the Planning Commission would give some consideration to allowing everyone to attend.

The process allows for "public hearings"..... what is this about? When the public hearing obviously shows that there is huge opposition, why are we still pleading our case? As American citizens we have a right to the "process"who interprets the results? As a commission are you unduly influenced by the planning department? Doesn't the Planning Commission have a requirement to digest what is presented and then protect citizens in an appropriate way? We surely request that you do and ask you to protect our homes and property from this viscous attack.

Please keep the May 28th meeting date and thank you for your time and consideration.
Sincerely, Vickey Hodnik and George Krier

Kelly Cooper
KPB Borough Assembly Representative
144 North Binkley Street
Soldotna, Alaska 99669

RE: Planning Commission

Dear Ms. Cooper,

I am writing to express my concern with the approach of the current Kenai Peninsula Borough (“KPB”) planning commission (the “Commission”) towards applications for land uses that some of the Commissioners dislike - such as applications for material extraction. I would urge the KPB Assembly (“Assembly”) to provide the Commission with additional training and guidance concerning the Commission’s duty to actively and diligently review all proposed land use permit applications and to schedule and hold hearings in a timely manner even if certain Commissioners dislike the land use proposed in the application before the Commission.

Over the past year, the Commission has engaged in conduct that gives the impression that certain land use applications will be handled one way and other land use applications (which some commissioners dislike) will be delayed, postponed and rescheduled. I am not suggesting that every member of the Commission is biased but it has become clear that the Commission is struggling to fairly and impartially conduct hearings for land uses which some Commissioners dislike. This ineffectiveness has a significant financial cost to land use applicants and to the Borough which must defend the Commission in costly administrative and legal challenges.

One of my prior clients has a permit application that is nearly a year old and yet this applicant is still trying to obtain a conditional land use permit¹. Several individuals challenging

¹ At the last Planning Commission Meeting the Commission delayed a hearing for a conditional land use application for material site for an additional two months! This delay occurred over the Applicant’s express desire to have the nearly year old application heard in April and over Planning Staff’s objection. However, despite these objections the Commission scheduled the

Homer, AK 99603

CELL 561-254-3377
EMAIL kcbaker@kcbakerlaw.com

this permit have made outrageous and offensive statements throughout the lengthy permitting process. These accusations have been lobbed at my prior clients, their children and even other Commissioners. In short, the behavior is unacceptable. However, despite this behavior the Commission continues to delay a decision and allows this behavior to continue.

My prior client is just one example of the delays that have been pushed on certain permit applicants by the Commission. Over the past year the Commission has delayed votes for permit applications for land uses which certain commissioners dislike namely – material extraction permits. Throughout the Commission meetings negative comments are made by some Commission members about certain land uses. This type of behavior gives the impression that land use decisions are arbitrary and capricious. I hope the Assembly will act to create a more meaningful processes to prevent the appearance of bias in the permitting process.

I would encourage the Assembly to send a representative to the Commission meetings so it can witness some of the comments that are made throughout the Commission meetings about certain land uses namely material extraction. Obviously, everyone is entitled to their personal opinion about various land uses. However, if a Commissioner has become biased against certain land uses to the point that they are unable to schedule a hearing (in a timely manner) to review a permit application and apply the permit conditions to that application then the Commissioner should be provided education or removed. Second, there is apparently no procedure in the KPB Code that requires the Commission to hold a hearing on a permit application within a certain time period. This is a significant drawback to a land owner attempting to obtain a land use permit. Consequently, at the option of the applicant, I encourage the Assembly to impose a deadline on permit applications that requires the Commission to timely review a permit application.

To be clear I am making these comments of my own accord and not on behalf of any of my clients or prior clients. However, I personally sympathize with some of my clients that have been forced into expending significant amounts of time, money and effort to secure land

hearing months out even though staff informed the Commission that it would be unable to prepare a packet on that date because the staff member in charge would not be in town leading up to the meeting. Staff urged the Commission to timely hold a hearing in April when staff could prepare the materials in advance. However, the Commission opted to force the Applicant to wait two months to obtain a hearing on its application for a conditional land permit. Likewise, it is likely that when the hearing date finally arrives the Commission will attempt to delay the hearing again because as staff informed the Commission a packet will be nearly impossible to prepare on the day that Commission scheduled the hearing.

use approvals because of the Commission's approach to reviewing certain land uses that some Commissioners do not like.

Please consider providing additional training and resources to the Commission so that land use applicants and the Borough can avoid time consuming and costly administrative and legal proceedings going forward. Should you have any other questions or concerns feel free to contact me on my cell phone or via email.

Sincerely,
KC Baker, LLC

Keri-Ann Baker

personal delivery or mail as long as it is complete and received in the clerk's office by 5:00 p.m. on the day the notice of appeal is due (21.20.250).

- B. An application to proceed with an appeal as an indigent may be filed with the borough clerk's office on a form provided by the borough clerk in lieu of the filing fee. The chair of the board of adjustment may allow an applicant who qualifies as an indigent a reduced filing fee, a payment plan, or a waiver of the filing fee where the chair is able to make a written finding, based on information provided by the applicant, that payment of the appeal fee would be a financial hardship for the appellant. Based upon the information provided, the fee may be reduced or waived per the schedule in 21.20.250.**

END OF STAFF REPORT

Mr. Huff added that starting on page 70 of the packet there were some photos from Google maps. These photos are pre-construction of the garage.

Chairman Martin opened the meeting for public comment. Seeing and hearing no one wishing to speak, the public hearing was closed and discussion was opened among the commission.

MOTION: Commissioner Whitney moved, seconded by Commissioner Carluccio to adopt Resolution 2019-11, grant the building setback exception requested, citing staff report findings 4 through 6 and 8 in support of standard 1, findings 2 through 8 in support of standard 2 and 3.

Commissioner Carluccio noted that the staff report mentioned that this is a DOT road but no comments had been received from them. She wanted to know what would happen if they objected after it was passed. Mr. Huff is not sure what the response would be. This is one of the roads being discussed for a road swap between the Borough and DOT. After the swap it will be borough maintained.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

SPECIAL CONSIDERATIONS

AGENDA ITEM I. PUBLIC HEARING

- 2. Amend a Hearing Date After Adoption for a Conditional Land Use Permit for a Material Site
Staff Report given by Bruce Wall PC MEETING: April 22, 2019

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road

BACKGROUND INFORMATION: The applicants wish to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

A public hearing was advertised and scheduled for March 25, 2019 for this application following a remand from the hearing officer. Prior to the hearing, the applicants' representative requested a continuance of the hearing due to unforeseen issues. Following public comments at the hearing, the Planning Commission voted to continue the hearing to May 28, 2019.

At the regular April 8, 2019 hearing of the Planning Commission, the applicants requested that the Planning Commission reconsider the decision concerning the date of the continuance. The applicants indicated that

they will be out of the country on May 28, 2019 and will not be available on that date. They suggested April 22, 2019 or May 13, 2019 as alternate dates.

The Planning Commission, by unanimous consent, agreed to amend after adoption the meeting date with the date to be decided at the April 22, 2019 meeting.

April 22, 2019	Is not an option because public notice needs to be provided.
May 13, 2019	There is sufficient time to meet the public notice requirements for this meeting. However, Max Best, Planning Director and Bruce Wall, Planner will both be unable to attend this meeting.
May 28, 2019	The applicants have indicated that they will not be available on this date.
June 10, 2019	Max Best, Planning Director will be unable to attend this meeting.
June 24, 2019	Bruce Wall, Planner will be unable to attend this meeting.

PUBLIC NOTICE: Public notice of this meeting was mailed on April 10, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel.

ATTACHMENTS

- Meeting minutes excerpt from April 8, 2019

END OF STAFF REPORT

Commissioner Brantley recused himself from the agenda item.

Chairman Martin opened the meeting for public comment.

1. Hans Bilben, PO Box 1176, Anchor Point

Mr. Bilben noted that in the packet were 19 or 20 letters from Anchor Point residents that are opposed to the rescheduling of the Planning Commission hearing date to any date prior to the current scheduled date of May 28th. The justification given for the continuance to the May 28th was to allow neighboring property owners that are not available prior to that time an opportunity to arrange their schedules accordingly in order to give in person testimony at the hearing. Several neighbors have made travel arrangements and will be available by May 28th.

There is a letter from Kasey Baker (Keri-Ann Baker), who is the applicant's former attorney. In her letter she talks about Commissioners that are guilty of delaying, postponing or rescheduling the application process because they do not like gravel. He first wanted to address delaying. Everyone was prepared for the March 25th hearing. Six days prior to the scheduled March 25th hearing Kasey Baker (Keri-Ann Baker) personally requested a delay or continuance for mysterious, unforeseen circumstances. No reason was given but more than likely it was because two of the three Commissioners that supported the application at the July 2018 hearing would be excused from the March 25th hearing. The delay was requested by the applicant's attorney and the delay was granted by the Planning Commission. At the March 25th meeting Kasey Baker (Keri-Ann Baker) the attorney, the applicant, their out of town gravel associates, arrived ready to proceed. He doesn't recall any postponement occurring during this permit process. He is present at this meeting because of a request from the applicant to reschedule not from the Planning Commission or from any opposing parties. He said that Kasey Baker (Keri-Ann Baker) is correct that there have been delays and a request to reschedule but both were initiated by the applicant and/or his attorney. Kasey Baker (Keri-Ann Baker) seems to be at the same mind set as the applicant, that the only people with rights are material extraction applicants. He wanted to thank the Planning Commission for not rubber stamping every application that comes before them. He also thanked those that realize that a material site that is improperly conditioned can have long lasting negative affects to families, neighborhoods and communities. He thanked all that insisted that an application be accurate and all conditions and standards are met before excepting or approving any permit.

The entire process is unfortunately stacked against neighboring property owners and in favor of the applicants. There are protections spelled out in the code and it is the job of the Planning Commission to ensure that those protections are afforded to neighboring property owners even if it means denying a permit at some point in time.

This hearing should remain on the schedule for May 28th and if the applicant cannot be it should be moved to June. May 13th will not work for several neighboring property owners that have made travel plans that coincide with the Planning Commission's March 25th decision, which was to hold it on May 28th. Additionally, the applicant will be pushing for the May 13th Planning Commission hearing. At that hearing neither the Planning Director or Planner will be present. He wanted to know who would answer technical or procedure questions when anyone has questions.

2. Ilene Sheridan, 32860 Seabury Ct., Anchor Point

Ms. Sheridan asked that the Commission not change the date from May 28th. That is the date many planned on and been working towards. She said everyone appreciates what the Planning Commission has done.

3. Lynn Whitmore, PO Box 358, Anchor Point

Mr. Whitmore stated that when this was scheduled for May 28th he made business plans for the meeting dates prior to that. Those are obligations he would like to keep. To have the date keep moving makes it difficult for any kind of planning. Even though they do not always agree with what the Planning Department has to say, anything that is done in this approval process will affect them down the line so it makes sense to have one or both of them available for decisions that may be upcoming.

4. Emmitt Trimble, PO Box 193, Anchor Point

Mr. Trimble wanted this done last July when all of the people that are coming this summer were already here. Everyone had a fair opportunity to testify at the original public hearing. They wanted it to happen in February but there were scheduling problems with staff. On the March 25th meeting the attorney had requested postponement and that was not possible. They received notice from staff that postponement was not possible but what could happen would be a continuation. When they arrived to the meeting they were prepared to go through with the process of the public hearing. They meet prior to the meeting with Planning Staff, Mr. Best and Mr. Wall, and the acting chairman, Dr. Foster. They made some changes to procedures and they wanted to make him aware of the changes. He listened and came away from the meeting knowing how the things would go regarding scheduling. All of the testimony would be allowed and at the end of public testimony they would ask for a continuance and that would be the end of the public testimony. Starting on April 22nd, the date presented by staff and Dr. Foster, that it would begin with his rebuttal and it sounded fine so they agreed. After lots of redundant testimony, a motion was made to continue but during the meeting individual testifiers were told they would be allowed to testify again. That was not his understanding. He said at least two people said that they would hold what they wanted to say until the next meeting. Obviously, the April 22nd meeting was not going to start with their rebuttal. Dr. Foster requested a motion for continuation and that happen. Someone asked what day, though they had discussed April 22nd which was proposed by staff and acceptable to them. During testimony people said they wanted to see it wait until at least May 28th so the snowbirds can be here. So the people, who do not live here, but they were here in July at the original hearing. They have had a year to testify in writing, telephonically and have had many opportunities. Someone mentioned making it May 28th because Dr. Foster said it would be left to staff. Someone moved to make it the May 28th because that is what the people said they wanted for the snowbirds to be able to be present. He did not think that was a valid reason. There was a vote, 2 people voted no and everyone else voted yes. They had no place other than to stand up and interrupt the meeting to say they would not be here on that date. He doesn't know where the conspiracy theory has come from of them being out of the country. They have a planned vacation, not out of country, but out of state. The next day they talked to staff and said that they would not be available on that date and they agreed to April 22nd. He was told that nothing could be done until the next meeting and he would need to come and request the change. They made the trip to Soldotna and requested the

change but was told they could not address it that night but they would have to come back two weeks later. None of these delays were anything they wanted. They should have had the permit in July. They are not available on May 28th but will be on May 13th and it seems that staff will be also. That date would be acceptable to them. In case someone had any concerns about whether the applicant would be here or not.

Commissioner Ruffner wanted to know if a date later than May 28th was discussed if he would be available in June. Mr. Trimble said that was not acceptable to him. Commissioner Ruffner understood that he would rather that not happen but if they would be available in June. Mr. Trimble said that as far as he knew he would be here in June. Mr. Trimble said they are going to be gone a week and it just happens to be that week and no one asked him.

5. Gary Sheridan, 32860 Seabury Ct., Anchor Point

Mr. Sheridan wanted to have the dates in the staff report clarified. He heard testimony saying that it appears that May 13th would be acceptable to everybody. He is concerned about that because the staff report says that Max Best, Planning Director and Bruce Wall, Planner, will both be unable to attend the meeting. The efficiency of the whole process both of those gentleman have a significant say in clarification in some of the points that will probably come up in some of the deliberations.

6. Pete Kinneen, 34969 Danver St., Anchor Point

Mr. Kinneen is concerned about the applicant keeps pushing the dates back and forth. He would like to see the date kept at May 28th or a following date for some of the reasons that others have already discussed.

7. Rick Carlton, 73500 Seabury Road, Anchor Point

Mr. Carlton wanted to ask a few questions. Conflicting testimonies have been heard. One is why the applicant would not say anything at the meeting that he would not be available when it was passed and approved for the May 28th meeting. He also wanted to know when Mr. Best and Mr. Wall would be present. He has heard some conflicts dates.

Seeing and hearing no one else wishing to speak, the public hearing was closed and discussion was opened among the commission.

MOTION: Commissioner Ecklund moved, seconded by Commissioner Ruffner to consider a motion to amend after adoption of the hearing continuance date for a conditional land use permit application for material extraction for the applicant Beachcomber LLC.

Commissioner Ecklund stated that the dates in the staff report list reasons why April 22 was not an option was due to public notice would not have been able to be provided. May 13, neither Mr. Best or Mr. Wall will be able to attend the meeting and she wanted to know if that was correct. Mr. Wall confirmed that they would both be out of town on that date. Commissioner Ecklund followed up that on May 28th the applicant will not be available. June 10, Mr. Best will not be available and June 24, Mr. Wall will not be available. That would move the meeting into July when the borough attorney that has been handling this will no longer be with the borough. She said it was looking like they would need to pick the least bad date.

Mr. Wall stated that Mr. Best and himself have discussed that they do not both have to be present. Either of the dates in June would work.

Commissioner Fikes asked if there was an obligation to take an action and wanted to know the options the Commission has. Commissioner Ruffner stated that they could leave it as scheduled on May 28. There is no motion to change it to date specific. It is possible to not reschedule but referencing the dates of who is available when and the fact that the applicant is not available needs to be considered.

Commissioner Carluccio stated that she thinks the applicant should be present on the date his application is discussed. Normally there is some give and take with the applicant at that time for some of the

requirements wanted and it will be hard to have that give and take if he is not present. Since neither Mr. Best or Mr. Wall will be present for the 13th meeting it would not be in Commission’s best interest to discuss it at that time. They are experts on this and the Commission needs at least one of them.

Commissioner Ruffner was not at the meeting when the date was set. He is trying to take everything in to decide when the best date would be. He recalls that typically with other applications ask to postpone the commission generally honors that. At the same time a statement was made to reschedule to May 28th that puts the other side feeling like they have been disenfranchised by moving the date again. His preference would be to have it on May 13th but the fact that both the Director and the Planner that have handled this will not be present he would make a motion for June 10th.

AMENDMENT MOTION: Commissioner Ruffner moved, seconded by Commissioner Carluccio to set the date for June 10, 2019.

Commissioner Whitney wanted to know if moved to the June 10th meeting would public testimony be allowed during the hearing. Mr. Wall said it was announced at the previous public hearing that they would allow additional public testimony. Chair Martin said yes it would be allowed.

Commissioner Fikes wanted to know if anyone from the administration could sit in for Mr. Best or Mr. Wall in their absences for the May 13th meeting. Mr. Wall responded that Marcus Mueller would be present at that meeting. Chairman Martin wanted to know if they felt if Mr. Mueller could fill in for them. Mr. Wall stated that Mr. Mueller is the Land Management Officer and he deals with borough lands and is not familiar with the material site ordinance.

AMENDMENT MOTION PASSED: Seeing and hearing no discussion or objection the amendment motion passed by unanimous consent.

MOTION PASSED BY UNANIMOUS VOTE: 8 Yes, 0 No

Yes:	Carluccio, Ecklund, Ernst, Fikes, Martin, Morgan, Ruffner, Whitney
Recused:	Brantley
Absent:	Bentz, Foster, Venuti

SUBDIVISION PLAT PUBLIC HEARINGS

1. Commissioner Chairman reported that the Plat Committee heard and approved 5 preliminary plats.

COMMISSIONER COMMENTS

Commissioner Ruffner updated the Commission on the Material Site Work Group. They will be meeting April 24th, which will be the last meeting to make proposals and vote on changes to the code to be recommended to the Commissioner and Assembly. April 30th the group will meet one more time to review the package and compose a cover letter. This should be an informational item in the May 13th packet.

ADJOURNMENT

MOTION: Commissioner Carluccio moved to adjourn the meeting at 8:18 p.m.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

Julie Hindman
Administrative Assistant

MEETING PACKET

&

JUNE 10, 2019

(Please note that some information has been dispersed throughout the record so that there was not duplicate information.)

RESOLUTION

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 where public comment was taken and the Commission denied the approval of the conditional land use permit; and
- WHEREAS,** the denial was appealed, a subsequent appeal hearing was held, and the hearing officer remanded the application to the Planning Commission; and
- WHEREAS,** a public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News; and
- WHEREAS,** at the March 25, 2019 meeting, the Planning Commission continued the hearing to May 28, 2019, which was later rescheduled for June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on Jun 10, 2019 where public comment was taken;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.

6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. A public hearing of the Planning Commission was held on Jun 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
13. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
14. *Parcel* boundaries. All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
15. *Buffer zone*. A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern

- property boundaries is 98-feet.
- L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
16. Processing. Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
17. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
18. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
19. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the

- floodplain is an existing stripped area.
- G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
20. **Fuel storage.** Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 - A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
 21. **Roads.** Operations shall be conducted in a manner so as not to damage borough roads.
 - A. The submitted site plan indicates that the material site haul route will be Danver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
 22. **Subdivision.** Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
 - A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
 23. **Dust control.** Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 24. **Hours of operation.** Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
 25. **Reclamation.** Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
 26. **Other permits.** Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
 27. **Voluntary permit conditions.** Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
 - A. No additional conditions have been volunteered by the applicant.
 28. **Signage.** For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.
 These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON

COMMENTS

Re: Beachcomber LLC gravel pit permit application

Dear Planning Commission Board,

Mary and Emmitt Trimble are the best owners for this particular piece of land. They have a 40 year tract record of developing amazing properties and being exceptional examples of responsible land stewardship. Prior to them purchasing this property, the field behind my house (also the viewscape of my neighbors' homes) was littered with gnarly stumps, slash, and huge ugly burn piles that the previous owners never got around to actually burning. You could not even walk thru the field because of this. My parents spent over \$60,000 to clean up this particular area of the property to make it the park-like field that it is today. This is a prime example of the level of reclamation they routinely do to clean/clear/improve all properties they come in contact with. THIS is the type of property developers they are! They care about this property more than any other individual or developer would, as shown by their careful and meticulous improvements to it. They have followed the letter of the law and worked with the borough to adhere to all regulations and staff recommendations for this permit, as they always will, because that is the type of developers, and humans, that they are. There is a valuable and needed resource within this property that our community as a whole can benefit from. A different developer might purchase this property solely for that resource and would not care about the actual land left behind after extracting that resource, but to my parents, the land is the most valuable resource of all. I would argue that keeping property values high is more important to the Trimble family than it is to any other sole family in the Anchor Point area. We have a lot of money invested in properties, and it does not behoove our family to take any action that would lower or jeopardize those investments. There is most certainly a way to responsibly and respectfully extract gravel from a parcel of land, without negatively impacting the surrounding area. As a neighbor and property owner, I appreciate and respect the borough's regulations on gravel pits. I want privacy berms and dust mitigation and reclamation plans to be enforced. Mary and Emmitt Trimble have always followed the law and have always been upstanding contributors to our community. They will be exceptional stewards of THIS parcel of land, just as they have been to all the other properties they have cared for over the last 40 years.

Respectfully,

Lauren Isenhour

To the Members of the Planning Commission,

Beachcomber LLC is owned by the Trimble Family Trust. Emmitt and Mary Trimble have created and improved over 150 residential homesites in the 43 years they have been living and contributing to the Anchor Point Community. My sister, Lauren, and I are actively involved in our communities and our parents raised us to be honest, law abiding and good stewards of the land, led by their example. We in turn are raising our children with the same mindset. Our little family started in the hearts of Mary and Emmitt in the Silver King Tackle Shop over 40 years ago. That area is our home and our heart. As a contractor, Lauren has worked hard to create a residential atmosphere in Anchor Point that is welcoming and enticing to new families. The commentary made by the opposition with regards to my parents is unfounded, and quite frankly, those people stooping to personal attacks should be ashamed of themselves. The toxic community environment that the opposition is creating is far more detrimental to the health of the Anchor Point Community than any development ever could be.

When the Planning Commission denied the application last year, you did so against the recommendations of staff, and in direct violation of your duties. To receive a permit, the applicant is required to meet certain standards outlined in code, and Beachcomber LLC agreed to all standards. The hearing examiner found on appeal that as you as the "Commission exceeded the scope of its authority in denying the permit based upon its determination that the conditions would not afford adequate protection from noise and visual blight. Further, the findings issued by the Commission did not provide substantial evidence in support of its denial and were not adequate," and kicked it back to you, the Planning Commission, so here we are.

On the Kenai Peninsula, gravel pits are one of the only regulated land uses. On this same piece of property, the following land uses could exist without regulations for sound or visual impact: sawmill, heavy equipment training facility, retirement home for sled dogs, motocross track, cattle feedlot, junkyard, and the like. My parents have been improving properties for 40 + years with not one blemish on their record for misuse of the land.

Gravel can be extracted on one acre or less without a permit. This pit already has a counter permit for 2.5 acres. The additional permitting only ensures greater standards of noise and visual minimization, which my parents have voluntarily agreed to. Every one of the conditions have been met. This is not a potential gravel pit. It is an existing gravel pit.

People believe there would be a better location for the site. Gravel exists where it does, not where we choose. This property comes with a bundle of rights, and as such is rich in a much needed resource. It also was for sale for a long time, on the open market; not one member of the opposition inquired about it, or made an offer to purchase.

This specific area was first settled in 1890, 129 years ago, exclusively for the value of the minerals discovered there, and continues to prosper as a result of the commercial utilization of those resources. The four nearby gravel pits have operated in harmony with the town and valley community for the last 68 years more or less. They have provided the access to the river, Parks and beach for residents and visitors alike. In fact they provided the very gravel that improved the homesites of those in opposition.

This is an unincorporated, un-zoned, multi-use area as a result of the preexisting industrial and commercial resource development. ALL of the people in opposition drove past 4 PEU gravel pits within a mile of our site, the most important being one off the Beach Rd between Danver and Kyllonen Dr. This pit is 60 ft from our pit, which is 3 years old. The claim that it is spent, or isn't in use, doesn't change its potential for land use in the future. The same people deny the current state of land use on our property claiming that it would still have the potential for greater use. Changing the facts to fit the argument is reckless and misleading.

They claim there was a nefarious effort made by my parents to sell them properties and not disclose their intentions, and that simply is not true. It really should be required for testimony in these proceedings to be made under oath.

This area relies on far more than Tourism and visitors for livelihood. The main goal for the gravel was the development of our personal properties along with select projects that improve the community and bring jobs to the area. Prior to my family applying for the CLUP, they were approached by Cook Inlet Construction to contract for approximately 9,500 yards at a value of approximately \$80,000. When the counter permit was granted and issued, it was disclosed to the complainants that there was a contract to provide that material to Hilcorp. A concerted effort and a barrage of complaints and threats to Hilcorp management erupted and as a result they instructed CIC to get the material from another source 22+ miles away. That Tortious Interference with a commercial transaction between CIC and Beachcomber LLC significantly damaged our family and caused us to postpone planned projects that left 3 separate contractors and their families looking for scarce other winter projects.

The opposition asserts that this is an issue of gravel trucks on the roads, however their interference with the contract with Hilcorp resulted in larger trucks, traveling further distance, to accomplish the same job. The Hilcorp project would have been one of the larger potential projects for this pit, and would have taken maybe a week to complete.

They have also stated that the noise in the area would deter tourism. The noise from the campground during Memorial Weekend camping was extremely loud from dirtbikes, ATVs, trucks pulling campers, fireworks and gunshots. This is not a place that people come for solitude. They come to recreate, which includes many loud activities.

Much of the community outrage is being stirred up by people who really don't care about impacts on the community. They spread misinformation to garner support, when their only real standpoint is NIMBY (Not In My Back Yard). They simply don't want something in their area, but would have no issue if it were next to someone else's home. In this community, under these codes, that is not a legal standpoint. If their point were valid, under the same argument, my parents would have the right to not want residences constructed on any new lots because it would interfere with the use of their property. Both are legal uses of land in this area, one use no more allowable than another.

I came home this week to tour the site and be here for the Open House that my parents are providing to welcome the community to see the gravel pit site. I drove with my Dad across the parked-out property, and visited our horses, all which exist on this property. We are here often, but many of the improvements were made since my last trip. The property is stunning and so well maintained. I could see my kids playing in the distance in my sister's backyard as we traveled. We drove into the gravel pit, observed the mitigation steps they have taken, such as the rolling berm, and I stood in the floor of the gravel pit and could not see a single house or other property. I couldn't help but exclaim "this is it? This is what they are complaining about?" It is simply ludicrous the level of complaints with how well designed and well maintained a project is presented. Many of complainants' properties are more displeasing to look at than the gravel pit.

The pit borders my sister's personal residence. My husband, children and I will also be living bordering the pit in the summers. For our family, the intention was always to build a family homestead and enjoy this as a legacy property where the grandchildren could play and learn to love the area just as we did. We spend countless hours exploring, bbqing and enjoying this property.

What is also true is that this is how our family has made a living for nearly a half a century, following in the footsteps of those before us on this very property. It is also our right and responsibility to provide for our children and their children in years to come. This is a legal use of this property being sought by the most likely people to complete the work respectably.

The opposition's standpoint hinges on emotional outbursts and attempts at scientific arguments and potential impact. The truth is, this is already a gravel pit and this is exclusively an issue of allowable land use. Any change in land use code must go through due process for change. This permit was applied for under specific code. The conditions have been met and the permit MUST be granted.

Subject: Beachcomber PC Hearing
Attachments: Beachcomber Findings - Denial.pdf; Beachcomber Findings - Alternate buffer zone.pdf

Hi Bruce,

Attached are the proposed findings that the neighbors opposed to the material site would like included in the packet meeting. The neighbors are proposing two different alternative findings of fact which would support the Planning Commission's decision to either 1. Disallow the application; or 2. Modify the buffer and berm requirements so as to actually provide sufficient minimization of noise and visual impact.

Thank you,

Katie Elsner

PROPOSED FINDINGS OF FACT
DENYING THE APPLICATION FOR A MATERIAL SITE CONDITIONAL LAND USE PERMIT
SUBMITTED BY BEACCOMBER LLC FOR PARCEL ID NUMBER 169-010-67

1. It is unlawful for any person to use land, or to assist another to use land, within the rural district of the Kenai Peninsula Borough as a commercial sand, gravel or material site without first obtaining a permit from the Kenai Peninsula Borough.
2. A conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres, if the material extraction enters the water table, and for materials processing.
3. The provisions of KPB Chapters 21.25 and 21.29 are applicable to material site CLUPs. These chapters are to be read in harmony, although, if there is a conflict between the provisions of KPB 21.25 and 21.29, the provisions of 21.29 control.
4. The purpose of Chapter 21.25 is to require advance public notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes public property rights.
5. In consideration of an application for a material site CLUP, the planning commission is directed to conduct a permit hearing and may thereafter approve, modify or disapprove the permit application.
6. Before granting a material site CLUP, the planning commission must find at a minimum that the proposed activity complies with the requirements of the code.
7. Material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise and visual impacts. Only the conditions set forth in KPB 21.29.050 are allowed to be imposed by the planning commission to meet these standards:
 - a. Protects against the lowering of water sources serving other properties;
 - b. Protects against physical damage to other properties;
 - c. Minimizes off-site movement of dust;
 - d. Minimizes noise disturbance to other properties;
 - e. Minimizes visual impacts; and
 - f. Provides for alternate post-mining land uses.
8. To obtain a material site CLUP, an applicant shall first complete and submit an application which shall include, among other things:
 - a. A buffer plan consistent with KPB 21.29.050(A)(2);
 - b. A site plan and field verification prepared by a professional surveyor licensed and registered in the State of Alaska, which includes proposed buffers consistent with 21.29.050(A)(2) or an alternate buffer plan.
9. 21.29.050(A)(2) requires that a buffer zone be maintained around the excavation perimeter or parcel boundaries.
 - a. The buffer zone shall provide and retain a basic buffer of:
 - i. 50 feet of undisturbed natural vegetation, or
 - ii. A minimum six-foot earthen berm with at least a 2:1 slope, or
 - iii. A minimum six-foot fence.

- b. The buffers and berms can be used individually or in combination as deemed appropriate by the planning commission or planning director.
 - c. The vegetation and fence must, however, be of sufficient height and density to provide visual and noise screening of the proposed use.
- 10. Applicant Beachcomber LLC submitted a material use CLUP application on June 4, 2018 to Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
- 11. The application proposed the following buffer zone:
 - a. North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
 - b. South: 6-foot high berm.
 - c. East: 6-foot high berm.
 - d. West: Greater than 50-foot vegetated buffer.
- 12. Planning Department staff found the proposed buffer zone did not comply with the requirements of the code and suggested the following buffer zone:
 - a. North: 50-foot vegetated buffer adjacent to the south boundary Parcel 169-022-033 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area; a six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 12-foot high berm along the rest of the northern boundary.
 - b. South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - c. East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - d. West: Greater than 50-foot vegetated buffer along the western most parcel boundary.
- 13. While the Planning Department must provide assistance to the planning commission to reach its decision, the planning commission is authorized and required to exercise its own discretion to judge whether the application for a material site CLUP conforms with the code.
- 14. This application is not complete and does not comply with the requirements of the code:
 - a. The buffer zone proposed by the applicant does not include vegetation and fence that are of sufficient height and density to provide visual and noise screening of the proposed use.
 - b. The buffer zone proposed by Borough staff does not include vegetation and fence that are of sufficient height and density to provide visual and noise screening of the proposed use.
- 15. Because the applicant fails to provide a buffer zone that complies with the conditions set out in KPB Code 21.29.050(A)(2), the standards set forth in KPB Code 21.29.040(A)(4) and 21.29.040(A)(5) are necessarily not met.
 - a. The application does not minimize noise disturbance to other properties;
 - b. The application does not minimize visual impacts.
- 16. The planning commission has relied on substantial evidence to support these findings:

- a. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the vegetation and fencing proposed were not of sufficient height and density to provide visual screening of the proposed use.
 - b. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the vegetation and fencing proposed were not of sufficient height and density to provide noise screening of the proposed use.
 - c. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the proposed buffer zone does nothing to minimize visual impact.
 - d. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the proposed buffer zone does nothing to minimize noise disturbance to other properties.
 - e. On July 16, 2018, the planning commission reviewed topographic and property maps which confirmed the neighbors' testimony.
 - f. On July 16, 2018, the planning commission reviewed visual depictions which confirmed the neighbors' testimony.
 - g. On June 10, 2019, the planning commission reviewed GIS profile drawings of the geographic and line-of-site profile from six surrounding residences which established that the proposed vegetation and fencing were not of sufficient height and density to provide visual and noise screening:
 - i. Gary Gordon – Parcel 169-230-26
 - ii. Hans Bilben – Parcel 169-240-11
 - iii. Rick Oliver – Parcel 169-280-16
 - iv. Steve Thompson – Parcel 169-230-11
 - v. RC Cline – Parcel 169-230-10
 - vi. Brandon Myers/Pete Kinneen – Parcel 169-230-13
17. The application does not comply with the mandatory conditions set forth in KPB Code 21.29.050(A)(2) and does not comply with the standards set out in KPB Code 21.29.040.
18. No voluntary conditions were offered by the applicant.

PROPOSED FINDINGS OF FACT
MODIFYING THE APPLICATION FOR A MATERIAL SITE CONDITIONAL LAND USE PERMIT
SUBMITTED BY BEACCOMBER LLC FOR PARCEL ID NUMBER 169-010-67

Having considered the testimony and evidence presented, the recommendations made by Borough staff, and being fully advised in the premises, the Planning Commission hereby adopts Borough staff's recommended findings of fact and permit conditions, with the following modifications:

Replace Finding of Fact 14, in its entirety, with the following:

14. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
- A. The application proposed the following buffer zone:
 - i. North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
 - ii. South: 6-foot high berm.
 - iii. East: 6-foot high berm.
 - iv. West: Greater than 50-foot vegetated buffer.
 - B. Planning Department staff found the proposed buffer zone did not comply with the requirements of the code and suggested the following buffer zone:
 - i. North: 50-foot vegetated buffer adjacent to the south boundary Parcel 169-022-033 (Brantley) with a six-foot high berm between the vegetated buffer and the extraction area; a six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 12-foot high berm along the rest of the northern boundary.
 - ii. South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm between the vegetated buffer and the extraction area.
 - iii. East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm between the vegetated buffer and the extraction area.
 - iv. West: Greater than 50-foot vegetated buffer along the western most parcel boundary.
 - C. While the Planning Department must provide assistance to the planning commission to reach its decision, the planning commission is authorized and required to exercise its own discretion to judge whether the application for a material site CLUP conforms with the code.
 - D. The planning commission must deem the vegetation and fencing to be of sufficient height and density to provide appropriate visual and noise screening of the proposed use.
 - E. The planning commission has the authority to modify an application.

- F. Therefore, the planning commission imposes the following buffer zone requirements pursuant to KPB 21.29.050(A)(2):
- i. North: 50-foot vegetated buffer adjacent to the South boundary Parcel 169-022-033 (Brantley) with a twelve-foot high earthen berm between the vegetated buffer and the extraction area; a twelve-foot high earthen berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 50-foot vegetated buffer with a twelve-foot high earthen berm between the vegetated buffer and the extraction area along the rest of the northern boundary.
 - ii. South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 43-foot high earthen berm between the vegetated buffer and the extraction area.
 - iii. East: East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 53-foot earthen high berm between the vegetated buffer and the extraction area.
 - iv. West: Greater than 50-foot vegetated buffer along the western most parcel boundary.
- G. The planning commission has relied on substantial evidence to support these findings:
- i. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the vegetation and fencing proposed were not of sufficient height and density to provide visual screening of the proposed use.
 - ii. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the vegetation and fencing proposed were not of sufficient height and density to provide noise screening of the proposed use.
 - iii. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the proposed buffer zone does nothing to minimize visual impact.
 - iv. On July 16, 2018, March 25, 2019 and June 10, 2019, neighbors testified that, given the geographic topography of the proposed site, the proposed buffer zone does nothing to minimize noise disturbance to other properties.
 - v. On July 16, 2018, the planning commission reviewed topographic and property maps which confirmed the neighbors' testimony.
 - vi. On July 16, 2018, the planning commission reviewed visual depictions which confirmed the neighbors' testimony.
 - vii. On June 10, 2019, the planning commission reviewed GIS profile drawings of the geographic and line-of-site profile from six surrounding residences which established that the proposed vegetation and fencing were not of sufficient height and density to provide visual and noise screening and that the substituted buffer zone was necessary in order to provide sufficient noise and visual screening from the proposed use:

1. Gary Gordon – Parcel 169-230-26
 2. Hans Bilben – Parcel 169-240-11
 3. Rick Oliver – Parcel 169-280-16
 4. Steve Thompson – Parcel 169-230-11
 5. RC Cline – Parcel 169-230-10
 6. Brandon Myers/Pete Kinneen – Parcel 169-230-13
- H. With the modified buffer zone, the planning commission can conclude that the standards imposed by KPB 21.29.040 are met.

