 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
22. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
23. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
24. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.

25. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
26. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
27. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
28. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
29. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
 - A. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - B. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimizes the noise impacts of the material site.
 - C. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
 - D. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
 - E. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.
 - F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.
 - G. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.
30. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

This decision may be appealed through the Borough Clerk within fifteen days of the date of the Notice of Decision.

7:30 p.m.

TRANSCRIPT OF PROCEEDINGS - EXCERPT
Pages 1 - 112, inclusive

Commissioners Present:

Paulette Bokenko-Carluccio, City of Seldovia
Syverine Abrahamson-Bentz, Anchor Point/Ninilchik
Jeremy Brantley, Sterling
Cindy Ecklund, City of Seward
Robert Ernst, Northwest Borough
Dr. Rick Foster, Southwest Borough
Diane Fikes, City of Kenai
Virginia Morgan, East Peninsula
Franco Venuti, City of Homer
Paul Whitney, City of Soldotna

Staff Present:

Max Best, Planning Director
Marcus Mueller, Land Management Officer
Julie Hindman, Administrative Assistant
Jordan Reif, Platting Technician
Holly Montague, Deputy borough Attorney
Karyn DeCinco, Resource Planner
Bruce Wall, Planner
Scott Huff, Platting Manager

Others Present:

Douglas Clegg

Transcribed by: Leonard J. DiPaolo, RPR, CRR, CCP

1 P R O C E E D I N G S
 2 7:28:18 p.m.
 3 (This portion not requested)
 4 8:03:22 p.m.
 5 **COMMISSIONER FOSTER:** It brings us to
 6 Item G-4.
 7 Yes, Mr. Brantley, do you have something
 8 you'd like to offer?
 9 **COMMISSIONER BRANTLEY:** Yes. I would
 10 like to recuse myself from this -- from G-4 for an
 11 appearance of a conflict of interest.
 12 **COMMISSIONER FOSTER:** It's been brought
 13 forth that Mr. Brantley may have a conflict, or at
 14 least appears to have a conflict of interest.
 15 Does anybody have an issue that we would
 16 need to call this to a count -- to a vote? Seeing and
 17 hearing no one, you are so recused.
 18 Anybody else have a concern? Mr. Venuti.
 19 **COMMISSIONER VENUTI:** Thank you, Mr.
 20 Chair. In our lay-down packet there is a letter
 21 suggesting that I have a conflict of interest on this
 22 issue and actually accuses me of unethical behavior,
 23 which is quite insulting. I don't feel that I have a
 24 conflict of interest. I feel that I could make a fair
 25 decision on this.

Page 3

1 **COMMISSIONER FOSTER:** Does anybody here
 2 have a concern that Mr. Venuti may have the appearance
 3 of a conflict of interest; and if so, want to discuss
 4 this?
 5 Should we -- in this case should we vote
 6 on this, or -- Mr. Venuti, you don't want to set out as
 7 recusing yourself then, is that correct?
 8 **COMMISSIONER VENUTI:** No.
 9 **COMMISSIONER FOSTER:** Okay, does anybody
 10 have an issue with that? Seeing and hearing no one,
 11 you are so not recused. You do not have a conflict,
 12 the chair decides.
 13 Staff report, please.
 14 **MR. WALL:** Thank you, Mr. Chairman. This
 15 is an application for a conditional land use permit for
 16 a material site in the Anchor Point area. It is
 17 located at 74185 Anchor Point Road. The parcel number
 18 is 169-010-67. The applicant is Beachcomber, LLC.
 19 This application was heard by the
 20 Planning Commission on July 16th where the application
 21 was denied approval. This decision was appealed, and
 22 it was reviewed by a hearing officer. The hearing
 23 officer has remanded the application to the Planning
 24 Commission.
 25 Excerpts from the hearing officer's

Page 4

1 decision is included in the staff report, and copies of
 2 the decision is contained in pages 20 through 41 of
 3 your packet.
 4 Pages 2 through 10 of your packet
 5 contains the staff report. It has been updated from
 6 the July meeting to be consistent with the hearing
 7 officer's instructions that the findings should be
 8 based on the mandatory conditions contained in KPB
 9 21.29.050.
 10 Staff is recommending different buffers
 11 from what is showing on the applicant's site plan and
 12 different from staff's recommendation in July.
 13 On page 18 of your packet is a map
 14 showing staff's recommendations. On the north
 15 boundary, staff recommends a 50-foot vegetated buffer
 16 adjacent to the south boundary of parcel 169-022-03,
 17 this is the Brantley parcel, with a six-foot high berm
 18 between the vegetated buffer and the extraction area.
 19 There is a riparian wetland and
 20 floodplain in the very northeast corner of the
 21 property, and staff is recommending a six-foot high
 22 berm between the extraction area and the 100-foot
 23 setback from the riparian wetland and floodplain.
 24 Then along the rest of the northern
 25 boundary, staff recommends a 12-foot high berm. And

Page 5

1 then on the south boundary, staff is recommending a
 2 50-foot vegetated buffer adjacent to the southern
 3 parcel boundaries with a 12-foot high berm between the
 4 vegetated buffer and the extraction area.
 5 Along the east boundary, a 50-foot
 6 vegetated buffer adjacent to the eastern-most parcel
 7 boundary -- and actually let me rephrase that. That
 8 actually should say a 50-foot vegetated buffer adjacent
 9 to the section line easement along the eastern property
 10 boundary with a 12-foot high berm between the vegetated
 11 buffer and the extraction area.
 12 And then along the west side, greater
 13 than a 50-foot vegetated buffer along the western most
 14 property boundary.
 15 A waiver is being requested for the
 16 300-foot processing distance requirement from the
 17 property lines. Staff does not recommend approval of
 18 the processing distance waiver requested. There is
 19 room elsewhere on the property for processing that
 20 meets the 300-foot setback requirement.
 21 Pages 42 through 115 of your packet
 22 contains comments that have been received for this
 23 hearing. And pages 116 through 303 contains the
 24 commission packet from the July meeting, including the
 25 application, the site plan, and public comments.

Page 6

1 Pages 304 through 331 contains the
 2 minutes from the July meeting. And then an additional
 3 54 comment letters have been received since your packet
 4 was prepared last week. These comments are sitting on
 5 your desk tonight.
 6 Also on your desk tonight is a letter
 7 from the applicant's representative requesting a
 8 continuance of the hearing due to unforeseen issues,
 9 and I will let the applicant address that. It was
 10 assumed that the applicant or the representative would
 11 not be available this evening, but it appears that they
 12 are.
 13 Staff recommends that you open the public
 14 hearing tonight as advertised and then continue the
 15 hearing to the April 22nd meeting. Even though the
 16 applicant and the representative appears to be here
 17 tonight, staff is -- has made an effort to make sure
 18 the public is aware that this would be continued and
 19 that they would not need to be here at this meeting to
 20 testify, that they could come to the next one.
 21 So we recommend that you table it to
 22 the -- or continue the hearing to April 22nd. And that
 23 is the end of my staff report.
 24 **COMMISSIONER FOSTER:** Thank you. At this
 25 time I'm going to have -- I'll open it for a

Page 7

1 presentation by the applicant and their representative.
 2 And as they are coming up, I will make
 3 comment that I will entertain a motion for a
 4 continuance after they speak -- after the public
 5 hearing, I'm sorry.
 6 **KERI-ANN BAKER:** Keri-Ann Baker on behalf
 7 of the applicant. First, I just wanted to apologize.
 8 I did not believe I was going to be able to make it to
 9 this hearing because of a personal issue. I spoke with
 10 Ms. Montague about it about a week ago. She suggested
 11 that I send an e-mail to Mr. Wall, which I did. It
 12 wasn't until today that I was able to get here at the
 13 last minute. As a courtesy to this group, as well as
 14 to everyone else, I did want to come.
 15 We're prepared to go forward, but we also
 16 understand, and we've spoken to Mr. Wall about his
 17 recommendation, that some of the public may not have
 18 heard because of our request, so whatever this body
 19 decides, we would respect.
 20 And again, I apologize that my e-mail
 21 caused that. That was not my intent, and it wasn't my
 22 intent to delay.
 23 **EMMITT TRIMBLE:** I'm the applicant,
 24 Emmitt Trimble, from Anchor Point, Mr. Chairman.
 25 I'd like to use the words that the

Page 8

1 borough attorney and borough staff used in their
 2 opening statement for the appeal. I think they
 3 articulated issues better than I could.
 4 This material site is located in the
 5 rural district of the borough. The rural district is
 6 unzoned. As such, this is not a case where a
 7 conditional use is being allowed in a residential zone
 8 where it would normally be prohibited. Subject to some
 9 protections afforded surrounding property owners as set
 10 forth in the code, a material site can be placed almost
 11 anywhere in the rural district of the borough.
 12 Given the wealth of gravel deposits in
 13 the Anchor Point area, it should not be surprising that
 14 this parcel would be utilized for a material site.
 15 Some of those property owners will be
 16 more protected by their distance from the material site
 17 and the proposed buffers; however, there will always be
 18 at least some noise and visual impacts to adjacent
 19 properties from a material site operation.
 20 In the history of the material site
 21 ordinance, there has not been an interpretation that
 22 all surrounding properties must not be able to see or
 23 hear the material site at all; rather the
 24 interpretation over the course of the 96 material site
 25 permits that have been issued since 1996 is a reduction

Page 9

1 in certain negative impacts is the goal of the material
 2 site regulations.
 3 Full elimination of negative secondary
 4 impacts has never been discussed or required, nor is it
 5 feasible. Attempting to judge whether a permit should
 6 be denied based on how many people claim they are not
 7 sufficiently protected ultimately will lead to
 8 arbitrary decision making.
 9 Rather than relying on evidence, this
 10 approach relies on surrounding property owners stocking
 11 the hall. Whether a permit is approved or denied
 12 becomes a numbers game. Such negative community
 13 sentiment is not a valid reason to deny a permit.
 14 Given the mandate from the assembly that
 15 material sites be subject only to certain mandatory
 16 conditions, a denial based on a conclusory statement
 17 that the buffers are insufficient to protect against
 18 noise and visual impacts cuts against the grain of the
 19 code.
 20 Rather, if the buffers that can be
 21 fashioned are entirely useless to protect surrounding
 22 uses, the answer is a waiver of the buffer requirements
 23 under the code, not an unauthorized denial of the
 24 permit.
 25 Staff though did not believe buffering

Page 10

1 would be useless and recommended enhanced buffers to
 2 afford increased protection over and above what the
 3 minimum buffers set forth in the code would require.
 4 The Planning Commission's findings are
 5 required to be supported by the substantial evidence in
 6 the record. The substantial evidence in the record
 7 required to support the Planning Commission's findings
 8 is not the same as a substantial number of people
 9 opposing a material site. Substantial evidence is
 10 defined as relevant evidence that a reasonable mind
 11 might accept to support a conclusion.
 12 One of nine commissioners indicated they
 13 read the information. One other commissioner indicated
 14 that they had read a bit of the information and assumed
 15 it would be verified by what they heard in the
 16 testimony.
 17 A Superior Court decision has upheld the
 18 borough assembly's authority to adopt an ordinance that
 19 favors material site operations. This order further
 20 held that it is the Planning Commission's
 21 responsibility to abide by the legislative standards
 22 the assembly has established.
 23 The assembly has specifically adopted
 24 ordinances that are protective of material site
 25 operators and rejected proposed ordinances that make it

Page 11

1 more difficult for the same to receive project
 2 approval.
 3 In adopting the material site code
 4 language, the borough task force rejected language that
 5 placed a larger burden on the permit applicant.
 6 The assembly could have chosen a policy
 7 that favors residential property owners; instead, it
 8 chose to adopt a policy that favors the material site
 9 operators.
 10 This is not to say a material site permit
 11 cannot be denied, but rather it cannot be denied based
 12 on inadequate buffers when, under the code, either
 13 enhancing the buffers or waiving the buffers are the
 14 authorized resolution to a situation where buffers are
 15 not feasible.
 16 This is the borough's reply to the
 17 opening statements of the opposition: The briefs
 18 presented in opposition to the Beachcomber application
 19 are very similar in that they discuss the volume of
 20 people who attended the hearing who complained
 21 primarily about the view shed being potentially ruined
 22 by the material site and also about potential noise,
 23 dust, road damage, diminishing property values, water
 24 quality and quantity.
 25 As discussed in the opening statement of

Page 12

1 the Kenai Peninsula Borough, the standards in .040
 2 address only water quantity, road damage, physical
 3 property damage, dust, noise, visual impacts, and
 4 reclamation. These are the adopted standards because
 5 these are the concerns that are raised about many, if
 6 not most, of the material site applications.
 7 The complaints received about the
 8 Beachcomber material site are not unique. Repeating
 9 over and over again the same complaints about the same
 10 material site doesn't change the standards or
 11 conditions for material site approval.
 12 Regardless of the evidence presented, the
 13 material site code is not designed to support a permit
 14 denial based on the buffers not being feasible given
 15 the topography of the location.
 16 Where buffers are not feasible, a waiver
 17 for those buffers is in order under the code. Staff,
 18 however, does not agree that the buffers are useless
 19 and not feasible, but rather believes that they reduce
 20 the negative impacts of the material site.
 21 The borough further contends that it
 22 would be unrealistic to expect buffers to fully
 23 eliminate the negative impacts of noise and
 24 unsightliness, which appears to be the position of the
 25 Planning Commission.

Page 13

1 Although the Planning Commission did not
 2 clearly articulate this interpretation of the code, it
 3 is inferred from their findings that a denial was
 4 appropriate because the buffers would not minimize
 5 noise and visual impacts.
 6 Reference is made to 200 pages of
 7 documents submitted, it's the Bilben brief. However,
 8 documents that don't address the standards are not
 9 persuasive. Minimal questions were asked of the
 10 applicant and testifiers regarding the standards
 11 applicable to the proposed material site.
 12 Evidence and fear are not synonymous.
 13 Much of what is referred to as evidence is actually
 14 voicing fear of what may happen if the material site is
 15 operated on the Beachcomber parcel.
 16 The borough inevitably hears complaints
 17 that wells will run dry and roads will be ruined by a
 18 material site, yet there has never been a substantiated
 19 case of these deleterious results occurring after 96
 20 permitted material sites. Fears and concerns, even
 21 though they may be real, are not evidence.
 22 There was no real discussion of these 200
 23 pages of documents. This wasn't a thorough,
 24 well-reasoned decision; it was a hasty, reactionary
 25 decision made to accommodate the fears and concerns of

Page 14

1 the crowd.
 2 In -- the Girton brief references the
 3 peace, tranquility, natural beauty of the open meadow
 4 and the view shed that will be destroyed by the
 5 material site; however, that open meadow is not a state
 6 or national park. That open meadow is a privately
 7 owned parcel in an unzoned area of the borough.
 8 The Baker Trust chose a -- referenced a
 9 case from Anchorage, however -- as supporting denial of
 10 a conditional use permit. However, in both cases the
 11 applicant was attempting to conduct a use in a
 12 residential zone where the activity would generally be
 13 prohibited.
 14 The borough has not adopted the
 15 geographical zoning scheme authorized in .040, but
 16 rather has adopted an ordinance to minimize unfavorable
 17 effects of material sites as authorized in .040.
 18 Consistent with the KPB comprehensive
 19 plan, a permit is required to operate a material site
 20 in the unzoned borough, but that permit requirement
 21 does not rely on the premise that material sites are in
 22 conflict or are generally prohibited in residential
 23 areas. A permit is required in the borough whether the
 24 nearest residence is across the street or across
 25 Kachemak Bay.

Page 15

1 The Bilben brief asserts there is
 2 substantial evidence in the record to support the
 3 Planning Commission's decision, but then goes on to
 4 argue is that if there isn't substantial evidence, the
 5 hearing officer should remand to the Planning
 6 Commission.
 7 Obviously, Bilben does not have
 8 confidence in the position that the substantial
 9 evidence in the record supports denial of the permit or
 10 he would not be suggesting a remand as an alternative.
 11 The arbitrariness of the Planning
 12 Commission's decision is underscored by the fact that
 13 another material site in Anchor Point was heard by the
 14 same commission on the same night. The Blauvelt pit is
 15 27-and-a-half acres, while the Beachcomber pit is 27.7
 16 acres.
 17 The testimony regarding Walt Blauvelt's
 18 material site was remarkably similar to the testimony
 19 regarding the Beachcomber material site; however, three
 20 people testified about the negative impacts of the
 21 Blauvelt material site while approximately 30 testified
 22 regarding Beachcomber. The extreme difference between
 23 the two decisions the Planning Commission reached
 24 cannot be rationally explained.
 25 While some commissioners may not like the

Page 16

1 standards and conditions in the material site code, is
 2 it not the Planning Commission's job to second guess
 3 the standards established by the assembly or ignore
 4 that the only conditions that may be placed on a
 5 material site are those set forth in KPB .050?
 6 The Planning Commission must work within
 7 the legislative standards established by the assembly.
 8 Staff does not believe there is legal support for
 9 upholding the Planning Commission's findings of fact or
 10 conclusions of law.
 11 Indeed, the Planning Commission gave no
 12 explanation for its diversion from the legal
 13 requirements. The Planning Commission's findings were
 14 conclusory and inadequate to support abandoning the
 15 well-established approval process for material site
 16 CLUPs.
 17 Conclusion, the denial of the material
 18 site based on perceived inadequate buffers is
 19 inconsistent with the many decisions issued by the
 20 Planning Commission where similar complaints have been
 21 raised.
 22 In those cases the Planning Commission
 23 enhanced the buffers to the extent allowed by the code.
 24 The Planning Commission may change course as its
 25 expertise and experience suggests or requires, but when

Page 17

1 they do so, they must provide a reasoned analysis
 2 indicating that prior standards and policies are being
 3 deliberately changed, not casually ignored.
 4 The Planning Commission made no analysis
 5 of why it would deny this material site as opposed to
 6 other material sites the very same meeting. It was
 7 arbitrary and unreasonable for the Planning Commission
 8 to deny this material site permit.
 9 Rather than relying on its own expertise
 10 and experience in administering KPB 21.29, it ignored
 11 the expertise and experience. As such, the hearing
 12 officer should not give consideration to the Planning
 13 Commission's interpretation in this case.
 14 In fact, it would be difficult to give
 15 much consideration to the Planning Commission's
 16 interpretation because they didn't discuss the
 17 ordinance, question staff or the witnesses in any
 18 meaningful way, or attempt to fashion more appropriate
 19 buffers.
 20 I'm sorry for being so lengthy. I know I
 21 went long there. I have submitted, and I believe you
 22 have a drawing and a cover letter that provides a grid
 23 and a profile to respond to the opposition's drawings
 24 that were submitted.
 25 And so we feel that this drawing done by

Page 18

1 a licensed registered surveyor is a more accurate
 2 representation. And that at worst it shows that as
 3 long as the berm is placed close to the excavation site
 4 as recommended by staff, they are showing that it would
 5 have to be 24 feet tall at Echo Street.
 6 But that's hundreds of feet away from
 7 where we propose to put the berm, which is right at the
 8 excavation site that will probably last for three to
 9 five years without any movement. It's not a
 10 large-scale operation. That's on page 410 or 412 in
 11 your packet, that drawing.
 12 **UNIDENTIFIED SPEAKER:** You think it is.
 13 **EMMITT TRIMBLE:** I think it is, yeah.
 14 **COMMISSIONER FOSTER:** Is that Mr.
 15 Trimble? Does anybody have any questions for Mr.
 16 Trimble?
 17 **COMMISSIONER BOKENKO-CARLUCCIO:** The
 18 question that I have is -- he just spoke to a drawing
 19 on page 410, and I have no 410. So I don't know what
 20 he's referring to.
 21 **MR. WALL:** Mr. Chairman, he's referring
 22 to a letter from his surveyor, which begins on page
 23 41.69 of your desk packet, 41.70, and 41.71.
 24 **COMMISSIONER FOSTER:** Thank you. Go
 25 ahead.

Page 19

1 **COMMISSIONER BOKENKO-CARLUCCIO:** I'm
 2 sorry, I have no questions at this time.
 3 **COMMISSIONER FOSTER:** Ms. Ecklund, yeah.
 4 **COMMISSIONER ECKLUND:** I have a question
 5 for Mr. Trimble.
 6 **EMMITT TRIMBLE:** Yes, ma'am.
 7 **COMMISSIONER ECKLUND:** So the large
 8 amount of reading that you did was all from our staff
 9 or our attorneys during the hearing process with the
 10 hearing officer, that was their presentation to the
 11 hearing officer? It was hard to determine where you
 12 began and ended.
 13 **EMMITT TRIMBLE:** It was all from --
 14 **COMMISSIONER ECKLUND:** Our attorney?
 15 **EMMITT TRIMBLE:** -- borough staff and
 16 borough attorney. It was the opening statement
 17 prepared for the appeal, and then it was the reply to
 18 the opponent's opening statement.
 19 **COMMISSIONER ECKLUND:** From our staff?
 20 All from our staff?
 21 **EMMITT TRIMBLE:** Yes, correct, from two
 22 different angles. There were two attorneys.
 23 **COMMISSIONER ECKLUND:** Two attorneys --
 24 **EMMITT TRIMBLE:** Yeah, so they responded
 25 to --

Page 20

1 **COMMISSIONER ECKLUND:** -- on our staff?
 2 **EMMITT TRIMBLE:** -- both of them.
 3 **COMMISSIONER ECKLUND:** Okay, thank you.
 4 **COMMISSIONER FOSTER:** Yes, Ms. Carluccio.
 5 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes, I
 6 do have a question, Mr. Trimble.
 7 So when you're talking about the berm,
 8 you're basically talking about a moving berm that's
 9 going to go along with -- as you excavate, then at the
 10 edge of that and when you decide to go further, you'll
 11 put up another berm, another 50 feet or 25 feet or
 12 whatever? But the berm will be 12 feet, or how high
 13 will the berm be?
 14 **EMMITT TRIMBLE:** Through the chair. Yes,
 15 ma'am, it would be as recommended, a 12-foot berm.
 16 There is currently about a 14-foot berm there that's
 17 running east to west with an area of about a half acre
 18 that's been stripped, which probably would not much
 19 happen this year.
 20 But I'm proposing, and was on site with
 21 Mr. Wall a few days ago, to go ahead and put a
 22 substantial berm 14 feet high if necessary towards the
 23 back of the Phase 1, in that area. And we looked at it
 24 on site and talked about the area to the east is
 25 actually where we're recommending a 12-foot berm.

Page 21

1 There is actually very dense timber there
 2 for a portion of that, and we discussed the possibility
 3 of not needing a berm there because of -- and the road
 4 is down below the level of the ground.
 5 And I would be moving, yes -- to
 6 answer -- I would be moving that berm when necessary,
 7 keeping it close to the excavation. And then we're 25
 8 feet below that level.
 9 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
 10 through the chair, one other question. So in the area
 11 that is vegetated --
 12 **EMMITT TRIMBLE:** Uh-huh.
 13 **COMMISSIONER BOKENKO-CARLUCCIO:** -- do
 14 you plan on leaving that also and only taking the
 15 vegetation down as you move the gravel pit?
 16 **EMMITT TRIMBLE:** I spent a lot of
 17 money -- ma'am, through the chair -- I spent a lot of
 18 money making that vegetation look like it does right
 19 now. It was a mess when I bought it.
 20 So yes. I don't anticipate having a big
 21 operation there, so having the berm close to the
 22 excavation, the pastures and the trees remain just like
 23 they are now for an extended period of time, depending
 24 on what the market is for sales of gravel. I primarily
 25 want to use the gravel for my own projects.

Page 22

1 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
2 thank you.
3 **COMMISSIONER FOSTER:** Are there any other
4 questions? Mr. Venuti.
5 **COMMISSIONER VENUTI:** Thank you for
6 coming, Mr. Trimble.
7 So my question is, what is the condition
8 of the Anchor River bridge?
9 **EMMITT TRIMBLE:** Through the chair.
10 It's, in a sense, been condemned to weight standards.
11 So gravel trucks can't -- they are doing it, not
12 anything to do with me, but there shouldn't be
13 anything -- I think it's either 10,000 or 11,000 pounds
14 limit. And it's proposed to be replaced. But it may
15 be two or three years.
16 **COMMISSIONER VENUTI:** So any product you
17 produce would go down the Old Sterling?
18 **EMMITT TRIMBLE:** Yes, sir.
19 **COMMISSIONER VENUTI:** Okay, thank you.
20 **COMMISSIONER FOSTER:** Any other questions
21 or comments? Now, thank you Mr. Trimble. Oh, one
22 more.
23 **MARY TRIMBLE:** Mary Trimble, I'm the
24 other half of Beachcomber, LLC. And my testimony is
25 quite a bit shorter.

Page 23

1 When we first started this permit
2 application process, we talked to the mayor about it,
3 and he said simply, "Follow the rules." And we have
4 been following the rules.
5 We hired an engineering firm to do the
6 surveys, drawings, and to work with us and the staff to
7 make our application complete.
8 Based on that, the staff did recommend
9 our permit for approval. Once again, we have worked
10 with the staff, and now are clearly stating in the
11 permit that our berms will be where they are most
12 effective, between the vegetative buffer and the
13 extraction site as we have intended to do all along.
14 The staff is again recommending approval.
15 The planning director Bruce and the borough attorney
16 have all visited the site and saw no problems with our
17 plan.
18 The borough attorney, in her briefs as
19 Emmitt already told you, interpreted the code, stated
20 the case law to back up her position that the permit
21 should be granted. These are professional, educated
22 people who represent the borough interests and who
23 interpret and enforce the code.
24 Emmitt and I became Anchor Point
25 residents in 1976, and we owned a tackle shop on the

Page 24

1 Anchor River for three years, so we have firsthand
2 experience in a tourist business there. Even though
3 our campgrounds and state park are a valuable resource
4 that we all enjoy, they contribute very little to the
5 town's economy.
6 The gravel industry is the economic
7 driver that helps many year-round businesses thrive.
8 The trickle-down effect is huge. We could not have
9 developed 150 residential home sites in the area
10 without an affordable source of gravel close by.
11 Currently we own 42 parcels of land,
12 eight homes, and a commercial building for a
13 significant combined tax assessed value. We also own a
14 construction company with our daughter, and we're
15 building new homes in town. Preserving property values
16 is very important to us.
17 With this permit we will only be a mom
18 and pop business and are not intending, able, or
19 willing to compete with the large operations, it just
20 isn't practical. We don't have equipment, so we will
21 hire local contractors that we know do a good job.
22 The permitted 27.7 acres, minus the
23 buffers, is actually less than 20 acres, planned in
24 three phases, and will be reclaimed as required by the
25 permit.

Page 25

1 As Emmitt said, our prime use for the
2 gravel will be to improve our other properties and sell
3 to the limited local market.
4 The contour of the surrounding area has
5 been mentioned many times, and erroneously described as
6 an amphitheater or bathtub. I submitted a colored
7 contour map, which I don't know what page it is in the
8 packet, but it clearly shows the true situation.
9 The higher area above our property runs
10 in a straight northeast/southwest line. Emmitt and I
11 believe in rights with responsibilities. And this is a
12 situation where we are agreeing to take on
13 responsibilities in exchange for the right to excavate
14 gravel on our property.
15 The opposition has the right to protect
16 their property but are unwilling to accept the fact
17 that they have a responsibility to do what they can to
18 minimize visual and noise, if it is bothersome, by
19 building a fence or a berm on their property or/and
20 installing blinds that raise up from the bottom so they
21 still maintain their inlet view.
22 They do not have rights to our land, so
23 we should not bear all the responsibility for
24 mitigating their perceived discomfort. As Emmitt said,
25 in fact our land is not a wildlife refuge, a bird

Page 26

1 sanctuary, or a state park. It is our private
 2 property, and we have the right to put it to its
 3 highest and best use, which is defined -- which being
 4 realtors, we deal with this quite a bit, highest and
 5 best use.
 6 It is the likely use, selected from a
 7 number of available choices, to which an area of land
 8 may be put based on what is physically possible in
 9 compliance with zoning and building regulations and
 10 which produces the most profitable present value of the
 11 land.
 12 As we have said before, this is an
 13 amazing legacy property for our family. We desire to
 14 build a home there so we can be close to our
 15 grandchildren who are on the lot adjoining Phase 3.
 16 Finally, 21.29 attempts to balance a
 17 variety of public needs, including residential area
 18 protection, a private party's right and ability to use
 19 their land to its highest and best use, and the
 20 public's need for gravel.
 21 Whether one agrees or not with 21.29, it
 22 is the law and standards that control what the Planning
 23 Commission can or can't do.
 24 Planning Commissioners have a fiduciary
 25 obligation to the taxpayers to thoroughly read and

Page 27

1 listen to what is presented, dismiss any irrelevant
 2 information, and make an informed decision based solely
 3 on the code and substantiated facts, thank you.
 4 **COMMISSIONER FOSTER:** Thank you. Are
 5 there any questions for Ms. Trimble? Seeing and
 6 hearing none, is there another statement?
 7 **KERI-ANN BAKER:** Yes, this will be a
 8 final statement. Keri-Ann Baker on behalf of the
 9 applicant, Beachcomber.
 10 You've got a very lengthy and heavy
 11 packet, and that packet contains our application for
 12 conditional land use together with our supporting
 13 documents. We've also asked the engineer, Gina
 14 DeBardelaben, to be here. She can answer any technical
 15 questions that you might have.
 16 You also have a staff report, a couple of
 17 staff reports, but the most recent staff report done in
 18 March.
 19 So what happened is after we all went
 20 back from this hearing, we went back through the
 21 application materials and we took a look at the permit
 22 conditions contained in 21.29.050. Because at the end
 23 of the day, that is really what we're here to look at,
 24 is the mandatory conditions that are set out in
 25 21.29.050 as compared to my client's application

Page 28

1 together with their supporting documentation.
 2 And when you take out the personal
 3 attacks, the personal attacks that have been made
 4 against my clients, the personal attacks that have been
 5 made against the commissioners, at the end of the day
 6 this doesn't have to do with a popularity contest, it
 7 has to do with the standards that are contained in
 8 21.29.050.
 9 Now, your staff, I believe, has gone
 10 through and done the same thing as us -- I don't know,
 11 you can ask them -- but gone back, looked at the
 12 application, analyzed it, looked at the permit
 13 conditions to determine whether they were met or
 14 exceeded.
 15 My client's position is that he has -- or
 16 they have met the codified conditions in the code.
 17 They have met the buffer requirements. They have met
 18 the water source separation. They have met the
 19 monitoring wells.
 20 And what I have here is a document where
 21 I've gone ahead and I've analyzed all of the conditions
 22 in 21.29.050, I compared it to the materials submitted
 23 by my clients, I've compared it to all of the staff
 24 reports that have been prepared by the borough
 25 representatives, and it will show you exactly what

Page 29

1 pages in the record -- and I do apologize, I was going
 2 to the hearing record -- where the information is
 3 showing that my client has met the mandatory conditions
 4 in 21.29.050.
 5 So if we take out all of the personal
 6 attacks and all of the animosity of this case, really
 7 what it comes down to is, does my client meet the
 8 mandatory conditions in 21.29.050 or not? And we
 9 believe the record clearly shows the substantial
 10 evidence that they do. So at the end of my conclusion,
 11 I'll go ahead and turn this in.
 12 So we would urge at this point that --
 13 either at this hearing or the 22nd if it's continued,
 14 that the commissioners take a look at the record and
 15 they take out everything else and they look at the
 16 conditions and they look at my clients' application and
 17 supporting materials, and they look at the staff
 18 report, and they look at the staff permit conditions.
 19 And when you look at that and you take out everything
 20 else, it's clear that my client has satisfied those
 21 mandatory conditions.
 22 And under the law, they have a right to
 23 receive this permit. I would just point out that we do
 24 have our engineer, if there were any technical
 25 questions, and she would be happy to answer them as

Page 30

1 well.

2 **COMMISSIONER FOSTER:** Does anybody have

3 any questions for the attorney? How about for the

4 engineer? Not at this time, thank you.

5 **KERI-ANN BAKER:** Thank you.

6 **COMMISSIONER FOSTER:** Okay, at this point

7 I will be opening the public hearing. And also to let

8 you know that we will -- I will entertain a motion to

9 continue this public hearing and not close it until the

10 22nd.

11 So if you've got something to say now or

12 you want to wait until then, that's perfectly up to

13 you, but the public hearing is now open. For anybody

14 who has any comments, please sign in.

15 And I will, again, read from the rules by

16 which public hearings will be conducted.

17 Persons wishing to testify must wait for

18 recognition by the chair and state their name and

19 address for the record at the microphone provided by

20 the public comment.

21 Each speaker is limited to five minutes

22 unless they have a prepared statement, in which case

23 they may request additional time. All questions will

24 be directed to the chair. All questions and comments

25 will be kept to the subject at hand and shall not deal

Page 31

1 with personalities. And the public shall maintain

2 decorum at all times and treat all testifiers with

3 respect. No applause or verbal outbursts will be

4 allowed.

5 Does anybody want to testify?

6 **HANS BILBEN:** Just a clarification before

7 we start on this, Mr. Chair. We've been told --

8 **COMMISSIONER FOSTER:** State your name,

9 please.

10 **HANS BILBEN:** Hans Bilben, Anchor Point.

11 Mr. Wall has advised us of this request

12 for a continuance, and he's also advised us that people

13 that wish to speak tonight would be allowed to speak

14 again at the continuance, is that correct?

15 **COMMISSIONER FOSTER:** As far as I know,

16 yes.

17 **HANS BILBEN:** Okay. Let me go ahead

18 then. A couple things here. First off, a mom and pop

19 operation doesn't take out 50,000 cubic yards per year

20 for 15 years. So you call it what you want, but it's

21 not a mom and pop operation. If it was, I think we

22 could probably deal with it, but not 50,000 cubic yards

23 a year, and that's what the permit stipulates, and it's

24 a 15 year.

25 They talk about buying and selling

Page 32

1 houses. Who is buying and selling these houses? It's

2 people that move to Anchor Point, a lot of them live in

3 this area. A lot of people that are upset about this

4 are people that bought properties through the Trimbles,

5 and now after investing their money they are going to

6 have a gravel pit in their front yard. I don't think

7 that's quite acceptable.

8 One thing, I'm a member of the Anchor

9 Point Advisory Planning Commission, and the chairman of

10 the Planning Commission, the local commission, and

11 myself have repeatedly tried to convince the planning

12 department to allow our group in Anchor Point to hear

13 this application. They wanted the community to weigh

14 in, make a recommendation to this commission, and the

15 request has been denied.

16 Wouldn't you think it would be

17 appropriate maybe if the locals were allowed to weigh

18 in in Anchor Point? And that didn't happen.

19 When I asked the borough planner how it's

20 possible that the applicant, without any legitimate

21 justification for a continuance, is allowed to dictate

22 the date he feels up to defending his application. He

23 said that the applicant has special rights. He did pay

24 the \$300 application fee, you know. So for \$300 he has

25 rights that are over and above the rights of 60-plus

Page 33

1 neighbors? We have asked for a continuance for this

2 hearing on a couple of occasions and been denied.

3 And the reason for that is it's a

4 recreational/residential area. A lot of the residents

5 of that particular area are snow birds. They worked

6 and lived in Alaska for many years, they bought

7 property in Anchor Point, now they winter someplace

8 else. They won't be back until May.

9 We'll requesting that if there is a

10 continuance, that it would be until May 28th. The

11 reason for that is so that the residents that are

12 affected by this application will be here and able to

13 speak in person.

14 For \$300 he lays claim to the planning

15 department, the borough attorney, unlimited financial

16 backing. And it's like, well, I brought 300 bucks. If

17 I throw this out, can we get rights, too?

18 I mean, it kind of boils down to you say

19 that the applicant has special rights but we don't. So

20 there is something wrong with this system.

21 In the July hearing there was findings of

22 fact from this Planning Commission, and thank you for

23 making a good decision in July, and it was the correct

24 one. There was some problems.

25 The findings of fact said the noise will

Page 34

1 not be sufficiently reduced with any buffer or berm
 2 that could be added, which is true. Number two, the
 3 visual impact to neighboring properties will not be
 4 reduced sufficiently, which is also true.
 5 The stated intent of these findings is
 6 very clear. The application does not meet the minimum
 7 requirements of the code. And the exact wording and
 8 contents of the findings of fact were disputed by the
 9 hearing officer, and probably rightfully so. The main
 10 reason that she wanted a remand is because she wanted
 11 to see these findings of fact linked to specific
 12 conditions from 21.29.050, and she wanted to see the
 13 substantial evidence going along with it.
 14 I don't think I'm mistaken, but I believe
 15 the deputy borough attorney was present and involved
 16 with the wording of those stated findings, and
 17 shouldn't she be knowledgeable enough to advise you
 18 people on the correct contents?
 19 The Planning Commissioner's handbook
 20 actually goes through what findings of fact should
 21 state, and that was kind of lacking.
 22 This time we'll propose adequate findings
 23 of fact for you to adopt, along with the substantial
 24 evidence that was admitted from the findings in the
 25 previous hearing.

Page 35

1 The hearing officer further stated that
 2 the code does not afford the commission the discretion
 3 to judge the effectiveness of the conditions identified
 4 in the code. I agree with that.
 5 As Planning Commission members, you can't
 6 say, "Hey, berms don't work." Berms work, everybody
 7 knows that, it's a standard in the industry, and that's
 8 why they use buffers and berms.
 9 What the Planning Commissioners -- what
 10 you guys have to do is determine from 21.29.050 if the
 11 berms are appropriate -- pardon me, if they are of
 12 sufficient density and sufficient height.
 13 So you don't have to say, "Berms and
 14 buffers don't work," you have to say, "Are they of
 15 sufficient density and sufficient height to screen
 16 neighbors from the proposed use?" And the answer in
 17 this case is absolutely not. We will have some
 18 drawings that we won't submit until the continuance of
 19 this hearing.
 20 Those drawings will show you that -- from
 21 some of these houses, from line of sight -- and we use
 22 line of sight from the upper levels of these houses,
 23 because we pay taxes on those upper levels, the borough
 24 gladly accepts our money for them -- line of sight from
 25 some of these houses is 53 above the floor of that.

Page 36

1 Now, how are you going to protect
 2 somebody that's 53 feet above the floor of this pit
 3 with a 12-foot berm? Razzle dazzle maybe, but I don't
 4 think it's quite possible.
 5 The fact that in the initial application
 6 there was six-foot berms that were supposed to protect
 7 people that were 53 feet above this thing, it was
 8 ludicrous to think that that was even in the
 9 application. The commissioners did the right thing,
 10 and hopefully they will do it again.
 11 As commissioners, you're required to make
 12 your decisions based upon the law. In this case, the
 13 law is the code. It's written in plain English and
 14 adopted by the borough assembly. The hearing officer
 15 is certainly entitled to her opinion, but it's just an
 16 opinion. She can't change the law as adopted by this
 17 assembly.
 18 The code, yes, it unfortunately favors
 19 material site applicants, but there are a few
 20 protections in place for neighboring property owners.
 21 Those few protections need to be fiercely protected by
 22 this Planning Commission.
 23 There aren't many things that you can say
 24 that can help the residents in this neighborhood, but
 25 because of the way this code is written, it does state

Page 37

1 in 21.29.050 that berms and buffers have to be of
 2 sufficient height and density. And I think you're
 3 going to see through the evidence that that's not the
 4 case.
 5 With all the supporting evidence
 6 presented in the past, plus what you're going to see
 7 and hear tonight, you'll see that this application is
 8 ill-conceived, can't possibly comply with the mandatory
 9 conditions and standards set forth in the code, and
 10 it's just wrong for the Anchor Point community. If
 11 ever there was an application -- pardon me?
 12 **COMMISSIONER FOSTER:** Sir, are you
 13 getting close to the end?
 14 **HANS BILBEN:** I am, I'm two seconds --
 15 well, five seconds away.
 16 **COMMISSIONER FOSTER:** Okay.
 17 **HANS BILBEN:** If ever there was an
 18 application that should be denied and could be denied
 19 justifiably because of the way the code is written and
 20 because of the way this application is written, based
 21 upon the protections afforded neighboring property
 22 owners, this application should definitely be denied
 23 again by the Planning Commission, thank you.
 24 **COMMISSIONER FOSTER:** Thank you. Any
 25 questions? Yes, Ms. Carluccio.

1 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes,
2 thank you very much for your comments. What I
3 wanted -- what I noticed that -- you mentioned that you
4 were going to give us findings of fact and that you
5 were going to give us documentary information that
6 would substantiate your claim for not having this
7 gravel pit.
8 What I ask you to do -- I know you said
9 you were going to save it for the next meeting, but
10 please make sure you get it to the staff in time that
11 we get a chance to review it before we come to the
12 meeting.
13 **HANS BILBEN:** Right, we will do that.
14 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Because}
15 tonight we ended up with this packet --
16 **HANS BILBEN:** 322 pages, I saw it.
17 **COMMISSIONER BOKENKO-CARLUCCIO:** -- that
18 just got turned in, and I'm sorry, I read pretty fast,
19 but not that fast.
20 **HANS BILBEN:** Right. We will probably
21 present it at the hearing and get it so it's fresh in
22 your hands. It's only six pages, so it's not -- it's
23 pictures.
24 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{But it}
25 still would be good to have it prior to the meeting.

1 drive slow because of the condition of the road.
2 But these dump trucks are not going to
3 run 25 mile an hour. They are going to be pushing
4 hard, they run by the load, and they are not going to
5 care about the noise.
6 And I can't hold hope that -- it said in
7 the paper that we picked up tonight that there is going
8 to be a bond put down in case the dust rises and there
9 will be -- Beachcomber will be held liable if they have
10 to -- you know, if the dust comes up and they are not
11 watering the roads, or if the noise is bad.
12 I can't hold hope that the state is going
13 to contact me and say, "Okay, we'll be right out." Or
14 if I call them and tell them, I don't think they are
15 going to come out here and stick their nose into
16 Beachcomber's business and say, "Come on, you guys got
17 to slow down, or you guys got to quit making so much
18 noise."
19 We have people that walk down through
20 there with their animals going to the beach. There is
21 no place to get off the side of the road. I don't know
22 what these people are going to do. And the dump trucks
23 ain't going to be careful of them. And there is also
24 businesses on this road, a couple businesses that are
25 just now trying to make it.

1 **HANS BILBEN:** Okay.
2 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Okay,}
3 thanks.
4 **COMMISSIONER FOSTER:** Any other
5 questions? Okay, next testifier, please. State your
6 name and --
7 **MARK CLAYPOOL:** Mark Claypool from Kenai.
8 I'm here to represent Silver King RV Village in Anchor
9 Point on Anchor Point River Road.
10 I'm also the president of the association
11 there. I've gotten a lot of calls from a lot of people
12 that oppose this inside the park. I have also got
13 calls from people that didn't get their letter in time
14 to get the e-mail back by the 22nd.
15 So a continuation of this would be
16 greatly appreciated for their efforts, because they
17 come back here in the summer. And they come here to
18 enjoy a summer here and peaceful and quiet, and then
19 these dump trucks are going to be coming down through
20 there.
21 And it don't make any sense to me to have
22 this kind of activity on a road that's already
23 fractured and in poor shape to where as a boat owner
24 and an RV owner, we pull our boats down to the beach,
25 we drive our RVs down to the beach, and we have to

1 Well, here is the business, the big guys
2 are going to knock these little guys out. It's just
3 not fair to these people, it's not fair to the people
4 that live on this road, or from Danver to the New
5 Sterling. But yet, you know, they want this to happen.
6 And I just don't see any reason for it.
7 And I'd like to ask for a continuation on
8 this, so that people when they come back, they can
9 voice their own opinion. I thank you.
10 **COMMISSIONER FOSTER:** Sir, you would
11 rather have a continuance from the -- not to the 22nd,
12 but to the next --
13 **MARK CLAYPOOL:** Actually, I'd like to see
14 it continued probably into May sometime or maybe even
15 June. I mean, these people, a lot of them don't come
16 back until June.
17 **COMMISSIONER FOSTER:** Okay, thank you.
18 Any -- anybody have any questions?
19 **MARK CLAYPOOL:** Thank you.
20 **COMMISSIONER FOSTER:** Next testifier,
21 please. State your name and your address.
22 **DAN SYME:** Dan Syme, 73530 Seabury Road.
23 I'm up over the hill from this proposed gravel pit
24 within the boundaries of a half mile though.
25 I guess my concern is here, you guys as a

Page 42

1 council and chair, Planning Commission, my concern is
 2 are you looking out for the safety for those
 3 constituents that you guys represent? And I haven't
 4 heard anything about -- very little about dust control.
 5 A 12-foot berm isn't going to hold the dust in.
 6 We just mentioned about the roadway.
 7 Where is the safety into all these state parks and
 8 stuff that are right along that roadway, right across
 9 the street from this gravel pit? There is kids out
 10 there all the time. I don't hear anything about the
 11 safety of those kids.
 12 I guess I would say to you guys, I hope
 13 you really look at this permit. It's time for a
 14 change. This free gratis of just putting a gravel pit
 15 wherever you think -- I don't think anybody that lives
 16 in the City of Kenai, because he has an acre, can have
 17 a gravel pit next to you.
 18 There has to be some gives and takes on
 19 both sides, I realize that. But this place and this
 20 pristine area, boat launches, state parks, residential
 21 areas, people walking their dogs, to me we need to take
 22 special attention to this. This is just not as usual,
 23 let it go down the lane and we'll approve it.
 24 Public safety means something. And I
 25 would like to see that happen to this council, thank

Page 43

1 you.
 2 **COMMISSIONER FOSTER:** Are there any
 3 questions, comments? Thank you. Thank you, not at
 4 this time. Next testifier, please.
 5 **RICHARD CARLTON:** My name is Richard
 6 Carlton. I live in Anchor Point not far from Mr. Syme,
 7 73500.
 8 I'd like to echo the safety issue, but at
 9 the same time I'd like to kind of bring -- you know,
 10 you could approve a facility, an extraction facility,
 11 you have certain guidelines, certain rules that have to
 12 be met for these people to apply -- to make their
 13 application out and for you guys to even look at the
 14 application.
 15 But what isn't on those applications,
 16 if -- from what I've seen in this last few months is
 17 going to meetings and things, is that -- just like what
 18 Dan was saying, you know, the fact that there is no
 19 shoulders on this primary haul road that gets them to
 20 the Old Sterling Highway, which is already pretty bad
 21 shape after the -- Hilcorp had their trucks running up
 22 and down it and all the neighbors had to put up with
 23 the sound and everything the last few months over that.
 24 This little stretch is about a half a
 25 mile, and like I said, no sides on it at all. Mr.

Page 44

1 Trimble's daughter, I had to stop last summer. She was
 2 pushing her baby in a stroller, and I had to just wait
 3 for the cars and the boats to go by before I could go
 4 around her. I mean, she was just going out for a walk.
 5 It's just the fact that, you know, what
 6 makes sense and what doesn't make sense doesn't seem to
 7 be applying to this particular event.
 8 A gravel pit amongst the state parks, RV
 9 parks, and, you know, cabin -- little business -- like
 10 the gentleman said, there was a couple businesses
 11 there, and all these people that come, wait all year
 12 long to come to this place to vacation.
 13 My wife and I, that's what we -- since
 14 1996 we would save up our vacation, come up to this
 15 location, and spend -- eventually we got up to a whole
 16 month. And so we got to be here for a whole month.
 17 Well, when we retired eventually, we went
 18 ahead and we live here now. And so when somebody
 19 wanted to desecrate this little jewel to us, naturally
 20 we've put a lot of time into trying to figure out why,
 21 you know. And I still haven't -- you know, I haven't
 22 figured out why, out of 96 applications, this happens
 23 to be the very first one.
 24 But it isn't really that hard to figure
 25 out when you consider not only all the residences that

Page 45

1 are around there, but the actual location, where it is.
 2 I realize there is no zoning, but it's
 3 not right. And anybody can say that it is. I'm sorry,
 4 they are really just not looking. They are not going
 5 for a walk in this area. That's all I have, thanks.
 6 **COMMISSIONER FOSTER:** Thank you. Any
 7 questions or comments for the speaker? Not at this
 8 time, thank you. Yes, next.
 9 **KATIE ELSNER:** Hi, good evening. My name
 10 is Katie Elsner, it's E-l-s-n-e-r. I don't actually
 11 live in Anchor Point. I'm a local attorney, and I've
 12 been helping the people who have been impacted or who
 13 will be impacted by this proposed site.
 14 And I just wanted to take the opportunity
 15 to discuss a little bit of the law with you tonight.
 16 And I will, in fact, be presenting proposed findings to
 17 you all and will do that in advance of the next
 18 hearing, and then I can sort of explain those proposed
 19 findings at that point in time.
 20 But there has been some notion that your
 21 authority is somewhat constrained here. And what the
 22 code does make very, very, very clear is that you are
 23 the body that is both vested with the authority and the
 24 responsibility to determine what site and noise impacts
 25 can be reduced sufficiently, and whether or not those

Page 46

1 reductions are, in fact, sufficient.
 2 And that is actually contained within the
 3 conditions, which can be found in 21.29.050, which
 4 requires you, as the body who applies the facts to the
 5 law, to determine what vegetation and fencing will be
 6 of sufficient height and density to provide visual and
 7 noise screening of the proposed uses deemed appropriate
 8 by you.
 9 And so the code actually requires that
 10 you determine that the buffer and berming proposal is
 11 both sufficient and appropriate to screen the nearby
 12 land owners and the nearby properties.
 13 And in order to approve an application,
 14 you must find that these conditions allow the standards
 15 to be met. And the standards that we're talking about
 16 here are, of course, 21.29.040(a)(4) and (5), which
 17 require that these conditions are both sufficient and
 18 appropriate to minimize these noise and visual impacts.
 19 And as far as your ability to deny an
 20 application when you cannot make a finding that the
 21 impacts are going to be minimized, that authority
 22 specifically is granted to you under 21.25.050(b),
 23 which states that before granting a permit, you must
 24 find at a minimum that the proposed activity complies
 25 with the code.

Page 47

1 And so you must find that these minimum
 2 standards are met, and these minimum standards are
 3 clearly met, and the conditions require that the
 4 berming, that the screening, be both sufficient and
 5 appropriate.
 6 And so if you disagree with the notion
 7 that you are un -- you're disallowed from denying or
 8 disallowing a permit when you cannot find that these
 9 conditions are met, you cannot find that these
 10 standards are met, you are allowed to, you know, break
 11 away from prior precedent.
 12 And if you believe that that prior
 13 precedent is clearly erroneous, the law does allow you
 14 to break away from those prior precedents and those
 15 prior interpretations of the code.
 16 But I would submit to you that you need
 17 not do that, because an application that does not
 18 provide sufficient screening, sufficient noise
 19 screening, sufficient visual impact screening, is
 20 actually just an incomplete application.
 21 And so in the event that you find that
 22 the applicant's submission -- that the conditions that
 23 the applicant is proposing in an effort to screen
 24 nearby neighbors and other properties that already
 25 exist is not sufficient and not appropriate, then I

Page 48

1 also submit to you that you could deny that application
 2 as it is an incomplete application because it does not
 3 meet the buffer requirements under the code.
 4 And so, like I said, I will propose
 5 actual proposed findings of fact for your consideration
 6 in advance of the next hearing and then be available in
 7 the event that there are any questions in support of
 8 those findings of fact.
 9 **COMMISSIONER FOSTER:** Are there any
 10 questions at this time?
 11 **KATIE ELSNER:** Thank you.
 12 **COMMISSIONER FOSTER:** Next testifier.
 13 **PETE KINNEEN:** My name is Pete Kinneen.
 14 **COMMISSIONER FOSTER:** You turned the
 15 light off. There you go.
 16 **PETE KINNEEN:** Oh yeah, all right. There
 17 is a major disconnect in this whole situation, not just
 18 in this particular application, but in what you are
 19 doing up there, and I'm compelled to talk about it.
 20 This is basically a head-on collision,
 21 and this is the time to get it straightened out. You
 22 are being told when you go through the whole tale that
 23 they are putting to you, that you are really nothing
 24 but a rubber stamp, that's what they are saying. That
 25 you cannot deny the application because the assembly

Page 49

1 has dictated that gravel pits get priority over
 2 everything else.
 3 We have queried most of the assembly.
 4 The assembly denies it. There is nobody on the
 5 assembly that will admit to that. So we say terrific.
 6 Where are the assembly people? Where is the director
 7 from the assembly that says that you are mandated to
 8 issue permits for a gravel pit?
 9 And incidentally, this is not a gravel
 10 pit. Gravel pits are typically little backyard
 11 operation. This is a mine. This is a full-blown
 12 processing mine with a proposed asphalt plant, that's
 13 what we've heard from the applicant in previous
 14 presentations. So this is a really big deal.
 15 And you have vested in you -- you are our
 16 legislature. You have higher authority than anybody
 17 over here. You do not work for them. You work for us.
 18 And all that we're asking is to follow the law.
 19 I've made a presentation before, it's in
 20 your packet under my name, Pete Kinneen, look it up.
 21 And we just had an attorney tell you in plain language
 22 that the code says that not only do you have the
 23 authority to deny, despite what you're hearing, and we
 24 lay it out, 1, 2, 3, 4, it starts with the legislative
 25 intent from the assembly, it's right in the code, it

Page 50

1 says "intent." The intent is to protect the
 2 preexisting properties.
 3 We were there mostly because we got
 4 buffaloes by the Trimble clan that we have covenants,
 5 we have protective zoning, self -- volunteer zoning.
 6 And we were told by them that this last little flat
 7 area down there at the bottom of the hill would be a
 8 high-end subdivision, and it would certainly not be
 9 motivated for gravel.
 10 And we hear incessantly about rights,
 11 that this is unzoned, and that the assembly is telling
 12 you that unzoned means the Wild West. It's not true,
 13 okay, it's not true.
 14 When it comes to gravel, there is three
 15 levels of gravel extraction. The first is -- you can
 16 disturb one acre, okay, almost anywhere you are unless
 17 it's zoned out.
 18 The second is up to two-and-a-half acres,
 19 then you have to go get an administrative approval.
 20 But it very clearly says that you cannot disturb more
 21 than two-and-a-half acres without your approval. And
 22 that's a proactive approval.
 23 And the code is incredibly clear that,
 24 okay, you cannot mandate out of whole cloth something
 25 more than berms and buffers. And so that is the only

Page 51

1 mandatory thing that you can do. But please go back
 2 and look at this, and it says "minimum six-foot berm."
 3 And we're going to have excellent
 4 evidence, excellent evidence using the borough's own
 5 data that will show you that in this particular
 6 circumstance, because of the topography of it, it's a
 7 very unique topography, that there are no berms and
 8 buffers that will meet the code. And therefore because
 9 it cannot meet the code, the standards and conditions,
 10 then it is your duty to deny.
 11 **COMMISSIONER FOSTER:** Thank you, Mr.
 12 Kinneen. Any questions?
 13 **PETE KINNEEN:** Sir, one last sentence,
 14 please.
 15 Also in the packet is testimony that we
 16 brought up before. And in this particular case the
 17 planning department met with the applicants' engineer,
 18 and it's in the record, we will point this out to you,
 19 where the staff and the applicants are saying that
 20 the -- and I'm quoting them, I'm quoting them -- that
 21 the berms are not sufficient to protect. And that's
 22 just down on the lower level. So when you go to the
 23 higher levels, it's clear from their own testimony, and
 24 we will point this out to you.
 25 **COMMISSIONER FOSTER:** Okay, we'll get to

Page 52

1 that. Any questions? All right, thank you. Next
 2 testifier, please.
 3 **RICK OLIVER:** My name is Rick Oliver, I
 4 live at 34880 Danver Street in Anchor Point.
 5 The borough and the Trimbles have, in
 6 their opening statements, claimed that no substantial
 7 evidence was submitted in [sic] the neighboring
 8 property owners to support the Planning Commission's
 9 decision, and I beg to differ.
 10 In your packet, and this is a poor copy,
 11 but it's in your packet, it's a picture taken from my
 12 bedroom window. Grade level from my property is
 13 approximately 20 feet above the grade level for the
 14 mine.
 15 And my house is classified as a
 16 one-and-a-half story with a basement. This will put
 17 the view from my bedroom window at approximately 34
 18 feet above the top of a six-foot berm.
 19 I feel like another nail in the coffin
 20 here, but I think it's important that you guys
 21 understand exactly what we're looking at here, or will
 22 be looking at here if you approve the application.
 23 The view from my living room is
 24 approximately 24 feet from the top of the berm, and I
 25 believe the borough must consider my bedroom as

Page 53

1 property in the fact that we do, in fact, pay taxes for
 2 that.
 3 Mr. Wall has been to my property and has
 4 seen this picture. He obviously does not see any dust
 5 or noise or visual impact that may affect my or any
 6 other neighboring property.
 7 My property is located directly across --
 8 directly east of the proposed gravel mine across Danver
 9 Street, which shows through the bottom of that picture.
 10 And although I'm a little bit short of 6
 11 feet tall, I'm carrying a 10-foot board, which will
 12 give you a practical application of just exactly the
 13 view that I'll be looking at should this be approved.
 14 Planning staff has concluded that a
 15 50-foot vegetated buffer and a six-foot berm will
 16 sufficiently minimize the dust, noise, and visual
 17 impact to my property. And I'm incensed, yet again,
 18 that Mr. Trimble has the audacity to state that we
 19 ought to buy heavy curtains to eliminate this
 20 obscenity.
 21 All trees behind me in this picture are
 22 located in the mine area and will be gone. That leaves
 23 one tree within the 50-foot vegetated buffer, and a
 24 six-foot berm to protect my property. I'm also
 25 standing on what would become the primary access road

Page 54

1 to the mine, and the potential 5,000 ten-yard dump
 2 trucks in, and the 5,000 ten-yard dump trucks out that
 3 would travel it annually for the next 15 years.
 4 Absolutely no noise impact there.
 5 250 feet behind me is the proposed
 6 location for the rock crusher, which will end up being
 7 about 300 feet from my front door.
 8 The borough and Mr. Trimble apparently
 9 don't consider this to be substantial evidence. I
 10 think I have a reasonable mind to conclude differently.
 11 To approve this application in light of
 12 the substantial evidence would have been a direct
 13 contradiction of 21.29.050(2)(E), which states that
 14 buffer requirements shall be made in consideration of
 15 and in accordance with existing use of adjacent
 16 property at the time of the approval of the permit.
 17 And 21.29.050(2)(C) which states that the
 18 vegetation and fence or berm shall be of sufficient
 19 height and density to provide visual noise and
 20 screening of the proposed use as deemed appropriate by
 21 the Planning Commission or the planning director.
 22 As such, the Planning Commission was
 23 justified in their denial of this application, and
 24 their findings of fact were correct, and I thank you
 25 again for that.