Replace Permit Condition 2, in its entirety, with the following:

2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - a. North: 50-foot vegetated buffer adjacent to the South boundary Parcel 169-022-033 (Brantley) with a twelve-foot high earthen berm between the vegetated buffer and the extraction area; a twelve-foot high earthen berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain; and a 50-foot vegetated buffer with a twelve-foot high earthen berm between the vegetated buffer and the extraction area along the rest of the northern boundary.
 - b. South: 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 43-foot high earthen berm between the vegetated buffer and the extraction area.
 - c. East: 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 53-foot high earthen berm between the vegetated buffer and the extraction area.
 - d. West: Greater than 50-foot vegetated buffer along the western most parcel boundary.

Subject: Fwd: Beachcomber hearing

To KPB Planning Commission Chair:

The following information needs to be reviewed and included in the Record for the Beachcomber hearing so that should this case again end up with a Hearing Officer all facts are known.

1. Commissioner Ruffner has made public statements (attached) stating that *“the Planning Commission doesn’t have the authority to say no”* in reference to a material site application. The statement was made during an interview with Renee Gross of KBBI Radio, published January 4, 2019, and conflicts with KPB Code 21.25.050 which states that the Commission can deny an application that does not meet the requirements of the Code. The contentious Application in Anchor Point is referenced in the interview. This statement shows that Commissioner Ruffner is biased in his decision making on material site applications and based upon guidelines in the Planning Commissioners Manual should recuse himself from discussion and voting at the upcoming hearing dealing with the Beachcomber application.
2. The applicant stated at the 4/22/2019 Planning Commission hearing that he had met with Acting Chair Foster and Staff prior to the 3/25/2019 Commission meeting to discuss aspects of the hearing. This type of contact with a Commissioner would seem to be inappropriate in that it amounts to ex parte contact and may constitute bias. The minutes from the 4/22/2019 meeting have written transcription, but the audio recording is more specific as to what was said.
3. Commissioner Venuti through his work as a respected, longtime residential and commercial building inspector may have gained financially through past dealings with Coastal Realty (owned by the applicant), and may likewise gain financially in the future. In a real estate transaction the realtor will either refer a client to a specific building inspector, or make direct contact with the inspector. If Commissioner Venuti and the applicant do not have a working relationship, then no bias or conflict of interest would be apparent—however, if there is a working relationship, then it would be appropriate for Commissioner Venuti to recuse himself.

Borough work group questions gravel pits proximity to neighborhoods and homes

CREDIT COURTESY OF THE KENAI PENINSULA BOROUGH

The Kenai Peninsula Borough's Material Site Work Group has been reviewing codes regulating gravel pits and other resource development for roughly a year now. The work group will eventually provide recommendations on how the borough's planning commission handles the permitting process for such operations.

Work group members say it's unlikely they will recommend that the Kenai Peninsula Borough Assembly give the planning commission the ability to outright deny permits. But during a meeting Wednesday, some members discussed creating new codes that are more friendly to residential areas.

The borough's current code has led to a contentious debate in rural neighborhoods near Anchor Point where gravel pits have sprouted up near homes.

Currently, the borough's planning commission does not have the authority to deny a permit for a gravel pit or other resource extraction as long as it fits certain criteria surrounding noise, the visibility of the site and basic buffer zones among other standards.

"When an applicant comes in and applies to develop a gravel pit, there's a notification that goes to the surrounding land owners and often times those surrounding landowners will come to the borough with the expectation that if they really rally the troops, that the planning commission may say no to a permit," said work group chair Robert Ruffner. "And I don't think that the borough has done a particularly good job of letting people know when those notices come out, that the planning commission doesn't have the authority to say no."

But during its past few meetings, Ruffner asked the group if there are certain scenarios that would warrant an outright denial. For example: if a gravel pit is near a school or a senior living home.

Ruffner said the work group doesn't want the process to be arbitrary.

"So the working group decided that they would rather see criteria laid out so that both a potential developer and neighborhoods would know what those criteria are, but that there shouldn't be a scenario where the planning commission could use some discretionary criteria to outright deny a gravel pit," he said.

The work group has not come to a formal consensus on any potential changes to the planning commission's powers during the permitting process. Members such as Larry Smith are opposed to anything that will increase the planning commission's ability to deny a permit.

"Honestly, I don't want to see anything changed from the way it is now," Smith said. "I don't want anybody to have any illusions about my representation on this board. I represent the gravel pits."

However, some members want to change the criteria for approving gravel pits. During the meeting on Wednesday, member Robin Davis borrowed language from the Matanuska-Susitna Borough's code and suggested the borough require a material site to preserve character of the surrounding area, among other changes.

"This will get us started on that direction," he said. "If this doesn't work for y'all, what will you put in here to protect residences, residential areas? What would you do?"

Davis plans to put some of his suggestions up for a vote in the near future. Group member Brent Johnson suggested modifying codes based on the number of homes in an area.

“We could look at residential areas and find the density of homes per acre or per whatever and when we are satisfied that a typical area that has yea much density shouldn't have a gravel pit within yea distance of it, then I think that that's an aspect that everybody could look at, those measurements, and say ok, that's not capricious, it's a standard thing,” he said. “When this many people move into area, you can't have a gravel pit there.”

While it's unclear when the work group will agree on what, if any, changes will be made to the borough's permitting criteria for gravel pits, it has agreed on other changes such as the hours of operation for gravel pits.

“So crushing rocks, shaking them and sorting them: those types of activities are particularly noisy and the current code right now says that you could do that between 6:00 a.m. and 10:00 p.m. and we voted to make a recommendation to the planning commission and the assembly that we think those hours should be reduced to 6:00 a.m. to 7:00 p.m. with the ability for a material side operator to request an exception to that,” Ruffner said.

The group has already voted on roughly 15 general recommendations it plans to give to the assembly – mostly minor administrative changes.

Ruffner says they still have about 15 recommendations to work through. The group's next meeting will be on Jan. 16.

CONDITIONAL LAND USE PERMIT FOR MATERIAL SITE

CLUP DEVELOPMENT NOTES

1. THIS PERMIT APPLICATION IS FOR PARCEL 16901087, T5S R15W SECTION 5 SEWARD MERIDIAN, MCGEE TRACTS DEED OF RECORD BOUNDARY SURVEY TRACT B.
2. THE EXISTING AND PROPOSED INGRESS/EGRESS IS TO DANVER STREET AND/OR SECTION LINE EASEMENT, AS SHOWN.
3. THE EXISTING AND PROPOSED INGRESS/EGRESS IS TO DANVER STREET AND/OR SECTION LINE EASEMENT, AS SHOWN.
4. THE PREFERRED BUFFERS ARE A COMBINATION OF 50' (OR GREATER) NATIVE VEGETATIVE BUFFERS AND 8' HIGH BERM.
5. WELLS WITH IN 100' AND/OR 300' OF THE EXCAVATION AREA ARE SHOWN HEREON.
6. THERE IS MAPPED WETLAND AND SURFACE WATER, AS SHOWN IN THE NORTHEAST CORNER OF THE PARCEL. PROPOSED EXCAVATION IS A MINIMUM OF 10' FROM WATERBODIES. THIS SURFACE WATER SETBACK WILL PROVIDE PROTECTION VIA PHYTOREMEDIATION OF ANY RUH-OFF PRIOR TO ENTERING THE SURFACE WATER.
7. GROUNDWATER IS ESTIMATED AT APPROXIMATELY 20' (AVERAGE) BELOW EXISTING GROUND IN PROPOSED EXCAVATION AREAS. THIS ESTIMATE IS FROM T1 ST HOLE.
8. THE RECLAIMED AREA WILL BE GRATED AND RECONSTRUCTED USING STRIPPINGS, OVERBURDEN AND TOPSOIL TO A CONDITION THAT ALLOWS FOR RE-ESTABLISHMENT OF NATURAL VEGETATION AND SLOPES STEEPER THAN 2:1 WILL BE SEEDED.
9. PROPOSED MATERIAL EXTRACTION INCLUDING STRIPPING WILL BE DONE IN INCREMENTALLY BEGINNING AT THE NORTHERN LIMITS, AS SHOWN. ANY PROCEEDING SOUTHWARD AS MARKET FOR MATERIAL SALES JUSTIFIES. THE CENTRAL AREA WILL BE EXCAVATED LAST.
10. PROPOSED PROCESS AREA IS SHOWN. A PROCESS WAIVER WILL BE REQUESTED FOR SEPARATION TO THE NORTH PROPERTY LINE.
11. THE PROPERTY CORNERS, WITNESS CORNERS, OR SECTION LINE EASEMENT WAS LOCATED AND THE PARCEL BOUNDARY HAS BEEN FLAGGED AT VISIBLE INTERVALS AS SHOWN HEREON.
12. ALASKA DEPARTMENT'S MANUAL, BEST MANAGEMENT PRACTICES FOR GRAVEL/ROCK EXTRACTION AND STOCKPILE MANAGEMENT, SEPTEMBER 2012 WILL BE UTILIZED AS A GUIDELINE TO REDUCE POTENTIAL IMPACTS TO WATER QUALITY.

RE: Comments on Conditional Land Use Permit for Material Site; Beachcomber LLC; 169-010-67; Remand on Appeal

I am again providing comments on the referenced Land Use Permit application

I want to reiterate that I am disgusted with the KPB gravel pit regulations and the actions of Planning Department staff. The regulations and the process are stacked against adjacent property owners and meaningful public comment in favor of gravel pit developers. The regulations do little to protect property values or uses adjacent to gravel pit locations. Additionally, Planning Department staff have been less than honest with adjacent property owners. This proposal has cost me several thousand dollars in attorney fees, and lots of time and effort to prepare comments, not to mention lost sleep.

I am opposed to development of a material site and approval of a land use permit at this location. I request that the KPB deny the permit.

I am the owner of the residential parcel (PID 169-022-08), which is immediately to the north of the proposed processing area and which is bordered by the proposed material site on two sides.

I purchased this property in 2001 and installed an access road and pad several years later. My intent was to build a cabin at this location when I retired and spend a good portion of the year there. I fully retired in 2015, and I began investigating building a cabin on my property at PID 169-022-08. However, I put those plans on hold when I first heard about the proposed gravel pit. I discussed this with the applicant's daughter who told me that her parents had no plans to

develop a gravel pit. At about the same time the applicant began mining gravel on a portion of his property.

I offer the following specific comments with regard to compliance with Borough regulations at 21.29.

1. According to KPB 21.29.040.A, "These material site regulations are intended **to protect against** aquifer disturbance, road damage, physical damage to adjacent properties, **dust, noise, and visual impacts**. Only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards: 1. Protects against the lowering of water sources serving other properties; 2. Protects against physical damage to other properties; 3. Minimizes off-site movement of dust; 4. Minimizes noise disturbance to other properties; 5. Minimizes visual impacts; and 6. Provides for alternate post-mining land uses." These regulations are internally inconsistent in that they are intended to "protect against dust, noise and visual impacts," yet the individual standards only require off-site movement of dust be minimized, that noise disturbance to other properties be minimized, and that visual impacts be minimized. Therefore, in my comments which follow, I will focus on the more stringent requirement which is "**to protect against**."
2. Approval of the proposed material site application will preclude me from building a cabin because of noise, dust and visual disturbances which is contrary to the regulations. Nothing can **protect** my property other than no gravel pit. Additionally, a material site will significantly diminish my property value and will impact my ability to sell this property. Development of a material site at this location effectively constitutes a taking of my property value and my enjoyment of this property. Imposition of the conditions set forth in the regulations are not sufficient to **protect** my property.
3. The idea that construction of berms or retention of vegetative buffers, as required by the code, can protect my property or other adjacent properties against the noise, dust, or visual effects of a gravel pit is ludicrous. The only method available to mitigate the adverse effects of noise, dust, and visual effects as required by the code is no pit or increased and adequate distance. In this case increased distance is impossible which leaves only the no pit alternative. I have attached photos of the berms taken from inside of my property. **Imagine waking up at 6:00 am on a beautiful summer morning at your recreational cabin, which you have saved for your entire adult life, only to hear the sound of heavy equipment working on the other side of the berm and generating clouds of dust. If this is your vision of an Alaskan recreational experience, call me and we can discuss your purchase of my property.**
4. The proposed onsite processing area is located 200 feet south of my parcel 169-022-08. I disagree with the statement in the public notice that my parcel is "undeveloped." I have constructed a road and building pad. I have not proceeded with construction of a cabin because of the threat of gravel pit development. I am caught in a "catch 22 situation." I would be an idiot to build a cabin for spring, summer and fall use, which is exactly the period of time when gravel would be mined. I also note that while I

presently do not camp on this parcel, I do let friends camp there during the summer, and I camped there many times in the past.

5. According to KPB 21.29.050.A.2.c, "At its discretion, the planning commission may waive buffer requirements where the topography of the property or the placement of natural barriers makes screening not feasible or not necessary. Buffer requirements shall be made in consideration of and in accordance with existing uses of adjacent property at the time of approval of the permit. There is no requirement to buffer the material site from uses which commence after the approval of the permit." As I previously noted, I put my cabin construction plans on hold because of the threat of gravel pit development, but I did construct a road and pad, and friends camp on my property. Therefore, my recreational use of my property has proceeded the application for a gravel pit, and therefore buffer waivers are not appropriate.
6. According to KPB 21.29.050.A.3, "In the case of a CLUP, any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries. At its discretion, the planning commission may waive the 300-foot processing distance requirement, or allow a lesser distance in consideration of and in accordance with existing uses of adjacent property at the time." The planning commission should not waive the 300-foot processing distance requirement because it would further preclude my use and enjoyment of my property. As mentioned in the previous paragraphs, my use of my property has proceeded the gravel pit proposal.
7. According to KPB 21.29.050.5, "Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission based on the following: a. Certification by a qualified independent civil engineer or professional hydrogeologist that the excavation plan will not negatively impact the quantity of an aquifer serving existing water sources. b. The installation of a minimum of three water monitoring tubes or well casings as recommended by a qualified independent civil engineer or professional hydrogeologist adequate to determine flow direction, flow rate, and water elevation. c. Groundwater elevation, flow direction, and flow rate for the subject parcel, measured in three-month intervals by a qualified independent civil engineer or professional hydrogeologist, for at least one year prior to application. Monitoring tubes or wells must be kept in place, and measurements taken, for the duration of any excavation in the water table. d. Operations shall not breach an aquifer-confining layer." Compliance with this condition cannot presently be determined because the applicant has not yet gathered the required the required data or conducted the required studies.

In addition, I offer the following additional comments.

1. This is a residential and recreational area and it is inappropriate for the KPB to allow development of a material site at this location. A material site will

significantly impact property values and use and enjoyment of residential and recreational property, including the Anchor River Recreational Unit, a part of the State Park System. A material site will conflict with existing residential and recreational use of the area.

2. There is considerable recreational use of the Anchor Point Road and Danver Street by people, including children, walking, running, walking dogs, bicycle tours, and riding bikes in the summer. Use of these roads by gravel trucks is a disaster waiting to happen.

Sincerely,

s/

Philip J. Brna

Subject: Evidence in Beachcomber hearing

To Planning Commission members.

This is the listing for the PEU gravel pit (now known as Denver Lake Retreat) that we all drive by every day on Denver Street—it is the only PEU on or near Denver Street! In 2003 when we bought property to build our home on Denver Street this 1.86 acre property was what appeared to be a small, worked out gravel pit with no sign of any recent activity. The property owner showed us many lots he had for sale in the area, including this one. Since that time there has been little to no commercial activity there except that in the past couple years the owner excavated below water table to make the lake which is the feature in the listing. For the applicant to claim that this is a mining district because of this insignificant, exhausted former gravel pit, and that all of the neighbors moved to a mining district is absurd. A 1.86 acre gravel pit operated decades ago in an undeveloped area is a far cry from a 27.4 acre industrial mine in the middle of a residential/recreational neighborhood!

Subject: Beachcomber gravel pit

My name is Jim Gorman. My residence is located at 73608 Twin Peaks Loop, which is the street overlooking the Beach Road.

These remarks address sections 21.29.030 and .040 of the Materials Site Permit Code and cover noise pollution which was a basis for the denial of this permit by the Planning Commission.

In a previous letter I articulated my concerns about additional heavy truck traffic through a narrow corridor shared by both residential and recreational users. This, I believe, poses a threat to public safety as conflicts are sure to arise. The State has just finished ditching the road resulting in the narrowing of what shoulders previously existed. Two wide loads have little room to maneuver and pedestrians have virtually no where to go.

In addition, the volume of truck traffic would create unacceptable noise levels for residences in the vicinity of the road. I do not see how such noise can be "minimized" as stated in the Borough code. Trucks currently traversing the road are loud and they would be generally smaller than the trucks need to service a mine of this size.

In conclusion, the insertion of an industrial size gravel mine in this particular location is a poor idea. It boggles the mind to see how this in any way promotes the "general welfare" or insures the "domestic tranquility" of the residents, both current and future.

Sincerely,

James and Cynthia Gorman

To: KPB Planning Commission
From: Linda and Mike Patrick, Parties of Interest in the Beachcomber Gravel Pit
Proposed for the Anchor Point Residential/Recreational location.
Date: May 28, 2019

Concerns about Planning Department Report; March 25, 2019.

We believe the KPB should provide for the safety and health of all residents that lived within its boundaries equally. This statement does not imply that we are entitled to all the same services as city dwellers but we do deserve to be equally protected when it comes to our safety and health. We look to the KPB Planning Commission and the KPB Assembly to extend those protections to rural residents particularly when it comes to the air we breathe and the safety of the roads in our community. It appears that the planning department feels that the rural community of Anchor Point does not deserve protections from Noise pollution, Dust Pollution (*See DEC guidelines and alerts for road dust and gravel pits in rural residential area*), and protection for our roads to access our homes. The Planning Department seems to think that rural residents shouldn't have safe routes to their homes, parks, businesses, and beachfront and tourist attractions. They have not even attempted to evaluate the % increase of harmful PM_{2.5} and PM₁₀. (*The DEC thinks this is important for rural Alaskans to have access to clean air.*) They also don't seem to think that the Anchor Point Advisory Planning Commission has a right to review this proposed gravel pit. The KPB material site codes are primitive at best and even recently proposed changes do nothing to protect the health and safety of rural residents.

We question the following *Section 14 Buffer Zones*.

Sections B, C, and D

These sections appear to restrict parties of interest to only adjacent properties and very nearby parcels. We were under the impression that parties of interest went way beyond a few hundred feet past the buffer zone.

Section E

This is a very inaccurate representation of the Inverse Law of Sound Dissipation. "As sound dissipates over distance." This is a theoretical representation and has very little to do with acoustical sound. The Inverse Law deals with sound waves in an Ideal sound environment. It must meet specific lab standards in order to approximate any sort of sound behavior in an uncontrolled environment. In the real world sound is heard by humans and other life forms. This is referred to as acoustical sound. It is measured via Psycho-Acoustic Perception. This is scientific terminology for ears and brains.

The supposition made by the Planning Department does not take in to account reflective surfaces, lower temperatures than ideal standards (69 degrees F.), higher humidity, cloudy days, atmosphere changes at 300 feet, and prevailing winds blowing into the residential/ recreational area. All of these factors will increase noise levels beyond those levels that are projected by the Inverse Law of Dissipation. These real world conditions all exist in this location. If the Planning Department would have constructed a theoretical sound contour involving a 100db heavy equipment source, measuring it a 50 feet. The Inverse Law indicates a -6db drop when the distance is doubled for each distance measurement. This means at 1550 feet the decibel level would be at 76db. This sound level would extend far beyond the adjacent properties discussed in sections B, C, and D mentioned above. Because of the real world factors I mentioned above, this 1550 foot sound contour boundary could increase as much as 10 to 20dbs. Meaning a boundary level between 86dbs and 96dbs. This would only be a 4-14dbs drop from the level of sound of the heavy equipment. Many states require sound levels at 60dbs or less filtering into residential areas. I see no evidence that the Planning Department made any attempt to investigate the evidence presented to them by the residents of this location. These human observational statements are more accurate in the verification of extraordinary noise transmission in this location due to the real world conditions in this geographic location.

Instead the Planning Department appears to rely on a purely academic concept that only accurately represents controlled lab experiments. (“As sound dissipates over distance.”) It has very little standing on the accurate measurement of acoustical noise.

Note: Section E states, “ Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.” *I have pointed out the gross inaccuracy of the of the underline statement, however the non-underlined part of the statement is even more significant because* **it points out the adjacent properties are impacted by the material site. (Therefore permit denied) Here is the specific information provided by the planning department for a motion to deny any pit permits at this location. (Noise impact)**

On top of this admission the Planning Department Report in section Q of buffer zones also states: “ Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally

screened by the buffers. The differences in elevations of the parcels, varying vegetation on surrounding parcels and the proposed material site, and the distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.” Even your codes don’t recognize equality for rural residents.

Motion- Based on the findings of the Planning Department section Q and E in the Buffer zone report stated findings of non-equal impact and screening of material site from the surrounding properties exist, therefore the Permit for the Beachcomber Gravel permit should be denied.

Simplification of Noise, Acoustics and visual impact statements

Lets simplify this whole process. The human ear accurately measures noise. You have numerous written and verbal testimonies to confirm the characteristics of noise at this location. That testimony is a very valid source of factual interpretation of noise measurement as are the visual testimonies given by residents. Beauty is in the eye of the beholder. The gravel pit berm will not block the view of the mountain peaks across the inlet, it will destroy the panoramic view of the entire area by filling the foreground of a majestic view with defoliated land, piles of gravel and waste, oh an don’t forget the heavy industrialize equipment parking lot that will take the place of spruce trees and meadow. It would be like having the Mona Lisa altered to be a nude. Who would notice that beautiful smile anymore?

A Tree Falls in the Forest Analogy (Pure Science vs. Applied Science)

If a tree falls in the forest and nobody is around is there any sound? To the physicist the answer is obvious. When the tree fell molecules were vibrated, therefore sound was created. The applied science person would say that it is obvious that if there are no ears present there will be no noise.

If you say if a tree falls in the forest is there any noise? To this the applied scientist would reply if humans were nearby they would hear it. If the humans found the sound unwanted, there would be Noise. It is the ears that hear the sound that determine the noise levels.

The following analogies are stereotypical in nature. You would have to ask each individual their opinion to make things accurate.

If a human owned land nearby and paid large amounts of money for what is heard and seen around him the trees falling would be unbearable noise!

If the humans were loggers they would hear the sound of \$\$\$\$. This certainly would not be noise to them. If it were next to their house they might consider it noise, however if enough \$\$\$ were to be made they could always move their loved ones away with all the \$\$\$ they could make. They could even buy them nicer homes.

If the human was an environmentalist he/she might hear the end of the world, as we know it. Yes, this would be noise. He/she might also hear the collapse of an ecosystem, air pollution, destruction of nearby infrastructure, unsafe conditions for human inhabitants and all Flora and Fauna. **Wow!** That is a lot to be heard. However, what you hear is subject to your mental perception.

Alert! The accurate measurement of noise is Psycho Acoustical Perception. Noise is in the ear and mind of the beholder. When you put a pit at this location noise will be maximized not minimized. You have heard from the ears that have monitored the place for many years. The Patricks' became parties of interest in this place in 1992.

Dust and Potential Health Problems

Why is dust a concern?

EPA health research tells us that dust can cause health problems. People with heart and lung disease and those with breathing problems can be impacted when inhaling dust. Even healthy people can have short term irritation when breathing dust. Dust is a nuisance, it settles on your tables, your coffee cup, your subsistence foods, and salmon drying racks.

Dust has been around for generations. Winds have been blowing dust off glaciers and dry river banks forever. We have lived with dust for thousands of years, but that doesn't make dust healthy to breathe. Now, we help throw dust back into the air with our four wheelers, trucks and cars.

In the past three years the Alaska Department of Environmental Conservation (ADEC) received dust complaints from over 50 communities. Is dust a problem in your village?

If you believe you have a dust issue, ADEC would like to help you find a solution to this potential health threat.

Causes of Dust

- Wind across dirt roads, runways riverbeds
- Human activities on lots without vegetation
- Quarry operations in gravel pits
- Vehicles and four wheelers on dirt roads
- Residents have told us that traffic is increasing in villages over the past 10 years, making the dust problem worse.

Sources of Dust

- Dirt roads, runways
- gravel pits, dry river beds, unvegetated land

Contacts

Gerry Guay, Air Monitoring, Program Manager
gerry_guay@dec.state.ak.us
907-269-3070

Alice Edwards, Nonpoint & Mobile Source, Program Manager
alice_edwards@dec.state.ak.us
907-465-5100

Health Impacts

ADEC has heard there is an increase in respiratory problems in the villages. Health studies indicate breathing problems are either somewhat worse or higher than expected in rural Alaska

Health problems associated with dust:

- Aggravates existing heart and lung disease
 - Damages lung tissue
 - Mostly impacts children, seniors, people with asthma, people with heart conditions
- Has been shown to increase hospital/clinic visits

How does ADEC measure for dust?

ADEC has equipment that can measure for dust - particles less than 1/10 the diameter of your hair.

Dust is a very small particle that can reach the inner lung. ADEC compares their measurements to the following EPA standards for dust:

- 24 hours - 150 micrograms per cubic meter
- Annual - 50 micrograms per cubic meter

External images are now more secure, and shown

by default. [Change in Settings](#) **Particulate**

Matter - Health

Impacts [Air Non-Point & Mobile](#)

[Sources](#) There are anecdotal and some peer reviewed studies suggesting more respiratory problems in Alaska's villages than expected. The causes for this are varied and hard to pinpoint. On the other hand, Alaska is committed to reducing pollutant levels when possible. The opportunity to reduce particulate matter levels is now upon us. Coarse and fine particulate cause health problems when people are exposed to harmful concentrations. Fine particulate ($PM_{2.5}$) is associated with more severe health consequences than coarse particulate (PM_{10}). In addition, particulate matter is a nuisance, especially dust. Particulates can settle on furniture, a coffee cup, or subsistence foods, making food inedible, and damaging electronics. Controlling particulate matter will benefit our health and enhance our quality of life. **PM_{10} - Coarse Particulate**

(Dust)

(Photo by D. Haggstrom, ADF&G) EPA health

research tells us that dust, measured as PM_{10} , can cause health problems. People with heart disease, those with existing breathing problems (like asthma), children and the elderly are more susceptible to dust than others.

These problems include:

- short term airway irritation;
- aggravation of existing heart disease;
- aggravation of existing lung disease (like asthma);
and
- damage to lung tissue

$PM_{2.5}$ - Fine particulate (Smoke /

Exhaust)

(Photo by D. Haggstrom, ADF&G) Numerous

scientific studies have linked fine particle pollution exposure to a variety of problems, including:

- increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing;
- decreased lung function;
- aggravated asthma;
- development of chronic bronchitis;
- irregular heartbeat;
- nonfatal heart attacks; and
- premature death in people with heart or lung disease

Subject: Attn: Charlie Pierce, Bruce Wall - Beachcomber Llc and Emmitt Trimble gravel pit

Hello there -

I am a property owner within a mile of this proposed gravel pit. However, I am a daily traveler and user of the Beach Access Road and Danver, as my daughter lives on Danver. I also frequent the Anchor Point beach, gathering coal or recreating.

There are a number of reasons why this gravel pit should never be allowed in this area.

Here are a few: Watershed, wetlands, proximity to spawning salmon stream.

Health hazard - dust/pollution

Noise

Safety of pedestrians, tourists, bikers, bicyclists, ATVs, and other vehicular traffic

Damage to roads
Plummeting property values Historically this is a prime tourist recreation area, which is one of the main sources of income for keeping Anchor Point alive. If this gravel pit is permitted to exist in this area, tourism may very well cease, due to the noise, dust, and lack of safety on the road for pedestrians, bicyclists, etc.

People are already leaving the area due to the potential damage of this pit.

The only person that will benefit from this gravel pit is Emmitt Trimble. Not this community.

Emmitt Trimble, through Coastal Realty, has sold many properties in the area, knowing that he intended to open that gravel pit, but not disclosing this to buyers. This is unethical, if not illegal.

I would like to point out that I am not against gravel pits. I am against the location of this gravel pit.

Thank you for considering the rest of us who will be effected if this gravel pit is allowed to operate in this location. This is a huge deal. Please, do NOT issue a permit to Beachcomber Llc / Emmitt Trimble for this gravel pit in this location, on Danver / Anchor Point Beach Access Road.

Sincerely,

Russell and Deanna Chesser

RE: Permit for sand, gravel, and peat extraction by Beachcomber LLC

Dear Chairman,

The purpose of this letter is to comment and protest the Beachcomber LLC application for the permit to establish a gravel pit in Anchor point. The proposed extraction is within 1/2 mile of our property, 34907 Fisher Ct., Anchor Point, and will negatively impact us and other residents and visitors in the area. When we purchased the property, it was marketed as a view property in a neighborhood developed by Buzz Kyllonen with covenants, underground shared water, and underground utilities. It is a beautiful and quiet piece of land with magnificent views and easy access to the Cook Inlet and Anchor River so many of us enjoy. The proposed material extraction would cause financial depreciation of all the properties around as well as diminish our enjoyment and use of it. This is a residential area and should not have commercial holdings destroying its character.

Furthermore, the immediate surroundings are used by many locals and tourists. Halibut Campground is a well-known State Park just to the North and would be adversely affected by dust, noise, and heavy equipment traffic. The Anchor River State Recreation Area is also heavily used for fishing and outdoor activities and would suffer a similar fate.

Beachcomber LLC has several other land holdings in the area and this encroachment is unnecessary and will have a detrimental impact on the residents of this established neighborhood as well as its surroundings.

Chairman and Planning Commission, we urge you to take all the above into consideration and deny this permit. You have denied a similar permit request in 2018. Buffers, no matter the size, will not mitigate dust, road traffic, noise disturbances and will negatively impact a great deal of people who have come to love and enjoy this area.

Thank you in advance for your support and thorough consideration of this critical matter.

RE: Beachcomber LLC, Parcel Number 169-010-67, 74185 Anchor Point Road

Commission Members:

On the first public testimony opportunity, I wrote regarding my objections to the conditional use permit for the gravel pit owned and operated by Beachcomber LLC.

I am now submitting further public testimony on behalf of my wife and me regarding this topic.

Since my initial letter dated July 1, 2018, apparently much has occurred on the process for a permit for gravel and peat extraction on the parcel listed above and yet, at the same time, a decision has yet to be made. In our opinion, that's a good thing.

My objections, shared by my wife, still stand – **we are vehemently and adamantly opposed to the issuance of a permit** and we are shocked by the staff report dated March 25, 2019 that the Planning Department will recommend approval of the Conditional Land Use Permit. It's apparent that this is an about face for Mr. Wall in his support of this application, however as we mentioned previously, there's so much more than meeting the weak and in this case, ineffective current conditions to be granted a permit.

We realize, sometimes only too painfully and pointedly that we do not live in the lower 48 contiguous United States. This can oft times be a positive, however in this particular case, it is most definitely a negative. In this day and age, where do you find in the lower 48 that any planning department and/or planning commission would even consider, let alone approve a conditional use permit for a gravel pit directly in the confluence of a high-use recreational area, state parks, and a large residential area? I think the answer is an obvious one but just in case it should slip past you, you don't. And there's a very good reason for that, just as there is now a very good reason to not allow this to become the exception here in Alaska.

In the close to a year that we've had to observe this process, several things have occurred. This request was turned down by the Planning Commission, was appealed by the Applicant, was sent to a hearing officer who bounced it back to the Planning Commission saying they failed to do their job, and is now back in the hands of the Planning Department but soon to appear before the Planning Commission again. In this span of time, we have been able to make several observations which do not reflect favorably on the process. At one point, the KPB attorney weighed in on behalf of Beachcomber which appears to have been a highly prejudicial action. No one representing the borough, attorney or otherwise, should weigh in on behalf of either side in this contentious action unless it's a legal suit, which it is not.

Also during this timeframe, it's very concerning that Mr. Trimble appears to be creating troubling situations of harassment and intimidation to people opposing his application. This should be a huge red flag to the borough that there is enough opposition to this application that it's resulting in criminal activities and charges. In our opinion, this should be enough to indicate that the location of this gravel pit and its' attendant activities is in the wrong place and should be considered for placement elsewhere. There's also been the suggestion that Mr. Trimble has or is attempting to disrupt the boat launch business in Anchor Point by contacting the Department of State Parks which could result in this business owner being put out of business. There are none of us, most certainly those in city government, who should condone fear and intimidation tactics.

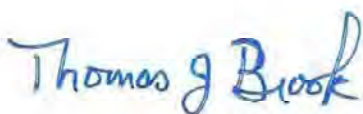

Then there's the mysterious question of why NO one from the borough or the State has submitted a finding about the extreme potential damage caused to the Anchor Point Road when running multiple huge side dumps back and forth daily during peak tourist season not to mention the peril to ANYONE using that road when confronted with a narrow space to pass said dump truck. This road is already in terrible shape and to add the constant heavy large truck traffic is just asking for serious trouble and an inevitable lawsuit. This may be rumor, however we have heard that the Planning Department may be favorable to permitting this application in order to create a more favorable cost bid for the Kenai Peninsula Borough and/or the state for the cost of the gravel haul to the projected road construction from Anchor Point to Homer. Don't we find it coincidental that Mr. Trimble/Beachcomber is pressing for this gravel pit at precisely the time when a huge road project is planned, needing a fortune's worth of gravel?

And then there's the rock crusher. Last year when mounds of material were submitted about the gravel pit and a hearing held, there was huge concern over the environmental hazards of a rock crusher, but we were assured during the hearing process that Beachcomber didn't own a rock crusher. Apparently in the interim, that fact has been negated by the fact that indeed, Beachcomber does own or lease a rock crusher because there is a rock crusher in the pit. After the studies submitted substantiating the perils of the carcinogens produced from a rock crusher, that alone should be enough to deny the requested permit.

I believe in due process but this has gotten ridiculous. This gravel pit is wrong time wrong place. There are so many other pieces of property in the Anchor Point area where a gravel pit could be developed and used without interference from, aggravation to or hazard to anyone. Mr. Trimble has backed off of his position that this would not devalue much of the property in the area because there is no doubt in our minds that this gravel pit will drastically reduce the value of all the property surrounding this pit. As if that isn't insult enough, the true irony is that Mr. Trimble sold most if not all of the land to the owners sharing our objections in this letter!

We will restate that we think the extreme down side to this permit cannot be ignored or sacrificed just because your criteria does not specifically prohibit this activity. Again, we ask that you NOT support this application by voting to turn it down.

Thank you for your consideration and support.

Attn: Mayor Charlie Pierce and Planning Commissioners

Subject: Mention Beach Comber LLC/ Anchor Point Gravel Pit.

The Silver King RV Village Association has a total of 90 Lots we are opposed to the Mention Beach Comber/Anchor Point Gravel Pit. This Association has been established since 1980.

We have brought this before the SKRVV Association at our Annual Meeting in May. The lots that are owned by people that are very concerned about the safety, noise and dust that will be created by the Gravel Pit and the truck traffic on the Anchor River Road.

The owners have bought their lots for the peace and quiet of Anchor River. They are also concerned about the safety of their families and guest that walk to the river and inlet. The Anchor River Road has no shoulders or walk ways for them.

We have lots of owners that have boats and are concerned about the extra truck traffic to get on and off the River Road safely.

We are concerned about the road as it already has problems with the road bed. There are lots of cracks in it and with the heavy truck traffic it will fall to pieces. Who will be responsible for the problems that arise when the road falls apart?

We stand with the other land owners of the Anchor River Road Area that are against the Mention Beach Comber/Anchor Point Gravel Pit.

Silver King RV Village Association

Subject: NO gravel pit in Anchor Point!

Dear Mayor Pierce and Planning Commissioners, I am writing in opposition to the proposed gravel pit mine which would be adjacent to the Anchor River recreational area and state campground sites as proposed by Emmitt and Mary Trimble of Breachcomber LLC. As a current Homer resident and past Anchor Point resident, my family, friends and I utilize this beautiful area all year long to fish, camp, walk and bike ride. If you allow the gravel pit in this location the noise, dust and crowded roads would greatly affect access and enjoyment of this pristine and important recreational area.

Unfortunately I cannot attend your meeting tonight due to my work schedule but ask that you again deny the permit for this gravel pit.

Thank you,

Amy Rattenbury

Subject: Beachcomber Permit

My wife Pamela, and I Gary Gordon attending the commissions meeting Monday the 25th of March, regarding the Beachcomber's Extraction Permit in Anchor Point Beach Area. We're owners of the home at 34919 Fishers Court, overlooking the proposed pit.

The word used by both sides that really stood out to us was "inappropriate ". We looked up the definition "not suitable or proper in the circumstances". Yes, that sums up a gravel pit at this location.

I would like to comment on Mary Trimble's address, regarding Mom and Pop operation, Max value of their property, and developing their 42 parcels of land with the referenced gravel. I would comment on Emmitt's, but we could all just read that again ourselves.