Page 55

1 The proposed buffering is neither in
 2 consideration of existing use or of sufficient height
 3 and density to provide visual and noise screening as
 4 required by the code.
 5 One tree does not constitute sufficient
 6 density. Sufficient height cannot be obtained to
 7 visualize the noise or impact for myself. And I'm
 8 certainly not the highest property that's affected by
 9 this application. And that's what I said before in
 10 this paragraph.
 11 All properties that are at higher
 12 elevations in the neighborhood are even more affected
 13 by the visual and noise impact than mine and will
 14 inflict -- because of the fact that the berms and
 15 buffers of any practical height are well below the line
 16 of sight, which will be proven again with more evidence
 17 that we'll provide prior to the next meeting.
 18 Standards 21.29.040(a)(4) and (a)(5),
 19 which are required by the code cannot be met and the
 20 Planning Commission's finding are correct and
 21 appropriate. Thank you.
 22 **COMMISSIONER FOSTER:** Thank you, sir.
 23 Any questions? Thank you. Next testifier, please.
 24 **MICHAEL BRANTLEY:** Good evening, ladies
 25 and gentlemen. My name is Michael Brantley. I'm an

Page 56

1 owner of a recently new opened business called the
 2 Anchor River Fly Fishing. It's an RV park and cabins
 3 for fly fishermen.
 4 I have one question, if I may ask the
 5 assembly, and if I can have a response by a show of
 6 hands, I would appreciate that. Do I have permission
 7 to ask a question?
 8 **COMMISSIONER FOSTER:** Not at this time.
 9 You can just ask the question and then we can discuss
 10 it in our discussion, or the staff -- if it's a
 11 question for staff, they will ask at a later time --
 12 answer it.
 13 **MICHAEL BRANTLEY:** Okay. My question is,
 14 how many of you folks actually have taken the
 15 initiative to drive down to the Anchor Point community
 16 and see what's going on in the community besides the
 17 gravel pit, and actually look at the homes of all the
 18 people that have written to you asking you to deny this
 19 permit? There is very obvious reasons, more than what
 20 I can come up with.
 21 If it's permissible, if Mr. Kinneen would
 22 like to take over the rest of my time to speak, I would
 23 allow that, if that's permissible.
 24 **COMMISSIONER FOSTER:** Well, let's hear
 25 from the other folks. If you have something else to

Page 57

1 say, you can, that way we just keep moving on.
 2 **MICHAEL BRANTLEY:** Okay. You know, in
 3 all the records and everything that I've read, there is
 4 a certain line that stands out there, and it has to be
 5 the health, safety, and welfare of the community, and
 6 that's what we're talking about here, too. Not just
 7 all the rules and regulations.
 8 I've contacted other departments about
 9 this issue. My opinion is they need to be rewritten,
 10 and these issues need to be applied.
 11 I got a fact sheet here from OSHA. There
 12 is a new standard that came out for the marine industry
 13 for silica. I wanted to read you the definition of
 14 silica.
 15 Crystalline silica is a known carcinogen
 16 found in sand, stone, and artificial stone. Exposure
 17 to silica dust can trigger sarcoidosis, a chronic
 18 disease that involves scarring of the lungs.
 19 OSHA estimates that 2.3 million workers
 20 are exposed to dust involving 2 million in the
 21 construction industry. This new standard went into
 22 effect sometime in February of 2018.
 23 My business is just on the northern
 24 property line -- on the other side of the northern
 25 property line of the pit. The mine's a southern.

Page 58

1 Last meeting I had a thumb drive
 2 presentation. I would like to leave this with you as
 3 evidence. I have drafted this and made it better with
 4 wording so you can understand. So you can take this,
 5 you can keep it, you can copy it. I don't need it
 6 back.
 7 You know, these carcinogens and this
 8 noise is going to be right there present. I'm staying
 9 in my cabins now as it is getting prepped for summer,
 10 and I can hear any traffic going up and down that
 11 Denver Road. And I think those cabins are pretty well
 12 insulated.
 13 I've got pictures that I'll present to
 14 the next one that's showing people, ladies with baby
 15 carriages, single baby, two babies, three babies,
 16 sometimes with dogs and --
 17 **COMMISSIONER VENUTI:** Sir, can you speak
 18 into the microphone so we can hear you, please.
 19 **MICHAEL BRANTLEY:** Yeah. I've got photos
 20 of mothers with their children in strollers, one
 21 stroller, a double stroller, a triple stroller,
 22 sometimes with kids, sometimes with dogs walking up and
 23 down that traffic, and everybody has to go around them.
 24 As described before, that road is in
 25 horrendous condition. If they got permitted tomorrow

Page 59

1 and they started tomorrow, I would predict that the
 2 middle of July that road would be closed to the heavy
 3 traffic.
 4 The carcinogens will be spread through
 5 the air. That embankment is a 2 to 1 slope. It's like
 6 a jet engine. When that wind hits that, it's going to
 7 go up. It's still going to travel in that direction,
 8 but it's going to go up to the higher elevations, come
 9 over and settle on my property. And across the road is
 10 the bird estuary, and those waters will get
 11 contaminated with the carcinogen dust, and therefore
 12 that would also flow over into the Anchor River and our
 13 sparsely reoccurring salmon return each year. It might
 14 get worse.
 15 **COMMISSIONER FOSTER:** Can you tie this up
 16 now?
 17 **MICHAEL BRANTLEY:** Yes, sir.
 18 **COMMISSIONER FOSTER:** Okay, thank you.
 19 **MICHAEL BRANTLEY:** I want to make
 20 perfectly clear, you stated that after I make my
 21 testimony today, with this continuation I will be able
 22 to make another statement at that time, is that
 23 correct?
 24 **COMMISSIONER FOSTER:** That's correct.
 25 **MICHAEL BRANTLEY:** Okay. My opinion is

Page 60

1 that the continuation should be into the latter part of
 2 May or the first part of June, that is my
 3 recommendation, so we can all prepare ourselves.
 4 As stated before, all these folks coming
 5 back to the RV village -- you know, I heard a statement
 6 back in the room a little bit ago that said, well, you
 7 know, those people don't live here.
 8 Well, they do live here. They bought
 9 here. They are paying taxes for the property that they
 10 own here. So don't discourage their wording. You've
 11 got to listen to the people. You folks need to come
 12 down and see this community, talk to the community. I
 13 thank you.
 14 **COMMISSIONER FOSTER:** Thank you. Are
 15 there any questions?
 16 **MICHAEL BRANTLEY:** Any questions, please?
 17 **COMMISSIONER BOKENKO-CARLUCCIO:** The only
 18 question is, please give Julie your thumb drive. Thank
 19 you, Mr. Brantley.
 20 **MICHAEL BRANTLEY:** Thank you.
 21 **COMMISSIONER FOSTER:** Next testifier,
 22 please.
 23 **TODD BAREMAN:** My name is Todd Bareman.
 24 I live about a mile away from the proposed pit, but I
 25 have a business within a half mile. I have the boat

Page 61

1 launch down at the end of Anchor Point Road. And that
 2 haul road, again, will be on that road, which we're
 3 real concerned about.
 4 The only reason I think that road hasn't
 5 fallen apart more is it's so bad that the motorhome and
 6 the boat traffic now have to go real slow down that
 7 road.
 8 We all know how fast and how heavy gravel
 9 trucks are, and that's a big concern to us. You guys
 10 have no plans. We've been fighting, this will be my
 11 8th summer at the boat launch, and we've been fighting
 12 to get that road fixed for -- until I -- since I
 13 started down there and before.
 14 There is no plans to do it. As far as I
 15 know, he's not liable, whoever hauls gravel out of that
 16 pit. If that road becomes destroyed so far that we
 17 can't safely travel it with motorhomes or boat traffic
 18 during the summer, that will impact a lot of businesses
 19 down there.
 20 I would like to ask for a continuation
 21 until the May 28th. I don't feel that April is
 22 sufficient time. My peak season doesn't start until
 23 the end of May, so I know when the residents are back
 24 because I see them, I'm launching their boats. My
 25 business starts the end of April down there launching

Page 62

1 boats, but there is nobody -- it's just not busy until
 2 the end of May for the summer. So that's why I would
 3 like to ask for a continuance so you can hear from the
 4 people that are there for four months a summer,
 5 whatever they are. They own property in the area.
 6 Another question, we're not hearing from
 7 state parks. I'm trying to get a comment from them.
 8 But I just have a question for you and
 9 I'll close. Vacation time is pretty important to
 10 working families and everybody else, and we have five
 11 state campgrounds down there that are really nice, and
 12 we have three RV parks, and they are all busy for those
 13 three or four months of the summer.
 14 And if you had to wake up with your
 15 family to a gravel crusher, an asphalt plant, dump
 16 trucks running up and down the road, just ask yourself
 17 if you'd come back to any of those campgrounds again.
 18 We're worried about that. This is not a one or
 19 two-year permit, this is a long permit, and that's why
 20 we're concerned about it. It is a big deal. Our
 21 economy is the fishing, the boat launch, the state
 22 parks, and the RV parks. That's a big deal for us
 23 during the summer. So just consider that, thank you.
 24 **COMMISSIONER FOSTER:** Thank you. Next
 25 testifier, anybody else?

Page 63

1 **LINDA FEILER:** Hi, my name is Linda
 2 Feiler, I live at 73230 Tryagain Avenue. And I've
 3 lived in Anchor Point for the past 42 years or more.
 4 And Anchor Point is a quiet town. Most
 5 of us moved there because of the river, and that river
 6 is our jewel. If you ask the hundreds of people that
 7 come down from Anchorage, if you ask the people from
 8 Homer who come up to walk the beaches, to fish in the
 9 river, to walk along the river, to walk along the river
 10 road, I personally go down to the beach very often
 11 with -- alone or with my dogs or just with friends, we
 12 go for exercise. We walk along the road because it's
 13 quiet, because it's deserted, because it's lovely, and
 14 that's why a lot of us moved there.
 15 You know, I had Hilcorp moving in next
 16 door. They are going to make a lot of noise. They
 17 weren't required to put in a berm, yet when they made
 18 noise, it vibrated right through our bodies.
 19 We have had other gravel pits, and we
 20 could hear them all the way from -- on the Sterling
 21 Highway you could hear the road crusher.
 22 When I first moved there in '77, I asked
 23 my boyfriend, "What is that?" He said, "Oh, that's a
 24 train that goes to Anchorage," you know, because of
 25 that chug, chug, chug. And I said, "No, it can't be.

Page 64

1 There is no train." He said, "Oh, that's --" and the
 2 noises with the beep, beep, beep, every time anything
 3 backs up or goes forward. And in the summertime it
 4 goes for 24 hours.
 5 Now, there is a rumor that Hilcorp wants
 6 the gravel to put their berms up around all the oil
 7 rigs that you're going to start putting in there. We
 8 live in this town. It may be just a town to you people
 9 or some kind of backwoods, podunk area down there, but
 10 a lot of us are very well educated, and we moved there
 11 in order not to be within city limits, in order not to
 12 have dog ordinances and everything else.
 13 But it used to be that if my neighbor's
 14 dog barked or they were shooting off guns, I could call
 15 the police and they would come and say, "No, sorry, you
 16 know, people are trying to sleep, you have to quit it."
 17 Nowadays, I don't know. We don't have
 18 anything that protects us. It doesn't have anything
 19 that protects us, that keeps our home values, keeps our
 20 families, keeps us safe.
 21 We're no longer a part of the Kenai
 22 Peninsula Borough if you're not going to think that we
 23 also live here. And it's very important to us to know
 24 that you care that we are part of the Kenai Peninsula
 25 Borough. That scares me when I hear people speak

Page 65

1 about -- when I hear the rumors, perhaps, of what you
 2 talk about when you discuss Anchor Point.
 3 When I moved there, there were 200 of us,
 4 and there is a heck of a lot more now. We all care
 5 about our town, and just because we have a gravel pit
 6 down on Danver, it doesn't mean that it's not going to
 7 affect me and it's not going to affect my neighbors,
 8 because we are walking on that road, we use that road
 9 as our park, our exercise track. And we don't walk
 10 along the river because it's too muddy, but we do walk
 11 in the road because there is no traffic, because it's
 12 lovely.
 13 And I think from now on when something
 14 happens in Anchor Point, that you take into
 15 consideration not the people that live 25 feet or 50
 16 feet from the proposed thing that's going to come in
 17 that's going to affect our town. If you want us to
 18 incorporate, then treat us like you know who we are.
 19 We are a town, and we care about each
 20 other, and many of us take care of each other, and many
 21 of us use the river and the river road.
 22 I'm also worried about the bridge. We've
 23 had it resurfaced, but after you -- you've seen all the
 24 damage from above. But when those trucks come
 25 downhill -- I lived as a trucker for the first 20

Page 66

1 years -- and when you come down the hill with a full
 2 load of gravel, or up the hill, that bridge is a
 3 danger, and it's not double wide.
 4 So I hope you take all that into
 5 consideration and remember that we are part of your
 6 community, thank you.
 7 **COMMISSIONER FOSTER:** Any questions?
 8 Yes, Ms. Carluccio.
 9 **COMMISSIONER BOKENKO-CARLUCCIO:** I'm
 10 curious about what rumors you hear about how we speak
 11 about Anchor Point.
 12 **LINDA FEILER:** "That little backwoods
 13 area. That little pain in the neck down there."
 14 We're -- you know, I mean, yes --
 15 **COMMISSIONER BOKENKO-CARLUCCIO:** I'm
 16 sorry, I'm just trying to figure out who --
 17 **LINDA FEILER:** Well, I hope it is a
 18 rumor.
 19 **COMMISSIONER BOKENKO-CARLUCCIO:** -- on
 20 this Planning Commission would say something like that?
 21 I don't think so.
 22 **LINDA FEILER:** Well, we only hear what
 23 filters down, and we hear things at meetings. And so,
 24 you know, it's worrisome.
 25 Because once again, we're not informed

Page 67

1 when something happens in our area, okay. All of a
 2 sudden, I go out to take care of my brother and
 3 sister-in-law that died, I come back and I have Hilcorp
 4 right there.
 5 And when they go on, they didn't have to
 6 put up a berm. And a six-foot berm wouldn't help. And
 7 I sleep upstairs in my bedroom. And the vibration that
 8 goes through your chest, and my neighbors who are just
 9 panicked about it, we weren't notified, we weren't
 10 asked how we felt about it. You wouldn't want one near
 11 your house.
 12 You know, noise is a big one, really big,
 13 and we can hear the highway noise. We've stopped Jake
 14 brakes. Remember, you're not allowed to go down the
 15 hill and put on your Jake brake? How far away is a
 16 Jake brake heard?
 17 In Anchor Point, I hear break-up when the
 18 river breaks up, I hear waves crashing, and I'm a good
 19 distance away. I'm up on Tryagain. I'm up on the Old
 20 Sterling, and I can hear the ocean, and I can hear the
 21 river.
 22 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay, I
 23 understand your comments now, but that's not what I
 24 asked you.
 25 **LINDA FEILER:** Right, okay. Okay, sorry.

Page 68

1 Well, that's --
 2 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay.
 3 **LINDA FEILER:** I will get you -- if I
 4 ever hear it again --
 5 **COMMISSIONER BOKENKO-CARLUCCIO:** Thank
 6 you.
 7 **LINDA FEILER:** -- I will try to find out
 8 where it's coming from.
 9 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
 10 thanks.
 11 **COMMISSIONER FOSTER:** Thank you. Next
 12 testifier, please.
 13 **ED MARTIN:** Hi, my name is Ed Martin, I
 14 live in Sterling. Just a couple things before I start
 15 my testimony that I think you guys should really know
 16 about from previous testimony.
 17 The aforementioned boat launch was built
 18 with gravel from this site.
 19 I hear a lot about safety. I'm the owner
 20 of Alaska Driving Academy. It's a school that I train
 21 people to obtain their CDLs and become good truckers.
 22 A lot of these people are talking about safety, they
 23 are talking about the width of the road, that they
 24 don't have the room to walk up and down it with their
 25 various baby strollers and whatnot.

Page 69

1 One thing you need to keep in mind is
 2 that the typical boat trailer is wider than a dump
 3 truck, is wider than a semi truck, therefore it takes
 4 up more of the road, therefore is less safe if you're
 5 sharing that 12-foot lane on either side of this road.
 6 Wider is worse, right?
 7 Second, another thing that they are
 8 really concerned about safety, yet I hear that they got
 9 Jake brakes banned, and a Jake brake is a safety device
 10 on a truck. So obviously they are willing to trade
 11 safety for noise degradation. As long as it sounds
 12 good, they don't mind not being quite as safe.
 13 Anyhow, now I'll get to my testimony.
 14 I'm the elected president of the Kenai Peninsula
 15 Aggregate and Contractors Association that is in the
 16 process of being formed this week. I represent over 40
 17 contractors and material site operators. I urge the
 18 commission to approve Beachcomber's application based
 19 on the reasons for denial were invalid.
 20 The commission's findings that noise and
 21 visual impact would not be sufficiently reduced are not
 22 a valid reason for denial. I would like to remind the
 23 commission that your power of judgment lies within the
 24 code. You may impose conditions outlined in the code,
 25 but you may not judge their effectiveness or impose

Page 70

1 conditions outside of the code. Therefore, you must
 2 approve a permit that has met the standards set forth
 3 in the application.
 4 I urge you to vote in favor of issuing a
 5 CLUP immediately. I believe further public comment
 6 will comprise no new findings, as the public has had
 7 ample time to testify in past meetings. You've already
 8 deliberated on this once, correct? And to not further
 9 burden the applicant.
 10 The construction and development season
 11 is short, and delaying another month will be
 12 detrimental to a material site operator. Thank you.
 13 Any questions?
 14 **COMMISSIONER FOSTER:** Thank you. Are
 15 there any questions? Yes, Mr. Venuti.
 16 **COMMISSIONER VENUTI:** Thank you for
 17 testifying. You might be the right guy to ask this
 18 question.
 19 **ED MARTIN:** Yes, sir.
 20 **COMMISSIONER VENUTI:** What do you know
 21 about white noise back-up alarms, and what's your
 22 opinion on them, and do you think this would be a good
 23 solution for noise at this site?
 24 **ED MARTIN:** Well, white noise back-up
 25 alarms is a give and take. I've researched them

Page 71

1 thoroughly. There is actually a couple of studies done
 2 on them. And it's kind of another one of those avenues
 3 where you give up safety for -- a little bit of safety
 4 for a little bit of noise degradation.
 5 So basically what I found out about them
 6 is that they are only effective in certain areas behind
 7 whatever vehicle that they are put on. And they are
 8 only effective if the surrounding noise is -- they are
 9 really only effective if -- say you have one machine,
 10 maybe two machines in a pit. As soon as you put a
 11 screening plant or a crusher or something like that,
 12 that the ambient noise level has gone up dramatically,
 13 then their effectiveness comes way down, extremely
 14 down, versus a multitone alarm, or the old beep-beep
 15 tone alarms. They are actually the most effective.
 16 And there has been studies in laboratories and on --
 17 in-the-field studies of their effectiveness and the
 18 alertness of people to alarm being turned on.
 19 **COMMISSIONER VENUTI:** So is this
 20 something you would recommend an operator to use? And
 21 again, what would be the typical cost to install a
 22 system like that on trucks?
 23 **ED MARTIN:** Typical cost to install a
 24 system like that ranges in between \$4- and \$600 for
 25 your typical setup. I mean, some are cheaper, some are

Page 72

1 more expensive, particularly more expensive on the
 2 newer machinery because they are computerized and such.
 3 You can't just hack into the electrical system like you
 4 can an old machine.
 5 But it really depends on the operation.
 6 Like I said, if it was just a gravel extraction
 7 operation where you just had one loader working in a
 8 pit filling up dump trucks, it would be an effective
 9 alarm.
 10 If you have a screening operation or a
 11 crushing operation, it's not really an effective alarm
 12 because of the ambient noise from the other machinery
 13 that's operating in that site.
 14 **COMMISSIONER VENUTI:** Great, thank you.
 15 **COMMISSIONER FOSTER:** Are there any other
 16 questions? Not at this time I guess. Thank you. Next
 17 testifier, please.
 18 **LARRY SMITH:** My name is Larry Smith. I
 19 reside at 320 Artifact Street, Soldotna.
 20 I had hoped to come up here tonight and
 21 testify and give you all the benefit of my knowledge of
 22 gravel pits.
 23 And just as a background there, I've been
 24 in the construction business in Alaska for nearly 40
 25 years. My brother and I own a construction company.

Page 73

1 We've built streets, roads, and bridges throughout
 2 Alaska. We're currently under contract with the Kenai
 3 Peninsula Borough to build the North Road extension,
 4 Kenai Spur Highway extension.
 5 That project has approximately 200,000
 6 tons of gravel, which converts to something around a
 7 hundred thousand yards, which converts to, I don't know
 8 how many truck loads. I could tell you if I had my
 9 calculator with me, but I left my smart phone at home.
 10 I'm up here tonight to testify on behalf
 11 of the Trimbles and ask you to approve their permit.
 12 I've bought gravel throughout the state from a number
 13 of different entities. My brother and I currently own
 14 three gravel pits, one in Ninilchik, one in Soldotna,
 15 and one in Nikiski.
 16 I've heard a lot of testimony. I've read
 17 a lot of the letters and e-mails and such in
 18 opposition. I read the hearing officer's decisions and
 19 findings of fact.
 20 And that's what this is all about. This
 21 is all about facts. I've heard a lot of testimony out
 22 there. Long on testimony, short on facts. I saw a lot
 23 of testimony that's long on emotion, again, short on
 24 facts.
 25 The facts in my mind are that Mr. and

Page 74

1 Mrs. Trimble have met the requirements of the Kenai
 2 Peninsula Borough ordinances as evidenced by your
 3 staff's recommendation on not one, but two occasions
 4 that you approve this permit.
 5 In reading through this packet today, I
 6 came across something that I would like to read here,
 7 and it's from -- it's on page 72 of 332 of packet No.
 8 2. It has to do with the study of values of homes, and
 9 that's not what I'm here to talk to you about. I have
 10 my opinion as to what happens with the value of homes
 11 near a gravel pit, and it's -- everybody has their
 12 opinion.
 13 What this is is the background, and I'm
 14 going to read, I'm quoting: Odds are that underneath
 15 your feet is a construction material made of sand,
 16 crushed stone, and gravel. And I can guarantee that
 17 under this building is gravel, and under this carpet is
 18 concrete, which consists of gravel and other
 19 ingredients.
 20 These construction materials are an
 21 essential ingredient into nearly ever construction
 22 project from residential housing, office buildings,
 23 retail outlets, entertainment structures, to the roads
 24 that connect them. Sand, rock, and gravel are
 25 literally the foundation of economic development, but

Page 75

1 their extraction process can generate dust, noise,
 2 vibration, and truck traffic.
 3 While modern technologies and methods
 4 have greatly reduced quarry's impact -- and when I say
 5 quarries, I mean gravel pits -- the environmental and
 6 economic consequences of quarry operations receive
 7 considerable attention, often in the form of "not in my
 8 backyard," or NIMBY, campaigns opposing quarry
 9 expansions or new sites.
 10 Choosing a quarry site is a delicate
 11 task. While a quarry may be best located far from
 12 residential density on NIMBY concerns, it also needs to
 13 be near the final point of demand due to its high
 14 transportation costs. Quarries, or gravel pits, must
 15 balance the need to be both near and far.
 16 And that's -- I would imagine in a very
 17 perfect world, the Trimbles would love to have their
 18 gravel pit somewhere else where it didn't impact on the
 19 view of their neighbors. But what needs to be kept in
 20 mind is the neighbors' view is not their right. They
 21 don't own the view of the Trimbles' land.
 22 There was talk tonight about putting some
 23 fences up on their property. And I honestly believe
 24 that when we come to some of these conditions for
 25 gravel pits, that that may be some conditions we can

Page 76

1 consider; however, that's not what the code allows.
 2 The code allows certain things. The Trimbles have met
 3 those requirements, and I would request that you
 4 approve their permit, thank you.
 5 **COMMISSIONER FOSTER:** Thank you. Are
 6 there any questions? Not at this time, thank you.
 7 Next testifier, please.
 8 **LYNN WHITMORE:** My name is Lynn Whitmore,
 9 I live in Anchor Point, and I'm the next door neighbor
 10 to the proposed gravel pit. And I brought an overhead
 11 presentation to make, but for the sake of expediency,
 12 it seems like it would be redundant to do it now and
 13 then do it again in the future.
 14 So I'd just like to maybe repeat
 15 something I've heard a couple times, in that when we
 16 got remanded back to you guys from this case, on this
 17 case, we asked the planning department to continue this
 18 until we got some of the neighbors back who are
 19 affected by this.
 20 A lot of the people are smarter old
 21 duffers than I am, and they have got their timing
 22 figured out and they are Outside at this time of year,
 23 and they come home. They have got their dream piece of
 24 property up there.
 25 And I think it would be really fair to

Page 77

1 get them here to speak their concerns. And we'll try
 2 to talk them into talking about the findings of fact
 3 and not to get too far outside of what we actually need
 4 to address.
 5 And I would hope that we could continue
 6 it to around May 28th and give us a chance to get
 7 everybody together, thanks.
 8 **COMMISSIONER FOSTER:** Thank you, Mr.
 9 Whitmore. Any questions? Thank you.
 10 Any more testifiers? Or do you want to
 11 wait until next time?
 12 **JOSH ELMALEH:** Hi, my name is Josh
 13 Elmaleh, and I live on Seabury Court not far from the
 14 planned gravel extraction site.
 15 There is a few things that I would like
 16 to point out, is you guys made an excellent decision
 17 last time that we had this meeting to deny Beachcomber,
 18 LLC the right to extract gravel, and the reasons for
 19 that were visual and noise impacts.
 20 I cannot see the property from my house,
 21 yet anytime they had a tractor or a Bobcat running, I
 22 was hearing it from my house, and that's over the hill,
 23 through trees, behind other neighbors' houses.
 24 And so normally I can't hear anything
 25 from my house in that distance, but I hear it clear as

Page 78

1 day. Whenever you hear a dump truck dump, or if they
2 are going down a road, you hear their -- you hear their
3 bed clang and clack and all that. That's going to
4 happen whether or not it's on their property. It's a
5 product of their excavation, it's a product of what
6 they are going through.

7 There is a high wind in that area. That
8 will kick up the dust that they are going to expose.
9 That is going to create another visual impact because
10 you're going to have people driving by, and then all of
11 a sudden you have a cloud of dust blocking your vision,
12 not necessarily all of your vision, but it does hinder
13 it.

14 And then there is an impact on our road.
15 So that is another visual impact. You're going to have
16 high wear marks, high things -- a lot of stuff that's
17 going to be happening. And it's not just that, okay,
18 maybe they have to fix it on a weekly basis. I don't
19 know.

20 But I'll tell you, I don't want this to
21 go in, because it affects me, my family, my wife, my
22 kids, my dogs.

23 You know, I try to keep my dogs at the
24 house, you know. They are magicians. They find a way
25 out. They are going to find a way to that pit. They

Page 79

1 are going to find a way, and then somebody is going to
2 run them over, and I'm not going to have control over
3 that, you know. I do my best.

4 And I know a lot of people might be
5 better with their animals, but, you know, I grew up
6 with them, and I've always learned, do your best and
7 teach them and love them as best you can.

8 There is many -- in previous
9 testimonies -- there is many visual impacts that are
10 going to happen from it. You drive up the road, you
11 drive down the road, you're going to see what the
12 Trimbles are doing on that property. Yeah, it's their
13 property, they should have a lot of rights to what they
14 do to it.

15 But you guys have your six criteria they
16 have to meet, you know that, it's redundant. But I
17 agree with your initial findings of visual and sound
18 impacts are not going to be met, no matter what they
19 do, because they are in that bowl, and we all have a
20 perched view right above them.

21 And there is a lot of people who are
22 going to be affected, not just the neighbors, but the
23 tourists, the people that are close by, people coming
24 through.

25 I'm not going to mention property values,

Page 80

1 I'm not going to mention safety because that's all
2 there, and it doesn't matter according to those six
3 criteria.

4 And I will say this one thing, if
5 anything, Mr. Emmitt Trimble has brought the community
6 together, but not in his favor, but to resist the
7 health and the noise impact that his proposed mine will
8 bring about.

9 And a lady came up and she said something
10 about vibration. That is absolutely correct. Anytime
11 you have a truck going by, especially in that type of
12 neighborhood, you're going to have that vibration going
13 through. I mean, that's a physical impact. You're
14 being physically impacted when something goes by.

15 You know, maybe sometimes you run fast
16 and your heart starts beating a little bit. Well, you
17 kind of get that if all of a sudden, whoa, the ground
18 is moving. Some people are really affected by
19 earthquakes. Not me because I grew up in California,
20 lots of earthquakes, didn't really care about that too
21 much.

22 So anyways, please stand to your initial
23 findings, and I hope that you guys will enjoy part of
24 the piece of Heaven that we have down there.

25 **COMMISSIONER FOSTER:** Thank you, any

Page 81

1 questions? Not at this time.

2 **LAUREN ISENHOUR:** I'm Lauren Isenhour. I
3 live at 34737 Beachcomber Street. I'm just going to
4 read my statement.

5 I believe that Anchor Point is a
6 wonderful place to live for all the same reasons as
7 these people here. I like having privacy and acreage,
8 I like having control over what I can do on my own
9 property. I love being able to walk to the beach and
10 the river with my kids and not to be surrounded by lots
11 of people.

12 The success and longevity of Anchor Point
13 is extremely important to me and my family. We
14 actually depend on it. Maintaining a successful town
15 structure, meaning keeping businesses open, keeping
16 Chapman school open, keeping Anchor Point a
17 recreational destination, keeping property values high,
18 these things are very important to my family and to our
19 livelihoods.

20 I believe there is an attainable balance
21 between keeping Anchor Point the quaint little town we
22 all love while still allowing for the development that
23 keeps our community viable.

24 I see the word development used with a
25 negative connotation a lot, and I truly don't

Page 82

1 understand that. We all live in houses and drive on
 2 roads, and that's development.
 3 Anchor Point, due to its size and
 4 economy, can only support a certain amount of
 5 development, and I like that. With our construction
 6 company, I could hire a crew and build ten houses a
 7 year, only there just isn't the population to buy them.
 8 In 2018 there were 30 home sales in
 9 Anchor Point. That's a really small market. Currently
 10 I'm building one to two houses a year, and that size of
 11 development is a perfect fit for me and my family.
 12 I'm proud of what I'm accomplishing and
 13 for what I can help contribute to my town. I don't
 14 want to build in Homer or anywhere else. I want to
 15 live and work in Anchor Point.
 16 At my last build I benefitted from
 17 contributions from at least 20 local Anchor Pointers
 18 employed through local contractors who work year round
 19 and support their families with income they make right
 20 here in our tiny town. Those laborers are the backbone
 21 of our town. Without their year-round work and their
 22 year-round contributions back and our community, our
 23 town would dry up.
 24 I believe my parents are the perfect
 25 people to own this property for my neighborhood. They

Page 83

1 bought it because they love it and want to keep it
 2 fully intact and want to be able to keep it in the
 3 Trimble family for generations. They did not buy this
 4 property with plans to develop it, they bought it to
 5 keep it. But it's expensive.
 6 I would rather see a controlled,
 7 small-scale gravel pit that provides needed gravel and
 8 jobs to local people and is then reclaimed to the
 9 highest standards and be able to stay one large vacant
 10 parcel maintained by the Trimble family for generations
 11 than I would to see it subdivided. I don't want 27 new
 12 neighbors with no regulations to control what they
 13 build or do on their new properties.
 14 Ironically, my family and the
 15 neighborhood who oppose the permit both want the same
 16 thing, which is for this beautiful parcel to remain
 17 vacant and to remain one large piece of land. Once a
 18 parcel is subdivided and homes are built, it will be
 19 that way forever.
 20 My parents are very interested in keeping
 21 property values high. It benefits their real estate
 22 business as a whole and benefits their own property
 23 investments.
 24 I've heard a number of comments that this
 25 permit will lower the surrounding property values. I

Page 84

1 don't agree with that. There are no regulations on
 2 anyone else's properties protecting us from our
 3 neighbors potentially having junkyards or tarped roofs
 4 or the like that we see. Gravel pits are strictly
 5 regulated and monitored and required to be reclaimed.
 6 All over Anchor Point are properties that
 7 my parents have developed and sold, and without a
 8 shadow of a doubt, each one has been radically improved
 9 at their hand. This parcel is no exception.
 10 Prior to my parents purchasing it, the
 11 field behind my house was so littered with stumps and
 12 slash you could hardly walk through it. My parents
 13 spent over 60 grand to clean it up to the beautiful
 14 state it's currently in.
 15 That does not lend to the picture their
 16 opposition tries to paint of them as greedy destroyers
 17 of the land. They have been successful in land
 18 development for 40 years, because they are
 19 exceptionally excellent at it. They are meticulous and
 20 deliberate in their stewardship of the land.
 21 I have all the trust and confidence in
 22 the world, not because they are my parents, but because
 23 of their proven track record, that whatever areas of
 24 this permitted land they do extract gravel from, it
 25 will be reclaimed to the highest degree.

Page 85

1 The engineer who designed this permit
 2 application testified that for a large pit in this type
 3 of rural area, 10,000 cubic yards is a more realistic
 4 amount of gravel to move a year.
 5 As I stated before, Anchor Point is a
 6 small community that can only support a small amount of
 7 development. There just isn't the populous to purchase
 8 my potential ten houses a year, and there just isn't
 9 the populous to purchase 50,000 cubic yards of gravel a
 10 year. That's the number that -- the maximum the permit
 11 would allow. That's not a realistic extraction amount
 12 in our community.
 13 I'd also like to address the safety and
 14 condition of the beach access road as stated. I do
 15 walk the road with my kids, and during the summer
 16 months there is a lot of traffic and boats and RVs,
 17 bikes and walkers and constant vehicle traffic.
 18 Wide-load boats drive very slowly, RVs drive very
 19 slowly, and with a such a constant flow of vehicles,
 20 traffic just moves slowly.
 21 Gravel trucks also drive that road all
 22 the time delivering gravel to the residents, and I
 23 believe as a community we all work really well together
 24 to keep everyone safe on a road. So yeah, when I'm
 25 walking with my kids, we step off into the ditch and

Page 86

1 drivers do drive very slowly around us, and we all wave
2 at each other as we do this. And we've worked together
3 to keep everyone safe.
4 Gravel trucks drive no differently than
5 wide-load boats or RVs. And just to be clear, I
6 support the presence of RVs and boats as well as gravel
7 trucks. I believe there is an attainable balance
8 between all of us in the community to keep Anchor Point
9 the quaint town we love, yet also keep the responsible
10 amount of development that keeps jobs in our community.
11 **COMMISSIONER FOSTER:** Thank you very
12 much. Any questions for Ms. Isenhour? Not at this
13 time, thank you.
14 **LAUREN ISENHOUR:** Thank you.
15 **COMMISSIONER FOSTER:** Any more
16 testifiers?
17 **GINA DEBARDELABEN:** You managed to fill
18 up the whole sheet so far.
19 My name is Gina DeBardelaben, I'm with
20 McLane Consulting. Our engineering and surveying firm
21 was hired by Beachcomber, LLC to survey the property
22 and prepare the CLUP permit documents and exhibits.
23 Field work for the permit was completed
24 in May of 2018, and the CLUP application was submitted
25 in June of 2018. Since then -- I mean, that's -- we're

Page 87

1 almost working on a year at this point on this
2 application.
3 The site was previously utilized, and it
4 had a driveway on it and still has a driveway and a
5 small gravel pad and some berms established.
6 The material site, or the proposed
7 material site parcel has a lot of relief to it. And it
8 would require any type of -- for any type of
9 development some excavation and leveling for access,
10 residential or commercial construction, all of which
11 could have impacts similar to a material site. Just
12 something to keep in mind, that with an unlevel site
13 you always have larger impacts than a level site.
14 There were a few things brought before --
15 up in this plethora of written comments and public
16 testimony that I want to speak to. I know that some of
17 these are things that I regularly testify or say at
18 Planning Commission meetings for CLUPs, but I think
19 it's important that the commission hears it and the
20 public in attendance hear it.
21 One of them is noise concerns. It's
22 unrealistic to think that buffers will or should fully
23 eliminate impacts of noise or visual impacts. The code
24 and the proposed buffers would minimize or reduce
25 visual impacts and noise, and that's the requirement.

Page 88

1 The code provides these tools that are
2 already in the box that are supposed to be used for
3 buffers or barriers, and that's what an applicant has
4 to choose from at this point, and that's kind of the
5 way the code is written. So, you know, an applicant
6 does their best to pick from those tools that are
7 provided.
8 There's additional information provided
9 regarding site minimization by Geovera, so I don't want
10 to -- I'm not going to talk about that too much, but I
11 do want to talk about noise pollution a little more.
12 Noises can be deceiving. ANSI, MSHW, and
13 OSHA, they all have, like, great charts and comparative
14 data and studies on noise. I'm going to site some
15 docs, some noise -- some information on noise abatement
16 and some data, and that's all from a U.S. Bureau of
17 Mines report regarding noise abatement for construction
18 sites.
19 A front-end loader, which is our most
20 common piece of equipment in a material site, emits
21 between 85 and 91 decibels depending on the age of the
22 equipment and the material it's moving. It averages
23 about 88 decibels from where the operator sits.
24 As a comparison, a gas lawn mower
25 operates at 100 decibels, and a blow dryer operates at

Page 89

1 85 decibels, and an uninsulated dishwasher in your home
2 operates at 70 decibels.
3 Separation distancing and locating noisy
4 equipment behind a barrier are the two top
5 recommended -- recommendations for noise abatement. A
6 noise barrier, such as a spoils berm, drops the noise
7 level in a curvilinear rate relative to the distance
8 and the noise of the barrier.
9 But noise separation from a -- separation
10 of distance from a noise drops the impacts in a linear
11 fashion. So for every 10 feet of distance, the noise
12 drops approximately six decibels.
13 So between the curvilinear and the linear
14 analysis, a berm in combination with approximately 20
15 feet of separation, drops the decibel levels of a
16 front-end loader to that of a dishwasher. It gives you
17 an idea.
18 Decibels are always something that's a
19 little bit vague and how they drop across air and how
20 barriers affect noise abatement. So I just wanted to
21 bring it a little bit in perspective on what the
22 combination of distance and berms provide.
23 The other thing that's brought up is haul
24 routes. The Anchor River Road and the Old Sterling are
25 state maintained, and those meet what the requirements

Page 90

1 of a state road, four feet of road, are. Believe it or
 2 not, that's what the state requires -- that's what the
 3 state has provided, and they meet their standards.
 4 They also -- the Anchor River bridge has
 5 a gross to vehicle -- a GVW listed for it. Right now
 6 it's listed very low because the bridge is near being
 7 condemned or whatnot. It's damaged, and it is slated
 8 for replacement in 2020.
 9 All users of these roads need to abide by
 10 DOT requirements for GVW, speed, proper use of lanes,
 11 shouldering, et cetera. The health of the Anchor River
 12 Road to the borough permit is not -- the health and use
 13 of the Anchor River Road is not applicable to the
 14 borough permitting process.
 15 DOT's letter regarding line of site,
 16 landing length, sweeping, and traffic control permits
 17 are all standard to borough road, to DOT access points,
 18 and industrial traffic use.
 19 All borough material sites are also
 20 required to maintain their borough haul routes, which
 21 would be like a borough gravel road, and dust abatement
 22 for gravel haul routes. The material sites are
 23 required by borough code and by DEC BMPs for material
 24 sites.
 25 Quantity of extraction is another one

Page 91

1 that comes up. Gravel extraction per year is based on
 2 an unknown quantity of material sales. This CLUP
 3 application lists 50,000 yards maximum, when in
 4 reality, an extraction from a site like this is likely
 5 not to exceed 10,000 yards a year.
 6 For perspective, a large borough road
 7 capital improvement project, which would be a typical
 8 4,000-foot-long gravel road to be improved in this area
 9 wouldn't exceed 4,000 cubic yards for that project.
 10 Mr. Smith cited a very large project and
 11 cited, you know, 130,000 cubic yards for this whole
 12 project. That's over eight miles of new road
 13 construction. That's a huge project for our borough.
 14 It's not relative to a site like this or a project that
 15 would be supplied by a material site like this.
 16 So the 50,000 cubic yard maximum is
 17 something that we utilize because that's DNR's
 18 threshold for -- determines how material sites are
 19 required to report to the state for extraction and the
 20 state bonding for reclamation.
 21 So that 50,000 yards, if it's above that,
 22 they have different requirements than if it's under.
 23 So it's just kind of a -- it's kind of a cap to say
 24 that we're not going to be this huge extraction mining
 25 site.

Page 92

1 Ground water protection. The proposed
 2 extraction area is greater than 100 feet from all
 3 residential wells, surface wetlands, and flood
 4 boundaries as per the borough code. There is no
 5 extraction proposed below the table as part of this
 6 permit. Extraction will remain two feet above the
 7 ground water elevation as per the requirement.
 8 If the owner decides they want to try to
 9 extract below ground water, there's a whole nother set
 10 of requirements that they have to meet and another
 11 planning committee meeting.
 12 **COMMISSIONER FOSTER:** Thank you, could
 13 you tie this up?
 14 **GINA DEBARDELABEN:** I absolutely am, yep.
 15 Really quick, before I offer -- answer
 16 questions, Mr. Keenan [sic] has quoted multiple times,
 17 at least twice in meetings, something in an e-mail
 18 correspondence between Mr. Wall and I about -- and Mr.
 19 Wall asks -- he asked about proposing maybe a higher
 20 berm. And my response was simply after -- you know,
 21 how the vegetation is sparse or some -- there's
 22 vegetation in one corner and not all the way across, is
 23 we could propose a higher berm, but I'm not sure that
 24 makes sense either.
 25 So interpretation of that, of what I had

Page 93

1 to say, I guess Mr. Keenan's [sic] interpretation has
 2 been maybe skewed and not what the intent of the
 3 comment or the e-mail was.
 4 **COMMISSIONER FOSTER:** Thank you, are
 5 there any questions? Yes, Mr. Whitney.
 6 **COMMISSIONER WHITNEY:** Yeah, there's been
 7 a couple of comments made about a asphalt plant going
 8 in there. What's -- any word on that? Any truth to
 9 those rumors?
 10 **GINA DEBARDELABEN:** No. There's no --
 11 actually as far as I'm aware of, there is no planned
 12 sale for gravel from this site at all at this point.
 13 **COMMISSIONER FOSTER:** Ms. Ecklund.
 14 **COMMISSIONER ECKLUND:** Thank you.
 15 Through the chair, did you or your firm draft up the
 16 map on page 41.70 of our 332-page desk packet?
 17 **GINA DEBARDELABEN:** I might need help
 18 finding that.
 19 **COMMISSIONER ECKLUND:** Yeah, 41.70 --
 20 **GINA DEBARDELABEN:** Page 40?
 21 **COMMISSIONER ECKLUND:** -- of 332.
 22 **GINA DEBARDELABEN:** I'm getting close.
 23 No, that was prepared by Geovera, and that's another
 24 surveying firm out of Anchor Point.
 25 **COMMISSIONER ECKLUND:** Okay, okay. But

Page 94

1 you may be able to answer the question.
 2 **GINA DEBARDELABEN:** Sure.
 3 **COMMISSIONER ECKLUND:** The question I
 4 have is about distance, and the proposed site is how
 5 many miles from the Sterling Highway? How long of a
 6 drive is that? Not the Old Sterling Highway that's
 7 planning to be an exit site, but from the regular
 8 highway out there.
 9 **GINA DEBARDELABEN:** I don't know what
 10 that is. And then there's two routes to get to the
 11 Sterling Highway right now.
 12 **COMMISSIONER ECKLUND:** Right.
 13 **GINA DEBARDELABEN:** You can't take a
 14 loaded truck across --
 15 **COMMISSIONER ECKLUND:** The bridge.
 16 **GINA DEBARDELABEN:** -- the Anchor River
 17 bridge.
 18 **COMMISSIONER ECKLUND:** Right, okay. All
 19 right, thank you.
 20 **COMMISSIONER FOSTER:** Any more questions?
 21 Ms. Fikes.
 22 **COMMISSIONER FIKES:** So this applicant's
 23 proposal is for -- you're saying roughly estimated at
 24 10,000 cubic yards, is that your understanding for this
 25 permit for this location?

Page 95

1 **GINA DEBARDELABEN:** Well, the permit says
 2 less than 50,000 yards. In reality, gravel sales are
 3 based on -- excavation is based on gravel sales.
 4 10,000 yards is much more appropriate and likely in
 5 this neighborhood or this area.
 6 **COMMISSIONER FIKES:** And with that
 7 understanding, what would be realistic hours of
 8 operation for this particular site?
 9 **GINA DEBARDELABEN:** I don't know, but,
 10 you know, 10,000 yards isn't -- you know, that would be
 11 over two or three projects, most likely. And maybe a
 12 project would be four to six weeks depending on the
 13 size, and, you know, the crews -- it depends on what
 14 their delivery schedule needs to be.
 15 **COMMISSIONER FIKES:** Okay. Thank you.
 16 **COMMISSIONER FOSTER:** Any other
 17 questions? Not at this time, thank you. Any other
 18 testifiers?
 19 **ELDON OVERSON:** My name is Eldon Overson,
 20 and I have the piece of property that's on the corner
 21 of Danver and Seaward.
 22 So I'd like to thank the commissioners
 23 that on the July hearing that I think correctly denied
 24 the permit. The piece of property that I bought I just
 25 recently started framing up a little cabin to use in

Page 96

1 the summertimes, which I halted immediately once I
 2 found out this gravel pit was going to -- was being
 3 planned. So that pretty much halted my intended use of
 4 my property that I purchased that I paid quite a bit of
 5 money for.
 6 Also I'd like to kind of address some of
 7 the, I think, misinformation that you have received
 8 from the opposition.
 9 One, they say they're a mom and pop, you
 10 know, they're just going to take out a few yards here
 11 and there. When they were stopped from doing their
 12 additional two-and-a-half acre permit, they had a
 13 contract with Hilcorp to extract 12,000 yards. And
 14 that same 12,000 yards then was -- when they were
 15 stopped from doing that, was given to another gravel
 16 company, the Schafers, and they did that hauling of
 17 12,000 yards to Hilcorp, which is a, you know, longer
 18 distance away in just under a week-and-a-half. It took
 19 them about nine days.
 20 So the information that I think you're
 21 getting from the opposition is to paint this thing as
 22 kind of a small, no impact.
 23 My property sits exactly at the very top
 24 of the hill, and it is 50 feet above the material site.
 25 And it's also on the face where there is almost no

Page 97

1 vegetation. So that 50-foot vegetation buffer and --
 2 will do no good for me.
 3 And also the berm will do absolutely
 4 nothing, because I will have a complete line of sight
 5 of the crusher site and most of the excavation, even
 6 with Beachcomber's proposed moving the berm as they go.
 7 I will have -- I did submit a picture and
 8 kind of a site plan of where my property from -- the
 9 picture from my deck of my cabin that I was building,
 10 and it showed where the gravel pit was going to be.
 11 And a 12-foot berm with no trees in front of me in line
 12 of sight from the gravel pit, I will actually be --
 13 have a complete line of sight.
 14 So her testimony that the berm will knock
 15 down the sound, it won't because I will have a direct
 16 line of sight. It will not be -- the visual or the
 17 noise will not be stopped at my property because of the
 18 berm or the 50-foot buffer.
 19 So I would just hope that you would
 20 consider that and deny their permit again on those
 21 grounds. Thank you.
 22 **COMMISSIONER FOSTER:** Are there any
 23 questions? Not at this time, thank you.
 24 Is there anybody else who wants to
 25 testify at this time?

Page 98

1 **GREGG WIESER:** Good evening, my name is
2 Gregg Wieser. I have two properties on Seabury Road.
3 I just recently moved to Alaska after visiting for 25
4 years, nine different vacations. Been all over the
5 state on those vacations, but I did not go to all of
6 those locations each and every vacation, or I -- but I
7 always came back to Homer and Anchor Point every single
8 vacation.
9 And I fell in love with it, and I said to
10 myself, "One day I'm going to live there." And that
11 was my dream starting the very first time I came in
12 1995.
13 Some of the things that attracted me most
14 to the area are the people and the community, and of
15 course all of the different adventurous activities and
16 the nature.
17 Well, I finally was able to fulfill my
18 dream, and this past October I purchased my two
19 properties, which total a little over 10 acres on
20 Seabury Road, seven-tenths of a mile from this proposed
21 gravel site. So I was not included in any mailer or
22 anything like that, because as I understand it, it was
23 a half a mile, so I missed it by two-tenths of a mile.
24 I was actually one property over according to the map I
25 saw, the parcel.

Page 99

1 But basically I'm located between --
2 well, it was a big surprise to me my very first week
3 here, Hilcorp with their loud noise and wondering if
4 those are the Northern Lights, but it's actually east
5 and it was white lights. And that disturbance
6 eventually stopped.
7 But I'm closer to this proposed site on
8 Danver, which would be even more noisy, I would
9 imagine, with trucks. But now in this -- listening to
10 everybody, I'm also hearing about, you know, crushing,
11 and I don't even understand the definition, but it just
12 sounds more impactful than just trucks going up and
13 down the only recreational area in that part of the
14 Kenai Peninsula for five campgrounds and a river with
15 salmon and ends at a beach where you have thousands of
16 tourists -- God bless you -- thousands of tourists that
17 visit, like my son and I did this past July and again
18 in August before we purchased the property, or I
19 purchased the property. And went down to that beach
20 and was able to enjoy low tide, you know, with all of
21 the bald eagles.
22 Well, Jean, the Eagle Lady, she's no
23 longer around in Homer. The eagles left. So I took a
24 few years since my last time in Alaska. When I was in
25 Homer I noticed, "Where are all the eagles?" And they

Page 100

1 explained to me what happened. You've got to go to
2 Anchor Point, you've got to go at low tide.
3 So my son and I went for his 18th
4 birthday over to Anchor Point low tide. I fell in love
5 with the area, and I told my realtor, "You know what?
6 I've been in real estate for over 10 years, and I'm
7 finally able to retire young, and I'm moving to my
8 favorite vacation place. My son is moving to the Air
9 Force, I'm free, I can do what I want, and I'm moving
10 to Alaska. And I don't have the light pollution, and I
11 don't have the sound and the traffic and the horns and
12 flaggers on the road. And I can enjoy clean air. And
13 then I got bald eagles. And I can walk to the beach
14 and not have to worry about getting run over by
15 somebody and -- or -- but it's pretty strange that you
16 sand the roads here instead of salt. How come?"
17 "Oh, to protect the vegetation, to
18 protect the wildlife. It doesn't eat up the roads as
19 much. You've got to use sand."
20 So I see the value, without a doubt, of
21 having a gravel pit, of having sand, of having the
22 ingredients, as one testifier said. But I think the
23 location itself is just -- it's just not in the best
24 interest of the community for those who actually have
25 invested -- I paid cash. I don't have a mortgage. I

Page 101

1 paid it off on the spot. It was the greatest financial
2 achievement of my life.
3 But I didn't think that I'd be
4 questioning whether I should expand and double the size
5 of the place or triple the size of the place or to
6 invest in the local business -- in the local Anchor
7 Point community or not. And now it's a question of "or
8 not," because it was a surprise with Hilcorp, and then
9 I understand that stopped.
10 But now there's the Chapman school that's
11 maybe a wishy-washy thing on whether that's going to go
12 through or not and it's going to close, and then now
13 this. And I'm thinking, geez, all of that is within a
14 mile-and-a-half of my new home, and that's not what I
15 want.
16 So I'm hesitant on reinvesting in my
17 property, and I'm hesitant on going ahead and starting
18 up a business in Anchor Point or something on the Spit.
19 So I understand the facts, and, you know,
20 emotional and all that, but if it's not on record, if
21 it's not documented, it never happened. So thank you
22 for your time and your consideration.
23 And I definitely agree that there's a lot
24 of people that maybe are not like me, their first year
25 and go all out year round. Maybe they're snow birds

Page 102

1 and they don't have the opportunity to speak up and
 2 they didn't get the notice. I did not. I found out
 3 through the grapevine. So I think postponing it until
 4 they come back, like some of these experts that have
 5 been here a while know, would be in the community's
 6 best interest.
 7 But thank you for your time.
 8 **COMMISSIONER FOSTER:** Thank you, Mr.
 9 Wieser.
 10 **GREGG WIESER:** Yes.
 11 **COMMISSIONER FOSTER:** Any questions?
 12 Is there anybody else who wants to
 13 testify? And what I should probably ask is how many
 14 more are we going to have? We might have to take a
 15 break. We're going stop this at 11, but hopefully
 16 before that. But we will continue this.
 17 **JOSH ELMALEH:** I had a question -- or an
 18 answer to a question if you want it.
 19 **COMMISSIONER FOSTER:** I don't think right
 20 at this time here. What do you guys --
 21 **COMMISSIONER ECKLUND:** I think he just
 22 wants to respond to how far is the material site from
 23 the Sterling Highway.
 24 **COMMISSIONER FOSTER:** Oh, okay.
 25 **JOSH ELMALEH:** There's two routes one --

Page 103

1 **COMMISSIONER FOSTER:** Could you step up
 2 to the --
 3 **JOSH ELMALEH:** Sure. My name is Josh --
 4 **COMMISSIONER ECKLUND:** Specifically along
 5 Anchor Point Road. If you turn on Anchor Point Road
 6 and go to the material site, how far is that?
 7 **JOSH ELMALEH:** From Anchor Point Road to
 8 the material site is, like, three-quarters of a mile.
 9 Now, if you go from where it intersects
 10 with Old -- from the material site to the New Sterling
 11 along the route that you would have to take with a
 12 truck is approximately 10 miles. If you take it across
 13 the bridge, it's one mile. And if you go back to
 14 Anchor Point, it's between 15 and 18 miles.
 15 **COMMISSIONER ECKLUND:** Thank you.
 16 **COMMISSIONER FOSTER:** Well, I'm -- is
 17 there any more?
 18 **UNIDENTIFIED SPEAKER:** (Indiscernible).
 19 **COMMISSIONER FOSTER:** No, you've
 20 already -- you've already testified.
 21 **UNIDENTIFIED SPEAKER:** I just wanted
 22 (indiscernible).
 23 **COMMISSIONER FOSTER:** No, I'm sorry.
 24 You'll have a chance next time.
 25 Anybody new or something new?

Page 104

1 I would like to entertain a motion to
 2 continue until brought back by staff.
 3 **COMMISSIONER BOKENKO-CARLUCCIO:** So
 4 moved.
 5 **COMMISSIONER FOSTER:** Is it seconded?
 6 **COMMISSIONER ABRAHAMSON-BENTZ:** ^{Second.}
 7 **COMMISSIONER FOSTER:** Is there any
 8 opposition? Yes, Mr. Whitney, or discussion.
 9 **COMMISSIONER WHITNEY:** Well, the question
 10 is are you setting a date certain or --
 11 **COMMISSIONER FOSTER:** I said brought back
 12 by staff. I figured they'd set the date.
 13 **COMMISSIONER WHITNEY:** I would rather see
 14 a date certain, and I would say May 28th, assuming
 15 that's our meeting date.
 16 **COMMISSIONER FOSTER:** I'll check with
 17 staff on that.
 18 **MR. BEST:** That's correct. May 28th is a
 19 Planning Commission meeting, but it is on a Tuesday.
 20 **COMMISSIONER FOSTER:** Is that a motion?
 21 **COMMISSIONER WHITNEY:** Well, then I'd
 22 amend -- I would amend the motion to May 28th.
 23 **COMMISSIONER VENUTI:** I second that.
 24 **COMMISSIONER FOSTER:** Any discussion?
 25 **COMMISSIONER FIKES:** So we're postponing

Page 105

1 this until May, so --
 2 **COMMISSIONER FOSTER:** Not postponing,
 3 we're continuing so that -- we're continuing the public
 4 hearing. It's not even on the table.
 5 **MR. WALL:** Mr. Chairman, if I could add,
 6 I have a concern about May 28th in that I had planned
 7 my vacation schedule. I will be here on the 28th, but
 8 I'll be gone the four weeks prior to that. So I'm
 9 concerned about the continuity in processing the
 10 application if we were to have it on that date.
 11 **COMMISSIONER FOSTER:** So do you have a
 12 recommendation for a continuation?
 13 **MR. WALL:** The April 22nd date would be
 14 my recommendation.
 15 **COMMISSIONER FOSTER:** Yes, Ms. Ecklund.
 16 **COMMISSIONER ECKLUND:** Well, through the
 17 chair to staff, based on the applicant's representative
 18 tonight, they were ready to go forward with their
 19 discussion tonight. I believe we have all of the
 20 application materials prepared. I know we're going to
 21 have a lot more probably come in, maybe another 332
 22 desk packet by then, which we hope to get a little
 23 earlier. But I don't know that most of the work isn't
 24 already done. So take your four-week vacation, and
 25 let's do it on May 28th.

Page 106

1 **COMMISSIONER FOSTER:** Well, we have
 2 something on the floor right here, do we not? That we
 3 wanted to move it to the May 22nd and --
 4 **UNIDENTIFIED SPEAKER:** That's what she
 5 said.
 6 **MR. WALL:** May 28th.
 7 **COMMISSIONER FOSTER:** I mean April?
 8 **UNIDENTIFIED SPEAKER:** No
 9 (indiscernible).
 10 **MR. WALL:** No, May 28th.
 11 **COMMISSIONER FOSTER:** No, May 27 -- May
 12 28th? Okay.
 13 **COMMISSIONER BOKENKO-CARLUCCIO:** I think
 14 what she was saying is is that most of the work is
 15 done, that you should be able to prepare everything
 16 before you go on vacation and just slide in to the
 17 meeting.
 18 **COMMISSIONER FOSTER:** That's why I said
 19 let's bring it back when they bring it back to us, but
 20 it sounds like it may be --
 21 **UNIDENTIFIED SPEAKER:** It's too long a
 22 (indiscernible).
 23 **COMMISSIONER FOSTER:** -- too long a go,
 24 yeah.
 25 **UNIDENTIFIED SPEAKER:** Call for the

Page 107

1 question.
 2 **COMMISSIONER FOSTER:** Let's call for the
 3 question. We have to vote on whether we want to call
 4 for the question or not.
 5 So all those for calling for the
 6 question -- I guess roll call, please.
 7 **UNIDENTIFIED SPEAKER:** Chair, can you
 8 clarify?
 9 **COMMISSIONER FOSTER:** Yeah, in order to
 10 call for the question, we have to vote on that,
 11 otherwise we can keep the discussion going.
 12 **UNIDENTIFIED SPEAKER:** What are you
 13 calling the question on? That's what --
 14 **COMMISSIONER FOSTER:** That's the May
 15 20 -- the May 28th, bring about -- back for -- continue
 16 is until May 28th.
 17 **THE CLERK:** So this would be to continue
 18 on the May 28th Planning Commission meeting?
 19 **UNIDENTIFIED SPEAKER:** No.
 20 **COMMISSIONER FOSTER:** Yes.
 21 **UNIDENTIFIED SPEAKER:** It's to call the
 22 question.
 23 **COMMISSIONER BOKENKO-CARLUCCIO:** No, just
 24 to call the question.
 25 **COMMISSIONER FOSTER:** That's what the

Page 108

1 question is.
 2 **UNIDENTIFIED SPEAKER:** I'm so confused.
 3 **UNIDENTIFIED SPEAKER:** They're voting on
 4 the motion.
 5 **UNIDENTIFIED SPEAKER:** Okay, so...
 6 **UNIDENTIFIED SPEAKER:** We're voting on
 7 the motion, is that -- did that --
 8 **COMMISSIONER FOSTER:** Well, we can cut to
 9 the voting on the motion, yeah.
 10 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
 11 so --
 12 **COMMISSIONER FOSTER:** We're supposed to
 13 vote to decide whether we will vote. Yeah, that's part
 14 of the --
 15 **UNIDENTIFIED SPEAKER:** That's part of it.
 16 **COMMISSIONER FOSTER:** Yeah.
 17 **UNIDENTIFIED SPEAKER:** Yeah, you have to
 18 remember these (indiscernible).
 19 **UNIDENTIFIED SPEAKER:** I know
 20 (indiscernible).
 21 **COMMISSIONER FOSTER:** Yeah, so the idea
 22 is that when you -- when we're having a discussion and
 23 somebody calls for the question, then we have to vote
 24 whether we will stop our discussion and call for the
 25 question.