First, I don't think The Trimble's a believable Mom and Pop operation; nor, do any of us think this gravel will be used merely for their and their daughters housing development projects. I have built close to twenty houses. The average gravel used on a suitable building lot would be between 250 and 400 cubic yards, putting pencil to paper you can verify this by your building area. Therefore, 42 parcels at 400cyds is 16,800cyds, or just over one years extraction of gravel in a 15 year stated development. It should be noted that the Trimble's, or their contractor mobilized equipment to the extraction site while weight restrictions were at there max restriction. Taking that risk, doesn't sound like a slow paced Mom and Pop gravel extraction project. Now look at the cost of trucking gravel the 18 stated miles, using the Old Sterling back to Anchor Point. Operated ten yard dump trucks are \$120/hr, going yard of gravel loaded is \$6. At an average of 40mph, 18 miles takes 1.33 minutes per mile, 24 minutes each way, just drive time, now add loading time and dumping time. It's more than an hour easy for a round trip. Out of any of the 5 or 6 operating gravel pits on the Anchor Point side of the river you can get two loads of gravel delivered for the price of just the trucking from the Beachcomber Pit. I printed out the six pages from the borough site showing 47 parcels owned by Mary and Emmitt. The majority of theses parcels are smaller residential building sites in Anchor Point or North of Anchor Point. The point is, hauling gravel from the Beachcomber site is not cost effective. The true Max Value of this gravel is hauling to Homer. Homer requires far more gravel than Anchor Point.

A question that needs response is " how is gravel extraction going to be monitored"? Can permittee mine without consequences over the stated/permitted 15,000cyds yearly? Who and How is or will bonding be enforced? Are surveys going to be required?

I am or was a general contractor both building and civil, and I own a commercial gravel pit. From previous experience, I believe the State of Alaska will put or maintain existing 50% weight restrictions on the deteriorating paved Beach Access Road. The State is not going to stand by and watch over weight gravel trucks destroy this road.

Here is another thought I want to share, for your decision making. This proposed pit area is 25.6 acres times 43,560sft/acre times 18' deep divided by 27cft/cyd is 743,424 possible yards of gravel. The applicant states 15,000cyds/year for 15 years. Why would someone propose to mine one third of the potential gravel?

Just for your information, a belly or side dump can haul about 18cyds legally. Mom and Pop Hauling, using four side dumps, using one hour RT, for that would occupy a loader operator, can move 720cyds in a ten hour shift. In less than 22 days they can move their stated 15,000cyds. Trimble's don't own mining and trucking equipment; therefore, this will be

subcontracted and the contractor will move gravel in the least expensive way, as stated above, with full time loader operator maximizing truck efficiency.

Summary, I don't believe Mom and Pop are planning a slow paced, personal use gravel pit, nor should anybody be deceived into such a thought.

Re: LAS 32591 – Letter of Acceptance for Non-State Land Reclamation Letter of Intent

Dear Beachcomber LLC,

The Department of Natural Resources (DNR), Division of Mining, Land and Water (DMLW), Southcentral Regional Office (SCRO), received your Letter of Intent (LOI) for the reclamation of 2.5 acres after extracting 15,000 cubic yards of sand, gravel and topsoil. According to the application, the subject site is located on Kenai Peninsula Borough land within Township 5 South, Range 15 West, Section 5, Seward Meridian.

Thank you for submitting a LOI for gravel extraction activities. After reviewing the LOI we have determined that the LOI is complete as submitted. The proposed reclamation measures are appropriate provided that the operation is conducted in a manner that will prevent unnecessary and undue degradation of land and water resources, and the operation shall be reclaimed using current reclamation methods so that the site is left in a stable and safe condition. No financial assurance is required for activities under a LOI.

Although the proposed gravel extraction is exempt under the provision for small operations, an annual reclamation statement needs to be filed with this office at the end of the year. This statement should disclose the total acreage and volume of material mined in the current year, the total acreage reclaimed, and the specific reclamation methods used to comply with AS 27.19.020 (Reclamation Standards). Please submit this statement to SCRO no later than December 31, 2018. If a statement is not submitted, subsequent operations, regardless of size, will no longer be exempt from a mining reclamation plan and bonding.

This acceptance letter does not alleviate the necessity to obtain authorizations required by other agencies and entities for this activity. If you have any questions, please feel free to contact Brittany Smith at (907)269-8116 or email at brittany.smith@alaska.gov.

Respectfully,

Clark Cox
Regional Manager

Dear Planning Commission Members,

I am a resident of the Kenai area and a frequent visitor and recreationist of the Anchor Point area. My family enjoys at least monthly visits to the Anchor Point State Recreation Site and campgrounds during the spring/summer/fall months.

As a user of the area, I am writing to express my serious concerns regarding the proposed gravel extraction pit and processing area. The increased traffic and noise will greatly reduce the quality of recreational experiences in the area and the loss of habitat in close vicinity to critical habitat (Anchor River and beach) is concerning for fish and wildlife species.

Please take the steps to protect the habitat and scenic qualities of the area and to protect the quality of recreational experiences by locals and visitors alike by voting no on the proposed gravel pit.

Sincerely,
Emily Munter

Subject: ELUT 7A1b)(1) Silica Dust - Gravel Pit Flyer.pdf
Attachments: ELUT 7A1b)(1) Silica Dust - Gravel Pit Flyer.pdf

In my opinion, the attached article states reasons why "Note Approve" the Conditional Land-Use Permit for a Open Gravel Pit and Rock Crushing Operations by Emmitt Trimble and Beachcomber LLC.

The article presents it clearly, a Gravel Pit and Rock Crushing Operations do creates Carcinogens and other Respiratory health hazardous once exposed.

I firmly believe our Bird Sanctuary, and the Anchor River fishery will be seriously damaged or killed, once exposed. There by greatly damaging Anchor Point's economic commerce, and the States Anchor River Recreational areas. Who would want to visit, camp, bird watch or fish, for the next 15 years with the carcinogens dust and materials in our air every day.

KPB Planning Commission previously stated, "for the Welfare, and Safety of the Community". If this Application is approved by you, the KPB Planning Commission is not thinking about the Welfare and Safety of the Anchor Point Community. They are only thinking about revenue.

I've spent over many many thousands of dollars to create my Retirement plans, Anchor River Fly Fishing Cabins and RV sites.

The Beachcomber's LLC northern property line, is my southern property line. Therefore creating carcinogenic dust to expose my clients, and the noise it would create. Most likely, killing my business and others too.

I firmly request, that the KPB Planning Commission, DENY this Application for Limited Conditional Land-use by Beachcomber LLC and Emmitt Trimble.

Mike Brantley

Get [Outlook for Android](#)

Why put a Gravel Pit / mining operation that creates a known carcinogen (cancer-causing) right next to homes and a school?

You won't find the answer to that here, or anywhere else for that matter. It's a bad and lethal idea.

What's in the dust created by a Gravel Pit operation?

It is not the same as the dust created by farming or other periodic natural events. The killer is the fine particles of dust you cannot see. The mining and crushing of gravel creates and releases fine particulate matter called Crystalline Silica into the air which will be carried by the wind towards homes and schools. These dangerous particles will permeate homes, neighborhood parks, schools, and playgrounds.

Adults and vulnerable children and seniors will be exposed to this harmful carcinogen every day, all day. Why the City and County would **CHOOSE** to allow the creation of a toxic environment for our neighborhoods and these neighborhood schools when they do, *in fact*, have state and local government statutory and federal regulatory authority, and Texas Attorney General and Supreme Court ruling precedence to use their authority to deny the permit in order to protect public health, safety, economic development, and quality of life is inexcusable, incomprehensible, and UNACCEPTABLE.

So what's wrong with Crystalline Silica?

Crystalline Silica, a known carcinogen (cancer causing agent) which has been found to cause lung cancer, silicosis, and other health hazards!

SOME FACTS:

- Some of the Crystalline Silica can be of the most dangerous variety with a designation as a PM2.5 particle. These are particles that measure less than 2.5 micro meters in size
- Once these tiny particles enter the lung *they stay there*. The body's natural defense encapsulates them *causing permanent lung damage or cancer*.
- Winds can carry these fine particles over great distances.
- The closer you are to the source, the higher the concentration and danger
- Health effects can range from Silicosis, lung cancer, tuberculosis increased lung irritation
- There is no cure for silicosis
- Once these fine particles enter the lungs, the body has no means to expel them
- Crystalline Silica clings to inanimate objects like homes, outdoor and playground equipment, trees, plants, and grass and vehicles / cars, so you and your families will come into contact with it.
- Crystalline Silica will infiltrate home and schools' heating and cooling system and there is no viable way to stop it or mitigate it.
- The dust is cumulative; each day over the 20 or more years the pit is in operation more and more of this hazardous dust will accumulate inside and around homes and the schools.
- Our neighborhood homes and the new middle school is adjacent to and/or sits downwind of the proposed pit and its loading and hauling facilities
- They don't call this "Wind Country" for nothing. Most days of the year the wind speed exceeds 15 mph and is often much, much higher in our neighborhoods.

Why put a Gravel Pit / mining operation that creates a known carcinogen (cancer-causing) right next to homes and a school?

Below are some links and excerpts from articles that address this serious hazard.

http://www.osha.gov/OshDoc/data_General_Facts/crystalline-factsheet.pdf

What is crystalline silica?

Crystalline silica is a basic component of soil, sand, granite, and many other minerals.

Quartz is the most common form of crystalline silica. And we are NOT talking countertop grade. Cristobalite and tridymite are two other forms of crystalline silica. **All three forms may become respirable size fine particles when workers chip, cut, drill, or grind objects that contain crystalline silica.**

What are the hazards of crystalline silica?

Silica exposure remains a serious threat to nearly 2 million U.S. workers, including more than 100,000 workers in high risk jobs such as abrasive blasting, foundry work, stonecutting, rock drilling, **quarry work** and tunneling. The seriousness of the health hazards associated with silica exposure is demonstrated by the fatalities and disabling illnesses that continue to occur in sandblasters and rockdrillers. **Crystalline silica has been classified as a human lung carcinogen. Additionally, breathing crystalline silica dust can cause silicosis, which in severe cases can be disabling, or even fatal. The respirable silica dust enters the lungs and causes the formation of scar tissue, thus reducing the lungs' ability to take in oxygen. There is no cure for silicosis. Since silicosis affects lung function, it makes one more susceptible to lung infections like tuberculosis.**

http://www.airinfonow.com/html/ed_particulate.html

Particles can come in almost any shape or size, and can be solid particles or liquid droplets. We divide particles into two major groups. These groups differ in many ways. One of the differences is size, we call the bigger particles PM10 and we call the smaller particles PM2.5.

BIG. The big particles are between 2.5 and 10 micrometers (from about 25 to 100 times thinner than a human hair). These particles are called PM10 (we say "P M ten", which stands for Particulate Matter up to 10 micrometers in size). These particles cause less severe health effects.

SMALL. The small particles are smaller than 2.5 micrometers (100 times thinner than a human hair). These particles are called PM2.5 (we say "P M two point five", as in Particulate Matter up to 2.5 micrometers in size).

The smaller particles are lighter and they stay in the air longer and travel farther. PM10 (big) particles can stay in the air for minutes or hours while PM2.5 (small) particles can stay in the air for days or weeks.

And travel?

- **PM10 particles can travel as little as a hundred yards or as much as 30 miles.**
- **PM2.5 particles go even farther; many hundreds of miles.**

Kenai Peninsula Planning Commission
BeachComber LLC, material site application

Memorial Day weekend, along the Anchor River, was a huge success! We welcomed hundreds of campers, fishermen and those out for a drive to appreciate the beautiful views, beach, baby moose and eagles. This is exactly what the Comprehensive Plan is about and how to encourage the use of our natural resources to create a healthier economy. This area is the "gem" of Anchor Point and helps to sustain the economy of this small, rural community.

The history of Anchor Point does include mining and much of the North Fork Road is absolutely "disfigured" because of it. To experience the noncompliance of the gravel people take a look at the North Fork and the lack of remediation along that drive. The park area of the Anchor River should not be subject to the blight of the North Fork Road. Just because an area has a "history" doesn't mean that destruction should be allowed to reoccur. We implore you to embrace our rural residential community and allow it to maintain itself as the park that it is.....not an industrial area.

There is no way to hide a gravel pit at the BeachComber LLC site and no way to contain the noise. We ask you to weigh the loss to this community, if the pit ruins our park, for Beachcomber's financial gain.

Without the cooperation of the Planning Commission we are left to supplicate the legal system to help secure our rights as Alaskan residents and citizens of the United States.

Sincerely,

Vickey Hodnik and George Krier

RE: Beachcomber CLUP Application

May 31, 2019

5 pages total

Realities and Random Thoughts

1. The Anchor Point Beach Road is not in horrible condition any more than most paved roads in our local area, Homer or the road to Anchorage. Each lane of the Beach Road is 12' wide, which is a common road width, and the speed limit is maximum 25 MPH. Speeders and unsafe drivers should be reported to the Troopers. It is used by all kinds of water, fuel, delivery, gravel trucks, pickups, boat trailers and RV's on a daily basis. That is what the road is there for. I have not heard of an accident on that road. What I see is that during busy times the users slow down and share the road with whoever is using it.
2. Dump Trucks are 8.5' wide and the drivers must have a CDL license. Pickups with boat trailers and RV's are often wider and they do not require a special license to operate. A commercial truck driver is unlikely to drive in a manner to risk the loss of his license or the inability to get work. Safety is paramount for CDL drivers.
3. The distance from the Old Sterling to Denver Rd is only 60% (3,860ft) of the entire 1.2 mile road and there are no businesses in that portion. From the Old Sterling to the Silver King parking area there exists 2,250ft of a walking trail with only 1,610ft of trail left to create before Denver Rd. Beachcomber would be happy to supply the material and get any necessary permits if those people that are so extremely worried about safety would volunteer the labor.
4. The claim that Coastal Realty has sold many properties to people in the area is false. Since the beginning of the brokerage in 1991 (28 years ago) they have only sold to 7 parties of which 3 are not in opposition to the Beachcomber pit. Continuing to repeat a falsehood does not make it true. Prior to April of 2018 Beachcomber did not have plans for a CLUP so there should be no accusations of unethical actions or failure to disclose it.
5. The rumor that the Trimble's intention is to sell out and move away is quite untrue. What is true is that we (our entire family) love and care for that property and all of its value above and below ground. Unfounded claims and heresy should not be a part of the record. Unsworn testimony presented as unsubstantiated, emotional claims, exaggerations, rumors and ramblings should not be allowed and should not influence the Planning Commissions decisions. An inordinate amount of time, money and paper has been wasted by many people because of frivolous rhetoric. The time for change is now - a mission of the Trimble's and Beachcomber.

6. The KPB has professional staff in the planning department and the legal department. They apply the code when they review applications for material sites and work with the applicant until all criteria are met before presenting to the Planning Commission. That is the reason permits are approved either at the Planning Commission or appeal level. In this case, an organized and mean-spirited group has come together to essentially do or say anything to prevent our application being approved even to the point of accusing an upstanding commission member of nefarious behavior. The Planning Commission should be able to see through this and not be caught up in it. Codes are codes, rules are rules and that is what is at hand here for the PC to review. Allowing "snowbirds" who were notified many times by mail and were present last summer to testify in person additional time is ludicrous. And, allowing the opposition multiple opportunities to repeat what they last testified should not be allowed unless they have new substantiated facts to present. That is how an efficient commission would operate not dragging out the process as has been the procedure in this case.
7. The campgrounds and state park contribute little to the economy of Anchor Point which is the opposite of the claims. The tourist season is very short, weather is often not suitable for camping and the river is often not in good condition for fishing or the runs are poor so many fishermen go to other locations. The campers stock up on supplies before they get to Anchor Point and pay their camping fee to the State. Crowded campgrounds are anything but quiet – it is not why people come to the Anchor River on the weekends. A small number of visitors come at quiet times during the week days or when the river is closed to fishing. It is truly a beautiful river and area that we value and have enjoyed for over 40 years.
8. Many of the resident opposers to our CLUP present themselves as concerned property tax payers when in fact they are over 65 and have chosen to accept the Borough senior exemption of \$350,000. There are 7 parties that pay no property taxes: Hans and Jeanne Bilben, Lynn Whitmore, William and Linda Patrick, Gary and Eileen Sheridan, Rick Oliver, Daniel Syme and Jim Gorman. Three parties pay tax on any assessment over the \$350,000: Joseph and Denise Sparkman, Robert Baker and Hodnick/Crier. The Carltons and Gregorys may soon join the group. These main players have combined property assessments of over \$3 million which is equal to over \$33,000 to the borough in lost tax revenue yet these are the folks costing the Borough significant money.
9. Much has been said about property values but no study has been done by borough assessors to substantiate any reduction in value for properties with a gravel pit in the neighborhood. In fact, the Girtons sold their home for full price of \$495,000 after 20 DOM and after the first notice of the permit application was out last year.
10. LiDar drawings by a layman of the opposition are falsely presenting that berms must be very tall in order to be effective and that the permit should not be issued because of that. The reality that is being totally ignored is, per the permit, the berms will be at or close to the excavation site, otherwise known as "rolling berms" to provide visual protection to the neighborhood. Licensed surveyor, Steve Smith, used the LiDar to show that "rolling berms" will be effective and those drawings were submitted earlier to the record and are hereby attached again for reference.
11. For the record, there have been submitted 14 letters in support of this permit. They may have been missed since they were mixed in with hundreds of other pages of repetitious rants.

Re: McGee Tracts Line of Sight Drawings:

Dear Mr. Trimble,

Please find attached two drawings (plan and profile) that show the line of sight from a point on Lot 3, Parkinson Tracts - Del Mar Addition (85-102 HRD) along two vectors to points within Tract B, McGee Tracts Deed of Record Boundary Survey (80-104 HRD).

The plan drawing shows two vectors originating at the Bilben property (Lot 3). This point is the approximate location of the house on Lot 3 as determined from the Kenai Peninsula Borough fixed wing imagery as shown on their Geocortex Viewer. The plan drawing shows the boundaries of the existing Beachcomber, LLC counter permit gravel extraction area as well as the proposed three phase conditional land use permit material site area that is under consideration by the borough.

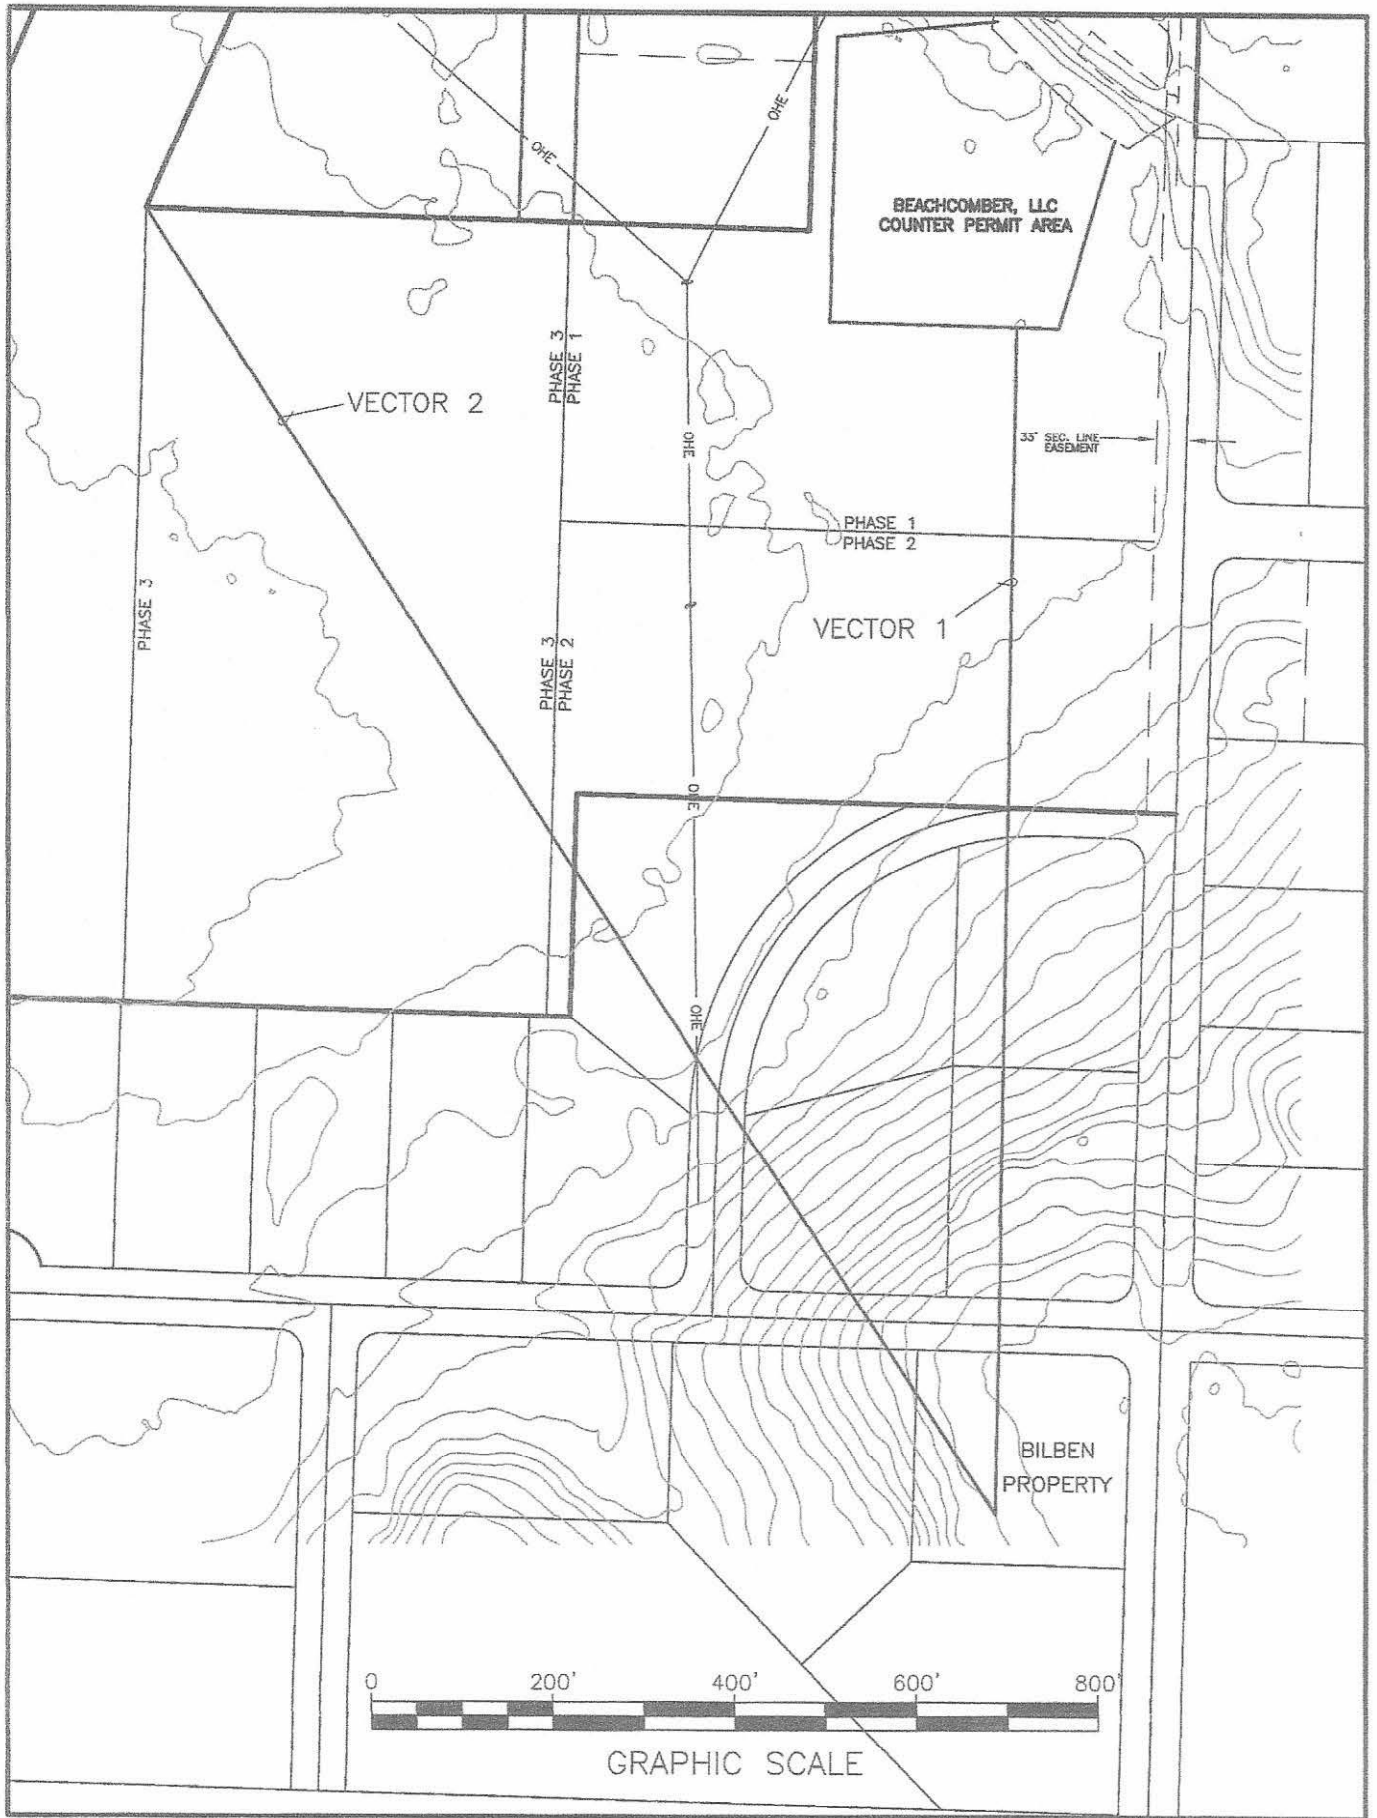

The contours shown are 4 foot interval LiDAR contours downloaded from the Kenai Peninsula Borough Terrain Viewer. The LiDAR data is in the Alaska State Plane Coordinate System (NAD83).

The representation of the property boundaries of Lot 3, Parkinson Tracts - Del Mar Addition and Tract B, McGee Tracts Deed of Record Boundary Survey is from a retracement survey conducted by me in 2017. The retracement survey was done utilizing GPS methodology. The basis of coordinates for the retracement survey was the Alaska State Plane Coordinate System (NAD83) determined from a GPS static observation on a control point that was submitted to OPUS (Online Positioning User Service) for processing.

The profile drawings show line of sight from a point 20 feet above existing ground at the approximate location of the house on Lot 3, to two points within Tract B (Vector 1 and Vector 2). The original ground profile is interpolated from the 4 foot interval LiDAR contours along the two vectors. The horizontal to vertical relationship on the profile drawings is 1 to 1. If you have any questions, please feel free to call me at (907) 399-4345.

Subject: Anchor Point Gravel Pit

Hello Mr. Wall, and Planning Commission,

Thank You for all your time and efforts on this issue.

A family emergency has arisen and my wife and I will be unable to attend the June 10th Planning Commission 7:30 meeting in which we were planning to give oral testimony to the following. So upon your advise I am sending an email.

Please be advised as well as advise the Planning Commission on the following:

As owners of the property of 74140 Seaward Ave, Anchor Point, AK. my wife, Lee, and I would like to withdraw our objections to the proposed gravel pit which includes all oral and written correspondence. Also, please remove the photographs and all showing the 5 yard property boundary for phase 3 of the pit. Through our conversations in which you are recommending the fifty foot buffer and a twelve foot berm we are satisfied that the KPB will protect our interest as tax paying property owners. We also have had several conversations with Mr. and Mrs. Trimble regarding the fifty foot buffer and twelve foot berm in which they have agreed to. My wife and I took advantage of The Trimbles hospitality of the open house on June 2nd on the property of the proposed gravel mine. The current berm on the two and half acres displays the type of berm in use. I could not see the surrounding homes from out of the pit as it is now.

Our only other concern was the reclamation of the property after the proposed mining operations were concluded as this could affect surrounding property values. Upon our tour of the property, Mr. Trimble showed us where he has reseeded and reclaimed an area already which was done very well. We also realize, to not reclaim this property upon termination of mining activity would be a mistake as the property would not have the value as it is in a pristine location.

Should you have any questions please feel free to contact us by email or phone at 907 226-2026.

Respectfully Submitted,

Mark and Lee Yale

KENAI PENINSULA BOROUGH
PLANNING DEPARTMENT

Dear Planning Chairman,

I am a summer time resident of Anchor pt.

Recently purchased a place along the road on Anchor river.

Its truly a beautiful part of Alaska. There are about five campsites that hold around twenty units per campsite totaling around 100 camp

I live on the Silver King RV Park, I see moose almost every day.

Every morning in the summer there happy couples walking their dog + child along the roadside + the Anchor river.

I have alot of company visit from the lower 48, they spend alot of money on out-of-state licences, meals, charters enjoying the Homer - Anchor pt. wonderlana.

I believe a commercial gravel pit heavy traffic "just dont go together"

I sincerely hope you can see the effect this ~~commerial~~ gravel pit will have on the roads, narrow bridge, and mostly people walking the road side.

Thank you
Ronald Paulson

Date: June 10, 2019 at 3:02:31 PM PDT

To: <MBest@kpb.us>

To all the KP planning commissioners, the assembly members, and mayor.

I am an Anchor Point area Borough resident. I support the Anchor point Gravel pit. I understand their is an issue with the loss of view. That view is of private property, and no private property owner should be required to maintain a view at their expense or loss of use for other property owners enjoyment.

Befor you know it their will be people demanding manicured lawns, and dictating building sizes and types.

Those who want that lifestyle can buy into HOAs or land that has covenants attached to it. The people who are loosing a view that never belonged to them can plant a tree line on their property.

I have heard the owners say when they bought the property they were told the land the gravel pit is going on would not be developed, if they feel they were cheated then they can take it to civil court.

Thanks Carrie Harris
Anchor Point Ak

MEMO

Regarding: a proposed Sand and Gravel operation in Anchor Point as a Conditional Use Permit

From: J. L. Jorgensen, property owner of two parcels on Anchor River Road

Request for Consideration and Response

My previous experience has been that a CUP (conditional Use Permit) may be approved or conditionally approved only if the agency makes the following findings:

- That the proposed development will **not adversely affect the applicable land use plans** of the area, burrow, or county;
- That the proposed development **will not be detrimental to the public health, safety and welfare;**
- That the proposed development will comply to the maximum extent feasible with the regulations of the general plan, the applicable zoning district and the development standards;
- That the proposed development is appropriate at the proposed location.

In the earlier consideration I would support the findings of the Planning Commission to deny the permit. I understand that the Planning Department staff has prepared what should be an objective advisory recommendation to the Planning Commission. The Planning Commission after hearing extensive testimony denied the permit.

I do not believe that the four above findings can be met.

1. That the proposed development will **not adversely affect the applicable land use plans.**

The area is currently developed as a combination of RESIDENTIAL and RECREATIONAL USES. Neither of these uses are compatible with the proposed development and the effects that are generated in terms of traffic, safety, noise or dust or visual blight.

In addition the proximity to the Anchor River recreational and wildlife area is of serious concern.

2. proposed development **will not be detrimental to the public health, safety and welfare;**

The traffic on Anchor River Road currently includes pedestrians, bicycles, cars, boats and wildlife crossing.

The width of the Anchor River Road clearly does not allow SAFE use of multiple ton trucks with the right of way. Safety of Human life, children, youth and adults. This alone should be clear grounds for denial. The recreational and commercial fishing charter boats that are launched as well as the property involved is a substantial concern.

The bridge on Old Sterling Highway may allow two way traffic but is generally used by vehicles going one direction as a neighborly courtesy.

The bridge recently repaired may physical accommodate trucks serving the area but I would strongly question the wear and tear that the proposed site serving many other locations would be able to serve.

3. That the proposed development will comply to the maximum extent feasible with the regulations of the general plan, the applicable zoning district and the development standards.

The proposed development CANNOT comply with the general plan of the area.

4. That the proposed development is appropriate at the proposed location.

The proposed development might be possible if it were the first and only use in the area but is clearly NOT APPROPRIATE AT THE PROPOSED LOCATION. Other locations are available for this type of use that will not jeopardize the HEALTH SAFETY or WELFARE OF THE COMMUNITY.

The requirement of a CUP for any operation indicates that there is an underlying and preliminary anticipation of concerns. At times these can be adequately mitigated at appropriate locations. This situation is a clear intrusion into a residential and recreational area. The proposed sand and gravel and the associated truck traffic is directly detrimental to the Health, Safety and Welfare that the Planning Commission and those above are empowered to protect through this process.

REGULATING SCENIC VIEWS

By: Kevin E. McCarthy, Principal Analyst

You asked that we identify (1) states that explicitly authorize the regulation of developments to protect scenic views and (2) ways that municipalities and other political subdivisions protect views, either under such explicit authorization or their general zoning authority.

SUMMARY

Hawaii has established statutory guidance for a state agency regarding the preservation of views in the Kakaako development district on Oahu. Maine, Minnesota, New York, Oregon require political subdivisions to regulate developments to protect scenic views and other aesthetic values, and Vermont and Wisconsin allow subdivisions to do so. The regulation generally occurs under zoning enabling law, although Maine provides for the protection of scenic views in its subdivision control laws. Minnesota's law applies to areas near lakes, streams, and wetlands. The remaining laws apply statewide. Connecticut allows municipalities to protect scenic views by establishing village districts pursuant to CGS § 8-2j, which is described in OLR memo [98-R-0945](#). To date Brooklyn and Middletown have established village districts.

As discussed in OLR memo [2002-R-0618](#), Connecticut also requires municipalities to address scenic preservation goals when acting on proposed developments in designated coastal areas. At least four states (California, Maine, Oregon, and Washington) require municipalities to address scenic preservation goals when acting on proposed coastal developments, while in New Hampshire and Rhode Island state agencies address scenic views in their regulation of coastal developments.

While most states do not explicitly authorize political subdivisions to regulate scenic views, many subdivisions have done so under laws that grant them broad zoning powers. These laws, in Connecticut and elsewhere, are based on the Model Zoning Enabling Act, which establishes the promotion of the general welfare as a purpose of zoning. The U.S. Supreme Court, in *Berman v. Parker* 348 U.S. 26, 31 (1954), has indicated that the general welfare can include aesthetics. Courts in several states, including Connecticut, have ruled that municipalities can regulate development solely or in part based on aesthetics.

Several municipalities have used this general welfare provision to regulate on the basis of aesthetics, including the protection of scenic views. One common approach is to protect viewsheds, i.e., the view that can be seen from a specific location. Another approach is to protect views of specific natural or manmade features. In several cases, municipalities have established overlay districts to protect views. Such districts can cover different types of zones within a municipality (e.g., residential and commercial) and impose additional restrictions on development within the district. Another approach is the establishment of view corridors, which regulate development along specified streets to protect views of natural resources such as rivers.

In addition to these techniques, municipalities protect scenic views under their power to regulate the height and bulk of buildings under the Model Zoning Enabling Act. Don Poland, legislative director of the Connecticut chapter of the American Planning Association, notes that many shoreline municipalities in the state regulate the height of buildings near Long Island Sound to protect the views of nearby properties.

Municipalities can also preserve scenic views by regulating signs, including billboards. Municipalities routinely adopt such ordinances, and in some cases require that an architect or other design professional to review the proposed sign to determine whether it is compatible with its surroundings. OLR memo [2000-R-0773](#) describes the law in Connecticut and other states regarding local regulation of billboards. A number of states (including Connecticut) have statutory procedures for the designation of scenic roads, which regulate activities such as tree cutting. OLR report [93-R-0554](#) provides information on Connecticut's law.

STATE LAWS

Hawaii

Haw. Rev. Stat. § 206E-33 provides guidance policies for the state Community Development Authority with regard to the Kakaako development district. Among other things, the guidance calls for the preservation of major view planes and view corridors through regulation and design review. It also calls for the preservation of culturally significant settings and locations.

Maine

Under state law, local subdivision control ordinances must protect aesthetic, cultural, and natural values from undue harm. In adopting an ordinance and approving subdivisions, the municipality may not permit undue harm to visual access to the shoreline (Me. Rev. § 30-A-4404). Municipalities

can meet these requirements by having planning board members view the site, comparing the height of proposed buildings with the tree line, and reviewing engineering studies. The developer can protect the view by entering into scenic easements that limit development of the property (see *Conservation Law Foundation v. Town of Lincolnville* 2001) Me., 786 A. 2d 616).

As discussed in OLR memo 2002-R-0618, Maine also has a law requiring municipal of developments on the seashore and along lakes and rivers that requires the preservation of visual access.