Page 109

1 If we all say yes, then we go for the
 2 vote. If somebody says -- you know, if the majority
 3 says no, then we still discuss.
 4 **THE CLERK:** So do you want to vote on the
 5 question?
 6 **UNIDENTIFIED SPEAKER:** Call for
 7 (indiscernible).
 8 **COMMISSIONER FOSTER:** Call for the
 9 question to vote on the question.
 10 **THE CLERK:** Okay, so call on the question
 11 to vote on the question?
 12 **COMMISSIONER FOSTER:** Yes, as ridiculous
 13 as it is.
 14 **THE CLERK:** All right, Carluccio?
 15 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes.
 16 **THE CLERK:** Fikes?
 17 **COMMISSIONER FIKES:** Yes.
 18 **THE CLERK:** Morgan?
 19 **COMMISSIONER MORGAN:** Yes.
 20 **THE CLERK:** Whitney?
 21 **COMMISSIONER WHITNEY:** Yes.
 22 **THE CLERK:** Bentz?
 23 **COMMISSIONER ABRAHAMSON-BENTZ:** Yes.
 24 **THE CLERK:** Ecklund?
 25 **COMMISSIONER ECKLUND:** Yes.

1 THE CLERK: Ernst?
 2 COMMISSIONER ERNST: Yes.
 3 THE CLERK: Venuti?
 4 COMMISSIONER VENUTI: Yes.
 5 THE CLERK: Foster?
 6 COMMISSIONER FOSTER: Yes.
 7 THE CLERK: Okay, it passed.
 8 COMMISSIONER FOSTER: Now we get to vote
 9 on whether it will be on the 28th.
 10 THE CLERK: Okay, so this is to continue
 11 the public hearing to the May 28th Planning Commission
 12 meeting.
 13 Ecklund?
 14 COMMISSIONER ECKLUND: Yes.
 15 THE CLERK: Carluccio?
 16 COMMISSIONER BOKENKO-CARLUCCIO: Yes.
 17 THE CLERK: Ernst?
 18 COMMISSIONER ERNST: Yep.
 19 THE CLERK: Fikes?
 20 COMMISSIONER FIKES: No.
 21 THE CLERK: Bentz?
 22 COMMISSIONER ABRAHAMSON-BENTZ: Yes.
 23 THE CLERK: Whitney?
 24 COMMISSIONER WHITNEY: Yes.
 25 THE CLERK: Morgan?

1 COMMISSIONER MORGAN: Yes.
 2 THE CLERK: Venuti?
 3 COMMISSIONER VENUTI: Yes.
 4 THE CLERK: Foster?
 5 COMMISSIONER FOSTER: No.
 6 THE CLERK: 2 to 7.
 7 COMMISSIONER FOSTER: So we are continued
 8 to the May 28th meeting.
 9 So at that time the public hearing will
 10 be -- remain open, and you can come back and talk about
 11 that and whatever else is new.
 12 If you have anything to turn in, that's
 13 for both the applicant and -- anything you have to send
 14 in, please get it in early.

1 PROCEEDINGS
 2 7:44:58 p.m.
 3 **CHAIRMAN MARTIN:** Good evening, everyone.
 4 I'd like to call to order tonight's meeting of the
 5 Kenai Peninsula Borough Planning Commission for April
 6 8th, 2019. Roll call, please.
 7 **THE CLERK:** Bentz?
 8 **COMMISSIONER ABRAHAMSON-BENTZ:** Here.
 9 **THE CLERK:** Brantley?
 10 **COMMISSIONER BRANTLEY:** Here.
 11 **THE CLERK:** Carluccio?
 12 **COMMISSIONER BOKENKO-CARLUCCIO:** Here.
 13 **THE CLERK:** Ecklund?
 14 **COMMISSIONER ECKLUND:** Here.
 15 **THE CLERK:** Ernst?
 16 **COMMISSIONER ERNST:** Here.
 17 **THE CLERK:** Fikes?
 18 **COMMISSIONER FIKES:** Here.
 19 **THE CLERK:** Foster?
 20 **COMMISSIONER FOSTER:** Present.
 21 **THE CLERK:** Martin?
 22 **CHAIRMAN MARTIN:** Here.
 23 **THE CLERK:** Morgan?
 24 **COMMISSIONER MORGAN:** Here.
 25 **THE CLERK:** Ruffner?

Page 3

1 **COMMISSIONER RUFFNER:** Here.
 2 **THE CLERK:** Venuti?
 3 **COMMISSIONER VENUTI:** Here.
 4 **THE CLERK:** Whitney?
 5 **COMMISSIONER WHITNEY:** Here.
 6 **THE CLERK:** A quorum is present.
 7 **CHAIRMAN MARTIN:** Thank you. At this
 8 time I'll entertain a motion for approval of consent
 9 and regular agenda.
 10 **COMMISSIONER BOKENKO-CARLUCCIO:** So
 11 moved.
 12 **COMMISSIONER ABRAHAMSON-BENTZ:** ^{Second.}
 13 **CHAIRMAN MARTIN:** Is there any discussion
 14 or addition? Is there any opposition? Seeing none,
 15 the motion passes unanimously.
 16 That takes us to item D with the public
 17 comment presentations, something not appearing on the
 18 agenda.
 19 (Audio pause)
 20 **CHAIRMAN MARTIN:** Yeah, please state your
 21 name and address at the microphone for the record.
 22 **EMMITT TRIMBLE:** Emmitt Trimble, P.O. Box
 23 193, Anchor Point. I'm not sure that this is the
 24 appropriate place to make this request. I called
 25 earlier today.

Page 4

1 At the last Planning Commission meeting,
 2 we had discussed procedures and the possibility of a
 3 continuation, which we were okay with and had talked
 4 about a date, April 22nd, and went into the meeting
 5 with that -- if that was -- that worked for us.
 6 At the late hour that it ended, there was
 7 a motion to continue to May 28th because a couple of
 8 our opponents had said they really wanted to see it on
 9 May 28th. That gave time for the snow birds to come
 10 back from Arizona and California, and they really
 11 needed to testify too.
 12 The motion passed unanimously without any
 13 question to us or finding out whether we were even
 14 going to be in the country at that time, and we're not.
 15 So we're not available for the continuation on May
 16 28th. We are available on April 22nd, which was kind
 17 of our agreement with staff and Mr. Foster, and -- or
 18 May 13th.
 19 So we're just respectfully requesting
 20 that we address that issue and try to change that date.
 21 We aren't going to change the date of our family
 22 vacation.
 23 **CHAIRMAN MARTIN:** Any questions at this
 24 time?
 25 **COMMISSIONER FIKES:** I would just like to

Page 5

1 point out it wasn't unanimous.
 2 **EMMITT TRIMBLE:** Thank you.
 3 **CHAIRMAN MARTIN:** Anyone else?
 4 **EMMITT TRIMBLE:** I have one more thing,
 5 if I may.
 6 **CHAIRMAN MARTIN:** Sure.
 7 **EMMITT TRIMBLE:** There was a fairly
 8 vicious attack of one of the planning commissioners in
 9 a written testimony from opponents during the time when
 10 Mr. Brantley recused himself. And it was requested
 11 that Mr. Venuti recuse himself because we were real
 12 estate brokers and he was an inspector.
 13 And I'd just like to apologize for the
 14 majority of Anchor Point for the suggestion that Mr.
 15 Venuti was unethical and nefarious. I was offended.
 16 **CHAIRMAN MARTIN:** Thank you for your
 17 testimony.
 18 Is there anyone else in the audience to
 19 bring up something that's not on tonight's agenda?
 20 So hearing and seeing no further
 21 requests, we'll address the request at this time. Is
 22 that -- Ms. Ecklund.
 23 **COMMISSIONER ECKLUND:** The process, I
 24 believe, to change a date that was a set date at a
 25 meeting is that we have to make a motion to amend after

1 adoption, and the discussion of the change would take
2 place at our next meeting. Not -- we don't make a
3 change to the date tonight, we just make a motion to
4 amend after adoption and then put the item on our next
5 meeting agenda for public notice.
6 **CHAIRMAN MARTIN:** Is now the time to take
7 that motion?
8 **COMMISSIONER ECKLUND:** I move that we
9 amend after adoption the date set for the Anchor Point
10 Trumbly [sic] material extraction site to be publically
11 noticed for discussion at our next meeting.
12 **COMMISSIONER FIKES:** Second.
13 **CHAIRMAN MARTIN:** Mr. Whitney.
14 **COMMISSIONER WHITNEY:** Just a question.
15 Would Mr. Brantley have to recuse himself on this also?
16 **CHAIRMAN MARTIN:** Mr. Brantley.
17 **COMMISSIONER BRANTLEY:** Yes, I would like
18 to recuse myself from this discussion.
19 **CHAIRMAN MARTIN:** So everybody
20 understands the motion? Is there any objection?
21 Hearing and seeing none, the motion passes unanimously,
22 bringing it up for discussion at our next meeting.

APRIL 22, 2019

KENAI PENINSULA BOROUGH PLANNING COMMISSION

LOCATION

Betty J. Glick Assembly Chambers
George A. Navarre Administration Building
144 North Binkley Street
Soldotna, Alaska 99669

Monday, April 2, 2019
7:28 p.m.

TRANSCRIPT OF PROCEEDINGS - EXCERPT
Pages 1 - 23, inclusive

Commissioners Present:

Paulette Bokenko-Carluccio, City of Seldovia
Jeremy Brantley, Sterling
Cindy Ecklund, City of Seward
Robert Ernst, Northwest Borough
Diane Fikes, City of Kenai
Blair Martin, Kalifornsky Beach
Virginia Morgan, East Peninsula
Robert Ruffner, Kasilof/Clam Gulch
Paul Whitney, City of Soldotna

Staff Present:

Max Best, Planning Director
Julie Hindman, Administrative Assistant
Jordan Reif, Platting Technician
Tom Dearlove, River Center Manager
Bruce Wall, Planner
Scott Huff, Platting Manager

Others Present:

Emmitt Trimble
Mary Trimble
Pete Kinneen
Rick Carlton
Gary Sheridan
Eileen Sheridan
Hans Bilben

1 PROCEEDINGS
 2 7:28:19 p.m.
 3 (This portion not requested)
 4 7:48:14 p.m.
 5 **CHAIRMAN MARTIN:** That will bring us to
 6 I-2 for the consideration of a motion to amend after
 7 adoption.
 8 **MR. WALL:** Yes, Mr. Chairman. This is to
 9 schedule the continuation of a hearing for a
 10 conditional land use permit for a material site. The
 11 applicant is Beachcomber, LLC.
 12 At your March 25th meeting the applicant
 13 had requested the hearing be continued. He had
 14 suggested April 22nd. At the conclusion of the
 15 meeting, the commission had scheduled it for May 28th.
 16 And the borough staff and the commission at that time
 17 failed to check with the applicant about his
 18 availability on that date. He has since indicated that
 19 he is unavailable, that he will be out of the country,
 20 and so the continuation date needs to be rescheduled.
 21 **CHAIRMAN MARTIN:** Okay, thank you. So at
 22 this time, how many people have a comment that they are
 23 interested in presenting tonight? All right, first
 24 commenter, please.
 25 **COMMISSIONER BRANTLEY:** Excuse me.

Page 3

1 Before we start, I need to recuse myself from this.
 2 **CHAIRMAN MARTIN:** So noted and ordered.
 3 **HANS BILBEN:** Thank you to the chair and
 4 the commissioners for allowing us to discuss this.
 5 In your packets for tonight you have 19
 6 or 20 letters from Anchor Point residents who are
 7 opposed to the rescheduling of the Planning Commission
 8 hearing to any date prior to the current scheduled time
 9 on May 28th.
 10 The justification given for the
 11 continuance to May 28th was to allow neighboring
 12 property owners who are not available prior to that
 13 time an opportunity to arrange their schedules
 14 accordingly in order to give in-person testimony at the
 15 hearing.
 16 As you can see in the letters that were
 17 submitted, several neighbors have now made their travel
 18 arrangements and will be here by May 28th.
 19 You also have a letter in your packet
 20 from a Kasey Baker [sic] who is the applicant's former
 21 attorney. In her letter she talks about commissioners
 22 who are guilty of delaying, postponing, or rescheduling
 23 the application process because they just don't like
 24 gravel.
 25 Let's talk about delaying. We were all

Page 4

1 prepared for the March 25th hearing, we were kind of
 2 looking forward to it. Six days prior to the scheduled
 3 March 25th hearing, Kasey Baker [sic] personally
 4 requested a delay or a continuance for mysterious,
 5 unforeseen circumstances. No reason given. But more
 6 than likely it was because two of the three
 7 commissioners who supported the application at the July
 8 2018 hearing would be excused from the March 25th
 9 hearing.
 10 The delay was requested by the
 11 applicants' attorney; the delay was granted by the
 12 Planning Commission.
 13 Even more mysterious, at the March 25th
 14 meeting, here comes Kasey Baker, the attorney, the
 15 applicants, their out-of-town gravel buddies, they all
 16 showed up ready to proceed.
 17 Which commissioners does she want to
 18 blame for that one?
 19 Postponing. I think she just threw that
 20 one because it sounded good, but I don't recall of any
 21 postponement that's gone on so far in this process.
 22 That leaves rescheduling. We're here
 23 today because of a request from the applicants to
 24 reschedule, not because of a request from anybody on
 25 the commission or anybody that's opposing this. It was

Page 5

1 the applicant that requested this reschedule. I don't
 2 believe this request came from any gravel-hating
 3 commissioner, it came from the applicant.
 4 Yes, Kasey Baker [sic] is correct, there
 5 have been delays and a request to reschedule. Both
 6 were initiated by the applicant and/or his attorney.
 7 Kasey Baker [sic] seems to be of the same
 8 mindset as the applicant, in the only -- in that the
 9 only people with rights are material extraction
 10 applicants.
 11 I just want to say thank you to all of
 12 the commissioners who are not willing to rubber stamp
 13 every application that comes before them.
 14 Thank you to those of you who realize
 15 that material site -- a material site that is
 16 improperly conditioned can have long-lasting negative
 17 effects to families, neighborhoods, and communities.
 18 Thank you to all of those who insist that an
 19 application is accurate and that all conditions and all
 20 standards are met before accepting or approving any
 21 permit.
 22 The entire process is unfortunately
 23 stacked against neighboring property owners and in
 24 favor of the applicants, but there are protections
 25 spelled out in the code, and it's the job of this

Page 6

1 Planning Commission to ensure that those protections
2 are afforded to neighboring property owners, even if it
3 means denying a permit at some time -- point in time.
4 This hearing should remain on the
5 schedule for the May 28th date, and if the applicant
6 can't find a way to break free from his busy schedule,
7 then it should be moved to June. May 13th will not
8 work for several neighboring property owners who have
9 made travel plans that coincide with the Planning
10 Commission's March 25th decision, and that was to hold
11 it on May 28th.
12 Additionally, on the -- the applicant
13 will likely be pushing for the May 13th Planning
14 Commission hearing. At that hearing we will have
15 neither a planning director or a planner. So who is
16 going to be here to answer technical or procedural
17 questions when the commission has questions or when the
18 opponents or the applicant have questions? So the May
19 13th date does not work.
20 This hearing should either be May 28th --
21 somebody suggested June of 2050, I'm kind of with that
22 one, too, but I don't think we'll go that far. But
23 that's all I have, thank you.
24 **CHAIRMAN MARTIN:** Are there any
25 questions? None at this time. Next, please.

Page 7

1 **ILENE SHERIDAN:** I'm Ilene Sheridan, and
2 I live right in the area there. I can't give you --
3 it's 32 -- what's our address? 32860 Seabury Court,
4 and that's -- we're secondary to this area, but we're
5 still within that half mile, and I'm already getting a
6 little dust in our homes from this.
7 We are wishing that you would wait to not
8 change the date to the 20 -- any earlier or later --
9 that May 28th is the date that we've planned on, that
10 we've been working towards, and we appreciate what
11 you've all done for us. Thank you.
12 **CHAIRMAN MARTIN:** Next.
13 **LYNN WHITMORE:** My name is Lynn Whitmore,
14 and I live next door to the proposed gravel pit.
15 And when we set the schedule for May
16 28th, I made business plans for the times prior to
17 that, and those are obligations I'd like to keep. And
18 to have this thing keep moving and keep moving, it
19 makes it really difficult for any kind of planning if
20 you're still doing business.
21 And even though we don't always agree
22 with what the planning department has to say about this
23 whole thing, anything that we do in this approval
24 process, it's going to affect them down the line. So
25 it seems just to make sense to have one or both of

Page 8

1 those guys available for decisions that might be
2 upcoming like this one, thanks.
3 **CHAIRMAN MARTIN:** Thank you. Next
4 testifier, please.
5 **EMMITT TRIMBLE:** I'm Emmitt Trimble, the
6 applicant from Anchor Point.
7 We really wanted this to be done back in
8 July when all of these people who are going to be
9 coming this summer were here. Everyone had a fair
10 opportunity to testify at that original public hearing.
11 We wanted it to happen in February.
12 There were scheduling problems for staff, so there were
13 reasons given to us that we had to move along.
14 So on the March 25th, I believe it was,
15 meeting when we came, we had requested -- the attorney
16 had requested postponement, and that wasn't possible.
17 Right away immediately we received a
18 notice from the staff that that was not possible, but
19 what could happen would be a continuation.
20 And so when we came, we were prepared
21 that night to go through with the process of the public
22 hearing.
23 We met prior to the meeting with planning
24 staff, Mr. Best and Mr. Wall, and the acting chairman,
25 Dr. Foster. They'd made some changes to procedures,

Page 9

1 and they wanted us to be aware of them.
2 And we listened to that and went away
3 from that meeting of how things were going to go.
4 Regarding scheduling, is that all of the testimony
5 would be allowed, and at the end of public testimony,
6 that they would ask for a continuation, and that that
7 would be the end of the public testimony.
8 And that starting on April 22nd, which
9 was the date that was presented by staff and Dr.
10 Foster, that it would begin with our rebuttal. And all
11 of that sounded fine to us, and so we agreed to that.
12 As often happens at 11 o'clock when
13 everybody is ready to go home, and after lots and lots
14 of redundant testimony, a motion was made to continue.
15 But during the meeting, individual testifiers were told
16 that they would be able to testify again. And that
17 certainly wasn't our understanding.
18 And so I think at least two people said,
19 "Well, we'll hold what we've got to say until the next
20 meeting," for whatever reason. So obviously it wasn't
21 going to start with our rebuttal at the April 22nd
22 meeting. Okay, that's fine.
23 Then Mr. Foster, as he had said he would
24 do, requested a motion for continuation, and that
25 happened. And someone said, "Well, what day?" And

Page 10

1 though we had talked about April 22nd, and that wasn't
 2 something we proposed, it was something that staff
 3 and -- proposed, and it was acceptable to us.
 4 But during testimony people were saying,
 5 "Since this is going to be continued, I won't give my
 6 testimony tonight, I'll give it later. And we would
 7 like to see this until at least May 28th so that the
 8 snow birds can be here."
 9 So those are people who don't live here,
 10 but they are people who were here in July in the
 11 original hearing, and they have had a year to testify
 12 in writing, telephonically, many, many opportunities.
 13 So someone said, "Well, let's make it May
 14 28th," because Dr. Foster said we would leave that to
 15 staff, and that's where the April 22nd we supposed
 16 would come from. It didn't happen.
 17 Someone said, "I move that it's the 28th,
 18 because that's what these people said they want for the
 19 snow birds to be able to get here." I thought that was
 20 not a really valid reason for doing that.
 21 That was the vote. Two people voted no
 22 and everybody else voted yes, and that was it.
 23 At the end of that we had no place other
 24 than to stand up and interrupt the meeting to say,
 25 "We're not going to be here on that date." And I don't

Page 11

1 know where the conspiracy theories have come of out of
 2 country. Yeah, we have a planned vacation, not out of
 3 country, out of state.
 4 And the next day we talked to staff and
 5 said, "We're not going to be here on that date, you
 6 know, we were -- we had agreed on the 22nd."
 7 "Well, we can't do anything until the
 8 next meeting. You'll have to come and request a
 9 change."
 10 Okay, so we made the trip up here and we
 11 requested that. "No, we can't address that tonight.
 12 You've got to come back two weeks later."
 13 So none of these delays were something we
 14 wanted. We should have had the permit in July. So we
 15 won't be here on May 28th. We will be here on May
 16 13th. And it seems like staff will be here also. So
 17 that would be acceptable to us in case someone had any
 18 concern about whether the applicant would be here or
 19 not, thank you.
 20 **CHAIRMAN MARTIN:** Is there anyone else in
 21 the audience? Seeing none, we'll continue the -- we
 22 have a question for Mr. Trimble.
 23 **EMMITT TRIMBLE:** Yes, sir.
 24 **COMMISSIONER RUFFNER:** Through the chair.
 25 Thanks, Emmitt. So, I mean, you heard the testimony

Page 12

1 the same as I did tonight.
 2 **EMMITT TRIMBLE:** Yes, I did.
 3 **COMMISSIONER RUFFNER:** Yeah, so I guess
 4 what I would like to know from you is if -- you know,
 5 none of us have talked to each other, so we don't
 6 know -- we're being pretty careful on this case about
 7 making sure we follow the rules.
 8 **EMMITT TRIMBLE:** Uh-huh.
 9 **COMMISSIONER RUFFNER:** But just if the
 10 discussion comes up about a date later than the 28th,
 11 are you going to be here in June?
 12 **EMMITT TRIMBLE:** That's not acceptable to
 13 me.
 14 **COMMISSIONER RUFFNER:** Yes, so you'd
 15 rather that not happen?
 16 **EMMITT TRIMBLE:** No, I'd rather that not
 17 happen. This has gone far enough.
 18 **COMMISSIONER RUFFNER:** Right. I clearly
 19 get that perspective from you, but I just want to know
 20 if you're going to be here or not.
 21 **EMMITT TRIMBLE:** As far as I know, I'll
 22 be here in June, yeah. Yeah, the season is here, we're
 23 working.
 24 **COMMISSIONER RUFFNER:** Right. Okay, that
 25 was the --

Page 13

1 **EMMITT TRIMBLE:** It's just on that -- we
 2 were going to be gone for a week, and that May 28th
 3 happened to be smack in the middle of that. Nobody
 4 asked me.
 5 **COMMISSIONER RUFFNER:** Right, yeah, I got
 6 that part.
 7 **EMMITT TRIMBLE:** I could have said that
 8 earlier.
 9 **COMMISSIONER RUFFNER:** I got that you're
 10 going to be here on May 13th.
 11 **EMMITT TRIMBLE:** Yes.
 12 **COMMISSIONER RUFFNER:** Okay, and that's
 13 your preference?
 14 **EMMITT TRIMBLE:** Yes.
 15 **COMMISSIONER RUFFNER:** Yeah, okay, I got
 16 it.
 17 **EMMITT TRIMBLE:** Thank you.
 18 **CHAIRMAN MARTIN:** Thank you. Discussion
 19 on the date? Ms. Ecklund? Did you miss your chance to
 20 talk?
 21 **UNIDENTIFIED SPEAKER:** He did. I don't
 22 think you closed it.
 23 **GARY SHERIDAN:** Thank you, Mr. Chairman.
 24 I'm Gary Sheridan --
 25 **COMMISSIONER BOKENKO-CARLUCCIO:** Hit the

Page 14

1 button.

2 **GARY SHERIDAN:** I'm Gary Sheridan from

3 Anchor Point. And I just want a note of clarification

4 about the dates that are in the staff report that was

5 handed out to us.

6 And I just heard the testimony saying

7 that it appears that May 13th would be acceptable to

8 everybody, and I'd be concerned about that because it

9 says that Max Best, planning director, and Bruce Wall,

10 planner, will both be unable to attend the meeting.

11 And for the efficiency of the whole

12 process we're here, I think both of those gentlemen

13 have a real significant say in clarification of some of

14 the points that will probably come up in some of the

15 deliberations, thank you.

16 **CHAIRMAN MARTIN:** Thank you. Please

17 state your name and address for the record.

18 **PETE KINNEEN:** I just came by to address

19 the motion for reconsideration.

20 **CHAIRMAN MARTIN:** We need your name and

21 address on the microphone.

22 **PETE KINNEEN:** Pete Kinneen in Anchor

23 Point. And I just wanted to express concern about the

24 constant -- it's the applicant, actually, that is

25 pushing the dates back and forth, it's nobody else.

Page 15

1 And so I'd like to weigh in on the date

2 being as we set it, the 28th of next month. And if

3 that's not available -- I mean, it is available, but it

4 would either be May 28th or a following date for the

5 reasons that I think some of the other people have

6 already covered. So I just wanted to weigh in on that,

7 thank you.

8 **CHAIRMAN MARTIN:** Thank you. Next

9 person. Was there somebody else?

10 **RICK CARLTON:** Yeah, my name is Rick

11 Carlton. I'm from Anchor Point also.

12 **CHAIRMAN MARTIN:** And your address.

13 **RICK CARLTON:** And I pretty much just

14 have a question, couple questions, actually. We've

15 heard some conflicting testimonies, or things that were

16 said here, and I just would kind of like a

17 clarification.

18 One of which, why would the applicant

19 have not said something at that meeting that he wasn't

20 going to be here when it was passed and approved that

21 they were going to move the meeting to the 28th?

22 That's my first question.

23 And the other question was, when are Mr.

24 Best and Mr. Wall going to actually be here? I've

25 heard that they are not going to be here this date and

Page 16

1 they are not going to be here that date. So could we

2 get those two questions answered?

3 **CHAIRMAN MARTIN:** I'm sure that will come

4 up in discussion.

5 **RICK CARLTON:** Thanks.

6 **CHAIRMAN MARTIN:** Thank you. Anyone

7 else? Last call. I'll close public comment, bring it

8 to the commission for discussion.

9 Do we need a motion to get this ball

10 rolling? Ms. Ecklund.

11 **COMMISSIONER ECKLUND:** Do we make a

12 motion to consider a motion, is that the --

13 **UNIDENTIFIED SPEAKER:** You have to amend

14 the motion.

15 **COMMISSIONER ECKLUND:** Okay. I move that

16 we consider a motion to amend after adoption of the

17 hearing continuance date for a conditional land use

18 permit application for material extraction by the

19 applicant Beachcomber, LLC.

20 **COMMISSIONER RUFFNER:** Second.

21 **CHAIRMAN MARTIN:** Now we can discuss it.

22 Ms. Ecklund.

23 **COMMISSIONER ECKLUND:** Yeah, my question

24 was already asked by the public. The dates in our

25 packet lists reasons why April 22nd is not an option

Page 17

1 because public notice would not have been able to be

2 provided.

3 May 13th, neither Mr. Best or Mr. Wall

4 will be able to attend the meeting, is that correct?

5 **MR. WALL:** That's correct. We will both

6 be out of town on that date.

7 **COMMISSIONER ECKLUND:** Okay. And on May

8 28th, the applicant will not be available; June 10th,

9 Mr. Best won't be available; and June 24th, Mr. Wall

10 won't be available.

11 That moves it into July when, I believe,

12 the borough attorney, who has been handling this

13 primarily, will no longer be with the borough. So

14 we're just going to have to pick the least worst date

15 it looks like.

16 **CHAIRMAN MARTIN:** Ms. Ecklund stated --

17 Mr. Wall.

18 **MR. WALL:** Mr. Chairman, if I could.

19 **CHAIRMAN MARTIN:** Please.

20 **MR. WALL:** There is no reason for Mr.

21 Best and myself both to be here. So we feel that

22 either of those dates in June would work.

23 **CHAIRMAN MARTIN:** Thank you. Ms. Fikes.

24 **COMMISSIONER FIKES:** Do we have an

25 obligation to take an action, or can we take no action?

Page 18

1 What are our options?
 2 **CHAIRMAN MARTIN:** Mr. Ruffner.
 3 **COMMISSIONER RUFFNER:** Thank you, Mr.
 4 Chair. Yeah, no, we could leave it as scheduled on the
 5 28th. So the motion is that we take this up. And so
 6 unless somebody (indiscernible) that they are date
 7 specific, you know, that's where we stand procedurally,
 8 I believe.
 9 So it is possible, but I think, you know,
 10 referencing the dates of who is here and who is not
 11 here and the fact that the applicant is not here is one
 12 of those things we have to consider.
 13 **CHAIRMAN MARTIN:** Ms. Carluccio.
 14 **COMMISSIONER BOKENKO-CARLUCCIO:** Well, I
 15 think that the applicant should be here on the day that
 16 we discuss his application. Normally when we get down
 17 to this, there is some give and take with the applicant
 18 at that time when it comes to some requirements we
 19 want. And it's going to be kind of hard to have that
 20 give and take if he's not here.
 21 So I think that we should consider moving
 22 it forward, even though I know he didn't want us to, he
 23 wanted us to do it on the 13th. Since neither Max Best
 24 nor Bruce Wall are here, I think that it would be -- it
 25 wouldn't be in our best interest to discuss it at that

Page 19

1 time. They're our experts on this, and we need at
 2 least one of them.
 3 **CHAIRMAN MARTIN:** Mr. Ruffner.
 4 **COMMISSIONER RUFFNER:** Thank you, Mr.
 5 Chair. So, I mean, I think we all recognize we're in a
 6 little bit of a pickle.
 7 I wasn't here at the last meeting when
 8 the date was set, so, you know, I'm trying to take in
 9 everything that I've heard to decide when the best time
 10 to be -- you know, typically what I recall with other
 11 applications that come in and the applicant requests to
 12 postpone or stuff, we generally honor that. But at the
 13 same time, we've already -- we've also made a statement
 14 as to -- we were scheduled on May 28th, and so that
 15 puts the other side at -- you know, feeling like they
 16 have been disenfranchised by moving the date again.
 17 So I think my preference would be to hold
 18 it on May 13th, but for the fact that both the director
 19 and the planner that have handled this are not here,
 20 I'm going to move to amend the motion to set the date
 21 for June 10th.
 22 **COMMISSIONER BOKENKO-CARLUCCIO:** I'll
 23 second it.
 24 **CHAIRMAN MARTIN:** Discussion on the
 25 amendment? Mr. Whitney.

Page 20

1 **COMMISSIONER WHITNEY:** If it is moved to
 2 the June 10th date, would there be public testimony
 3 allowed during that hearing?
 4 **CHAIRMAN MARTIN:** Yes.
 5 **MR. WALL:** We did announce at the last
 6 meeting that we would allow additional public
 7 testimony.
 8 **COMMISSIONER WHITNEY:** Thank you.
 9 **COMMISSIONER FIKES:** Is there anyone from
 10 administration that could step in for Max or Bruce in
 11 their absence?
 12 **MR. WALL:** Marcus Mueller will be here at
 13 that meeting.
 14 **CHAIRMAN MARTIN:** I think the question
 15 was the May 13th meeting? Okay. And what -- you guys,
 16 you feel that Mr. Mueller could fill in in your stead?
 17 **MR. WALL:** He's the land management
 18 officer. He deals with borough lands. He's not
 19 familiar with the material site ordinance.
 20 **CHAIRMAN MARTIN:** Thank you. Further
 21 discussion on the amendment, June 10th? Is there any
 22 opposition to the motion to amend? Seeing none, that
 23 passes unanimously. Therefore the consideration is set
 24 for June 10th.
 25 **UNIDENTIFIED SPEAKER:** Do we need to vote

Page 21

1 one more time on that?
 2 (Whispered discussion - indiscernible)
 3 **CHAIRMAN MARTIN:** Mr. Best.
 4 **MR. BEST:** Thank you, Mr. Chairman. The
 5 original motion was to amend the date, is that what
 6 your motion was?
 7 **CHAIRMAN MARTIN:** So we amend the date.
 8 Now we approve the --
 9 **COMMISSIONER RUFFNER:** So the first
 10 motion was consideration of a motion to amend after
 11 adoption kind of just as written in the staff packet.
 12 And so that motion was made, and then I made an
 13 amendment to set a specific date to that.
 14 **UNIDENTIFIED SPEAKER:** Now you need to
 15 vote on that main motion.
 16 **COMMISSIONER RUFFNER:** Yeah, that's what
 17 I thought. And I think the roll call.
 18 **CHAIRMAN MARTIN:** Roll call, please.
 19 **THE CLERK:** This was for a motion to
 20 amend a hearing date after adoption for a conditional
 21 land use permit for a material site for the applicant
 22 Beachcomber, LLC amended to a June 10th hearing date.
 23 Ernst?
 24 **COMMISSIONER ERNST:** Yes.
 25 **THE CLERK:** Whitney?

JUNE 10, 2019

KENAI PENINSULA BOROUGH PLANNING COMMISSION

LOCATION

Betty J. Glick Assembly Chambers
George A. Navarre Administration Building
144 North Binkley Street
Soldotna, Alaska 99669

Monday, June 10, 2019
7:30 p.m.

TRANSCRIPT OF PROCEEDINGS - EXCERPT
Pages 1 - 172, inclusive

Commissioners Present:

Paulette Bokenko-Carluccio, City of Seldovia
Syverine Abrahamson-Bentz, Anchor Point/Ninilchik
Jeremy Brantley, Sterling
Cindy Ecklund, City of Seward
Robert Ernst, Northwest Borough
Dr. Rick Foster, Southwest Borough
Diane Fikes, City of Kenai
Blair Martin, Kalifornsky Beach
Franco Venuti, City of Homer
Paul Whitney, City of Soldotna

Staff Present:

Julie Hindman, Administrative Assistant
Jordan Reif, Platting Technician
Dan Conetta, Land Management Agent
Charlie Pierce, Kenai Peninsula Borough Mayor
Bruce Wall, Planner
Scott Huff, Platting Manager

Others Present:

Page 4

1 was conducted on March 25th and continued to this date.
 2 Excerpts from the hearing officer's
 3 decision is included in the staff report, and copies of
 4 the decision is contained in Volume 2 of your packet
 5 beginning on page 2.
 6 All of these other page references that
 7 I'm going to give you are in Volume 1. And because
 8 this is a continuation of the March meeting, there is
 9 not a new staff report done. The staff report from the
 10 March meeting begins on page 222 of Volume 1.
 11 The resolution beginning on page 77 has
 12 been updated to reflect today's meeting. The draft
 13 resolution contains staff recommended buffers. Those
 14 buffers are illustrated on a map on page 238. Staff is
 15 recommending different buffers than what is shown on
 16 the applicant's site plan and different from the
 17 staff's recommendation in July.
 18 On page 18 of your packet -- hang on,
 19 nope, forget that last reference.
 20 A waiver is being requested for the
 21 300-foot processing distance requirement from the
 22 property line. Staff does not recommend approval of
 23 the processing distance waiver request. There is room
 24 elsewhere on the property for processing that meets the
 25 300-foot setback requirement. The draft findings in

Page 3

1 PROCEEDINGS
 2 7:28:15 p.m.
 3 (This portion not requested)
 4 7:32: 35 p.m.
 5 **CHAIRMAN MARTIN:** That brings us to item
 6 F-3, continuation of the March 25th, 2019 public
 7 hearing for the CLP in the Anchor Point area. Staff.
 8 **COMMISSIONER BRANTLEY:** May I?
 9 **CHAIRMAN MARTIN:** Yeah, please.
 10 **COMMISSIONER BRANTLEY:** I just wanted to
 11 remind the commission that I've recused myself from
 12 this.
 13 **CHAIRMAN MARTIN:** So noted. Whenever
 14 you're ready, Mr. Wall.
 15 **MR. WALL:** Thank you, Mr. Chairman.
 16 This is an application for a conditional
 17 land use permit for a material site in the Anchor Point
 18 area. It is located at 74185 Anchor Point Road, Parcel
 19 No. Is 169-010-67. The applicant is Beachcomber, LLC.
 20 This application was heard by the
 21 Planning Commission on July 16th, 2018 where the
 22 application was denied approval. This decision was
 23 appealed and was reviewed by a hearing officer.
 24 The hearing officer has remanded the
 25 application to the Planning Commission where a hearing

Page 5

1 the resolution support the denial of the waiver.
 2 Julie has provided the commission members
 3 with an index for where other items are located in the
 4 packet. However, if you have difficulty finding the
 5 document during the meeting, feel free to ask me to
 6 help you locate it. It is quite a large volume, so I
 7 understand that it's cumbersome to get through.
 8 The new comments that have come in since
 9 the March meeting begin on page 84. You also have
 10 several letters in your desk packet, including a letter
 11 from an adjacent property owner requesting that his
 12 previous objections to the proposal be disregarded.
 13 There are also two letters on your desk
 14 that came in after the desk packet was published. The
 15 Planning Commission -- or actually make that -- I think
 16 it's three letters that's come in since the desk packet
 17 was prepared.
 18 The Planning Commission should review the
 19 application, site plan, staff report, and comments
 20 received and determine if the mandatory conditions
 21 contained in KPB 21.29.050 will be met.
 22 The planning department recommends that
 23 the Planning Commission deny the processing distance
 24 waiver request, approve the conditional land use permit
 25 with listed conditions, and adopt the findings of fact

Page 6

1 subject to the requirements contained in the staff
 2 report. And that's the end of my report.
 3 **CHAIRMAN MARTIN:** Thank you. Before I
 4 open public comment, I'll read the rules by which these
 5 hearings will be conducted.
 6 Anyone wishing to testify must wait for
 7 recognition by the chair and state their name and
 8 address for the record at the microphone provided for
 9 public comment.
 10 Each speaker is limited to five minutes
 11 unless they have a prepared statement, in which case
 12 they may request additional time. All questions will
 13 be directed to the chair. All questions and comments
 14 will be kept to the subject at hand and shall not deal
 15 with personalities.
 16 The public shall maintain decorum at all
 17 times and treat testifiers with respect. No applause
 18 or verbal outbursts will be allowed.
 19 And the hearing procedure -- well, the
 20 chair introduces the agenda item, like I just did;
 21 staff presents a report and a recommendation; and
 22 presentation by the applicant and their
 23 representatives; and then followed by testimony by
 24 members of the public.
 25 Then we go to response by staff and

Page 7

1 testimony that was given and an opportunity for the
 2 commission to ask questions of the staff, rebuttal by
 3 the applicant. The applicant can rebut evidence or
 4 testimony but should not present new testimony or
 5 evidence.
 6 The person -- the chairperson closes the
 7 hearing and then entertains a motion. The commission
 8 deliberates and makes a decision.
 9 So I think Mr. Venuti has a comment.
 10 **COMMISSIONER VENUTI:** Mr. Chair, I would
 11 like to make a motion that we limit testimony tonight
 12 to new information rather than rehashing all the
 13 information we received already.
 14 **COMMISSIONER FOSTER:** I'll second that.
 15 **CHAIRMAN MARTIN:** Discussion? Mr.
 16 Whitney.
 17 **COMMISSIONER WHITNEY:** Yeah, I would
 18 object to that. At the last meetings and in previous
 19 meetings, everyone who has testified was told they
 20 would be able to testify again at the next hearing,
 21 being this particular one here, with no limitations or
 22 curtailment of their testimony. So they are being
 23 denied something that basically they walked out of here
 24 with a promise that they would be able to do.
 25 And I have a question of staff. I'm

Page 8

1 wondering if the change in the height requirements is
 2 different than the presentation that we had at the --
 3 the recommendations we had at the March 25th meeting?
 4 If so, that's a change to the process.
 5 **MR. WALL:** The staff recommendation has
 6 remained the same from the March 25th meeting. One of
 7 the neighbors has proposed alternate buffers, and maybe
 8 that's what you're thinking of. But the staff
 9 recommendation has not changed from the March meeting.
 10 **COMMISSIONER WHITNEY:** Well, I still have
 11 that objection.
 12 **CHAIRMAN MARTIN:** Thank you. Ms.
 13 Carluccio.
 14 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes, I
 15 wouldn't support that either. Because one of the other
 16 things that was brought up at the last meeting was that
 17 there would be a number of people here tonight who were
 18 not in residence at that time, and they have no idea
 19 what was testified or not testified. And so I think
 20 that telling them that they couldn't repeat something
 21 that they don't even know about is, you know, beyond
 22 what we should do.
 23 **CHAIRMAN MARTIN:** Any other discussion?
 24 Roll call, please.
 25 **THE CLERK:** The motion was to limit

Page 9

1 testimony to new information only.
 2 Foster?
 3 **COMMISSIONER FOSTER:** No.
 4 **THE CLERK:** Venuti?
 5 **COMMISSIONER VENUTI:** No.
 6 **THE CLERK:** Brantley -- sorry. Ernst?
 7 **COMMISSIONER ERNST:** No.
 8 **THE CLERK:** Whitney?
 9 **COMMISSIONER WHITNEY:** No.
 10 **THE CLERK:** Carluccio?
 11 **COMMISSIONER BOKENKO-CARLUCCIO:** No.
 12 **THE CLERK:** Fikes?
 13 **COMMISSIONER FIKES:** No.
 14 **THE CLERK:** Bentz?
 15 **COMMISSIONER ABRAHAMSON-BENTZ:** No.
 16 **THE CLERK:** Ecklund?
 17 **COMMISSIONER ECKLUND:** No.
 18 **THE CLERK:** Martin?
 19 **CHAIRMAN MARTIN:** No.
 20 **THE CLERK:** Unanimous.
 21 **CHAIRMAN MARTIN:** Thank you. So at this
 22 time I will open public comment. Please state your
 23 name and address at the microphone provided, and sign
 24 in as well. And push the button at the bottom of the
 25 microphone to get it started.

Page 10

1 **EMMITT TRIMBLE:** My name is Emmitt
 2 Trimble --
 3 **CHAIRMAN MARTIN:** Hit the mic, please.
 4 **EMMITT TRIMBLE:** My name is Emmitt
 5 Trimble. I live at P.O. Box 193, Anchor Point. I
 6 personally will be pretty brief because I've lost my
 7 voice.
 8 This is our attorney of record, Stacey
 9 Stone, and we have a video that we hope to be able to
 10 play for you that unfortunately I know that it's hard
 11 for you folks to get down and take a look at sites that
 12 you're talking about.
 13 So you've looked at lots of pictures, and
 14 we just have a little video that may be helpful when
 15 we're having a discussion about things later on.
 16 I personally would like to leave you just
 17 with a couple of thoughts, phrases that are very
 18 relevant.
 19 Substantial evidence; findings of fact.
 20 Like Sergeant Friday said in Dagnet many years ago,
 21 "Just the facts, ma'am."
 22 **STACEY STONE:** Thank you, my name is
 23 Stacey Stone. I'm an attorney at Holmes, Weddle &
 24 Barcott at 701 West 8th Avenue, Suite 700 in Anchorage,
 25 Alaska, 99501.

Page 11

1 As you all have before you today, you
 2 have the remand that was passed back from the hearing
 3 officer. Within that remand, she identified the charge
 4 that's before this commission as set forth in the Kenai
 5 Peninsula Borough code.
 6 The charge to this commission is very
 7 limited in scope, and it's set forth in the code
 8 itself. It sets forth what this commission has the
 9 authority to do and what the commission has the
 10 authority not to do.
 11 It also helps to extrapolate on what the
 12 purpose of a conditional land use permit within the
 13 Kenai Peninsula Borough is, because this is not your
 14 standard -- as she referenced, this isn't where we have
 15 a residential property and they are looking for a
 16 conditional land use permit for an exemption to have a
 17 daycare in a residential area where they are running
 18 business; rather this is something that's allowable,
 19 and the borough assembly has chosen to codify how these
 20 are done legally.
 21 Essentially someone has the authority to
 22 do this on the land, and if the government is going to
 23 come in with a restriction, that restriction has to be
 24 limited by law.
 25 The law is set forth. It provides very

Page 12

1 specific conditions. If everyone checks -- if the
 2 applicant checks all of the boxes that are set forth
 3 within the code, which indeed my client has done, then
 4 it's up to this commission to look and see if there are
 5 appropriate conditions that need to be placed, and if
 6 there are appropriate conditions, then they need to be
 7 instituted and then the permit needs to be approved
 8 unless it's lacking.
 9 And we maintain that the permit -- every
 10 box has been checked. There are appropriate conditions
 11 that have been set forth, and therefore tonight this
 12 commission should approve the permit for the
 13 conditional land use.
 14 **CHAIRMAN MARTIN:** Thank you. Are there
 15 any questions from commissioners?
 16 **EMMITT TRIMBLE:** Mr. Chairman?
 17 **CHAIRMAN MARTIN:** Yes, sir.
 18 **EMMITT TRIMBLE:** If we could, with your
 19 permission, the video that we would like to play. And
 20 if the sound isn't working, my daughter who took the
 21 video will narrate it for you. And I'm done, with your
 22 permission.
 23 **CHAIRMAN MARTIN:** Yes, sir.
 24 (Whispered discussion off the record)
 25 **MR. WALL:** Mr. Chairman, while that's

Page 13

1 coming up -- never mind, it's up. So I'll --
 2 (Whispered discussion off the record)
 3 (Video played - not transcribed)
 4 **COMMISSIONER ECKLUND:** Mr. Chairman?
 5 **CHAIRMAN MARTIN:** Yes? Could you pause,
 6 please? Ms. Ecklund.
 7 **COMMISSIONER ECKLUND:** Yes, excuse me.
 8 When you say, "Looking across," could you say which
 9 direction you're looking, north, east, west -- I mean,
 10 you're saying --
 11 **ALLISON TRIMBLE PAPAROA:** Northwest. So
 12 kind of from the Danver side, like if you're up in the
 13 upper portion -- maybe you can help clarify.
 14 **COMMISSIONER ECKLUND:** The northern
 15 portion of Danver?
 16 **EMMITT TRIMBLE:** She was standing at the
 17 intersection of Kyllonen and Danver. You're looking to
 18 the west here, due west.
 19 **COMMISSIONER ECKLUND:** And that's in this
 20 one. The one where you say you're looking towards your
 21 sister's house --
 22 **ALLISON TRIMBLE PAPAROA:** I was standing
 23 just right over there. If you're looking, I was right
 24 here. So this is --
 25 **COMMISSIONER ECKLUND:** And you were

Page 14

1 looking which direction at that point?
 2 **ALLISON TRIMBLE PAPAROA:** I was looking
 3 north.
 4 **COMMISSIONER ECKLUND:** North, okay.
 5 **EMMITT TRIMBLE:** Northwest.
 6 **COMMISSIONER ECKLUND:** Okay, all right,
 7 thank you.
 8 **EMMITT TRIMBLE:** Towards my daughter's
 9 house.
 10 **UNIDENTIFIED SPEAKER:** Yeah, I don't know
 11 where that is.
 12 (Video played - not transcribed)
 13 **EMMITT TRIMBLE:** Here is looking south
 14 again. This is Kyllonen Drive.
 15 (Indiscernible-simultaneous talking while video is
 16 playing)
 17 **EMMITT TRIMBLE:** Looking north on Denver.
 18 There is the berm. You can barely see through the
 19 trees, the vegetated buffer.
 20 This is now the ingress to the pit. This
 21 berm was along there at the request of Mr. Wall and the
 22 reseeding at the request of planning.
 23 **ALLISON TRIMBLE PAPAROA:** Facing north.
 24 **EMMITT TRIMBLE:** Mr. Brantley's
 25 properties are on the other side of that berm. Mr.

Page 15

1 Whitmore's properties are right there. Mr.
 2 (Indiscernible) property is right there. This is where
 3 Mr. Bilben and others are, up in that area. This is
 4 the area that was stripped by CIC Construction. And
 5 the floor of the pit would be 25 feet below that level.
 6 This is from the beach road looking south
 7 on Denver.
 8 This is Mr. Brantley's so-called business
 9 where the sign is.
 10 **ALLISON TRIMBLE PAPAROA:** There is one
 11 final one --
 12 **CHAIRMAN MARTIN:** One final one.
 13 **ALLISON TRIMBLE PAPAROA:** That just shows
 14 across the property.
 15 **EMMITT TRIMBLE:** This is the area of the
 16 proposed Phase 2 many years down the road, if at all.
 17 Thank you for your consideration. I
 18 appreciate it.
 19 **CHAIRMAN MARTIN:** Ms. Ecklund.
 20 **COMMISSIONER ECKLUND:** Thank you. If
 21 your daughter would sign in, then she would be a person
 22 of record since she spoke, and that might be beneficial
 23 to you. And I do have some questions for you, Mr.
 24 Trimble --
 25 **EMMITT TRIMBLE:** Yes, ma'am.

Page 16

1 **COMMISSIONER ECKLUND:** -- if you don't
 2 find.
 3 **EMMITT TRIMBLE:** I think she's intending
 4 to testify as well.
 5 **COMMISSIONER ECKLUND:** Oh, later on?
 6 **EMMITT TRIMBLE:** Yeah.
 7 **COMMISSIONER ECKLUND:** Okay. Just so
 8 long as you get --
 9 **ALLISON TRIMBLE PAPAROA:** You betcha.
 10 **COMMISSIONER ECKLUND:** -- your record.
 11 **ALLISON TRIMBLE PAPAROA:** Do you have
 12 questions for me as well during this time?
 13 **COMMISSIONER ECKLUND:** No, no thank you.
 14 Mr. Trimble, in that video you were
 15 talking about that you were looking -- or the road was
 16 the beach road. And on the permit maps that are in
 17 this current 400-some page packet, it doesn't show
 18 that.
 19 So my question is, how far is your
 20 property line from beach -- from the beach, from Cook
 21 Inlet, from water?
 22 **EMMITT TRIMBLE:** From the western
 23 boundary of Phase 3 in this permit, it's probably 700
 24 feet to the beach line, more or less.
 25 **COMMISSIONER ECKLUND:** Or to mean high

Page 17

1 water, or whatever.
 2 **EMMITT TRIMBLE:** Right, yeah.
 3 **COMMISSIONER ECKLUND:** Thank you.
 4 Through the chair, could I ask some additional?
 5 On your permit application, there was a
 6 spot for listing voluntary permit conditions, and one
 7 thing that we've been asking of past gravel pit
 8 applicants or material site applicants was to
 9 voluntarily use the white noise backup alarms. And
 10 we've talked about this --
 11 **EMMITT TRIMBLE:** Yes, ma'am.
 12 **COMMISSIONER ECKLUND:** -- and it isn't
 13 added into this new application, which I think is your
 14 original. But would you be amenable to adding the
 15 white noise backup to your equipment?
 16 **EMMITT TRIMBLE:** Yes, ma'am, as long as
 17 it's my equipment I have control over. The people that
 18 I've been hiring have had their backup beepers
 19 disabled.
 20 **COMMISSIONER ECKLUND:** Okay.
 21 **EMMITT TRIMBLE:** And I have no problem
 22 with that, no.
 23 **COMMISSIONER ECKLUND:** Additional? Thank
 24 you, chair.
 25 On the map on page 71 of 438, in packet 1

1 it shows an existing stripped area, which I think was
2 all you had done at the time you first applied. But
3 you've received a counter permit since then. So there
4 is some -- that area is bigger now, the area that's
5 been stripped with the counter that had approval.

6 **EMMITT TRIMBLE:** A couple clarifications.

7 **COMMISSIONER ECKLUND:** Okay.

8 **EMMITT TRIMBLE:** When I first started
9 before I even considered a conditional use permit or
10 anything, we were just under the one-acre thing.

11 **COMMISSIONER ECKLUND:** Right.

12 **EMMITT TRIMBLE:** I had moved in in what
13 looked like uplands. And I've had a delineation done,
14 by the way, and it is, in fact, uplands.

15 But Mr. Wall pointed out that that area
16 that I had built a substantial gravel pad so trucks
17 could get in and turn around, it's on my property, he
18 pointed out that the hundred year floodplain map and
19 the riparian wetlands map, whether or not they are
20 accurate, that the permit that I got, the counter
21 permit, required that we stayed a hundred feet away
22 from those lines.

23 I said, "Yes, sir. Can I have the
24 coordinates?" He sent me the coordinates. I said,
25 "I'm going to do exactly what you tell me." We went

1 **EMMITT TRIMBLE:** No, I have no problem.
2 We just haven't changed the application.

3 **COMMISSIONER ECKLUND:** Right, right. I
4 just -- based on the staff report, and he -- Mr. Wall
5 mentioned that, the waiver again --

6 **EMMITT TRIMBLE:** Yes, ma'am.

7 **COMMISSIONER ECKLUND:** -- I just wanted
8 to make sure that you --

9 **EMMITT TRIMBLE:** No problem.

10 **COMMISSIONER ECKLUND:** -- were ready to
11 go forward with changing your processing area.

12 **EMMITT TRIMBLE:** Sure.

13 **COMMISSIONER ECKLUND:** Okay, thank you.

14 **CHAIRMAN MARTIN:** Are there any other
15 questions for Mr. Trimble? Mr. Whitney.

16 **COMMISSIONER WHITNEY:** There was some
17 indication in the material we received that there was
18 plans to do some rock crushing there. Is that a fact?

19 **EMMITT TRIMBLE:** There is no plans to do
20 that now, but it's certainly something that would be
21 permissible with the permit. It would just need to
22 have a processing location that met the conditions that
23 we're willing to agree to.

24 **COMMISSIONER WHITNEY:** But that's
25 something that could happen in the future?

1 out there, and that's what that one berm was.

2 And then we reseeded the entire -- we put
3 four inches of topsoil down and reseeded it, I don't
4 know, 6- \$7,000 worth of stuff.

5 **COMMISSIONER ECKLUND:** Okay, let me see.
6 Oh, one final one. The staff is recommending that we
7 don't approve your waiver for your processing area to
8 be less than 300 feet from the property line.

9 And I see that you've got it marked on
10 your permit map, but it is 300 feet from, like, the
11 center of Danver Road.

12 Would you be able to move that so that
13 you're within the 300 feet from your boundary, from
14 your property boundary?

15 **EMMITT TRIMBLE:** Yes, ma'am. I don't
16 have any problem with the waiver not being approved.
17 It was something the engineer recommended. You know,
18 it's 200 feet from Mr. Brna's property, I understand
19 that.

20 As is pointed out in the staff report,
21 there are many other areas to the west in Phase 2 and
22 Phase 3 where if there was a need to be 300 feet away,
23 it's possible. So I don't have any problem with that.

24 **COMMISSIONER ECKLUND:** Okay. And you
25 could move that back?

1 **EMMITT TRIMBLE:** Absolutely it could
2 happen. It's not something I've got planned, but it's
3 something that could happen.

4 Normally in a pit this size, if something
5 happens -- so maybe you have a screen or a crusher -- I
6 don't have a lot of experience with it -- there will be
7 some people testifying here that could maybe answer
8 better than I, but maybe two weeks out of the year.
9 Very limited situation. This is not a major industrial
10 pit.

11 **MR. WALL:** Mr. Chairman, would it be
12 possible for me to ask a clarifying question?

13 **CHAIRMAN MARTIN:** Please.

14 **MR. WALL:** Mr. Trimble, at the last
15 meeting you talked about the rolling berm, the moving
16 berm.

17 **EMMITT TRIMBLE:** Yes, sir.

18 **MR. WALL:** And the way that the condition
19 is written in the staff report and in the resolution,
20 it would require a 50-foot vegetated buffer with a
21 12-foot-high berm between the buffer and the
22 excavation. And that would certainly allow the moving
23 berm, but it doesn't require it the way that it's
24 worded.

25 Is it your intention to volunteer that as

Page 22

1 a condition, that you will have a moving berm, a
 2 rolling berm so --
 3 **EMMITT TRIMBLE:** Absolutely.
 4 **MR. WALL:** -- it would be --
 5 **EMMITT TRIMBLE:** I think that's the way
 6 to best minimize any effects of any kind, have the berm
 7 close to where you're working.
 8 In a small-scale operation -- I mean, the
 9 area that you saw there that's been stripped is a half
 10 acre. And that would be a long time.
 11 You know, people talk about 50,000 yards
 12 of material. You know, if you sold 10- or 15,000 yards
 13 a year, that's monumental for someone this size. And
 14 we had the opportunity to do that, but it was taken
 15 away from us.
 16 So the rolling berm is -- you'll see
 17 these LIDAR drawings, and they say, "Well, it would
 18 have to be 50 feet if it's over here." Okay, well,
 19 it's not going to be over there, it's going to be right
 20 here. It's going to be right next to where we're
 21 working, and then we would be 25 feet below the base of
 22 that 12-foot berm. So 37 feet.
 23 **CHAIRMAN MARTIN:** Ms. Ecklund.
 24 **COMMISSIONER ECKLUND:** I found one more
 25 note, through the chair, for Mr. Trimble.

Page 23

1 Part of the permit process is that you
 2 designate your haul route. And your haul route has
 3 been designated as Danver Street. But then from Danver
 4 then where are you going to go?
 5 **EMMITT TRIMBLE:** Well, I won't go
 6 anywhere.
 7 **COMMISSIONER ECKLUND:** Or whoever is
 8 hauling your gravel.
 9 **EMMITT TRIMBLE:** Yeah. Anyone that's
 10 hauling, unless they were going north up Danver to some
 11 of these folks, they would be going south a few hundred
 12 feet to the intersection, turning right, and going
 13 towards the Old Sterling Highway. At this time you
 14 can't go across the bridge.
 15 **COMMISSIONER ECKLUND:** Right.
 16 **EMMITT TRIMBLE:** Okay, so if anything was
 17 moving that way, it would be moving towards Homer on
 18 the Sterling Highway.
 19 **COMMISSIONER ECKLUND:** Okay.
 20 **EMMITT TRIMBLE:** I mean, that's one of
 21 the things that happened with -- the opposition caused
 22 Hilcorp to pull out of a deal they had with us. And so
 23 instead of running two miles on the beach road and the
 24 Old Sterling Highway, they got them to go 22 miles one
 25 way on the beach road, the Old Sterling Highway, the

Page 24

1 new Sterling Highway, and the North Fork Road. Maybe
 2 it wasn't as safe as the other option.
 3 **COMMISSIONER ECKLUND:** Just to clarify,
 4 since I'm not familiar with the area.
 5 You would go always -- if you had to get
 6 out to the new Sterling Highway, you would use the Old
 7 Sterling Highway as the haul route, not Anchor Point
 8 Road?
 9 **EMMITT TRIMBLE:** Yes, ma'am.
 10 **COMMISSIONER ECKLUND:** Okay, thank you.
 11 **CHAIRMAN MARTIN:** Is there any more
 12 questions for the applicant? We're not going to -- we
 13 have to keep the meeting better than this. Everybody
 14 is going to get their turn.
 15 **MR. WALL:** Mr. Chairman.
 16 **CHAIRMAN MARTIN:** Mr. Wall.
 17 **MR. WALL:** Just for clarification. I
 18 think Mr. Trimble misunderstood the question or
 19 something. Because in order to get to the Old Sterling
 20 Highway from Danver Street, you need to go on Anchor
 21 Point Road.
 22 **EMMITT TRIMBLE:** Yes, that's how you get
 23 to the bridge, yeah. Oh, I'm sorry, I misunderstood.
 24 That's obvious. You're going to turn off of Danver,
 25 turn right on the beach road to the Old Sterling

Page 25

1 Highway. Thank you for the clarification.
 2 **COMMISSIONER ECKLUND:** Okay, followup,
 3 please.
 4 **CHAIRMAN MARTIN:** Please.
 5 **COMMISSIONER ECKLUND:** How many miles or
 6 feet would you be on Anchor Point Road to get to Old
 7 Sterling Highway.
 8 **EMMITT TRIMBLE:** Less than a mile, or
 9 approximately a mile.
 10 **COMMISSIONER ECKLUND:** Less than a mile.
 11 Okay, thank you.
 12 **CHAIRMAN MARTIN:** Any other commissioner
 13 questions? None at this time.
 14 **EMMITT TRIMBLE:** Thank you, I appreciate
 15 your consideration.
 16 **CHAIRMAN MARTIN:** Next testifier, please.
 17 **PAUL MORINO:** Hello, thank you ladies and
 18 gentlemen. My name is Paul Morino. I reside at Silver
 19 King RV Village at basically the corner of Ann Street
 20 and Anchor Point Road.
 21 I'm one of at least 70 residents that
 22 reside on Anchor Point Road within that one mile from
 23 Danver Street to the Old Sterling Highway.
 24 Silver King RV Village incorporates 88
 25 individual lots with approximately 70 residential

Page 26

1 owners. Many of us live there throughout the entire
 2 summer and into late September and even in April.
 3 I wasn't at the last meeting, so you
 4 probably discussed the noise concerns earlier, but I
 5 want to bring up something that the applicant's
 6 daughter pointed out of the 27 four-wheelers not going
 7 up and down the road.
 8 One truck going up and down that road
 9 equals the noise of 32 cars, and that was from a study
 10 done in 2000 by the Canadian government. So we may not
 11 have 27 four-wheelers, but there is going to be -- for
 12 each truck going down that road, the noise level is
 13 going to be equivalent of 32 cars.
 14 One thing I'm concerned about is a
 15 statement by the applicant that says that, "Just the
 16 facts." Well, yeah, Jack Webb said, "Just the facts,"
 17 but there is also just the amount of people involved
 18 just on the one mile of the Anchor Point Road.
 19 I don't know how many tourists and
 20 tourist dollars are spent on that one mile of road
 21 alone with the three or four state campgrounds just on
 22 the other side of Silver King RV Village. But if not
 23 over a thousand people, it's got to be close to a
 24 thousand tourists coming there and camping and residing
 25 there throughout the entire summer.

Page 27

1 Again, I don't know how big of an issue
 2 the noise is in the scheme of things, but for anybody
 3 who resides right there on that road, the trucks, the
 4 truck noise is going to be pretty loud.
 5 And how many trucks are there going to
 6 be? I mean, the applicant says that there's going --
 7 it's going to be a small operation. What's a small
 8 operation? How many trucks are going up and down that
 9 road? I don't know.
 10 Anyway, that's my major concern is just
 11 the amount of traffic on that roadway and the amount of
 12 noise on that roadway and what it's going to do to all
 13 the people that visit that area, that one small
 14 stretch. That's all I have.
 15 **CHAIRMAN MARTIN:** Thank you. Any
 16 questions? Ms. Ecklund.
 17 **COMMISSIONER ECKLUND:** Do you have the
 18 title of that 2000 study that you referenced?
 19 **PAUL MORINO:** There is a U.S. DOT 1995
 20 noise report that stated one truck traveling 55 miles
 21 an hour equal 28 cars. And the one from --
 22 **COMMISSIONER ECKLUND:** How many miles per
 23 hour, sir, excuse me?
 24 **PAUL MORINO:** 55. And of -- the speed
 25 limit on that road is 25.

Page 28

1 **COMMISSIONER ECKLUND:** Yeah, okay.
 2 **PAUL MORINO:** But the other study, if I
 3 could quickly look real quick, it's a Transit Canada
 4 2000 Noise Centre, C-e-n-t-r-e, BC Transit. I didn't
 5 write down the website.
 6 **COMMISSIONER ECKLUND:** Okay, thank you.
 7 **PAUL MORINO:** Yep.
 8 **CHAIRMAN MARTIN:** Any other questions for
 9 our testifier? Seeing none, thank you.
 10 **PAUL MORINO:** Thank you.
 11 **CHAIRMAN MARTIN:** Next, please.
 12 **JUDY AARON:** It was already on, sorry.
 13 My name is Judy Aaron, and I live on 73691 Ann Court.
 14 I also live in the Silver King RV park, and I'm
 15 thankful that you let us speak up today. I was not
 16 able to attend any of the previous meetings.
 17 I share the same concerns about the
 18 amount of noise when it talks especially about the
 19 buffer zones and the noise on the road and the amount
 20 of trucks going up and down. That's a very small road.
 21 And just the maintenance of both -- and then the state
 22 maintenance and the borough maintenance. And that's
 23 all.
 24 **CHAIRMAN MARTIN:** Thank you. Mr. Whitney
 25 has a question.

Page 29

1 **COMMISSIONER WHITNEY:** From where you're
 2 located in the RV park, can you hear any of the
 3 operation that's going on in the current gravel site?
 4 **JUDY AARON:** I don't think -- I don't
 5 know if they are really operating right now. But I can
 6 hear the road traffic.
 7 **COMMISSIONER WHITNEY:** Thank you.
 8 **JUDY AARON:** But currently I don't see
 9 vehicles going back and forth for the gravel operation.
 10 **CHAIRMAN MARTIN:** Any other questions?
 11 None at this time, thank you. Next testifier, please.
 12 **LINDA BRUCE:** My name is Linda Bruce.
 13 And let's see if I can't get this done really quick.
 14 And I live at Post Office -- well, I
 15 don't live at Post Office Box. My address is Post
 16 Office Box 39004, and that's Ninilchik, Alaska 99639.
 17 And I have not been at any of the
 18 previous meetings. So I do know some of the input
 19 that's been done, but I -- and hopefully I won't touch
 20 on it, but I haven't -- you know, I haven't been here.
 21 We own property down in Anchor Point,
 22 which is practically adjacent to the gravel pit. We
 23 bought that property from Emmitt and Mary Trimble a
 24 long time ago. And Emmitt -- I'll touch on the
 25 newspaper article, but first I want to touch on the

Page 30

1 video.
 2 The video, I'm not sure what the specific
 3 point of the video was, but if it's to show the gravel
 4 pit or what it was there for, but if it was to
 5 demonstrate the pristine and lovely nature of the area,
 6 it did that. And that the gravel pit is right in the
 7 middle of that pristine and lovely area, it succeeded
 8 at that, it was great for that.
 9 But I will touch on the newspaper article
 10 that recently came out that was talking about the
 11 40-year trust that -- and these are quotes from Mr.
 12 Trimble -- the 40-year trust relationship with the
 13 people of Anchor Point, my parents being two of those
 14 people, my husband and I being two more of those
 15 people, and selling and buying property.
 16 And my feeling now is that Mr. Trimble
 17 has broken that trust. And in the newspaper he talked
 18 about the properties, the gravel pit being in an
 19 unincorporated, unzoned area.
 20 You know, I thought that was really
 21 interesting, because that's the very reason that most
 22 of us here bought there. We buy there because it's
 23 outside the city, it's outside all the craziness that's
 24 in Anchorage or Wasilla or Girdwood or wherever, it's
 25 outside all of that. It's outside Soldotna, it's

Page 31

1 outside Kenai. And we've had an apartment building for
 2 years in Kenai, and trust me, Ninilchik is a lot
 3 quieter than Kenai.
 4 So I understand the unincorporated,
 5 unzoned area. But then to play that card, to ask for a
 6 permit for a gravel pit in that pristine area is really
 7 an insult. At that critical point in Anchor Point,
 8 it's really an insult to all of us who have put our
 9 trust in Mr. Trimble and then to have a gravel pit in
 10 our backyard. It really is insulting.
 11 And he says that in 15 years they will
 12 rebuild, they will make it all great. Well, some of
 13 the gravel pits around here, in fact, one in Ninilchik
 14 has been going for 40 years. So 15 years is a really
 15 aggressive target, and quite truthfully, some of you
 16 are younger than me, but I can tell you right now, if I
 17 live the 15 years, I may not live long enough to see
 18 that gravel pit be reconstituted to something really
 19 great. And so I don't want to wait 15 years to see
 20 Anchor Point rebuilt to something really great.
 21 So I really -- I mean, I think you would
 22 know that I object to this. But what my question to
 23 you is, do we -- is there a point to public input?
 24 Does public input -- because I saw Mr. Trimble's
 25 attorney get up here and say, "We've met all the

Page 32

1 conditions and we should be granted the permit."
 2 So does public input, the letters,
 3 everything, does that really have any bearing on this
 4 process? And I don't know who can answer that or if
 5 all of you can answer that, but does it have any
 6 bearing, or are we all just wasting our time because
 7 the permit is going to be granted because the
 8 conditions have been met? And that's really all.
 9 **CHAIRMAN MARTIN:** Thank you. Any
 10 questions? None at this time, thank you, ma'am.
 11 Next testifier, please.
 12 (Indiscernible - whispered conversation)
 13 **CHAIRMAN MARTIN:** Are we ready for the
 14 video over there? Will you let us know when it's --
 15 your request? Thank you, whenever you're ready, sir.
 16 **MARK CLAYPOOL:** My name is Mark Claypool.
 17 I'm the president of the association at Silver King RV
 18 Village Association. I have two things.
 19 Number one, Mr. Whitney's question about
 20 the noise. We hear the surf from where we're at, so
 21 there is no doubt in my mind we're going to hear what
 22 comes from that gravel pit.
 23 Number two, if the haul road, meaning
 24 Anchor Point river road cannot be safe with these
 25 trucks running up and down and permission not be

Page 33

1 granted -- I'm surprised that Mr. Trimble didn't
 2 mention this road, he's lived here for so many years.
 3 But that's all I've got.
 4 **CHAIRMAN MARTIN:** Any questions? Not
 5 now, thank you. Next.
 6 **CHRISTINA ELMALEH:** Hi, my name is
 7 Christina Elmaleh, I live at 34885 Seabury Court, which
 8 is kind of up and above the gravel pit. And I just
 9 want to testify to the noise.
 10 I quit my job about a year ago to stay
 11 home with our then two-month old. We have a couple
 12 kids, and I could hear the noise from the operations at
 13 the gravel pit throughout the day, so much so that any
 14 time my dog could hear it, she was freaking out and
 15 barking, so that just kind of added to it.
 16 But we can definitely hear the noise from
 17 where we're at. It's a bit of, like, an amphitheater
 18 that kind of magnifies it up to our house.
 19 The reason we bought where we bought was
 20 actually to be away from gravel pits. We didn't look
 21 at anything near a gravel pit at the time to keep that
 22 kind of noise away from our young -- two young kids and
 23 to be in a safe, open area. So I just wanted to
 24 testify that we can hear it from our house, and that I
 25 am against the gravel pit.

Page 34

1 **CHAIRMAN MARTIN:** Thank you. Any
2 questions? Mr. Whitney.
3 **COMMISSIONER WHITNEY:** How far away from
4 the pit are you actually?
5 **CHRISTINA ELMALEH:** A quarter -- like a
6 quarter mile.
7 **COMMISSIONER WHITNEY:** Okay, thank you.
8 **CHAIRMAN MARTIN:** Any other questions?
9 None at this time, thank you. Next testifier, please.
10 **TERESA JACOBSON GREGORY:** Hi, I'm Teresa
11 Jacobson Gregory, and that poster is a picture of my
12 neighborhood.
13 **UNIDENTIFIED SPEAKER:** Excuse me, Julie,
14 could you just stand it up a little bit more because
15 it's glaring and we can't really see it. Thank you.
16 **TERESA JACOBSON GREGORY:** And if you look
17 in your packet on page 343, there is a map of -- with
18 red area that shows a small portion of this picture,
19 and it also shows where the gravel pit -- the full
20 gravel pit will be.
21 And I just want to thank you all for
22 serving and being a member of this Planning Commission
23 for each of our communities in the Kenai Peninsula
24 Borough. Also being willing and already willingly
25 denying this conditional use permit and then hearing us

Page 35

1 again after the appeal.
2 I question the fact that a conditional
3 land use permit was denied and then the director and
4 the planner approved a two-and-a-half acre
5 over-the-counter gravel permit for Beachcomber, LLC
6 immediately after the denial that does not have to
7 require a public comment.
8 There have been several written comments
9 about the Planning Commissioners. On March 25th, 2019
10 at the Planning Commission meeting Mary Trimble stated,
11 quote, "The staff is recommending approval. The
12 planning director Bruce and the borough attorney have
13 all visited the site and saw no issues with our plan.
14 The borough attorney has, in her briefs, interpreted
15 the code and stated case law to back up her position
16 that the permit should be granted.
17 These are professional, educated people
18 who represent the borough interests and who interpret
19 and enforce the code," end quote.
20 And then in -- another letter addressed
21 to you as the Planning Commissioners for this meeting
22 was from Allison Trimble, their daughter. "When the
23 Planning Commission denied the application last year,
24 you did so against the recommendation of the staff and
25 in direct violation of your duties," unquote.

Page 36

1 I looked up the Planning Commission
2 administration codes, and 2.4.005 [sic] and 2.4.007
3 [sic], you as Planning Commissioners have investigation
4 and recommendation authority. Also, you have approval
5 or -- you can approve or rejection, you have that
6 authority. So when they tell you that you don't have
7 any right to do these borough codes, that's not so.
8 Now we're back to the main point where
9 the borough ordinances are -- I know that you can only
10 act on certain codes in the borough, which is
11 minimizing off-site dust movement, which, if you go out
12 and look at my car right now, you'll see after the
13 borough graded the roads, we're all yellow from Anchor
14 Point.
15 Minimizes noise disturbance to other
16 properties, minimizes visual impacts, and while the
17 first one was protects against physical damage, which I
18 believe will be physical damage to our property as far
19 as value.
20 The definition of minimize is to reduce
21 something -- especially something unwanted or
22 unpleasant to the smallest possible amount or degree.
23 The codes are set up for guidelines for all of the
24 Kenai Peninsula Borough residents.
25 I live about a hundred feet above this

Page 37

1 area for the conditional lands permit, and there is no
2 way that it's possible to minimize the noise
3 disturbance.
4 I called and invited Mr. Wall to come and
5 sit on my deck and listen when they first started back
6 in August after they gave them the two-and-a-half acre
7 permit, but I mostly wanted him to hear the quiet, the
8 sounds of the ocean, and then the racket of the Cats
9 and the trucks moving dirt. He didn't come. And I
10 invite any of you to come to my deck and listen, and I
11 hope at least that you've seen this area for yourself.
12 And as you can see in that picture, there
13 is no gravel pit within a long area of that one.
14 I quote again from Mary Trimble's
15 statement on March 25th of 2019 in the Planning
16 Commission meeting, "Emmitt and I believe in rights and
17 responsibilities. This is a situation where we are
18 agreeing to take on responsibilities in exchange for
19 the right to excavate gravel on our property. The
20 opposition, quote, has the right to protect their
21 property, but are unwilling to accept the fact that
22 they have a responsibility to do what they can to
23 minimize visual and noise, if it is bothersome, by
24 building a fence or a berm on their property or
25 installing blinds that rise up from the bottom so that

Page 38

1 they will still have an inlet view. They do not have
 2 right to our land, so we should not bear all the
 3 responsibility for mitigating their perceived
 4 discomfort," unquote.
 5 **CHAIRMAN MARTIN:** Could you please
 6 summarize.
 7 **TERESA JACOBSON GREGORY:** Sure. Mary and
 8 Emmitt do not live on that property. They live five
 9 miles north from this property. And it's been said
 10 many times that this is their legacy property, which
 11 nobody lives on the land right now, and that they
 12 bought it three-and-a-half years ago.
 13 We as residents live on our property, and
 14 it's truly our legacy that we moved there. We bought
 15 here and there was no gravel pits. This gravel pit is
 16 located in our neighborhood, which is beautiful and
 17 pristine, as you can see.
 18 One other point, today, right on the end
 19 of Danver Road where the dump trucks will exit, it
 20 takes 29 seconds to get to the first campground on the
 21 left of Anchor Point Road where I saw a tent just from
 22 me to you.
 23 So I hope you will not let your -- my
 24 husband and I have lived here for 23 years, and during
 25 that time we have met people from all over the world

Page 39

1 right here on the Anchor River and the Anchor Point
 2 beach, Finland, Sweden, Germany, China, Japan, many,
 3 many others, all the Alaskans, all the people from the
 4 Lower 48.
 5 Please don't let your names go on record
 6 that you approved this conditional land use permit, and
 7 it stays with this property and will not go away.
 8 Thank you.
 9 **CHAIRMAN MARTIN:** Thank you. Any
 10 questions? None at this time, thanks for your
 11 testimony. Next person, please.
 12 **PETE KINNEEN:** My name is Pete Kinneen,
 13 and I live on Danver. I forgot to sign in here.
 14 **CHAIRMAN MARTIN:** And your complete
 15 address, please.
 16 **PETE KINNEEN:** It's 34969 Danver. And
 17 does the five minutes start when I walk up here? So
 18 the sign-in takes out of the --
 19 **THE CLERK:** No, I paused it while you
 20 signed in.
 21 **PETE KINNEEN:** Huh?
 22 **THE CLERK:** I paused it while you signed
 23 in. But I'll just (indiscernible).
 24 **PETE KINNEEN:** Thank you. I totally
 25 agree with the speaker before me. And frankly this

Page 40

1 whole thing is a head-on collision. The tension -- let
 2 me just define it very quickly. The tension is between
 3 the interpretation of the existing law.
 4 The ordinance is very clear, and there
 5 has been a lot of effort to mesmerize you into
 6 believing that the laws -- that the ordinance says
 7 something that it doesn't.
 8 The Planning Commission is a higher
 9 authority. You are the judge, you are the jury, not
 10 the department. They are here to support you, not to
 11 oppose you.
 12 The default position -- this is extremely
 13 important. Almost nothing else really matters.
 14 Everything else is the details, but the clear legal
 15 default position here is denial.
 16 There is a lot of silliness, nonsense
 17 about land owners have rights to extract gravel. That
 18 is absolutely not true.
 19 Land owners have rights to do certain
 20 things. They have rights to do everything that is not
 21 excluded. A land owner, including this land owner,
 22 could put in an automotive junk yard, they could raise
 23 pigs, there is all kinds of different things they could
 24 do.
 25 But under the borough ordinance, living

Page 41

1 outside a zoned area is not living in the Old West, it
 2 is not living in unrestricted areas.
 3 The whole reason you're here, the
 4 conditional land use permit, the CLUP, is the people
 5 voting through the assembly to tell you that there are
 6 certain things that are not a right, they are a
 7 privilege.
 8 If they meet certain conditions and come
 9 to you and you agree that they -- that the conditions
 10 meet the standards, then you are authorized to grant a
 11 permit. It is not a default position.
 12 The exclusion anywhere in the borough,
 13 including in the zoned or the outzoned areas, is you do
 14 not have a right to extract gravel. You must come in
 15 and go through this process. You are charged with
 16 looking at the very clear standards written in plain
 17 English that start with the intent. And the intent is
 18 to protect the existing neighborhood.
 19 And if the applicant can meet certain
 20 conditions to meet those standards, then you are
 21 authorized possibly to grant the permit; otherwise,
 22 again, default position is denial.
 23 And that is where we are right now. The
 24 standards cannot be met on this particular site for all
 25 the reasons that have been given to you because of the

Page 42

1 topography and the unique geography of it. And you
 2 know that this is not the right place for a gravel
 3 mining operation. You've been quoted as saying that.
 4 And there has been a lot of confusion
 5 about you have to approve this because, as the first
 6 speaker said, the applicant [sic] has been made and the
 7 box has been checked. True, they have. They have been
 8 checked, but they haven't been -- they do not meet the
 9 conditions. They cannot meet the conditions under the
 10 borough ordinance and the definitions of the conditions
 11 meeting the standards.
 12 You're going to find some great
 13 information tonight from the borough's own technology,
 14 which will demonstrate to you that this applicant
 15 cannot meet the conditions or the standards, it must be
 16 denied.
 17 The first attorney who spoke tonight, a
 18 lot of smoke, made a bad conclusion. It's a
 19 misstatement of the law, read it. I mean, I'm happy to
 20 answer any questions into detail of any of that, thank
 21 you.
 22 **CHAIRMAN MARTIN:** Thank you. Any
 23 questions for Mr. Kinneen? Ms. Carluccio.
 24 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes,
 25 thank you. In your speaking and us seeing that graph

Page 43

1 up there, is that part of your speech?
 2 **PETE KINNEEN:** That's -- yeah. What that
 3 shows is that when I wake up in the morning, I look out
 4 the bedroom window. And the graphic that was brought
 5 up by the applicant shows a, whatever, a 12-foot berm
 6 or something. I'm 70 feet above that. And I look
 7 right over it as if it wasn't there.
 8 This is the equivalent -- the
 9 amphitheater effect is the equivalent of living in a 7,
 10 8, 10, 12-story building, and there is something going
 11 on right downstairs. You can't put a berm up.
 12 So yeah, to -- under the regulations,
 13 to -- what does that say, the berm would have to be 43
 14 feet tall to meet the conditions, to meet the
 15 standards. And if they want to build that, then you
 16 can authorize it. But a 6 foot or 12 foot or 14 foot
 17 doesn't do anything at all.
 18 **COMMISSIONER BOKENKO-CARLUCCIO:** Through
 19 the chair. One of the things that Mr. Trimble said
 20 when he started off was that from where it is now it's
 21 going to potentially go down another 25 feet.
 22 **PETE KINNEEN:** Right.
 23 **COMMISSIONER BOKENKO-CARLUCCIO:** What
 24 difference would that make to your graph?
 25 **PETE KINNEEN:** It wouldn't make any

Page 44

1 difference. For example --
 2 **COMMISSIONER BOKENKO-CARLUCCIO:** Well, if
 3 he goes -- if he drops down 25 feet --
 4 **PETE KINNEEN:** It's still -- imagine I'm
 5 in a 7th floor apartment and he's just a few hundred
 6 feet out. I'm going to watch him dig down over 15
 7 years, dig down from that elevation to 25 feet deeper.
 8 And the noise is horrendous.
 9 And also the dust -- in his pictures,
 10 he's showing -- to answer your question, he hasn't
 11 vegetated anything, he hasn't thrown any grass seeds
 12 out, and every time the wind blows, it blows the dust
 13 off of that up into the hills and into my house and
 14 everybody else's house. And it's just -- you can't do
 15 it, really.
 16 **COMMISSIONER BOKENKO-CARLUCCIO:** One more
 17 question. Is how far -- you probably said it, but I'm
 18 sorry, I don't remember -- how far from the gravel pit
 19 are you?
 20 **PETE KINNEEN:** Across the street. I'm on
 21 Danver. So however wide Danver is, I guess, is how far
 22 I am away from it.
 23 **COMMISSIONER BOKENKO-CARLUCCIO:** 30 feet?
 24 **PETE KINNEEN:** Yeah.
 25 **COMMISSIONER BOKENKO-CARLUCCIO:** 50 feet?

Page 45

1 **PETE KINNEEN:** 50 -- let's call it 50.
 2 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
 3 thank you.
 4 **PETE KINNEEN:** You're welcome.
 5 **CHAIRMAN MARTIN:** Any other questions?
 6 Mr. Foster.
 7 **COMMISSIONER FOSTER:** Sir, Mr. Kinneen, I
 8 don't want to be disrespectful, but I just was
 9 thinking, you know, I wanted an unobstructed view of
 10 the ocean, and the only way I could do that is buy it
 11 right on the bay.
 12 And I was just wondering if -- you
 13 indicated or somebody else said that there is no zoning
 14 against a junkyard or a car lot or something like that.
 15 **PETE KINNEEN:** Right.
 16 **COMMISSIONER FOSTER:** And so if rather
 17 than a gravel pit he had just brought in acres and
 18 acres of pigs, we're going to have a smell, we're going
 19 to have nothing to good [sic] look at, but there is
 20 really nothing you can do here.
 21 Here we do have some little bits of
 22 things that we can try to do, and that's -- just be
 23 aware that we're trying to do everything we can. But
 24 there is not so much you can do with this grand view
 25 that we're looking at.

Page 46

1 **PETE KINNEEN:** Wait, with the what?
 2 **COMMISSIONER FOSTER:** A grand view. You
 3 know, you're looking at this from the 7th floor or that
 4 kind of a thing.
 5 **PETE KINNEEN:** Good question, if I can
 6 answer that, thank you. No discussion here about the
 7 grand view. The ordinance is very clear, it's not
 8 about the grand view, it's not about taking their view,
 9 their view shed or anything.
 10 The ordinance speaks entirely to
 11 shielding us from seeing the actual operation, and
 12 that's what the fence is about.
 13 Like on a junkyard you put up a fence,
 14 you drive down, you know there is a junkyard over
 15 there, but you can't see it.
 16 So the only view consideration is to
 17 shield us from the ugliness of this open pit mine. It
 18 doesn't have anything to do with the rest of the view,
 19 which is there.
 20 And the addressing your valid concerns
 21 about, well, he could put in a pig farm. So he's not
 22 putting in a pig farm, so why not just take the gravel?
 23 I wish we were in college and I could
 24 debate you, that would be fun, in that because he's not
 25 cutting off my left arm, it's okay for him to cut off

Page 47

1 my right arm? No. Are we in agreement, that's not a
 2 good argument? Okay, all right, then I won't debate
 3 it.
 4 What was your other point?
 5 **COMMISSIONER FOSTER:** That's all.
 6 **CHAIRMAN MARTIN:** Mr. Wall.
 7 **MR. WALL:** Mr. Chairman, yeah, thank you,
 8 Mr. Chairman.
 9 For clarification, Mr. Kinneen, how many
 10 lots are between your residence and the proposed gravel
 11 pit?
 12 **PETE KINNEEN:** How many lots?
 13 **MR. WALL:** Yeah. I mean, you said --
 14 **PETE KINNEEN:** A single lot.
 15 **MR. WALL:** Okay, I just wanted to make
 16 sure that was clarified. Okay, thanks.
 17 **PETE KINNEEN:** Sure.
 18 **CHAIRMAN MARTIN:** All right, Mr. Whitney.
 19 **COMMISSIONER WHITNEY:** Who prepared that
 20 diagram?
 21 **PETE KINNEEN:** I'm sorry?
 22 **COMMISSIONER WHITNEY:** Who prepared that?
 23 **PETE KINNEEN:** Mr. Whitmore, who has got
 24 experience in dealing with this. This is the borough's
 25 technology. We're taking this right from the borough.

Page 48

1 And again, you'll see it, it demonstrates
 2 that this mine cannot be permitted under the existing
 3 law. It's very clear.
 4 **CHAIRMAN MARTIN:** Any other questions for
 5 Mr. Kinneen? None at this time, thank you. Mr.
 6 Whitmore.
 7 **LYNN WHITMORE:** It would probably help if
 8 I explain what we have here. This is the borough's GIS
 9 system utilizing their LIDAR. We're going to have a
 10 few more of these to show, so it's probably a good idea
 11 for everybody to understand how I came up with these.
 12 And I worked with Chris Clough back when
 13 he first started to do the GIS, and I worked with him
 14 non-stop. And I've worked with the borough's GIS
 15 system for quite a few years in a professional
 16 engineering business.
 17 So what you do with the borough's system
 18 is you start right here and you run a transect to a
 19 certain point. And it's going to -- you click a
 20 button, and it's going to give you a side elevation
 21 view of that layout.
 22 What I did was converted that to AutoCAD,
 23 and then put it to scale so I could measure things and
 24 put it in the proper perspective.
 25 Each house floor is about ten feet in

Page 49

1 height, including the floor trusses -- the floor
 2 joists. And so everything here should be pretty much
 3 to scale.
 4 And as we go on, it probably would be
 5 fair, because there is going to be a moving berm
 6 process here, and we've all talked about that with our
 7 group. And, in fairness, it seems like if I'm going to
 8 demonstrate the moving berm and we're going to talk
 9 about it, it seems like the applicant should be able to
 10 interact somewhat with this, too, to show us what his
 11 plans are. But we haven't had a chance to run that by
 12 everybody yet, and he may not want to, but I suspect he
 13 might. Thank you.
 14 **CHAIRMAN MARTIN:** So is that the end of
 15 your presentation? You're just going to be here in
 16 case you can support some of the other testifiers?
 17 **LYNN WHITMORE:** I don't mean that to be
 18 my presentation, I mean that to be an explanation of
 19 what I have here.
 20 **CHAIRMAN MARTIN:** Okay.
 21 **LYNN WHITMORE:** Thanks.
 22 **CHAIRMAN MARTIN:** So we'll bring up
 23 another testifier.
 24 **LYNN WHITMORE:** Please.
 25 **CHAIRMAN MARTIN:** Yes, ma'am.

Page 50

1 **ALLISON TRIMBLE PAPAROA:** My name is
 2 Allison Trimble Paparoa, I live at 3020 Upland Way,
 3 Ferndale, Washington, and I've also recently purchased
 4 a home on Kyllonen Drive. I'm also a, you know,
 5 multiple decade property owner in the borough and
 6 taxpayer.
 7 I'm going to speak to a couple things
 8 that I think I'm qualified to speak to. I've written
 9 more in my letter. The first thing I'm going to speak
 10 to is that on June 1st we opened up the property to the
 11 entire public to be there, to ask questions, to look at
 12 the site, to talk to our family, and to have a good
 13 barbecue.
 14 Three people from the opposition took
 15 advantage of that. None of the three people are in
 16 this room. Of the three parties, two have since
 17 changed their position after being there, and the third
 18 didn't really have a strong position.
 19 What I would like to read from you is
 20 from the letter that was submitted to you by Lee and
 21 Mark Yale. It says, "My wife Lee and I would like to
 22 withdraw our objections to the proposed gravel pit,
 23 which includes all oral and written correspondence.
 24 Through our conversations, we are satisfied that the
 25 KPB will protect our interests as tax paying property

Page 51

1 owners.
 2 We also have had several conversations
 3 with Mr. and Mrs. Trimble and took advantage of the
 4 Trimbles' hospitality of the open house on June 1st.
 5 The current berm on the two-and-a-half acres displays
 6 the type of berm and use. I cannot see the surrounding
 7 homes out of the pit as it is now.
 8 Our only other concern was the
 9 reclamation of the property as this could affect
 10 surrounding property values. Upon our tour of the
 11 property, Mr. Trimble showed us where he has reseeded
 12 and reclaimed an area which was done very well. We
 13 also realized to not reclaim this property upon
 14 termination of mining activity would be a mistake as
 15 the property would not have the value as it is in a
 16 pristine location."
 17 We just would like to extend a thank you
 18 to the people who did show up with an open mind, asked
 19 us questions, and were there in the spirit of
 20 compromise, because that really was what we were
 21 attempting to do with that.
 22 We rolled open the doors and invited
 23 everybody to come, and I think the people who came felt
 24 that they were well received.
 25 The other thing I'd like to speak to, I

Page 52

1 own a real estate brokerage in Washington state. I am
 2 the president-elect of our Whatcom County Association
 3 of Realtors, and my job as such is to deal with land
 4 use and the loss of private property rights.
 5 In my brokerage I work largely in rural
 6 areas, meaning outside of the city limits, trying to
 7 help property owners navigate the mounting regulations
 8 in order to utilize their properties for even
 9 residential purposes.
 10 What we love about Alaska is the ability
 11 to live and let live and actually own our property, the
 12 bundles of rights attached and intact.
 13 This is a slippery slope, with the next
 14 step being borough-wide zoning with restrictions on all
 15 properties, including residential.
 16 One of the scare tactics that has been
 17 brought up is that there is going to be a devaluation
 18 of property, the property values around a gravel pit.
 19 The borough assessor claims that they have no -- they
 20 do not devalue properties or change the assessments
 21 based on them being located near a gravel pit. And for
 22 their practical use shows that there have been two
 23 sales recently at full asking price in the area, and
 24 there is a third one that's pending.
 25 I called and spoke to the listing agent.

Page 53

1 I asked him if there was any impact that he believed on
 2 his sale from the adjoining properties, to which he
 3 asked me, "Do you have the property that has the old
 4 Connex butted up against it?" And I said, "No, we have
 5 the gravel pit down below." And he said, "It was never
 6 mentioned and didn't seem to have an effect on it."
 7 And he did say it was a solid sales price.
 8 You were also provided with a letter from
 9 Marjo Cardon, a realtor at the Kachemak Group, stating
 10 she was solicited by a complainant to give a CMA on
 11 their property because they were intending to sell it.
 12 They led her to believe that she would be listing the
 13 property, but on her arrival only talked about the
 14 gravel pit, twisting it to fit the narrative and did
 15 not list the property. She referred to their tactic as
 16 panic pedalling, and shared with you her experience
 17 with property values next to gravel pits.
 18 So I just want to state that there isn't
 19 any truth to the fact that it's going to devalue these
 20 properties, and as property owners ourselves, that
 21 would be the last thing we would be trying to do in
 22 that area. We have not made our living as gravel pit
 23 owners, we have made it as property owners.
 24 And they pointed out very clearly, we
 25 have sold a lot of the properties in this area and are

Page 54

1 very proud of it and have done a good job of being good
2 stewards of the land.
3 I really struggled with what to say
4 because it's really easy to get caught up in trying to
5 respond to the inaccuracies and misinformation and
6 defamation from opposition.
7 What it comes down to is that your duty
8 and your charge is to deal with what is set forth in
9 the CLUP, and that's been said. The superseding code
10 to be met is set forth in this ordinance. In all three
11 recommendations from staff, my parents have voluntarily
12 met or exceeded the required standards.
13 As the Planning Commission, it's a
14 thankless and difficult position, especially when faced
15 with these sorts of antics; however, what you're
16 charged with is to follow the codes and ordinances that
17 are set for all of us through legislation. In this
18 situation it's simple. The conditions have been met
19 and the permit must be issued.
20 It's also time that this decision is made
21 tonight to stop unnecessary use of taxpayer dollars and
22 to end the damages being done to the applicant.
23 **CHAIRMAN MARTIN:** Thank you. Any
24 questions? Mr. Whitney.
25 **COMMISSIONER WHITNEY:** On the Yales'

Page 55

1 property on the letter you mentioned, what level are
2 they -- their property? Is it on the same level as the
3 pit, or is it up in the -- up above it or just where --
4 **ALLISON TRIMBLE PAPAROA:** They are on the
5 same level as the pit, and they would be bordering
6 Phase 3. So they would have direct impact from Phase
7 3.
8 **COMMISSIONER WHITNEY:** So they would be
9 on the same level, and they would be just looking at
10 the berm?
11 **ALLISON TRIMBLE PAPAROA:** Yes, they are
12 adjoining the property, correct.
13 **COMMISSIONER WHITNEY:** Thank you.
14 **CHAIRMAN MARTIN:** Anyone else? No
15 further questions at this time, thank you. Next
16 testifier, please.
17 **GARY SHERIDAN:** My name is Gary Sheridan,
18 and I'm in Anchor Point. I live at 34860 Seabury
19 Court, and I'm probably a secondary, you might say, lot
20 away from the view down into the gravel pit as some of
21 the other people here.
22 But there has been quite a bit of back
23 and forth about statement of fact, and I would like to
24 present some statement of fact that you can look at.
25 Earlier I had the clerk hand out a packet

Page 56

1 of photos that show the Anchor River Road, and there
2 are -- some of those photos are in your other packets,
3 but I just gave you the whole -- all the photos that I
4 took.
5 The Anchor River Road is -- which is --
6 the proposed gravel pit owner will use as part of his
7 haul route is in terrible condition. In a letter to
8 Bruce Hall -- Wall, excuse me, Bruce -- KPB Planning
9 Department dated March 21st, 2019, State of Alaska,
10 Department of Transportation, Joselyn Biloan, area
11 planner DOT stated, "Anchor River Road is in extremely
12 poor condition, and additional heavy truck travel will
13 only hasten further deterioration." And that letter is
14 in your packet as well.
15 The Beachcomber, LLC gravel pit
16 application states they plan to haul 50,000 cubic yards
17 of gravel each year for 15 years from the proposed pit
18 on Danver Road. The only access to other destinations
19 for Danver Road is the Anchor River Road.
20 If we estimate the pit operation to have
21 a five-month season to move 50,000 cubic yards of
22 gravel, that would equal approximately 5,000 cubic
23 yards per day, a hundred day season assuming. A gravel
24 truck will carry in excess of 10 cubic yards per load,
25 which means the pit operation under the proposed gravel

Page 57

1 pit application would haul about 50 gravel truck loads
2 on the Anchor River Road per day.
3 In addition, that would mean there would
4 be 50 empty trucks returning. So that's the number of
5 a lot of gravel trucks.
6 Gary Cullip, a long-time highway
7 construction contractor in Anchorage has stated the
8 present condition of the Anchor River Road simply won't
9 hold up to this kind of heavy gravel truck traffic.
10 In a recent public hearing at the
11 material site workgroup meeting, the owner of the
12 proposed gravel pit stated that they decided to limit
13 their annual production to 10,000 cubic yards of gravel
14 per season. This is rather curious as their gravel pit
15 application states that they plan to haul up to 50,000
16 cubic yards.
17 But at any rate, 10,000 cubic yards of
18 gravel being hauled over the Anchor River Road means
19 that 10 heavily loaded gravel trucks will travel the
20 Anchor River Road one way each day and return empty for
21 a total of 20 gravel truck trips per day.
22 I spoke to Mr. Cullip about the lesser
23 hauling. He stated that even 20 gravel trucks per day
24 will seriously further damage the Anchor River Road.
25 It has been stated in written testimony

Page 58

1 by Mary Trimble, Beachcomber, LLC, in a letter May
 2 31st, 2019, the Anchor River Road is not in horrible
 3 condition any more than most paved roads in our local
 4 area, Homer or the road to Anchorage.
 5 Just as an aside, I submit to you that
 6 the pictures I laid out to you there don't look
 7 anything like the road between here and Anchorage.
 8 I took 95 photos of the Anchor River
 9 Road, documented its present condition. I found
 10 serious deterioration the complete length of the road.
 11 Payment slumping along the sides of the road is evident
 12 nearly the whole length. The slumping in the worst
 13 case is about six-inch deep by about two-feet wide.
 14 Concrete slumping is a result of heavy traffic causing
 15 the roadbed to depress below the concrete.
 16 The concrete is broken in many locations.
 17 Significant cracking is noted throughout the roadway,
 18 which will further deteriorate within -- with increased
 19 heavy truck traffic.
 20 Further in the letter to DOT to Bruce
 21 Wall March 21st, it states, "We request the Kenai
 22 Peninsula Borough, Item 4, require pavement repair on
 23 the Anchor River Road by the Kenai Peninsula Borough in
 24 the event truck hauling creates obvious pit holes,
 25 rusting -- rutting, and pavement damage."

Page 59

1 The fact that DOT will hold the Kenai
 2 Peninsula Borough responsible for any damage to the
 3 Anchor River Road is rather a sobering fact.
 4 **CHAIRMAN MARTIN:** Could you summarize,
 5 please.
 6 **GARY SHERIDAN:** You bet. We consulted
 7 with a highway construction owner who estimates the
 8 rebuilding of the Anchor River Road could cost KPB
 9 between \$175,000 to \$300,000.
 10 As an aside, just a quick note, the
 11 Department of Transportation recently did some ditching
 12 along the sides of the Anchor River Road and ended up
 13 with a shoulder from 12 to 15 inches wide. So those
 14 people that are concerned about safety have serious
 15 reason to be concerned. Thank you very much.
 16 **CHAIRMAN MARTIN:** Any questions? None at
 17 this time, thank you.
 18 **GARY SHERIDAN:** Thank you.
 19 **CHAIRMAN MARTIN:** Next testifier, please.
 20 **RICHARD CARLTON:** My name is Richard
 21 Carlton. And my wife kind of pulled up lame, so she's
 22 not going to be able to be here. She had something she
 23 wanted to say, so I'm filling in for her.
 24 There was -- somebody said earlier
 25 that -- it's actually 1.2 miles, that road that Gary

Page 60

1 was just talking about. And there is five campgrounds,
 2 212 campsites in there, and that's not including the
 3 Silver King homes that are up there on the side of the
 4 hill there.
 5 So the density of people in that area is
 6 really -- can really be high, especially holidays and
 7 things like that. And that little side, 12 to 15
 8 inches that Gary was talking about, is truly a hazard,
 9 because a lot of people use it to walk and, you know,
 10 get to the beach and come back, and of course head down
 11 to go fishing, one thing or the other.
 12 Gravel is something we need, I mean, it
 13 really is. And I can see why our laws -- or the way
 14 everything is worded and everything is that way.
 15 You've had people that -- I mean, we've needed gravel.
 16 I mean, the ground around Anchor Point, my area in
 17 particular, I'm just kind of up on the hill there, and
 18 man, things move around. I mean, it's just like a
 19 peat, I guess you might say, and mud and everything,
 20 and just now is really drying out to where you can do
 21 things.
 22 But so anyway last July the planning
 23 department presented you with an application that was
 24 grossly incomplete due to buffers and berms and were
 25 designed using only subjective guesswork. You

Page 61

1 correctly denied the application.
 2 Tonight it's a replay of that submission
 3 because the application again indicates berms that are
 4 totally subjective, arbitrary, and unable to provide
 5 the protections that are mandatory conditions and
 6 standards spelled out in the KPB's code.
 7 By using KPB's own GIS technology, we
 8 have produced substantial evidence to prove that once
 9 again you are being pressured by staff to approve an
 10 incomplete application. Staff seems to be of the
 11 opinion that you should just ignore the obvious, that
 12 being the large percentage of the neighboring property
 13 owners who have little or no screening from the noise
 14 and visual impact, and then vote to approve the permit.
 15 Your function is to act as the judge in
 16 this case and ensure that meager protections afforded
 17 the residents in the Kenai Peninsula are guarded and
 18 upheld.
 19 I have a recording I'd like to play.
 20 Really, I do. Well, it worked earlier. Basically it
 21 was just Emmitt talking about what was previously
 22 stated. It was in print that, you know, really it's up
 23 to the people that live around there to protect
 24 themselves from the offensive -- things that they find
 25 offensive about a gravel pit. That includes building a

Page 62

1 fence or buying nice blinds that you can bring up from
2 the bottom to block out the gravel pit and then still
3 see your view. And so it was basically in his own
4 words, but I'm not very good at technology. So that's
5 all I have.

6 **CHAIRMAN MARTIN:** Thank you. Are there
7 any questions? Seeing none, thanks for your testimony.
8 Next, please.

9 **TODD BAREMAN:** Name is Todd Bareman. I
10 live at 73300 Tryagain Ave. In packet No. 1 on pages
11 79 and 80 under findings of fact, 15, the buffer zone,
12 I have some questions that I would like to direct
13 through the chair to Mr. Wall.

14 The following letters -- items mention
15 the word "adjacent," letters B, C, D, E, H, I, and Q.
16 Why would the code require that all property owners
17 within one half mile of a proposed material site be
18 notified when the findings of fact are written by the
19 planning department? It appears that only adjacent
20 property owners will be afforded any of the mandatory
21 protections.

22 The only reference to "adjacent" in KP
23 21.29.040 is the protection against physical damage to
24 adjacent properties.

25 Is it the intent of this application to

Page 63

1 only provide visual and noise protections to adjacent
2 properties when the code in 21.29.040, the six
3 standards, specifically says, "other properties."
4 These findings of fact seem to indicate that the
5 planning department has taken it upon themselves to
6 change the code and ignore the other property owners.

7 In this neighborhood there are many other
8 properties that would be severely impacted if buffers
9 and berms are not of sufficient height and density,
10 provide visual and noise screening as required in KP
11 21.29.050.

12 Letter Q in the same section states that
13 each piece of real estate is uniquely situated, and a
14 material site cannot be conditioned so that all
15 adjacent parcels are equally screened by the buffers.
16 The different elevations of the parcels, varying
17 vegetation on the surrounding parcels in the material
18 site, the distance of the material site from the
19 various surrounding parcels necessarily means that the
20 surrounding parcels will not be equally impacted, nor
21 can they be equally screened from the material site.

22 Where in the code does it say that only
23 some of the neighboring properties need to be protected
24 by buffers and berms of sufficient height and density?
25 The applicant has publically declared that neighbors

Page 64

1 who don't like what they see and hear coming from his
2 mine should utilize window shades, hearing protection,
3 and fences.

4 Who makes the decision as to who gets
5 sufficient visual and noise screening as is required in
6 the code, and who gets to pull their shades and wear
7 ear plugs in their own homes for the next 15 years?
8 Everything that's spelled out in fact Q
9 is the exact reason that this particular material site
10 application needs to be denied. If mandatory
11 conditions cannot be met, then the commission is
12 required in KP 21.25.050 to deny the permit, not just
13 to disregard the obvious deficiencies in this
14 application and allow an industrial gravel mine of this
15 magnitude in the center of a residential and
16 recreational neighborhood.

17 One last comment. Vacation time is
18 precious to everyone. If you were camping and at any
19 time of the day had to listen to gravel being
20 processed, whether it be screening, crushing, or
21 loading trucks, would you ever come back to that
22 campground or RV park? There is a hundred campsites, a
23 hundred RV sites within earshot of this proposed site.

24 I'm not trying to take away potential
25 income from one man, I'm trying to save a recreation

Page 65

1 area that thousands of people use. Unfortunately, this
2 doesn't seem to matter. Thank you.

3 **CHAIRMAN MARTIN:** Thank you. Any
4 questions? None at this time.

5 **RYAN MUZZARELLI:** I'm Ryan Muzzarelli,
6 P.O. Box 170, Anchor Point. One second here. And I
7 live on Kyllonen Drive. I was one of the cabins you
8 could see in the video, just kind of right behind Rick
9 Oliver's, if you look up there. And I'm here just to
10 testify in favor of private property rights and my
11 neighbors' rights to make a living.

12 I've spoken to Emmitt and Mary about the
13 property on multiple occasions, and they are incredibly
14 proud of it, and I'm confident that they will not only
15 maintain the property, but also provide a lot of value
16 to the community. Thank you.

17 **CHAIRMAN MARTIN:** Any questions? Not at
18 this time, thank you. Next testifier, please.

19 **ED MARTIN, III:** Hi, my name is Ed
20 Martin, III. I reside at 37200 Thomas Street,
21 Sterling. I'm the president of the Kenai Peninsula
22 Aggregate and Contractors Association. It's comprised
23 of almost 60 professional contractors all doing
24 business in the KP.

25 Over the past year we've been involved in

Page 66

1 scrutinizing the material site regulations for the
 2 borough. I've personally put in hundreds of man hours
 3 in research regarding all the facets that make up our
 4 current code. Tonight I'd like to speak on one
 5 particularly, that is the view.
 6 View shed, the regulation of and the
 7 rights pertaining to it are commonly misunderstood,
 8 also commonly thought of as an entitlement. A good
 9 part of my weeks of research were dedicated to just
 10 this debate. What I found was probably not what many
 11 people want to hear, but it is fact.
 12 There are only three ways a right to a
 13 view can be regulated, taken from, or given to an
 14 individual across this nation. One, the federal
 15 government holds view shed rights for our national
 16 parks; two, some cities and first class governments
 17 regulate view shed over large areas by way of zoning,
 18 including all lots or parcels within that area; and
 19 finally, three, view shed rights may be given from one
 20 entity to another by way of a purchase or contract.
 21 There is no precedence of regulation on an individual
 22 parcel of land. None of these options can apply to our
 23 second class borough.
 24 I have in my possession a copy of the OLR
 25 report in which I provided to all of you. After hours

Page 67

1 of research, it is the most complete explanation of the
 2 precedence of these rights. I would like for all of
 3 you to read it. Also, as this issue goes beyond what's
 4 in front of you today, I would encourage all of you not
 5 to take my word for it, but do your own research.
 6 I would ask that you rule in favor of the
 7 applicant tonight as the vast majority of the
 8 opposition is opposed to the application because they
 9 just don't want to see it. I've heard hours of their
 10 testimony stating that sentiment. It doesn't change
 11 the fact that they just don't have the right to the
 12 view over their neighbors' property. It also doesn't
 13 change the fact that that right may not be granted to
 14 them by our current governing body.
 15 I will be encouraging the KPB Planning
 16 Commission and assembly to strike any language of view,
 17 visual impact, or view shed from their current and
 18 future ordinance. Thank you.
 19 **CHAIRMAN MARTIN:** Any questions? None at
 20 this time, thank you.
 21 **VICKEY HODNICK:** Hi, my name is Vickey
 22 Hodnick from Anchor Point. My address is 35031 Moffit
 23 Lane. I really appreciate the fact that you're all
 24 here and that we can be here to present some of our
 25 concepts to you.

Page 68

1 I have to take exception to Mr. Martin's
 2 remarks. I've been a resident on the Peninsula for 30
 3 years, and I think I was assessed on my view property
 4 down in Homer.
 5 And this -- the majority of the people
 6 other than the visitors that come during the summer or
 7 come camping and fishing are -- most of us are senior
 8 citizens, this is our final home down there.
 9 And something that's kind of disturbing
 10 is that we're going to spend our final retirement years
 11 being entertained by Caterpillars and gravel trucks and
 12 all the other things that are involved. We can't send
 13 the grandkids out to ride their bike on the road during
 14 the time that they are visiting us.
 15 We certainly believe that you delivered
 16 the correct conclusion on July 16th last year, and
 17 although it was remanded back to you for adequate
 18 findings of fact, we feel that the same evidence
 19 prevails today.
 20 We're here to remind you that we love our
 21 homes. We love our community. There are many
 22 legitimate reasons to not deny this permit, which are
 23 not presently covered in the code. Some of these
 24 things should be covered in the code because there is
 25 very few things that we can find that actually protect

Page 69

1 us as law abiding citizens of the borough.
 2 Kenai Peninsula code 21.29.040 states the
 3 standard for the material sites. These material site
 4 regulations are intended to protect against aquifer
 5 disturbances, road damage, physical damage to adjacent
 6 properties, dust, noise, visual impact.
 7 Only the conditions set forth in the code
 8 21.29.050 may be used or imposed to meet these
 9 standards. However, the prelude to these standards is
 10 clarified, which is to protect the existing surrounding
 11 land uses against the negative impacts of material site
 12 operations. A standard is added for providing
 13 consistency with the borough comprehensive plan, which
 14 we're not hearing anything about.
 15 In other planning documents it says land
 16 use regulations are required by the Alaska state law to
 17 be consistent with the borough comprehensive plan. A
 18 simple rule of thumb would be if there is a house,
 19 don't start a gravel pit. If there is a gravel pit,
 20 don't build a house.
 21 We had a -- we spent -- most of us in our
 22 neighborhood spent the last winter going to the
 23 material site meetings as they were developing new
 24 restrictions and regulations for gravel mining. And
 25 there was a gentleman there from the Valley that came

Page 70

1 down and said, "Just because there is gravel, it
2 doesn't mean you have to dig it."
3 And I think just because there is a
4 history in a community, like a former gravel pit, it
5 doesn't mean that everybody is entitled to have a
6 gravel pit thereafter.
7 Things change and communities change, and
8 when families move in and create a settlement, even in
9 a residential -- a rural residential area, I think it
10 needs to be considered.
11 This community hosts five state
12 campgrounds, three private campgrounds, 70 or 88 unit
13 summer residential park, and 50 to 60 permanent private
14 homes close to the proposed site, a tractor launch, and
15 an only road that is determined a tsunami exit road.
16 There are also moose, fish, nesting eagles, a rickety
17 bridge, and a narrow road.
18 The DNR recognizes that this site hosts
19 archeological and historical artifacts and cemeteries.
20 The proposed mine site has established homes like --
21 located on three sides of it, and on the fourth side is
22 Cook Inlet itself.
23 A 15-year permit for this gravel pit will
24 drop our property values and disrupt the quality of
25 life for hundreds, if not thousands of people due to

Page 71

1 noise, dust, traffic issues, and visual blight.
2 The impact of the health of Anchor River
3 is potentially devastating. It could damage the fish
4 population in the future. Please note that none of
5 these concerns are really noted in the code.
6 The mandate to the Planning Commission as
7 spelled out in the Kenai Peninsula code 21.25.050 is to
8 approve, deny, or modify the application. Approval is
9 only allowed when the minimum requirements of the code
10 are met. Anything short of that would allow the
11 commission to modify the application to a state that
12 would meet the requirements, or to deny the application
13 for the fact it would be considered an incomplete
14 application.
15 In July of last year this commission
16 rightly denied an obviously incomplete application and
17 failed to design a buffer zone that complied with
18 conditions that are set forth in code 21.29.050. And
19 as a result it failed to meet the mandatory standards
20 of code 21.29.040.
21 Tonight, we, the neighboring property
22 owners, are here to prove once again that the arbitrary
23 numbers used to design the buffer zone in this
24 application are totally inadequate resulting in this
25 application being declared incomplete and therefore

Page 72

1 should be denied once again. Thank you very much.
2 **CHAIRMAN MARTIN:** Thank you. Any
3 questions? Ms. Fikes.
4 **COMMISSIONER FIKES:** Through the chair.
5 You stated that your view is assessed by the borough.
6 So how many lots are your property --
7 **VICKY HODNICK:** I'm not sure about --
8 what we're on, we're on four acres right now. When I
9 was in Homer I had 30 acres.
10 **COMMISSIONER FIKES:** And do you have
11 waterfront view, is that what the assessment --
12 **VICKY HODNICK:** I did, uh-huh.
13 **COMMISSIONER FIKES:** So what you're
14 referencing is waterfront view?
15 **VICKY HODNICK:** Yes.
16 **COMMISSIONER FIKES:** And you're not
17 certain how many lots are between you and the proposed
18 pit?
19 **VICKY HODNICK:** We are about a thousand
20 feet away, and we're on the same level.
21 **COMMISSIONER FIKES:** Okay, thank you.
22 **CHAIRMAN MARTIN:** Ms. Ecklund.
23 **COMMISSIONER ECKLUND:** Through the chair.
24 Thank you for your testimony. You mentioned the
25 archeological site possibility and a cemetery

Page 73

1 possibility --
2 **VICKY HODNICK:** Right.
3 **COMMISSIONER ECKLUND:** -- which we have
4 heard in prior testimony.
5 Have you contacted anyone to look into
6 that and --
7 **VICKY HODNICK:** Yes, I have.
8 **COMMISSIONER ECKLUND:** -- and research it
9 and determine if it is so?
10 **VICKY HODNICK:** It is recorded. And most
11 of the people were thinking I was looking for some kind
12 of a grant in order to save that particular site, and I
13 did tell them it was on private property. And the
14 response from the state and even the national level was
15 a little interesting.
16 But going back to thinking about what we
17 want to keep and the history we want to maintain in the
18 state itself, I think these are important things to
19 think about before just having them dug up and become
20 part of a gravel pit.
21 **COMMISSIONER FIKES:** Thank you.
22 **CHAIRMAN MARTIN:** Any other questions?
23 At this time I'll institute a five-minute recess.
24 We'll reconvene in five minutes.
25 (Recess)

Page 74

1 **CHAIRMAN MARTIN:** Are you ready? All
2 right, you're free to go.
3 **RICK OLIVER:** My name is Rick Oliver. I
4 don't live in a Post Office Box. I live at 34880
5 Danver Street, which is right on the corner of Kyllonen
6 and Danver.
7 We've spoken many times to -- as to who
8 can see just what from where and what the setbacks
9 should and could be and how high are the berms.
10 Apparently, this has been considered a
11 subjective subject, and no one here other than Mr.
12 Walls [sic] has come to look, to my knowledge.
13 It appears that the borough's idea of
14 minimizing the view, dust, noise, is a random tree here
15 and there. What we would like to show you here is hard
16 evidence from the data, again provided by the borough's
17 own technology.
18 We have this evening several profiles,
19 one of which is from my house. All the other profiles
20 and most of the affected neighboring properties are at
21 a much higher elevation than mine. We have a visual
22 presentation we can show you, a profile from the
23 affected home sites to areas within the proposed mining
24 site. This will also help to dispel the effectiveness
25 of the ludicrous concept of moving berms as the sight

Page 75

1 levels can be shown from all appropriate angles.
2 Hopefully this can minimize the
3 subjectivity and provide clear and indisputable
4 evidence showing this application can never meet all
5 the borough standards.
6 That's really all I have to say other
7 than -- well, speaking to the presentation before by
8 Mr. Trimble, it amazes me to think that -- it is
9 lovely, lovely property, all beautifully maintained,
10 he's done a fantastic job in presenting all of these
11 lovely trees. And where are all these lovely trees
12 going to go when we start mining gravel?
13 And we're going to have a berm
14 that's going to be -- or he's going to be mining 25
15 feet below a berm. Where does the 25-foot hole come
16 from? I don't -- well, I know where it is. But
17 anyway, that's all I have to say.
18 **CHAIRMAN MARTIN:** Any questions? Not at
19 this time, thank you.
20 **RICK OLIVER:** Thank you.
21 **CHAIRMAN MARTIN:** Next testifier, please.
22 **RICHARD CLINE:** First of all, thanks.
23 Good evening, and thanks for your service. We
24 appreciate your time and effort that you have to put in
25 for this.