Minnesota

By law (Minn. Stat. §§103F.201 to 103F.221), each county containing unincorporated land and each city must adopt a shoreland ordinance at least as protective as the Department of Natural Resource (DNR) model ordinance at Minn. Rules Ch. 6120. The DNR ordinance applies development setbacks and restrictions to lands adjacent to water basins and watercourses designated as public waters. In addition, a municipality may apply its ordinance to lands adjacent to wetlands designated as public waters wetlands. The DNR ordinance regulates building lot sizes, the placement of structures and sewage disposal systems, and other land uses within the shorelands of public waters—defined as within 1000 feet of the ordinary high water mark of a lake or locally designated wetland and within 300 feet of an ordinary high stream elevation. These ordinances are primarily are directed toward viewshed protection (See Minn. Rules Ch. 6120.3300).

New York

The state constitution (Article 1454) establishes a state policy to conserve and protect scenic beauty. State law explicitly allows all municipalities to protect scenic views under Mun. Home Rule Law Sec. 10(1)(a)(1), which allows them to adopt land use laws to protect and enhance their physical and visual environments. Towns and villages may consider viewshed protection in their definition of open space (N.Y. Env. Cons. Law § 55-0119).

Under the State Environmental Quality Review Act a wide range of developments are subject to environmental review. Under regulations developed pursuant to the act (6 NYCRR Part 617.10) all local agency reviews of developments must consider whether the project will have a negative impact on resources of historic or aesthetic importance, and if so, establish conditions on the project to mitigate that impact.

Oregon

Oregon addresses scenic view regulation as part of a broader statewide land use planning policy, which includes protecting natural resources and conserving scenic and historic areas and open spaces (Or. Admin R. 60-015-0000(5)). The policy specifies 19 goals municipalities must address in their respective land use plans and regulations, which must be reviewed and approved by the Land Conservation and Development Commission (Or. Rev. Stat. § 197. 015(5)).

Vermont

The state allows municipalities to establish design control districts, which may include urban settlements with striking views and views extending access of open fields up to the forest edge. Planning commission approval is required build, substantially alter, demolish, or move buildings within such districts (Ver. Rev. Stat. § 24-4407).

Wisconsin

State law allows towns to “regulate any place, structure, or object with a special character, historic interest, or other significant value, for the purpose of preserving the place, structure, or object and its significant characteristics” (Wis. Rev. Stat. § 60.64).

LOCAL ORDINANCES

California

The Big Sur Local Coast Land Use Plan was developed pursuant to the California Coastal Act of 1976, which is described in OLR memo 2002-R-0618. The plan includes policies to protect particularly important scenic views. Under the plan, areas that otherwise could be developed may not be because of constraints imposed by the policies. In Monterey County, owners of residentially zoned properties within such areas can receive a transferable development credit. To receive the credit, the property owner must grant the county an irrevocable scenic easement on the property, permanently restricting its development. The credit is transferable and can be sold to a third party. This credit allows the holder to more intensively develop a residential building site elsewhere in the county that is not subject to the restrictions. The new residential developments made possible by the credit must meet the other requirements of the plan, e.g., its water supply and geological safety criteria. In addition, they must have the minimum feasible number of driveways leading onto the Pacific Coast Highway.

Colorado

Denver has adopted an ordinance to restrict development in order to protect mountain views. The ordinance includes a map specifying the area where development is restricted, which amounts to about 12.5% of the city. The tops of buildings in this area cannot exceed 5,434 feet, plus one foot for every 100 feet the building is located from a reference point located in Cranmer Park. (Denver's altitude is approximately 5,200 feet.) The city also regulates the height of downtown buildings to protect views of its Civic Center. The ordinance is available on-line at <http://www.sonoran.org/town/denver.pdf>. The state Supreme Court has upheld the ordinance in *Landmark Land Company, Inc. v. City and County of Denver*, 728 P.2d 1281 (1986), citing *Parker* and holding that the ordinance did not constitute a taking.

Maryland

Washington County has established an overlay zone designed in part to preserve the existing viewshed of the historic Antietam Battlefield site. The ordinance covers the subdivision of land as well as development within the zone.

New York

North Elba, a resort community in the Adirondack Mountains, has established an overlay district to protect the viewshed of Whiteface Mountain. Developers in the district must demonstrate that their projects will not “result in a clearly adverse aesthetic impact.” Among other techniques, the planning board uses computer simulations to determine the impact of proposed developments. In 1998, the town's planning board rejected an application to build a Wal-Mart within the district, finding that it would cause a noticeable change to the visual character of the viewshed. The state's appellate court upheld the decision (*Wal-Mart Stores Inc. v. Planning Board of the Town of North Elba* NYS2d 774 (1998)).

Rochester has established corridors to preserve and enhance views of the Genesee River, which runs through the center of the city. The corridors were established by ordinance (Rochester City Code § 115-85.1.1) as part of the river management overlay district. All proposed construction, reconstruction, remodeling, alteration or moving adjacent to or above corridors must comply with additional dimension and bulk restrictions. The ordinance provides design guidelines for pavements, lighting, and safety barriers. The arrangement and scale of improvements must encourage and allow easy flow of pedestrian traffic across the site as well as to and from adjacent sites.

Oregon

Portland has established four view corridors to protect views of Mt. Hood and Rocky Butte from selected vantage points in Columbia South Shore. The height of nearby buildings is restricted. Portland has also established view corridors of the Willamette River along seven streets. For six of these streets, buildings cannot intrude in the 30 feet from each side of the street. For the seventh street, there can be no intrusion in the 60 feet from each side of the street. These corridors were established to provide visual access and connections to the river for neighborhoods and

business districts that might otherwise be visually cut-off from the river. The corridors are generally extensions of existing public rights-of-way through to the river.

All development and vegetation with areas with a view corridor designation must undergo design review. Buildings in these areas can have facades of no more than 100 feet. Two rows of trees (one deciduous and one evergreen) must be planted on 30-foot centers. The ordinance also has provisions requiring screening of garbage cans and mechanical systems, establishing set-back requirements, and limiting the size and height of signs. The ordinance generally prohibits the removal of mature trees within the street setback. Additional sign standards apply in the Columbia South Shore view corridor.

Like many other cities, Portland allows developers to build larger buildings than would normally be permitted in a particular zone if the developer provides more open space than is required or meets other criteria. The developer cannot use this bonus space to violate view corridors.

These provisions are contained in §§ 33.480.40 *et seq.* of the municipal code (<http://municipalcodes.lexisnexis.com/codes/portland/>).

Texas

Austin has established an overlay zone by ordinance to protect views from its hill country roadways. Among the goals of the ordinance is to preserve the scenic values of the Hill Country Corridor Parkways. The height of buildings and floor area ratio of buildings in these corridors are restricted, with the restriction varying with the underlying zone and the distance from the development to a state highway. Developments are subject to site plan review and landscaping requirements. The ordinance establishes landscaping requirements and limits new streets and driveways. The ordinance also provides incentives for developers who exceed its requirements by protecting scenic views of downtown Austin and various water bodies. The ordinance (Mun. Code § 5180 *et seq.*) is available on-line at <http://www.sonoran.org/town/austin.pdf>.

San Antonio has established overlay districts to protect views of the Alamo and other landmarks and sites. According to the ordinance (Unified Development Code § 35-337), the purpose of these districts is to “safeguard San Antonio's heritage by preventing the despoliation of views of areas and buildings that reflect important elements of the city's cultural, natural, historic, and economic fabric.” The ordinance established the process by which the districts are created. Developments that protrude into the viewshed and block the view of the protected building or site are limited by the ordinances setting up the individual districts. Existing structures within the viewshed that were legally erected are permitted to continue in existence. They may be modified, so long as they do not further encroach into the viewshed. The viewsheed protection provisions are available on-line at http://www.sanna.org/udc_article3.pdf.

Utah

Summit County has developed policies to protect views of meadows and hillsides in the Snyderville Basin. The policy divides the basin into four areas, subject to different levels of development controls. Residential and other forms of development are not permitted in preservation areas. In retention areas, developments are only permitted if they are not visible from major roads in the basin. In modification areas, developments are permitted but their visual impact must be mitigated through such means as siting, landscaping, and lighting. The final type of area are those which have been visually degraded and should be rehabilitated and where the landscape should be restored. In all areas, development should occur in a way to preserve the scenic foreground and distant views, by placing development at the edge of open meadows and at the bottom of the hillsides. The policy is available on-line at http://www.co.summit.ut.us/dept/planng/sville/Chpt6_drft.htm

Wisconsin

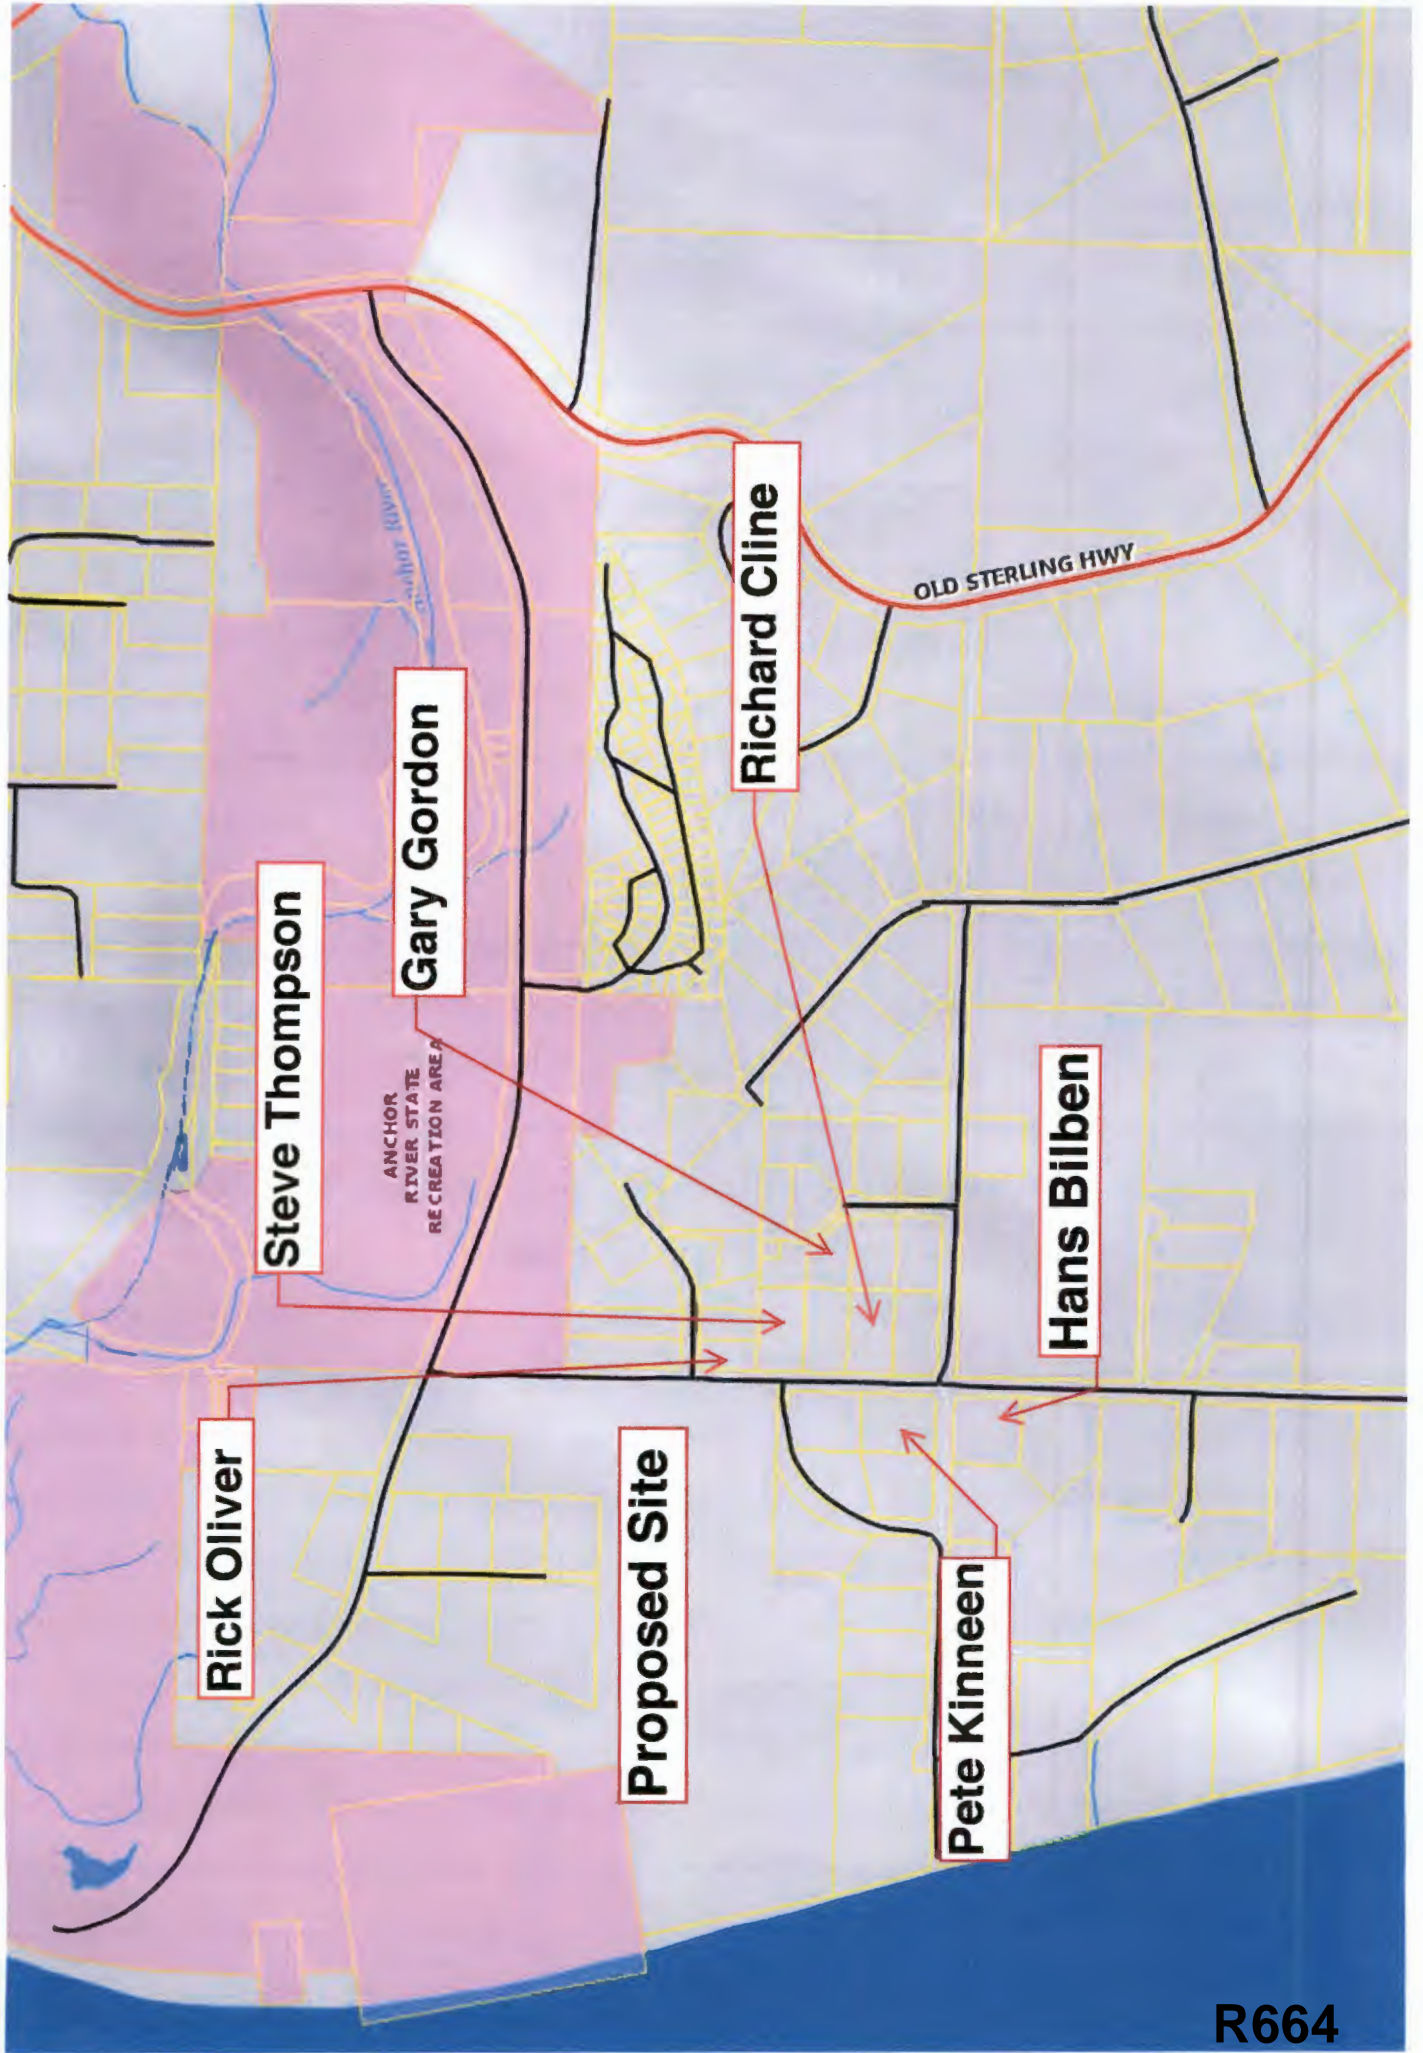

The town of Westport has adopted a historic preservation ordinance that addresses viewshed protection (Code of Ordinances § 10-7-1 *et seq.*). One of the ordinance's stated purposes is to protect landscapes that reflect elements of the town's history and to enhance the town's visual and aesthetic character. Alteration or visual impairment of any historic resource with the town's historic district requires a certificate of appropriateness from the town Historic Preservation Commission. Historic resources can include viewsheds, as well as historic buildings. Among the factors, the commission must consider in granting a certificate is whether the proposed construction diminishes the aesthetic

values or scenic qualities of a landscape or viewshed.

APPROVED MINUTES

CALL TO ORDER

Chairman Martin called the meeting to order at 7:30 p.m.

ROLL CALL

Commissioners Present

Syverine Abrahamson-Bentz, Anchor Point / Ninilchik
Jeremy Brantley, Sterling
Paulette Bokenko-Carluccio, City of Seldovia
Cindy Ecklund, City of Seward
Robert F. Ernst, Northwest Borough
Diane Fikes, City of Kenai
Rick Foster, Southwest Borough
Blair Martin, Kalifornsky Beach
Franco Venuti, City of Homer
Paul Whitney, City of Soldotna

With 10 members of a 13-member Commission in attendance, a quorum was present.

Staff Present

Julie Hindman, Administrative Assistant
Scott Huff, Platting Manager
Jordan Reif, Platting Technician
Bruce Wall, Planner
Dan Conetta, Land Management Agent
Charlie Pierce, Kenai Peninsula Borough Mayor

Others Present

APPROVAL OF REGULAR AGENDA AND ADOPTION OF THE CONSENT AGENDA

AGENDA ITEM C. CONSENT AGENDA

- *7. Commissioner Excused Absences
 - a. Virginia Morgan, East Peninsula
 - b. Robert Ruffner, Kasilof / Clam Gulch
 - c. Vacant, Ridgeway

****Approved with the adoption of the consent agenda.***

AGENDA ITEM C. CONSENT AGENDA

- *8. Minutes
 - a. May 28, 2019 Planning Commission Minutes

****Approved with the adoption of the consent agenda.***

MOTION: Commissioner Carluccio moved, seconded by Commissioner Bentz to approve the consent and regular agendas.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

PUBLIC COMMENT / PRESENTATIONS / COMMISSIONERS

Chairman Martin opened the meeting for public comment for items not on the agenda. Seeing and hearing no one public comment was closed and meeting continued.

PUBLIC HEARINGS

AGENDA ITEM F. PUBLIC HEARINGS

- 1. Ordinance 2019-13; An Ordinance Authorizing Retention or Sale of Certain Real Property Obtained by the Kenai Peninsula Borough Through Tax Foreclosure Proceedings.

Staff Report given by Dan Conetta

PC Meeting: 6/10/19

There are two lists for this Ordinance. Exhibit A contains about 10 parcels which is being recommended for retention for various purposes. Some are sub-standard lots, have wetlands, etc. Exhibit B contains about 40 parcels that are being recommended to be sold at auction. This auction is about every 2 years when there are enough parcels to justify the sale.

END OF STAFF REPORT

Seeing and hearing no one wishing to comment, Chairman Martin closed public comment and discussion was opened among the Commission.

MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to forward Ordinance 2019-13 to the Assembly for approval.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

AGENDA ITEM F PUBLIC HEARINGS

2. Ordinance 2019-12; An Ordinance Authorizing the Sale of Certain Real Property Obtained by the Kenai Peninsula Borough Through Tax Foreclosure Proceedings which was Previously Retained for a Public Purpose.

Staff Report given by Dan Conetta

PC MEETING 6/10/19

About six years ago this parcel was retained for a public purpose because it was considered a sub-standard lot. Land Management reviews the platting code for a minimum lot size of 40,000 square feet. This lot is less so it was retained. It appears that this lot does have a functioning well and septic on site even though it is less than 40,000 square feet. Land Management is recommending that the lot be put in the tax foreclosure sale and be sold at auction along with other parcels.

END OF STAFF REPORT

Chairman Martin opened public comment. Seeing and hearing no one wishing to comment, Chairman Martin closed public comment and discussion was opened among the Commission.

MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to forward Ordinance 2019-12 on to the Assembly for approval.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

AGENDA ITEM F PUBLIC HEARINGS

Commissioner Brantley reminded the Commission that he previously recused himself from the next item and removed himself.

3. Continuance of the March 25, 2019 public hearing on a conditional land use permit application for material extraction on a parcel in the Anchor Point area that has been remanded on appeal to the Planning Commission.

Staff Report given by Bruce Wall

PC MEETING 6/10/19

Applicant / Landowner: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) – Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

Proposed Land Use: The applicant wishes to obtain a permit for sand, gravel and peat extraction on a portion of the parcel listed above.

This application was heard by the Planning Commission on July 16, 2018, where the application was denied approval. This decision was appealed and was reviewed by a Hearing Officer. The Hearing Officer remanded the application to the Planning Commission. A hearing was conducted on March 25, 2019 and continued to this date. Excerpts from the Hearing Officer's decision is included in the staff report and copies of the decision is contained in Volume 2 of the meeting packet beginning on page 2.

Mr. Wall noted that the next page numbers he would be referencing were contained in Volume 1 of the packet. Since this is a continuation of the March meeting there is not a new staff report. The staff report from the March 25, 2019 meeting begins on page 222, Volume 1. The Resolution begins on page 77 and has been updated to reflect tonight's meeting. The draft Resolution contains staff recommended buffers. Those buffers are illustrated on a map found on page 238, Volume 1. Staff is recommending different buffers than what is shown on the applicant's site plan and different from staff's recommendations in July 2018.

A waiver is being requested for the 300 foot processing distance requirement from the property line. Staff does not recommend approval of the processing distance waiver request. There is room elsewhere on the property for processing that meets the 300 foot setback requirement. The draft findings in the Resolution support the denial of the waiver.

Mr. Wall let the Commission know that Ms. Hindman prepared an index to help them locate various items throughout the two volumes of the desk packet. He did ask the Commission to let him know if they have difficulty locating an item during the meeting to please ask for help to locate the item since this is a large volume of information.

New comments that have come in since the March meeting begin on page 84, Volume 1 of the packet. There are several letters in the desk packet, including a letter from an adjacent property owner requesting that his previous objections to the proposal be disregarded. There are also three letters that were laid down that were received after the desk packet was published.

The Planning Commission should review the application, site plan, staff report, and comments received and determine if the mandatory conditions contained in KPB 21.29.050 will be met. The Planning Department recommends that the Planning Commission deny the processing distance waiver request, approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the requirements contained in the staff report.

END OF STAFF REPORT

Chairman Martin read the rules by which public hearings are conducted.

MOTION: Commissioner Venuti moved, seconded by Commissioner Foster to limit testimony to new information only.

Commissioner Whitney objected to the motion. He noted that at the previous meeting everyone that testified was told they would be able to testify again at the next hearing with no limitations or curtailment of their testimony. He then asked staff if the change in the height requirements is different than the recommendations at the March 25, 2019 meeting. If so that is a change to the process. Mr. Wall replied that staff recommendations have remained the same from the March 25, 2019 meeting. One of the neighbors has proposed alternative buffers but staff recommendations have not changed.

Commissioner Carluccio added that she would not support the motion. One thing that was brought up at the last meeting was that there would be a number of people in attendance tonight that were unable to attend the previous meeting. They may not know what was given in testimony. The Commission would be

trying to tell them they cannot repeat information that they don't know and she felt it was beyond what the Commission should do.

MOTION FAILED BY UNANIMOUS VOTE: 0 Yes, 9 No, 2 Absent, 1 Recused

Yes: --
 No: Bentz, Carluccio, Ecklund, Ernst, Fikes, Foster, Martin, Venuti, Whitney
 Absent: Morgan, Ruffner
 Recused: Brantley

Chairman Martin opened public comment.

1. Emmitt Trimble, PO Box 193, Anchor Point

Mr. Trimble introduced his attorney Stacey Stone. He let the Commission know that they had some videos they wanted to play. He knows that it is difficult for the Commission to go to the various sites. There have been a lot of pictures seen but they have videos that may be helpful.

He wanted to leave with a few thoughts before starting the videos. Some phrases that are very relevant: substantial evidence and finding of fact.

2. Stacey Stone, 701 W. 8th Ave, Ste. 700, Anchorage, AK 99501

Ms. Stone is an attorney at Holmes Weddle & Barcott. The Hearing Officer's remand is before the Commission. Within that remand the Hearing Officer identified the charge that is before this Commission as set forth in the Kenai Peninsula Borough Code. The charge of the Commission is very limited in scope and is set forth in the code. It sets forth what this Commission has the authority to do and what the Commission has the authority not to do. It also helps to extrapolate on the purpose of a conditional land use permit within the Kenai Peninsula Borough. This is not a standard permit. As referenced this isn't a case where there is a residential property that is looking for a conditional land use permit for an exemption to have a daycare in a residential area. This is something that is allowable and the Borough Assembly has chosen to codify how it can be done legally. Essentially, someone has the authority to do this on the land. If the government is going to come in with a restriction, then that restriction has to be limited by law. The law set forth provides very specific conditions. If the applicant checks all of the boxes that are set forth within the code, which her client has done, then it is up to this Commission to look and see if there are appropriate conditions that need to be placed. If there are appropriate conditions they need to be instituted and the permit needs to be approved unless it is lacking. They maintain that on the permit every box has been checked, appropriate conditions have been set forth, and therefore tonight the Commission should approve the permit for the conditional land use.

Mr. Trimble asked if they could show the videos. He noted that if the audio was not working that his daughter would narrate. Chairman Martin agreed to allow the videos to be played.

Allison Trimble Papparoa played the videos for the Commission. Below is some discussion and audio heard during the videos.

Video 1 – This is one of the access point to the property off the beach road. This is a road built with gravel from the property. This is an area that has been reclaimed and reseeded. This is the access to the beach portion of the property.

Video 2 – This is the access point to the property at the beach, built with gravel from this property. This is the Kyllonen Homestead, which is being preserved as a historical site by Beachcomber. This is the area at the beach and the beach access. Our family is hoping to build a retirement home. As you can see this property has been well maintained and hydro seeded.

Video 3 – I am now standing on the bed of the six wheeler looking across the third phase. As you can see over in the distance that is my sister's house. Here is the acreage that we use to house our horses. This is in phase two and some in phase three. As you can see this property is very well

maintained. Over in the distance you can see the Kyllonen Drive sign where we have just recently purchased our home. That is our home you can see in the distance. As you can see this is heavily treed. Over in the distance somewhere behind those trees is Danver and the home of the opposition. What you can see is that this property is heavily treed and the areas that are not heavily treed are well maintained as all of Emmitt and Mary's properties are.

Video 4 – I am standing again on the six wheeler bed looking directly at the gravel pit from the corner of Kyllonen and Danver.

Chairman Martin asked for the video to be paused. Commissioner Ecklund wanted to know when saying looking across which direction is that. Ms. Paparoa responded that in this video it is Northwest from the Danver side if in the upper portion. Mr. Trimble helped clarify by saying she was standing at the intersection of Kyllonen and Danver and looking to the West. Commissioner Ecklund wanted to know when she stated she was looking towards her sister's house what direction that was. Ms. Paparoa noted where she was standing on the image up and said she was looking North – Northwest.

Mr. Trimble added directions as the video played. (His comments are italic). Video resumed – This is our property and how it is maintained. Here we see a home of the opposition. (*This is looking south*). This is Kyllonen Drive and in the distance you will see the home we just purchased. Not the cabin right in front of us but behind it in the trees. Paying full price. Below you see the previous existing use gravel pit that Mr. Kyllonen had used to develop much of this area. (*Looking north*). Off in the distance there is the area of the gravel pit that has been active for over a year at this point. You can almost see the rolling berm.

Video 5 – There is the beach road. Here is the area that was reclaimed and done to the standards asked by the Borough and this is the start of the existing gravel pit that has been here for over a year.

Video 6 – There is the entrance to the existing gravel pit. The beach road is down over there somewhere in the distance behind the trees. (*North*). Here is the rolling berm. I am standing on top of the six wheeler bed. I am approximately 9 feet in the air. This is the rolling berm. This is the top of the gravel pit and you can only see the very top of those houses. The work would be going on approximately 25 feet below where I am now standing.

Video 7 – I am parked in the center of the road at Danver and the beach road. You can barely see the entrance to the gravel pit from here. As I come across this is the neighboring property that claims that they would be negatively impacted.

Chairman Martin asked that video 7 be stopped.

Video 8 – This is the backside of my sister's home and property coming onto what would potentially be phase 3. This is where we keep our horses. This gravel pad was made with gravel from this property. There are some of the homes off in the distance that overlook this property. You can see it is heavily vegetated. The amount of alder on those properties is substantial. One of things that has not been discussed is if this property was developed in some other way, for example 27 home sites, the amount of work that would be done over 15 years at 2 homes per year would be substantial and in the end this property would not be reclaimed. This property would have 27 new homes with 27 families and 27 barking dogs, 27 four wheelers, 27 boats, and all of the work that would need to be done to develop those properties.

Mr. Trimble thanked the Commission for their consideration.

Commissioner Ecklund had a few questions for Mr. Trimble. She noted that one of the videos it stated that the road was the beach road. On the permit maps that are in the packet it does not show the beach road. She wanted to know how far his property line is to the beach, from Cook

Inlet and the water. Mr. Trimble responded that from the western boundary of Phase 3 of this permit it will be about 700 feet to the beach line. Commissioner Ecklund wanted to clarify that he meant mean high water. Mr. Trimble said yes.

Commissioner Ecklund noted that on the permit application there was a spot for listing voluntary permit conditions. One thing that the Commission has been asking of past gravel pit applicants or material site applicants was to voluntarily use the white noise backup alarms. She stated it had been discussed but it is not added into the new application, which is the original, if he would be willing to add the white noise backup alarms to his equipment. Mr. Trimble said he would and as long as it is his equipment he can control that. The people that have been hired have had their backup beepers disabled. He has no problem with that condition.

Commissioner Ecklund referred to the map on page 71, Volume 1 of the packet. It shows an existing stripped area, which she thought was all that Mr. Trimble had done at the time he first applied. She wanted to know since receiving the counter permit if the stripped area was bigger. Mr. Trimble wanted to clarify that when he first started, before he considered a conditional land use permit because they were under one acre, he had moved into what appeared to be uplands. He had a delineation done and it is in fact uplands. Mr. Wall pointed out that the area he had built a substantial gravel pad on was so that trucks could get in and turn around on his property. Mr. Wall pointed out that the counter permit required that the applicant stay 100 feet away from the lines on the 100 year flood plain map and the riparian wetlands map, whether or not they are accurate. Mr. Trimble agreed and asked for the coordinates and Mr. Wall provided them. Mr. Trimble said that the one berm was to close and they put down 4 inches of top soil down and reseeded the area.

Commissioner Ecklund said that staff is recommending the Commission deny the waiver for the processing area to be less than 300 feet from the property line. It is marked on the permit map and it is 300 feet from the center of Denver Road. She wanted to know if he would be willing to move the processing area to be within the 300 feet from his property boundary. Mr. Trimble said he had no issue with the waiver being denied. It was something the engineer recommended. It is 200 feet from Mr. Brna's property and he understands the issue. As pointed out in the staff report there are many other areas to the west in Phase 2 and Phase 3 where the need to be 300 feet away is possible. He is willing but the application has not been changed.

Commissioner Whitney said there was indication in the materials received that there were some plans to do rock crushing. He wanted to know if that was indeed a fact. Mr. Trimble said there are no plans to do that now. It is something that would be permissible with the permit. It just needs to have a processing location that meets conditions that he is willing to agree to. Commissioner Whitney asked if it could happen. Mr. Trimble said it could possibly happen but is not planned. Normally in a pit this size if something could happen that a screen or crusher is needed. He does not have a lot experience with it. There will be some people testifying later that can may be answer better than he. He sees maybe two weeks out of the year in a very limited situation. This is not a major industrial pit.

Mr. Wall wanted to ask some questions to clarify some information. He wanted to discuss the rolling or moving berm that was discussed at the last meeting. The way the condition is written in the staff report and in the resolution it would require a 50-foot vegetative buffer with a 12-foot-high berm between the buffer and the excavation site. That would allow the moving berm but it doesn't require it the way it is written. He wanted to know if Mr. Trimble is volunteering a condition to have a rolling, moving berm. Mr. Trimble said absolutely. He feels that it is the best way to minimize any effects of any kind. Have the berm close to the work. This is a small scale operation, the area that has been stripped is a half-acre and that will take a long time. Selling 10,000 or 15,000 yards of gravel a year is monumental for something this size. They had the opportunity to do that but it was taken away. The rolling berm, looking at the LIDAR drawing, they saw it needs to be 50 feet if it is over here but it is not going to be there. It will be next to the area they are working. Then they will be 25 feet below the base of that 12-foot berm.

Commissioner Ecklund said part of the permit process is that the haul route be designated. The permit says the haul route will be Danver St. but from there where will the route go. Mr. Trimble said anyone that is hauling from the site, unless they are going north up Danver to a location, will go south a few hundred feet to the intersection, turn right and go towards the Old Sterling Highway. At this time, they cannot go across the bridge. If going to Homer they will go on the Sterling Highway. That is one of the issues. The opposition caused HilCorp to pull out of a deal he had. Instead of running two miles on the beach road and then the Old Sterling Highway, they had to go 22 miles one way on the beach road, the Old Sterling Highway, the new Sterling Highway, and North Fork Road. He was not sure that it was as safe as the other option. Commissioner Ecklund wanted to clarify that the route would be if going to the Sterling Highway, use the Old Sterling Highway and not the Anchor Point Road. Mr. Trimble agreed. The crowd began making noise and Chairman Martin reminded them that the meeting must be kept in order. Mr. Wall wanted to clarify that Mr. Trimble may have misunderstood. In order to get to the Old Sterling Highway from Danver Street you have to go onto the Anchor Point Road. Mr. Trimble agreed he misunderstand. He said the route would be to turn right off of Danver onto Anchor Point Road to the Old Sterling Highway. Commissioner Ecklund followed up with wanting to know how many miles or feet would the trucks be on Anchor Point Road to get to the Old Sterling Highway. Mr. Trimble responded less than a mile.

3. Paul Morino, Silver King RV Village, Anchor Point

Mr. Morino said he resided in the RV Village which is at the corner of Ann Street and Anchor Point Road. He is one of at least 70 residents that reside on Anchor Point Road within that one mile from Danver Street to the Old Sterling Highway. Silver King RV Village incorporates 88 individual lots with approximately 70 residential owners. Many of them live there throughout the entire summer and into late September and April. He was not able to be at the last meeting. The noise concerns were probably discussed. He wanted to bring up something that the applicant's daughter pointed out regarding 27 four wheelers going up and down the road. One truck going up and down that road equals the noise of 32 cars. That is from a study done in 2000 by the Canadian government. They may not have 27 four wheelers but for each truck going down that road the noise level will be equivalent to 32 cars. One thing he is concerned about is a statement by the applicant, just the facts. There is also the amount of people involved just on the one mile of the Anchor Point Road. He doesn't know how many tourist and tourist dollars are spent on that one mile of road alone with three or four state campgrounds on the other side of Silver King RV Village. If not over a thousand, then it has to be close to a thousand tourists camping and residing there during the entire summer. Again, how big of an issue is the noise in the scheme of things but for anybody that resides right there on that road the trucks and the truck noise is going to be pretty loud. How many trucks are there going to be? The applicant says it is going to be a small operation but what is a small operation, how many trucks will be going up and down the road? His major concern is the amount of traffic on that roadway and the amount of noise on the roadway and what it will do to all the people that visit that area.

Commissioner Ecklund wanted the title of the 2000 study that was referenced. Mr. Morino said there was a US DOT 1995 noise report that stated 1 truck traveling 55 mph equals 28 cars. The speed limit on that road is 25 mph. The other study was a Transit Canada 2000.

4. Judy Aaron, 73691 Ann Ct., Anchor Point

Ms. Aaron she lives in the Silver King RV Park. She was not able to attend any previous meetings. She shares the same concerns about the amount of noise especially when talking about the buffer zones, the noise on the road, the amount of trucks going up and down a very small road.

Commissioner Whitney wanted to know from where she is located in the RV park can she hear any operations that is going on in the current gravel site. Ms. Aaron responded that she didn't think they were really operating right now but she can hear the road traffic. She currently does not see trucks going back and forth for the gravel operation.

5. Linda Bruce, PO Box 39004, Ninilchik

Ms. Bruce have not been in attendance to any previous meetings. They own property in Anchor Point that is practically adjacent to the gravel pit. They bought the property from Emmitt and Mary Trimble a long time ago. She wanted to discuss the videos. She was not sure of the specific point of the video but if it is to show the gravel pit or to demonstrate the pristine and lovely nature of the area it did that. The gravel pit will be right in the middle of that pristine and lovely area. She wanted to touch on the newspaper article that recently came out that talked about the forty-year trust relationship with the people of Anchor Point. Her parents being two, herself and her husband also being some of those people, selling and buying property. Her feeling now is that Mr. Trimble has broken that trust. In the newspaper he talked about the property and the gravel pit being in unincorporated and an unzoned area. She thought that was interesting because that is the very reason that most of the people bought there. They bought there because it is outside the city. It is outside all the craziness that is in Anchorage, Wasilla, Girdwood, or elsewhere. It is outside all of that. It is outside Soldotna and Kenai. They have had an apartment building for years in Kenai and Ninilchik is a lot quieter than Kenai. She understands the unincorporated unzoned area but then to play that card to ask for a permit for a gravel pit in that pristine area is really an insult. At that critical point in Anchor Point it is an insult to all of those that put their trust in Mr. Trimble and then to have a gravel pit in their backyard. He says that in 15 years they will rebuild and they make it all great. Some of the gravel pits, like one in Ninilchik has been going on for 40 years. 15 years is a really aggressive target. She said if she may not live long enough to see that gravel pit reconstituted to something really great. She does not want to wait 15 years to see Anchor Point rebuilt to something really great. She objects to this. Her question to the Commission is if there is a point to public input? Mr. Trimble's attorney said they meet all the conditions and should be granted the permit. So does public input, the letters, does it really have any bearing on this process? She wanted to know if it had any bearing or if they were just wasting their time because the permit is going to be granted because conditions have been met.

6. Mark Claypool, Kenai

Mr. Claypool is the President of the Silver King RV Village Association. He had two things. He addressed Commissioner Whitney's question about the noise. They hear the surf from where they are at. There is no doubt in his mind that they will hear what comes from the gravel pit. Also, if the haul road, meaning Anchor Point River Road, cannot be safe with these trucks running up and down that permission not be granted. He is surprised that Mr. Trimble did not mention the road.

7. Christina Elmaleh, PO Box 542, Anchor Point

Ms. Elmaleh she lives at 34885 Seabury Ct. which is up and above the gravel pit. She wanted to testify to the noise. She quit her job about a year ago to stay home with their two month old and they have a couple of kids. She can hear the noise from the operations of the gravel pit throughout the day. So much so that anytime her dog hears it she freaks out and barks which just added to the noise. They can definitely hear the noise from where they are. It is bit like an amphitheater that magnifies it up to their house. The reason they bought where they did was to be away from gravel pits. They didn't look at anything near a gravel pit at the time to keep that kind of noise away from their two young kids and to be in a safe open area. She wanted to testify that they can hear it from their house and that she is against the gravel pit.

Commissioner Whitney wanted to know how far away she is from the pit. Ms. Elmaleh said it is about a quarter mile.

8. Teresa Jacobson Gregory, PO Box 904, Anchor Point

Ms. Gregory had a poster that was a picture of her neighborhood.

On page 343 of the Packet there is a map with the red area that shows a small portion of this picture and it also shows where the full gravel pit will be. She thanked the Commission for serving and being members of the Planning Commission for each of the communities in the Kenai Peninsula Borough. Also, for being willing and already willing to deny this conditional use permit and hearing everyone again after the appeal. She questions the fact that a conditional land use permit was denied and then the Director and Planner approved the 2 ½

acre over the counter gravel permit for Beachcomber LLC immediately after the denial and it does not require public comment. At the March 25, 2019 Planning Commission meeting Mary Trimble stated "The staff is recommending approval. The Planning Director, Bruce, and the Borough Attorney have all visited the site and saw no issue with our plan. The Borough Attorney has in her briefs interpreted the code and stated case law to back up her position that the permit should be granted. These are professional, educated people who represent the borough interest who interpret and enforce the code." In another letter addressed to the Planning Commission for this meeting from Allison Trimble, their daughter, "When the Planning Commission denied the application last year you did so against the recommendation of the staff and in direct violation of your duties." She looked up the Planning Commission administration codes. KPB 2.4.005 (2.40.050) and 2.4.007 (2.40.070), as Planning Commissioners you have investigation and recommendation authority. Also, the Commission can approve or reject and have that authority. So when they tell the Commission that they do not have any rights according to these borough codes that is not so. She knows they can only act on certain codes. In the borough there is minimizing off site dust movement. If someone looks at her car right now they will see it is yellow from Anchor Point. Minimize noise disturbance to other properties, minimize visual impacts and the first one is protect against physical damage. She believes there will be physical damage to their property as far as value. The definition of minimize is to reduce something, especially something unwanted or unpleasant, to the smallest possible amount or degree. The codes are set up as guidelines of all of the Kenai Peninsula Borough residents. She lives about 100 feet above the area for the conditional land permit and there is no way it is possible to minimize the noise disturbance. She called and invited Mr. Wall to sit on her deck and listen when operations first started back in August after the 2 ½ acre permit was received but she mainly wanted him to hear the quiet. The sounds of the ocean and then the racket of the cats and trucks moving dirt. He did not come. She invited any of the Commissioners to come to her deck and listen. She hopes that they have seen the area for themselves. In the picture there is no gravel pit. She quoted from Mary Trimble's statement on March 25, 2019 at the Planning Commission meeting "Emmitt and I believe in rights and responsibilities. This is a situation where we are agreeing to take on responsibilities in exchange for the right to excavate gravel on our property. The opposition says quote "Has the right to protect their property but unwilling to accept the fact that they have responsibility to do what they can to minimize visual and noise. If it is bothersome by building a fence or berm on their property or installing blinds that rise up from the bottom so that they will still have an inlet view. They do not have right to our land so we should not bear all the responsibility for mitigating their perceived discomfort." Mary and Emmitt do not live on that property. They live 5 miles north from this property. It has been said many times that this is their legacy property which no body lives on the land right now. They bought it three and half years ago. Us residents live on our properties and it is truly our legacy that we moved there. They bought there and there were no gravel pits. This gravel pit is located in their neighborhood which is beautiful and pristine. Right on the end of Danver Road, where the dump trucks will exit, it takes 29 seconds to get to the first campground on the left of Anchor Point Road and today she saw a tent from her to the Commissioners. She and her husband have lived there for 23 years and during that time they have meet people from all over the world on

the Anchor River and the Anchor Point Beach. Finland, Sweden, Germany, China, Japan and many others and Alaskans and people from the lower 48. She asked that they please don't let their names go on record that they approved this conditional land use permit and it stays with this property and will not go away.

9. Pete Kinneen, 34969 Danver St., Anchor Point

Mr. Kinneen agrees with the speaker before him. This whole thing is a head on collision. He wanted to define it quickly, the tension is between the interpretation of the existing law. The ordinance is very clear and there has been a lot of effort to mesmerize the Commission into believing that the laws, that the ordinance, says something that it doesn't. The Planning Commission is the higher authority, and is the judge and jury not the department. They are here to support the Commission not to impose. The default position, this is extremely important and almost nothing else really matters everything else is the details, but the clear legal default position here is denial. There is a lot of silliness and nonsense about land owners having rights to extract gravel. That is absolutely not true. Land owners have rights to do certain things. They have rights to do everything that is not excluded. A land owner, including this land owner, could put in an automotive junk yard, raise pigs, there are all kinds of different things they can do. Under the Borough ordinance, living outside a zoned area is not living in the old west. It is not living in an unrestricted area. The whole reason the Commission is here for the conditional land use permit is the people voting through the Assembly tell the Commission that there are certain things that are not a right but are a privilege if certain conditions are met and the Commission agrees that the conditions meet the standards. Then a permit is authorized to be granted. It is not a default position. The exclusion anywhere in the borough, including in the zoned or out zoned areas, is it is not a right to extract gravel. A person must come in and go through this process. The Commission is charged with looking at the very clear standards, written in plain English, that start with the intent. The intent is to protect the existing neighborhood and if the applicant can meet certain conditions to meet those standards then the Commission is authorized to possibly grant the permit. Otherwise, default position is denial. That is where we are right now. The standards cannot be met on this particular site for all the reasons that have been given because of the topography and the unique geography. The Commission knows that this is not the right place for a gravel mining operation and has been quoted as saying

that. There has been a lot of confusion about the Commission having to approve this because, as the first speaker said, the application has been made and the boxes have been checked. They have been checked but they do not meet the conditions. They cannot meet the conditions under the borough ordinance and the definitions of the conditions. There is some great information tonight using the Borough's own technology which will demonstrate that this application cannot meet the conditions or the standards. It must be denied. The first attorney that spoke tonight made a bad conclusion, it is a misstatement of the law, read it.

Commissioner Carluccio wanted to know if the graph being displayed was part of his speech. Mr. Kinneen said that it shows when he wakes up in the morning and looks out his bedroom window. The graphic shows a 12-foot berm and he is 70 feet above it and will look right over it as if it isn't there. This is the amphitheater effect. This is the equivalent of living in a 7, 8, 10, or 12 story building and there is something going on downstairs. A berm cannot be put up. Under the regulations the berm would have to be 43 feet tall to meet the conditions and standards. If they want to build that then the Commission can authorize it but a 6, 12 or 14-foot berm does not do anything at all. Commissioner Carluccio noted that Mr. Trimble stated that from where it is now it is going to go down potentially another 25 foot. She wanted to know

what difference that made to the graph. Mr. Kinneen said it would not make any difference. Commissioner Carluccio asked if it drops down 25 feet. Mr. Kinneen said to imagine he is in a 7th floor apartment and just a few hundred feet out he will be watching him dig down for over 15 years. Digging down from that elevation to 25 feet deeper, the noise will be horrendous and also the dust. In the pictures shown Mr. Trimble hasn't vegetated anything, hasn't thrown down any grass seeds and every time the wind blows it blows the dust off of that up into the hills and into his and everyone else's houses. Commissioner Carluccio wanted to know how far he is from the gravel pit. Mr. Kinneen said he is across the street on Danver, so how ever wide the road is. Commissioner Carluccio asked if he was 30 or 50 feet. Mr. Kinneen agreed about 50 feet.

Commissioner Foster said he did not want to be disrespectful but if he wanted an unobstructed view of the ocean the only way to get that was to buy it right on the bank. It was mentioned by Mr. Kinneen or somebody else that there is no zoning against a junk yard or car lot. That instead of a gravel pit acres of pigs could be brought in. There is going to be a smell, there will be nothing good to look at but there is nothing that can be done. Here there are some little bits of things that the Commission can try to do. He asked that everyone be aware that the Commission is trying to do everything they can but there is not much that can be done with this grand view. Mr. Kinneen responded that the discussion is not about the grand view. The ordinance is clear that it is not about the grand view or taking someone's view or their view shed. The ordinance speaks entirely to shielding from seeing the actual operation. That is what the fence is about. At a junk yard they put up a fence. The only view consideration is to shield neighbors from the ugliness of this open pit mine. This has nothing to do with the rest of the view which is there. Addressing valid concerns, the owner could put in a pig farm and he is not so why not just take the gravel. He is not cutting off my left arm so it is okay to cut off my right arm.

Mr. Wall wanted to clarify Mr. Kinneen's location to the pit. He asked him how many lots are between his residence and the proposed gravel pit. Mr. Kinneen answered a single lot.

Commissioner Whitney wanted to know who prepared the diagram. Mr. Kinneen responded that Mr. Whitmore who has experience in dealing with this. This is the Borough's technology. They have taken the information right from the borough. It demonstrates that this mine cannot be permitted under the existing law. It is very clear.

10. Lynn Whitmore

Mr. Whitmore explained the graphs. This utilizes the Borough's GIS LIDAR. There will be more to show throughout the night. He gave some history. He worked with Chris Clough when the GIS first started. He has worked with the Borough's GIS system for many years in the professional engineering business. He demonstrated how he obtained and used the information. Going into the Borough's information a transect is ran from a starting location to a certain point. After clicking a button, a side elevation view is shown of that area. Mr. Whitmore then converted that elevation view into AutoCAD where he then put it to scale. He could then measure things and put it in the proper perspective. Each house floor is about 10 feet in height. Everything should be pretty much to scale. He is able to demonstrate the moving berm. To be fair he offered the applicant the option to use this to demonstrate his plans and to be able to move berms around as well.

Chairman Martin wanted to know if that was Mr. Whitmore's presentation and if he was planning on staying to help support other testifiers. Mr. Whitmore said that it was not his presentation but just an explanation of what was being shown.

11. Allison Trimble Paparoa, 3020 Upland Way, Ferndale, WA

Ms. Paparoa recently purchased a home on Kyllonen Drive. She is a multiple decade property owner within the borough. She wanted to speak on a few things she believes she is qualified to speak to and that more is in her letter in the packet. First, on June 1st they opened up the property to the entire public to be there to ask questions, to look at the site, to talk to the family and have a good BBQ. Three people from the opposition took advantage of that. None of those three people are in the room. Of the three parties, two have since changed their position after being there and

the third didn't really have a strong position. What she wants to read is from a letter submitted by Lee and Mark Yale. It says "My wife, Lee and I would like to withdraw our objections to the proposed gravel pit which includes all oral and written correspondence. Per our conversations we are satisfied that the KPB will protect our interests as tax paying property owners. We also have had several conversations with Mr. and Mrs. Trimble and took advantage of the Trimble's hospitality of the open house on June 1st. The current berm on the 2 ½ acre displays the type of berm in use and cannot see the surrounding homes out of the pit as it is now. Our only other concern was the reclamation of the property as this could affect surrounding property values. Upon our tour of the property Mr. Trimble showed us where he has reseeded and reclaimed an area which was done very well. We also realize to not reclaim this property upon termination of mining activity would be a mistake as the property would not have the value as it is in a pristine location." She wanted to extend a thank you to those that did show up with an open mind, asked questions, and were there in the spirit of compromise because that was the intent. They rolled open the doors and invited everyone to come. She thinks that everyone that came felt well received.

She owns a real estate brokerage in Washington state. She is the President elect of the Whatcom County Association of Realtors and her job is to deal with land use and loss of private property rights. At her brokerage she works largely on rural areas, outside of the city limits, trying to help property owners navigate the mounting regulations in order to utilize their properties even for residential purposes. What they love about Alaska is the ability to live and let live and actually own the property and the bundles of rights attached and intact. This is a slippery slope with the next step being Borough wide zoning with restrictions on all properties including residential. One of the scare tactics that has been brought up is that there will be a devaluation of property values around the gravel pit. The Borough Assessor claims that they do not devalue properties or change the assessments based on property being located near a gravel pit. Further practical use shows that there have been two sales recently at full asking price in the area and there is third one that is pending. She called and spoke to the listing agent and asked if he believed there was any impact on his sale from the adjoining properties. He asked if she had the property that has the old conex butted up against it. She told him no the gravel pit down below and he said it was never mentioned and did not seem to have an effect on the sale and it was a solid sale price. A letter was also provided from Marjolein Cardon, a realtor at the Kachemak Group, stating that she was solicited by a complainant to get a CMA on their property because they were intending to sell it. They lead her to believe that she would be listing the property but on her arrival they only talked about the gravel pit, twisting it to fit the narrative and did not list the property. She referred to their tactic as panic peddling and shared her experience with property values next to gravel pits. She just wanted to state that there is no truth to the fact that it will devalue the properties. As property owners themselves that would be the last thing they would try to do in that area. They have not made a living as gravel pit owners. They made it as property owners. It was pointed out very clearly that they have sold a lot of the properties in this area, are very proud of it, and have done a good job of being good stewards of the land. She struggled with what to say because it is really easy to get caught up in trying to respond to the inaccuracies, misinformation, and defamation from the opposition. What it comes down to is that the Commission's duty and charge is to deal with what is set forth in the CLUP. The superseding code to be met is set forth in this Ordinance. In all three recommendations from staff, her parents have voluntarily met or exceeded the required standards. The Planning Commission is a thankless and difficult position especially faced with these sort of antics however, what the Commission is charged with is to follow the code and ordinances that are set for everyone through legislation. In this situation it is simple. The conditions have been met and the permit must be issued. It is also time that this decision is made to stop unnecessary use of tax payer's dollars and to end the damages being done to the applicant.

Commissioner Whitney wanted to know about Yale's property and what level their property is to the gravel pit. Ms. Paparao said they are on the same level and would be bordering Phase 3. They would have direct impact from Phase 3. Commissioner Whitney asked that since they are on the same level they would just be looking at the berm. Ms. Paparao said yes since they adjoin.

12. Gary Sheridan, 34860 Seabury Ct., Anchor Point

Mr. Sheridan he is a secondary, a lot away from the view down into the gravel pit. There has been a lot of back and forth about statement of fact. He would like to provide some statement of fact that can be looked at. Earlier he had a packet handed out of photos that show the Anchor River Road. Some of those photos are in the other packets but he wanted to submit all the photos he took. The Anchor River Road, which is proposed by the gravel pit owner to be part of the haul route, is in terrible condition. In a letter to Bruce Wall, KPB Planning Department dated March 21, 2019 from the State of Alaska Department of Transportation, Joselyn Biloan, Area Planner, stated Anchor River Road is in extremely poor condition and additional heavy truck travel will only hasten further deterioration. That letter is in the packet. The Beachcomber LLC gravel pit application states that they plan to haul 50,000 cubic yards of gravel each year for 15 years from the proposed pit on Danver Road. The only access to other destinations from Danver Road is the Anchor River Road. If estimating the pit operations have a 5-month season, moving 50,000 cubic yards of gravel would equal approximately 5,000 cubic yards per day assuming a 100-day season. Gravel truck will carry in excess of 10 cubic yards per load which means the pit operation under the proposed gravel pit application will haul about 50 gravel truck loads on the Anchor River Road per day. In addition, there would be 50 empty trucks returning. That is a lot of gravel trucks. Gary (?), a long time highway construction contractor in Anchorage has stated that the present condition of the Anchor River Road simply will not hold up to this kind of heavy gravel truck traffic. In a recent public hearing at a Material Site Work Group meeting the owner of the proposed gravel pit stated that they decided to limit their annual production to 10,000 cubic yards per season. This is rather curious as their gravel pit application states that they plan to haul up to 50,000 cubic yards. 10,000 cubic yards of gravel being hauled over the Anchor River Road means that 10 heavily loaded gravel trucks will travel the Anchor River Road one way each day and return empty for a total of 20 gravel truck trips per day. He spoke with Mr. (?) about the lesser hauling and he stated that even 20 gravel trucks per day will seriously further damage the Anchor River Road. It has been stated in written testimony by Mary Trimble that Beachcomber LLC in a letter dated May 31, 2019, "The Anchor River Road is not in horrible condition any more than most paved roads in our local area, Homer or the road to Anchorage." He asked if the pictures he submitted look anything like the road from here to Anchorage. He took 95 photos of the Anchor River Road, documenting its present condition. He found serious deterioration the complete length of the road. Pavement slumping along the sides of the road is evident nearly the whole length. The slumping in the worst case is about 6 inches deep by about 2 feet wide. Concrete slumping is a result of heavy traffic causing the road bed to depress below the concrete. Concrete is broken in many locations. Significant cracking is noted throughout the roadway which will further deteriorate with increased heavy truck traffic. Further in the letter from DOT to Bruce Wall, March 21, 2019 it states "We request the Kenai Peninsula Borough item 4 require pavement repair on the Anchor River Road by the Kenai Peninsula Borough in the event truck hauling creates obvious pit holes, rutting or pavement damage." The fact that DOT will hold the Kenai Peninsula Borough responsible for any damage to the Anchor River Road is a sobering fact. They consulted with a highway construction owner that estimates the rebuilding of the Anchor River Road could cost KPB between \$175,000 to \$300,000. As a side the Department of Transportation recently did some ditching along the sides of the Anchor River Road and ended up with a shoulder from 12 to 15 inches wide so those people concerned about safety have serious reasons to be concerned.

13. Richard Carlton, 73500 Seabury Road, Anchor Point

Mr. Carlton wanted to speak for his wife who was unable to attend. The road Gary was talking about is 1.2 miles. There are 5 campgrounds, 212 campsites in there and that is not including the Silver King RV Resort on the side of the hill. The density of people in that area can really be high especially around holidays. That little 12 to 15 inches on the side is truly a hazard because a lot of people use it to walk and get to the beach. Gravel is something we need. We need gravel. The ground around Anchor Point, his area, is up on the hill and things move around. It is like a peat, mud. It is just now drying out to where people can do things. Last July the Planning Department presented the Commission an application that was grossly incomplete due to buffers and berms and were designed using only subjective guess work. The Commission correctly denied the application. Tonight is a replay of that submission because the application again indicates berms that are totally subjective, arbitrary, and unable to provide the protections that are mandatory

conditions and standards spelled out in the KPB code. By using the KPB GIS technology they have produced substantial evidence to prove that once again the Commission is being pressured by staff to approve an incomplete application. Staff seems to be of the opinion that the obvious be ignored. The large percentage of neighboring property owners will have little or no screening from the noise and visual impact but vote to approve the permit. The Commission's function is to act as the judge in this case and insure that meager protections afforded the residents in the Kenai Peninsula are guarded and upheld. (He attempted to play a recording but it did not play.) He stated it was Mr. Trimble talking about what was previously stated in print. That it is really up to the people that live around there to protect themselves from the offensive things they find about a gravel pit. That includes building a fence, or buying nice blinds that come up from the bottom to block out the gravel pit and still see the view.

14. Todd Barman, 73300 Tryagain Ave., Anchor Point

Mr. Barman referred to page 79 and 80 in Volume 1 of the packet, under findings of fact number 15. It is about buffer zones and he had questions. The following items mentioned the word adjacent, letters B., C., D., E., H., I., and Q. He wanted to know why the code would require that all property owners within ½ mile of a proposed material site be notified when the findings of fact written by the Planning Department make it appear that only adjacent property owners will be afforded any of the mandatory protections. The only reference to adjacent in KPB 21.29.040 is the protection against physical damage to adjacent properties. He wanted to know if it was the intent of the application to only provide visual and noise protections to adjacent properties when the code in 21.29.040 and the six standards specifically say other properties. These findings of fact seem to indicate that the Planning Department has taken it upon themselves to change the code and ignore the other property owners. In this neighborhood there are many other properties that will be severely impacted if buffers and berms are not of sufficient height and density to provide visual and noise screening as required in KPB 21.29.050. Letter Q. in the same section states that each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the material site, the distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site. He wanted to know where it says in the code that only some of the neighboring properties need to be protected by buffers and berms of sufficient height and density. The applicant has publically declared that neighbors that do not like what they see and hear coming from his mine should be utilizing window shades, hearing protection and fences. He wanted to know who makes the decision as to who gets sufficient visual and noise screening as is required in the code and who gets to pull their shades and wear earplugs in their own homes for the next 15 years. Everything that is spelled out in fact Q. is the exact reason that this particular material site application needs to be denied. If mandatory conditions cannot be met then the Commission is required in KPB 21.25.050 to deny the permit, not just disregard the obvious deficiencies in this application and allow an industrial gravel mine of this magnitude in the center of a residential and recreational neighborhood. Vacation time is precious to everyone. He asked if you were camping and at any time of the day had to listen to gravel being processed whether it be screening, crushing or loading trucks, would you ever come back to that campground or RV park? There are 100 campsites, 100 RV sites within ear shot of this proposed site. Not trying to take away potential income from one man but trying to save a recreation area that thousands of people use. Unfortunately, this doesn't seem to matter.

15. Ryan Muzzarelli, PO Box 170, Anchor Point

Mr. Muzzarelli lives on Kyllonen Drive, behind Rick Oliver. He then referenced the map on the display.

He wanted to testify in favor of private property rights and his neighbor's rights to make a living. He has spoken to the Trimble's on multiple occasions and they are incredibly proud of their property. He is confident that they will not only maintain the property but provide a lot of value to the community.

16. Ed Martin III, 37200 Thomas St., Sterling

Mr. Martin is the President of the Kenai Peninsula Aggregate and Contractors Association. It is comprised of almost 60 professional contractors all doing business in the KPBA. Over the past year they have been involved and scrutinizing the material site regulations for the Borough. He personally has put in hundreds of man hours in researching all the facets that make up the current code. Tonight he would like to speak about one in particular, which is the view. View shed, the regulation of and the right pertaining to it, are commonly misunderstood. Also, commonly thought of as an entitlement. A good part of his weeks of research was dedicated to just this debate. What he found was probably not what many people want to hear but it is fact. There are only three ways a right of a view can be regulated, taken from or given to an individual across this nation. One, the federal government holds view shed rights for our national parks. Two, some cities and first class governments regulate view shed of large areas by way of zoning, including all lots or parcels within that area. Finally, view shed rights may be given from one entity to another by way of purchase or contract. There is not precedence of regulation on an individual parcel of land. None of these options can apply to our second class borough. He has in his possession a copy of the OLR report, which was provided to the Commission. After hours of research it is the most complete explanation of the precedence of these rights. He would like for all of the Commission to read it. Also, as this issue goes beyond what is in front of them today he would encourage them to not take his word for it but do their own research. He asks that they rule in favor of the applicant tonight as the vast majority of the opposition is opposed to the application because they just don't want to see it. He has heard hours of their testimony stating that sentiment. It doesn't change the fact that they just don't have the right to the view over their neighbor's property. It also doesn't change the fact that our current governing body can grant that right. He is encouraged the KPBA Planning Commission and Assembly to strike any language of view, visual impact, or view shed from their current and future ordinances.

17. Vicky Hodnick, 35031 Moffit Lane.

Ms. Hodnick let the Commission know that she appreciates them being there and allowing them to present. She takes exception to Mr. Martin's remarks. She has been a resident on the Peninsula for 30 years and she was assessed on her view property down in Homer. The majority of the people, other than the visitors that come during the summer to camp and fish, are senior citizens. This is their final home. Something that is kind of disturbing is that they will spend their final retirement years being entertained by Caterpillars and gravel trucks and all the other things involved. They cannot send the grandkids out to ride their bike during the time they are visiting. They believe that the Commission delivered the correct conclusion on July 16, 2018. Although it was remanded back to for adequate findings of fact they feel the same evidence prevails today. They are here to remind the Commission that they love their homes and community. There are many legitimate reasons to deny this permit which are not presently covered in the code. Some of these things should be covered in the code because there are very few things they can find that actual protect them as law abiding citizens of the Borough. Kenai Peninsula Code 21.29.040 states

the standard for the material sites. These material site regulations are intended to protect against aquifer disturbances, road damage, physical damage to adjacent properties, dust, noise and visual impact. Only the conditions set forth in the code 21.29.050 may be used or imposed to meet the standards. However, the prelude to these standards is clarified which is to protect the existing surrounding land uses against the negative impact of material site operations. A standard is added for providing consistency with the Borough Comprehensive Plan which they have heard nothing about. In other planning documents as land use regulations are required by the Alaska State Law to be consistent with the Borough Comprehensive Plan. A simple rule of thumb would be if there is a house don't start a gravel pit, if there is a gravel pit don't build a house. Most of them in their neighborhood spent the last winter going to the material site meetings as they were developing new restrictions and regulations for gravel mining. There was a gentleman that came from the valley and said just because there is gravel it doesn't mean it has to be dug. She thinks just because there is a history in the community of a former gravel pit does not mean that everyone is entitled to have a gravel pit thereafter. Things change, communities change and when families move in and create settlements even in a rural residential area she thinks it needs to be considered. This community hosts 5 state campgrounds, 3 private campgrounds, 70 or 80 units in a summer residential park, and 50 to 60 permanent private homes close to the proposed site. A tractor launch and a road that has been determined as tsunami exit route. There are moose, fish, nesting eagles, a rickety bridge, and a narrow road. DNR recognizes that this site hosts archeological and historic artifacts and cemeteries. The proposed mine site has established homes located on three sides of it and on the fourth side is Cook Inlet itself. A 15 year permit for this gravel pit will drop property values and disrupt the quality life for hundreds if not thousands of people due to noise, dust, traffic issues and visual blithe. The impact of the health of the Anchor River is potentially devastating and could damage the fish population in the future. Please note that none of these concerns are really noted in the code. The mandate to the Planning Commission as spelled out in the Kenai Peninsula Code 21.25.050 is to approve, deny or modify the application. Approval is only allowed when the minimum requirements of the code are met. Anything short of that would allow the Commission to modify the application to a state to meet the requirements or to deny the application for the fact it would be considered an incomplete application. In July of last year this Commission rightly denied an obvious incomplete application and failed design of a buffer zone that complied with conditions that are set forth in code 21.29.050. As a result, it failed to meet the mandatory standards of 21.29.040. Tonight the neighboring property owners are here to prove once again that the arbitrary numbers to design the buffer zones in this application are totally inadequate resulting in this application being declared incomplete and therefore should be denied once again.

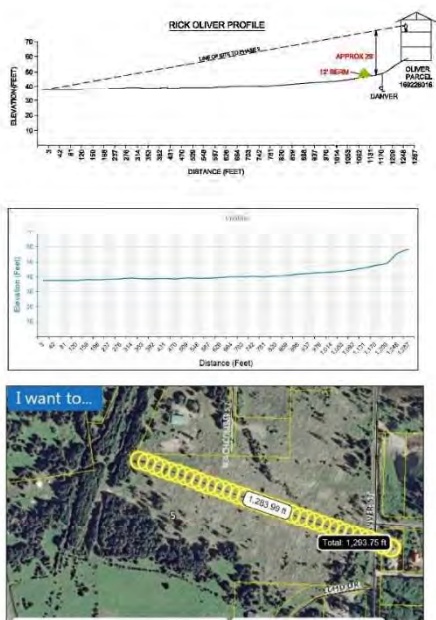

Commissioner Fikes said Ms. Hodnik stated her view was assessed by the borough. She wanted to know how many lots away from the property she was. Ms. Hodnik said they are on four acres now but when she was in Homer she had 30 acres. Commissioner Fikes asked if it was waterfront view. Ms. Hodnik said it was. Commissioner Fikes asked if what she was referencing was waterfront view. Ms. Hodnik said yes. Commissioner Fikes followed by asking how many lots are between her property and the proposed pit. Ms. Hodnik said they are about 1,000 feet away and on the same level.

Commissioner Ecklund noted that she mentioned the archeological site and cemetery possibility which had been heard in prior testimony. She wanted to know if anyone was contacted to look into that, research and determine if it is so. Ms. Hodnick said she has and it is recorded and most of the people thought she was looking for some kind of grant in order to save that particular site. She told them it was on private property and the response from the State and National level is a little interesting. Going back to thinking about what we want to keep and the history we want to maintain in the state itself these are important things to think about before being dug up and become part of a gravel pit.

18. Rick Oliver, 34880 Danver St., Anchor Point

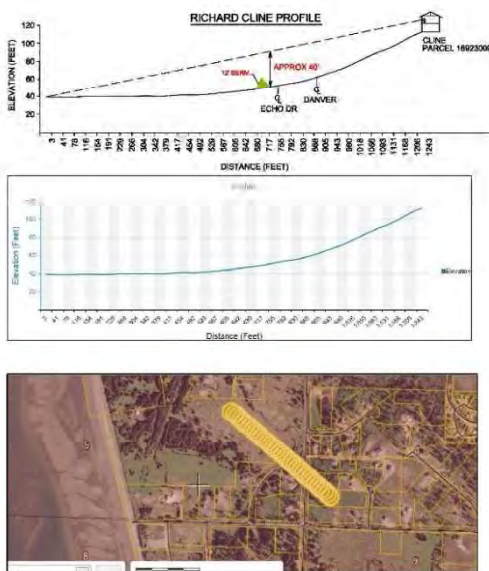

Mr. Oliver stated that they have spoken many times as to who can see what from where, what the setbacks should and could be, and how high the berms need to be. This has been considered a

subjective subject and no one other than Mr. Wall has come to look. It appears the borough's idea of minimizing the view, dust and noise is a random tree here and there. What they wanted to show is hard evidence from the data provided by the Borough's own technology. They have several profiles, one of which is from his house. All the other profiles and most of the affected neighboring properties are at a much higher elevation than his. They have a visual presentation to show the Commission profile from the effected home sites to areas within the proposed mining site. This will also help to dispel the effectiveness of the ludicrous moving berms as site levels can be shown from all appropriate angles. Hopefully this can minimize the subjectivity and provide clear and indisputable evidence showing this application can never meet all the borough standards. Speaking on the presentation by Mr. Trimble. it amazes him to think that this lovely property beautifully maintained, Mr. Trimble has done a fantastic job at presenting all of the lovely trees but where are all these lovely trees going to go when they start mining gravel. He is going to be 25 feet below a berm. Where does the 25-foot hole come from?

19. Richard Cline, 34926 Danver, Anchor Point

Mr. Cline thanked the Commission for their time and service. Their time and effort is appreciated. He likes to learn something every day and today he learned that putting a gravel pit in a neighborhood does not decrease property values. They directly overlook the material site even though not adjacent. When Todd brought up adjacent versus the other it is a very meaningful thing to him. They will always be able to see Mt. Redoubt and Mt. Iliamna which is the view shed, but their view will have a negative visual impact, which is the wording of the code. Negative visual impact not the view shed. We don't have to worry about the National Parks interfering with anything they are going to do. He has some questions and they are hypothetical. Why does everybody in the borough that he has talked to, in the Planning Department and elsewhere, say the permit is going to be granted? That was from day one when he got notified last year that this is in the works. He called to know more about this and they said it doesn't matter what you think, what you do, how much money, time or effort you put into it just take it for granted that it will be approved. Why is that an automatic thing? Which leads to something that is curious to him and they may want to think about. If that is true, why does the Borough, the Commission, the Assembly allow them to waste their time, effort and money in this process at all? He thinks they are just opening themselves up to a liability in that regards. They have put a lot of time, money and effort into this. He again asked if this would make them susceptible to some kind of liability. No one denies the need for gravel. That has been heard from everybody, the gravel guys of course and them as well. They know what it has built they just deny that it has to come from the middle of their well established and ecologically fragile neighborhood. Referring to the presentation he noted that with Lynn's help the Commission can see from his deck, he knows that Emmitt and Mary are very familiar with this because his security cameras caught them on his deck taking movies and making snide comments when they were not there. They can see over the top of the berm. They would basically need a 43-foot berm to conceal and minimize

the visual impact of just one portion of the pit. While he is not an earth mover he is pretty sure a 43-foot berm in an unworkable berm. He likes the idea of a 43-foot berm on the far end with a 25-foot hole behind it and be able to watch as they move it towards his house in the rolling berm deal. Another problem with the topography of this location is that the entire area acts like a megaphone.

Everything blasts up the hills. Steve needs a 53-foot berm because he is a little bit closer. That is just some of the houses that are up the hill from the site. This is the Borough's technology. This is not smoking mirrors. This is math. His cabin sits a bit higher than Rick's. Rick is right across the street from it. The argument that there is no way a berm could ever work is not true. They can build a berm high enough; it is physically possible it is just unrealistic. If the Commission wants to put the limitations or some type of modification to the requirements of the mandatory conditions, then say a 43 foot or 53-foot berm is wanted. Would that satisfy him, no obviously, but if it keeps the pit from being built then it would satisfy him. Just saying no berm will ever do it is not really true but it is true in reality. The permit submitted is flawed, it is incomplete at the least and is truly unacceptable on its own. They respectfully ask the Commission to act on behalf of not only the small group facing the total destruction of their neighborhood but the countless other citizens of the borough that could soon see the same thing in their front yard. He asked that they deny this permit on the grounds that the true findings of fact supported by overwhelming substantial evidence shows that the mandatory standards will not be satisfied in the permit's

application.

20. Charity Jacobson, 72150 Griner Ave., Anchor Point

Ms. Jacobson is about 3 miles from the proposed gravel pit. It may not be to relevant but they can hear a rock crusher that is 7 miles away from on the other side off North Fork Road. If this proposed pit goes in they will be right between and it will be twice as loud. Also, in the ordinances for a gravel pit it is not a one size fits all for each area and location and this should be looked into as far as residential areas, recreational areas, or state land. If this was out in the middle of nowhere it would not apply to some of these regulations. Also, it has been stated that a gravel pit does not have any physical damage on the adjacent properties. She asked if any of them would knowingly purchase a retirement home with an active gravel pit between 100 to 1000 feet away for the next foreseeable future.