Page 76

1 I'm Richard Cline, my wife and I live at
2 34926 Danver Street. And Lynn has a profile of our
3 spot as well.
4 First, though, I'd like to tell you
5 that -- I like to learn something every day, and today
6 I did learn something. I learned that putting a gravel
7 pit in a neighborhood doesn't decrease property values.
8 I would have never thought that on my own, so I'm glad
9 I came tonight to learn that part.
10 We directly overlook the material site,
11 even though we're not adjacent. So when Todd brought
12 that up about adjacent versus other, that's a very,
13 very meaningful thing to me, because we will see not
14 the view shed, we'll always be able to see Mt. Redoubt
15 and Mt. Iliamna, which is the view shed, our view, but
16 we will see -- we will have a negative visual impact,
17 which is the wording of the code, the visual impact,
18 not the view shed. So we don't have to worry about the
19 national parks guys interfering with anything we're
20 going to do.
21 I do have some questions, and these are
22 hypothetical, just think about them later on. I just
23 want to know why everybody in the borough that I've
24 talked to in the planning department and elsewhere that
25 said the permit is going to be granted. That was right

Page 77

1 from day one when I got notified last year that this is
2 in the works.
3 And I call up, I say, "Hey, tell me more
4 about this." They said, "Doesn't matter what you
5 think, what you do, and how much money or time or
6 effort you put into it, just take it for granted that
7 it will be approved." So I just -- that's a question I
8 have, why is that an automatic thing?
9 Which leads to something that's kind of
10 curious to me and something you might want to think
11 about yourselves. If that is true, if no matter what
12 we do here we're just spinning our wheels, then why do
13 you allow us, why does the borough allow us, the
14 commission, the assembly, to waste our time, our
15 effort, and our money in this process at all? It's
16 just curious.
17 It would seem to me that you would be
18 opening yourselves up for liability in that regard
19 somehow. Because as you can tell, we've put a lot of
20 time, effort, and money into it. Doesn't this make you
21 guys susceptible to some kind of liability? Something
22 to think about.
23 No one here denies a need for gravel.
24 We've heard that from everybody, the gravel guys of
25 course, but then us as well. We know what it's all

Page 78

1 built on. We just deny that it has to come from the
 2 middle of our well-established and ecologically fragile
 3 neighborhood.
 4 With Lynn's help you can see from our
 5 deck, and I know that Emmitt and Mary are very familiar
 6 with this because my security cameras caught them on
 7 our deck, when we were not there, taking movies and
 8 making snide comments.
 9 And you can see over -- right over the
 10 top of the berm. We basically will need a 43-foot berm
 11 to conceal the -- to basically minimize the visual
 12 impact of just one portion of their pit.
 13 A 43-foot berm -- I'm not an earth mover,
 14 but I'm pretty sure that that's an unworkable berm.
 15 And I kind of like the idea of a 43-foot berm on the
 16 far end with a 25-foot hole behind it, and then I want
 17 to watch how he moves that towards my house in the
 18 rolling berm kind of deal.
 19 Another problem with the topography of
 20 this location, you can see it's highlighted in that
 21 elevation, is that entire area acts like a mega phone.
 22 Everything just blasts up the hills to us, to Rick, to
 23 my neighbor Steve Thompson. And Lynn can put up
 24 Steve's.
 25 Poor Steve, he needs a 53-foot berm to

Page 79

1 hide his because he's a little bit closer to it. And
 2 that's just one -- you know, these are just some of the
 3 things, some of the houses that are up the hill from
 4 there.
 5 This is your own technology, this is the
 6 borough's technology. We didn't make this up. This is
 7 not smoke and mirrors, this is math.
 8 Our cabin sits, you know, a bit higher
 9 than Rick's. Poor Rick is right across the street from
 10 it.
 11 One argument that there is no way a berm
 12 could ever work is not really true. They can build a
 13 berm high enough, I guess it's physically possible,
 14 it's just unrealistic, okay.
 15 And if you want to put it -- you know,
 16 the limitations or you want to put some kind of a
 17 modification to the requirements, the mandatory
 18 conditions, then you can say, "Okay, I want a 43-foot
 19 berm or a 53-foot berm." That's going to -- you know,
 20 would that satisfy me? No, obviously. But if it keeps
 21 the pit from being built, then of course it would
 22 satisfy me. But that is within your power. Just
 23 saying no berm would ever do it is not really true on
 24 the face of it, but it's true in the reality of it.
 25 The permit as submitted is flawed, it's

Page 80

1 incomplete at the least, and it's totally unacceptable
 2 on its own. We respectfully ask the commission to act
 3 on behalf of not only the small group here -- and I'll
 4 wrap this up -- facing the total destruction of our
 5 neighborhood, but the countless other citizens of the
 6 borough who could soon see the same thing in their
 7 front yard.
 8 We ask that you deny this permit on the
 9 grounds that the true findings of fact, supported by
 10 overwhelming substantial evidence, shows that the
 11 mandatory standards will not be satisfied in this
 12 permit's application. Thank you.
 13 **CHAIRMAN MARTIN:** Thank you. Any
 14 questions? None at this time, thank you.
 15 Next person, please. The young lady
 16 coming towards the back was -- she beat you to the
 17 punch.
 18 **JIM REID:** Oh, I'm sorry, I didn't see
 19 you.
 20 **CHARITY JACOBSON:** Hi. Hi, my name is
 21 Charity Jacobson. I live at 72150 Griner Avenue. We
 22 are about three miles from the proposed gravel pit.
 23 It might not be too relevant, but we can
 24 hear a rock crusher that is seven miles away from us to
 25 the other side out of the North Fork Road. So if this

Page 81

1 proposed pit goes in and all the operations were right
 2 in between and -- it's going to be twice as loud.
 3 Also in the ordinances for a gravel pit,
 4 it is not a one size fits all. For each area and
 5 location, this should be looked into as far as
 6 residential areas, recreational areas, state land, you
 7 know, because if it was out in the middle of nowhere,
 8 it wouldn't apply to some of these regulations.
 9 Also it's been stated that a gravel pit
 10 does not have any physical damage on the adjacent
 11 properties, but would you or anyone knowingly purchase
 12 a retirement home with an active gravel pit between a
 13 hundred and thousand feet away from you for the next
 14 foreseeable future? That's all, thank you.
 15 **CHAIRMAN MARTIN:** Thank you. Are there
 16 any questions? None at this time. Next testifier,
 17 sir.
 18 **JIM REID:** I've got to see if there is
 19 somebody else coming down the aisle.
 20 Hi, my name is Jim Reid, and I live at --
 21 where do I live? 73820 Seaward Avenue. Okay, I live
 22 right above it.
 23 Anyway, I only have a couple questions,
 24 but my question would be to the planning staff, maybe
 25 they can answer it. What does a natural berm consist

Page 82

1 of? What is a natural berm? What's the definition of
 2 a natural berm?
 3 **CHAIRMAN MARTIN:** Go ahead.
 4 **MR. WALL:** Yeah, and I'm not quite sure
 5 where you're going with that, because our code does not
 6 talk about a natural berm.
 7 **JIM REID:** Let's just put it this way.
 8 Emmitt has already stacked up a bunch of logs and stuff
 9 from -- debris from, looks like, a lot clearing thing.
 10 He stacked it up about 15, 20 feet along Denver.
 11 And I just -- my question was, what does
 12 a natural berm consist of? Because if it consists of
 13 live trees growing, we can all go home because it's
 14 going to be 30 years before he gets to 25-foot trees.
 15 **MR. WALL:** What the code requires is an
 16 earthen berm with a 2 to 1 slope.
 17 **JIM REID:** An earthen berm. Does that
 18 mean it's a bunch of logs and debris and then they
 19 cover it over with some dirt, is that considered a
 20 natural berm?
 21 **CHAIRMAN MARTIN:** Sir, I think your
 22 question has been answered. We're getting -- it's an
 23 earthen berm, not a natural berm.
 24 **JIM REID:** Oh, well, I was told it was a
 25 natural berm, but that's okay.

Page 83

1 Anyway, it's an earthen berm, so that
 2 means it has to be dirt, it can't be a bunch of logs
 3 and stuff stacked up and dirt over it?
 4 **CHAIRMAN MARTIN:** Within reason. We're
 5 not limiting it to every last piece of wood, yes, sir.
 6 **JIM REID:** Oh, okay. Well, all right
 7 then.
 8 And you know the other thing, of course,
 9 is I realize the gravel -- I was a builder down south,
 10 so I know we have to have rock and gravel and whatever.
 11 But I don't understand the part when you bring the
 12 gravel in -- we have a gravel pit within two miles of
 13 our house right there up on old Seaward. It's way over
 14 there. But I didn't move next to a gravel pit, because
 15 my theory is if you move next to a gravel pit or you
 16 move next to an airport, don't cry. You knew it, you
 17 moved there. But when a whole residential area is
 18 there and it moves next to you, well, then that's a
 19 different situation.
 20 You know, it's like they said the other
 21 day, all gravel pits can't be under the same rules. I
 22 mean, they are different. This gentleman right there
 23 said, "Hey, you go over on the other side over there,
 24 nobody cares about noise and dust because there is no
 25 houses over there, there is no people."

Page 84

1 So here we are in a situation where all
 2 these people live there and use this area and now we're
 3 going to move a gravel pit in. Anyway, that's it. Let
 4 me sign my name.
 5 **CHAIRMAN MARTIN:** Any questions? Seeing
 6 none, next testifier, please.
 7 **ROGER McCAMPBELL:** Let me see if I can
 8 get my technology to work better than Rick. Can you
 9 hear that while I sign my name? Anybody identify those
 10 birds? Excuse me, 7345 -- my name is Roger McCampbell,
 11 I live at 73450 Seabury. My mailing address is still
 12 in Homer. I'll turn this off now. Just about a year
 13 ago I bought this piece of property.
 14 After coming up and looking all over
 15 Homer, I could buy anywhere I wanted in this state.
 16 I've lived in Homer for 31 years. I've loved the
 17 Anchor River valley since I moved down here, and that
 18 area. I spent the night on that front porch for the
 19 peace and quiet over Memorial Day weekend because I
 20 knew that would be the weekend of the most noise and
 21 disturbance.
 22 And the reason I know that is I was the
 23 district supervisory park ranger for the southern Kenai
 24 Peninsula for 31 years, and I kind of know that area
 25 pretty well. I know Emmitt pretty well, a great deal

Page 85

1 of respect for him and his family.
 2 But this is the wrong gravel pit at the
 3 wrong place. It's not about -- I don't see it from my
 4 place. I live four-tenths of a mile away from it. I
 5 can hear the waves breaking on the ocean at night or in
 6 the morning when it's peaceful and quiet. Those birds,
 7 most of those are about 150 to a hundred yards away. I
 8 like my peace and quiet. That's why I moved there.
 9 I retired five years ago. It's not about
 10 the scene. I don't see it, I drive by it. I don't
 11 particularly like to look at gravel pits, I don't know
 12 who does, unless they turn into giant swimming and
 13 fishing holes later.
 14 Now, I own a lot of heavy equipment
 15 myself. I run a cattle ranch. My family, we have
 16 cattle ranches down in northern California where I'm
 17 originally from. Everybody says don't Californicate
 18 Alaska, and that's exactly what we're doing. It's
 19 usually from the people that are doing it, because I
 20 grew up there five generations.
 21 Our neighboring ranch has a rock crusher.
 22 I can hear that when I'm down there sitting around my
 23 campfire, and it's 15 miles away. So yeah, I can hear
 24 it, I can hear the rocks, I can tell when the gravel
 25 trucks -- I also own two gravel trucks. I had a couple

Page 86

1 bulldozers and back scrapers, so, you know, I'm not
 2 opposed -- nobody I think is opposed to gravel pits.
 3 And, in fact, I was looking at several of
 4 the lots around me to buy and develop and do some
 5 rental units, but I've been in the business long enough
 6 and most of the people that I know in the rec -- that
 7 want to come up here and stay in an AirBNB, they want
 8 peace and quiet, too.
 9 Most of those campgrounds, Halibut and
 10 Slide Hole when we developed those, our socioeconomic
 11 look at those was for family camping. People come up
 12 there to -- you know, Memorial Day weakened is crazy,
 13 there is no doubt about it. But after Memorial Day
 14 weekend -- the fishing is lousy, but the beer drinking
 15 is good. So, you know, but after that it pretty well
 16 calms down. There is always a yahoo, there is always a
 17 yahoo on the dirt bike with the muffler off or the
 18 four-wheeler.
 19 By the way, the Anchor Point beach road
 20 is an ominous road. It is state park land at the edge
 21 of the pavement. State Parks allowed DOT to dig out
 22 those culverts this year because of drainage issues and
 23 the saturation underneath the road was causing it to
 24 buckle even more.
 25 But DOT, if anybody is thinking, "Oh, we

Page 87

1 can now excuse to widen that road and make it safer,"
 2 you're going to have to battle with DNR and State Parks
 3 on that, because that easement is only pavement to
 4 pavement, it is not an extended easement off that.
 5 You know, since we permitted Todd years
 6 ago, or long before him for the tractor launch
 7 operation, it increased the visitation on the beach
 8 area, a lot more charters, and they are not little
 9 charter boats, they are 32 foot, 10-foot beams, and
 10 that's a wide load. And trying to pass on that road,
 11 trying to have kids ride their bike, walk up and down
 12 that road.
 13 Now, it would be nice if the borough and
 14 the city or -- Anchor Point community has been fighting
 15 for a pedestrian path and bike path down there. That
 16 would be really nice, that would take some of the
 17 pressure off. I'm the first one to admit that.
 18 But I don't want to hear it, that's my
 19 simple point. There is more to visual. I don't care
 20 about views. I own view property. I never looked at
 21 it, I'm too busy. You know, I'm doing things. I'm out
 22 in the view, that's where I want to be.
 23 But I like to sit on my front porch at
 24 night and not hear -- oh, you're -- let's see, Item 15
 25 on this whereas and wherefore document, Item E, these

Page 88

1 parcels are less impacted by the material site than the
 2 adjacent (indiscernible) site as sound dissipates over
 3 distance. Yeah, but not four-tenths of a mile, not 15
 4 miles.
 5 So I think it's rather disingenuous to
 6 say that these buffers -- it's just going to echo up.
 7 If I can hear waves breaking and the seagulls down on
 8 the beach, then I've certainly -- I've already heard
 9 the -- speaking of which, Old Sterling is right behind
 10 my house. So when the gravel trucks go out, go down
 11 the beach road, then they turn around and they come
 12 right up behind. So I can hear Jake brakes, I can hear
 13 anybody messing around behind there, too. So it's a
 14 noise issue for me. Thank you.
 15 **CHAIRMAN MARTIN:** Any questions? None at
 16 this time. Next, please.
 17 **ROGER McCAMPBELL:** Very good. I hate
 18 answering questions.
 19 **LARRY SMITH:** My name is Larry Smith. I
 20 reside at 320 Artifact Street, Soldotna.
 21 I thought this was an opportune time for
 22 me to come up here because Mr. McCampbell mentioned the
 23 Slide Hole Campground. I constructed the Slide Hole
 24 Campground in 1992 back before the Anchor Point Road or
 25 the anchor beach road or whatever it's called today was

Page 89

1 paved. It was a narrow, nasty little gravel road back
 2 then, but we bought our gavel from Mr. Kyllonen at the
 3 little gravel pit at the top of the hill, and we
 4 constructed the campground. And we didn't hear a lot
 5 of opposition back then to the gravel trucks traveling
 6 down the Anchor Point Road or anchor beach road.
 7 Anyway, just so there is no mistake, I'm
 8 here to support Emmitt and Mary Trimble in their
 9 request for this gravel material site application.
 10 I have spent a great deal of time in the
 11 last year or so studying the Kenai Peninsula Borough
 12 gravel ordinances, and I've got a real education. I
 13 thought I knew something about gravel. I own a
 14 construction company, I own three gravel pits. I
 15 bought gravel from most or many of the gravel owners
 16 throughout the borough, including the State of Alaska,
 17 U.S. Forest Service, Kenai Peninsula Borough.
 18 I was born in Seward and raised in Cooper
 19 Landing, and back when I was a young man, gravel wasn't
 20 a dirty word. It seems to have become a dirty word
 21 now, even though every one of us is in a building
 22 that's built out of concrete that has gravel.
 23 We traveled on paved roads that are --
 24 the asphalt is made out of gravel. Our foundations of
 25 our houses are made out of gravel, or under our houses.

Page 90

1 Our driveways are made out of gravel. There is no
 2 doubt that gravel is important to all of our lives. It
 3 always has been, always will be. But I don't think Mr.
 4 and Mrs. Trimble should be penalized for asking for a
 5 gravel pit on their property.
 6 I agree with Mr. Martin who was up here
 7 before me. View shed, visual impact, I know that's
 8 some language that's inside the borough ordinance, and
 9 it's a feel-good term. But there is no -- there is no
 10 case law having to do with -- or very little, I won't
 11 say no -- there is very little case law having to do
 12 with view shed and visual impact.
 13 I happened to ask Mr. Kinneen at a
 14 meeting earlier this year if he had the right to the
 15 view shed over his neighbors' property, and he told me
 16 he did, it was an absolute right. I don't believe
 17 that.
 18 I certainly empathize with those who
 19 don't want to look at a gravel pit. And this is not
 20 going to be a popular comment, but if you don't want to
 21 look at the gravel pit, buy the land. Offer Emmitt and
 22 Mary Trimble some money for their property and then it
 23 can become your property and you can turn it into a pig
 24 farm or a junkyard or a car junkyard or whatever you
 25 want to turn it into.

Page 91

1 And the other last thing I want to
 2 comment on is if you don't like the ordinance, change
 3 the ordinance. But the ordinance as it exists today,
 4 the requirements for the material site have been met.
 5 I believe it's the duty of the Planning Commission to
 6 approve that application.
 7 And I'm a realist. You have a thankless
 8 job, because I believe that no matter what you do, this
 9 is going to end up in litigation. But anyway, I would
 10 urge you to support their application, thank you.
 11 **CHAIRMAN MARTIN:** Thank you. Any
 12 questions? Mr. Whitney.
 13 **COMMISSIONER WHITNEY:** I want to make
 14 sure I heard you right. You said you built the
 15 campground in 1992, was that it?
 16 **LARRY SMITH:** I believe it was 1992. We
 17 built the -- we had a contract with DNR, Parks and
 18 built the Slide Hole. It was an addition to the Slide
 19 Hole Campground.
 20 **COMMISSIONER WHITNEY:** Using Anchor --
 21 the --
 22 **LARRY SMITH:** Using gravel -- Mr.
 23 Kyllonen had a gravel pit right up the Anchor River
 24 Road, across the bridge, above the bridge, right above
 25 the bridge. And we bought gravel from him and we built

Page 92

1 the campground.
 2 **COMMISSIONER WHITNEY:** Was the area as
 3 built up then as it is now?
 4 **LARRY SMITH:** Pretty much, yeah, it
 5 was -- well, I guess not.
 6 Well, you know, here is the thing. You
 7 know, we're talking about safety and about all this
 8 stuff on this road, and these 40-foot motor -- you
 9 know, diesel powered land yachts that they come up here
 10 with from the Lower 48, Anchor Point Road is a
 11 dangerous road, but it's not going to be any more
 12 dangerous with the gravel trucks than it is to all the
 13 tourist traffic that's going on today. Thanks a lot,
 14 Mr. Chairman.
 15 **CHAIRMAN MARTIN:** We want to keep a
 16 polite meeting. This is the second warning, that we
 17 need to maintain decorum. Everybody deserves respect.
 18 Next testifier, please.
 19 **CHRIS CRUM:** Hi, my name is Chris Crum.
 20 I live at 72485 Ester Avenue in Anchor Point. My
 21 husband and I and our five children have lived there
 22 since 1987.
 23 Like I said, we raised five kids there.
 24 I taught school at Chapman school for 25 years, since
 25 retired. All of our children went to Chapman school,

Page 93

1 graduated from Homer High School, went outside to
 2 college, and came back to Alaska because there is no
 3 other place. And they all have employment in Wasilla,
 4 unfortunately, but if they could, they would be down
 5 here. They absolutely love it.
 6 My husband and I have done nine
 7 transactions with Emmitt and Mary through Coastal
 8 Realty over the last 25 years. And I just want to say
 9 that they are very professional, and they got what they
 10 wanted and we got what we wanted. So all the
 11 disparaging comments about them and their
 12 professionalism, like Larry said and Roger said, they
 13 are very, very nice people.
 14 I've sat through two hearings, and I came
 15 to the realization that this is really not about a
 16 permit. Emmitt and Mary and Beachcomber, LLC, I've
 17 read all of the regulations, read the codes. They have
 18 done everything that has been required of them and gone
 19 beyond. And this is about "not in my backyard." And I
 20 understand that, I certainly do I understand that.
 21 It's also about private property rights.
 22 So I just -- thinking about this, I was
 23 thinking what I've heard so far about the rock crusher.
 24 One of the meetings there was a rock crusher, a D9
 25 dozer, a grizzly, and a big operation, which was not

Page 94

1 factual, there has never been.
 2 Every day I go down to feed my horses on
 3 that property. So I go down there on Beachcomber road,
 4 I pass Danver, and there has never been anything like
 5 that down there.
 6 The second thing is, yes, the road is in
 7 bad shape. We have lived in Anchor Point for 30 plus
 8 years. It's always been sort of a dangerous road, you
 9 know, for kids, and moms and babies pushing -- moms
 10 pushing strollers. There is no sidewalk.
 11 But the road started to deteriorate 15 or
 12 20 years ago when the tractors came in and took over
 13 our beach. We have huge charter boats, 10-plus wide,
 14 up to 11 wide traveling on that road every single day
 15 of the summer starting May, ending around Labor Day.
 16 Yes, they are big. They should not be
 17 going across the bridge, some of them. People are
 18 concerned about trucks on the road and the bridge. The
 19 bridge is rated for 11 tons. Loaded gravel trucks
 20 should not be on that bridge. They have to turn right
 21 and go around on the Old Seward Highway. That is what
 22 they are going to be doing. So that's a fact.
 23 I also want to give a shout out to the
 24 truck drivers in Anchor Point. The majority of the
 25 business, the majority of the employment in Anchor

Page 95

1 Point, majority meaning over 50 percent, is trucking,
 2 hauling dirt, gravel, and gravel pits. We need the
 3 business, we need the money. We can't live without it.
 4 So those people that are saying the
 5 business is going to be deteriorating in Anchor Point,
 6 it will be -- it will be increasing if you have more
 7 trucks hauling gravel and dirt.
 8 I just want to say the Trimbles have done
 9 what you required of them. Gravel pits are regulated
 10 by the Kenai Peninsula Borough and your statutes, the
 11 State of Alaska, and MSHA, which is Mine Safety and
 12 Health Administration. They have good policing
 13 abilities. The noise, the dust, and the safety all
 14 have to be complied with in a gravel pit.
 15 So in closing, I know it's going to be a
 16 hard decision. You have the ordinances and the
 17 regulations in front of you. You have the application
 18 for the permit. I'm just asking you to weigh heavy on
 19 how it's been written, how it's been followed, what's
 20 been done, and do the right thing.
 21 **CHAIRMAN MARTIN:** Thank you. Any
 22 questions? None at this time.
 23 **HANS BILBEN:** Hi, my name is Hans Bilben,
 24 35039 Danver Street in Anchor Point. Rick Carlton was
 25 having some trouble with his audio. I'm going to see

Page 96

1 if I can do it for him here.
 2 (Audio played - not transcribed)
 3 **HANS BILBEN:** Okay, that was the
 4 applicant telling us how we could protect ourselves
 5 from his gravel pit. So who gets to do that? I don't
 6 know, but I don't want to have blinds closed, I don't
 7 want to wear hearing protection in my own house, and I
 8 don't think I need to build a fence to protect myself.
 9 A couple corrections. The applicant
 10 talked about a 25-foot deep hole. The application
 11 calls for an 18-foot excavation, 20 feet to water.
 12 He's got to stay two feet above it.
 13 Yes, he's checked all the boxes, but he
 14 hasn't met the conditions of the code. So that's what
 15 we're trying to decide tonight: Has he met the
 16 conditions of the code?
 17 You talk about a charter boat going
 18 across the bridge. I ran a charter boat for 16 years.
 19 A heavy charter boat would be about 10,000 pounds
 20 versus an empty dump truck at about 22,000 pounds, and
 21 you double that for a loaded dump truck.
 22 Last July you correctly voted to deny
 23 this application, and you made the findings of fact
 24 that said the noise will not be sufficiently reduced
 25 with any buffer or berm that could be added. The word

Page 97

1 "any" there is kind of the key.
 2 While the intent of these findings is
 3 abundantly clear, they are lacking any reference to
 4 specific sections of the code that define the mandatory
 5 conditions, and they are lacking supporting evidence.
 6 The hearing officer on appeal ruled that
 7 the commission exceeded the scope of its authority in
 8 denying this permit based upon its determination that
 9 the conditions would not afford adequate protection
 10 from noise and visual blight.
 11 I absolutely agree with the hearing
 12 officer. The findings of fact had some problems. The
 13 planning department seems to be of the opinion that
 14 because the hearing officer said that, that this is
 15 proof positive that you as commissioners must approve
 16 this application.
 17 To the contrary, the hearing officer did
 18 not rule that the commission lacked the authority to
 19 deny the application. To do so would be counter to the
 20 code, which in KPB 21.25.050 says that you have three
 21 possible outcomes. You can approve, deny, or modify an
 22 application.
 23 A very important point here is that she
 24 did, in fact, affirm the denial. She did not say give
 25 them the permit. She affirmed the denial, and here we

Page 98

1 are today.
 2 The authority granted to the commission
 3 in 21.29.050 is to ensure that buffers and berms are of
 4 sufficient height and density to provide visual and
 5 noise screening of the proposed use. That's what we
 6 need to determine tonight. Are they of sufficient
 7 height and density to provide visual and noise
 8 screening of the proposed use? And if it can't do
 9 that, then you can't approve it.
 10 Buffers and berms are the industry
 11 standard, and if properly designed they should protect
 12 neighboring properties from noise and visual blight.
 13 The key words here are "properly designed." That's
 14 what this GIS technology is all about.
 15 You guys have a heck of a job if you're
 16 trying to determine what are these buffers and berms
 17 all about. Because every time they come in they say,
 18 "Six-foot berm, 50-foot buffer." Okay, what does that
 19 do? Well, you don't know what it does.
 20 With that technology that is borough
 21 technology, all you have to do is look at it and say,
 22 "Yeah, it works," or, "No, it doesn't work." I don't
 23 know why the borough is so hesitant to get into that.
 24 Yes, you probably exceeded the scope of
 25 your authority by saying that there wouldn't be any

Page 99

1 buffers and berms that could screen the proposed use,
 2 but you did not exceed the scope of your authority by
 3 your denial.
 4 A better finding of fact might have been
 5 that the application was not of sufficient height or
 6 density to provide visual and noise screening. You
 7 needed to tie your findings of fact to the code, and
 8 that's what we're here for today.
 9 So the hearing officer sent us back here
 10 tonight, and this is what she wanted us to do, list
 11 findings of fact referencing the mandatory conditions
 12 listed in KPB 21.29.050 and detail the substantial
 13 evidence that supports those findings.
 14 The evidence we're going to give you
 15 here, the findings of fact are in your packet, and
 16 another person will speak to that.
 17 Obviously, we feel that putting this
 18 large-scale mining operation in the heart of a
 19 recreational and residential area should be denied for
 20 a multitude of legitimate reasons, but more important
 21 it must be denied because it doesn't meet the mandatory
 22 conditions of the code.
 23 In KPB finding of fact 15 Q, it states
 24 all of the reasons that this can't meet the code. One
 25 of the previous speakers talked about 15 Q in the

Page 100

1 findings of fact from the staff. They are basically
 2 saying a large percentage of the neighbors in that area
 3 cannot be protected, but yet they want to give you --
 4 issue this permit anyway.
 5 Just in closing, what the applicant
 6 claims -- or the applicant claims that this is just a
 7 mom and pop operation and that they are not going to --
 8 maybe move maybe 10,000 yards a year.
 9 But what they say or may not say is
 10 irrelevant. What is relevant is the fact that this
 11 permit, if approved, would allow for mining of up to
 12 50,000 cubic yards per year for 15 years on 27 acres of
 13 commercial mining that cannot be sufficiently screened
 14 from neighboring properties.
 15 Like most of us, they are claiming this
 16 is a legacy property. Well, like most of us in this
 17 room, our home, property, and quality of life is our
 18 legacy, and we would like to protect it. Thank you.
 19 **CHAIRMAN MARTIN:** Thank you. Any
 20 questions?
 21 **HANS BILBEN:** I had to go pretty fast on
 22 that.
 23 **CHAIRMAN MARTIN:** Good job, thank you.
 24 **HANS BILBEN:** That's your pen.
 25 **CHAIRMAN MARTIN:** Next, please.

Page 101

1 **ANN CLINE:** Good evening. My name is Ann
 2 Cline. My address is 34926 Danver. I'm a Cline, so --
 3 oh, well, you're quick.
 4 My husband and I purchased two lots from
 5 the Trimbles in order to build a cabin for our
 6 grandchildren, and we created a trust for our
 7 descendants to enjoy the piece and serenity that is
 8 there.
 9 I wrote a detailed letter based on my
 10 research of mining operations in the United States and
 11 Canada, and I'm hoping you have that in your packet.
 12 Ann Cline.
 13 I addressed the findings of fact, and in
 14 particular the noise decibel research that has been
 15 conducted both in Canada and in the United States
 16 regarding mining operations and excavations.
 17 Regarding one of the previous speakers,
 18 some of us, myself included, are not financially able
 19 to offer the Trimbles enough money to satisfy them in
 20 order to buy that land so that we could keep it as a
 21 park land or a campground or whatever. We're not able
 22 to do that. So thus we need your help in controlling
 23 the use of the property.
 24 And regarding the freedom of decision, as
 25 a previous testifier said, and I agree, if you want to

Page 102

1 have peace and quiet, don't buy a home next to a gravel
 2 pit. If you want to have a gravel pit, don't put it in
 3 the middle of an existing neighborhood.
 4 I implore you to please help us, the
 5 Anchor Point community, which is these folks here. Not
 6 all of us are speaking out of respect for time, but we
 7 would really humbly request that you consider
 8 thoughtfully and uphold and affirm your denial of this
 9 permit. Thank you very much.
 10 **CHAIRMAN MARTIN:** Thank you. Any
 11 questions for Ms. Cline? Seeing none, thanks for your
 12 testimony.
 13 **ANN CLINE:** Thank you.
 14 **CHAIRMAN MARTIN:** Next testifier, please.
 15 **LAUREN ISENHOUR:** Hello, I'm Lauren
 16 Isenhour, I live at 34737 Beachcomber Street. And
 17 tonight I would like to talk about sound. I'd like to
 18 talk about sound and the claim from the opposition that
 19 hearing sounds from gravel pit activity will destroy
 20 the value of their property.
 21 Private property rights in our area are
 22 very important to all of us who chose to live in Anchor
 23 Point. Many of us utilize our acreage for activities
 24 that are not allowed within the city ordinances of
 25 Homer and the like: ATVs, snowmachines, chainsaws for

Page 103

1 firewood, free range dogs, livestock, home improvement
 2 projects and mowing our lawns.
 3 ATV's sounds range from 90 to a hundred
 4 decibels; snowmachines and motorcycles are around a
 5 hundred decibels; chainsaws around 110 decibels; and
 6 riding law mowers are around a hundred decibels.
 7 From my research, construction tools such
 8 as chopsaws, sanders, drills, et cetera, operate
 9 between 90 and a hundred decibels. My diesel truck is
 10 over 90 decibels at 50 feet away.
 11 These are all activities and machines
 12 that are routinely operated in my neighborhood and are
 13 acknowledged as socially acceptable by everyone. None
 14 of these activities or machines are restricted by
 15 borough regulations to only operate during particular
 16 hours and are not required to mitigate the sound
 17 created by their usage.
 18 After researching decibel levels of these
 19 common activities, I was surprised to learn that the
 20 sounds created from gravel equipment is notably less
 21 than the items I've spoken of. A backhoe from 50 feet
 22 is 80 decibels, a hundred feet is 74, at 300 feet it's
 23 65 decibels.
 24 A bulldozer from 50 feet is 85 decibels,
 25 from a hundred feet is 79 decibels, 300 feet is 70

Page 104

1 decibels.
 2 A dump struck from 50 feet is 84
 3 decibels, from a hundred feet is 78, and from 300 feet
 4 away is 69 decibels.
 5 So gravel equipment ranges from 65 to 85
 6 decibels, while my common use home tools range from 90
 7 to 110 decibels.
 8 My family camped over Memorial weekend on
 9 the Anchor River, and I was genuinely surprised at the
 10 high levels of sound created by the campers. ATVs,
 11 motorcycles, and dirt bikes ripped up and down the
 12 beach road late into the night. Trailers running
 13 generators in the campground, which operate at around
 14 68 decibels, lots of dogs, music, and general camper
 15 noise.
 16 Regular vehicle traffic on the beach
 17 access road is quite noisy. Since virtually all the
 18 campsites are right along the road, I needed ear plugs
 19 to be able to sleep at night.
 20 There was zero gravel pit activity during
 21 those three days I was camping. It was not quiet or
 22 tranquil, but the campground was full of people having
 23 a lot of good family fun.
 24 The Beachcomber gravel pit has now been
 25 operational for about one year, and prior to that the

Page 105

1 prior existing use gravel pit on Danver Street across
 2 from the Beachcomber pit was operational for around 15
 3 years.
 4 So anyone who has recreated on the Anchor
 5 River or camped in that campground within the last 15
 6 years has done so in conjunction with an operational
 7 pit. We can and have been coexisting there.
 8 The opposition has noted that they would
 9 rather this property be developed into a subdivision
 10 than a gravel pit, and I find this very curious. If
 11 this 27 acres was divided into 27 new home sites, the
 12 amount of sound created would surpass the sound of
 13 sporadic seasonal gravel activity.
 14 The access roads to develop 27 new lots
 15 would be extensive and require a lot of gravel and
 16 equipment. Building roughly two houses a year would
 17 take nearly 15 years to develop, and the sound from
 18 trucks, cement trucks and dump trucks, delivery trucks,
 19 well drilling rigs, and general construction tools as I
 20 mentioned before range from between 90 to a hundred
 21 decibels, would operate five to seven days a week for
 22 the life of the development.
 23 But then at the end of that subdivision
 24 project, the property would not be reclaimed as it
 25 would for gravel development. After 15 years of

Page 106

1 construction sounds, we would now have sounds from 27
 2 new neighbors with loud trucks and barking dogs and
 3 lawn mowers and chainsaws and all the other sounds that
 4 come from a rural neighborhood.
 5 I read all the letters submitted, and I
 6 would like to comment on Phil Brna's statement to the
 7 Planning Commission claiming that sounds generated from
 8 the gravel pit would destroy both his ability to enjoy
 9 his property as well as the general value of his
 10 property.
 11 My property neighbors, Phil is on his
 12 other side separated by Beachcomber Street and a line
 13 of trees, and there is nothing to regulate me from
 14 mowing my lawn at a hundred decibels or operating my
 15 chainsaw at 110 decibels or running any number of my
 16 power tools, ATVs or snowmachines as we often do at any
 17 time of day or night.
 18 Despite my best efforts, as all my
 19 neighbors know my dogs bark quite a lot during the
 20 night. There is no regulations here in Anchor Point to
 21 stop or control any of these activities that I
 22 routinely do on my property. Phil has never complained
 23 to me that my activities have jeopardized his property
 24 value or enjoyment.
 25 There are too many inconsistencies with

Page 107

1 the argument about sound being a detriment to the
 2 neighborhood for it to be considered a viable argument.
 3 I can create more sound at higher decibels for longer
 4 durations on my private property without having to
 5 abide to any regulations.
 6 If an individual feels so strongly that
 7 the value of their property can be destroyed by the
 8 activity of their neighbors, then that individual needs
 9 to purchase a parcel larger than an acre to be able to
 10 personally ensure adequate distant from neighborly
 11 activities that they might find displeasing or move to
 12 an area with ordinances and zoning that control all
 13 residents' activities. Thank you.
 14 **CHAIRMAN MARTIN:** Thank you. Any
 15 questions? None at this time.
 16 **LAUREN ISENHOUR:** Thank you.
 17 **CHAIRMAN MARTIN:** Next.
 18 **BUZZ KYLLONEN:** Good evening,
 19 commissioners. Mr. Mayor, nice to have you here. My
 20 name is Buzz Kyllonen, 74200 Seaward Avenue. You've
 21 heard the name Kyllonen used many, many times.
 22 I'm here in support of the Trimbles'
 23 rights to extract gravel from their property. I'm
 24 actually a property rights person, and my real fear is
 25 what's going to happen to this borough.

Page 108

1 The ordinance as it's drafted, the
 2 protective conditions that are there are, for the most
 3 part, unfounded, and what it's doing is inviting people
 4 to band together against neighbor. And if this
 5 continues, I can't imagine anybody wanting to file for
 6 an application for a material site permit. No one
 7 wants to go through the expense and the vitriol that
 8 comes from a mob-type reaction to a legitimate
 9 activity.
 10 Now you might ask, who am I? Well, I'm
 11 Buzz Kyllonen. I'd like to think I'm an expert. I
 12 don't know what the definition is, but I began
 13 developing property in Anchor Point 40 years ago. Over
 14 30 subdivisions, 500 lots. Aggregate of about \$50
 15 million in assessed value. None of which I could have
 16 been able to do under the current ordinance.
 17 I've owned and operated 12 gravel pits or
 18 more within Anchor Point, within shouting distance of
 19 most everyone here. Most everyone here is a
 20 beneficiary of one of my subdivisions. That's what I
 21 do and that's what I did for a living until the
 22 ordinance was enacted, and that put me out of business.
 23 Let me explain why.
 24 According to the ordinance, if you export
 25 material from your property A to property B and it

Page 109

1 enhances the value of property B, you will be required
 2 to file for an application for a material site permit
 3 to do that. There is precedence set for that, and I'm
 4 here to acknowledge that.
 5 If Mr. Trimble wants to use any of the
 6 gravel, had he not had a permit that he has right now,
 7 he would not be able to transport that material to
 8 another one of his properties without applying for a
 9 material site permit. He has no choice. He has to
 10 apply for this material site in order to use the
 11 material that he currently owns.
 12 As far as the harm and the catastrophic
 13 effects of having a gravel pit are totally unfounded.
 14 No one has complained about the 12 gravel pits that
 15 I've had in Anchor Point, at least no one has looked me
 16 in the eye and said so.
 17 So what Mr. Trimble is doing is basically
 18 a developer gravel pit. There is a difference between
 19 industrial and developer use. You have an industrial
 20 use right here in the heart of Soldotna not very far
 21 from here. A huge facility, they produce asphalt. How
 22 long have they been there? I'm not sure, but a long
 23 time. Everyone is still alive, no one has died from
 24 respiratory disease. Anchorage Sand & Gravel in the
 25 middle of Anchorage, they function. Life goes on. We

Page 110

1 have an industrial site in Anchor Point.
 2 Interestingly, the Trimbles are
 3 beneficiaries of hundreds, if not thousands, of truck
 4 loads of gravel that go right by their Coastal Realty
 5 office every day. It's endless. Homer was built with
 6 Anchor Point gravel. Believe it or not, gravel is
 7 where Mother Nature put it, not where you want it to
 8 be. We should all be supporting the Trimbles for
 9 opening up some priceless resource like gravel so that
 10 it's available.
 11 I promise you, I'm a supporter, because
 12 who would complain more than me? I own property on
 13 both sides, substantial property that borders this
 14 property. Even more important, I'm the original Anchor
 15 Pointer. No one alive in Anchor Point has been there
 16 longer than me. I date back to 1945.
 17 The homestead property that Mr. Trimble
 18 owns is sacrosanct to me. That's where the material
 19 site will be. If anyone should complain, I should lead
 20 the parade. And with that, if you have any questions,
 21 I'd be more than happy to answer.
 22 **CHAIRMAN MARTIN:** Ms. Ecklund, did you
 23 have a question?
 24 **COMMISSIONER ECKLUND:** Thank you for your
 25 presence here tonight. Since you have the longest

Page 111

1 history in that area, I'd appreciate an answer to a
 2 couple of questions.
 3 When you had the gravel pit, which has
 4 been referenced several times by name, operating in
 5 that area, how many campgrounds or campsites were in
 6 the area?
 7 **BUZZ KYLLONEN:** I developed all those
 8 campsites.
 9 **COMMISSIONER ECKLUND:** So they didn't
 10 have the use --
 11 **BUZZ KYLLONEN:** With the exception of the
 12 state.
 13 **COMMISSIONER ECKLUND:** The state, the
 14 five state ones?
 15 **BUZZ KYLLONEN:** The gravel came from my
 16 gravel pits right there. Tens of thousands of yards,
 17 thousands of truck loads.
 18 **COMMISSIONER ECKLUND:** So currently it's
 19 been stated that there are five state campgrounds and
 20 three private ones and 200 campsites in the Silver King
 21 site.
 22 So were any -- you built all of those
 23 except the state ones?
 24 **BUZZ KYLLONEN:** Over 30 subdivisions,
 25 both sides of the river have my fingerprints on most of

Page 112

1 them. Most of the folks are beneficiaries, a lot of
 2 them are very close friends, hopefully they will still
 3 remain friends.
 4 **COMMISSIONER ECKLUND:** How many people
 5 lived in the area when you were operating your gravel
 6 pit?
 7 **BUZZ KYLLONEN:** It's evolved over the
 8 years. It was extremely busy in the mid '80s.
 9 **COMMISSIONER ECKLUND:** Your pit was busy?
 10 **BUZZ KYLLONEN:** There was a depression in
 11 property sales. Interestingly, the reason that I went
 12 out of business, out of the development business, was
 13 because of the ordinance. Because I was issued a cease
 14 and desist when I used material from my golf course,
 15 which I created, to develop what is now the trooper
 16 building. And the code compliance officer from the
 17 borough came down and said, "No more, you can't do
 18 that. You must get a material site permit to build the
 19 golf course." I had no choice. I had a half a million
 20 dollars in the golf course. To continue, I couldn't
 21 afford not to apply for a permit, so I did.
 22 Now that put me in the category of a
 23 gravel pit, which subsequently I was fined by the
 24 borough \$20,000, \$10,000 in attorney fees because I
 25 exceeded the artificial boundary they imposed.

Page 113

1 So I have a major heartburn about the
 2 ordinance.
 3 **COMMISSIONER ECKLUND:** Yes.
 4 **BUZZ KYLLONEN:** I would like to see it
 5 scrapped, and I would also like to see it rewritten
 6 focusing on the -- what should be the intent of
 7 reclamation and prudent and proper extraction.
 8 **COMMISSIONER ECKLUND:** Thank you for your
 9 input.
 10 **BUZZ KYLLONEN:** You're welcome.
 11 **CHAIRMAN MARTIN:** Any other questions?
 12 Ms. Fikes.
 13 **COMMISSIONER FIKES:** Yes. With your
 14 history in the area and your history of the operation
 15 of a pit in the area, speaking to the transfer from you
 16 to the next owner of the pit, what was your experience
 17 with the reclamation, and how much of that did you
 18 perform during your operation?
 19 **BUZZ KYLLONEN:** Well, I think that's the
 20 key issue. You would be hard pressed to find where
 21 I've had a gravel pit. They have all been reclaimed.
 22 **COMMISSIONER FIKES:** Were there ever any
 23 complaints about water table contamination during the
 24 time?
 25 **BUZZ KYLLONEN:** That's what's an

Page 114

1 unfounded allegation. That is not possible to happen.
 2 Evaporation maybe, ditching only. Digging in the water
 3 table, that was one of my key things. I have several
 4 lakes where I dug in the water table, and that was one
 5 element of this ordinance that I would like to see
 6 revisited, because it does virtually no harm to the
 7 environment. It offers a place for the moose and the
 8 ducks.
 9 Just yesterday two moose were learning
 10 how to swim in my golf course lake. I have pictures of
 11 that. I was quite fascinated by that. Ducks are there
 12 all the time. I love the water. Excuse me, I didn't
 13 mean to expand on that.
 14 **COMMISSIONER FIKES:** So then also
 15 expanding on that, during the operation, were there
 16 ever any complaints for noise, or were there ever any
 17 complaints --
 18 **BUZZ KYLLONEN:** Not to me directly, no.
 19 Over the 500 properties, I'd say 499 are close friends.
 20 **COMMISSIONER FIKES:** So was there any
 21 agency that contacted you with a direct complaint --
 22 **BUZZ KYLLONEN:** No.
 23 **COMMISSIONER FIKES:** -- due to your
 24 specific operation?
 25 **BUZZ KYLLONEN:** No. I might want to add

Page 115

1 one more thing because it was mentioned several times,
 2 the beach road, the Anchor Point Road.
 3 **COMMISSIONER FIKES:** Uh-huh.
 4 **BUZZ KYLLONEN:** No one has driven a dump
 5 truck over that road probably more than me, thousands
 6 of times, thousands of times prior to when it was
 7 paved.
 8 One of the stars in my crown is when I
 9 was on the assembly, I got that road paved. The
 10 definition by the state was if you can give me \$200,000
 11 from the mayor at the time, (indiscernible), we will
 12 paint that road black. Not today. \$200,000
 13 transferred from the borough to DOT, and they painted
 14 it black. I didn't know what that meant at the time.
 15 Basically what that means is literally
 16 paint it black. And that's why the road is in the
 17 condition it is, because they had no money to improve
 18 the subsurface.
 19 So -- and I might also add that it was on
 20 the state agenda to revisit that in 2020. If it hadn't
 21 been for my efforts on the assembly, we would still be
 22 waiting for the state to do an assessment. So --
 23 **CHAIRMAN MARTIN:** 11 o'clock is coming up
 24 soon.
 25 **BUZZ KYLLONEN:** Okay, I'm sorry.

Page 116

1 **CHAIRMAN MARTIN:** Any -- other question.
 2 **COMMISSIONER FIKES:** I have one more
 3 question. Switching gears to safety.
 4 Again, in your experience, and also it
 5 sounds like you live in that specific area, during that
 6 time are you aware of any school activity disruptions
 7 with school buses or folks waiting for buses or --
 8 people have spoke or testified tonight and previous
 9 nights about the activity and the trucks passing and
 10 going.
 11 In your experience, again, going back to
 12 have you actually heard of or received any written
 13 complaints that would speak to that matter?
 14 **BUZZ KYLLONEN:** Three of my gravel pits
 15 are within rock throwing distance of the existing
 16 school in Anchor Point. Zero, none. Truck drivers are
 17 professional. Someone was referencing the motorhomes.
 18 Those people don't go to school to drive motorhomes,
 19 but truck drivers do. And believe me, it's not easy to
 20 get that license.
 21 **COMMISSIONER FIKES:** Thank you.
 22 **BUZZ KYLLONEN:** You're welcome.
 23 **CHAIRMAN MARTIN:** Any further questions?
 24 None at this time, thank you. Anyone else here wishing
 25 to testify?

Page 117

1 **PETE KINNEEN:** I've already testified,
 2 but --
 3 **CHAIRMAN MARTIN:** Yeah, you have not been
 4 recognized by the chair.
 5 **PETE KINNEEN:** Point of order.
 6 **CHAIRMAN MARTIN:** We have not -- everyone
 7 gets one chance to speak, sir.
 8 **PETE KINNEEN:** Except my testimony was
 9 slandered, and to the degree that my testimony has some
 10 effect here, am I not entitled to address it?
 11 **CHAIRMAN MARTIN:** We're keeping the ball
 12 rolling. Everybody gets one turn.
 13 **PETE KINNEEN:** So it's going to be come
 14 up and done?
 15 **CHAIRMAN MARTIN:** That's correct. And as
 16 far as the -- is there anyone else in the audience
 17 wishing to testify? Mr. Whitmore has some
 18 presentation, or at least has his hand going.
 19 **LYNN WHITMORE:** Sure. This is my two
 20 bits worth, and then hopefully that will lead into
 21 questions from you guys on the berm.
 22 So I guess a rhetorical question is, when
 23 you are supposed to be hidden from the construction
 24 site by the berm, is that berm also supposed to hide
 25 you from the remnants of the pit behind you?

Page 118

1 So as we practice with a moving berm, the
2 question I want you to kind of pay attention to is what
3 are they going to look at as the berm moves closer to
4 the homes?
5 And the berms, because the homes are
6 situated in roughly a 90 degree angle looking down,
7 then it seems like the berms are going to have to cover
8 the full 90 degrees from the people on one side of the
9 hill and the people wrapped around to the other side of
10 the hill, so that's something to keep in mind when you
11 talk about berms.
12 And I keep -- I hear a developer gravel
13 pit being stated and that it's just going to be one of
14 those. But as near as I can tell from everything I've
15 read, the moment that they get a permit, they can sell
16 it and somebody else in a larger capacity could come
17 along and mine the entire 27 acres. So the developer
18 gravel pit changes immediately upon sales, and that
19 permit goes with the property as I understand it.
20 And so with that, we could work our way
21 through the berm question if you guys have some.
22 **CHAIRMAN MARTIN:** My question for
23 clarification is, is the berm ordinance intended to
24 obscure the view 100 percent, or is our ordinance
25 written to minimize impact, not bring it to zero, but

Page 119

1 to minimize impact?
2 **LYNN WHITMORE:** Sure. As I'm seeing
3 this, the question I have is, as we move the 12-foot
4 high berm closer to these houses that are way up
5 higher, the remaining pit behind that berm becomes more
6 visible the further you move that berm toward those
7 homes. And maybe we can display that or look at that.
8 I don't know that a 12-foot berm doesn't
9 work because I haven't heard from the other side on how
10 they intend that to work. But I'd work with them if
11 they wanted to.
12 **CHAIRMAN MARTIN:** I guess our definition
13 is what does "work" mean? Because I think our
14 ordinance means mitigate, it doesn't mean eliminate.
15 **LYNN WHITMORE:** I agree.
16 **CHAIRMAN MARTIN:** Next testifier.
17 **TOM CLARK:** You can start the clock so we
18 can get done. Tom Clark, Box 962, Anchor Point.
19 **CHAIRMAN MARTIN:** Hit the microphone
20 button, sir.
21 **TOM CLARK:** Tom Clark, Box 962, Anchor
22 Point. Thank you, Blair, appreciate it.
23 I sat on this body for six years, I sat
24 on the Board of Adjustment for seven years. Heard I
25 don't know how many of these. Three of the members

Page 120

1 here were there when I was there.
2 Most of those that were appealed were
3 sent to the assembly, which acted as Board of
4 Adjustment at that time. All the decisions in the
5 affirmative were upheld. Any of those that were
6 rejected by the Planning Commission were denied by the
7 BOA at that time.
8 Our BOA listened to several appeals, some
9 that you had affirmed, some that you had rejected. All
10 of those passed this ordinance in full. Two lawsuits,
11 the judge ruled in favor of the borough, the way the
12 borough handles their buffers, the way they handle
13 their sound, the way everything gets handled.
14 I know this is all new, these folks are
15 upset, I get it, I live there. This is not in my best
16 interest. It's in my best interest that this pit goes
17 away and the price of my gravel goes up.
18 But as it is today, they are legal, this
19 is allowable, and it's been proven in court.
20 Questions?
21 **CHAIRMAN MARTIN:** Any questions? Thank
22 you. Next.
23 **ANGELA ROLAND:** Hi, my name is Angela
24 Roland, and I own property at the Silver King fish camp
25 as well as property on Thurmond Avenue.

Page 121

1 Today I spoke to the parks department
2 about their concerns, since they are property owners as
3 well as run the state recreation area. They said they
4 sent a letter May 1st, and their concerns were dust,
5 safety, and noise.
6 I did some research into dust, as well as
7 there has been a letter already sent. I don't mean to
8 run over this too often, but crystalline silica is as
9 fine as asbestos, and this is a particulate that is
10 emitted whenever rock is crushed or screened and
11 excavated. It also travels a great distance, and it
12 can reach the school. It builds up in buildings, it
13 gets clogged into ventilation systems, and yes, it does
14 cause respiratory diseases. You can verify this at the
15 EPA as well as other OSHA websites. I'm sorry, I said
16 EPA, I meant OSHA websites as well as other well
17 established information.
18 I don't know what size dust mask you need
19 to wear in order to mitigate that, or eliminate it
20 rather.
21 When it comes to safety, we've talked
22 about this quite a bit; however, there has been
23 statistics showing that heavy truck accidents have gone
24 up. The last year that the information was available
25 was 2016/2017. And on this narrow road, yes, like

Page 122

1 everyone else has said with boats, RVs, kids on bikes,
2 and also tourists who don't know where they are going,
3 and I don't know if you've noticed, there are a lot of
4 people who look down with their cell phones wandering
5 around trying to figure out -- well, I don't know what
6 they are doing, but anyway, they walk around looking
7 down at their cell phones.

8 So I suppose going as fast as you can to
9 deliver your haul and get back and deliver more, I hope
10 the truck drivers are as careful as they can be.

11 When it comes to decibels, we've been
12 talking a lot about -- or rather when we talk about
13 noise, we've been talking about decibels. And yes it's
14 true that some -- there is some sounds that sound just
15 simply worse than others. So I guess the analogy would
16 be if you could imagine your favorite song at a hundred
17 decibels, that would be fine; your least favorite song
18 at a hundred decibels would be misery. It would also
19 be misery as a lower decibel if you really didn't like
20 the song. So that's one aspect of it to remember.

21 And then as far as the Trimble family
22 member living next to it, to their ears I suppose that
23 sounds like a cash register running.

24 And it just so happens that my father
25 owned an excavation business. He built a golf course

Page 123

1 and he ran heavy equipment as well. I know the dust.
2 We wound up having a dog with one leg, too. He wound
3 up, you know, camping out underneath one of the trucks
4 and it couldn't be helped. So it is a dangerous
5 business.

6 There is also potential for all kinds of
7 accidents to occur, from spilling fuel, oil, all those
8 kinds of problems.

9 One of the things that we haven't talked
10 about is where are we at right now when it comes to the
11 health of the community? We've talked about Anchor
12 Point being so common with gravel pits everywhere, but
13 are we really a healthy community?

14 We have a school right there, and a lot
15 of people -- I'm finding that even though this has been
16 the way we've done things for a long time, we also have
17 science and technology that tells us now that
18 particulates, small ones like that, can harm you, they
19 can cause respiratory problems.

20 The last point -- well, maybe not the
21 last one -- how much time -- okay, I did contact the
22 EPA, and on their website you can easily see that this
23 portion of the Kenai Peninsula does have one endangered
24 species, the Stellar's eider, if I'm saying that right,
25 and I don't know if that was the bird that was singing

Page 124

1 that he was playing, but that is something that should
2 be considered, is that if we're harvesting gravel and
3 using it here on our state roads and on our borough
4 roads with gravel that comes from an area, we don't
5 know if there is eiders on there right now, but no
6 study has been done.

7 So we destroy their habitat, and the
8 federal law, you know, is opposed to it, in other words
9 they have laws against it. And then we take the gravel
10 and we put it on our roads and on our borough roads and
11 our state roads, and I don't think that we should have
12 a supply chain that's questionable. Thank you. Do you
13 have any questions?

14 **CHAIRMAN MARTIN:** Thank you. Do you have
15 any questions? Seeing none, thank you for your
16 testimony.

17 **ANGELA ROLAND:** Okay, thank you.

18 **CHAIRMAN MARTIN:** Next testifier, please.

19 **JOSH ELMALEH:** Hi, my name is Josh
20 Elmaleh. I live at 34885 Seabury Court just over the
21 hill. My wife testified earlier, she had to leave.

22 We're about a quarter mile from the site,
23 and currently there is -- has been the -- or just
24 recently there has been the road construction to
25 elevate -- or improve the drainage for the sides of

Page 125

1 Anchor Point Road, and we've been hearing that a lot.
2 Well, our dogs are normally peaceful and
3 quiet, and they let us know when there is animals out
4 that we should know about, neighbor dogs, neighbors,
5 moose, keep our -- help keep our kids safe, so we hear
6 things.

7 When they were running that equipment,
8 our dogs have been going crazy. They have been barking
9 non-stop. We go out there, we tell them to be quiet,
10 we encourage them when they are quiet. They have
11 just -- going non-stop. There isn't anything we can do
12 about that.

13 When -- in the event that the Trimbles
14 have their pit, we're going to be faced with that for
15 however -- whenever they decide to excavate gravel.
16 Maybe it's daily, maybe it's weekly, maybe it's every
17 once in a while, who knows, but only they do.

18 I'm here to say I don't agree with it, I
19 don't want it on there. I would advise you guys to go
20 in there and check it out. It's an amphitheater. We
21 hear things, we hear the waves, we hear the birds.

22 I go down to the eagles -- my dad came up
23 last year, I hadn't seen him in ten-plus years. He
24 walked to the beach. He got to see the eagles. He
25 said it's the million dollar view. I don't believe him

Page 126

1 for one second, but at the same time, it's a view not
2 to be messed with.

3 They have the right for their own
4 property, I have the right for my property, I agree
5 with that. And if they don't get it and they develop
6 their own thing, then they develop their own thing, but
7 we don't want a gravel pit.

8 My wife and I two years ago bought our
9 place. We didn't know about it. We looked at another
10 place that was twice the size and only about \$20,000
11 more than our current house. It would have fit our
12 family a lot better, but it was right next to a gravel
13 pit.

14 And we decided, okay, we're not going to
15 get this one, we're going to go to the one that's going
16 to be a lot nicer. So we went there, sure enough we
17 bought it, bickering back and forth with the seller,
18 and finally he got what he wanted and we got a place.

19 So I encourage you, the sound is not
20 going to be improved. It doesn't matter how big the
21 berm is, it's not going to be improved. I can hear a
22 half mile away, a mile away. I can hear dump trucks
23 going on the Old Sterling Highway. So it's what's
24 there. Please help us, thank you.

25 **CHAIRMAN MARTIN:** Thank you. Next.

Page 127

1 **KATIE ELSNER:** Hi, good evening. My name
2 is Katie Elsner. I'm an attorney in Kenai. Our
3 address is 215 Fidalgo Avenue, Suite 201. And I have
4 been helping several of the neighbors that are opposed
5 to this gravel pit. And I want to first address Mr.
6 Martin's question.

7 The borough code uses two words in
8 defining what to do with this, both "minimize" and
9 "sufficient," and I just quickly Googled the definition
10 of minimize, which is to reduce something to the
11 smallest possible amount or degree.

12 So the code doesn't call for you to make
13 sure that there is some separation, some barrier or
14 some reduction in the visual impact, it calls on you to
15 actually reduce it to the smallest possible amount or
16 degree. And it further calls on you to ensure that
17 that reduction, that smallest possible amount, is
18 sufficient to address the visual impact.

19 And so, you know, when it comes to Mr.
20 Whitmore's presentation, as far as I can tell with this
21 rolling berm that they are proposing, one of two
22 options are going to come into play. Either the berm
23 is going to start closer to the property, and I think
24 we can move it up, right, so we can move the berm to
25 sort of demonstrate that.

Page 128

1 So either it starts closer to the
2 property, at which point there is more or greater
3 visual impact, because you can see -- I mean, it would
4 have to be taller in order to negate it because you're
5 getting closer to the higher elevation, and then it
6 moves back leaving all of the excavated property in its
7 wake; or it starts in that position where it could
8 potentially cause some sort of reduction and visual
9 impact, because at that point farthest away, the angle
10 or elevation allows it to be sufficiently tall.

11 But then as it moves closer and closer
12 and closer and closer to the impacted and affected
13 properties, all you see from behind -- first, of all
14 the same height berm becomes less effective, and all
15 you can see in the background is the excavated pit in
16 its wake.

17 And so, you know, at this point where the
18 GIS LIDAR profile mapping is set by Mr. Whitmore, and I
19 believe you guys all have the examples in your packet,
20 is at, you know, the most likely proposed site for it.

21 And we did propose findings of fact, and
22 I'm going to talk to you in just one minute about that,
23 but those findings of fact are based on that spot and
24 geography and what berm would be sufficient there.

25 But when it comes to these rolling berms,

Page 129

1 I think that makes your job even more difficult because
2 the rolling berms would have to vary in height in order
3 to minimize or sufficiently address the visual impact
4 as they moved in geographic proximity to the subject
5 parcels. So I just wanted to address that one point.

6 As I mentioned, we did propose findings
7 of fact for the commission to consider in the event
8 that they are assisting -- or they are assistive to
9 you.

10 There is two alternative proposed
11 findings of fact, you can find them on pages 89 and 92
12 of Volume 1 of your packet. They present under two
13 separate factual scenarios. The first one is if the
14 commission were interested in an outright denial of the
15 application; the second one is proposing a modification
16 to the buffer and berms that are submitted in the
17 application that, based on the objective data based on
18 the GIS LIDAR profiling, would be required in order to
19 minimize and interfere with that visual impact.

20 I do want to make one scrivener's error.
21 Mr. Wall snuck a change in on me that I didn't catch.
22 On page 92, you would actually have to replace finding
23 of fact 15, because that is the one that addresses the
24 buffer and berming. And in the new resolution it's no
25 longer a finding of fact 14.

Page 130

1 However, our position is that these
2 findings of fact are sufficiently detailed and follow
3 and track the law, and you have them here so you can
4 read them. I'm not going to go through them again in
5 order to -- in either scenario that the Planning
6 Commission were interested in considering would support
7 the findings.
8 Because while you've heard that you don't
9 have the authority to deny this permit application, I
10 would just remind you that, in fact, nowhere -- nowhere
11 in the code does it say that you're not allowed to deny
12 an application. Nowhere in the code does it say that
13 as long as an application parrots the language in the
14 ordinance, the Planning Commission must approve it
15 regardless and without any consideration of how it
16 impacts and whether or not that question of your
17 discretion as to what is sufficiently minimized plays
18 out in reality. It's not enough in this scenario that
19 he states the requirements of the code, the minimum
20 requirements of the code. I will wrap it up.
21 The question for you is whether or not
22 it's sufficient. And what the code does is expressly
23 grants, and in fact mandates authority on this body to
24 either approve the permit if you find that those berms
25 represent, as proposed in the application, sufficient

Page 131

1 visual and noise barriers; or you can modify it, if in
2 fact you find that, based on the objective evidence,
3 significantly higher berms are going to be required in
4 order to minimize that impact; or you can deny it.
5 And in this instance we would urge you to
6 exercise that authority to either deny or modify it
7 based on the fact that this is a gravel site, it's in a
8 depressed elevation surrounded by neighboring
9 communities in a recreational area. And I'm happy to
10 answer any questions to the extent you have any.
11 **CHAIRMAN MARTIN:** Thank you, any
12 questions? None at this time.
13 **KATIE ELSNER:** Thank you.
14 **CHAIRMAN MARTIN:** Mr. Wall.
15 **MR. WALL:** Could I get some clarifying on
16 the findings that you drafted?
17 **KATIE ELSNER:** Sure.
18 **MR. WALL:** And I guess because I have
19 some concerns with some of the language in there. I
20 want to get your feedback on it.
21 In the -- what you're proposing in the
22 denial findings is that it be denied because it is
23 incomplete because they have not provided -- they
24 haven't included a vegetation and fencing plan that are
25 sufficient height and so forth.