21. Jim Reid, 73820 Seaward Ave., Anchor Point

Mr. Reid had a few questions. What is a natural berm, what does it consist of? What is the definition of a natural berm? Mr. Wall was not sure exactly what he was looking for. The code does not discuss a natural berm. Mr. Reid said there are a bunch of logs and debris from a lot clearing stacked up about 15 to 20 feet along Denver. He wanted to know if a natural berm consists of live trees growing if so they could all go home because it will be 30 years before he gets 25 foot trees. Mr. Wall said the code requires earthen berm with a 2:1 slope. Mr. Reid asked if that is a bunch of logs and debris that gets covered over with dirt. Chairman Martin said it is an earthen berm not a natural berm. Mr. Reid said he was told it was a natural berm. He asked if it is an earthen berm does it have to be dirt and not a bunch of logs and stuff stacked with dirt over it. Chairman Martin said it is within reason. They will not limit it to every last piece of wood. Mr. Reid knows we have to have rock and gravel but he doesn't understand the part when you bring the gravel in. They have a gravel pit within 2 miles of their house on Old Seaward (should be Sterling) but he didn't move next to gravel pit. If someone moves next to a gravel pit or airport don't cry, but when a whole

residential area is there and the pit moves next to you that is a different situation. All gravel pits cannot be under the same rules they are all different. Go where nobody cares because there are no houses or people. Here is a situation that all these people live and use this area and now a gravel pit is moving in.

22. Roger McCampbell, 73450 Seabury Road, Anchor Point

Mr. McCampbell played audio of birds chirping. About a year ago he bought his piece of property, after looking all over Homer and he could have bought anywhere he wanted in this state. He lived in Homer for 31 years and he has loved the Anchor River valley since he moved to the area. He spent the night on his front porch for the peace and quiet on Memorial Day weekend knowing that would be the weekend of the most noise and disturbance. The reason he knows that is he was a district supervisor park ranger for the Southern Kenai Peninsula for 31 years and knows the area very well. He knows Emmitt very well and has a great deal of respect for him and his family but this is the wrong gravel pit in the wrong place. He does not see it from his place. He lives 4/10 of a mile away from it. He can hear the waves breaking on the ocean at night or in the morning when it is peaceful and quiet. He likes his peace and quiet and that is why he moved there. He retired 5 years ago. It is not about the scene. He doesn't see it but does drive by it. He doesn't particularly like to look at gravel pits and he doesn't know who does unless they turn into giant swimming and fishing holes later. He owns a lot of heavy equipment himself and runs a cattle ranch in Northern California. People say don't Californicate Alaska and that is exactly what is being done. His neighboring ranch has a rock crusher and he can hear it when sitting around his campfire and it is 15 miles away. He can hear the rocks and gravel trucks. He owns two gravel trucks and a couple of bulldozers. He is not opposed and doesn't think anyone is opposed to gravel pits. He was looking at several lots around him to buy and develop for rental units. He has been in the business long enough to know that when people come and stay in an Air BNB they want peace and quiet. Most of those campgrounds, Halibut and Slidehole, were developed for family camping. Memorial Day weekend is crazy. After that it calms down. There is always a someone on a dirt bike with a muffler off or a 4 wheeler. The Anchor Point Beach Road is an ominous road. It is state park land at the edge of the pavement. State Parks allowed DOT to dig out those culverts this year because of drainage issues and the saturation underneath the road was causing it to buckle even more. If anyone is thinking they have an excuse to widen that road and make it safer they will have to battle with DNR and State Parks because that easement is pavement to pavement. It is not an extended easement off that. Since Todd was permitted years ago and long before him when they permitted the tractor launch operation, it increased the visitation on the beach area. A lot more charters and they are not little charter boats, they are a wide load. Trying to pass on that road, trying to have kids ride their bikes, walk up and down that road, it would be nice to get the pedestrian and bike path the Anchor Point community has been fighting for. His point is he doesn't want to hear it. There is more to visual but he doesn't care about views. He owns view property and he never looks at it because he is busy. Referring to the Resolution, item 15. and E. says these parcels are less impacted by the material site then the adjacent to the site as sound dissipates over distance. He is 4/10 of a mile not 15 miles. If he can hear waves breaking and seagulls down on the beach. The Old Sterling is behind him so he will hear the gravel trucks going up and down the Beach Road and then behind him on the Old Sterling. It is a noise issue for him.

23. Larry Smith, 320 Artifact St., Soldotna

Mr. Smith noted that Mr. McCampbell mentioned the Slidehole campground. He constructed the campground in 1992 back before the Anchor Point Road, was paved. It was a narrow, nasty little gravel road back then. They bought their gravel from Mr. Kyllonen at the gravel pit at the top of the hill. They constructed the campground and they didn't hear a lot of opposition back then about the gravel trucks traveling down the Anchor Point Road or Anchor Beach Road. He is there to support Emmitt and Mary Trimble in their request for this gravel material site application. He has spent a great deal of time the last year or so studying the Kenai Peninsula Borough gravel ordinances and got a real education. He thought he knew something about gravel. He owns a construction company and owns three gravel pits. He has bought gravel from many of the gravel owners throughout the borough including the State of Alaska, US Forest Service, and the Kenai Peninsula Borough. He was born in Seward and raised in Cooper Landing. Back when he was a young man

gravel was not a dirty word. It seems to have become a dirty word now. Even though everyone is in a building built of concrete that has gravel, traveled on paved roads that the asphalt is made out of gravel. The foundations of our houses, our driveways are made out of gravel. There is no doubt that gravel is important to all of our lives. It always has been and always will be. But he doesn't think Mr. and Mrs. Trimble should be penalized for asking for a gravel pit on their property. He agrees with Mr. Martin that view shed and visual impact is some language within the Borough Ordinance and it is a feel good term but there is very little case law having to do with view shed and visual impact. He asked Mr. Kinneen at a meeting earlier this year if he had a right to the view shed over his neighbor's property and he said he did, it was an absolute right. Mr. Smith does not believe that. He empathizes with those who don't want to look at a gravel pit and this is not going to be a popular comment but if you don't want to look at the gravel pit then buy the land. Offer Emmitt and Mary Trimble some money for their property and then it can become your property and you can turn it into a pig farm, junk yard, or car junk yard. Last thing to comment on is if you don't like the Ordinance then change the Ordinance. The Ordinance as it exists today, the requirements for the material site application have been met. He believes it is the duty of the Planning Commission to approve the application. He is a realist and the Commission has a thankless job. He believes that no matter what the Commission does this is going to end up in litigation. He urges that they support the application.

Commissioner Whitney wanted to make sure he heard something correctly. He asked if he built the campground in 1992. Mr. Smith said he believes it was 1992. They had a contract with DNR Parks and built the Slidehole with an addition to the campground. Commissioner Whitney asked if they used Anchor Point gravel. Mr. Smith said they used gravel from Mr. Kyllonen who had a gravel pit right up the Anchor River Road, across the bridge, and above the bridge. They bought gravel from him and built the campground. Commissioner Whitney wanted to know if the area was built up as it is now. Mr. Smith said pretty much. The crowd responded and he said he guessed not. He said there has been talk about safety on this road. These 40-foot diesel powered land yachts that people come up with from the lower 48 are on the road. Anchor Point Road is a dangerous road but it is not going to be any more dangerous with the gravel trucks then it is with all the tourist traffic that is going on today. The crowd responded again. Chairman Martin reminded the crowd to keep a polite meeting decorum must be maintained and everyone deserves respect.

24. Chris Crum, 72485 Ester Ave., Anchor Point

Ms. Crum, her husband and five children have lived in Anchor Point since 1987. She taught at Chapman School for 25 years and has since retired. All of their children went to Chapman school, graduated from Homer High School, went outside to college and came back to Alaska. She and her husband have done 9 transactions with Emmitt and Mary through Coastal Realty over the last 25 years and she wanted to say that they were very professional and everyone got what they wanted. She sat through two hearings and she came to the realization that this is not really about a permit. She has read all of the regulations and codes and Emmitt and Mary have done everything that is required of them and beyond. This is about not in my back yard. She understands that. It is also about private property rights. One of the meeting it was said there was a rock crusher, a D9 dozer, Grizzly and a big operation which was not factual. Every day she goes down to feed her horses on that property. So she goes down Beachcomber Road and passes Danver and there has never been anything like that down there. The road is in bad shape. They have lived in Anchor Point for 30 plus years. It has always been a dangerous road for kids, moms pushing strollers, there is no sidewalk. The road started to deteriorate 15 or 20 years ago when the tractors came in and took over the beach. There are huge charter boats traveling on that road every single day of the summer, starting in May and ending around Labor Day. Some of them should not be going across the bridge because they are big. People are concerned about trucks on the road and the bridge. The bridge is rated for 11 tons. Loaded gravel trucks should not be on that bridge they will have to turn right and go around on the Old Seward (Sterling) Highway. That is what they are going to be doing. So that's a fact. She also wanted to give a shout out to the truck drivers in Anchor Point. The majority of the business, the majority of the employment in Anchor Point, meaning over 50 %, is trucking, hauling dirt, gravel and gravel pits. The area needs the business and the money. She wanted to say that the Trimble's have done what the Commission required of them. Gravel pits

are regulated by the Kenai Peninsula Borough statutes, the State of Alaska and MSHA which is Mine Safety and Health Administration. They have good policing abilities. The noise, the dust, and the safety all have to be complied with in a gravel pit. She knows it is going to be a hard decision. The Commission has the ordinances and the regulations. They also have the application for the permit and she is asking to weigh heavy on how it has been written, how it is being followed, what has been done and do the right thing.

25. Hans Bilben, 35039 Danver Rd., Anchor Point

Mr. Bilben played the audio that Mr. Carlton had tried to play earlier. It was a recording played from his phone of Mr. Trimble speaking. "You are looking to the operator or the gravel pit owner to solve the other person's problem on their property with their money instead of them solving their problem. Build a fence, get some blinds, get some ear plugs. So in answer to your question about responsibility if it is an unzoned area no." That was the applicant telling them how to protect themselves from his gravel pit. He said he didn't want have blinds closed, wear hearing protection in his own home or have to build a fence to protect himself. He wanted to make a couple of corrections. The applicant talked about a 25-foot-deep hole but the application calls for an 18-foot excavation. 20 feet to water and you have to stay 2 feet above it. The applicant has checked all the boxes but he hasn't met the conditions of the code. What is trying to be decided tonight is if he has met the conditions of the code. Talking about a charter boat going across the bridge. He ran a charter boat for 16 years. A heavy charter boat is about 10,000 pounds versus an empty dump truck at about 22,000 pounds and double that for a loaded dump truck. Last July the Commission correctly voted to deny this application and made the findings of fact that the noise would not be sufficiently reduced with any buffer or berm that could be added. The word any is the key. While the intent of these findings is abundantly clear they are lacking any reference to specific sections of the code that define the mandatory conditions and their lacking supporting evidence. The hearing officer on appeal ruled that the commission exceeded the scope of their authority in denying this permit based upon its determination that the conditions would not afford adequate protection from noise and visual blithe. He agrees with the hearing office. The findings of fact had some problems. The planning department seems to be of the opinion because the hearing officer said this that this is proof positive that the Commission must approve this application. To the contrary the hearing officer did not rule that the Commission lacked the authority to deny the application to do so would be counter to the code. KPB 21.25.050 says the Commission has three possible outcomes, approve, deny or modify an application. A very important point here is that she did in fact affirm that the denial. She did not say give them the permit. She affirmed the denial. The authority granted to the Commission in 21.29.050 is to ensure that buffers and berms are of

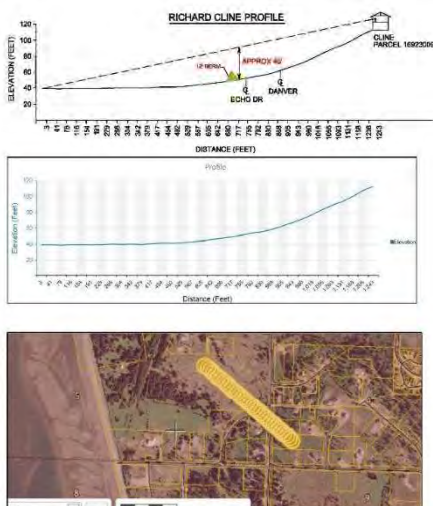

sufficient height and density to provide visual and noise screening of the proposed use. That is what needs to be determined tonight, if they are of sufficient height and density to provide visual and noise screening of the proposed use. If it can't do that then it can't be approved. Buffers and berms are the industry standard and if properly designed they should protect neighboring properties from noise and visual blithe. The key words here are properly designed. That is what the GIS technology is about. The Commission can have a hard time trying to determine what the buffers and berms are all about and what they do when used together. With this Borough technology it is easy to look at it and see what works or doesn't work. He doesn't know why the Borough is so hesitant to get into that. Yes, the Commission probably exceeded the scope of its authority by saying that there would not be any buffers and berms that could screen the proposed use but did not exceed the scope of its authority by the denial. A better finding of fact might have been that the application was not of sufficient height or density to provide visual and noise screening. The Commission needs to tie findings of fact to the code. The hearing officer sent everyone back here tonight and this is what she wanted us to do. List findings of fact referencing the mandatory conditions listed in

KPB 21.29.050 and detail the substantial evidence that supports those findings. The findings of fact are in the packet and another person will speak to that. Obviously, we feel that putting this large scale mining operation in the heart of a recreational and residential area should be denied for a multitude of legitimate reasons but more important it must be denied because it does not meet the mandatory conditions of the code. In KPB finding of fact 15. Q. it states all of the reasons that this can't meet the code. One of the previous speakers talked about 15. Q. and the findings of fact from the staff. They are basically saying a large percentage of the neighbors in that area cannot be protected but yet they want to issue this permit anyway. In closing, the applicant claims that this is just a mom and pop operation and that they are going to maybe move 10,000 yards a year. What they say or may not say is irrelevant. What is relevant is that if this permit is approved it will allow for mining of up to 50,000 cubic yards per year for 15 years on 27 acres of commercial mining that cannot be sufficiently screened from neighboring properties. They are claiming that this is a legacy property. Most of us in this room, our home property, quality of life is our legacy and we would like to protect it.

26. Ann Cline, 34926 Danver, Anchor Point

Ms. Cline and her husband purchased two lots from the Trimble's in order to build a cabin for their grandchildren. They created a trust for their decedents to enjoy the peace and serenity that is there. She wrote a detailed letter based on her research of mining operations in the United States and Canada. She addressed the finding of fact, in particular the noise decibel research that has

been conducted both in Canada and United States regarding mining operations and excavations. Regarding one of the previous speakers some of us, herself included, are not financial able to offer the Trimble's enough money to satisfy them in order to buy that land so that they could keep it as a park land or campground. They are not able to do it. That is why they need the Commission's help in controlling the use of the property. Regarding the freedom of decision as a previous testify said, and she agrees, if you want to have peace and quiet then don't buy a home next to a gravel pit. If you want to have a gravel pit don't put it in the middle of an existing neighborhood. She implores the Commission to please help them, the Anchor Point community, which is all of them in attendance. Not all are speaking out of respect for time but they would really humbly request that the Commission consider thoughtfully and uphold and affirm their denial of this permit.

27. Lauren Isenhour, 34737 Beachcomber St., Anchor Point

Ms. Isenhour wanted to talk about sound. She wanted to talk about sound and the claim from the opposition that hearing sounds from the gravel pit activity will destroy the value of their property. Private property rights in their area are very important to all of the that chose to live in Anchor Point. Many of them utilize their acreage for activities that are not allowed within the city ordinances of Homer and the like. ATVs, snowmachines, chainsaws for firewood, free range dogs, livestock, home improvement projects and the mowing of their lawns. ATV sounds range from 90 to 100 decibels. Snowmachines and motorcycles are around 100 decibels. Chainsaws are around 110 decibels and riding lawn mowers are around 100 decibels. From her research construction tools such as chopsaws, sanders, drills, etc. operate between 90 and 100 decibels. Her diesel truck is over 90 decibels at 50 feet away. These are all activities and machines that are routinely operated in her neighborhood and are acknowledged as socially acceptable by everyone. None of these activities or machines are restricted by Borough regulations to only operate during particular hours and are not required to mitigate the sound created by their usage. After researching decibel levels of these common activities she was surprised to learn that the sounds created from gravel equipment is notably less than the items she spoke of. A backhoe from 50 feet is 80 decibels, 100 feet is 74 and 300 feet is 65 decibels. A bulldozer from 50 feet is 85 decibels, from 100 feet is 79 decibels and 300 feet is 70 decibels. A dump truck from 50 feet is 84 decibels, from 100 feet is 78

and from 300 feet away is 69 decibels. Gravel equipment ranges from 64-85 decibels while her common use home tools range between 90 to 110 decibels. Her family camped over Memorial Day weekend on the Anchor River and she was generally surprised at the high level of sounds created by the campers. ATVs, motorcycles, and dirt bikes ripped up and down the beach road late into the night. Trailers running generators in the campground which operate around 68 decibels. Lots of dogs and music and general camper noise. Regular vehicle traffic on the Beach Access Road is quite noisy since virtually all the campsites are right along the road. She needed earplugs to be able to sleep at night. There was zero gravel pit activity during those three days she was camping. It was not quiet or tranquil but the campground was full of people having a lot of good family fun. The Beachcomber gravel pit has now been operational for about 1 year. Prior to that the prior existing use gravel pit on Danver Street across from the Beachcomber pit was operational for around 15 years. Anyone that has recreated on the Anchor River or camped in that campground within the last 15 years has done so in conjunction with an operational pit. We can and have been coexisting there. The opposition has noted that they would rather this property be developed into a subdivision than a gravel pit. She finds this very curious. If these 27 acres was divided into 27 new home sites, the amount of sound created would surpass the sound of sporadic seasonal gravel activity. The access roads to develop 27 new lots would be extensive and require a lot of gravel and equipment. Building roughly 2 houses a year would take nearly 15 years to develop and the sound from cement, dump, and delivery trucks as well as drilling rigs and general construction tools as mentioned before would operate 5 to 7 days a week for the life of the development. At the end of that subdivision project the property would not be reclaimed as it would be for a gravel development. After 15 years of construction sounds we would now have sounds from 27 new neighbors with loud trucks, barking dogs, lawnmowers and chainsaws and all the other sounds that come from a rural neighborhood. She read all the letters submitted and would like to comment on Phil Brna's statement to the Planning Commission claiming that sounds generated from the gravel pit would destroy both his ability to enjoy his property and well as the general value of his property. Her neighbor is separated by Beachcomber Street and a line of trees and there is nothing to regulate her from mowing her lawn at 100 decibels or operating her chainsaw at 110 decibels or running any number of her power tools, ATVs or snowmachines as they often do at any time day or night. Despite her best efforts, as all her neighbors know, her dogs bark a lot during the night. There are no regulations in Anchor Point to stop or control any of these activities that she routinely does on her property. Phil has never complained to her that her activities jeopardized his property value or enjoyment. There are too many inconsistencies with argument about sound being a detriment to the neighborhood for it to be considered a viable argument. She can create more sound at higher decibels for longer durations on her private property without having to abide to any regulations. If an individual feels so strongly that the value of their property can be destroyed by the activity of their neighbors, then that individual needs to purchase a parcel larger than an acre to be able to personally ensure adequate distance from neighborly activities that they might find displeasing or move to an area with ordinances and zoning that control all residence activity.

28. Buzz Kyllonen, 74200 Seaward Ave., Anchor Point

Mr. Kyllonen was there in support of the Trimble's right to extract gravel from their property. He is actually a property rights person. His real fear is what is going to happen to the Borough. The ordinance as it is drafted, the protective conditions that are there, are for the most part unfounded and what it is doing is inviting people to band together against neighbors. If this continues, he can't imagine anybody wanting to file an application for a material site permit. No one wants to go through the expense and what comes from a mob type reaction to a legitimate activity. He would like to think he is an expert but he doesn't know what the definition is. He began developing property in Anchor Point 40 years ago. Over 30 subdivisions, 500 lots, about \$50 million in assessed value, none of which he would have been able to do under the current ordinance. He owned and operated 12 gravel pits or more within Anchor Point, within shouting distance of almost everyone here. Almost everyone here is a beneficiary of one of his subdivisions. That is what he does and that is what he did for a living. When the ordinance was enacted it put him out of business. He explained why. According to the ordinance if someone exports material from their property A to their property B and it enhances the value of property B an application for a material site permit must be filed. There is precedence set for that. He is here to acknowledge that. Without the permit Mr. Trimble

has he would not be able to transport material to any of his other properties. He has no choice. He has to apply for this material site in order to use the material that he currently owns. As far as the harm and the catastrophic effects of having a gravel pit are totally unfounded. No one has complained about the 12 gravel pits that he had in Anchor Point. At least no one has looked him in the eye and said so. What Mr. Trimble is doing is basically a developer gravel pit. That is the difference between industrial and developer use. There is an industrial use pit in the heart of Soldotna and it is a huge facility. They produce asphalt. They have been there a long time and everyone is still alive and no one has died from respiratory diseases. Anchorage Sand and Gravel is in the middle of Anchorage. They function, life goes on. There is an industrial site in Anchor Point. Homer was built with Anchor Point gravel. Gravel is where mother nature put it not where people want it to be. Everyone should be supporting the Trimble's for opening up some priceless resource like gravel so that it is available. He is a support and no one should have more to complain about this than him. He owns property on both sides. Substantial property that borders this property. More important he is the original Anchor Pointer. No one alive in Anchor Point has been there longer than him. He dates back to 1945. The homestead property is the property that Mr. Trimble owns and is where the material site will be.

Commissioner Ecklund thanked him for being present since he has the longest history in that area. She wanted to know when he had the gravel pit that was operating in that area how many campgrounds or campsites were in the area. Mr. Kyllonen said he developed all the campsites. The State campsites used his gravel. Commissioner Ecklund said that it was stated that there are 5 state campgrounds and 3 private ones and 200 campsites and the Silver King sites. She asked if he built all of them except the state campgrounds. Mr. Kyllonen said he developed over 30 subdivisions on both sides of the road. Commissioner Ecklund wanted to know how many people lived in the area when he was operating his gravel pit. Mr. Kyllonen answered that it has evolved over the years. It was extremely busy in the mid 80's. There was a depression and property sales slowed. The reason he went out of the development business was because of the ordinance. He was issued a cease and desist when he used material from the golf course he created to develop what is now the trooper building. The code compliance officer from the Borough came down and told him he must get a material site permit to build the golf course. He had no choice. He had a half a million into the golf course so he couldn't afford not to apply for the permit to be able to continue. That put him in the category of a gravel pit. He was then fined by the Borough \$20,000 and paid \$10,000 in attorney fees because he exceeded the artificial boundary the Borough imposed. He has a major heartburn about the ordinance and would like to see it scraped and see it rewritten focusing on what should be the intent of reclamation and prudent and proper extraction.

Commissioner Fikes wanted to know with his history of the area and the operation of a pit in the area what his experience of the reclamation was and how much of it did he perform during his operation. Mr. Kyllonen said it would be hard to find where he had a gravel pit. They have all been reclaimed. Commissioner Fikes wanted to know if he ever had complaints about water table contamination during his time. Mr. Kyllonen said it is an unfounded allegation. It is not possible to have happen, evaporation maybe. Digging in the water table was one of his key things. He has several lakes where he dug in the water table and that was one element of this ordinance he would like to see revisited because it does virtually no harm to the environment and offers a place for the moose and ducks. There were two moose yesterday learning how to swim in his golf course lake. Commissioner Fikes asked if during his operations if there were ever any complaints for noise. Mr. Kyllonen said not to him directly. Out of the 500 properties, 499 are close friends. Commissioner Fikes wanted to know if any agencies contacted him with a direct complaint due to his specific operations. He said no. He wanted to add one more comment about the Beach Road. Anchor Point Road, no one has driven a dump truck over that road more than him. Thousands of times prior to when it was paved. When he was on the Assembly he helped get it paved. The State said if \$200,00 could be received from the Mayor they would paint the road black. \$200,000 transferred from the Borough to DOT and they painted it black. He didn't know what that meant at the time. They literally painted it black. That is why the road is in the condition it is because they didn't have any money to improve the subsurface. He added that it was on the state agenda to revisit it in 2020. If it hadn't been for his efforts on the Assembly everyone would still be waiting for the state to do an

assessment. Chairman Martin reminded him of the time. Commissioner Fikes had another question, switching gears to safety, she wanted to know in his experience and with living in that specific area if there were any school activity disruptions with school buses or children waiting for buses. People have spoken or testified tonight and previously about the activity and the trucks passing and going. She wanted to know in his experiences if he ever heard or received any written complaints that would speak to that matter. Mr. Kyllonen responded that three of his gravel pits are within a rock throwing distance of the existing school in Anchor Point. He received and heard none. Truck drivers are professional. Someone was referencing motorhomes. School is not required to drive motorhomes but truck drivers do have to go to school and it is not easy to get that license.

Mr. Kinneen approached and said he already testified. Chairman Martin said he had not been recognized by the chair. Everyone gets one chance to speak. Mr. Kinneen said his testimony was slandered and if agreeing his testimony has some effect here he should be entitled to address it. Chairman Martin said the meeting must proceed.

29. Lynn Whitmore, Anchor Point

Mr. Whitmore used his presentation to discuss the moving berms. The question is what will the neighbors be looking at as the berm moves closer to the homes. The homes are situated roughly at 90 degree angles looking down so it seems that the berms need to cover the full 90 degrees from the people on the one side of the hill and the others wrapping to the other side of the hill. That is something to keep in mind when talking about berms. He hears a developer gravel pit being stated and it will just be one of those but as near as he can tell from everything he has read that the moment that they get a permit they can sell it and somebody else in a larger capacity could come along and mine the entire 27 acres. A developer gravel pit changes immediately upon sales and the permit goes with the property as he understands it. He offered to walk them through any berm questions if the Commission had any.

Chairman Martin wanted to clarify if the berm ordinance intended to obscure the view 100% or is the ordinance written to minimize impact. Not to bring it to zero but minimize. Mr. Whitmore using his presentation moved the berm to show the varying views. As the 12-foot-high berm moves closer to the houses that are up high the remaining pit behind that berm becomes more visible the further the berm moves towards those homes. He doesn't know that a 12-foot berm doesn't work because he hasn't heard from the other side on how they intend for it to work. He would work with them if they want. Chairman Martin asked what the definition of work means. He thinks the ordinance means mitigate not eliminate. Mr. Whitmore agreed.

30. Tom Clark, PO Box 962, Anchor Point

Mr. Clark sat on the Commission for 6 years and the Board of Adjustment for 7 years. Most of those that were appealed were sent to the Assembly that acted as the Board of Adjustment at that time. All the decisions in the affirmative were upheld. Any of those that were rejected by the Planning Commission were denied by the BOA at that time. Our BOA listened to several appeals, some that the Commission had affirmed and some that were rejected. All of those passed this ordinance in full. There were two lawsuits and the judge ruled in favor of the Borough and the way the Borough handled their buffers, the sound and how everything was handled. This is not in his best interest. It is in his best interest that this pit goes away and the price of his gravel goes up. But, as it is today the applicant has a legal right and it is allowable and it has been proven in court.

31. Angela Roland, 17337 Thurmond Dr., Anchor Point

Ms. Roland owns property at the Silver King Fish Camp as well as property on Thurmond Avenue. Today she spoke with the Parks Department about their concerns since they are property owners and run the state recreation area. They said they sent a letter on May 1st and their concerns were dust, safety and noise. She did some research into dust as well as a letter already submitted about crystalline silica and it is as fine as asbestos. This is a particulate that is emitted whenever rock is crushed or screened and excavated. It also travels a great distance and it can reach the school. It builds up in buildings and get clogged into ventilation systems and it does cause respiratory

diseases. This can be verified with the EPA as well as other OSHA websites. She said EPA but met OSHA. She doesn't know what size dust masks need to be worn to eliminate it. There have been statistics showing that heavy truck accidents have gone up. The last year the information was available was 2016-2017. On this narrow road with boats, RVs, kids on bikes, and also tourist that don't know where they are going. There are also a lot of people looking down on their cell phones wandering around. She supposes that going as fast as they can to deliver a haul and get back and deliver more but she hopes the truck drivers are as careful as they can be. When talking about noise we've been talking about decibels. It is true that some sounds sound simply worse than others. Imagine your favorite song at 100 decibels and that would be fine but your least favorite song at 100 decibels would be misery. It would also be misery at a lower decibel if you really didn't like the song. As far as a Trimble family member living next to it. To their ears, she guesses it sounds like a cash register running. It just so happens that her father owned an excavation business, built a golf course, and he ran heavy equipment as well. She knows the dust. It is a dangerous business. There is also the potential for all kinds of accidents to occur. From the spilling of fuel, oil and all those kind of problems. One of the things that hasn't been talked about is the health of the community. It has been talked about that Anchor Point has gravel pits everywhere but is it a healthy community. There is a school right there. Even though this has been the way things have been done for a long time there is also science and technology that that particulates, small ones can harm and cause respiratory problems. She did contact the EPA and on their website it says this portion of the Kenai Peninsula does have one endangered species, the Steller's Eider. If we are harvesting gravel and using it on our State and Borough roads that comes from an area that may contain Eiders we will destroy their habitat. Federal law is opposed to that and has laws against it. If the gravel is taken and put on our roads she felt the supply chain is questionable and should not be.

32. Josh Elmaleh, 34885 Seabury Ct, Anchor Point

Mr. Elmaleh said he is about a ¼ mile from the site and just recently there has been road construction to improve the drainage for the sides of Anchor Point Road. They have been hearing the construction noises a lot. Normally his dogs are peaceful and quiet and let him know when there are animals there and help keep his kids safe. They hear things. When the equipment is running his dogs go crazy. They have been barking nonstop. They tell them to be quiet and encourage them when they are quiet but they continue. There isn't anything he can do about that. In the event that the Trimble's have their pit, he is going to be faced with that whenever they decide to excavate gravel. Maybe its daily, weekly, or every once in a while. He is here to say he doesn't agree with it and doesn't want it there. He advised the Commission to go check the site. It is an amphitheater. They hear the wave and the birds. His dad came up last year and he walked to the beach and saw the eagles. His father said it is the million-dollar view. He may not believe that but it is a view not to be messed with. They have the right for their own property just as he does for his and he agrees with that. If they don't get the permit and develop, then they develop. They don't want a gravel pit. He and his wife bought their place two years ago not knowing about this. They looked at another place that was twice the size and only about \$20,000 more than their current house. It would have fit their family better but it was right next to a gravel pit. The sound is not going to be improved and doesn't matter how big the berm is. He can hear a half mile, mile away. he can hear dump trucks going on the Old Sterling Highway.

33. Katie Elsner, 215 Fidalgo Ave., Suite 201, Kenai

Ms. Elsner has been helping several of the neighbors that are opposed to the gravel pit. She wanted to address Chairman Martin's question. The borough code uses two words in defining what to do with this, both minimize and sufficient. She googled the definition of minimize which is to reduce something to the smallest possible amount or degree. So the code doesn't call for the Commission to make sure that there is some separation or some barrier or some reduction in the visual impact. It calls to actually reduce it to the smallest possible amount or degree and to ensure that the reduction is sufficient to address the visual impact. When it comes to Mr. Whitmore's presentation, as far as she can tell with the rolling berm, that proposing of one of two options is going to come into play. (Mr. Whitmore began using a profile to demonstrate) Either the berm is going to start closer to the property at which point there is more or greater visual impact. It would have to be taller

in order to negate it because you are getting closer to the higher elevation. Then it moves back leaving all of the excavated property in its wake. It could start in that position where it could potentially cause some kind of reduction in visual impact because at that point, furthest away the angle or elevation allows it to be sufficiently tall. As it moves closer and closer to the impacted and affected properties the same height berm becomes less effective and all that can be seen in the background is the excavated pit. Where the GIS LIDAR profile mapping is set by Mr. Whitmore is at the most likely proposed site for it and she did propose findings of fact. Those findings of fact are based on that spot in geography and what berm would be sufficient there. When it comes to the rolling berms that makes the Commission's job more difficult because the rolling berms will have to vary in height in order to minimize or sufficiently address the visual impact as they move in geography proximity to the subject parcels. As mentioned, they did propose findings of fact for the Commission to consider in the event that they are assistive to them. There are two alternative proposed findings of fact. They can be found on pages 89 and 92 of Volume 1 of the packet. They present under two separate factual scenarios. The first one is if the Commission were interested in an outright denial of the application. The second one is proposing a modification to the buffer and berms that are submitted in the application that are based on the GIS LIDAR profiling that would be required to minimize and interfere that visual impact. Mr. Wall had a change to the

resolution. On page 92 finding of fact 15 will need to be replaced not 14. This is addressing the buffer and berming. Their position is that these findings of fact are sufficiently detailed and follow and track the law. She would like to remind the Planning Commission that nowhere in the code does it say that they are not allowed to deny an application. Regardless and without any consideration of how it impacts and whether or not that question of the Commission's discretion as to what is sufficiently minimized plays out in reality. It is not enough in this scenario that the applicant states the minimum requirements of the code. The question for the Commission is whether or not it is sufficient. The code does expressly grants and in fact mandates authority to the body to either approve the permit if found that those berms represent as proposed in the application sufficient visual and noise barriers or the Commission can modify it and in fact based on the objective evidence significantly higher berms are going to be required to minimize that impact or it can be denied. In this instance we would urge the Commission to exercise that authority to either deny or modify it based on the fact that this is a gravel site in a depressed elevation surrounded by neighboring communities in a recreational area.

Mr. Wall wanted to get some clarification on some findings Ms. Elsner drafted. He had some concerns with some of the language so he wanted her feedback. In the denial finding she had that it should be denied because it is incomplete because they have not provided a vegetation and fencing plan that is of sufficient height and so forth. Mr. Wall struggles with that idea that the application is incomplete because the applicant can't know at the time of the application submittal what the Planning Commission will deem as appropriate because the code specifically says that the Planning Commission gets to determine what is sufficient height and density for the vegetation and fence. He wanted her to elaborate on how that would be an incomplete application if the applicant doesn't know up front what the Planning Commission would want. Ms. Elsner responded that an application in order to be approved must meet the standards and the standards are complied with by meeting the conditions. In this instance one of the conditions for a complete application is that the berms and buffers are of sufficient height and density in order to mitigate and sufficiently

minimize the visual and noise impact. Mr. Wall stated as deemed by the Planning Commission. Ms. Elsner said the Planning Commission makes that determination. In the event that determination is made in the negative then the application is almost necessarily incomplete because a complete application, an approvable application, requires compliance with those conditions. Mr. Wall asked if she is saying the application be incomplete after the fact. Ms. Elsner said the application is not complete and approvable until this body says and deems it so. Mr. Wall said the other thing she pointed out in her findings that the code also provides for the applicant to submit an alternate buffer plan. So could that not be construed as an alternate buffer plan and therefore the application is complete? Ms. Elsner said in the event, as she understands it, there is often some degree of back and forth between the applicant and the Planning Commission and she thinks the code does allow for that type of flexibility and that type of working through as the process goes on. However, that does not change the fact that in the event that an application or scenario after the back and forth, after the voluntary conditions, that the Commission is tasked to rule on this decision but it does not meet the mandatory condition, cannot be found to sufficiently minimize the visual and noise impact. The way she reads the code says that it is incomplete at that point and time. It doesn't meet the mandatory and required conditions. Never the less, even if not viewed that way it still must be denied because the Planning Commission must deny applications, must deny these material site permits when they don't comply with the minimum standards. Mr. Wall noted that the code talks about the vegetation of fencing needs to be sufficient height and density but it doesn't talk about that in regards to berms but yet she seems to be applying it to berms as well. Ms. Elsner said she does because it is in the same paragraph, same section, and read together it seems clear to her in her interpretation that it refers to the same types of impact, mitigating tools or mechanisms that are available to the Planning Commission and applicants. Mr. Wall wanted to switch to the other set of findings she drafted. She proposed a 43-foot berm and a 53-foot berm and one of the testifies basically came to the same conclusion as him, would that not be in effect a denial in that a 43-foot berm and a 53-foot berm would not pass any reasonable test or reasonable standard. Ms. Elsner said she does not believe that there is a reasonable test or standard written in the code. The proposition that an application has to be denied despite its ineffectual conditions to meet the standards in the code is not consistent with the language of the code, the intent of the code, with the fact that there is a material site ordinance in the first place. There has to be a mechanism to address ineffective conditions. It is certainly not by imposing a world of conditions that exist outside of the ones allowable in the code. So what the code allows is for the Planning Commission to modify until they think it is sufficient height and density. In the event that someone wants to build a gravel site in a place where visual impact mitigation or minimization requires a 43-foot berm that is the decision of the applicant. She doesn't think it is the Planning Commissions determination to decide whether or not the applicant ultimately goes forward. The question is whether or not they can approve a permit that complies with both the conditions in so far that it allows the conditions to meet the standards.

Seeing and hearing no one else wishing to comment, Chairman Martin closed public comment but was reminded the applicant has a right to give a rebuttal as long as not providing any new information.