Page 132

1 But I struggle with that idea that the
2 application is incomplete, because the applicant can't
3 know at the time of application submittal what the
4 Planning Commission will deem as appropriate. Because
5 the code specifically says that the Planning Commission
6 gets to determine what is sufficient height and density
7 for the vegetation and fence.
8 So can you elaborate on how that would be
9 an incomplete application with the -- if the applicant
10 doesn't know up front what the Planning Commission
11 would want?
12 **KATIE ELSNER:** Absolutely. An
13 application must, in order to be approved, must meet
14 the standards, and the standards are complied with by
15 meeting the conditions.
16 And in this instance, one of the
17 conditions for a complete application is that the berms
18 and buffers are of sufficient height and density in
19 order to mitigate and minimize, sufficiently minimize
20 the visual or voice impact. That's the way the
21 ordinance --
22 **MR. WALL:** As deemed by the Planning
23 Commission.
24 **KATIE ELSNER:** -- is written. And so the
25 Planning Commission makes that determination. And in

Page 133

1 the event that that determination is made in the
2 negative, the application is almost necessarily
3 incomplete, because a complete application, an
4 approvable application requires compliance with those
5 conditions.
6 **MR. WALL:** So you're saying the
7 application be incomplete after the fact?
8 **KATIE ELSNER:** The application is not
9 complete and approvable until this body says and deems
10 it so.
11 **MR. WALL:** Now, the other thing is that
12 the -- and you pointed out in your findings that the
13 code also provides for the applicant to submit an
14 alternate buffer plan.
15 **KATIE ELSNER:** Yes.
16 **MR. WALL:** So could not that be construed
17 as an alternate buffer plan and therefore the
18 application is complete?
19 **KATIE ELSNER:** In the event -- I
20 understand -- you'll have to forgive me, you have way
21 more experience with these than I do.
22 But my understanding is there is
23 oftentimes some degree of back and forth between the
24 applicant and the Planning Commission, and I think the
25 code does allow for that type of flexibility and that

Page 134

1 type of working through as the process goes on.
 2 However, that does not change the fact
 3 that in the event that we have an application that --
 4 or a scenario after the back and forth, after the
 5 voluntary conditions at the time that the commission is
 6 tasked to rule on this decision, that does not meet the
 7 mandatory condition, cannot be found to sufficiently
 8 minimize the visual and noise impact.
 9 The way I read the code says that that's
 10 incomplete at that point in time. It doesn't meet the
 11 mandatory and required conditions.
 12 And nevertheless, even if you didn't view
 13 it that way, it still must be denied because the
 14 Planning Commission must deny applications, must deny
 15 these material site permits when they don't comply with
 16 the minimum standards.
 17 **MR. WALL:** Okay. And another question
 18 there is that the code talks about the vegetation and
 19 fencing needs to be of sufficient height and density,
 20 but it doesn't talk about that in regards to berms, but
 21 yet you seem to be applying it to berms as well.
 22 **KATIE ELSNER:** I do. It's in the same
 23 paragraph. It's in the same section read together. It
 24 seems clear to me, and the interpretation I've taken on
 25 this is that it refers to the same types of

Page 135

1 impact-mitigating tools or mechanisms that are
 2 available to the Planning Commission and to applicants
 3 under the code.
 4 **MR. WALL:** Switching to the other set of
 5 findings that you drafted --
 6 **KATIE ELSNER:** Ouch. Okay.
 7 **MR. WALL:** -- you proposed a 43-foot berm
 8 and a 53-foot berm. And actually one of the testifiers
 9 basically came to the same conclusion as me, is would
 10 that not, in effect, be a denial in that a 43-foot berm
 11 and a 53-foot berm would not pass any reasonable test
 12 or reasonable standard?
 13 **KATIE ELSNER:** Well, except I don't
 14 believe that there is a reasonable test or a reasonable
 15 standard written in the code.
 16 I mean, the proposition that an
 17 application has to be denied despite its ineffectual
 18 conditions to meet the standards in the code is just
 19 not consistent with the language of the code. It's not
 20 consistent with the intent of the code. It's not
 21 consistent with the fact that we have a material site
 22 ordinance in the first place.
 23 And so there has to be a mechanism to
 24 address ineffective conditions. And it's certainly not
 25 by imposing a world of conditions that exist outside of

Page 136

1 the ones allowable in the code. And so what the code
 2 allows is for the Planning Commission to modify until
 3 they think that it's of sufficient height and density.
 4 And so, you know, in the event that you
 5 want to build a gravel site in a place where visual
 6 impact mitigation or minimization requires a 43-foot
 7 berm, that's the decision of the applicant. And I
 8 don't think it's the Planning Commission's
 9 determination to decide whether or not the applicant
 10 ultimately goes forward. The question is whether or
 11 not they can approve a permit that complies with both
 12 the conditions insofar as it allows the conditions to
 13 meet the standards. Anybody else?
 14 **CHAIRMAN MARTIN:** Thank you. Next
 15 testifier, please. Is there anyone in the audience
 16 wishing to testify? Last call.
 17 Hearing and seeing no further requests, I
 18 will close public comment and bring it to the
 19 commission for continuing discussion. Ms. Ecklund.
 20 **COMMISSIONER ECKLUND:** Thank you. I have
 21 so many notes floating around my desk. But --
 22 **MR. WALL:** I'm sorry, Mr. Chairman, the
 23 rules that you read at the beginning, the procedures
 24 allow for the applicant to give a rebuttal as long as
 25 he's not providing any new information, just rebutting

Page 137

1 the testimony that's been given.
 2 **CHAIRMAN MARTIN:** That's why I called
 3 everybody, and nobody spoke up.
 4 **MR. WALL:** Okay.
 5 **CHAIRMAN MARTIN:** Would you like to make
 6 a rebuttal?
 7 **STACY STONE:** Yes, I do, Mr. Chair. As a
 8 matter of procedure, I apologize because I was not
 9 making a further public comment but rather rebutting
 10 testimony offered.
 11 Now, Ms. Elsner got up and spoke and said
 12 that the application before you is incomplete, and
 13 that's incorrect. Because if you go back to 21.25.050
 14 which provides for permit considerations and when a
 15 public hearing is required, it's up to the planning
 16 director and the designee to review and determine
 17 completeness of an application.
 18 The application is not forwarded to this
 19 body until such time as the planning director has said
 20 to this body, "This is a complete application," or,
 21 "This is an incomplete application."
 22 At such time, if there is an incomplete
 23 application, the planning director can go back to the
 24 applicant and say, "Hey, this is not complete, and we
 25 should work to fix it," or it can go straight to this

Page 138

1 body for a hearing. And this body could then
 2 determine, "Yes, we agree with the staff, it's
 3 incomplete, and we're going to deny it." Hence the
 4 reason why you have the ability to deny an application.
 5 Now, there has been several comments
 6 today about why does public testimony matter. Why is
 7 there a public process involved in this?
 8 Now, when you read through the code
 9 provisions, and the code has to be read in total, there
 10 are several words, and we've heard the value of words
 11 today, and the important thing is public comment does
 12 matter, because it informs you of what conditions you
 13 need to be paying attention to. If there was no public
 14 comment, for instance, the person could apply, the
 15 planning director could approve and say, "This is a
 16 complete application," pass it to the Planning
 17 Commission, and it could be passed off wholesale.
 18 But the neighbors and the residents have
 19 brought concerns about noise. There is a provision in
 20 here that allows for voluntary conditions to be imposed
 21 by this body.
 22 We talked earlier today about white noise
 23 monitor -- or excuse me, white noise machines being
 24 added to these heavy equipment to help reduce the sound
 25 impacts, and my client today testified that he would do

Page 139

1 so voluntarily. And these are the types of things that
 2 all of these people here informing you that noise is a
 3 concern of them allow you to thread this needle and try
 4 and find a balance.
 5 Because you're a government entity,
 6 you're imposing a restriction on the free enjoyment of
 7 someone's land. And in order to do so, it must be
 8 narrowly tailored. And the assembly has taken great
 9 steps to ensure that this fine balance between
 10 government intervention and the public being allowed to
 11 freely exercise on their private property, that that
 12 balance is struck.
 13 Now, there are standards in the code, and
 14 we heard a lot about the standards just a few moments
 15 ago about how they are set to minimize impact. And
 16 what does it mean to minimize impact?
 17 Well, the code itself helps us define
 18 what we can do to minimize the impact. It says only
 19 the conditions set forth in 21.29.050 may be imposed to
 20 meet these standards.
 21 And then when we look further at the
 22 standards, they further guide your deliberation here
 23 tonight. There is words such as "buffer zone shall
 24 provide and retain a basic buffer." And that buffer is
 25 to be at -- if you look, it shall be maintained around

Page 140

1 the excavation permitter or parcel boundaries.
 2 We've heard a lot about the rolling berm
 3 today. But that meets exactly with the code, and it's
 4 a compliance to try and make sure that the excavation
 5 perimeter is as protected as possible to minimize the
 6 impact, to meet with that definition of the code.
 7 So again, as we stated at the beginning
 8 of the day today before we heard all the public
 9 testimony, my client submitted an application, it was
 10 reviewed by the planning director, there was a site
 11 visit, there was recommendations to revise the
 12 application, the application was revised, it was
 13 forwarded to this body as complete. This body has
 14 heard public testimony, it's heard the concerns, it has
 15 the ability to institute certain conditions and modify
 16 that application in order to approve it.
 17 But, again, we maintain that there is no
 18 reason for this body to deny the permit, but rather to
 19 institute those conditions that have been agreed to and
 20 that this body is allowed that are reasonable and
 21 necessary under the circumstances to find that strict
 22 balance between someone's right to enjoy their own
 23 property and government intervention.
 24 So we ask that you respectfully approve
 25 the permit.

Page 141

1 **CHAIRMAN MARTIN:** Thank you, and I
 2 apologize as well, because the rebuttal phase just kind
 3 of comes naturally. In strict legalese, you did the
 4 right thing.
 5 **MR. WALL:** Mr. Chairman.
 6 **CHAIRMAN MARTIN:** Yes.
 7 **MR. WALL:** It's 10:59.
 8 **CHAIRMAN MARTIN:** Yep. We've been
 9 discussing this -- we're going to have to vote for a
 10 continuation.
 11 **UNIDENTIFIED SPEAKER:** By suspending the
 12 rules?
 13 **CHAIRMAN MARTIN:** Suspending the rules.
 14 So I'm going to entertain a motion for suspending the
 15 rules.
 16 **COMMISSIONER BOKENKO-CARLUCCIO:** So moved
 17 for -- do you want a time period?
 18 **CHAIRMAN MARTIN:** Please.
 19 **COMMISSIONER BOKENKO-CARLUCCIO:** 15
 20 minutes.
 21 **CHAIRMAN MARTIN:** I heard 30 in the
 22 whispers.
 23 **COMMISSIONER BOKENKO-CARLUCCIO:** You
 24 think 30? Okay, 30.
 25 **CHAIRMAN MARTIN:** Yes, we should be able

Page 142

1 to get this done in 30 minutes. And the second?
 2 Discussion? Yes, Ms. Ecklund.
 3 **COMMISSIONER ECKLUND:** I believe we were
 4 in the same place the night we denied this, and we were
 5 accused of hurriedly denying it without adequate
 6 discussion. And I want to make sure that we're not
 7 accused of that again. So I don't know if we want 30
 8 minutes or -- I mean, I've got the longest drive.
 9 **CHAIRMAN MARTIN:** Yes, ma'am.
 10 **COMMISSIONER ECKLUND:** So it might take
 11 longer.
 12 **CHAIRMAN MARTIN:** No sense in rushing to
 13 the finish line prematurely.
 14 **COMMISSIONER ECKLUND:** No, no. I want to
 15 deliberate.
 16 **CHAIRMAN MARTIN:** We're just going to
 17 take it at 30 minute bites at a time.
 18 **COMMISSIONER ECKLUND:** Okay, we can make
 19 another motion at 30 minutes?
 20 **CHAIRMAN MARTIN:** Yeah.
 21 **COMMISSIONER ECKLUND:** Thank you.
 22 **CHAIRMAN MARTIN:** So are we all in
 23 agreement that we're going 30 minutes at a time? The
 24 motion passes.
 25 Now, discussion. Ms. Ecklund --

Page 143

1 **COMMISSIONER ECKLUND:** Do we need to have
 2 a motion to put it on the table?
 3 **COMMISSIONER BOKENKO-CARLUCCIO:** I was
 4 going to say, don't we need a motion?
 5 **CHAIRMAN MARTIN:** Let's get this --
 6 **COMMISSIONER ECKLUND:** Don't we still
 7 have the motion live from the last time we took it up?
 8 **CHAIRMAN MARTIN:** No, we're start -- I
 9 think we're starting over. This is kind of a rare
 10 bird.
 11 **COMMISSIONER ECKLUND:** So we need a
 12 motion to approve this, correct, to put it on the floor
 13 for discussion? All right, I'm going to try to find
 14 that number again.
 15 I move to approve a conditional land use
 16 permit application for Beachcomber, LLC for discussion
 17 purposes.
 18 **UNIDENTIFIED SPEAKER:** (Indiscernible).
 19 **COMMISSIONER ECKLUND:** Thank you.
 20 2018-23 is the resolution number for the record.
 21 **COMMISSIONER BOKENKO-CARLUCCIO:** I'll
 22 second it.
 23 **CHAIRMAN MARTIN:** Yes, ma'am.
 24 **COMMISSIONER ECKLUND:** Through the chair.
 25 We work for you, all of you. We work for the assembly.

Page 144

1 And I think the main goal for all of the residents of
 2 the Kenai Peninsula is balanced development, a balance
 3 between economy and residents living their values,
 4 their life values.
 5 It is sad to say that people want to put
 6 a gravel pit in a residential area, and if you knew it
 7 was there at the size this one is, or if the number of
 8 you that purchased property there knew it was coming,
 9 you probably wouldn't purchase property there.
 10 Several things have been brought up
 11 tonight that this ordinance doesn't address. It
 12 doesn't really say we can do anything if it's not safe.
 13 And I've brought that up several times in past gravel
 14 pit permits, the safety, site triangles, school bus
 15 stops, traffic on the road coming and going at the
 16 ingress and egress.
 17 But that's not -- it doesn't really allow
 18 us to say, "Oh, it's not safe, we can't do that." I've
 19 been given reasons like, "Oh, school bus stops always
 20 change," and stuff like that.
 21 That's -- and we hoped to have a gravel
 22 material site extraction ordinance done a year ago, I
 23 believe, or less than a year ago, June sometime at
 24 2018. And it has been in committee, and it's, I guess,
 25 coming out of committee soon. We've had some

Page 145

1 discussions of it.
 2 I do have some questions for staff, so to
 3 Mr. Wall. I believe that the permit that's in the
 4 packet tonight in packet 1, I've heard that that's not
 5 correct anymore, because I've heard through public
 6 testimony -- and that may be -- that now instead of
 7 50,000 cubic yards, he's going to only extract 10,000
 8 cubic yards a year, and then the application says
 9 50,000.
 10 It also says that the one test hole
 11 that's been dug says that the groundwater is at 18
 12 feet -- or at 20 feet, and he was going to only dig to
 13 18. And his own testimony was tonight that he was
 14 going to dig 25 feet down.
 15 So do we need a new application?
 16 **MR. WALL:** What you need to base your
 17 decision on is the application that was submitted
 18 and -- yeah. He hasn't changed -- except for the
 19 volunteered conditions, the application has not
 20 changed.
 21 **CHAIRMAN MARTIN:** Maybe for
 22 clarification. The 50,000 is a threshold. So you can
 23 do less than 50,000 without changing the application?
 24 **MR. WALL:** Right. In other words, I
 25 guess what I'm trying to say is that what he intends to

Page 146

1 do in the foreseeable future and what he puts on the
2 application are two different things. What you're
3 approving is what's on the application.
4 **COMMISSIONER ECKLUND:** Followup through
5 the chair to Mr. Wall.
6 So if we had a gravel pit permit approved
7 and then they wanted to dig into the water table,
8 wouldn't they have to come back and ask for permission
9 to do that?
10 **MR. WALL:** Yes, the code specifically
11 requires that.
12 **COMMISSIONER ECKLUND:** So we'll be seeing
13 him come back if we approve this? He'll have to come
14 back since he's now going to dig 25 feet down?
15 **MR. WALL:** He will not be able to
16 excavate within two feet of the water table without
17 coming back to the commission.
18 **COMMISSIONER ECKLUND:** Through the chair.
19 I only see one test hole on the site map that says the
20 groundwater at whatever date it was dug was at 20 feet.
21 Is that how you read the application?
22 **MR. WALL:** Yes.
23 **COMMISSIONER ECKLUND:** I'll allow the
24 rest of the commission deliberation.
25 **CHAIRMAN MARTIN:** Ms. Bentz.

Page 147

1 **COMMISSIONER ABRAHAMSON-BENTZ:** A
2 question for staff through the chair. The letter from
3 the DOT about requiring KPБ to repair any impairments
4 in the road. The letter that is in page 172 of our
5 packet, can you confirm that it would be the
6 responsibility of the borough for any repairs to
7 that -- that road?
8 **MR. WALL:** That road is under the
9 jurisdiction of the state, and they are responsible for
10 maintenance. The borough has no intentions of doing
11 any maintenance on that road.
12 **COMMISSIONER ABRAHAMSON-BENTZ:** So
13 followup. That statement from DOT would be erroneous
14 as far as their concerns about this application?
15 **MR. WALL:** Yes, Ms. Bentz. Mr. Chairman.
16 I believe that the point that they were trying to
17 emphasize is that they also have no intentions of doing
18 repairs upon that road.
19 **CHAIRMAN MARTIN:** Ms. Carluccio.
20 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes. I
21 wanted to ask you -- I saw some information in there
22 about the parks, the state parks. And I just wanted to
23 know if you had anything in writing from DNR or the
24 Division of Parks and Outdoor Recreation whether they
25 were in favor or opposed to this, or have you heard

Page 148

1 back from them at all? Or were they contacted?
2 **MR. WALL:** Yes, Mr. Chairman, Ms.
3 Carluccio. I have talked to State Parks several times,
4 and they have talked about getting a letter to me.
5 I've never seen that, though.
6 **COMMISSIONER BOKENKO-CARLUCCIO:** And in
7 your conversation with them, what were they saying?
8 **MR. WALL:** I don't think that they -- I
9 think they just mentioned that they may have some
10 concerns because of the proximity of the parks. I
11 don't think they were specific. They were just talking
12 more about the deadlines for getting the comment letter
13 to me and things of that sort.
14 **COMMISSIONER BOKENKO-CARLUCCIO:** And
15 apparently they have missed the deadline?
16 **MR. WALL:** Yeah, they missed several
17 deadlines. I have not seen a comment letter from them.
18 **CHAIRMAN MARTIN:** Mr. Ecklund.
19 **COMMISSIONER ECKLUND:** I want to follow
20 up on the letter from the Department of Transportation
21 and Public Facilities that, number one, they had five
22 things that they listed. And number one was that they
23 wanted someone to verify the site triangles at the
24 Danver Street stop sign either by an engineer, a
25 surveyor, or a borough public works official. KPБ

Page 149

1 public works can coordinate with the DOT Public
2 Facilities maintenance and operations when reviewing
3 sight triangles. Has that been accomplished?
4 **MR. WALL:** It has not, or at least that
5 information has not been passed on to me.
6 I did talk to the roads department about
7 that. We were not able to connect and get out there.
8 But I didn't pursue it further because there is not any
9 conditions or standards in the code that would relate
10 to that.
11 **COMMISSIONER ECKLUND:** Again, another one
12 of those safety issues that I was hoping we would see
13 in the new ordinance and I hear has not been included
14 in the new ordinance.
15 So when that comes forward, I think there
16 will be some amendments hoping that we can add some of
17 these safety elements, you know, shoulders of 12 inches
18 to 14 inches, that kids walk on and bikes go on and
19 sight triangles. That's come before us, and I had
20 mentioned it in the past.
21 So I just -- I'm concerned that a state
22 organization is asking us to verify some things and
23 that we're not. Because I thought we could do more
24 than the state asked of us, but we can't do less. So
25 is it only if we see it in a state --

Page 150

1 **UNIDENTIFIED SPEAKER:** In statute.
 2 **COMMISSIONER ECKLUND:** -- in the
 3 administrative codes and in statute. So they would
 4 have had to reference a statute to make us act?
 5 **MR. WALL:** Yes, there is nothing in
 6 the -- there is no state requirement that we check site
 7 triangles on approaches to state roads.
 8 **CHAIRMAN MARTIN:** Mr. Ernst.
 9 **COMMISSIONER ERNST:** Yeah, this is to the
 10 staff through the chair. I just need some
 11 clarification.
 12 I'm looking at the findings of fact on
 13 page 80, 15 Q, and it says -- I just need to understand
 14 this a little bit, because when I look at the GIS
 15 evidence, if you will, it doesn't seem like there is
 16 any way -- let's see, it says, "Each piece of real
 17 estate is uniquely situated, and a material site cannot
 18 be conditioned so that all adjacent parcels are equally
 19 screened by the buffers."
 20 Well, in this unique situation, we have a
 21 pit that's in the lowlands surrounded by affected
 22 properties. Is there any possible buffer that could be
 23 reasonably used to protect the, you know, the noise
 24 levels and visual impact of this pit since there are so
 25 many parcels around it?

Page 151

1 **MR. WALL:** And one thing that was asked
 2 earlier that I did want to answer, somebody from the
 3 public asked, and that is that they were talking about
 4 adjacent parcels versus other parcels in the vicinity.
 5 And the code does say that the buffer
 6 requirements shall be made in consideration of and in
 7 accordance with existing uses of adjacent property. So
 8 that is in the conditions in 21.29.050.
 9 So that's why in the staff report I put
 10 particular emphasis on the adjacent parcels, because
 11 that's what the decision needs to be based on as
 12 concerning buffers.
 13 And even at that, not all of those
 14 parcels -- and I think that that 15 Q, really all it's
 15 saying is that not all -- some parcels are going to get
 16 better screening than others. And so it's not a matter
 17 of eliminating the visual impact or the noise impact,
 18 it's a matter of minimizing it.
 19 **CHAIRMAN MARTIN:** Mr. Ernst, followup.
 20 **COMMISSIONER ERNST:** I'm sorry, a
 21 followup.
 22 So equal protection under this law
 23 doesn't apply? I mean, I'm looking at that, I'm
 24 looking at this.
 25 **MR. WALL:** The way that I'm reading the

Page 152

1 ordinance is that all adjacent properties need to be
 2 minimized. The impacts need to be minimized for all
 3 adjacent properties.
 4 **COMMISSIONER ERNST:** So some properties
 5 are more minimized than others?
 6 **MR. WALL:** That's the way that I -- yeah,
 7 I would have to agree with that statement.
 8 **COMMISSIONER ERNST:** Okay, that's
 9 interesting.
 10 **CHAIRMAN MARTIN:** Mr. Foster.
 11 **COMMISSIONER FOSTER:** Mr. Wall, I had a
 12 little concern over adjacent and adjoining. And I
 13 remember back when I was with Homer that that came up,
 14 that adjoining means next to and touching and adjacent
 15 means nearby. Is that correct?
 16 **MR. WALL:** And I did spend some time
 17 looking at various definitions. And as it relates to
 18 property, generally it means adjacent or just separated
 19 by a roadway.
 20 It seems to be more specific than just
 21 nearby, although elsewhere in the code the word
 22 "adjacent" is used, and it appears to be referencing
 23 nearby in that it talks about wells within 300 feet on
 24 adjacent properties. Well, not all wells are
 25 on adjacent -- all wells within 300 feet are on

Page 153

1 adjacent property.
 2 So in that context it appears to be
 3 referencing nearby, or in close vicinity. I took it as
 4 adjacent properties to be immediately adjacent or
 5 separated by a roadway, which is a common definition I
 6 read as it relates to property.
 7 **CHAIRMAN MARTIN:** Thank you. Ms.
 8 Ecklund.
 9 **COMMISSIONER ECKLUND:** The specific code
 10 on that is 21.29.050 permit conditions (2)(C). And
 11 it's "The Planning Commission or planning director
 12 shall designate one or a combination of the above as it
 13 deems appropriate. The vegetation and fence shall be
 14 of sufficient height and density to provide visual and
 15 noise screening of the proposed use as deemed
 16 appropriate the Planning Commission or planning
 17 director."
 18 And I don't see where it says "adjacent"
 19 on that or on the buffer zone above it. If somebody
 20 sees where it says "adjacent," it just says --
 21 **MR. WALL:** (2)(E).
 22 **COMMISSIONER ECKLUND:** -- deemed.
 23 Right, in (2)(E), "At its discretion, the
 24 Planning Commission may waive buffer requirements where
 25 the topography of the property or the placement of

Page 154

1 natural barriers makes screening not feasible or not
 2 necessary. Buffer requirements shall be made in
 3 consideration of and in accordance with existing uses
 4 of adjacent properties at the time of the approval of
 5 the permit. There is no requirement to buffer the
 6 material site from use which commenced after the
 7 approval of the permit."
 8 So existing uses of adjacent property.
 9 We have residential and recreational are the adjacent
 10 properties, is that correct?
 11 **MR. WALL:** Yes.
 12 **COMMISSIONER ECKLUND:** Thank you. And
 13 then one last, if I may. 14 of 21.050 permit
 14 conditions reads that, and I'm going to take a point
 15 out of there, "It's at the best interest of the borough
 16 and the surrounding property owners."
 17 So there is these references to existing
 18 uses of adjacent properties and the surrounding areas
 19 and the surrounding property owners. But we let them
 20 all come and talk, but we have no meat to help them in
 21 this ordinance, because we are -- we can put buffers,
 22 we can put vegetation, and we can put fences, but who
 23 are we going to ask to put a 53-high earthen berm. I
 24 mean, we all know that's ridiculous.
 25 **UNIDENTIFIED SPEAKER:** Well, we can't

Page 155

1 even (indiscernible).
 2 **CHAIRMAN MARTIN:** Because, Mr. Wall,
 3 correct me if I'm wrong, the buffer is vegetative or a
 4 fence or a six-foot berm. Unless we want to jack
 5 the -- do we have the power to jack the berm up taller?
 6 **MR. WALL:** Yes. The code says minimum
 7 six-foot high fence --
 8 **CHAIRMAN MARTIN:** Minimum.
 9 **MR. WALL:** -- or minimum six-foot high
 10 berm or a 50-foot vegetated buffer.
 11 **CHAIRMAN MARTIN:** Thank you.
 12 **UNIDENTIFIED SPEAKER:** Minimum?
 13 **CHAIRMAN MARTIN:** Yeah, minimum. Ms.
 14 Carluccio.
 15 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes. Or
 16 it also says a combination. So we could require a
 17 buffer, a berm, and a fence. Under C, designate one or
 18 a combination of the above as it deems appropriate.
 19 **CHAIRMAN MARTIN:** If you can justify it
 20 with findings.
 21 **COMMISSIONER BOKENKO-CARLUCCIO:** But,
 22 what I also see here is that the minimum six-foot
 23 earthen berm -- okay, it says minimum. So we could
 24 actually make the berm taller?
 25 **COMMISSIONER ECKLUND:** Yep.

Page 156

1 **COMMISSIONER BOKENKO-CARLUCCIO:** Like 53
 2 feet.
 3 **MR. WALL:** Yes, and staff did -- and
 4 staff did propose a 12-foot berm in most locations.
 5 **COMMISSIONER BOKENKO-CARLUCCIO:** But is a
 6 12-foot berm enough to minimize visual and noise
 7 effects?
 8 **CHAIRMAN MARTIN:** It depends on what --
 9 your definition of minimize. Because it will bring it
 10 less. I mean, he can show us a picture of a six-foot
 11 berm or a 12-foot berm, and it will reduce the area of
 12 the triangle in the line of sight, but will it be
 13 adequate?
 14 **COMMISSIONER BOKENKO-CARLUCCIO:** But is a
 15 the minimization adequate, and that's what the question
 16 is.
 17 **CHAIRMAN MARTIN:** Ms. Ecklund, you have
 18 your hand up.
 19 **COMMISSIONER ECKLUND:** I asked the
 20 planning staff earlier today if they could share some
 21 information about how many gravel pits we've actually
 22 denied in the ten years I've been on this commission.
 23 Mr. Wall, did you say we've denied a couple over the
 24 last ten years or so?
 25 **MR. WALL:** Yes, there has been two

Page 157

1 denials done by the Planning Commission.
 2 **COMMISSIONER ECKLUND:** And the hearing
 3 officer overturned both of them?
 4 **MR. WALL:** Yes. And actually one was
 5 overturned by the hearing officer and the other was
 6 overturned with the Board of Adjustments. There was a
 7 transition period about that time, but yes.
 8 And then there was a couple of other
 9 cases where a modification to a permit was denied, and
 10 in that case that I'm thinking of, that was upheld.
 11 **COMMISSIONER ECKLUND:** But how many have
 12 we approved? We are not against gravel pits, and I
 13 think it's been kind of put upon us that we are against
 14 them. I mean, my dad was an operating engineer for 40
 15 years. I lived at a gravel pit. I had a CDL, I know
 16 you're safe drivers out there. We're not against
 17 gravel pits. But in the middle of a recreational and
 18 residential area, it just doesn't seem right.
 19 And a couple years ago, I -- or over the
 20 last year or two I've looked at how much money the
 21 borough actually gains from gravel pits, like how much
 22 sales tax or something they get off of them. And there
 23 is other economic entities and industries in the
 24 borough that make a lot more money.
 25 So -- and I know we need gravel. I drive

Page 158

1 to Anchorage twice a week, and I drive to these
 2 meetings twice a month. You know how much construction
 3 there is out there? Do you know how much gravel and
 4 rocks are going on those roads? Tons and tons, and I
 5 know we need these, but not in the middle of a
 6 recreational and residential area.

7 **CHAIRMAN MARTIN:** Mr. Whitney.

8 **COMMISSIONER WHITNEY:** Well, I think this
 9 is one of the more unique gravel pit permits we've
 10 looked at. It seems like most of them that I can
 11 remember over the last five or six years I've been on
 12 the commission, they are usually more in a flat land
 13 area where you can put up a six-foot berm or a 10-foot
 14 berm or whatever and lose your visual impact.

15 This is a little bit unique. It sits
 16 down low and there is adjoining properties, adjacent
 17 properties, whatever you want to call them. They are
 18 all close by, they are looking down into that area.

19 So I just don't think the berms that are
 20 proposed and anything that's going on here is adequate
 21 to control the visual impact that everyone is going
 22 to -- the adjoining property owners are going to
 23 suffer.

24 As far as noise, you know, we've heard
 25 lawn mowers make more noise than the equipment does and

Page 159

1 hand drills and everything else. The difference with
 2 that is they don't run for 10 or 12 hours a day. Your
 3 lawnmower is going to be going for a couple of hours,
 4 and, you know, we all listen to that, even here in the
 5 city.

6 So the heavy equipment, I think they are
 7 going to be able to hear it because most of the wind
 8 comes -- direction is coming off the water. That has
 9 an effect on noise, it makes it travel. I live two
 10 miles away from Fred Meyers, and I can hear trucks
 11 going down the hill slowing down. So I think those
 12 people that are living above that are going to continue
 13 hearing noise no matter what.

14 So right now I've listened to I don't
 15 know how many hours of testimony, read hundreds and
 16 hundreds of pages, and I still think my decision is
 17 still going to be the same as it was in July of last
 18 year, and I'll vote against this.

19 **CHAIRMAN MARTIN:** Mr. Venuti.

20 **COMMISSIONER VENUTI:** Boy, I feel
 21 fortunate I live in a community that has planning and
 22 zoning. You know, if nothing else that comes out of
 23 this, is this is a good argument for local option
 24 zoning. And I hope no matter what comes out of this,
 25 that this community -- and it's really great that this

Page 160

1 has brought you all together, but I think that you
 2 should really consider local option zoning so that
 3 something like this won't happen in the future.

4 I know gravel is an important commodity,
 5 and I know that it's a big industry in Anchor Point.
 6 I'm in the construction industry. Every project I work
 7 on has gravel, and all of it comes from Anchor Point.
 8 So I know there is real value, but I'm glad that there
 9 is not a gravel pit next to me. And I understand where
 10 you guys are concerned about.

11 But the idea that we can deny an
 12 individual the right to develop their property doesn't
 13 sit well with me. I know that if I want to control
 14 what's happening on the property next to me, I better
 15 buy it.

16 So I'm uncomfortable with the way this
 17 has transpired. Like Mr. Whitney, I've read thousands
 18 of pages of -- hundreds of pages of testimony, heard a
 19 lot about your concerns. I hope you guys will consider
 20 local option zoning, thank you.

21 **CHAIRMAN MARTIN:** Ms. Bentz.

22 **COMMISSIONER ABRAHAMSON-BENTZ:** So I have
 23 maybe a question for staff or just an observation about
 24 the idea of a rolling 12-foot berm. And this goes back
 25 to some discussion we've been having at the material

Page 161

1 site code revision workgroup.

2 And a lot of -- some of what we talked
 3 about is alternative post-mining land uses and when
 4 does a pit stop being a pit and it starts being a
 5 reclaimed area that's a pasture or a meadow.

6 And I'm looking at these profiles that
 7 have been drawn using the LIDAR of the area and
 8 thinking about the reclamation plan that's outlined in
 9 our packet, and this idea of a rolling buffer -- or a
 10 rolling berm, excuse me, and if extraction could be
 11 pursued in a way that that rolling berm only was
 12 minimized -- or basically minimizing visual impacts
 13 from a narrow swath of land that was currently being
 14 excavated, and that annually or every couple years the
 15 applicant would be reclaiming in its path, so it would
 16 be marching along through the site reclaiming as they
 17 went, which I think is what they plan to do in their
 18 application, and leaving behind a reclaimed natural
 19 area that was topsoil and seeded and reclaimed, similar
 20 to the images that were shown earlier tonight.

21 So I'm just trying to wrap my head around
 22 that, how this rolling buffer -- this rolling berm
 23 could be an effective way to minimize visual impacts to
 24 adjacent properties.

25 And maybe the question for staff is,

1 looking at the reclamation plan and this idea of a
2 rolling 12-foot berm, would that be feasible -- would
3 that provide greater reduction of impact for at least
4 visual screening for neighboring properties if
5 extraction was pursued in that manner?

6 **MR. WALL:** Yes. And I think that what
7 you're referring to also is some comments earlier
8 about, yeah, if that berm moves then all you're seeing
9 is the scar on the land. But no, he would be required
10 to reclaim as he goes for the exhausted areas of the
11 material site.

12 **COMMISSIONER ABRAHAMSON-BENTZ:** And I
13 didn't -- just followup through the chair -- I didn't
14 see a schedule for reclamation in -- or maybe I missed
15 that in the packet. Do you have the page number for --
16 I know annually 50,000 yards, but I'm not sure if there
17 was an area plan to reclaim every year.

18 **MR. WALL:** It mentions two to five years,
19 but that's really going to depend on how much material
20 is extracted. So the intent is to reclaim a
21 significant amount. In other words, if more than 2 or
22 5 acres are excavated, there is going to be some
23 reclamation done.

24 **COMMISSIONER ABRAHAMSON-BENTZ:** So just
25 maybe a followup in the way of explanation.

1 **CHAIRMAN MARTIN:** Does that mean that
2 you're going to give us a count down so we can
3 deliberate and vote precisely? The maximum -- you
4 know, what's minimize versus maximize?

5 **COMMISSIONER ECKLUND:** The midnight hour
6 I turn into a pumpkin, so let's --

7 **MR. WALL:** Mr. Chairman, there is nothing
8 saying that a decision needs to be made tonight. We've
9 closed the hearing. You can continue your deliberation
10 at the next meeting.

11 **CHAIRMAN MARTIN:** Does anyone feel that
12 at this hour the human factor is weakening our ability
13 to make a decision? Continue discussion. Ms.
14 Carluccio.

15 **COMMISSIONER BOKENKO-CARLUCCIO:** This has
16 been an awful lot of information to read over and
17 understand, and there are a number of things that I
18 have read over where originally I thought I understood
19 it, and then I read it over and it didn't quite match
20 up to what my first impressions were.

21 I would not be unhappy with continuing
22 the deliberation at the next meeting. No more public
23 testimony, just deliberation and then findings of fact.

24 **CHAIRMAN MARTIN:** Mr. Foster.

25 **COMMISSIONER FOSTER:** I was ready to vote

1 So looking at these profiles, the whole
2 pit area wouldn't be a active excavation area as far as
3 line of sight goes, it would be the line of site only
4 within the currently excavated area, which would
5 hopefully be protected by that 12-foot berm.

6 **CHAIRMAN MARTIN:** Ms. Ecklund.

7 **COMMISSIONER ECKLUND:** To follow up on
8 the conversation about the rolling berm and the line of
9 sight, as I understand it, most of the visual impact is
10 along the east side and south side of this site where
11 the topography goes up?

12 In their Phase 1, 2, and 3 in the
13 processing area are going the other direction, so I
14 don't know how -- I mean, it's almost like they would
15 have to start on the Phase 3 and roll back towards the
16 hillside for that to work for a rolling berm. But it's
17 a good thought. I mean, maybe they could start on the
18 west side of Phase 1 and go that direction, and -- if
19 this is going to be approved.

20 **CHAIRMAN MARTIN:** We have a point of
21 order. It's 11:30. Ms. Ecklund.

22 **COMMISSIONER ECKLUND:** I move that we
23 continue the discussion for a maximum of another 30
24 minutes.

25 **COMMISSIONER BOKENKO-CARLUCCIO:** Second.

1 when I got here tonight, and then I heard -- I took
2 down seven pages of notes, and I would not be opposed
3 to continuing this so I could review these -- this
4 information.

5 **CHAIRMAN MARTIN:** Could anyone state that
6 in the form of a motion? Ms. Bentz.

7 **COMMISSIONER ABRAHAMSON-BENTZ:** I have a
8 question before we make that motion. The original
9 motion that's on the floor, did we attach staff
10 recommendations and findings or voluntary conditions?

11 **UNIDENTIFIED SPEAKER:** No.

12 **UNIDENTIFIED SPEAKER:** No.

13 **COMMISSIONER ABRAHAMSON-BENTZ:** And I
14 don't know -- just an order -- point of order. Do we
15 want to do that today?

16 **CHAIRMAN MARTIN:** I think so. I think
17 the maker of the motion and the second could easily
18 come to a concurrence on that, I hope. Mr. Whitney, do
19 you have a comment?

20 **COMMISSIONER WHITNEY:** I just have a
21 quick question for staff. What does the agenda look
22 like for the next meeting? Is it going to be a --

23 **THE CLERK:** Through the chair. The
24 agenda is not completely set right now. I do know the
25 material site is coming to that meeting. I'm trying to

1 remember what else. If you give me a minute, I can
 2 check.
 3 **CHAIRMAN MARTIN:** I know I could benefit
 4 from coalescing the notes and collecting my thoughts.
 5 Ms. Carluccio.
 6 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{The only}
 7 thing is I guess where we are now, we would have to do
 8 a up or down, a yes or no on what we have so far;
 9 whereas, I don't know if we're interested in asking the
 10 applicant to voluntarily add some things to this -- to
 11 his application.
 12 **CHAIRMAN MARTIN:** Did you have something
 13 creative in mind, or is this hypothetical?
 14 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{I don't}
 15 have any -- no, I don't have any. And I don't have
 16 much creative at 11:35, but I'm just saying that
 17 that's -- that would be one of the negative things.
 18 **CHAIRMAN MARTIN:** But it also could be --
 19 it also could be handled with -- if you did come up
 20 with some great idea in the interim --
 21 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Right.}
 22 **CHAIRMAN MARTIN:** -- you could pass it on
 23 to Bruce, and he could discuss it with the applicant,
 24 and we could be prepared.
 25 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{That's}

1 **UNIDENTIFIED SPEAKER:** The voluntary
 2 conditions?
 3 **CHAIRMAN MARTIN:** The voluntary
 4 conditions were only discussed. But once the applicant
 5 is questioned and -- because Ms. Ecklund I think said,
 6 "Did you agree to this?" And he said, "Yes." That's
 7 in the motion.
 8 **COMMISSIONER ECKLUND:** Right.
 9 **MR. WALL:** Just for some clarification,
 10 Mr. Chairman, is that those volunteered conditions need
 11 to be accepted by the commission, and there needs to be
 12 findings that those conditions are in the best interest
 13 of the borough and in the surrounding properties.
 14 **CHAIRMAN MARTIN:** Yes.
 15 **COMMISSIONER ECKLUND:** Through the chair.
 16 So the voluntary conditions that I brought forward was
 17 the white noise back-up alarm, and Mr. Trimble agreed
 18 to that. And I believe --
 19 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{For his}
 20 vehicles.
 21 **COMMISSIONER ECKLUND:** For his vehicles,
 22 not for any contractor that was in the pit, but for his
 23 vehicles. So he volunteered that condition. And I
 24 guess that's the only one I can remember.
 25 **MR. WALL:** The other one was the --

1 true.
 2 **CHAIRMAN MARTIN:** It wouldn't be a dead
 3 end.
 4 **THE CLERK:** Through the chair.
 5 **CHAIRMAN MARTIN:** Yes.
 6 **THE CLERK:** So for the 24th meeting we
 7 have a right-of-way vacation, the ordinance for the
 8 material site, and then the review of a plat committee
 9 approval.
 10 **CHAIRMAN MARTIN:** Sounds like a light
 11 agenda. Ms. Ecklund.
 12 **COMMISSIONER ECKLUND:** So I don't really
 13 find a staff agenda statement, but I guess the findings
 14 are on the resolution. And if you wanted me to attach
 15 those to the main motion, just so that we have a
 16 complete motion, and then we make a decision on if
 17 we're going to wait and deliberate at our next meeting
 18 or not.
 19 **THE CLERK:** Through the chair. When you
 20 made the motion earlier, you did reference the
 21 resolution, just to be clear.
 22 **COMMISSIONER ECKLUND:** Okay, so that
 23 should take care of it, all right, thanks.
 24 **CHAIRMAN MARTIN:** Badda bing, badda boom,
 25 okay.

1 **COMMISSIONER ECKLUND:** Rolling berms?
 2 **MR. WALL:** -- the rolling berms, yes.
 3 **COMMISSIONER ECKLUND:** The rolling berms,
 4 okay.
 5 **UNIDENTIFIED SPEAKER:** And the
 6 processing.
 7 **COMMISSIONER ECKLUND:** And I believe that
 8 the finding is that the white noise back-up alarms
 9 would minimize noise impact, and the rolling berm would
 10 hopefully minimize visual impact. Are those enough
 11 findings, or do I need to quote code verbatim? Code
 12 1 -- do you want me to do that?
 13 **MR. WALL:** No, that is --
 14 **COMMISSIONER ECKLUND:** Okay, good.
 15 **MR. WALL:** -- sufficient.
 16 **COMMISSIONER ECKLUND:** I just want to
 17 make sure we're sufficient tonight and not -- that was
 18 not made based on fear. Okay, thank you.
 19 **THE CLERK:** I'm sorry.
 20 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Yes, I}
 21 second.
 22 **THE CLERK:** Can I have a point of order
 23 of exactly what are we -- are we amending something
 24 here or --
 25 **COMMISSIONER ECKLUND:** They wanted to get

1 the voluntary conditions added to the main motion so
 2 that they were in the record, and that was for the
 3 white noise back-up alarms and the rolling berms.
 4 **CHAIRMAN MARTIN:** Mr. Whitney.
 5 **COMMISSIONER WHITNEY:** I thought he also
 6 agreed to the changing of the processing area.
 7 **CHAIRMAN MARTIN:** No, that was in a -- an
 8 exception, and staff recommended against -- to deny.
 9 **COMMISSIONER WHITNEY:** To not approve it,
 10 and then I thought he agreed that he would go --
 11 **CHAIRMAN MARTIN:** He said, yeah, don't --
 12 he said he doesn't have a problem with that denial.
 13 **UNIDENTIFIED SPEAKER:** Did anybody make a
 14 motion on postponing?
 15 **COMMISSIONER BOKENKO-CARLUCCIO:**
 16 (Indiscernible) I will.
 17 **CHAIRMAN MARTIN:** Please.
 18 **COMMISSIONER BOKENKO-CARLUCCIO:** I move
 19 that we postpone deliberation and final vote on KPB
 20 Planning Commission Resolution 2018-23.
 21 **COMMISSIONER ABRAHAMSON-BENTZ:** Second.
 22 **CHAIRMAN MARTIN:** And to the next
 23 meeting?
 24 **COMMISSIONER BOKENKO-CARLUCCIO:** Sorry,
 25 to the next meeting.

1 **CHAIRMAN MARTIN:** Mr. Whitney.
 2 **COMMISSIONER WHITNEY:** Can we make sure
 3 that's the number 1 thing on the agenda, so if people
 4 do come to be here for that decision, that they won't
 5 have to wait around all night?
 6 **CHAIRMAN MARTIN:** Do we have to make a
 7 motion to force to you do that, Julie? Thank you.
 8 Okay, is there any discussion on the
 9 motion to postpone? Any objection? It's unanimous
 10 that we'll see you -- we'll see each other here next
 11 time.

JUNE 24, 2019

KENAI PENINSULA BOROUGH PLANNING COMMISSION

LOCATION

Betty J. Glick Assembly Chambers
George A. Navarre Administration Building
144 North Binkley Street
Soldotna, Alaska 99669

Monday, June 24, 2019
7:36 p.m.

TRANSCRIPT OF PROCEEDINGS - EXCERPT
Pages 1 - 48, inclusive

Commissioners Present:

Paulette Bokenko-Carluccio, City of Seldovia
Syverine Abrahamson-Bentz, Anchor Point/Ninilchik
Jeremy Brantley, Sterling
Cindy Ecklund, City of Seward
Dr. Rick Foster, Southwest Borough
Blair Martin, Kalifornsky Beach
Diane Fikes, City of Kenai
Virginia Morgan, East Peninsula
Robert Ruffner, Kasilof/Clam Gulch
Franco Venuti, City of Homer
Paul Whitney, City of Soldotna

Staff Present:

Max Best, Planning Director
Charlie Pierce, Kenai Peninsula Borough Mayor
Julie Hindman, Administrative Assistant
Holly Montague, Deputy borough Attorney
Bruce Wall, Planner
Scott Huff, Platting Manager

Others Present:

Eric Neely
Pete Arno
Pete Kinneen
Teresa Jacobson Gregory
Mary Trimble
Hans Bilben
Richard Carlton
James Hall
Jamie Ross
Richard Koskovich
Peter Zuyus
Blaine Gilman
Buzz Kyllonen

1 location, and the adjacent property is a prior existing
 2 use material site on the opposite side of Danver Road.
 3 And so the recommendation would be, if
 4 you choose to make that change, would be the fifth
 5 bullet point on condition No. 2 to change it to read:
 6 A 50-foot vegetated buffer adjacent to the eastern most
 7 parcel boundary and a 12-foot high berm placed near the
 8 active excavation area, except along the northern 200
 9 feet of the proposed excavation.
 10 The applicant has also volunteered this
 11 additional condition. The permittee shall not operate
 12 the material site or haul material from the site on
 13 Memorial Day weekend, Saturday through Monday; Labor
 14 Day weekend, Saturday through Monday; and the 4th of
 15 July holiday, to include Saturday and Sunday if July
 16 4th is on a Saturday, Sunday, Monday, or Friday;
 17 Saturday, Sunday and Monday if the July 4th is on a
 18 Tuesday; Saturday, Sunday, and Friday if July 4th is on
 19 a Thursday.
 20 If the Planning Commission accepts this
 21 condition, staff recommends adding the following
 22 findings to finding No. 29, and that would be E, F, and
 23 G as follows.
 24 E, the applicant has volunteered a
 25 condition that prohibits material site operation on

Page 3

1 PROCEEDINGS
 2 7:34:42 p.m.
 3 (This portion not requested)
 4 7:37:50 p.m.
 5 **CHAIRMAN MARTIN:** Hearing and seeing no
 6 requests, I'll close public comment and bring it back
 7 to staff for a report on Item E-1.
 8 **MR. WALL:** Thank you, Mr. Chairman.
 9 This is an application for a conditional
 10 land use permit for a material site in the Anchor Point
 11 area. It is located at 74185 Anchor Point Road, Parcel
 12 No. is 169-010-67. The applicant is Beachcomber, LLC.
 13 At the June 10th meeting, the Planning
 14 Commission asked staff to work with the applicant on
 15 additional volunteered conditions. The applicant also
 16 wanted a clarification to the buffer along the eastern
 17 boundary.
 18 Along the northern 200 feet of the buffer
 19 along Danver Road he's requesting a 50-foot vegetated
 20 buffer without the 12-foot high berm. This was
 21 discussed at previous meetings, but not in detail, and
 22 it was not incorporated into the conditions.
 23 Staff is in support of this because there
 24 is significant vegetation in this area. Danver Road is
 25 at a lower elevation than the material site at this

Page 5

1 holiday weekends during the summer months; F, the
 2 volunteered condition to not operate on holidays is
 3 consistent with the standard to reduce noise
 4 disturbance to adjacent properties; and G, the
 5 volunteered condition to not operate on holidays is in
 6 the best interest of the borough and the surrounding
 7 property owners because the Anchor River State
 8 Recreational Area has a significantly greater number of
 9 visitors on holidays, and several of the neighbors and
 10 Alaska State Parks has expressed concerns about noise
 11 impacts to the recreational area.
 12 The public hearing for this item was
 13 closed at your last meeting. Your packet contains the
 14 resolution that has been updated to reflect the
 15 volunteered conditions that were accepted at the last
 16 meeting. The packet also includes on page 30 a letter
 17 dated May 1st from Alaska State Parks.
 18 At the last meeting it was mentioned by a
 19 testifier that State Parks had submitted a letter. I
 20 informed the Planning Commission that we had not
 21 received the letter. Since then I have spoken to State
 22 Parks and they provided me with a copy of the letter.
 23 It evidently was lost in the mail.
 24 On page 32 through 61 are materials that
 25 were passed out at the last meeting. In your desk

Page 6

1 packet are two letters from Shirley Gruber that were
 2 mailed directly to Ms. Carluccio and Mr. Whitney after
 3 the hearing was closed.
 4 The applicant has not had an opportunity
 5 to rebut the comments mailed directly to the commission
 6 members or the letter from State Parks.
 7 The applicant may not have received all
 8 of the printed materials that were provided at the last
 9 meeting.
 10 Prior to continuing deliberation on this
 11 matter, the applicant should be given an opportunity to
 12 rebut this additional information. The applicant
 13 should also be instructed to limit his rebuttal to only
 14 those additional comments that I have mentioned.
 15 With the chair's permission I would like
 16 to address a couple of commission members to get some
 17 items clarified in the record.
 18 Mr. Ruffner, there is an article
 19 published on June 4th by KBBi that quotes you as
 20 saying, concerning material sites, "The Planning
 21 Commission doesn't have the authority to say no."
 22 Can you state for the record the context
 23 of that statement?
 24 **COMMISSIONER RUFFNER:** Sure. Through the
 25 chair. Yeah, I don't know that I can recall verbatim

Page 7

1 what the comments were or the context, but in general I
 2 would say that a number of times when material sites
 3 have come before this body, since I've been on the
 4 commission, it's been pretty clear to me that our job
 5 as commissioners is to interpret what the code is that
 6 has been laid forward from the assembly.
 7 And with respect to a denial, if a permit
 8 application comes in and it's complete and it meets the
 9 conditions that have been set forth in 21.29, then
 10 those -- and again, I'll just repeat, if those
 11 conditions are met, then we don't have the ability to
 12 deny the permit.
 13 So that's my understanding of how that
 14 is, because those elements that address the conditions
 15 are pretty specific in 21.29.050 I believe. That would
 16 be my address back to staff and to the public for
 17 clarification on those comments.
 18 **MR. WALL:** So it's my understanding that
 19 was in the context of your role as the chair of the
 20 material site work group?
 21 **COMMISSIONER RUFFNER:** Yeah. I mean, I
 22 know they called me and asked about -- KBBi that is
 23 called and asked to do an interview on that. And it
 24 wasn't specific to any one gravel pit, it was the
 25 entire suite of code that we address right now.

Page 8

1 So again, I've made very similar comments
 2 on the record for a whole host of these material sites
 3 that have come before us over the last five, six, seven
 4 years.
 5 **MR. WALL:** All right, thanks. Mr.
 6 Chairman, if I could ask Dr. Foster a question as well.
 7 At the April 22nd meeting, the applicant
 8 stated, and I'm reading from the minutes of the meeting
 9 that I recognize isn't verbatim, but it says that he
 10 met prior to the meeting with planning staff Mr. Best
 11 and Mr. Wall, and the acting chairman Dr. Foster. They
 12 made some changes to procedures and they wanted to make
 13 him aware of the changes.
 14 He listened and came away from the
 15 meeting knowing how the things would go regarding
 16 scheduling. All of the testimony would be allowed, and
 17 at the end of the public testimony they would ask for a
 18 continuance and that would be the end of the public
 19 testimony.
 20 Starting on April 22nd, the date
 21 presented by staff and Dr. Foster, that it would begin
 22 with his rebuttal, and it sounded fine, so they agreed.
 23 So I guess what I'm wondering is, as I'm
 24 reading that, Mr. Trimble's account of the
 25 conversation, it sounds like the conversation was

Page 9

1 limited to how the meeting was going to proceed. And
 2 I'm wondering if you could provide any additional
 3 clarification concerning that conversation.
 4 **COMMISSIONER FOSTER:** Thank you. Through
 5 the chair. When I arrived I had a short meeting with
 6 Mr. Best and Mr. Wall in regards to tidying up our
 7 hearing procedure. That we would begin with the chair
 8 introducing the agenda items; the staff presenting a
 9 report and staff recommendation; the No. 3, the
 10 presentation by the applicant and their
 11 representatives -- in the past we have started that way
 12 but haven't read this out as this is going to be the
 13 process -- and then 4, testimony by members of the
 14 public; 5, response by staff to any testimony that was
 15 given and an opportunity for the commission to ask
 16 questions of the staff; and then No. 6, the rebuttal by
 17 the applicant.
 18 That's something that we hadn't done
 19 regularly. And so by making this hearing procedure,
 20 setting it in stone, that then No. 7, the chairperson
 21 closes the hearing and then entertains a motion.
 22 So I read this over, I agreed to it as
 23 the acting chair. And then Mr. Trimble, I shared it
 24 with Mr. Trimble and showed him the seven steps and
 25 said, "This is where we're going to ask you to

Page 10

1 present." And that's the limit of my conversation with
2 him.

3 **MR. WALL:** Thanks. And Mr. Chairman,
4 if -- one more thing. Just for the record, we know
5 that Mr. Whitney and Ms. Carluccio has received ex
6 parte communication after the hearing was closed, and
7 it would probably be a good idea to ask the rest of the
8 commission members if there has been any additional ex
9 parte communication.

10 **CHAIRMAN MARTIN:** Ms. Carluccio.
11 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes. I
12 just want to state for the record that when I received
13 that letter, I didn't know what it was when I opened
14 it. And when I opened it and read the first line and
15 saw that it was in -- pertaining -- it was pertaining
16 to this issue, I did not read the rest of the letter,
17 but I scanned it and sent it to Julie, our secretary.

18 And the first time I got to read the
19 letter was tonight when I saw it in the desk packet.

20 **CHAIRMAN MARTIN:** Mr. Foster.
21 **COMMISSIONER FOSTER:** I received --
22 through the chair. I received that same letter and
23 brought it in and turned it in.

24 **CHAIRMAN MARTIN:** Mr. Whitney.
25 **COMMISSIONER WHITNEY:** Yeah, I received

Page 11

1 it and e-mailed it to Julie the next day, I believe it
2 was.

3 **CHAIRMAN MARTIN:** Ms. Fikes.
4 **COMMISSIONER FIKES:** I received the same
5 letter, and I turned it over to Julie. I also received
6 a phone call message for contact and I did not respond.

7 **CHAIRMAN MARTIN:** Yes, Ms. Bentz.
8 **COMMISSIONER BENTZ:** I must not check my
9 mail very often because I did not receive a letter.

10 But I did receive calls from neighbors, but just
11 related to the material site code ordinance. And I
12 reminded them that I wouldn't be able to speak to any
13 specific permits. So we just discussed the ordinance,
14 not the application of the day.

15 **CHAIRMAN MARTIN:** Mr. Ruffner.
16 **COMMISSIONER RUFFNER:** Thank you, Mr.
17 Chair. Well, if I got a letter, I didn't read it or
18 see it. So I'm trying to catch up. So maybe not
19 specifically on ex parte communication, because I don't
20 believe I've had any ex parte communication with people
21 since the hearing happened.

22 But I would say that I wasn't here for
23 the last meeting, so I did go back and listen to the
24 audio portion of the record. I listened to almost all
25 of that, most of it, and read through the minutes

Page 12

1 pretty carefully. So I'm up to speed on what happened
2 last time.

3 **CHAIRMAN MARTIN:** Thank you. Ms. Morgan.
4 **COMMISSIONER MORGAN:** I was not here the
5 last meeting, but I did listen to the audio and I read
6 the minutes, and I read the packets.

7 **CHAIRMAN MARTIN:** Thank you. Staff.
8 **MR. WALL:** Thank you, Mr. Chairman. I
9 might add that both Mr. Ruffner and Ms. Morgan did view
10 the video presentation that was done by the applicant
11 at the last meeting.

12 And in conclusion, staff recommends that
13 the Planning Commission review the application, site
14 plan, staff report, and comments received and determine
15 if the mandatory conditions contained in KPB 21.29.050
16 will be met.

17 The planning department recommends that
18 the Planning Commission amend the resolution as
19 discussed in tonight's staff report, deny the
20 processing distance waiver request, approve the
21 conditional land use permit with listed conditions, and
22 adopt the findings of fact subject to the requirements
23 contained in the full staff report. And that's the end
24 of my report.

25 **CHAIRMAN MARTIN:** Thank you. So there is

Page 13

1 a motion on the floor. Mr. Whitney.
2 **COMMISSIONER WHITNEY:** I just have a
3 procedural question. If we pull up this new resolution
4 with these changes made, is that going to open up for
5 testimony about those changes?

6 **CHAIRMAN MARTIN:** I'm not at liberty to
7 answer that. Staff?
8 **MR. WALL:** The resolution that's included
9 in your staff report are basically what you had
10 approved at the last meeting, I just put it in writing.

11 What's contained in the staff report
12 today is the applicant's response to the public
13 testimony that's been heard. So you're certainly free
14 to act on that without taking additional public
15 comments. The public has already commented and the
16 applicant has responded with an additional volunteered
17 condition.

18 And the other item concerning the buffer,
19 that's certainly within your purview to change the
20 requested buffers. That does not require additional
21 public comment.

22 **CHAIRMAN MARTIN:** Thank you. Ms.
23 Ecklund.
24 **COMMISSIONER ECKLUND:** Through the chair
25 to staff. Is discussion then allowed, or any

Page 14

1 additional amendments allowed besides the one that are
 2 new and presented tonight and the changes we made at
 3 the last meeting?
 4 **MR. WALL:** As I recall, the way that you
 5 ended the last meeting was you left it open to bring
 6 the applicant up to ask him for additional volunteered
 7 conditions as well. But you also asked me to work with
 8 the applicant in the meantime so that wouldn't all have
 9 to be hashed out here.
 10 **COMMISSIONER ECKLUND:** In the time from
 11 the last meeting it's come to my attention that there
 12 is really, like, three times of the year that the beach
 13 is inundated with people, there is three openings, and
 14 it's mentioned in the letter that you said is new for
 15 us tonight, the one on page 30.
 16 It's mentioned in there by the parks
 17 department that the saltwater and the fresh fishery
 18 opens increase traffic. So I'm just wondering, are
 19 those the same periods of time that the applicant has
 20 made amendments and agreed to? They sound like
 21 holidays, but these fishery openings, is it possible
 22 to -- I know they change every year, but there are
 23 three fisheries openings in that area and would
 24 increase public traffic.
 25 **MR. WALL:** That is certainly something

Page 15

1 that you can bring up with the applicant.
 2 **COMMISSIONER ECKLUND:** Thank you.
 3 **CHAIRMAN MARTIN:** Yes.
 4 **COMMISSIONER ECKLUND:** Is this now the
 5 time that we can talk to staff and deliberate some
 6 more?
 7 **CHAIRMAN MARTIN:** Yeah, we are in
 8 discussion.
 9 **COMMISSIONER ECKLUND:** Through the chair,
 10 back to staff --
 11 **MR. WALL:** Mr. Chairman, if I could.
 12 Again, my recommendation is to allow the applicant to
 13 rebut the additional comment -- the additional comments
 14 he had not seen at the last meeting if he wishes to do
 15 so.
 16 **CHAIRMAN MARTIN:** I think that would be a
 17 good sequence of events if Ms. Ecklund agrees.
 18 **COMMISSIONER ECKLUND:** The comments
 19 regarding the fisheries?
 20 **CHAIRMAN MARTIN:** We're going to bring
 21 the applicant up so we can -- for housekeeping get the
 22 beginning -- get us caught up in time.
 23 **COMMISSIONER ECKLUND:** Okay, yeah.
 24 **CHAIRMAN MARTIN:** Would the applicant
 25 please come to the podium. State your name and address

Page 16

1 and turn the microphone on.
 2 **EMMITT TRIMBLE:** Emmitt Trimble, Box 193,
 3 Anchor Point.
 4 My understanding regarding any rebuttal
 5 would be it would specifically deal with those -- the
 6 letter that was received, and I had some rebuttal
 7 regarding the presentation that was drawn out over a
 8 two-hour period with the -- one of the opponents
 9 sitting over here with the computer. I felt that that
 10 was something that should not have happened. We've
 11 previously rebutted those drawings and those assertions
 12 with the letter from a licensed land surveyor.
 13 Regarding the letter that came in late, I
 14 have no problem with anything there, and I'm available
 15 for any questions.
 16 **CHAIRMAN MARTIN:** Ms. Ecklund.
 17 **COMMISSIONER ECKLUND:** Through the chair.
 18 Thank you, Mr. Trimble.
 19 The letter from the Alaska Division of
 20 Parks and Outdoor Recreation, Jack Blackwell, mentions
 21 the increase of traffic during the freshwater and
 22 saltwater fisheries, and I believe those are just a few
 23 days, but three different times. Are you familiar with
 24 those fishery openings?
 25 **EMMITT TRIMBLE:** Very familiar. I've

Page 17

1 been there in that river bottom since 1975.
 2 **COMMISSIONER ECKLUND:** Okay. And --
 3 sorry, go ahead.
 4 **EMMITT TRIMBLE:** And they aren't the
 5 same. The freshwater openings vary every year. It
 6 opens around Memorial Day, sometimes it's the weekend
 7 before, sometimes weekend after. But nevertheless, on
 8 Memorial Day and on the holidays, that's when the most
 9 people are there. Right now there is -- last Saturday
 10 there was 14 people out of 186 sites.
 11 So we chose to respond to the state's
 12 concerns. And, you know, the noise is coming both ways
 13 then. But it's not in our best interest to be trying
 14 to operate in the middle of all of that.
 15 Regarding the freshwater openings -- and
 16 so the saltwater is continuous every day, but mostly
 17 it's on the weekends. So I'm open to suggestions about
 18 that, but the summertime is what we have --
 19 **COMMISSIONER ECKLUND:** Correct.
 20 **EMMITT TRIMBLE:** -- we can't not operate.
 21 But I thought it was reasonable Labor Day, Memorial
 22 Day, and the 4th of July. Particularly we have a
 23 parade down there on the 4th of July and big barbecues,
 24 and so those were the big events.
 25 **COMMISSIONER ECKLUND:** Okay. I did go

Page 18

1 down there two Saturdays ago and drove the road and saw
 2 the recreational sites, and it was a pretty quiet
 3 Saturday. I don't think there was a freshwater opening
 4 that Saturday.
 5 **EMMITT TRIMBLE:** Yes, that was when there
 6 were 14 out of 186 was --
 7 **COMMISSIONER ECKLUND:** Not just three
 8 days ago, but two weeks ago.
 9 **EMMITT TRIMBLE:** Yes, I understand. And
 10 that was on a Saturday. There were 35 last Saturday.
 11 **COMMISSIONER ECKLUND:** Okay. So on your
 12 suggested additional conditions that you would agree
 13 to, you say if the 4th is on a Thursday you would be
 14 closed Saturday, Sunday, and Friday. Is your parade on
 15 the 4th or is your parade on Friday. Because you're
 16 going to be open on the day of the parade if the 4th is
 17 Thursday.
 18 **EMMITT TRIMBLE:** I didn't discuss those
 19 clarifications of when it fell. I'm open to anything
 20 there. Certainly I don't want to be anyone trying to
 21 operate while the parade is going on. We wouldn't do
 22 that anyway. So I think that was a clarification from
 23 staff that, you know, the dates change. So we needed
 24 to address that in the staff report.
 25 **COMMISSIONER ECKLUND:** Okay. Yeah,

Page 19

1 because they are skipping the 4th on all three of those
 2 dates. So we might need to just --
 3 **UNIDENTIFIED SPEAKER:** (Indiscernible).
 4 **COMMISSIONER ECKLUND:** -- to include the
 5 4th?
 6 **MR. WALL:** Mr. Chairman, that was the
 7 intent, to include the 4th. And so if it can be
 8 construed a different way, then feel free to reword
 9 that, I think.
 10 **COMMISSIONER ECKLUND:** Okay. So it's
 11 going to include the 4th plus these three additional
 12 days around these holidays?
 13 **EMMITT TRIMBLE:** Sometimes there is a
 14 four-day weekend I guess is what he was getting to. So
 15 we would include all of that.
 16 **COMMISSIONER ECKLUND:** And I didn't ask
 17 you to make it a condition, but you seem to be
 18 agreeable or probably practical not to operate on those
 19 freshwater openings when it's crowded, or would you --
 20 **EMMITT TRIMBLE:** I would rather keep it
 21 to the holidays because there is too much uncertainty
 22 about those openings. Frankly, usually the first
 23 weekend there is hardly anyone there anyway. So I
 24 would rather keep it to the holidays.
 25 **COMMISSIONER ECKLUND:** Thank you.

Page 20

1 **EMMITT TRIMBLE:** Because we know that
 2 people will be there then regardless of the fish.
 3 **COMMISSIONER ECKLUND:** Thank you.
 4 **CHAIRMAN MARTIN:** Further discussion on
 5 the voluntary conditions? Make sure we get those all
 6 nailed down.
 7 **EMMITT TRIMBLE:** And the -- to clarify,
 8 Mr. Wall had a question regarding the back-up beepers,
 9 and he was clarifying with me that I said I was in
 10 agreement with that on my equipment. I can't govern
 11 what happens with a truck that's maybe one time going
 12 to come in there, but I would certainly try to
 13 accomplish that.
 14 It's not a big deal to deactivate the
 15 beeper without putting the other white noise machine
 16 on. So I would do everything I could to keep that down
 17 on other people's equipment.
 18 **CHAIRMAN MARTIN:** Yes.
 19 **COMMISSIONER ECKLUND:** Just another
 20 question regarding the weight. Do you know what the
 21 weight limit is on the bridge? And I know you can't
 22 use it, but what is the weight limit on the bridge?
 23 **EMMITT TRIMBLE:** I think it's 11 tons. I
 24 followed a dump truck across it with 12 yards of dirt
 25 in it the other day heading up Danver, so...

Page 21

1 **COMMISSIONER ECKLUND:** I had one follow
 2 me across the bridge last Saturday.
 3 **EMMITT TRIMBLE:** So it's not being
 4 monitored. But to answer your question, I think it's
 5 11 tons.
 6 **COMMISSIONER ECKLUND:** And a gravel truck
 7 full is more than that?
 8 **EMMITT TRIMBLE:** As far as I know it's
 9 more than that. And we, for our part, would not be
 10 going across that bridge until it's repaired.
 11 **COMMISSIONER ECKLUND:** But you are
 12 probably going to have other contractors working with
 13 you in the pit?
 14 **EMMITT TRIMBLE:** And we would require of
 15 them, that if they are going to buy gravel from us,
 16 they cannot go across the bridge until it's repaired.
 17 **COMMISSIONER ECKLUND:** Is there a
 18 timeline for those repairs, do you know?
 19 **EMMITT TRIMBLE:** I'm hoping for next
 20 summer. I'm not optimistic. I mean, you've got to
 21 build a separate bridge to tear that one down, you
 22 know, to --
 23 **COMMISSIONER ECKLUND:** Yeah. Thank you.
 24 **CHAIRMAN MARTIN:** Ms. Fikes.
 25 **COMMISSIONER FIKES:** Through the chair.

Page 22

1 Is there an area of the residential zone there or
 2 housing area that would be affected by any of the Jake
 3 brake use at all?
 4 **EMMITT TRIMBLE:** The only place someone
 5 might use a Jake brake would be on the other side of
 6 the river coming down the hill towards the bridge.
 7 You know, I'm down there all the time, my
 8 daughter lives there. I don't know that I've heard
 9 Jake brakes there. I have heard them from out on the
 10 Sterling, Old Sterling highway. And also I'd just
 11 clarify it's not a residential zone. There are
 12 residential properties there, but there is no zone.
 13 **COMMISSIONER FIKES:** Yes, I apologize,
 14 you are correct. Thank you.
 15 **CHAIRMAN MARTIN:** Any other questions for
 16 the applicant? None at this time.
 17 **EMMITT TRIMBLE:** Thank you.
 18 **UNIDENTIFIED SPEAKER:** Mr. Chairman --
 19 **CHAIRMAN MARTIN:** I don't -- this isn't
 20 part -- this isn't part of the plan.
 21 **UNIDENTIFIED SPEAKER:** I realize it isn't
 22 (indiscernible).
 23 **CHAIRMAN MARTIN:** And if -- you're not
 24 even -- this is not part of the procedure, sir. We
 25 have -- we're in discussion at this point and we

Page 23

1 brought up some information by request.
 2 **UNIDENTIFIED SPEAKER:** (Indiscernible).
 3 **CHAIRMAN MARTIN:** No, by -- these people
 4 requested.
 5 **UNIDENTIFIED SPEAKER:** They did
 6 (indiscernible).
 7 **CHAIRMAN MARTIN:** What say you, Ms.
 8 Ecklund?
 9 **COMMISSIONER ECKLUND:** I have a question
 10 for staff through the chair.
 11 On page 124 of our packet No. 2, which
 12 has 600-some pages, is the letter we received, not
 13 quite -- there is so many packets on my iPad right now
 14 I'm not sure which one. But it's the one from the
 15 Alaska Department of Transportation & Public Facilities
 16 that is, like, giving us direction, giving the borough
 17 direction.
 18 And I will say the pictures that were
 19 presented to us at the last meeting in public testimony
 20 showed the road, they were black and white.
 21 But I drove that road, as I said, two
 22 Saturdays ago, and I can't imagine what that road is
 23 going to turn into with a large amount of heavy trucks
 24 going over it. It's very narrow, it is cracked all
 25 over, especially along the edges and tried to be

Page 24

1 patched like their edges are already falling off the
 2 sides of the road.
 3 So I spoke to Planning Director Best and
 4 asked if there had been any followup, because at the
 5 meeting, Mr. Wall, you stated that the borough would
 6 not be doing any repairs as the Department of
 7 Transportation and Public Facilities requested.
 8 Is there anyplace in the borough code
 9 that talks about what happens to a state maintained
 10 road when we approve something to happen on it that
 11 then makes it a bad shape, in bad repair? Who is
 12 responsible to repair that?
 13 **MR. BEST:** Thank you, through the chair,
 14 Ms. Ecklund. There is nothing in borough code that
 15 would require an applicant or somebody utilizing the
 16 road to repair it, a state road especially. The code
 17 talks about borough roads and any borough ownership of
 18 those roads.
 19 The -- that responsibility lies with the
 20 state. If they want to impose weight restrictions,
 21 axle load limits on a road in disrepair, they certainly
 22 have that ability, like they do in the spring, signage.
 23 Like I said, load limits and those kind of things, they
 24 have the tools to do that if they felt that was
 25 necessary on that road.

Page 25

1 **COMMISSIONER ECKLUND:** Thank you.
 2 **CHAIRMAN MARTIN:** Mr. Bentz.
 3 **COMMISSIONER BENTZ:** Followup question
 4 for staff regarding roads.
 5 We did receive testimony that, "Wouldn't
 6 it have to be approved by the state DNR through the
 7 State Parks since that road was originally granted as
 8 easement through the State Parks for DOT as well?"
 9 I just remember there being some
 10 combination of State Parks/DOT relationship with that
 11 road building.
 12 **MR. WALL:** It is complicated. I did look
 13 into that a little bit today. I believe that DOT does
 14 have an easement for that to do all the work they need.
 15 From my previous conversations with DOT,
 16 the major limiting factor was the adjacent wetlands and
 17 encroaching upon, like, the adjacent private property.
 18 There just isn't much room to work in there. So it was
 19 more of a physical restraint rather than the legal
 20 restraint.
 21 **CHAIRMAN MARTIN:** Mr. Whitney.
 22 **COMMISSIONER WHITNEY:** A followup on that
 23 earlier question on weight limits.
 24 Who would trigger that with DOT? Would
 25 it be a complaint from the borough? Would it be a

Page 26

1 complaint from property owners in the area or people
 2 using the road or even parks department?
 3 **MR. BEST:** Through the chair, Mr.
 4 Whitney. I believe it could be anybody that could make
 5 the complaint. But it would be up to DOT to do an
 6 analysis of it to decide if there should be some sort
 7 of load limit on there.
 8 **COMMISSIONER WHITNEY:** Thank you.
 9 **CHAIRMAN MARTIN:** Mr. Ruffner.
 10 **COMMISSIONER RUFFNER:** Thank you, Mr.
 11 Chair. So I think to get us on to the crux of what
 12 we're working on here, I would move to amend our motion
 13 by substitution. And the substitution would include
 14 the resolution that is in our electronic packet
 15 starting on page 22 of 173 and continuing through 29 of
 16 173.
 17 **COMMISSIONER BENTZ:** Second.
 18 **COMMISSIONER RUFFNER:** And then I can
 19 speak a little bit just to the substitution.
 20 So this substitution amendment renumbers
 21 a number of sections to have it make sense. There are
 22 a couple of substantial -- or maybe not substantial
 23 changes, but the additions are in red that included the
 24 voluntary conditions that were worked on and agreed
 25 upon by the applicant and staff.

Page 27

1 And also makes some changes and clarifies
 2 the permit conditions themselves with respect to a
 3 change in the height of the berm specifically along one
 4 of the streets. So that's -- and this was all covered
 5 by the staff in their staff report. So that's what
 6 this amendment accomplishes.
 7 **CHAIRMAN MARTIN:** Mr. Wall.
 8 **MR. WALL:** Just for clarification. The
 9 resolution on the page numbers that Mr. Ruffner just
 10 referred to does not include the conditions that has
 11 been volunteered since the last meeting. And the
 12 clarification on the buffer along Danver Road as
 13 contained in today's staff report, that would need to
 14 be --
 15 **CHAIRMAN MARTIN:** A separate motion?
 16 **MR. WALL:** -- an additional motion to
 17 amend that.
 18 **CHAIRMAN MARTIN:** So we can deliberate
 19 and vote on the motion now and then add to that, it
 20 would be simpler. Further discussion on the motion?
 21 Ms. Bentz.
 22 **COMMISSIONER BENTZ:** Question for staff
 23 through the chair.
 24 On page 27 of our packet, the permit
 25 conditions, there is language change on condition No. 2

Page 28

1 about buffers. And the language that was replaced was
 2 "between the vegetated buffer" and replaced with
 3 "placed near the active extraction area." Can you
 4 explain that language change for three bullet points in
 5 condition 2?
 6 **MR. WALL:** Yes, and that was me trying to
 7 get it into words what the applicant was volunteering
 8 concerning the rolling berm or the moving berm.
 9 The way that it was previously written,
 10 he could put that berm anywhere between the property
 11 boundary and the excavation. This limits him to
 12 placing the berm near the active excavation area.
 13 So as the -- as he progresses with the
 14 active excavation area, he would need to move the berm.
 15 So it would be moving or rolling, as he's referred to
 16 it.
 17 **CHAIRMAN MARTIN:** Further discussion? Is
 18 there any opposition to the motion? Hearing and seeing
 19 none, the motion passes, the amendment passes.
 20 I'll entertain a motion on the other
 21 amendment Mr. Wall discussed.
 22 (Whispered discussion-indiscernible).
 23 **COMMISSIONER RUFFNER:** I think there is a
 24 little discussion, I want to be careful about that. So
 25 the only discussion that's happening up here is that we

Page 29

1 just need a little clarification, Mr. Wall, on the --
 2 where we can find -- is it -- I think there are two --
 3 are there two additional changes or just one additional
 4 change that was not in the substitute language?
 5 **MR. WALL:** Yes, and I apologize. And
 6 some of that I did kind of a blue line/red line thing,
 7 and the other part I didn't. So let me clarify that.
 8 On condition 2, I'm proposing that the
 9 fifth bullet point be changed to a 50-foot vegetated
 10 buffer adjacent to the eastern most parcel boundary and
 11 a 12-foot high berm placed near the active extraction
 12 area except along the northern 200 feet of the proposed
 13 excavation. So that takes care of the first issue
 14 concerning the buffer along Danver.
 15 The --
 16 **COMMISSIONER BOKENKO-CARLUCCIO:** I'm
 17 sorry, I'm sorry, Mr. Chairman, I'm a little lost. I
 18 don't know -- he said Item 2, and now I don't know
 19 where he is.
 20 **MR. WALL:** Okay, and I'm referring to
 21 today's staff report, the two-page staff report,
 22 condition No. 2.
 23 **COMMISSIONER BOKENKO-CARLUCCIO:** On
 24 page -- on what page?
 25 **COMMISSIONER ECKLUND:** 27 of 173.

Page 30

1 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{15.1?}
2 **COMMISSIONER ECKLUND:** This is 15.1. But
3 on the packet it gives permit conditions.
4 **COMMISSIONER BOKENKO-CARLUCCIO:** And
5 that's on page 27?
6 **COMMISSIONER ECKLUND:** Where the change
7 is.
8 **COMMISSIONER BOKENKO-CARLUCCIO:** So,
9 okay, permit conditions on page 27 of 173 and 15.1 of
10 173?
11 **MR. WALL:** Yeah. So on the resolution
12 that's contained in your staff report -- I mean, in the
13 packet, you're changing the fifth bullet point -- I'm
14 proposing changing the fifth bullet point on condition
15 2 on page 27.
16 **COMMISSIONER RUFFNER:** Through the chair.
17 Is that the only additional change?
18 **MR. WALL:** Mr. Chairman, Mr. Ruffner, the
19 second change is in the staff report on that page 15.1.
20 And it would be all of the text under 22, and 29 E, F,
21 and G contained in the staff report. The 29 E, F, and
22 G would be the findings to support the additional
23 condition No. 22.
24 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Do you}
25 think you can --

Page 31

1 **CHAIRMAN MARTIN:** Mr. Ruffner.
2 **COMMISSIONER RUFFNER:** Thank you, Mr.
3 Chair. Just -- I know that we're all trying, trying to
4 follow along here. But I think I've got it, so I'll
5 try this and staff can correct me if it's not the right
6 intent.
7 But I think there are three more changes
8 that we might consider, and I think taking them one at
9 a time probably makes the most sense. So I'll put the
10 first one out there for discussion.
11 So in the fifth bullet point are the
12 resolution that we now have in front of us.
13 On condition No. 2, we would be
14 changing that bullet point to read, "A 50-foot
15 vegetated buffer adjacent to the eastern most parcel
16 boundary and a 12-foot high berm placed near the active
17 extraction area, except along the northern 200 feet of
18 the proposed excavation, period."
19 So that is a motion to amend our
20 resolution, to include that condition, permit
21 condition.
22 **COMMISSIONER BENTZ:** Second.
23 **CHAIRMAN MARTIN:** Discussion. Ms.
24 Carluccio.
25 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Why are}

Page 32

1 we excluding the 200 feet to the north?
2 **MR. WALL:** Mr. Chairman, Ms. Carluccio.
3 That is an area that has some significant vegetation.
4 The applicant felt like a 12-foot berm would be
5 redundant, particularly since the property sits at a
6 higher elevation than the adjacent road. The adjacent
7 road is quite a bit lower right there.
8 And the adjacent property across the
9 street on Danver is a prior existing use material site.
10 Generally the commission doesn't require a buffer
11 between material sites.
12 But then also the idea behind that, I
13 think what the applicant was getting at with that is
14 that that gives him additional gravel to extract in
15 that area that's more hidden from the neighbors. And
16 so if he can extract more gravel from that area that's
17 hidden from the neighbors, that would mean less gravel
18 that he would have to extract elsewhere potentially.
19 **CHAIRMAN MARTIN:** Ms. Ecklund.
20 **COMMISSIONER ECKLUND:** I'm not -- through
21 the chair to staff, and I'm not sure that you have this
22 dimension.
23 But when I drove down Danver, the first
24 200 feet is -- their access road is within there, and
25 you can see into the upper level as you said, an upper

Page 33

1 level area of gravel.
2 And at some point along Danver is a big
3 high berm, the downed trees and the stuff that was just
4 pushed off so that they could get to the gravel.
5 Do you know, is that berm within that 200
6 feet? It seemed rather close to the Anchor Point Road
7 up Danver.
8 **MR. WALL:** That berm would not be within
9 the 200 feet. The 200 feet would end where the denser
10 vegetation ends.
11 **COMMISSIONER ECKLUND:** Okay. There is a
12 berm somewhere along there, and you're right, it could
13 be more than 200 feet, and then there is an area where
14 there is no vegetation along Danver Road where you
15 could see out to the fenced horse area. Is that area 2
16 or area 3 that I saw?
17 I'm just trying to find out where the
18 buffer is along there. I know that's not what we're
19 talking about right now, but I just -- the berm is
20 passed the 200 feet, and then the area where you can
21 see the horse pasture is past the 200 feet?
22 **MR. WALL:** That's correct.
23 **CHAIRMAN MARTIN:** Ms. Carluccio.
24 **COMMISSIONER BOKENKO-CARLUCCIO:** ^{Yes.}
25 With all these pages, can you direct us to a page that

Page 34

1 we could visually see what you're talking about?
 2 **MR. WALL:** Give me a minute.
 3 **COMMISSIONER BENTZ:** Mr. Chair, I would
 4 suggest looking at page 190 of Volume 2, or --
 5 **MR. WALL:** And I apologize, my numbering
 6 is different than what you have, so give me a minute to
 7 catch up with you.
 8 **CHAIRMAN MARTIN:** Mrs. Carluccio, did you
 9 find the page that Ms. Bentz is suggesting?
 10 **COMMISSIONER BOKENKO-CARLUCCIO:**
 11 Actually, Ms. Ecklund did, and that's not really what I
 12 had in mind. I was thinking about a --
 13 **CHAIRMAN MARTIN:** Photograph.
 14 **COMMISSIONER BOKENKO-CARLUCCIO: --**
 15 actual photograph, an aerial view.
 16 **MR. WALL:** Yeah, I have in front of me
 17 the picture that you're looking for. I just need to
 18 find it, what the page number is in your packet. I'm
 19 being told that it's page 420.
 20 **COMMISSIONER BOKENKO-CARLUCCIO:** Of
 21 Volume 2? It can't be, I only have --
 22 **MR. WALL:** Okay, so there is the prior
 23 existing use material site is the pond on the opposite
 24 side of Danver. And immediately west of that pond is
 25 the vegetation that I'm talking about that's fairly

Page 35

1 dense in there. And that's the portion that he is
 2 proposing to eliminate the 12-foot high berm.
 3 Then on a couple of pages after that is
 4 some contour lines that might help visualize that as
 5 well. That would be page -- is there a number there?
 6 **UNIDENTIFIED SPEAKER:** 423.
 7 **CHAIRMAN MARTIN:** Yeah, 423.
 8 **MR. WALL:** And so there are some contour
 9 lines there that shows that the road is at a lower
 10 elevation there. You can see that the adjacent
 11 property is at about a 24-foot elevation, and where
 12 those trees are it's about a 44-foot elevation.
 13 **CHAIRMAN MARTIN:** Ms. Ecklund.
 14 **COMMISSIONER ECKLUND:** If you're looking
 15 at that page, the area I was talking about where there
 16 is no vegetated buffer is along Danver Road to the
 17 south where you don't see any trees.
 18 How do you get a vegetated -- 50-foot
 19 vegetated buffer? Are we talking grass land?
 20 **MR. WALL:** Yes, there are some trees in
 21 that area. They are pretty sparse. So yes, it does
 22 not provide a lot of screening. So yeah, most of that
 23 is going to be grass.
 24 **COMMISSIONER ECKLUND:** And that's --
 25 **MR. WALL:** So that's why a 12-foot berm

Page 36

1 is being recommended there in addition to that 50-foot
 2 vegetation.
 3 **COMMISSIONER ECKLUND:** Thank you.
 4 **CHAIRMAN MARTIN:** Further discussion on
 5 the amendment? Ms. Carluccio, you have your
 6 microphone.
 7 **COMMISSIONER BOKENKO-CARLUCCIO:** Sorry.
 8 **CHAIRMAN MARTIN:** Is there any opposition
 9 to the motion for amendment? Hearing and seeing none,
 10 the motion passes unanimously. Further discussion on
 11 the main motion? Mr. Ruffner.
 12 **COMMISSIONER RUFFNER:** Thank you, Mr.
 13 Chair. So we'll take the second proposed volunteered
 14 condition. So this would be No. 22.
 15 Permittee shall not operate the material
 16 site or haul material from the site on Memorial Day
 17 weekend, Labor Day weekend, and the 4th of July
 18 holiday. And the specifics of how those fall with
 19 respect to the Tuesday through Thursday is spelled out
 20 in three bullet points on page 151 of -- or 15.1 of
 21 173. So I'd make that amendment.
 22 **COMMISSIONER FOSTER:** Second.
 23 **CHAIRMAN MARTIN:** It's been moved and
 24 seconded. Discussion?
 25 **COMMISSIONER ECKLUND:** Add findings?

Page 37

1 **COMMISSIONER BENTZ:** Do we need to attach
 2 the findings?
 3 **COMMISSIONER RUFFNER:** Yes, and I'll add
 4 to my amendment then, too. Attach the following
 5 findings, 29 E, the applicant has volunteered the
 6 condition, a condition that prohibits material site
 7 operations on holiday weekends during the summer
 8 months; and F, a volunteered condition to not operate
 9 on holidays as consistent with the standard to reduce
 10 noise disturbance to adjacent properties; and G, the
 11 volunteered condition to not operate on holidays in the
 12 best interest of the borough and the surrounding
 13 property owners because of the state recreational area
 14 has a significant greater number of visitors on those
 15 holidays, and several of the neighbors and Alaska State
 16 Parks has expressed concerns about noise impacts to the
 17 recreational area.
 18 **CHAIRMAN MARTIN:** Does the maker of the
 19 second concur?
 20 **COMMISSIONER FOSTER:** Yes.
 21 **CHAIRMAN MARTIN:** Now we can discuss. Is
 22 there any opposition to the motion? Hearing and seeing
 23 none, that motion passes.
 24 Yeah, we're discussing the main motion as
 25 amended. Ms. Ecklund.

Page 38

1 **COMMISSIONER ECKLUND:** Through the chair
2 to staff. This is the main motion on approving this
3 material site permit.
4 Staff, is the area around this gravel
5 pit, would it have been sufficient area for a local
6 option zoning had they done that prior to this permit?
7 **MR. WALL:** Yes. All that's required for
8 a local option zone is 12 contiguous lots.
9 **COMMISSIONER ECKLUND:** Okay. Thank you
10 followup, sorry.
11 **CHAIRMAN MARTIN:** Yes.
12 **COMMISSIONER ECKLUND:** Would the
13 recreational, the state recreational -- no, I'm getting
14 a head shake from Mr. Best. So it would be 12
15 privately owned lots?
16 **MR. WALL:** Yeah, the code deals with
17 similarly sized lots. And so I would believe that
18 would exclude the state recreational areas, because
19 they would need to be similarly sized lots and similar
20 uses.
21 **COMMISSIONER ECKLUND:** And then they
22 could have -- I know it's after the fact, but yeah,
23 just wanted to know if it was even a possibility ever
24 in their life.
25 **CHAIRMAN MARTIN:** Ms. Carluccio.

Page 39

1 **COMMISSIONER BOKENKO-CARLUCCIO:** I was
2 going to say actually I don't think so, because even if
3 they did an LOR, it wouldn't necessarily include Mr.
4 Trimble's property. And so the LOR wouldn't have
5 affected this anyway, would it?
6 **MR. WALL:** That is correct. Under the
7 current ordinance, the -- because, again, the parcel
8 sizes need to be similarly sized, they could not
9 include Mr. Trimble's property within that local option
10 zone. It would be limited to 12 contiguous similarly
11 used lots, residential lots.
12 **CHAIRMAN MARTIN:** Ms. Carluccio.
13 **COMMISSIONER BOKENKO-CARLUCCIO:** Yes, one
14 other question. And once again, I'm not sure where it
15 was, but did Mr. Trimble at some point indicate what --
16 how much gravel he was planning to move on a yearly
17 basis, or how much he was planning to excavate?
18 **MR. WALL:** Mr. Chairman, Ms. Carluccio.
19 The application states up to 50,000 cubic yards. In
20 previous hearings he indicated that he really has no
21 intentions of going that high. It would probably be
22 much smaller. That is just the number that he used,
23 because anything beyond that requires bonding with the
24 state.
25 **COMMISSIONER BOKENKO-CARLUCCIO:** But in

Page 40

1 effect, he could excavate that much, move that much
2 gravel in a year.
3 And I guess through the chair, another
4 question I have is if he, in fact, sold this property,
5 would the conditional use go with the property?
6 **MR. WALL:** Yeah, the first question is
7 yes. He certainly could excavate the 50,000 cubic
8 yards, if this permit is approved, per year.
9 And yes, the permit does carry with the
10 land. It doesn't -- it's not tied to the owner, it's
11 tied to the land.
12 **COMMISSIONER BOKENKO-CARLUCCIO:** So just
13 one final followup. Even if he says that he doesn't
14 intend to move 50,000 in a year, but he, in fact, sold
15 the property, then it still would be open for up to
16 50,000?
17 **MR. WALL:** That's correct.
18 **COMMISSIONER BOKENKO-CARLUCCIO:** But --
19 through the chair. But all of these other conditions
20 that we've put on it today would remain in effect?
21 **MR. WALL:** That is correct.
22 **COMMISSIONER BOKENKO-CARLUCCIO:** Thank
23 you.
24 **CHAIRMAN MARTIN:** Are you ready to vote?
25 Ms. Bentz?

Page 41

1 **COMMISSIONER BENTZ:** Thanks, through the
2 chair. I guess in deliberations, I just remind all the
3 commissioners, if there is any other conditions or
4 modification to the conditions that we have laid before
5 us that would facilitate a reduction in negative
6 secondary impacts of this material site going in, we
7 did briefly talk about the rolling berm and how it
8 would be more or less effective based on the approach
9 to extraction, whether it was going from east to west
10 towards neighboring residences or from north to south,
11 and just trying to think about the practicality of that
12 rolling berm and having it march ahead of any
13 excavation so that it was reducing that sight angle or
14 reducing that potential dust or noise barrier as it
15 went.
16 So I think that's just a concept that I
17 haven't seen a lot before in other material sites, and
18 just curious if other commissioners have any opinions
19 about that, or the practicality of that?
20 **CHAIRMAN MARTIN:** Mr. Ruffner.
21 **COMMISSIONER RUFFNER:** Well, I'll just
22 kind of redirect to staff. I think that, you know,
23 that we did include that in that first amendment by
24 substitution, that the applicant had volunteered to
25 utilize that technique.

Page 42

1 And so it seems to make sense, you know,
 2 in this case, and because of the sight angles that you
 3 mentioned, but in other cases, than just the
 4 practicality of being able to extract material if
 5 you're removing the stuff you don't want, which is on
 6 top, and just kind of keep stacking it and moving it as
 7 you go, that keeps the greatest distance of a buffer
 8 between you rather than, you know, push it all out at
 9 the beginning, build your berm way out at the end and
 10 work to supply the material.
 11 And particularly in large sites it seems
 12 like it would make a lot of sense to apply that in the
 13 future as well. I think that's what you were asking.
 14 **CHAIRMAN MARTIN:** Mr. Foster.
 15 **COMMISSIONER FOSTER:** I have a question
 16 for staff. With these berms, do they ever put in
 17 alder, just so the alder will take off on these earthen
 18 berms, or they just generally cut down a bunch of trees
 19 and drag them over and make it kind of biomass and
 20 dirt? How -- what do we consist of an earthen berm and
 21 what can we put on as additional conditions on that?
 22 **MR. WALL:** I don't think the code really
 23 allows any additional conditions on that. It's assumed
 24 that it's going to be an earthen berm. Typically
 25 that's what I see with material sites, is an earthen

Page 43

1 berm with perhaps some woody debris in there from the
 2 clearing, but usually that stuff just gets in the way.
 3 So there is usually not a lot of woody debris in there.
 4 And then if that berm stays in place for
 5 quite some time, then vegetation will naturally start
 6 growing on it, such as alders. But that would not seem
 7 practical in this case where they are going to be
 8 moving the berm periodically.
 9 **CHAIRMAN MARTIN:** Further discussion?
 10 Ms. Carluccio.
 11 **COMMISSIONER BOKENKO-CARLUCCIO:** And as
 12 far as this goes, that we do have a reclamation plan in
 13 place? Or is it just up to Mr. Trimble?
 14 **MR. WALL:** There is a reclamation plan
 15 included with the application that meets the code
 16 requirements, yes.
 17 **COMMISSIONER BOKENKO-CARLUCCIO:** And the
 18 code requirements are?
 19 **MR. WALL:** The exhausted areas exceeding
 20 five acres in size needs to be reclaimed with four feet
 21 of soil and revegetated -- four inches of soil and
 22 revegetated. And the slopes need to be 2-to-1 slope so
 23 there aren't any steep slopes.
 24 **CHAIRMAN MARTIN:** Please.
 25 **COMMISSIONER BOKENKO-CARLUCCIO:** And what

Page 44

1 is the borough's history on following up on
 2 reclamations of other sites?
 3 **MR. WALL:** Each year I do go and do an
 4 inspection of each of the permitted material sites and
 5 take note of what areas are in need of reclamation, and
 6 if they haven't been keeping up, I do follow up with
 7 them.
 8 The current language of the code is a
 9 little bit problematic with that because it talks about
 10 exhausted areas, and so that's a little bit subjective.
 11 But if an area is obviously exhausted, then I do follow
 12 up and require the reclamation take place.
 13 **COMMISSIONER BOKENKO-CARLUCCIO:** And is
 14 there something in the code or some way to follow up
 15 if, in fact, they don't reclaim?
 16 **MR. WALL:** Yes, there are provisions in
 17 the code for enforcement of the ordinance, particularly
 18 concerning reclamation. That would involve sending out
 19 an enforcement notice, scheduling a hearing with a
 20 hearing officer. And the fines are typically \$300 a
 21 day, plus the hearing officer can take additional
 22 action concerning -- requiring the reclamation and
 23 revoking the permit.
 24 **COMMISSIONER BOKENKO-CARLUCCIO:** So, in
 25 effect, you actually can revoke a permit if they don't

Page 45

1 follow the guidelines?
 2 **MR. WALL:** Yes, absolutely.
 3 **COMMISSIONER BOKENKO-CARLUCCIO:** And
 4 through the chair -- you're very lenient, thank you.
 5 **CHAIRMAN MARTIN:** It's your meeting.
 6 **COMMISSIONER BOKENKO-CARLUCCIO:** And how
 7 much time do they have? I mean, when you send out a
 8 letter and a notice, are we talking weeks, months,
 9 years?
 10 **MR. WALL:** I'm probably a little too
 11 generous in working with some of these people, giving
 12 them more time than I should. The idea is to get
 13 compliance with it, get them to be in compliance and
 14 help them determine the time frame that works with
 15 them. But no, we're not talking about years, we're
 16 talking about months.
 17 **COMMISSIONER BOKENKO-CARLUCCIO:** Okay,
 18 thank you.
 19 **CHAIRMAN MARTIN:** Mr. Venuti.
 20 **COMMISSIONER VENUTI:** Question for staff
 21 through the chair. Mr. Wall, would reclamation require
 22 bonding?
 23 **MR. WALL:** The way that the code is
 24 currently written is if a material site in the borough
 25 is exempt from the state bonding requirements, we also

1 exempt it from our bonding requirements. Anything that
 2 is excavating -- that has a total disturbed area of
 3 less than five acres is exempt from the state bonding
 4 requirement.
 5 So if they start reclaiming land after
 6 they have disturbed five acres, then no, we would never
 7 require bonding under the current code.
 8 **COMMISSIONER VENUTI:** Can we make bonding
 9 a condition?
 10 **MR. WALL:** The ordinance specifically
 11 exempts it if they were exempt from the state bonding
 12 requirements.
 13 **COMMISSIONER VENUTI:** Thank you.
 14 **CHAIRMAN MARTIN:** Anyone else? Roll
 15 call, please.
 16 **THE CLERK:** This is to approve a
 17 conditional land use permit application for
 18 Beachcomber, LLC, Resolution 2018-23 that's been
 19 amended.
 20 Venuti?
 21 **COMMISSIONER VENUTI:** Yes.
 22 **THE CLERK:** Morgan.
 23 **COMMISSIONER MORGAN:** Yes.
 24 **THE CLERK:** Foster?
 25 **COMMISSIONER FOSTER:** Yes.

1 **THE CLERK:** Carluccio?
 2 **COMMISSIONER BOKENKO-CARLUCCIO:** No.
 3 **THE CLERK:** Bentz?
 4 **COMMISSIONER BENTZ:** Yes.
 5 **THE CLERK:** Whitney?
 6 **COMMISSIONER WHITNEY:** No.
 7 **THE CLERK:** Ruffner?
 8 **COMMISSIONER RUFFNER:** Yes.
 9 **THE CLERK:** Fikes?
 10 **COMMISSIONER FIKES:** Yes.
 11 **THE CLERK:** Ecklund?
 12 **COMMISSIONER ECKLUND:** Yes.
 13 **THE CLERK:** Martin?
 14 **CHAIRMAN MARTIN:** Yes.
 15 **THE CLERK:** 8 to 2.
 16 **CHAIRMAN MARTIN:** The motion carries.
 17 And I would like to thank you every member of the
 18 public who came and did their research and participated
 19 in the process. It's not a pretty one, but it's the --
 20 it's better than a lot of the alternatives. So I just
 21 want to express my thanks for you participating in this
 22 way.
 23 8:40:03.

Case No. 2019-01-PCA

HEARING OFFICER DECISION AND ORDER

I. INTRODUCTION

The undersigned hearing officer held a hearing in the above-titled appeal on October 30, 2019. Appellant Hans Bilben (“Appellant”) appealed the Kenai Peninsula Borough Planning Commission’s (“Commission”) approval of Beachcomber, LLC’s (“Applicant”) application for a conditional land use permit (“CLUP” or “material site permit”) for a material site on KPB Parcel 169-010-67. Twenty-nine individuals joined

Appellant's Opening Statement.¹ Pete Kineen filed a separate Opening Statement. The Kenai Peninsula Borough ("Borough") and the Applicant each filed Opening Statements.

After careful review and consideration of the Record, the legal arguments presented by the parties and their representatives both at the hearing and in writing, and applicable law, the undersigned hearing officer finds that the Commission's findings of fact are supported by substantial evidence and that due consideration is warranted to the Commission's legal interpretations of the Borough Code ("Code"). The Commission's decision to approve the Application is therefore upheld.

II. PROCEDURAL AND FACTUAL BACKGROUND

On June 4, 2018, Applicant filed an application with the Kenai Peninsula Borough for a conditional land use permit to extract peat, sand and gravel from its property (the "Application").² Beachcomber also owns the property on which the proposed material site would be located, 74185 Anchor Point Road (KPB Tax Parcel 169-010-67), an irregularly shaped parcel of 41.72 acres. The site plan and associated documents attached to the Application stated that extraction would be limited to the eastern 27.7 acres of the parcel and that the site haul route would be via Denver Street, a Borough maintained road, to Anchor Point Road.

This is the second appeal regarding this Application. The first time the Commission considered the Application in 2018, the Commission denied the

Bruce, Steve Thompson, Lynn Whitmore, Donald and Lori Horton, James Gorman, Linda Stevens, Gary and Eileen Sheridan, Thomas J. Brook, and Joshua and Christine Elmaleh.

² R. 1-10.

Application, which led Applicant to an appeal. A hearing officer reviewed the matter on appeal and remanded the case back to the Commission with instructions to conduct additional fact hearings and draft more detailed findings in support of their decision.³

In 2019, the Commission considered the Application again at public meetings on March 25, April 8, April 22, June 10, and June 24, 2019. The Commission heard public comments at the June 10 meeting.⁴ At the final meeting on June 24, 2019, the Commission reversed its earlier decision and voted to approve the Application via Resolution 2018-23.⁵ Resolution 2018-23 contains 30 findings of fact and 22 permit conditions.⁶

III. STANDARD OF REVIEW

Pursuant to the Kenai Peninsula Borough Code of Ordinances (“KPB”), the following three standards apply to an appeal of the Commission’s decision:

1. The hearing officer may exercise independent judgment on matters that relate to the interpretation or construction of ordinances or other provisions of law; however, due consideration shall be given to the expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21.
2. The hearing officer shall defer to the judgment of the planning commission regarding findings of fact if they are supported in the record by substantial evidence.
3. The hearing officer may revise and supplement the planning commission's findings of fact. Where the hearing officer decides that a finding of fact made by the planning commission is not supported by substantial evidence, the hearing officer may make a different finding on the factual issue, based upon the evidence in the record developed before the planning commission if it concludes a different finding was supported

³ R. 276-291.

⁴ T. 116-187.

⁵ T. 200.

⁶ R. 247-252.

by substantial evidence, or may remand the matter to the planning commission as provided in KPB 21.20.330(B).⁷

The above standards both define and limit a hearing officer's authority.

IV. FINDINGS AND DECISION

After reviewing the record, statements of the parties, oral presentations at the hearing, and the relevant law, it is my determination as the hearing officer for this appeal that the Commission acted within the scope of its authority in approving the Application. Due consideration must be given to the Commission's expertise and experience in interpreting KPB titles 20 and 21, and the additional facts presented at the Commission's 2019 public meetings on this Application provide the evidence to support the Commission's findings of fact, and for these reasons the Commission's decision is upheld.

A. Appellant's Procedural Claims

Appellant's Opening Statement first raises two procedural issues – arguing that Commissioner Ruffner should have been disqualified for bias pursuant to KPB 21.20.240, and that the Commission improperly failed to allow public comment towards the end of the series of public meetings.⁸ Neither claim has merit. KPB 21.20.240 concerns conflicts of interest for hearing officers and does not apply to Commission members. No Code provision specifically prohibits bias in Commission decision-making, but even if such a prohibition could be read into the Code as a whole, the outcome of the Commission's vote on this Application did not turn on one vote. If

⁷ See KPB 21.20.320

⁸ R. 862 – 865.

Commissioner Ruffner should have been excused from deliberating and voting on the Application on the basis of bias, the final vote tally was eight “yes” votes to two “no” votes,⁹ and therefore removing Commissioner Ruffner’s “yes” vote would not have changed the outcome of the vote.

Appellant also argues that it was unfair for the Commission to allow Applicant to respond to public comments after the public comments on the Application were closed.¹⁰ The bulk of the public comments on this Application were heard in the June 10, 2019 meeting, at the conclusion of which public comments were closed and deliberations on the Resolution were postponed.¹¹ At the June 24, 2019 meeting, Applicant responded to some of the comments and answered questions from the Commission.¹²

Appellant does not cite any Code provision in support of the argument that this sequence of events is unfair. Appellant does point to language in the Planning Commission Manual, which provides that if the Commission allows new testimony in the Applicant’s rebuttal, the Commission “may...take additional public comment regarding the new evidence.”¹³ However, this language is permissive (using the term “may”), and therefore does not require the Commission to take additional public comment on rebuttal testimony. More broadly, a fair proceeding is one where participants in a government process receive the “opportunity to be heard and the right to adequately

⁹ T. 200.

¹⁰ R. 863-865.

¹¹ T. 150, 159.

¹² T. 192-194.

¹³ R. 864.

represent one's interests".¹⁴ The opportunity to be heard does not necessarily include the right to comment on every detail of a proposed activity, only adequate and reasonable. The record indicates that the individuals in opposition to the Application's approval had at least two different opportunities to present their concerns: through written comments and in person comments at the June 10 meeting. There was no unfairness perpetrated as a result of allowing Applicant to briefly make follow-up comments.

Pete Kineen, in his Opening Statement in support of remanding the Commission's decision, also alleges procedural errors that include prosecutorial misconduct and other unspecified misconduct related to the Borough's influence over the Commission members' decision-making.¹⁵ Neither claim is supported by the evidence in the record. An application for a conditional land use permit is not a criminal matter and the Commission does not have any authority to enforce criminal provisions of the Borough Code. As for other improper conduct, Mr. Kineen's opening statement provides scant detail as to the nature of the Borough's alleged influence. Absent specific details, the hearing officer has no facts on which to review these claims.

B. Appellant's Substantive Claims

Appellant makes three arguments against the Commission's decision to approve the Application: (1) the Commission should have made its decision within the context of an interpretation of the Code that the Commission has the authority to disapprove a

¹⁴ See *Keyes v. Humana Hospital Alaska, Inc.*, 750 P.2d 343, 353 (Alaska 1988).

¹⁵ R. 856-858.

CLUP application,¹⁶ (2) the Commission was required to independently consider the standards in KPB 21.29.040 and the specific permit conditions in KPB 21.29.050, and (3) the Commission's findings of fact were not supported by substantial evidence.¹⁷ None of these arguments compel the hearing officer to disturb the Commission's interpretation of the Code or the Commission's findings of fact.¹⁸

Appellant points out that the Commission has the authority to disapprove or deny a CLUP application. KPB 21.25.050.B. provides that the Commission shall "either approve, modify or disapprove" a CLUP application. KPB 21.29.040 and 21.29.050 supply the specific guidelines and requirements the Commission must use when determining whether to approve, modify, or disapprove a material site permit such as the one submitted by Beachcomber in this case. The fact that the Commission reversed its prior decision on this Application and approved the Application on the second round is not sufficient to justify overturning the Commission's decision. The Commission gathered additional facts and evidence on the second round, as evidenced by the additional public meetings at which the Applicant and members of the public testified and presented evidence, and ultimately determined that the Application did meet the requirements in KPB 21.29.040 and 21.29.050.¹⁹

¹⁶ R. 869.

¹⁷ R. 869. These two broad categories encompass the substantive appeal points listed in Appellant's original appeal filing, see R. 789-791.

¹⁸ Pete Kineen joined in Appellant's arguments. See R. 856.

¹⁹ R. 248, "Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040."

Appellant next argues that KPB 21.29.040 and 21.29.050 must be read independently.²⁰ This is a legal argument whereby Appellant advances an interpretation of the Code that is in opposition to the Commission's interpretation. The Commission interprets the Code to mean that these two provisions are read together, and that compliance with KPB 21.29.050 necessarily means that KPB 21.29.040 is satisfied.²¹ In the face of differing opinions on Code interpretation, the standards of review require the hearing officer to give due consideration to the Commission's expertise and its interpretations of Titles 20 and 21 of the Code.

It is well-established that planning "authorities are bound by the terms and standards of the applicable zoning ordinance, and are not at liberty to either grant or deny conditional use permits in derogation of legislative standards."²² Given the plain meaning of the word "only" in KPB 21.29.040, KPB 21.29.040 bars the Commission from imposing conditions in CLUPs that are not contained in KPB 21.29.050. Thus, the conditions in KPB 21.29.050 are the "sole" or "exclusive" conditions that may be applied. No additional conditions are required of the Applicant by the Code, and the Commission lacks the authority to impose additional conditions, except as the Applicant may voluntarily agree to

The citation to KPB 21.29.050 in the text of KPB 21.29.040 indicates that the drafters of these two Code provisions intended them to be read together, rather than independently. Thus, the specific conditions in KPB 21.29.050 are the "sole" or

²⁰ R. 869-870.

²¹ R. 248.

²² *S. Anchorage Concerned Coal., Inc. v. Coffey*, 862 P.2d 168, 174 (Alaska 1993) quoting *Thurston v. Cache County*, 626 P.2d 440, 444-45 (Utah 1981).

“exclusive” conditions that may be applied to minimize the adverse impacts listed in KPB 21.29.040. The Commission’s interpretation that these two provisions must be read together, and that compliance with KPB 21.29.050 necessarily means compliance with KPB 21.29.040, is reasonable.

As explained in the first hearing officer’s decision in this case, the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in KPB 21.29.050. Instead, the Code grants the Commission limited authority to review material site permit applications to ensure that the conditions in KPB 21.29.050 are met and the application complies with the application requirements. The testimony of the Appellant and other parties in opposition to the Application shows the depth of concern of neighboring property owners, but ultimately it is the Borough Assembly that has the authority to set the conditions and standards required for material site permits under KPB 21.29.040 and 21.29.050, or change those conditions and standards. The Commission’s interpretation of KPB 21.29.040 and 21.29.050 is a reasonable one based on the language in those provisions. The hearing officer therefore finds no reason so substitute her judgment for that of the Commission.

Finally, Appellant argues that there was insufficient evidence to support the Commission’s findings of fact, mainly with respect to noise and visual impacts.²³ Appellant does not call out any specific finding of fact that is allegedly unsupported by substantial evidence in the record, but points to the number of individuals opposing the Application, the “rolling berm” voluntary condition, and the unchanged geography of the

²³ R. 870.

site.²⁴ Appellant also argues that none of the findings of fact indicate how the evidence “shifted” from the first time the Commission considered the Application.²⁵

As explained above, due consideration must be given to the Commission’s interpretation of the Code. The Commission interprets the Code to require that only the conditions set forth in KPB 21.29.050 may be imposed to ensure the standards in KPB 21.29.040 are met. Thus, there must be substantial evidence in the record to support the Commission’s findings that the conditions in KPB 21.29.050 are imposed by the CLUP granted in Resolution 2018-23. Substantial evidence is defined in KPB 21.20.210.A.7. as “relevant evidence a reasonable mind might accept as adequate to support a conclusion.” Notably, substantial evidence does not require a weighing of the number of persons on either side of an issue. Findings prepared by staff that are supplemented by documents in the record and statements in transcripts, and adopted by the Commission, are sufficient.²⁶

The large number of individuals presenting testimony in opposition to the Application is undisputed. At least 31 neighbors²⁷ have voiced opposition. Written public comments were included in the Commission’s meeting packets.²⁸ At the June 10, 2019 public meeting on this Application, the Commission took public comment from many people both for and against the Application at a meeting that lasted more than four

²⁴ R. 871-873.

²⁵ R. 871.

²⁶ *S. Anchorage Concerned Coal* at 171 (Alaska 1993) (affirming findings of fact prepared prior to an Anchorage Planning and Zoning Commission hearing).

²⁷ This number includes all those filing or signing on to an Opening Statement.

²⁸ For example, R. 576-675 contains the packet for the June 10, 2019 meeting and includes many pages of written public comments.

hours.²⁹ Many spoke in opposition to the Application, citing concerns about noise from the gravel pit,³⁰ visual impacts,³¹ adequacy of the proposed buffers,³² and increased traffic of gravel hauling trucks on Anchor Point Road.³³ However, a large number of opponents does not by itself constitute substantial evidence.

The Record contains a large amount of material that the Commission members reviewed before and during the public meetings and deliberations on this Application. This includes several meeting packets and miscellaneous information totaling at least 493 pages out of the 987 pages of the total record, containing written comments from members of the public,³⁴ maps of the property and surrounding areas,³⁵ photographs,³⁶ and diagrams depicting the line of sight to the proposed extraction area.³⁷ A review of the minutes and verbatim testimony of the Commission's several meetings show that the Commission members listened to and discussed the Application at length. The Commission then adopted extensive findings in Resolution 2018-23 detailing each condition required by KPB 21.29.050. The Application materials, the extensive record, and the detailed findings constitute reasonable evidence in support of the Commission's

²⁹ The portion of the hearing transcribed for this matter started at 7:32 pm (T. 117) and ended at 11:39 pm (T. 159).

³⁰ Testimony of Christina Elmaleh at T. 124, Testimony of Ed Martin, III at T. 133.

³¹ Testimony of Pete Kineen at T. 127, Testimony of Todd Bareman at T. 132, Testimony of Richard Cline at T. 136.

³² Testimony of Vickey Hodnick at T. 134, Testimony of Rick Oliver at T. 135, Testimony of Jim Reid at T. 138, Testimony of Hans Bilben at T. 141, Testimony of Lynn Whitmore at T. 145.

³³ Testimony of Paul Morino and Judy Aaron at T. 123, Testimony of Gary Sheridan at T. 130.

³⁴ For example, R. 28-60, R. 532-552.

³⁵ For example, R. 492-495.

³⁶ For example, R. 487-491, R. 553-558, R.607-614.

³⁷ For example, R. 726-728.

conclusion that the conditions imposed in Resolution 2018-23 meet the requirements of KPB 21.29.050. The hearing officer finds that the Commission's findings of fact are supported by substantial evidence in the record and deference to those findings is warranted.

V. ORDER

For the reasons stated in this decision, Appellant Hans Bilben's request for the hearing officer to overturn the Commission's decision to approve the Application is DENIED.

L. Anmei Goldsmith, Hearing Officer

Right of Reconsideration

Pursuant to KPB 21.20.350, any party that participated in the hearing may request reconsideration of this decision by filing a motion for reconsideration with the Borough Clerk within fourteen (14) days after the date of distribution of this decision. A motion for reconsideration may be based only on the criteria in KPB 21.20.350.A.1.-4. and must comply with all other requirements of KPB 21.20.350.

Right to Appeal

This Decision and Order is a final decision. An appeal from an officer decision may be filed in the Alaska Superior Court within 30 days after the date of distribution of this decision and is governed by Part 6 of the Alaska Rules of Appellate Procedure. This decision remains in effect while an appeal is pending unless stayed by the Alaska Superior Court. See KPB 21.20.350.E. and 21.20.360.

CERTIFICATE OF SERVICE

I, Michele Turner, Deputy Clerk of the Kenai Peninsula Borough, do hereby certify that, I served the foregoing notice and copies of Hearing Officers Decision.

Appeal Hearing Summary

October 30, 2019

10:00 AM

Betty J. Glick Assembly Chambers
George A. Navarre Kenai Peninsula
Borough Administration Building

CALL TO ORDER

The Kenai Peninsula Borough appeal hearing convened on October 30, 2019, in the Betty J. Glick Assembly Chambers of the George A. Navarre Kenai Peninsula Borough Administration Building in Soldotna Alaska. Hearing Officer L. Anmei Goldsmith called the meeting to order at 10:00 a.m.

There were present:

L. Anmei Goldsmith, Hearing Officer
Johni Blankenship, Borough Clerk
Max Best, Director of Planning
Sean Kelley, Deputy Borough Attorney
Bruce Wall, Planner
Michele Turner, Deputy Borough Clerk

Case No. 2019-01-PCA: In the matter of the Kenai Peninsula Borough Planning Commission's decision to approve a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) – Deed recorded in Book 4, Page 116, Homer Recording District.

PRELIMINARY MOTIONS

(10:02:20)

Parties will be asked to present any motions on preliminary matters or raise any objections regarding such matters at this time. These motions may include challenges regarding standing, alleged procedural errors by Hearing Officer, the clerk, or any of the parties, objections to the record or evidence before the Hearing Officer, requests to supplement the record, and so on. These are just examples and not all-inclusive.

MOTION TO EXPAND THE RECORD to include the Planning Commission Manual and Excerpts of Planning Commission Minutes of June 24, 2019 and September 9, 2019 by Attorney Elsner.

Attorney Trinka objected to the motion.

Hearing Officer Goldsmith ruled to include the Planning Commission Manual, and denied the addition of the excerpts of the Planning Commission minutes of June 24, 2019 and September 9, 2019.

11:11:10

OBJECTION: Attorney Trinka objected to allowing Lawrence "Rick" Oliver's Entry of Appearance.

Hearing Officer Goldsmith ruled that Mr. Oliver's Entry of Appearance would be allowed.

[Clerk's Note: All parties who were offering testimony were sworn in by Borough Clerk Blankenship.]

STAFF OVERVIEW - EXPLANATION OF PROCEEDINGS (10 Minutes)

(10:15:41)

Max Best, Planning Director presented the staff overview.

APPELLANT (15 Minutes)

(10:21:40)

Hans Bilben

Represented by Katherine Elsner of Ehrhardt, Elsner & Cooley

Attorney Elsner and Hans Bilben gave their testimony.

Notice of Appeal of Planning Commission Decision

Case No. 2019-01-PCA: In the matter of the Kenai Peninsula Borough Planning Commission's decision to approve a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) – Deed recorded in Book 4, Page 116, Homer Recording District. *[Enclosed please find a copy of the appeal filed in this matter and the Notice of the Planning Commission's decision.]*

Please Complete the Following Steps:

- Step 1.** If you wish to participate in the appeal process, you **must** file an entry of appearance (*form enclosed*) with the Borough Clerk within 15 days of the mailing date of the notice of appeal by the Borough Clerk.
- Step 2.** Any party filing an entry of appearance **may** also file additional designations of error or other alternative requests for modification or reversal of the decision.
- Step 3.** The original Entry of Appearance **must** be filed with the Borough Clerk on or before **Friday, August 9, 2019**. Service shall be made by the Borough Clerk either by mail or personal delivery within two business days of the filing deadline. Service by email or facsimile is permitted when the party to be served has affirmed in writing the acceptance of alternated forms of service.

This notice is being sent to you because our records indicate you are a party of record in the subject Planning Commission decision.