Stacy Stone returned to speak on behalf of the applicant. She noted that Ms. Elsner spoke and said that the application is incomplete. That is incorrect because referring to 21.25.050, which provides for permit considerations and when a public hearing is required, it is up to the Planning Director and the designee to review and determine completeness of an application. The application is not forwarded to this body until such time as the Planning Director has said to this body that this is a complete application or this is an incomplete application. At such time if there is an incomplete application the Planning Director can go back to the applicant and say this is not complete and they can try to fix it or it can go straight to this body for a hearing and the body can then determine if they agree with the staff that it is incomplete and can deny it. Hence the reason the Commission has the ability to deny an application. There have been several comments today why public testimony matters and why is there a public process involved in this. When reading through the code provisions, the code has to be read in total, there are several words and we have heard today. The important thing is public comment does matter because it informs the Commission of what conditions need attention. If there was no public comment for instance a person could apply the Planning Director could approve, and say this is a complete application, pass it on to the Planning

Commission and it could be approved. But the neighbors and the residents have brought concerns about noise and there is a provision in the code that allows for voluntary conditions to be imposed by this body. Earlier today discussions were had about white noise machines being added to heavy equipment to help reduce the sound impacts and her client testified that he would do so voluntarily. These are the types of things that all of these people here informing the Commission that noise is a concern of theirs allows the Commission to thread this needle and try to find a balance. The Commission is a government entity and is imposing a restriction on the free enjoyment of someone's land and in order to do so it must be narrowly tailored. The Assembly has taken great steps to ensure that this fine balance between government intervention and the public being able to freely exercise on their private property has been struck. There are standards in the code, we heard a lot about the standards just a few moments ago, and how they set to minimize impact. What does it mean to minimize impact? Well the code itself helps us define what we can do to minimize the impact. It says only the conditions set forth in 21.29.050 may be imposed to meet these standards. When looking further at the standards they further guide the Commission's deliberation. There are words such as buffer zone, provide and retain a basic buffer, and that buffer is to be maintained around the excavation perimeter or parcel boundaries. We have heard a lot about the rolling berm today but that meets exactly with the code and it is a compliance to try to make sure that the excavation perimeter is as protected as possible to minimize the impact to meet with that definition of the code. As stated at the beginning of the day before we heard all the public testimony, her client submitted an application. It was reviewed by the Planning Director, there was a site visit, there were recommendations to revise the application. The application was revised it was forwarded to this body as complete. This body has heard public testimony. It has heard the concerns. It has the ability to institute certain conditions and modify that application in order to approve it but again we maintain that there is no reason for this body to deny this permit but rather institute those conditions that have been agreed to and that this body is to find that strict balance between someone's right to enjoy their own property and government intervention. We ask that you respectfully approve the permit.

MOTION: Commission Carluccio moved, seconded by Commissioner Foster to suspend the rules and allow a 30-minute continuation of the meeting.

Commissioner Ecklund said we were in this same place last time this application was heard and was accused of hurriedly denying it without adequate discussion. She wants to make sure they are not accused of that again. She didn't know if they wanted thirty minutes. She has the longest drive and it might take longer. Chairman Martin said there was no point in rushing to the finish line. He said they should take it at 30 minutes at a time.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

Chairman Martin opened discussion among the Commission.

MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to approve a conditional land use permit application for Beachcomber LLC, Resolution 2018-23.

Commissioner Ecklund addressed the crowd through the chair. We work for you, all of you. We work for the Assembly. The main goal for all residents of the Kenai Peninsula is balance development. A balance between economy and residents living here, their life values. It is sad to say that people want to put a gravel pit in a residential area. If you knew it was there, the size of it, a number of you that purchased property there wouldn't have purchased that property if you knew it was coming. Several things have been brought up tonight that this ordinance does not address. It does not really say that they can do anything if it is not safe. She has brought that up several times in past gravel pit permits. The safety, sight triangles, school bus stops, traffic at the egress and ingress but that does not allow the Commission to say it is not safe. She has been given reasons that school bus stops always change. They had hope to have a material site extraction ordinance done a year ago. It has been in committee and is coming out of committee soon and there has been some discussions of it. She has questions for Mr. Wall. She believes that the permit that is in the packet is not correct anymore. She has heard through public testimony that now instead of 50,000 cubic yards he is only going to extract 10,000 cubic yards a year. Also, it says that the one test hole that

has been dug says the ground water is at 20 feet and he was only going to dig to 18 feet. In the applicant's testimony he said is going to dig 25 feet down. She wanted to know if a new application was needed. Mr. Wall explained that the decision needs to be based on the application that was submitted. Only volunteered conditions have changed the application has not changed. Chairman Martin wanted to clarify that the 50,000 is a threshold so he can do less than 50,000 without changing the application. Mr. Wall said yes. What he intends to do in the foreseeable future and what he puts on the application are two different things. What you are approving is what is on the application. Commissioner Ecklund wanted to know if they approve the gravel pit permit and the applicant does want to dig into the water table if they would have to come back and ask for permission to do so. Mr. Wall said yes, the code specifically requires that. Commissioner Ecklund wanted to know if they would be seeing him come back if they approve this if he is planning on digging 25 feet now. Mr. Wall responded he will not be able to excavate within 2 feet of the water table without coming back to the Commission. Commissioner Ecklund sees only one test hole and groundwater was at 20 feet. She wanted to make sure she was reading the application correctly. Mr. Wall said yes.

Commissioner Bentz commented on the letter from DOT about requiring KPB to repair any impairments in the road, the letter is on page 172 of the packet. She asked staff to confirm that it would be the Borough's responsibility for any repairs needed to that road. Mr. Wall said that road is under the jurisdiction of the state and they are responsible for maintenance. The Borough has no intention of doing any maintenance on that road. Commissioner Bentz followed up by asking if that statement from DOT will be erroneous as far as their concerns about this application. Mr. Wall said he believes that the point they were trying to emphasize is that they also have no intentions of doing repairs on that road.

Commissioner Carluccio noted there had been some information regarding State Parks. She wanted to know if anything in writing had been received from DNR Division of Parks and Outdoor Recreation and if they are in favor or opposed to this. Mr. Wall stated he has talked to State Parks several times and they have talked about getting a letter to him but he has not seen one. Commissioner Carluccio wanted to know in his conversations with them what were they saying. Mr. Wall they just mentioned they may have some concerns due to the proximity of the parks. They were not specific as they were talking more about the deadlines for getting the comment letter to him. Commissioner Carluccio said they must have missed the deadlines. Mr. Wall said several, he has not seen a comment letter from them.

Commissioner Ecklund wanted to follow up on the letter from the Department of Transportation and Public Facilities. They listed 5 things in the letter. Number 1 was that they wanted someone to verify the sight triangles at the Danver Street stop sign either by an engineer, surveyor or borough public works official. KPB Public Works can coordinate with DOT Public Facilities and Maintenance and Operations when reviewing sight triangles. She wanted to know if that was accomplished. Mr. Wall said it has not or if it was the information was not passed on to him. He did talk to the roads department and they were not able to connect and get out there. He didn't pursue it further because there are no conditions or standards in the code that would relate to that. Commissioner Ecklund said it is another one of those safety issues she was hoping to see in the new ordinance. She was concerned that a state organization is asking the Borough to verify something and we are not. She thought more could be done than the state asks for but not do less. She wondered if they would have had to reference a statute to make us act. Mr. Wall said there is no state requirement that we check sight triangles on approaches to state roads.

Commissioner Ernst needed some clarification. Looking at the findings of fact on page 80, item 15. Q. He needs to understand this better because when looking at the GIS information it doesn't seem that there is anyway. It says each piece of real estate is uniquely situated in a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. This unique situation is a pit that is in the low lands surrounded by affected properties. He wanted to know if there is any possible buffer that can be reasonably used to protect the noise levels and visual impact of this pit. Mr. Wall said one thing that was asked earlier during public testimony was about adjacent parcels versus other parcels in the vicinity and the code does state that the buffer requirement shall be made in consideration of and in accordance with existing uses of adjacent property. That is in the conditions of 21.29.050 and that is why in the staff report he put particular emphasis on the adjacent parcels because that is what the decision needs to be based on concerning buffers. 15. Q. is saying that some parcels are going to get better screening than others. It is not a matter of eliminating the visual or noise impact it is a matter of minimizing. Commissioner Ernst

followed up by asking if equal protection does not apply. Mr. Wall said the way he is reading the ordinance is all impacts need to be minimized for adjacent properties. Commissioner Ernst said so some properties are more minimized than others. Mr. Wall said yes he would agree with that statement.

Commissioner Foster has a concern with adjacent and adjoining. He remembered back when he was with Homer that it came up that adjoining means next to and touching. Adjacent means nearby. Mr. Wall said he did spend some time looking at various definitions and as it relates to property. Generally, it means adjacent or just separated by a road way. It seems to be more specific than just nearby. Although elsewhere in the code the word adjacent is used and it appears to be referring to nearby in that it talks about wells within 300 feet on adjacent property. Not all wells within 300 feet are on adjacent property. In that context it appears to be referencing nearby or close proximity. He took it as adjacent properties being immediately adjacent or separated by a roadway which is a common definition he read as it relates to property.

Commissioner Ecklund noted the code at 21.29.050 and that permit conditions 2. C. It says that Planning Commission or Planning Director shall designate one or a combination of the above as it deems appropriate. The vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the Planning Commission or Planning Director. She does not see where it says adjacent on that or on the buffer zone above it. Mr. Wall said it was located in 2. E. Commissioner Ecklund read that at its digression the Planning Commission may waive buffer requirements where the topography of the property or the placement of natural barriers makes screening not visible or not necessary. Buffer requirements shall be made in consideration of and accordance with existing uses of adjacent properties at the time of the approval of the permit. There is no requirement to buffer the material site from use that would commence after the approval of the permit. So it is existing uses of adjacent property and this has residential and recreational as adjacent properties. Mr. Wall said yes. Commissioner Ecklund said 14 of 20.21.050, permit conditions reads that "it's at the best interest of the borough and the surrounding property owners." There are references to existing uses of adjacent properties, the surrounding area, and the surrounding property owners. We have let them all come and talk but we have no meat to help them in this ordinance because we can put buffers, we can put vegetation and we can put fences. Who are we going to ask to put in a 53 high earthen berm.

Chairman Martin asked Mr. Wall if he was wrong but the buffer is vegetative, or a fence, or a six-foot berm unless the Commission wants to make the berm taller. Mr. Wall said yes, the code says minimum six-foot-high fence and a minimum 6-foot-high berm or a 50-foot vegetative butter. Commissioner Carluccio added that it also says a combination so a buffer, berm and a fence could be required. Under C, designate one or a combination of the above as it deems appropriate. Chairman Martin added if it can be justified with findings. Commissioner Carluccio said she also sees that the minimum is a 6-foot earthen berm so the berm could be taller. Mr. Wall said that staff did propose a 12-foot berm in most locations. Commissioner Carluccio followed up by asking if a 12-foot berm was enough to minimize visual and noise effects. Chairman Martin responded that it depends on your definition of minimize. It will bring it less and Mr. Whitmore can show a picture of a 6-foot berm or a 12-foot berm and it will reduce the area of the triangle in the line of sight but will it be adequate.

Commissioner Ecklund she asked the Planning staff earlier in the day if they could share some information about how many gravel pits they have actually denied in the 10 years she has been on the commission. She wanted to confirm with Mr. Wall that they denied a couple over the last 10 years. Mr. Wall confirmed that there have been 2 denials done by the Planning Commission. Commissioner Ecklund asked if the hearing officer overturned both of them. Mr. Wall said one was overturned by the hearing officer and the other was overturned by the Board of Adjustments. There were a few other cases where a modification to a permit was denied and in one of those cases he remembers it being upheld. Commissioner Ecklund wanted to know how many they approved. They are not against gravel pits. It has been put upon them that they are against them. Her dad was an operating engineer for 40 years. She lived at a gravel pit. She had a CDL, she knows the drivers are safe. The Commission is not against gravel pits but in the middle of a recreational and residential area it just doesn't seem right. Over the last year or two she has looked at how much the borough actually gains from gravel pits and there are other economic entities and industries within the Borough that make a lot more money. She knows we need gravel. She drives to Anchorage twice a week and drives to these meetings twice a month. There is a lot of construction and there is a lot of

gravel and rocks going on the roads. We need material sites but not in the middle of a recreational and residential area.

Commissioner Whitney said this is one of the more unique gravel pit permits the Commission has looked at. It seems that most of them, that he can recall over the last 5 or 6 years that he has been on the commission, are usually more in the flat land area. Where a 6-foot berm or 10-foot berm removes the visual impact. This is unique. It sits down low and there are adjoining or adjacent properties that are close by that are looking down into that area. He doesn't think the berms that are proposed with are adequate to control the visual impact that the adjoining property owners are going to suffer. As far as noise, we have heard that lawnmowers make more noise than the equipment and hand drills, etc. The difference is that they don't run for 10 or 12 hours a day. Lawnmowers will go for a couple of hours. We all listen to that even in the city. The heavy equipment, he thinks they will be able to hear it because most of the wind direction is coming off the water and that has an effect on noise. It makes it travel. He lives 2 miles away from Fred Meyer and he can hear trucks coming down the hill. He thinks those people that are living above it are going to continue hearing the noise no matter what. Right now after listening to many hours of testimony, after reading hundreds and hundreds of pages, he still thinks his decision is going to be the same as it was in July 2018 and vote against this.

Commissioner Venuti feels fortunate to live in a community that has planning and zoning. If nothing comes out of this, he hopes the argument for local option zoning will. He hopes no matter what comes out of this that this community, it is really great that this has brought everyone together, but they should consider Local Option Zoning so that something like this won't happen in the future. He knows that gravel is an important commodity and he knows it is a big industry in Anchor Point. He is a member of the construction industry and every project he works on has gravel and all of it comes from Anchor Point. There is real value but he is glad there is not a gravel pit next to him and he understands what everyone is concerned about. The idea that we can deny an individual the right to develop their property does not sit well him. He knows that if he wants to control what is happening on the property next to him he better buy it. He is uncomfortable with the way this has transpired. Like Mr. Whitney he has read of hundreds of pages of testimony, heard a lot of concerns. He hopes that the community will consider Local Option Zoning.

Commissioner Bentz wanted to either ask staff or point out an observation about the idea of a rolling 12-foot berm. This goes back to some discussion that was had at the Material Site Code revision Work Group and some of what they talked about is alternative post mining land uses and when does a pit stop being a pit and when does it start being a reclaimed area, which is a pasture or meadow. Looking at these profiles that have been drawn using the LIDAR of the area, thinking about the reclamation plan that is outlined in the packet, the idea of a rolling berm, and if extraction could be pursued in a way that the rolling berm was basically minimizing visual impacts from a narrow swath of land that was currently being excavated. Annual or every couple of years the applicant would reclaiming in its path. So it would be marching along through the site reclaiming as they go. That is what they plan to do based on the application, and leave behind a reclaimed natural area that was topsoil and seeded and reclaimed similar to the images that were shown earlier tonight. She was trying to figure out how this rolling berm could be an effective way to minimize visual impacts to adjacent properties. The question for staff is looking at the reclamation plan and this idea of a rolling 12-foot berm is if it would that be feasible. Will that provide greater reduction of impact for at least visual screening for neighboring properties if extraction was pursued in that manner? Mr. Wall said yes and that what she is referring to was in some comments earlier about if that berm moves then all that is seen is the scar on the land but no the applicant would be required to reclaim as he goes for the exhausted areas of the material site. Commissioner Bentz said she did not see a schedule for reclamation in the packet or wondered if she just missed it. She knows it is annually 50, 000 yards but she was not sure if there was an area plan to reclaim every year. Mr. Wall said it mentions 2 to 5 years but it depends on how much material is extracted. The intent is to reclaim a significant amount. If more than 2 to 5 acres are excavated there will be some reclamation done. Commissioner Bentz wanted to follow up in the way of explanation. Looking at the profiles the whole pit area wouldn't be an active excavation area as far as line of sight goes. It would be the line of sight only within the currently excavated area which would hopefully be protected by that 12-foot berm.

Commissioner Ecklund wanted to follow up on the rolling berm and the line of sight. As she understands it, most of the visual impact is along the east side and south side of this site where the topography goes up. In Phase 1, 2 and 3 and the processing area are going the other direction. She felt like they would almost need to start on Phase 3 and roll back towards the hillside for that to work. It is a good thought and maybe they could start on the west side of Phase 1 and go that direction if this is going to be approved.

Chairman Martin noted that the 30 minutes was about to expire.

MOTION: Commissioner Ecklund moved, seconded by Commissioner Carluccio to continue the discussion for a maximum of another 30 minutes.

Chairman Martin asked if that meant that there would be a count down so they could deliberate and vote precisely. Mr. Wall said that there was nothing that stated a decision had to be made tonight. The hearing has been closed, deliberations can continue at the next meeting. Chairman Martin asked if anyone felt at this hour that the human factor is weakening the ability to make a decision.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

Commissioner Carluccio said it had been a lot of information to read over and understand and there are a number of things that she has read over that originally she thought she understood but when reading again it is not matching up to her first impressions She would not be unhappy with continuing the deliberation at the next meeting. No more public testimony, just deliberation and then findings of fact.

Commissioner Foster said he was ready to vote when he got there but now he took down seven pages of notes and he would not be opposed to continuing this so he could review the information.

Commissioner Bentz asked if the original motion on the floor had staff recommendations and findings or voluntary conditions added. She wanted to know as a point of order if they wanted to attach those today. Chairman Martin said the maker of the motion and the second could come to an agreement on the motion.

Commissioner Whitney wanted to know what the agenda looked like for the next meeting. Ms. Hindman advised that the agenda is still tentative and asked for a moment to pull up the proposed agenda.

Chairman Martin noted he would benefit from reviewing the notes and collecting his thoughts.

Commissioner Carluccio wanted to know if where they are now if they would have to do an up or down on what they have so far whereas, if they are interested in asking the applicant to voluntarily add some things to his application. Chairman Martin asked if she had anything in mind. Commissioner Carluccio said not at this time. Chairman Martin said it could be handled and if a great idea is thought of in the interim it could be passed on to staff and they could discuss it with the applicant so it would be prepared.

Ms. Hindman advised Chairman Martin that the June 24th meeting had a right-of-way vacation, the ordinance for the material site and then the review of a plat committee approval. Chairman Martin felt that it was a light agenda.

Commissioner Ecklund wanted to make sure the findings are on the resolution and asked if she should attach them to the main motion. That way there is a complete motion and then decide if they will postpone. Ms. Hindman noted that when Commissioner Ecklund made the motion she did reference the Resolution.

Chairman Martin noted that the voluntary conditions were only discussed. The applicant was questioned and Commissioner Ecklund asked if he agreed to a term and he said he did. Mr. Wall added for clarification that those volunteered conditions needed to be excepted by the Commission and there needs to be findings that those conditions are in the best interest of the borough and the surrounding properties.

Commissioner Ecklund noted that the voluntary condition that she brought forward was the white noise backup alarm and Mr. Trimble agreed to that for his vehicles not for any contractor that is in the pit. Mr. Wall noted the other was the rolling berms. Commissioner Ecklund said the finding is that the white noise backup alarms would minimize noise impact. the rolling berm would minimize visual impact. She wanted to know if she need to quote code verbatim. Mr. Wall felt that it was sufficient.

Ms. Hindman asked if they could explain if they are making a new motion or amending their motion. Commissioner Ecklund wanted to get the voluntary conditions to the main motion so that they would be in the record. They are for the white noise back up alarms and the rolling berm. Commissioner Carluccio agreed to the addition to the motion. Commissioner Whitney thought he also agreed to change the processing area. Chairman Martin said that was an exception and staff recommended denial. The applicant said he doesn't have a problem with that denial.

MOTION: Commissioner Carluccio moved, seconded by Commissioner Bentz to postpone deliberation and final vote on Kenai Peninsula Borough Planning Commission Resolution 2018-23 to the next meeting.

Commissioner Whitney asked if it could be the first thing on the agenda. Chairman Martin asked staff if a motion was needed to do so. Ms. Hindman told them a motion was not needed and it would be first on the agenda.

MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

Motion on floor: to approve a conditional land use permit application for Beachcomber LLC, Resolution 2018-23, with voluntary conditions for white noise backup alarms for the applicant's vehicles and a rolling berm, citing findings of fact that the white noise alarms will minimize noise impact and the rolling berm will minimize visual impact.

Chairman Martin thanked the public for their participation in the process. It has been a unique process for everyone.

SUBDIVISION PLAT PUBLIC HEARINGS

1. Commissioner Carluccio reported that the Plat Committee heard and approved 4 preliminary plats.

ADJOURNMENT

MOTION: Commissioner Carluccio moved to adjourn the meeting at 11:41 p.m.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

Julie Hindman
Administrative Assistant

MEETING PACKET

&

DESK / LAY DOWN PACKET

JUNE 24, 2019

(Please note that some information has been dispersed throughout the record so that there was not duplicate information.)

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 where public comment was taken and the Commission denied the approval of the conditional land use permit; and
- WHEREAS,** the denial was appealed, a subsequent appeal hearing was held, and the hearing officer remanded the application to the Planning Commission; and
- WHEREAS,** a public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News; and
- WHEREAS,** at the March 25, 2019 meeting, the Planning Commission continued the hearing to May 28, 2019, which was later rescheduled for June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on Jun 10, 2019 where public comment was taken;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.

7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. A public hearing of the Planning Commission was held on June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
13. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
14. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
15. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
16. *Parcel boundaries.* All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
17. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening

- of the proposed use beyond that of a six-foot berm along those boundaries.
- K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - R. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
18. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
19. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
20. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
21. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.

- E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
22. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
23. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
24. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
25. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
26. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
27. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
28. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
- A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
29. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
- A. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - B. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms

- better minimizes the noise impacts of the material site.
 - C. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
 - D. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
- 30. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm placed near the active extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.
 These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business

- name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.
 21. The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON THIS _____ DAY OF _____, 2019.

Blair J. Martin, Chairperson
Planning Commission

ATTEST:

Julie Hindman
Administrative Assistant

PLEASE RETURN
Kenai Peninsula Borough
Planning Department
144 North Binkley St.
Soldotna, AK 99669

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2018-23
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** on June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 where public comment was taken and the Commission denied the approval of the conditional land use permit; and
- WHEREAS,** the denial was appealed, a subsequent appeal hearing was held, and the hearing officer remanded the application to the Planning Commission; and
- WHEREAS,** a public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News; and
- WHEREAS,** at the March 25, 2019 meeting, the Planning Commission continued the hearing to May 28, 2019, which was later rescheduled for June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on Jun 10, 2019 where public comment was taken;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
- ~~12.~~ A public hearing of the Planning Commission was held on June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
- ~~13.~~ At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
- ~~14-14.~~ At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
- ~~15.~~ Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB

21.29.040.

44-16. *Parcel boundaries.* All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.

- A. The submitted site plan indicates the location of each of the parcel boundary stakes.
- B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.

45-17. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.

- A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
- B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
- C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
- D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
- E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
- F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
- G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
- H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
- I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
- J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
- K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
- L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
- M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
- N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
- O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
- P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.

Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.

R. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.

Q.

46-18. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.

- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
- B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
- C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
- D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
- E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.

47-19. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.

- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
- B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
- C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.

48-20. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.

- A. This permit approval does not allow excavation in the water table.

49-21. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.

- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
- B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
- C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.

Formatted: No bullets or numbering

- D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
- 20-22. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
- 24-23. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
- 22-24. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
- 23-25. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
- 24-26. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
- A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
- 25-27. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
- A. The submitted application contains a reclamation plan as required by KPB 21.29.060.

- B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
- C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
- D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.

26-28. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.

- A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.

27-29. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.

A. ~~The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms. No additional conditions have been volunteered by the applicant.~~

B. ~~The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimizes the noise impacts of the material site.~~

C. ~~The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.~~

A-D. ~~The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.~~

28-30. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.

- A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm ~~placed near the active between the vegetated buffer and the~~ extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm ~~placed near the active between the vegetated buffer and the~~ extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary with a 12-foot high berm ~~placed near the active between the vegetated buffer and the~~ extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.
 These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing

- material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
 5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
 6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
 8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
 9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
 10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
 16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
 17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
 18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in

accordance with KPB 21.29.070.
~~20-21.~~ The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON
THIS _____ DAY OF _____, 2019.

Re: Beachcomber LLC Conditional Use Permit Application

Dear Mr. Wall:

The Alaska Division of Parks & Outdoor Recreation (DPOR) received notice from the Kenai Peninsula Borough about the public hearing scheduled for June 10, 2019 to address Beachcomber LLC's conditional land use permit application for sand, gravel, and peat extraction near Anchor Point. DPOR manages the Anchor River State Recreation Area which is a popular state park near the proposed gravel pit. As a nearby land manager, DPOR is neutral on the conditional use permit application. However, DPOR suggests that the Planning Commission consider the following potential impacts to the nearby recreation area while evaluating this application:

1. Noise from gravel pit and trucks hauling gravel. Consider potential hours of operation to reduce impact on campers and visitors in the recreation area.
2. Dust from gravel pit and trucks hauling gravel.
3. Safety along the beach access road. The road is narrow with minimal shoulders for pedestrians. Traffic along the narrow road increases during peak times during the freshwater and saltwater fisheries. The road provides access for people that tow trailered boats to the tractor launch along Cook Inlet.

Thank you for considering these concerns. Please contact me if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Jack D. Blackwell".

Jack D. Blackwell
Superintendent

AGENDA ITEM E. UNFINISHED BUSINESS

E. Conditional Land Use Permit for a Material Site; Anchor Point Area

STAFF REPORT

PC MEETING: June 24, 2019

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road

The resolution has been updated to reflect the volunteered conditions that were accepted at the last meeting.

At the June 10, 2019 meeting the Planning Commission asked staff to work with the applicant on additional volunteered conditions. The applicant also wanted a clarification to the buffer along the eastern boundary. Along the northern 200 feet of the buffer along Danver Road, he is requesting a 50-foot vegetated buffer without the 12-foot high berm. This was discussed at previous meetings but not in detail and it was not incorporated into the conditions. Staff is in support of this because there is significant vegetation in this area, Danver Road is at a lower elevation than the material site at this location, and the adjacent property is a Prior Existing Use material site.

2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain.
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation boundary with a 12-foot high berm placed near the active extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.

The applicant has also volunteered this additional condition:

22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to include:

- Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
- Saturday, Sunday, and Monday if July 4th is on a Tuesday
- Saturday, Sunday, and Friday if July 4th is on a Thursday

If the Planning Commission accepts this condition, staff recommends adding the following findings:

29. ...

E. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.

F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise

disturbance to adjacent properties.

G. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A “party of record” is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the \$300 filing and records preparation fee. (KPB Code 21.25.100)

END OF STAFF REPORT

June 18th 2019

Dear Miss Bokenko-Carluccio

It is with great respect and appreciation that I write to you today, I appreciate you sitting through all the public testimony, and taking additional time to really consider the CLUP for Beachcomber LLC. I am grateful to know that you hesitate on approving this permit.

Therefore, I want to reassure you that the authority that is granted to the commission is very clear, even though the attorneys, the KPB hearing officer on appeal, and prior commissioners would like you to believe otherwise. BUT....the planning commission does have **Discretion**.

The KPB Code 21.29.050, Sect A Paragraph 2 c, and I quote -

"The planning commission or planning director shall designate one or a combination of the above as it deems appropriate. The vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission or planning director."

As a commissioner, you can add, modify the permit as it is presented, and you do not have to approve the minimum, (the minimum is just the starting point) or the planning department modifications as being sufficient. The permit can only be presented to you as complete, but that does not necessarily mean the conditions are adequate.

As a commissioner, you can adjust the submitted permit and approve it based on additional conditions, those that appear during the public hearing, as well as the request for voluntary conditions.

The code continues with, KPB Code 21.29.050, Sect A Paragraph 2 e,

"Buffer requirements shall be made in consideration of and in accordance with existing uses of adjacent property at the time of approval of the permit. There is no requirement to buffer the material site from uses which commence after the approval of the permit."

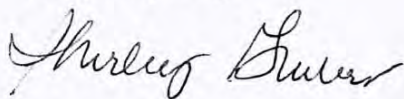

Yes, it is certain these conditions are all subjective in nature, but logic and reason hopefully will prevail. One commissioner has stated, the illogical sense of placing a gravel pit in a State Park area and residential neighborhood, with the grade school being barely 1 mile away. Plus, not to mention, what the permit applicant deems as reclamation.

But as another commissioner also noted, these gravel pits bring very little to the Borough, and by the way, there are already 6 plus pits in the area, when would it be enough?

As stated earlier, you do not have to deny it to prevent it. As a commissioner, adding the needed buffers that were calculated by the KPB GIS System, increasing the vegetation buffer, and enforcing earthen buffers (those that actually contain dirt not just old growth forest pushed on a pile....) with that.. the permit could then be approved. It then would be up to the applicant to follow through with those conditions. Placing conditions on the permit for what is needed, it is not injuring the applicant's rites, it is protecting all peoples rites. Even the applicant and some of the applicant's family do not live by the proposed pit, but it might happen to them one day.

Please continue to consider preventing this permit and perhaps influence others to really consider what this gravel pit would do to the community, both socially and economically, heck even the eagle would have to move it's nest.

Respectfully

Shirley Gruber
Twin Peaks loop
Anchor Point

AGENDA ITEM E. UNFINISHED BUSINESS

E. Conditional Land Use Permit for a Material Site; Anchor Point Area

Motion on floor: to approve a conditional land use permit application for Beachcomber LLC, Resolution 2018-23, with voluntary conditions for white noise backup alarms for the applicant's vehicles and a rolling berm, citing findings of fact that the white noise alarms will minimize noise impact and the rolling berm will minimize visual impact.

Staff Report given by Bruce Wall

PC MEETING: June 24, 2019

Applicant: Beachcomber LLC

Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road

The resolution has been updated to reflect the volunteered conditions that were accepted at the last meeting.

At the June 10, 2019 meeting the Planning Commission asked staff to work with the applicant on additional volunteered conditions. The applicant also wanted a clarification to the buffer along the eastern boundary. Along the northern 200 feet of the buffer along Denver Road, he is requesting a 50-foot vegetated buffer without the 12-foot high berm. This was discussed at previous meetings but not in detail and it was not incorporated into the conditions. Staff is in support of this because there is significant vegetation in this area, Denver Road is at a lower elevation than the material site at this location, and the adjacent property is a Prior Existing Use material site.

2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain.
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation boundary with a 12-foot high berm placed near the active extraction area.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.

The applicant has also volunteered this additional condition:

22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to include:

- Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
- Saturday, Sunday, and Monday if July 4th is on a Tuesday
- Saturday, Sunday, and Friday if July 4th is on a Thursday

If the Planning Commission accepts this condition, staff recommends adding the following findings:

29. ...

E. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.

F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.

G. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A “party of record” is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the \$300 filing and records preparation fee. (KPB Code 21.25.100)

END OF STAFF REPORT

Mr. Wall noted that the public hearing was closed at the last meeting. The packet contains the resolution that has been updated to reflect the volunteered conditions that were accepted at the last meeting. The packet also includes, on page 30, a letter dated May 1, 2019 from Alaska State Parks. At the last meeting it was mentioned by a testifier that State Parks had submitted a letter. Mr. Wall had informed the Commission that the letter had not been received. Since then Mr. Wall spoke with State Parks and they provided a copy of the letter that was evidently lost in the mail. On pages 32 through 61 of the packet there are materials that were passed out at the last meeting. In the desk packet are two letters from Shirley Gruber that were mailed directly to Commissioner Carluccio and Commissioner Whitney after the hearing was closed. The applicant has not had an opportunity to rebut the comments mailed directly to the Commissioners or the letter from State Parks. The applicant may not have received all of the printed materials that were provided at the last meeting. Prior to continuing deliberation on this matter the applicant should be given an opportunity to rebut the additional information. The applicant should also be instructed to limit his rebuttal to only those additional comments mentioned.

Mr. Wall asked the Chairman to allow him to address several Commission members to get some items clarified for the record.

Mr. Wall mentioned that Commissioner Ruffner was quoted in an article published on June 4th by KBB. It quotes him saying concerning material sites “The Planning Commission does not have the authority to say no.” Mr. Wall asked Commissioner Ruffner to state the context of that statement. Commissioner Ruffner does not recall verbatim the comments and context. Since he has been on the Commission, when material sites have come before the Planning Commission, it has been clear that their job is to interpret the code as it has been laid forth from the Assembly. In respect of a denial, if a permit application comes in and it is complete and meets the conditions set forth in 21.29 the Commission does not have the right to deny the permit. That is his understanding because of those elements that address the conditions are specific in 21.29.050. Mr. Wall said it was his understanding that the article was in the context of Commissioner Ruffner’s role as the Chair of the Material Site Work Group. Commissioner Ruffner said he knows that KBB called and asked to do an interview on that. It wasn’t specific to any gravel pit but was about the code. He made very similar comments on the record for several material site permits that have come before the Commission in the last 5 to 7 years.

Mr. Wall asked to address Commissioner Foster. At the April 22nd meeting the applicant stated, this is from the minutes of the meeting which are not verbatim, “That he met prior to the meeting with planning staff, Mr. Best, Mr. Wall and the acting Chairman, Dr. Foster. They made some changes to procedures and they wanted to make him aware of the changes. He listened and came away from the meeting knowing how things would go concerning scheduling. All of the testimony would be allowed and at the end of the public testimony they would ask for a continuance and that would be the end of the public testimony. Starting on April 22nd, the date presented by staff and Dr. Foster, they would begin with his rebuttal and it sounded fine so they agreed.” Mr. Wall said that while reading Mr. Trimble’s account of the situation it sounded like the conversation was limited to how the meeting was to proceed. He wanted to allow Commissioner Foster an opportunity to provide any additional information regarding the conversation. Commissioner Foster said when he arrived he had a short meeting with Mr. Best and Mr. Wall in regards to the hearing procedure. That they would begin with the Chair introducing the agenda item, then staff presenting the staff report and recommendations. The presentation by the applicant and their representatives would follow. In the past

the Commission has started that way but hasn't read it out loud as the process. Testimony from the public would be next. The response by staff to any testimony that was given and an opportunity for the Commission to ask questions of the staff would follow. The rebuttal by the applicant would then follow and that was something that was not regularly done. The Chairperson would then close the hearing and entertain a motion. He read the procedure over and agreed to it as the acting Chair. He then shared that information and showed Mr. Trimble the steps and explained where in the meeting he would be able to present. That was the limit of his conversation with the applicant.

Mr. Wall noted that Commissioner Whitney and Commissioner Carluccio received ex parte communications after the hearing was closed. He felt it was a good time for anyone else on the Commission to disclose if they received any ex parte communications.

Commissioner Carluccio addressed the letter she received. She did not know what it was when she opened it. She read the first line and realized it was pertaining to the permit and she did not continue reading. She scanned it in and sent it to staff. The first time she read the letter was when reviewing the desk packet.

Commissioner Foster said he received the same letter in the mail. He brought it in and gave it to staff.

Commissioner Whitney said he also received it and emailed it to staff the next day.

Commissioner Fikes also received the same letter and turned it into staff prior to the meeting. She also received a phone call message for contact information and she did not respond.

Commissioner Bentz said she had not received a letter. She did receive calls from neighbors but the calls were related to the Material Site Code Ordinance. She reminded them that she would not be able to speak to any specific permits. The Ordinance was the only thing discussed.

Commissioner Ruffner said if a letter was sent he did not receive it. He has not had any ex parte communications. He wanted to add that he was not present for the last meeting. He did go back and listen to almost all the audio from the last meeting and read through the minutes carefully. He feels caught up on what occurred at the last meeting.

Commissioner Morgan was also absent from the last meeting. She also listened to the audio, read the minutes and reviewed the packets.

Mr. Wall wanted to add that Commissioner Ruffner and Commissioner Morgan viewed the video presentation given by the applicant at the beginning of the previous meeting.

Mr. Wall concluded that staff recommends that the Planning Commission review the application, site plan, staff report, and comments received and determine if the mandatory conditions contained in KPB 21.29.050 will be met. The Planning Department recommends that the Planning Commission amend the Resolution as discussed in the staff report, deny the processing distance waiver request, approve the conditional land use permit with listed conditions and adopt the findings of fact subject to the requirements contained in the full staff report.

Commissioner Whitney wanted to ask a procedural question. He wanted to know if the new resolution presented would cause them to allow public testimony because of the changes. Mr. Wall explained the resolution included in the packet is what was approved by the Commission at the last meeting. He just updated the resolution to contain those changes. What is contained in the staff report for this meeting is the applicant's response to the public testimony that has been heard. The Commission is free to act on that without taking additional public comment. The public has already commented and the applicant has responded with additional volunteered conditions. Changes to the buffer is still within the Commission's purview. It does not require public comment.

Commissioner Ecklund asked staff if additional discussion and amendments were allowed other than the

ones that are new and presented tonight and the changes they made at the last meeting. Mr. Wall stated he recalled the previous meeting being ended with the Commission leaving it open to bring the applicant up to ask for additional volunteered conditions. Mr. Wall also worked with the applicant between the meetings so it wouldn't all have to occur at this meeting. Commissioner Ecklund stated that since the last meeting it came to her attention that there are three times of the year that the beach is inundated with people. There are three openings that are mentioned in the letter from State Parks on page 30 of the packet. The salt water and fresh fishery openings increase traffic. She wanted to know if those were the same periods of time that the applicant has amended and agreed to. Listed are holidays but wanted to know if the fishery openings could be included. They do change every year but it does increase public traffic. Mr. Wall said they could discuss with the applicant.

Mr. Wall felt that it would be a good time to allow the applicant an opportunity to rebut the additional comments received if he wishes to do so.

Mr. Trimble was brought up to rebut and answer questions.

1. Emmitt Trimble, PO Box 193, Anchor Point

Mr. Trimble's understanding regarding his rebuttal is that it must deal with the letter received and he also wanted to comment on the presentation given over a two-hour period. It was an opponent sitting with a computer during testimony. He felt that it was something that should not have happened. They previously rebutted those drawings and assertions with the letter from a licensed land surveyor. Regarding the letter that came in late he had no issue with anything stated.

Commissioner Ecklund wanted to discuss the letter from the State of Alaska Division of Parks and Outdoor Recreation, Jack Blackwell. It mentions the increase of traffic during the freshwater and saltwater fisheries. She believed that those were just a few days but three different times. She wanted to know if he was familiar with the fishery openings. Mr. Trimble said he is very familiar and they are not the same. The freshwater opening varies every year. It opens around Memorial Day but sometimes it is the weekend before and sometimes it is the weekend after. On Memorial Day and holidays is when the most people are there. Last Saturday there were about 14 people there out of 186 sites. They choose to respond to the State's concerns. It is not in their best interest to be trying to operate during the busy times. The saltwater is continuous every day but mostly on the weekends. He is open to suggestions but summer is the time they have and need to operate. He thought it was reasonable to not operate on Memorial Day, Labor Day and the 4th of July. There is a parade on the 4th of July with big BBQs. Those are the big events for the area. Commissioner Ecklund stated she went by the site two Saturdays ago and drove the road. She saw the recreational sites and it was a pretty quiet Saturday and she didn't think there was a freshwater opening. Mr. Trimble said yes, that was when there was only 14 out of the 186. This previous Saturday had 35. Commissioner Ecklund noted that on his additional conditions that he agrees to he states that if the 4th is on a Thursday he would not operate Saturday, Sunday and Friday. She wanted to know if the parade was on the 4th or on Friday. Mr. Trimble did not discuss the clarifications of when it falls and is open to suggestions. Mr. Trimble does not want to operate while the parade is going on. He thinks it is a clarification from staff due to the 4th falling on different days of the week. Commissioner Ecklund felt like the fourth was being skipped in how they were listed. Mr. Wall did clarify that the intent was to include the fourth. If it can be construed a different way, the Commission should reword that condition. Commissioner Ecklund asked if it will include the fourth and the additional days around the holidays. Mr. Trimble said sometimes there is a four-day weekend so it was the intent to include that. Commissioner Ecklund noted that he seemed agreeable to not operate on the freshwater opening when it is crowded. Mr. Trimble would rather keep it to the holidays because there is too much uncertainty about the openings. Usually the first weekend hardly anyone is there. He wanted to keep it to the holidays because they know people will be there regardless of the fishing.

Mr. Tremble wanted to clarify a question Mr. Wall had regarding the backup beepers. Mr. Tremble is in agreement on that condition for his equipment. He cannot govern what happens with a truck that may come in one time. He will try to accomplish that. It is not a big deal to deactivate the

beeper without putting the other white noise machine on. He would do everything he could to keep that down on other people's equipment.

Commissioner Ecklund wanted to ask about the weight limit on the bridge. She knows he can't use it but wanted to know the weight limit. Mr. Trimble thought it was 11 tons. He followed a dump truck across it with 12 yards of dirt in it the other day. Commissioner Ecklund had one follow her across the bridge. Mr. Trimble said it is not being monitored but he thinks 11 tons. Commissioner Ecklund wanted to know how much a full gravel truck would weight. Mr. Trimble said it is more than that and they will not be going across that bridge until it is repaired. Commissioner Ecklund wanted to know about other contractors he will be working with in the pit. Mr. Trimble stated that he will require that they cannot go across the bridge until it is repaired if they buy gravel from him. Commissioner Ecklund asked if there was a timeline for the repairs. Mr. Trimble is hoping for next summer but is not optimistic. They will have to build a separate bridge to tear the existing one down.

Commissioner Fikes wanted to know if there was an area in the residential zone or housing area that would be affected by Jake brake use. Mr. Trimble responded that the only place someone might use a Jake brake would be on the other side of the river coming down the hill towards the bridge. His daughter lives in that area and he doesn't recall hearing any Jake brakes when spending time there. He has heard them from the Old Sterling Highway. He wanted to clarify that it is not a residential zone. There are residential properties but there is no zone. Commissioner Fikes agreed.

Mr. Bilben approached the microphone and Chairman Martin let him know that public testimony was not going to be taken and not part of the procedure. The Commission is in discussion at this point and some information was taken by request from the Commission.

Commissioner Ecklund referred to page 124 of Volume 2 of the packet. She wanted to know about the letter received from the Alaska Department of Transportation and Public Facilities that gives the Borough direction. There were black and white pictures of the road presented at the last meeting during public testimony. She drove that road and she can't imagine what that road will turn into with a large amount of heavy trucks going over it. It is narrow and cracked all over especially along the edges. She spoke to Planning Director Best and asked if there had been any follow up because at the meeting Mr. Wall stated the Borough would not do any repairs as the Department of Transportation and Public Facilities requested. She wanted to know if there was any place in the Borough code that talks about a state maintained roads. If the Commission approves something that requires a roads use and it causes damage she wanted to know who is responsible for fixing the road. Mr. Best responded that there is nothing in Borough code that would require an applicant or somebody utilizing the state road to repair it. The code does talk about Borough roads and the Borough ownership of those roads. That responsibility lies with the State. If they want to impose weight restrictions, axle load limits on a road in disrepair they have that ability. They do have the tools available if they felt it was necessary on that road.

Commissioner Bentz noted that testimony was received that it would have to be approved by the State DNR through the State Parks since that road was originally granted as an easement through the State parks for DOT. She recalled that there was some combination of State Parks and DOT relationship with that road building. Mr. Wall said it is complicated and he did look into it. He believes that DOT does have an easement to do all the work they need. From his previous conversations with DOT the major limiting factor was the adjacent wetlands and encroaching upon the adjacent private property. There is not much room to work in there. It is more of a physical restraint then a legal restraint.

Commissioner Whitney wanted to know who would trigger issues of weight limits with DOT. He wanted to know if it needed to be a complaint from the Borough, property owners in the area, people using the road, or Parks Department. Mr. Best thought that anybody could make the complaint but it would be up to DOT to go out and do an analysis to decide if there should be a load limit.

AMENDMENT MOTION: Commissioner Ruffner moved, seconded by Commissioner Bentz to amend the motion by substitution to include the updated Resolution presented in the packet, pages 22 through 29.

Commissioner Ruffner noted that the substitution amendment renumbers a number of sections to have it make more sense. There are a couple of additions that are in red that include the voluntary conditions that were worked on and agreed upon by the applicant and staff. Also, it makes changes and clarifies the permit conditions in respect to a change in the height of the berm specifically along one of the streets. This was all covered by staff in the staff report. Mr. Wall wanted to clarify that the Resolution on the page numbers referenced does not include the conditions that has been volunteered since the last meeting and the clarification of the buffer along Denver Road will need to be a separate motion to amend.

Commissioner Bentz referred to page 27 of the packet and the permit conditions. There is language change on condition number 2 about buffers and the language that was replaced was "between the vegetative buffer and the" and was replaced with "placed near the active". She asked for him to explain the language change for the three bullet points in condition two. Mr. Wall was trying to get into words what the applicant was volunteering regarding the rolling or moving berms. The way it was previously written he could put that berm anywhere between the property boundary and the excavation. This limits him to placing the berm near the active excavation area. As the excavation area moves he would need to move the berm.

AMENDMENT MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

Commissioner Ruffner noted that there was some discussion occurring among the Commission but he wanted to note the discussion was because the Commission needed some clarification on where they could locate the additional changes. Mr. Wall clarified that on condition 2 the fifth bullet point be changed to a 50-foot vegetated buffer adjacent to the eastern most parcel boundary and a 12-foot-high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation. That takes care of the buffer issue along Denver. Commissioner Carluccio wanted to clarify because she was not sure what item 2 Mr. Wall was referring to. Mr. Wall was referring to the staff report in the desk packet. Commissioner Carluccio stated it was the permit conditions on page 27 of 173 and page 15.1 of 173. Mr. Wall said yes, on the resolution that is contained in the packet he is proposing to change the fifth bullet point on Condition 2 on page 27. Commissioner Ruffner asked if that was the only proposed change. Mr. Wall noted that the second change is located in the staff report on page 15.1. It would be all of the text under number 22 and 29. E, F, and G. 29 E, F, and G are the findings to support the additional condition number 22.

AMENDMENT MOTION: Commissioner Ruffner moved, seconded by Commissioner Bentz to amend Resolution 2018-23 to change the fifth bullet point on condition number 2 to change it to read "A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot-high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation."

Commissioner Carluccio wanted to know why the 200 feet along the north was being excluded. Mr. Wall stated that it is an area with significant vegetation. The applicant felt like a 12-foot berm would be redundant particularly since that property sits at a higher elevation than the adjacent road. The adjacent road is quite a bit lower right there. The adjacent property across the street on Denver is a prior existing use material site. Generally, the Commission does not require a buffer between material sites. The applicant can extract more gravel from that area that is hidden from the neighbors and that would be less gravel he would have to extract elsewhere. Commissioner Ecklund noted when she drove down Denver the first 200 feet is the access road. An upper level area of gravel can be seen and somewhere along Denver there is a big high berm. She wanted to know if that berm was within that 200 feet and it seemed close to the Anchor Point Road. Mr. Wall stated that the berm would not be within the 200 feet. The 200 feet would end where the denser vegetation ends. Commissioner Ecklund noted that there is a berm and then there is an area where there is no vegetation along Denver Road where the fenced horse area can be seen. She wanted to know if that area is Phase 2 or 3. She wanted to try to figure out the buffer along there. Commissioner Bentz suggested looking at page 190 in Volume 2 of the packet. Commissioner Carluccio was wondering if there was a photo or aerial. Mr. Wall found the map and it was page 420 of Volume 2. There is a prior existing

use material site that is where the pond is on the opposite side of Danver. Immediately west of that pond is vegetation that is fairly dense. That is the portion that he is proposing to eliminate the 12-foot-high berm. On page 423 there is some contour lines that may help visualize it and show that the road is at a lower elevation there. The adjacent properties are about 24-foot elevation and where the trees are there is about a 44-foot elevation.

Commissioner Ecklund said that when looking at that page there is an area with no trees. She wanted to know how a 50-foot vegetative buffer could be obtained. She wanted to know if grassland would be considered. Mr. Wall said there are some trees in that area but are sparse. It does not provide a lot of screening. Most of that will be grass and that is why a 12-foot berm is being recommended there in addition to the 50-foot vegetation.

AMENDMENT MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

AMENDMENT MOTION: Commissioner Ruffner moved, seconded by Commissioner Foster to amend Resolution 2018-23 to include the volunteered condition as number 22. "The permittee shall not operate the material site or haul material from the site on Memorial Day weekend, Labor Day weekend, and the 4th of July holiday." the specifics of how those fall is spelled out in three bullet points on page 15.1 of 173, and attach the following findings 29.E. The applicant has volunteered a condition that prohibits material site operations on holiday weekends during the summer months; 29.F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties; 29.G. The volunteered condition, to not operate on holidays, ins in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significant greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.

AMENDMENT MOTION PASSED: Seeing and hearing no discussion or objection the motion passed by unanimous consent.

Chairman Martin noted that discussion was for the main motion as amended.

Commissioner Ecklund noted that this is the main motion to approve this material site permit. She asked staff if the area around the gravel pit would have been a sufficient area for local option zoning had it been done prior to this application. Mr. Wall said that all that is required for a local option zone is twelve contiguous lots. Commissioner Ecklund wanted to know if the State recreational sites would be included, she noted that Mr. Best was shaking his head no. She stated it would have to be twelve privately owned lots. Mr. Wall said that the code deals with similarly sized lots. That would exclude the State Recreational areas because they would need to be similarly sized lots and similar uses. Commissioner Ecklund wanted to know if it was ever a possibility. Commissioner Carluccio stated she did not think so. Even if they did an LOZ it would not necessarily include Mr. Trimble's property. The LOZ would not have affected this in anyway. Mr. Wall said that was correct. Under the current ordinance, because the parcel sizes need to be similarly size, they could not include Mr. Trimble's property within that LOZ. It would be limited to 12 contiguous similarly residential use lots.

Commissioner Carluccio wanted to know if Mr. Trimble had indicated how much gravel he intended to move on a yearly bases or how much he planned to excavate. Mr. Wall said the application states up to 50,000 cubic yards. In previous hearings he indicated that he has no intentions of going that high. It would probably be much smaller. That is just a number he used because anything beyond that requires bonding with the state. Commissioner Carluccio stated the applicant would be allowed to excavate and move that much gravel in a year and wanted to know if the property is sold if the conditional use permit goes with the property. Mr. Wall said yes, he could excavate the 50,000 cubic yards if this permit is approved. Yes, the permit does carry with the land. It is not tied to the owner it is tied to the land. Commissioner Carluccio followed up, if he doesn't intend to move 50,000 in a year but he sold the property it would be open for up to 50,000. Mr. Wall said that was correct. Commissioner Carluccio asked if all the other conditions put on the permit would still remain in effect. Mr. Wall said they would.

Commissioner Bentz wanted to remind the Commission that if there were any other conditions or modifications to the conditions that are before them that would facilitate a reduction in negative secondary impacts of this material site could be discussed. Briefly talked about has been the rolling berm and how it would be more or less effective based on the approach to the extraction. She felt it could be more effective depending on whether it was going from east to west towards neighboring residents or north to south. She was trying to think of the practicality of that rolling berm and having it march ahead of any excavation so that it reduces that sight angle or reduce that potential dust or noise barrier. It's a concept that she hasn't seen a lot in other material sites and was curious if other Commissioners had opinions about it and the practicality of it.

Commissioner Ruffner wanted to check with staff that they did include in the amendment by substitution that the applicant volunteered to utilize that technic so it seems to make sense in this case because of the sight angles. The practicality of being able to extract material being and remove the stuff not wanted and putting it on top and then keep stacking and moving as the applicant goes will keep the greatest distance of a buffer. This is instead of pushing it all out and build the berm way out. In a large size area, it would make a lot of sense to apply it.

Commissioner Foster wanted to know if the berms ever have alder added to let the alder take off on the earthen berms or they just cut down trees and pile them up with biomass and dirt. He wanted to know what would consist of earthen berms and if there were additional conditions that could be added to it. Mr. Wall said the code doesn't really allow any additional conditions since it is assumed to be an earthen berm. Typically, that is what he sees with material sites. An earthen berm with some woody debris in there from the clearing. Usually that stuff gets in the way so there is usually not much woody debris. If that berm stays in place for some time vegetation will naturally grow on it such as alders but that would not be practical in this case because they will be moving the berm periodically.

Commissioner Carluccio wanted to know if the reclamation plan was in place or if it is up to the applicant. Mr. Wall said there is a plan included with the application that meets the code requirements. Commissioner Carluccio wanted to review the requirements. Mr. Wall stated that the exhausted areas exceeding 5 acres in size needs to be reclaimed with 4 inch of soil and revegetated. The slopes need to be 2:1 so there are no steep slopes. Commissioner Carluccio wanted to know the borough's history on following up on reclamation of other sites. Mr. Wall goes each year and does an inspection of each of the permitted material sites. He takes note of what areas are in need of reclamation. If they do not keep up he follows up with them. The current language of the code is a little problematic because it talks about exhausted areas. It is a little bit subjective. If an area is obviously exhausted, then he follows up and requires the reclamation take place. Commissioner Carluccio wanted to know if the code states what to do if they don't reclaim. Mr. Wall said there are provisions in the code for enforcement of the ordinance, particularly pertaining to reclamation. It involves sending out an enforcement notice, scheduling a hearing with the hearing officer, and fines are typically \$300 a day plus the hearing officer can take additional action concerning requiring the reclamation and revoking the permit. Commissioner Carluccio wanted to follow up that a permit can be revoked if they don't follow the guidelines. Mr. Wall said absolutely. Commissioner Carluccio wanted to know how much time the applicant has once a letter is sent out of notice. She wanted to know if it was weeks, months, or years. Mr. Wall felt he was maybe too generous with working with the applicants by giving them more time than he should. The idea is to get them in compliance and help them determine a time frame that works for them. It is not years it is months.

Commissioner Venuti wanted to know if reclamation would require bonding. Mr. Wall responded that the way the code is currently written is if a material site in the borough is exempt from the state bonding requirements the borough will also exempt it from the borough bonding requirements. Anything that has a total disturbed area of less than 5 acres is exempt from the state bonding requirement. If they start reclaiming land after they disturbed five acres, then bonding is not required under the current code. Commissioner Venuti asked if bonding could be made a condition. Mr. Wall said that the ordinance specifically exempts it if they are exempt from the state bonding requirements.

Roll call vote was requested for the main motion to approve a conditional land use permit application for Beachcomber LLC, Resolution 2018-23, that has been amended with voluntary conditions.

MOTION PASSED BY MAJORITY VOTE: 8 Yes, 2 No, 1 Recused, 1 Absent.

- Yes: Bentz, Ecklund, Fikes, Foster, Martin, Morgan, Ruffner, Venuti
- No: Carluccio, Whitney
- Recused: Brantley
- Absent: Ernst

Chairman Martin thanked the public that attended, did their research and participated in the process.

AGENDA ITEM F. VACATIONS NOT REQUIRING A PUBLIC HEARING

F. Utility Easement Vacation

1. Vacate the 10-foot-wide drainage easement on Lot 24-A, AA Mattox Peggi's Addition, granted by AA Mattox Peggi's Addition (Plat HM 99-64); within Section 17, Township 6 South, Range 13 West, Seward Meridian, Alaska, within the Kenai Peninsula Borough. KPB File 2019-048V

Staff Report given by Scott Huff

PC Meeting: June 24, 2019

Purpose as stated in petition: The 10' drainage easement has not been used since it was granted in 1984. There is an alternative corridor in place on the Nelson Avenue ROW above the north lot line of the subject property. A long driveway permit on the Nelson Avenue ROW has been issued by the City of Homer to the Quiet Creek Park LLC Project. The long driveway permit requires that the existing drainage corridor remain in place on the North side of the long driveway. The current corridor on the Nelson Avenue ROW handles any storm or seasonal water runoff from the Quiet Creek Park LLC Project and above, as well as, the drainage plan in place in the Quiet Creek Park LLC Project. The owner understands that the City of Homer prefers not to cross personal property when other more adequate options or corridors are available to the City of Homer for drainage and seasonal runoff. The subject property is currently for sale and buyers are concerned about the future use of the subject property 10' drainage easement, therefore preventing them from making an offer on the subject property. This is creating an adverse effect to the subject property. Vacating this easement would not create any adverse effects to the surrounding properties.

Petitioner: Peggi Patton of Homer, Alaska

Location: on Nelson Avenue and Heidi Court, in the City of Homer

Notification: Notice of vacation mailings were sent by regular mail to 17 owners of property within 300 feet. Notice of the proposed vacation was emailed to 8 agencies and interested parties.

The public notice was posted on the Planning Department's bulletin board at the KPB Administration Building.

The City of Homer Advisory Planning Commission recommended approval of the drainage easement vacation on May 15, 2019.

Comments Received:

Alaska Communications Systems: No objection.

ENSTAR Natural Gas: No objection.

GCI: No objection.

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

Public notice is hereby given that a conditional land use permit application for material extraction on a parcel in the **Anchor Point** area has been remanded on appeal to the Planning Commission. This notice is being sent to landowners located within ½ mile of the subject property. All members of the public are invited to comment. The project under consideration is described as follows:

Applicant: Beachcomber LLC
Landowner: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road
Proposed Land Use: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

KPB Code: Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or at: kpb.us

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, March 25, 2019**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the Betty J. Glick Assembly Chambers of the borough administration building located at 144 N Binkley St, Soldotna.

Public Comment: All comments previously submitted to the Planning Commission will again be provided to the Commission. Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: bwall@kpb.us. Please provide written statements by Friday, March 22, 2019. Aggrieved persons, who participate (or previously participated) in the public hearing, by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of the Notice of Decision.

The application and staff report will be available on the Planning Commission website a week prior to the meeting. For additional information or to obtain a copy of the application materials earlier, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Borough).

Kenai Peninsula Borough Planning Commission Meeting, March 25, 2019
 Conditional Land Use Permit for a Material Site

Parcel Number: 169-010-67
 Applicant: Beachcomber LLC

LEGEND

Proposed Material Site
 — Boundaries

0 250 500 Feet

Date: 3/1/2019

The information depicted hereon is a graphical representation only of best available sources. The Kenai Peninsula Borough assumes no responsibility for any errors on this map.

ABBREVIATED STAFF REPORT

PC MEETING: March 25, 2019

Applicant: Beachcomber LLC

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

On July 16, 2018, the Planning Commission denied the approval of this Conditional Land Use Permit application based upon the following findings:

- 1. The noise will not be sufficiently reduced with any buffer or berm that could be added.
- 2. The visual impact to the neighboring properties will not be reduced sufficiently.

The Planning Commission’s decision was appealed to a hearing officer in accordance with KPB 21.20. The hearing office has remanded the decision to the Planning Commission with the following instructions:

The Commission shall reevaluate the Application with respect to the mandatory conditions listed in KPB 21.29.050, as well as any voluntary conditions that Beachcomber may agree to. The Commission shall conduct a second public hearing at which it shall issue findings of fact, pertaining to the mandatory conditions listed in KPB 21.29.050 ...”

In the decision, the hearing officer stated that the Commission exceeded the scope of its authority in denying the permit based upon its determination that the conditions would not afford adequate protection from noise and visual blight and that the code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code. She also stated that the findings issued by the Commission did not provide substantial evidence in support of its denial and were not adequate. The complete decision of the hearing officer will be included in the Commission’s Packet.

The submitted site plan indicates that the material site haul route will be Danver Street, which is a Borough maintained road. The site plan and application proposes the following buffers:

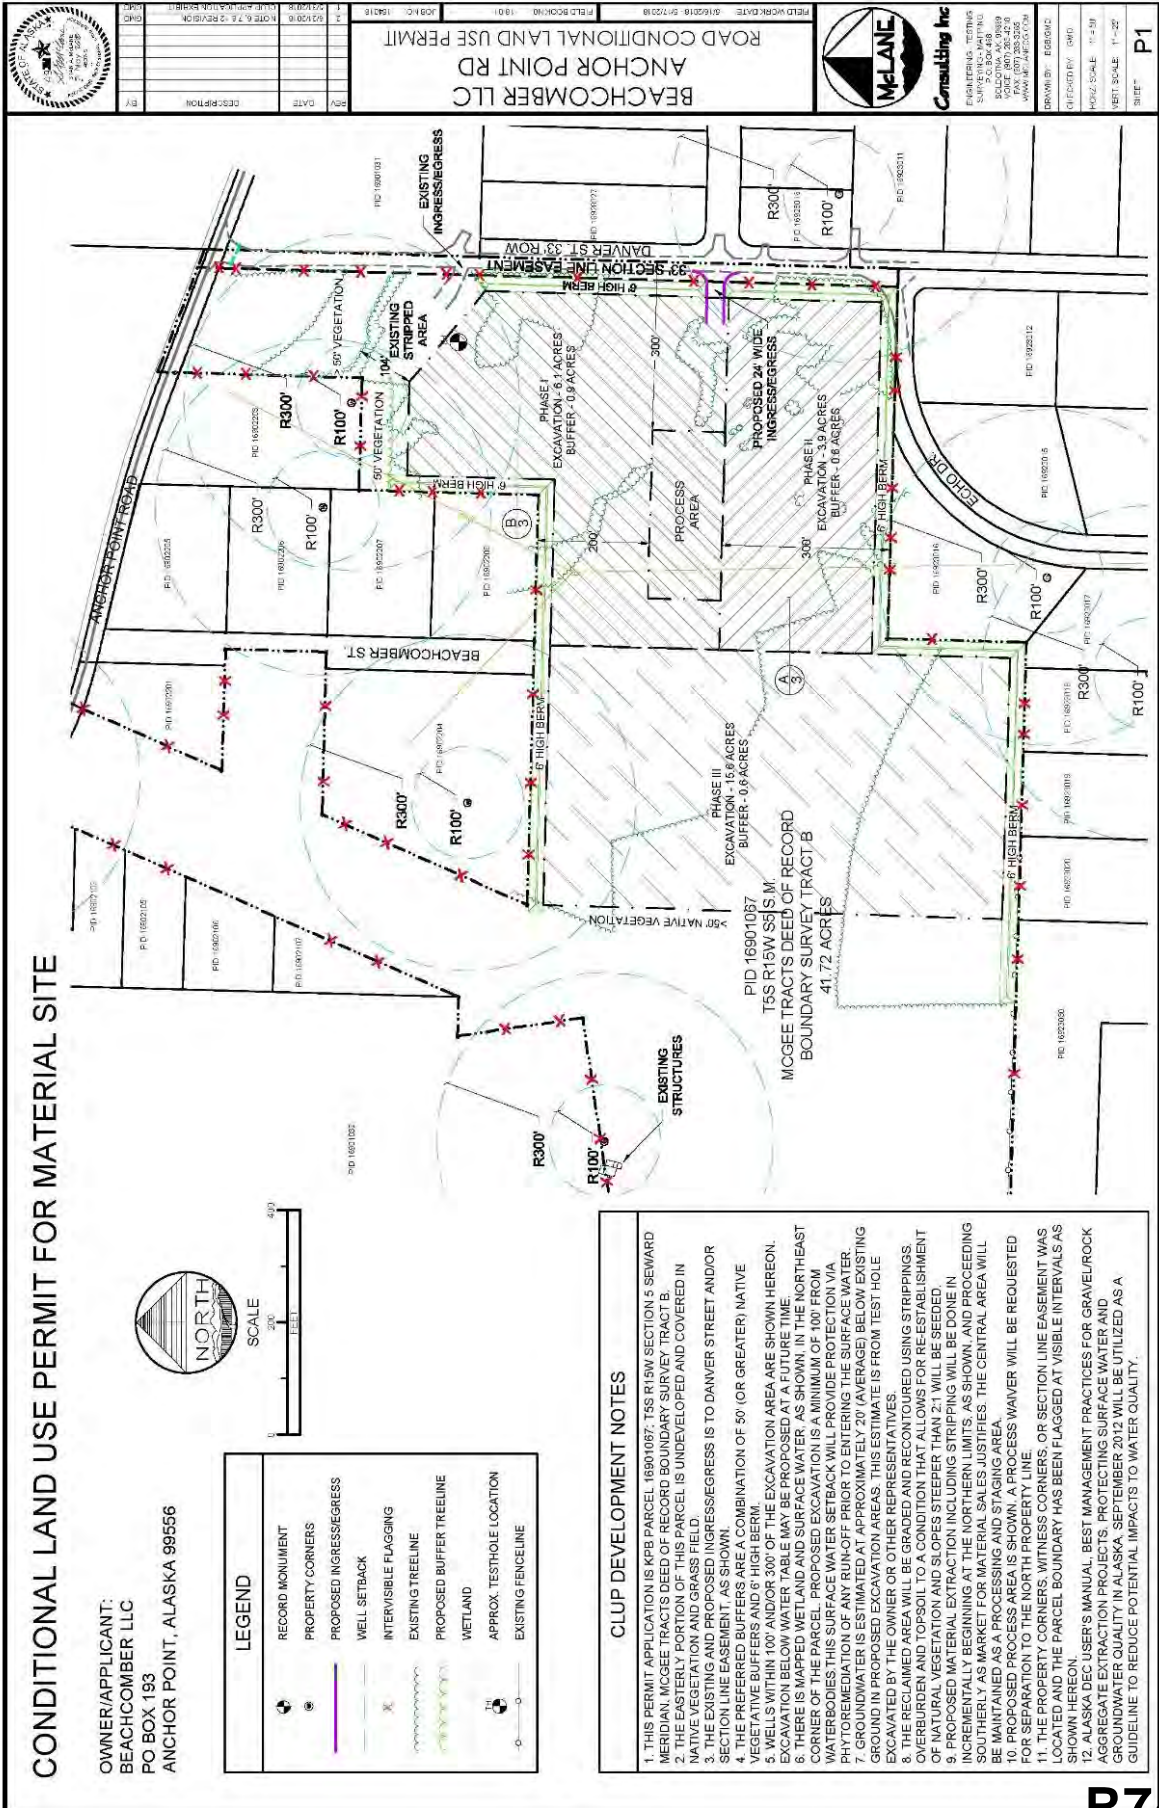

- North: 6-foot high berm except along the east 400 feet where a 50-foot vegetated buffer is proposed.
- South: 6-foot high berm.
- East: 6-foot high berm.
- West: Greater than 50-foot vegetated buffer.

It is anticipated that staff will recommend additional buffers for the material site. The site plan indicates that the processing area is 300 feet from the south and east property lines. It is greater than 300 feet from the west property line. A waiver is being requested from the north property line. The site plan indicates that the proposed processing area is located 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant’s daughter. The site plan indicates that there are several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.

STAFF RECOMMENDATION

The Planning Commission should review the application, site plan, staff report, and comments received and determine if the mandatory conditions contained in KPB 21.29.050 will be met. Based upon the guidance contained in the hearing officer’s decision, it is anticipated that the Planning Department will recommend approval of the Conditional Land Use Permit with the conditions listed in the full staff report.

Enclosed is a notice for a public hearing. Kenai Peninsula Borough Ordinance (21.25.060) requires that notice of public hearings for Conditional Land Use Permits be posted in the post office of the impacted community.

Can you post this for me in the Anchor Point Post Office?

Thanks,

Bruce Wall, AICP

KENAI PENINSULA BOROUGH PLANNING COMMISSION

NOTICE OF PUBLIC HEARING

Public notice is hereby given that a conditional land use permit application for material extraction on a parcel in the **Anchor Point** area has been remanded on appeal to the Planning Commission. All members of the public are invited to comment. The project under consideration is described as follows:

- Applicant:** Beachcomber LLC
- Landowner:** Beachcomber LLC
- Parcel Number:** 169-010-67
- Legal Description:** Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
- Location:** 74185 Anchor Point Road
- Proposed Land Use:** The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

KPB Code: Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or at: kpb.us

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, March 25, 2019**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the Betty J. Glick Assembly Chambers of the borough administration building located at 144 N Binkley St, Soldotna.

Public Comment: All comments previously submitted to the Planning Commission will again be provided to the Commission. Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: bwall@kpb.us. Please provide written statements by Friday, March 22, 2019. Aggrieved persons, who participate (or previously participated) in the public hearing, by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of the Notice of Decision.

The application and staff report will be available on the Planning Commission website a week prior to the meeting. [For additional information](#) or to obtain a copy of the application materials earlier, please call the planning department at [\(907\) 714-2206](tel:(907)714-2206), or 1-800-478-4441 (toll free within the Borough).

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

On March 25, 2019, the Kenai Peninsula Borough Planning Commission conducted a public hearing for a conditional land use permit application for material extraction on a parcel in the Anchor Point area that had been remanded on appeal to the Planning Commission. That public hearing has been continued to **June 10, 2019**. This notice is being sent to landowners located within ½ mile of the subject property. All members of the public are invited to comment. The project under consideration is described as follows:

Applicant: Beachcomber LLC
Parcel Number: 169-010-67
Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.
Location: 74185 Anchor Point Road
Proposed Land Use: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

KPB Code: Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or at: kpb.us

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, June 10, 2019**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the Betty J. Glick Assembly Chambers, George A. Navarre Borough Administration Building located at 144 N Binkley St, Soldotna.

Public Comment: All comments previously submitted to the Planning Commission will again be provided to the Commission. Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: bwall@kpb.us. Written statements provided prior to May 31, 2019 will be placed in the Planning Commission packet. Other written statements provided by Friday, June 7, 2019 will be given to the Planning Commission the day of the hearing. Aggrieved persons, who participate (or previously participated) in the public hearing, by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of the Notice of Decision.

For additional information, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Borough).

Enclosed is a notice for a public hearing. Kenai Peninsula Borough Ordinance (21.25.060) requires that notice of public hearings for Conditional Land Use Permits be posted in the post office of the impacted community.

Can you post this for me in the Anchor Point Post Office?

Thanks,

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

On March 25, 2019, the Kenai Peninsula Borough Planning Commission conducted a public hearing for a conditional land use permit application for material extraction on a parcel in the Anchor Point area that had been remanded on appeal to the Planning Commission. That public hearing has been continued to **June 10, 2019**. All members of the public are invited to comment. The project under consideration is described as follows:

Applicant: Beachcomber LLC

Parcel Number: 169-010-67

Legal Description: Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Location: 74185 Anchor Point Road

Proposed Land Use: The applicant wishes to obtain a permit for sand, gravel, and peat extraction on a portion of the parcel listed above.

KPB Code: Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or at: kpb.us

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, June 10, 2019**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the Betty J. Glick Assembly Chambers, George A. Navarre Borough Administration Building located at 144 N Binkley St, Soldotna.

Public Comment: All comments previously submitted to the Planning Commission will again be provided to the Commission. Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: bwall@kpb.us. Written statements provided prior to May 31, 2019 will be placed in the Planning Commission packet. Other written statements provided by Friday, June 7, 2019 will be given to the Planning Commission the day of the hearing. Aggrieved persons, who participate (or previously participated) in the public hearing, by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of the Notice of Decision.

For additional information, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Borough).

Unfinished Business

Conditional Land Use Permit for Beachcomber LLC. Postponed from 6/10/19 meeting. Motion on floor.

**Vacations Not Requiring A
Public Hearing**

Petition to vacate a 10-foot wide drainage easement in the City of Homer was submitted on 5/29/19. The easement is located on Lot 24-A, AA Mattox Peggi's Addn. (HM 996-64) within S17, T6S, R13W, SM, KPB, AK. KPB File 2019-048V. Petitioner: Peggi Patton of Homer, AK.

Special Considerations

Request to review the May 13, 2019 Plat Committee's Conditional Preliminary Approval of Diamond Ridge Estates No. 5; KPB File 2019-037 [Geovera, LLC / Amo] Location: on Estate Dr. off Skittles St. and Skyline Dr., Diamond Ridge, Kachemak Bay APC.

Public Hearings

1. A petition was received on 5/30/19 to vacate a public right-of-way and associated utility easements in the Diamond Ridge area. Vacate the southwestmost approximately 560 feet of the Dorothy Dr. ROW as dedicated on Gruening Vista 1988 Addn. (HM 88-37). Also, vacate the associated 10' wide utility easements within Lots 38, 40, and 41 Gruening Vista 1988 Addn. (HM 88-37). The ROW being vacated is unconstructed and located within the SE ¼ SE ¼ of S3, T6S, R13W, SM, KPB, AK. KPB File 2019-063V. Petitioner: Spotty Merle LLC of Peachtree City, GA. Reason stated in petition the ROW was to access parcels being reverted to a single tract.
2. Ordinance 2019-___; An Ordinance Amending KPB Chapter 21.25, Conditional Land Use Permits and Amending KPB Chapter 21.29, Material Site Permits.

Anyone wishing to testify may come to the meetings to give testimony. Written statements may be submitted by hand-delivery, mail (Planning Department, 144 N. Binkley St., Soldotna, AK 99689), email (planning@kpb.us) or fax (907-714-2378).

FUTURE MEETINGS

The next regularly scheduled Plat Committee and Planning Commission meetings will be held **Monday, July 15, 2019** at the KPB George A. Navarre Administration Building, 144 North Binkley St., Soldotna, Alaska.

The Plat Committee meeting will begin at 5:30 p.m. Please check the KPB's website as this time is subject to change. The Planning Commission meeting will begin at 7:30 p.m.

At their June 24, 2019 meeting, the Planning Commission approved a conditional land use permit for a material site that was requested for Parcel 169-010-67, Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

This decision may be appealed within fifteen days of the date of the Notice of Decision. The appeal must be submitted to the borough clerk on forms provided by that office, along with a filing and records preparation fee of \$300.

If you have any questions or comments, please feel free to contact me (907) 714-2206.

Sincerely,

Bruce Wall, AICP
Planner

Enclosures

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls.

R778

- Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
 5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
 6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
 8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
 9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
 10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
 16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
 17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
 18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
 19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.
 21. The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to also include:
 - Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
 - Saturday, Sunday, and Monday if July 4th is on a Tuesday
 - Saturday, Sunday, and Friday if July 4th is on a Thursday

NOTICE OF DECISION

At their June 24, 2019 meeting, the Planning Commission approved a conditional land use permit for a material site that was requested for Parcel 169-010-67, Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. A public hearing of the Planning Commission was held on June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
13. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
14. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
15. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
16. Parcel boundaries. All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
17. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.

- A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - R. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
18. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.

- E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
19. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
20. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
21. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