For Official Use Only

Appeals must be filed within 15 days of the Planning Commission Decision.

The appropriate filing fee must be received at the time of filing.
Make Checks Payable to: Kenai Peninsula Borough

Filing Fee: \$300.00
 Cash
 Check # 5263

Any party of record may file an appeal of a decision of the Planning Commission within 15 days of the date of the notice of the decision with the borough clerk on the forms provided and by paying the filing and records preparation fee of \$300. An appeal may be filed by personal delivery or mail as long as it is complete and received in the clerk's office by 5:00 p.m. on the day the notice of appeal is due. All appeals shall be to the hearing officer and shall be conducted in accordance with the provisions of KPB Chapter 21.20 unless otherwise provided by the Kenai Peninsula Borough Code. [KPB 21.20.250]

Appellant: Hans Bilben

Mailing Address: PO Box 1176 Anchor Point AK 99556

Email Address: catchalaska@alaska.net Daytime Telephone No.: 907 398-6156

I agree to service via email: Yes Initials HKB (provide email address above) No:

I hereby give notice that I am appealing a decision of the Kenai Peninsula Borough Planning Commission as set forth below. I understand that this appeal will not be accepted unless accompanied by a receipt verifying that the required fee has been paid.

1. Date and resolution number of the Planning Commission's written decision from which you are appealing:

Date of decision: June 24, 2019 ^{NOD} _{6/26} Resolution No. 2018-23

Summary of Decision being appealed:
Material site CLUP for Parcel 169-010-67. Applicant Beachcomber LLC.

2. State specific errors asserted in the Commission's findings of fact or conclusions of law. (Attach additional sheets if necessary.)

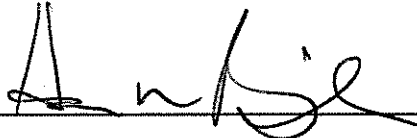

See attached sheets:

3. State the relief you are requesting from the Board of Adjustment including whether you want the Planning Commission decision reversed, modified or remanded for further proceedings. (Attach additional sheets if necessary.)

Reverse the decision. If the Hearing Officer finds that reversal is not warranted, then modification is required to reflect conditions that will actually meet the requirements of 21.29.040 and 21.29.050. Proposed Findings of Fact are spelled out in Meeting Packet Volume 2, pages 40 - 49 of 686 for the 6/24/2019 PC Meeting.

Appeals to the Hearing Officer are governed by KPB 21.20.200-360. You will receive notice from the Borough Clerk informing you of the deadlines and requirements for filing written statements and a hearing date for the appeal.

Date: 7/10/2019

Appellant's Signature: 

2. SPECIFIC ERRORS...

The Hearing Officer remanded to the Planning Commission in December 2018 for **two** reasons. One was to list Findings of Fact referencing the Mandatory Conditions defined in KPB 21.29.050, and the other was to Provide the **substantial evidence** that supports those findings. The applicant failed to provide substantial evidence which would support the Findings. Those opposed to the permit provided substantial evidence using KPB's own technology to prove that mandatory standards in KPB 21.29.040 could not be met by the Conditions—both imposed and voluntary.

A. THERE WAS INSUFFICIENT EVIDENCE TO SUPPORT A FINDING THAT BUFFERS/BERMS MINIMIZE NOISE DISTURBANCE AND VISUAL DISTURBANCE.

B. STAFF ERRED IN ADVISING THE PLANNING COMMISSION ON THE REQUIREMENTS OF THE CODE.

C. THE PLANNING COMMISSION ERRED IN INTERPRETING THE CODE ON THE ISSUE OF DISCRETION AND AUTHORITY TO DENY A PERMIT.

D. THE CONDITIONS IMPOSED ON THE PERMIT DO NOT PROVIDE SUFFICIENT VISUAL AND NOISE SCREENING.

E. THE VOLUNTARY CONDITIONS DO NOT PROVIDE SUFFICIENT VISUAL AND NOISE SCREENING.

F. MINIMUM STANDARDS FOR THE LAND USE WERE NOT MET IN THIS SITUATION WHICH CAUSES DAMAGE TO THE PUBLIC HEALTH, SAFETY, AND WELFARE.

G. THE DECISION DOES NOT RECOGNIZE PRIVATE PROPERTY RIGHTS OF THE SURROUNDING USERS.

H. THE ISSUANCE OF THIS PERMIT IS IN VIOLATION OF THE REQUIREMENTS IMPOSED UNDER KPB 21.25 AND UNDER KPB 21.29.

I. ONE OR MORE COMMISSIONERS SHOULD HAVE RECUSED THEMSELVES BASED UPON DEMONSTRATED BIAS AND/OR CONFLICT OF INTEREST ISSUES.

J. ADDITION OF LAST MINUTE VOLUNTARY AND IMPOSED CONDITIONS SHOULD HAVE REQUIRED THAT PUBLIC COMMENT BE RE-OPENED, AS REQUESTED, AT 6/24 MEETING.

K. IN SEVERAL KPB CONDITIONS AND FINDINGS OF FACT THE WORD "ADJACENT" WAS SUBSTITUTED FOR THE CORRECT WORD "OTHER" FROM KPB 21.29.040. THIS SUBSTITUTION WRONGLY INFLUENCED COMMISSIONER'S DECISIONS.

L. COMMISSIONERS DELIBERATED VERBIAGE AT LENGTH ON SEVERAL MEANINGLESS VOLUNTARY CONDITIONS, BUT SPENT NO TIME DISCUSSING HOW OR IF THOSE CONDITIONS COULD ACTUALLY MEET THE MANDATORY STANDARDS OF KPB 21.29.

M. PRIOR TO THE 6/24 DELIBERATIONS TWO COMMISSIONERS ABSENT FOR THE 6/10 HEARING WERE SHOWN VIDEO PREPARED BY THE APPLICANTS DAUGHTER. THOSE TWO COMMISSIONERS WERE NOT SHOWN THE PRESENTATION PREPARED BY THOSE OPPOSED TO THE PERMIT WHICH CLEARLY DEMONSTRATED THE DEFICIENCIES IN THE APPLICATION USING GEOGRAPHIC INFORMATION SYSTEM (GIS) TECHNOLOGY OWNED BY KPB.

N. COMMISSIONER ECKLUND INDEPENDENTLY VISITED THE SITE AND QUESTIONED THE LACK OF VEGETATION IN THE 50 FOOT VEGETATED BUFFER. BRUCE WALL AGREED THAT GRASS WAS THE PRIMARY VEGETATION IN NEARLY 60% OF THE BUFFER AREA. KPB 21.29.050 MANDATES BUFFER/BERM TO BE OF SUFFICIENT **HEIGHT AND DENSITY.**

O. IN THE MINUTES BEFORE THEY VOTED, ONE COMMISSIONER ASKED WHAT A ROLLING BERM WAS. A ROLLING BERM IS NOT REFERENCED OR DEFINED IN KPB 21.29. CLEARLY THERE IS NO DEFINITION FOR WHAT A ROLLING BERM IS, WHEN IT WOULD BE MOVED (ROLLED), WHERE IT WOULD BE MOVED (ROLLED), WHAT OBJECTIVE METHOD WAS USED TO DETERMINE THE BERM HEIGHT, OR WHETHER IT COULD MEET THE STANDARDS OF KPB 21.29.040 IN EACH (OR ANY) OF THE THREE PHASES OF THE APPLICATION.

P. COMMISSIONERS ON SEVERAL OCCASIONS DURING DELIBERATIONS MADE COMMENTS INDICATING LACK OF KNOWLEDGE ON WORDING OF KPB CODE. THEY APPEARED TO JUDGE THE APPLICATION, AND VOTE, WITHOUT WITHOUT A CLEAR UNDERSTANDING OF THE CODE.

Q. DURING DELIBERATIONS THERE WAS CONFUSING OR CONFLICTING LOCATIONS OF MATERIALS IN THE RECORD. STAFF AND COMMISSIONERS APPEARED TO HAVE DIFFERING PAGE REFERENCING WHICH CREATED A SITUATION WHEREBY COMMISSIONERS HAD DIFFICULTY LOCATING EVIDENCE IN THE RECORD, AND VICE VERSA. THIS CONTRIBUTED TO UNINFORMED DECISION MAKING ON THE PART OF THE COMMISSION.

Enclosures

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.These buffers shall not overlap an easement.
3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.

7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.
21. The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to also include:
 - Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
 - Saturday, Sunday, and Monday if July 4th is on a Tuesday
 - Saturday, Sunday, and Friday if July 4th is on a Thursday

Charlie Pierce
Borough Mayor

NOTICE OF DECISION

At their June 24, 2019 meeting, the Planning Commission approved a conditional land use permit for a material site that was requested for Parcel 169-010-67, Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. Land use in the rural district is unrestricted except as otherwise provided in KPB Title 21.
5. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres and provides regulations for material extraction.
6. The proposed disturbed area is approximately 27.7 acres.
7. Consistent with KPB 21.25.050(A) on June 21, 2018, the applicant submitted a revised site plan and application to the Planning Department that addressed issues raised by staff with the initial review of the application.
8. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
9. A public hearing of the Planning Commission was held on July 16, 2018. Public notice of the hearing was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the July 5, 2018 & July 12, 2018 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
10. Testimony was filed and heard regarding issues that are not addressed by the KPB 21.29.040 standards or 21.29.050 conditions. Staff and the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety.
11. A public hearing of the Planning Commission was held on March 25, 2019. Public notice of the hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the March 14, 2019 and March 21, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
12. A public hearing of the Planning Commission was held on June 10, 2019. Public notice of the hearing was mailed on April 30, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice of the hearing was published in the May 30, 2019 and June 6, 2019 issues of the Homer News. The notice requirements of KPB 21.25.060 for this meeting have been met.
13. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
14. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
15. Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.
16. Parcel boundaries. All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - A. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - B. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
17. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.

- A. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - B. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - C. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - D. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - E. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - F. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - G. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - H. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
 - I. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - J. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - K. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - L. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - M. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - N. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - O. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - P. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - Q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - R. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
18. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- A. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - B. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - C. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - D. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.

- E. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
19. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
- A. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - B. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - C. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
20. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- A. This permit approval does not allow excavation in the water table.
21. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- A. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - B. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - C. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - D. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - E. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - F. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - G. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - H. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - I. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
22. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- A. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
23. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- A. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - B. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - C. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
24. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
- A. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.

25. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
26. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - A. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - B. This condition reduces off-site noise impacts of the material site.
27. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - C. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - D. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
28. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - A. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
29. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
 - A. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - B. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimizes the noise impacts of the material site.
 - C. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
 - D. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
 - E. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.
 - F. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.
 - G. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.
30. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - A. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance

This decision may be appealed through the Borough Clerk within fifteen days of the date of the Notice of Decision.

Attn: Hearing Officer

I hereby submit for consideration concerns relating to the conditional land use permit. This permit was approved with missing information, and incomplete knowledge of the permit, reclamation plan and inadequate understanding by the commissioners.

Procedural Concerns:

At the June 24, 2019 meeting which was an extension of the the June 10th meeting, where it was agreed that all testimony was final and that the commission would only discuss and place their vote at the beginning of the June 24th meeting, as a courtesy to the public.

However, at that June 24th meeting, the commissioners brought the permit requester to the podium, and did a question and answer session where the permit requester brought new information, expanded on old information and, voiced complaints about the public being allowed to submit topographical information from the KPB GIS System. Perception was this was a way for those commissioners who missed the previous meeting could catch up and give the appearance of a knowledgeable decision. The commissioners did not allow public comment on the new information or respond to the expanded old information or defend their documentation originally submitted. Those commissioners should have excused themselves, especially one particular commissioner. Obviously, this showed bias for the applicant.

In all appearance, the public's (mine) due process was stymied and the permit requester was shown favoritism, or special buddy buddy treatment.

Continuance of Errors or Omissions in the Findings of Facts and Permit Conditions.

Fact # 13 – Utilizing a rolling berm. A rolling berm is not detailed nor defined in the KPB code, the permit requester explained the concept but presented no actual details; like height, length or type of material it would consist of, or how it would be moved. Since there is no historical data to confirm its success as a mechanism to reduce the impact, it does not fulfill or meet code requirement.

Fact #14 – Volunteering to operate his equipment with white noise back up alarms...but not on any other contractor's equipment. (As stated by applicant during the meeting). This is a pointless fact since the requester only owns a bobcat, and all work would be "subbed out" with out the requested back up sound system. It appears that planning would like to show good will of applicant, not facts.

Fact #17 - Buffer zones. 18 items are listed, as facts yet when scrutinized, these listed facts are repetitive and incomplete as well as subjective in nature such as: Items D & E; the properties noted that are at a higher elevations will not be impacted as greatly as those adjacent is in error, since looking down you see over the berm, and into the site where as adjacent properties would need to look through the berm. Per the KPB GIS systems a 52ft berm would be required to meet the KPB standard. It continues to say that those parcels *further away*, (across the street and higher on a hill- which is not really father away) will be less impacted by noise is also flawed, since this gravel site is a natural amphitheater and the noise travels much further and remains louder than in other gravel sites.

Fact #17 - Buffer zones Item P: states that testimony was made to the fact that this site would mare the view of MT, Iliamna Redoubt, is not quite accurate... with out proper screening there would be a huge visual impact...and yes the KPB code does not provide scenery view protections, but the

code's goal is to reduce CLUP visual impact. Again the wording of this fact finding appears to view public concern in a negative form. Perhaps this particular planner has a conflict of interest or is unable to remain non judgmental.

Fact # 23 – Roads. Planning correctly states that part of the haul out is on borough road and then onto a state road. Per meeting discussions planning says it is only responsible to borough roads. The commission had to press planning to reach out to the state to address what concerns if any the state would have, since it is a state road, in need of repair, and an emergency access road. Question remains as to what liability if any could occur from this permit. No information is listed within the findings.

Fact # 29 items A through G. The permit requester volunteered 2 items, white noise alarms on his (only his) equipment, and not to haul on specific holidays. These two items get exaggerated reviews to give the appearance of grand gestures. This fact finding section seems to be written as a means to again show favorable bias to the permit applicant, where as some of the same fact finding are written to show negative bias to the public interest.

Permit condition #3: Discusses 2:1 slope from buffer to pit floor, but the fact findings do not list any information to the size of pit, or the water table at different times of the year. Other permit applicant have had to list their core sample finding but noting is noted here. The permit just requires the standard code of 100 ft from bodies of water and 2ft from the water table. This omission is of a concern since the discussion of a 25 foot gravel pit would have to have more than 4 “ of top soil to make the reclamation process to have any value. As well as the idea that the deeper the pit the quieter it becomes and less visual it is, see fact finding #17 Item L. Seriously??

Permit Condition #21: Does not detail if “his” equipment means equipment he owns or as well as equipment he has (contracted) or control of while operating at the site. With out that detail this condition is of little value.

During the meetings it appeared that the commissioners were of the understanding that they lacked authority to do anything but approve all permits. One stated that they wished there was more that they could do. It appeared to me, that they were misled by planning, the applicants lawyers, and the hearing officer repeatedly saying: if the application was complete (minimum) it must be approved.

However, the code is explicit that the commission has the discretion to add to, or combine regulations to meet the conditions set out in the code. They even have the authority to remove code items that serve no value for the permit. Like berms that serve no one, do not have to be put into place.

This lack of confidence in their authority, is understandable, since the planning department questioned commissioner Foster of his understanding of the hearing procedures, in front of his peers and the public. (Embarrassing him) Then was coached so Commissioner Ruffner, who was not at the June 10th meeting to hear all given testimony, but was able to do a procedural request to question testimony and used a motion by substantives to walked a yes vote through the commission. This motion, made new questions appeared to become irrelevant, facts versus intent became blurred. Thus this permit was granted without enough due diligence, but an atmosphere of get it over with.

This permit needs to be placed on hold, and sent back to planning for a true review, a different planner who will look at only the facts, show no emotion or bias nor display favoritism for either side with subjective answers when presenting the written facts to create the permit conditions.

There are still too many unanswered questions, or the facts are not summarized sufficiently to show a thorough or complete permit application, one written in factual, unbiased fashion. Much of this permit hints that a conflict of interest exists, with planning, a couple of commissioners and the applicant. While attending the meetings it was most obvious that a conflict may exist, due to all the reassuring glances between the applicant and planning.

Please return this permit for a second opinion from a different planner. This gravel area is not like other gravel pits within Anchor Point. KBP needs to really be correct and sure and get it right.

In the matter of the Kenai Peninsula Borough Planning Commission's decision to approve a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

2. SPECIFIC ERRORS...

The Hearing Officer remanded to the Planning Commission in December 2018 for **two** reasons. One was to list Findings of Fact referencing the Mandatory Conditions defined in KPB 21.29.050, and the other was to Provide the **substantial evidence** that supports those findings. The applicant failed to provide substantial evidence which would support the Findings. Those opposed to the permit provided substantial evidence using KPB's own technology to prove that mandatory standards in KPB 21.29.040 could not be met by the Conditions—both imposed and voluntary.

A. THERE WAS INSUFFICIENT EVIDENCE TO SUPPORT A FINDING THAT BUFFERS/BERMS MINIMIZE NOISE DISTURBANCE AND VISUAL DISTURBANCE.

B. STAFF ERRED IN ADVISING THE PLANNING COMMISSION ON THE REQUIREMENTS OF THE CODE.

C. THE PLANNING COMMISSION ERRED IN INTERPRETING THE CODE ON THE ISSUE OF DISCRETION AND AUTHORITY TO DENY A PERMIT.

D. THE CONDITIONS IMPOSED ON THE PERMIT DO NOT PROVIDE SUFFICIENT VISUAL AND NOISE SCREENING.

E. THE VOLUNTARY CONDITIONS DO NOT PROVIDE SUFFICIENT VISUAL AND NOISE SCREENING.

F. MINIMUM STANDARDS FOR THE LAND USE WERE NOT MET IN THIS SITUATION WHICH CAUSES DAMAGE TO THE PUBLIC HEALTH, SAFETY, AND WELFARE.

G. THE DECISION DOES NOT RECOGNIZE PRIVATE PROPERTY RIGHTS OF THE SURROUNDING USERS.

H. THE ISSUANCE OF THIS PERMIT IS IN VIOLATION OF THE REQUIREMENTS IMPOSED UNDER KPB 21.25 AND UNDER KPB 21.29.

I. ONE OR MORE COMMISSIONERS SHOULD HAVE RECUSED THEMSELVES BASED UPON DEMONSTRATED BIAS AND/OR CONFLICT OF INTEREST ISSUES.

J. ADDITION OF LAST MINUTE VOLUNTARY AND IMPOSED CONDITIONS SHOULD HAVE REQUIRED THAT PUBLIC COMMENT BE RE-OPENED, AS REQUESTED, AT 6/24 MEETING.

K. IN SEVERAL KPB CONDITIONS AND FINDINGS OF FACT THE WORD "ADJACENT" WAS SUBSTITUTED FOR THE CORRECT WORD "OTHER" FROM KPB 21.29.040. THIS SUBSTITUTION WRONGLY INFLUENCED COMMISSIONER'S DECISIONS.

L. COMMISSIONERS DELIBERATED VERBIAGE AT LENGTH ON SEVERAL MEANINGLESS VOLUNTARY CONDITIONS, BUT SPENT NO TIME DISCUSSING HOW OR IF THOSE CONDITIONS COULD ACTUALLY MEET THE MANDATORY STANDARDS OF KPB 21.29.

M. PRIOR TO THE 6/24 DELIBERATIONS TWO COMMISSIONERS ABSENT FOR THE 6/10 HEARING WERE SHOWN VIDEO PREPARED BY THE APPLICANTS DAUGHTER. THOSE TWO COMMISSIONERS WERE NOT SHOWN THE PRESENTATION PREPARED BY THOSE OPPOSED TO THE PERMIT WHICH CLEARLY DEMONSTRATED THE DEFICIENCIES IN THE APPLICATION USING GEOGRAPHIC INFORMATION SYSTEM (GIS) TECHNOLOGY OWNED BY KPB.

N. COMMISSIONER ECKLUND INDEPENDENTLY VISITED THE SITE AND QUESTIONED THE LACK OF VEGETATION IN THE 50 FOOT VEGETATED BUFFER. BRUCE WALL AGREED THAT GRASS WAS THE PRIMARY VEGETATION IN NEARLY 60% OF THE BUFFER AREA. KPB 21.29.050 MANDATES BUFFER/BERM TO BE OF SUFFICIENT **HEIGHT AND DENSITY.**

O. IN THE MINUTES BEFORE THEY VOTED, ONE COMMISSIONER ASKED WHAT A ROLLING BERM WAS. A ROLLING BERM IS NOT REFERENCED OR DEFINED IN KPB 21.29. CLEARLY THERE IS NO DEFINITION FOR WHAT A ROLLING BERM IS, WHEN IT WOULD BE MOVED (ROLLED), WHERE IT WOULD BE MOVED (ROLLED), WHAT OBJECTIVE METHOD WAS USED TO DETERMINE THE BERM HEIGHT, OR WHETHER IT COULD MEET THE STANDARDS OF KPB 21.29.040 IN EACH (OR ANY) OF THE THREE PHASES OF THE APPLICATION.

P. COMMISSIONERS ON SEVERAL OCCASIONS DURING DELIBERATIONS MADE COMMENTS INDICATING LACK OF KNOWLEDGE ON WORDING OF KPB CODE. THEY APPEARED TO JUDGE THE APPLICATION, AND VOTE, WITHOUT WITHOUT A CLEAR UNDERSTANDING OF THE CODE.

Q. DURING DELIBERATIONS THERE WAS CONFUSING OR CONFLICTING LOCATIONS OF MATERIALS IN THE RECORD. STAFF AND COMMISSIONERS APPEARED TO HAVE DIFFERING PAGE REFERENCING WHICH CREATED A SITUATION WHEREBY COMMISSIONERS HAD DIFFICULTY LOCATING EVIDENCE IN THE RECORD, AND VICE VERSA. THIS CONTRIBUTED TO UNINFORMED DECISION MAKING ON THE PART OF THE COMMISSION.

Kenai Peninsula Borough
Entry of Appearance Case # 2019-01-PCA
Borough Clerk
August 6, 2019

Specific Errors found in the Planning Commission's vote of 6/2019 in regard to
Beachcomber LLC request for permit parcel 169-010-67

1. The Planning Commission did not do as directed by the hearing officer, Holly Wells. This did not create "findings of fact" to support their original denial of the permit in 2018.
2. The Planning Commission does not appear to have a clear understanding of the borough codes which pertain to this issue.
3. The Planning Commission was ill informed in regard to berms and buffers and one member of the commission was asking, at the last minute, "what is a moving buffer again?"
4. The actual voluntary conditions do not reflect sufficient visual or sound screening for those who live close to the proposed site.
5. Public health, safety, welfare and well being have not been considered by the Planning Commission nor the Planning Department.
6. Private property rights are being ignored by the borough Planning Commission and the planning department.
7. The Planning department showed absolute bias in regard to this permitting process.
8. Loss of property value and peace and quiet should not be handed away by the Planning department. As citizens, we have a right to those commodities and it appears that no one at the borough is willing to support the common citizens.
9. The planning department, including the attorney, are changing language within the various materials, like the Planning Commission Handbook, to change how things read....in other words, to slant the codes or relevant information in their favor.
10. Our rights, as citizens, were not recognized when we were unable to reply to "new information" added to the Planning Commission meeting of 6/2019. Mr. Trimble's rebuttal was uncontested. His voluntary and imposed conditions should have required public comment.
11. The Planning Department had so much influence over the Planning Commission that it obviously is afraid to make decisions on their own.....in fact, to overlook the findings of the Hearing Officer and not properly respond.

In the matter of the Kenai Peninsula Borough Planning Commission's decision to approve a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Alternative Requests for Modification or Reversal of Planning Commission Decision (attach additional pages if necessary): _____

This Form Must Be Received by the Borough Clerk on or before **FRIDAY, AUGUST 9, 2019**.
Service shall be made by the Borough Clerk either by mail or personal delivery within two business days of the filing deadline. Service by email or facsimile is permitted when the party to be served has affirmed in writing the acceptance of alternate forms of service.

Additional Designations of Error

1. In Notice of Decision #29 (A. and B.) the applicant volunteered to operate **his** equipment with multi frequency back-up alarms. KPB Planner Bruce Wall after several site visits and multiple conversations with the applicant is well aware that the applicant does not own **any** equipment, and that the the applicant is not an operator. Prior to the 6/24 PC hearing a request was made via email to Planner Wall to divulge this information to the Commission during deliberations, which he declined. A request was also made to reopen public comment concerning voluntary conditions which were clearly not in the best interests of the borough or of surrounding property owners as required by KPB Code—also denied. Misinformed Commissioners unknowingly accepted this Voluntary Condition which led to faulty decision making as the Record will show.

2. Notice of Decision #17 (Q.) is clearly an admission that this application cannot meet the Mandatory Standards of 21.29.040 utilizing the Conditions (Mandatory and Voluntary) as written. The Code in 21.29.050 states that adjacent, and other properties are to be protected with buffer zones of sufficient height and density to provide visual and noise screening of the proposed use. If Conditions do not meet the Standards the Planning Commission is instructed to Deny or Modify, and **not** to Approve an incomplete application. #17 (Q.) denies protections to many neighboring property owners in violation of the Code as written. No where in the Code does it give the applicant the option of protecting only those properties that are at (or nearly at) the same elevation as the proposed use, as #17(Q.) would imply.

8/6/19

My wife and I strongly feel the Planning Commission should reverse their decision on this gravel pit, for all the same reasons you denied it the first time. Berms & Buffers will not stop the noise, dust & visual impact of this pit to our neighborhood. There are hundreds of reasons why we did not buy property next to a gravel pit. How many gravel pits does the Kenai Peninsula need? To develop one in the middle of a Residential/Recreational area is not only unfair to everyone who owns property there, and to everyone who visits the Anchor River Recreational area.

There is only 1 Anchor River
Recreational Area. Why
would you allow this to
proceed ??? If this was
in your back yard I doubt
it would!

Thank you,
Don & Lani
~~Harter~~

NOTICE OF CERTIFICATION OF THE RECORD AND NOTICE OF HEARING OFFICER AND HEARING DATE

Please be advised that a hearing will convene on **Wednesday, October 30, 2019 at 10:00 a.m. in the Borough Assembly Chambers.** Anmei Goldsmith has been assigned as the hearing officer to hear this appeal.

Written opening statements ("opening statements") shall be filed no later than **5 p.m. on Tuesday, October 1, 2019** in the Office of the Borough Clerk and in accordance with KPB 21.20.280(A). An opening statement **must** be filed by the appellants (Hans Bilben), applicant (Beachcomber, LLC) and Borough staff. **Failure to timely file an opening statement shall result in your dismissal as a party to this appeal.** Multiple parties may preserve their party status by filing a single written statement; however, the written statement must clearly identify all parties filing the single statement. An opening statement may contain the following: 1) a statement of facts as derived from the record on appeal; 2) a statement of the party's perception of the correctness of the planning commission decision; 3) a list of asserted errors; and 4) any citations to applicable statutes, ordinances, regulations or other legal authority for the position taken by the party to the appeal. Service shall be made by the Borough Clerk either by mail or personal delivery within two business days of the filing deadline.

Each party filing an opening statement **may** submit a reply statement which must be limited to response to matters specifically raised in the statement to which the party is responding. A party shall file a single reply statement in response to all opening statements filed. Reply statements must be filed in the Office of the Borough Clerk no later than **5:00 p.m. on Monday, October 21, 2019** and in accordance with KPB 21.20.280(B). Service shall be made by the Borough Clerk either by mail or personal delivery within two business days of the filing deadline.

The indexed record and minutes on appeal, as certified by the planning director, were mailed to the appellants and applicant by the Borough Clerk on September 11, 2019. Any party may request a copy of the record at a cost of .25 cents per page. The total cost of the record is \$190.27 (\$179.50 plus 6% sales tax).

Any party may request an extension of time for filing an opening statement or reply statement before the deadline, which the Hearing Officer may grant, for good cause shown.

CERTIFICATE OF SERVICE

I, John Blankenship, Clerk of the Kenai Peninsula Borough, do hereby certify that, I served the foregoing notice.

Opening Statement in CASE NO. 2019-01-PCA

Comes now party Pete Kinneen to file his opening statement.

Elements 1,11,111,1V, and V of the Bilben opening statement filed this 1st day of October, 2019 are hereby concurred with and augmented with the following.

- 1) KPB is guilty of repetitious prosecutorial misconduct.
- 2) Both applicant and KPB agree that instant application fails to meet standards of relevant ordinance. Without attaining the standards, the default position of the ordinance calls for DENIAL.

1-In this quasi-judicial proceeding the KPB is acting in the role of prosecutor, and as such, has rung up a terrible record of forcing decisions to meet their desired outcome which is to grant every application a permit whether it meets the standards necessary, or whether it fails completely, as it does in instant case.

For reasons which remain obscure the KPB administration has consistently steered the lay persons Planning Commission toward granting the application to extract gravel from anywhere at anytime. Whether it meets the standards or whether it does not. The prima facie evidence of this misconduct is the KPB record of public hearings in 97 cases heard before the Planning Commission. Of these hearings some were denied by the Commission even after being told, by the Borough, that they did not have authority to deny. (See Bilben Opening Statement.) In the cases of the Commission voting against instructions of KPB staff the administration opposed the commission and caused the permit to be granted regardless of whether it met standards or not. The current case falls into the category of not meeting the standards, being denied, and followed by KPB arm twisting the Planning Commission into changing their decision.

The sordid record stands at 97-0 in favor of granting applications even when they totally fail to meet conditions of the relevant ordinance. Is 97-0 of contested applications not prima facie evidence of misconduct?

Among issues of misconduct by KPB staff, again as witnessed in Bilben statement, are the conditioning of the laypeople Commissioners to believe that the default position of the ordinance is to Grant when the clear default position is to DENY.

KPB has also falsely mesmerized the Commissioners into believing that land owners with gravel on their land, in excess of one acre, have an as of Right to extract said gravel and that such imaginary Right exceeds the existing neighbors real right to peaceful enjoyment of their lands and homes.

In reality the KPB Assembly deliberated and on August 1, 2006 they codified the extinguishment of those as of rights. This is found at KPB Ord. No. 2006-01(S), Sec 1, 8-1-06.

They were replaced with the lower Privilege of applying for a conditional license, or permit, as found in KPB 21.29.020

Privilege is obviously of lower authority than as of right, as KPB understands, but they have continued to mesmerize the Commissioners into somehow believing the privilege to extract gravel trumps the as of right to protect existing neighbors as codified in relevant ordinance. 97-0

21.29.040 states the INTENT which is to protect neighbors against the negative impacts of gravel mining. It is not intended to protect gravel miners from existing neighbors. The burden of proof falls on gravel extractions, contrary to admonishment Of KPB perverting the ordinance to say the opposite.

Perhaps as a result of this atrocious case in Anchor Point the Planning Commission has awoken to the misconduct of KPB and have openly revolted. They are now demanding clarification of their rights to judge the merits of individual cases on their merits based on ordinance versus instructions of KPB staff. (Again see examples of this in Bilben, et al)

The lower court judges (Planning Commission) whose decision is being appealed here have voluntarily and subsequently admitted in publicly recorded admissions that they have been duped and misled into making decisions based on false understanding of the relevant law. (See Bilben) What stronger basis for repeal and remand could you ask for?

2-KPB Bruce Wall and Beachcomber engineer discuss the falsity of a six foot berm sufficiently minimizing the Yale home on the south end of the proposed open pit mine due to topography. They acknowledge that Yale is at ground zero while virtually all other properties are at higher elevations. If Yale can not be sufficiently minimized, how then is it possible to meet code on any of the higher elevations? See R-19, R-195, R-196
T-2 line 29 of page 3 and line 25.

Conclusion-for all the reasons stated in Bilben, and here, Justice calls for remand to Planning Commission to deliberate in consideration of their independent judgement based on relevant ordinance, not as instructed by KPB.

CASE NO. 2019-01-PCA

OPENING STATEMENT

Comes Now Hans Bilben, by and through counsel, Katherine Elsner, and joined in filing – pursuant to KPB Code 21.20.280(A) – by Philip Brna, George Krier, David Gregory, Theresa Ann Jacobson, Rick Oliver, Shirley Gruber, Todd Bareman, Xochitl Lopez-Ayala, Richard and Marie Carlton, Mike and Linda Patrick, Joseph Sparkman, Vickey Hodnik, Michael Brantley, Gary Cullip, John Girton, Linda R. Bruce, Steve Thompson, Lynn Whitmore, Donald and Lori Horton, James Gorman, Linda Stevens, Gary and Eileen Sheridan, Thomas J. Brook, and Joshua and Christine Elmaleh, hereby files his opening statement.

The question presented in this appeal is whether to uphold the decision of the Planning Commission when it, having been misadvised as to the legal code, having received no compelling new evidence, having committed procedural error, having failed to make necessary findings, and having insufficient facts to support the findings that were made, determined to approve a

Conditional Land Use Permit sought for KPB Parcel 169-010-67 that it had disapproved a mere year earlier. The 2018 decision of the Planning Commission remains correct, the 2019 decision was incorrect and the Hearing Officer should exercise independent judgment in determining the interpretation of the Code is in error and should determine that there is not substantial evidence to support the findings of the Planning Commission, and, accordingly, find that the decision must be reversed.

I. Statement of Relevant Facts.

On June 4, 2018, Beachcomber LLC applied for a Conditional Land Use Permit (CLUP) under KPB Code 21.29.020 for Parcel 169-010-67. After investigation by the Planning Department, submission of Department recommendations, public notice and public comment from approximately 30 people at a hearing on July 16, 2018, the Planning Commission disapproved Beachcomber's CLUP application. The public comment and evidence submitted established that Parcel 169-010-67 sits in a depressed basin surrounded from above by the neighboring properties. In the shape of an amphitheater, the proposed extraction site is in the bottom, or the bowl, and the surrounding properties are in an elevated position looking down at the location of the proposed site. In disapproving the permit, the Commission made two findings:

1. noise will not be sufficiently reduced with any buffer or berm that could be added;
2. visual impact to the neighboring properties will not be reduced sufficiently.

Beachcomber LLC appealed this decision. KPB staff and its legal department argued that the Planning Commission did not have authority to disapprove a CLUP. The Hearing Officer apparently agreed and remanded the matter for further proceedings and findings of fact in early 2019.

Notice was again posted, and public comments and evidence were again presented. Various hearings were held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and June 24, 2019. The underlying factual circumstances surrounding the geographic situs of the proposed extraction site remained unchanged. The elevated position of surrounding property owners remained unchanged. The visual and aural impact of the proposed site remained unchanged. KPB staff and its legal department maintained its legal position that the Commission lacked authority to disallow a CLUP application and advised the Commissioners of the same. At the conclusion of deliberations, unfocused on how the current application and evidence presented in any way differed from the prior evidence that lead them to conclude that visual and aural impact were not minimized by the application, the Commission nevertheless approved Beachcomber's CLUP application. This appeal follows.

II. Statement of Relevant Law Governing the Appeal.

KPB Code 21.20.320 defines the scope of permissible appellate review of the decision of the Planning Commission:

After the hearing the hearing officer shall apply the following rules to its decision:

1. The hearing officer may exercise independent judgment on matters that relate to the interpretation or construction of ordinances or other provisions of law; however, due consideration shall be given to the expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21.
2. The hearing officer shall defer to the judgment of the planning commission regarding findings of fact if they are supported in the record by substantial evidence.
3. The hearing officer may revise and supplement the planning commission's findings of fact. Where the hearing officer decides that a finding of fact made by the planning commission is not supported by substantial evidence, the hearing officer may make a different finding on the factual issue, based upon the evidence in the record developed before the planning commission if it concludes a different finding was supported by substantial evidence, or may remand the matter to the planning commission as provided in KPB 21.20.330(B).

“Substantial evidence” is defined by KPB Code 21.20.210(A)(7) as “relevant evidence a reasonable mind might accept as adequate to support a conclusion.”

Accordingly, the questions presented are: whether KPB Code provisions relating to approval or disapproval of CLUP applications were properly interpreted such that it is correct that the Commission has no authority to disapprove a permit application; whether the Code requires independent consideration of the statutory standards set forth in 21.29.040; whether there were sufficient findings to justify the approval of the CLUP; and whether there was substantial evidence to support those findings. Because, despite KPB’s position, the Commission plainly has the authority to disapprove a CLUP application, because, despite KPB’s position, the Commission must consider the statutory standards set forth in 21.29.040, because there were insufficient findings to justify the approval and because there was not substantial evidence to support the findings that were made, the decision approving the CLUP must be reversed on both procedural and substantive grounds.

III. Argument Relating to Procedural Error.

1. Planning Commission Members Prejudging the Application Outcome Should Have Been Disqualified.

KPB Code provision 21.20.240 governs times at which a hearing officer may not hear or decide a case. 21.20.240(2) disqualifies a Commission Member where it is demonstrated that, “due to factors external to the case, the ability of the hearing officer to make an impartial decision is actually impaired.” Moreover, the Planning Commission Manual created and provided by KPB Staff to advise the individual members on policy and procedure states that:

Bias is prejudging a matter. There is not a borough ordinance prohibiting bias. However, quasi-judicial decisions resulting from prejudice, arbitrary decision making, or improper motives may be invalidated under case law.... The bias test is whether a commissioner has actually made up his mind regardless of any argument

that might have been advanced at the hearing. Indicators of prejudice include a commissioner making a clear statement suggesting that a decision has already been reached. The test is objective and queries whether a disinterested observer would conclude that the commissioner has in some measure adjudged the facts as well as the law of a particular case in advance of hearing it.¹

On January 4, 2019, Commissioner Ruffner was interviewed relating to the process of proposing amendments to the KPB Code relating to CLUP applications for material site extraction. Discussed in that interview was the instant application and the current law and procedure for CLUP applications for material site extraction. Commissioner Ruffner was quoted saying:

When an applicant comes in and applies to develop a gravel permit, there's a notification that goes to the surrounding landowners and often times those surrounding landowners will come to the borough with the expectation that if they really rally the troops, that the planning commission may say no to a permit. And I don't think that the borough has done a particularly good job of letting people know when those notices come out, that the planning commission doesn't have the authority to say no. [R. 595]

Commissioner Ruffner's comments clearly indicated that, no matter the facts or arguments presented at the hearing, when a notice has been sent out by the Borough for a material site CLUP hearing, the ultimate decision, in his view, is predetermined. His recusal was sought on this basis and it should have been granted. [R. 594]. Instead, he was permitted to deliberate on this application and voted in its favor. [T. 200].

2. The Planning Commission Improperly Disallowed Public Comments After Additional Testimony was Presented by the Applicant and Additional Voluntary Conditions were Proposed.

At the June 24, 2019 hearing, Borough Staff invited the Applicant to provide additional testimony in support of his application. [T. 192] Through that commentary, the Applicant addressed evidence previously presented² even though he had already taken the opportunity to

¹ Planning Commission Manual at 16-17.

² Mr. Trimble: "I had some rebuttal regarding the presentation that was drawn out over a two-hour period with the – one of the opponents sitting over here with the computer... We've previously rebutted those [drawings and those assertions with the letter from a licensed land surveyor]." [T. 192]

rebut evidence at the prior hearing at that prior hearing;³ proposed new voluntary conditions that had never previously been discussed;⁴ responded to new evidence that had not previously been presented;⁵ proposed a voluntary condition on back-up alarms after which Staff failed to clarify and the public was not allowed to comment on the ineffectiveness of such a voluntary condition;⁶ and testified relating to an issue that had never before been raised - the lack of aural impact from the use of “jake brakes.”⁷

The public attempted to provide additional comment relating to this additional testimony and proffered voluntary conditions but was prohibited from doing so. [T. 194]. The Planning Commission Manual dictates the hearing procedures to be followed in order to allow a “fair” quasi-judicial hearing and states that at the time the Applicant presents its rebuttal to the Planning Commission during the hearing, “If new evidence or testimony is allowed, the Planning Commission may question staff regarding the same and take additional public comment regarding the new evidence.”⁸ This allowance for additional public commentary would have been

³ Mr. Wall: “the procedures allow for the applicant to give a rebuttal as long as he is not providing any new information, just rebutting the testimony that’s been given.”

Ms. Stone: “As a matter of procedure, I apologize because I was not making a further public comment but rather rebutting testimony offered.” [T. 150]

⁴ Mr. Trimble agreed to not operate on Labor Day, Memorial Day, and the 4th of July to address concerns raised in a new and not previously provided letter to the Borough by the Alaska Division of Parks and Recreation and on which the public had no opportunity to comment. [T. 192]

⁵ See, e.g., id.

⁶ [R. 594]; Mr. Trimble: “And the – to clarify, Mr. Wall had a question regarding the back-up beepers, and he was clarifying with me that I said I was in agreement with that on my equipment. I can’t govern what happens with a truck that’s maybe one time going to come in there, but I would certainly try to accomplish that.” [T. 193]

⁷ [T. 193-194].

⁸ Planning Commission Manual, at page 22.

particularly important where, in this instance, additional conditions were proposed and discussed. Pursuant to 21.29.050(14) there must be a finding that the “conditions will be in the best interest of the borough and the surrounding property owners.” Accordingly, the Commissioners made determinations as to what was in best interests of the surrounding property owners without giving them the opportunity to be heard on that subject.

The disallowance of additional public commentary was not brought to a vote by members of the Planning Commission and, considering the nature of Mr. Trimble’s comments and the subsequent discussion, the failure to allow further comment created an unfair proceeding.

IV. Argument Relating to Substantive Error.

1. The Planning Commission Can Disallow a Permit.

Chapter 21.25 of the KPB Code provides general regulation of all CLUPs and Chapter 21.29 provides more specific regulations relating to material site permits. Pursuant to Chapter 21.25.010:

Chapter 21.25 applies to all land within the rural district of the Kenai Peninsula Borough, as designated in KPB 21.04.010. This chapter sets forth general provisions applicable to all conditional land use permits (CLUPs) and definitions. The provisions in this chapter are in addition to the chapters set forth in title 21 addressing specific types of CLUPs and where the provisions in this chapter and a CLUP chapter regulating a specific use conflict, the more specific chapter shall control. (emphasis added).

That is, the regulations and requirements in chapter 21.25 are equally controlling across all CLUPs unless and until a specific conflict arises between a provision in 21.25 and a more specific chapter.

Pursuant to the general governance contained in chapter 21.25, KPB Code 21.25.050 sets forth the authority of the Planning Commission in considering CLUPs. 21.25.050(B) both authorizes and mandates the exercise of Planning Commission authority:

When the application is scheduled to be considered, the planning commission shall conduct a public hearing to consider the permit application, and shall either

approve, modify or disapprove the permit application. Those wishing to contest issuance of the permit may submit evidence and be heard at the hearing. Before granting the permit, the commission must find at a minimum that the proposed activity complies with the requirements of this chapter. Planning commission approval of these conditional land use permits shall be by resolution. Permits shall be conditioned upon compliance with this chapter and other applicable code provisions. (emphasis added).

KPB Code 21.25.020 sets forth the purpose of the CLUP chapter: “to require advance notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes private property rights.” For that reason, and employing the same language,⁹ KPB Code 21.29.040 sets forth the specific standards that apply to CLUPs for material sites. Indeed, pursuant to KPB Code 21.20.040, while only the conditions authorized in 21.20.050 may be imposed by the Commission, those conditions are imposed in order to “meet” the standards set forth in 21.20.040.

At the time that the 2018 disallowance was remanded to the Commission for further findings and hearing, KPB Staff provided an updated report to the Commission Members. Contained within that Staff report were excerpts from the Hearing Officer’s Decision. Included in those excerpts was a clear message to the Commission Members that they expressly lacked the authority to disallow a permit. [R. 253]. The Commission Members were expressly directed by Staff through the Hearing Officer Decision that the “Code does not provide the Commission discretion to deny such a permit when the application has been properly submitted... While the Commission’s concerns may be valid, the Code does not afford the Commission discretion to judge the effectiveness of the conditions identified in the Code. Instead, the Assembly, in adopting the

⁹ See, e.g., KPB Code 1.08.040(T), which requires that, in construing the provisions of the code, “technical words and phrases and such others as may have acquired a peculiar and appropriate meaning in the law shall be construed and understood according to such peculiar and appropriate meaning.”

Code, only granted the Commission authority to impose these conditions and ensure that any application complied with the application requirements.”¹⁰

To read the KPB Code in a way to conclude that the Commission does not have the authority to disallow an application that the Planning Director has determined is complete is erroneous and necessarily renders the standards set forth in KPB 21.29.040 obsolete. The presumption of statutory interpretation is “that the legislature intended every word, sentence, or provision of a statute to have some purpose, force, and effect, and that no words or provisions are superfluous.”¹¹ Any other statutory interpretation renders the fundamental underlying intent and purpose of the 21.29.040 standards meaningless because it would require granting a permit under ineffectual conditions even where it cannot be said that the standards are met. *See, e.g., Mech. Contractors of Alaska, Inc. v. State, Dep’t of Pub. Safety*, 91 P.3d 240, 248 (Alaska 2004) (“When we engage in statutory construction we will presume “that the legislature intended every word, sentence, or provision of a statute to have some purpose, force, and effect, and that no words or provisions are superfluous.”) and *National R.R. Passenger Corp. v. Boston & Me. Corp.*, 503 U.S. 407, 418 (1992) (“a reviewing court need not accept an interpretation which is unreasonable”).

The KPB Code simply does not have a provision that requires mandatory authorization of permit applications. In *Farley v. Utah County*, the Utah Court of Appeals was called upon to interpret the statutory language contained in Utah County’s zoning scheme. There, like here, the Utah applicant asserted that the statutory provisions created a scheme whereby Utah County lacked discretion to do anything more than approve a submitted application. In disagreeing with the

¹⁰ *Id.*

¹¹ *See, e.g., Mech. Contractors of Alaska, Inc. v. State, Dep’t of Pub. Safety*, 91 P.3d 240, 248 (Alaska 2004) (internal citations omitted).

Applicant, the Utah Court of Appeals noted that: “[t]he best evidence of the legislature’s intent is the plain language of the statute itself,” that “[i]f the criteria in section 17-45-305 could be mechanically applied and if approval followed automatically whenever those criteria were met, there would be little need for two agencies to separately review the application and make recommendations, and for the legislative body to hold a public hearing and then decide whether to ‘approve, modify and approve, or reject’ an application,” and that “[b]ecause the Act requires an evaluation of factors beyond those criteria listed in section 17-45-305, the statutory scheme as a whole does not support the conclusion that an application must be approved if those five criteria are “satisfied.” Therefore, the plain language of the Act unambiguously grants Utah County discretion in deciding whether to approve and modify the creation of an agricultural protection area.”¹²

In enacting the KPB Code, the legislature included language on standards for permit applications. The legislature also limited the conditions that the Planning Commission could impose to meet those standards. The legislature provided for investigation into the permit application, recommendations to the Commission and public notice, hearing and deliberation. The legislature required the Commission to consider factors, including the public health, private property rights, safety and public welfare. The legislature explicitly authorized the Commission to disallow permits.

¹² *Farley*, 440 P.3d 856, 860 – 862 (Utah App. 2019). *See also, Da Vinci Investment, Limited Partnership v. City of Arlington, Texas*, 747 F. App’x 223, 226 (5th Cir. 2018) (“Da Vinci argues that the council members had no discretion to deny its development plan because it had met all the guidelines set forth in the ordinances. We again find no such mandatory language....Because there is no ‘explicitly mandatory language’ in the ordinances requiring city officials to approve a development plan, even where a plan meets all required guidelines, the city council had discretion to grant or deny the benefit.”)

The clear message given to Commission Members contained an erroneous interpretation of the law which conveyed to them they lacked the discretion to disallow this permit. The Commission Members themselves articulated an identical belief.¹³ The resulting decision must be reversed and remanded for reconsideration in the context of a correct interpretation of the law that explicitly and clearly grants Commission Members the authority to disallow a CLUP application for material site extraction.

2. The Planning Commission Must Independently Find that the Standards in 21.29.040 and Conditions in 21.29.050 Have Been Met.

KPB 21.29.040 sets forth certain standards that *must* be met in order to issue a CLUP. Pursuant to that provision, the standards require that the permit application: “Protects against the lowering of water sources serving other properties; Protects against physical damage to other properties; Minimizes off-site movement of dust; Minimizes noise disturbance to other properties; Minimizes visual impacts; and Provides for alternate post-mining land uses.” Relying on the erroneous interpretation of Chapters 21.25 and 21.29, the only finding relating to compliance with 21.29.040 is Finding of Fact 15: “Compliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040.” As discussed above, to conclude that independent consideration of the standards of 21.29.040 is unnecessary as they are only viewed in the context of compliance with 21.29.050 is erroneous.

The Commission was obligated to determine that the application did sufficiently protect against and minimize lower of water sources, physical damage, off-site dust movement, noise disturbance, and visual impacts. Indeed, 21.25.050 mandates a determination that the requirements

¹³ See, e.g., Commissioner Ruffner’s comments relating to the news report: “if a permit application comes in and it’s complete and it meets the conditions that have been set forth in 21.29, then those – and again, I’ll just repeat, if those conditions are met, then we don’t have the ability to deny the permit.” [T. 190].

of 21.25 are met prior to issuing a permit. 21.25.020 requires the Commission to send “advance notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes private property rights.” That is, the Code requires that the standards set forth in the Code are met prior to issuance of a permit.

In 2018, the Planning Commission found that “The noise will not be sufficiently reduced with any buffer or berm that could be added;” and “[t]he visual impact to the neighboring properties will not be reduced sufficiently.” In 2019, no findings of fact relating to either of these standards was provided. Instead, the Commission found that purported compliance with 21.29.050¹⁴ “necessarily means that the application meets the standards contained in KPB 21.29.040” regardless of whether or not the Commission believed that the standards had *actually* been met. These findings are required under the Code and were not made by the Planning Commission before approving this application. The Hearing Officer should exercise independent judgment to determine that independent consideration of the standards set forth in 21.29.040 was required - and that there were insufficient findings relating to 21.29.050(A)(2)(c)’s requirement that the buffer zone be of “sufficient height and density” - prior to granting the permit and that the findings in the resolution approving this permit were insufficient as a matter of law.

3. The Applicant Did Not Present Substantial Evidence to Support the Findings.

In 2018, the Commission heard public comment from more than 30 people and received over 200 pages of documents against this application. After a hearing spanning two and a half hours, the Commission determined that they were unable to find that the application minimized

¹⁴ A contention that is not accepted, as the Finding of Facts are silent as to whether the buffers and berms are of “sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission or planning director” as required under 21.29.050(A)(2)(c).

noise and visual impact to surrounding property owners. The Commission then found that the noise will not be sufficiently reduced with any buffer or berm that could be added and that the visual impact to the neighboring properties will not be reduced sufficiently.

Having had the matter remanded in 2019, the Commission again received documentary evidence and heard public commentary. This application came before the Commission on 5 different days and public hearing was heard that spanned over seven hours. 125 people presented written or verbal contributions that were against the application. The vast majority of those people were within the ½ mile notification area immediately surrounding the proposed site. Of the 39 people presenting written or verbal statements in support of the application, the majority of these individuals were outside of the notification zone, were not neighboring property owners and were, instead, other gravel pit owners and/or operators.

Importantly and notably, none of the findings of fact indicate how the evidence presented shifted in such a way that there is now substantial evidence to undermine the Commission’s prior findings and to determine that this site would be sufficiently screened from visual and aural impact. This finding of fact is absent because the evidence did not in fact shift.

Beachcomber presented a voluntary condition that contained a “rolling berm” which purported to solve the visual and noise impact problem. Much attention was focused on the rolling berm, however, the permit condition says nothing more than that the berm will be placed “near” the active excavation area and will be “moved” as excavation progresses. [R. 781]. It does not say how near the berm must be to the active area, within what time the berm needs to be moved, how much progression requires the berm to “roll,” or how the berm will operate in fact. Indeed, as noted by Commissioner Ecklund, the only way the rolling berm would provide screening impact would be for it to start on the west side of Phase 3 and roll back to the east toward the hillside and the affected

properties. [T. 157]. Commissioner Bentz voiced similar thoughts that the rolling berm is more or less effective depending on where and in what direction excavation progressed. [T. 198]. However, even after understanding the utter ineffectiveness of the rolling berm under certain conditions, the Commission did not make any requirements about the order or direction of excavation progression. The voluntary condition imposing a berm “near” the active extraction site, accordingly, provides no assurance that the site will actually be visually or audibly screened to surrounding property owners.

The site location poses the same inability to minimize visual and noise impact in 2019 as it did in 2018. That these problems were not overcome with additional evidence was summarized by Commissioner Ernst:

I’m looking at the findings of fact on page 80, 15Q, and it says – I just need to understand this a little bit, because when I look at the GIS evidence, if you will, it doesn’t seem like there is any way – let’s see, it says ‘each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers.’

Well, in this unique situation, we have a pit that’s in the lowlands surrounded by affected properties. Is there any possible buffer that could be reasonably used to protect the, you know, the noise levels and visual impact of this pit since there are so many parcels around it?

....

So equal protection under the law doesn’t apply?

Indeed, that the proposed buffers and berms do not adequately screen from noise and visual impact is conceded by the Applicant themselves. Mary Trimble submitted an email stating that the

‘opposition’ wants the right to protect their property but are unwilling to consider/accept the fact that they have a responsibility to do what they can to minimize visual and noise, if it is bothersome, by building a fence or berm on their property and/or installing blinds that raise up from the bottom so they still have their Inlet view. They do not have rights to our land, so we should not bear all the responsibility for mitigating their perceived discomfort for how we use it. [R. 378].¹⁵

¹⁵ Emmitt Trimble echoed this sentiment in a recorded statement, played for the Commissioners: “You are looking to the operator or the gravel pit owner to solve the other person’s problem on their property with

On the other hand, surrounding property owners presented objective and compelling evidence that noise and aural impacts will not be screened by the proposed buffers and berms, regardless of whether the berm does in fact move. Using the Borough's own data system, GIS profile drawings were prepared for the properties of Richard Cline, Gary Gordon, Pete Kinneen, Hans Bilben, Steve Thompson and Rick Oliver. [R.598-62, R662-664 726-728]. These profile drawings clearly demonstrate the ineffectiveness of the buffers and berms proposed by the application at reducing any visual and aural impact. Rather than refuting, the vector profile drawings prepared by Stephen Smith only validate the GIS profile drawings and, when read in conjunction with the GIS profiles, only further confirm the ineffectiveness of the berms. [R. 443-444]. This ineffectiveness remains confirmed in real life by Rick Oliver's visual depiction of the effect a 12' berm would have on reducing the sightline from his property into the proposed pit. [R451-453].

The geography of this site remains as it was at the 2018 hearing: a proposed gravel pit in a residential and recreational area that sits lower than surrounding property owners and has a higher propensity to be seen and heard by surrounding neighbors. Nothing presented by the Applicant undermined the conclusion that the Commission reached in 2018, and the Commission did not find otherwise. Substantial evidence does not support the issuance of this application and its allowance must be reversed.

V. Conclusion.

For the foregoing reasons, it is proper for this Hearing Officer to exercise independent judgment in the interpretation of the Code and determine that the Commission does, in fact,

their money instead of them solving their problem. Build a fence, get some blinds, get some ear plugs. So in answer to your question about responsibility if it is an unzoned area no." [R. 697].

pursuant to the express mandate of the Code, have the authority to disallow material site CLUP applications. The Hearing Officer should determine that those Commissioners who had prejudged this issue should not be permitted to deliberate and decide. The Hearing Officer should determine that independent consideration of the standards set forth in 21.29.040 is essential and that those standards are not necessarily met by the mere submission of conditions set forth in 21.29.050, which were also not met. The Hearing Officer should determine that there is not substantial evidence to support the issuance of this permit but, instead, that the substantial evidence demonstrates that the permit should not be issued.

DATED October 1, 2019.

Applicants.)

KENAI PENINSULA BOROUGH'S OPENING STATEMENT

PROCEDURAL AND FACTUAL BACKGROUND

A material site conditional land use permit (hereinafter "CLUP") application was received and processed pursuant to KPB chapters 21.25 and 21.29. [R.1-4]. The applicant and owner is Beachcomber LLC. [R.1]. The property is located at 74185 Anchor Point Road.¹ [R.19]. The submitted site plan indicated the material site haul route to be Danver Street, which is a borough maintained road. [R.8].

The application indicates that the depth to groundwater is 20 feet and that the depth of the proposed excavation is 18 feet. [R.2]. The site plan indicated that processing of material would take place more than 300 feet from the south, east, and west parcel

¹ Legal Description: Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) – Deed recorded in Book 4, Page 116, Homer Recording District.

boundaries and 200 feet from the north boundary. [R.25]. A waiver to the 300-foot setback requirement for processing was requested in the application. [R.4]. The site plan indicated that there are several wells located within 300 feet of the property but none within 100 feet of the proposed excavation. [R.5]. The site plan indicates a 100-foot setback from the wetlands area located in the northeast corner of the property and that this setback will provide protection via phytoremediation of any site run-off prior to entering the surface water. [R.5]. The site plan also indicates that the Alaska DEC user's manual, *Best Management Practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska*, will be utilized as a guideline to reduce potential impacts to water quality. [R.5]. The applicant estimates a life span of 15 years for the site. [R.2].

Evidence of public notice and publication is in the record. [R.183-186; R.199-200; R.196; R.205-208]. Public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Application information was provided to pertinent KPB staff and other agencies on July 6, 2018. Comments were received from Alaska State Department of Environmental Conservation, Alaska State Department of Natural Resources, and the Donald E. Gilman River Center. [R.34; R.36; R.94-95; R.98-100]. The KPB also received comments from Kachemak Bay National Estuarine Research Reserve, Homer Soil and Water Conservation District, Kachemak Bay Conservation Society, and Cook Inletkeeper. [R.60-92; R.109-110; R.129-131; R.160; R.163-165]. Forty-two comment letters in opposition from area residents were received, one of which was inadvertently not provided to the commission. [R.28-165; R.218]. (Agency comments are not separated from area residents' comments in the record.) A petition in opposition was received that was signed by 17 area residents. [R.137-138]. Most of these comments were not available to the planning commission members until the night of the public hearing. At the hearing, an additional petition was submitted as were additional photos from area residents and from the applicant. [R.166-182].²

At the July 16, 2018 meeting, staff recommended that the commission take public comments and then continue the hearing to the next meeting to allow time for the

² 16 of the 20 signatures on this petition participated in the planning commission proceedings with either written or oral testimony.

commission members to read all of the written comments that had been received. [T.3]. At the meeting, 27 people spoke in opposition to the application or expressed concerns about the proposed project and one neighbor spoke in favor of the application. The applicant and the applicant's engineer also addressed the commission.

The primary concerns raised about the proposed material site through the correspondence and testimony were as follows: traffic volume, traffic safety, surface and subsurface water quality, property values, quality of life, visual impacts, noise, dust, wildlife habitat, and hours of operation. [T.3-19].

After close of the public comment period, a motion to continue the public hearing to the following month was made. The motion failed by a vote of four to five. [T.25-26]. Following the failed motion to postpone, a motion was made to approve the requested material site. Following discussion, the motion failed by a vote of three to six. [T.26-28]. The commission then adopted the following findings:

1. The noise will not be sufficiently reduced with any buffer or berm that could be added.
2. The visual impact to the neighboring properties will not be reduced sufficiently.

[T.28]

An appeal was filed with the Borough Clerk by Beachcomber LLC pursuant to KPB 21.20 on August 2, 2018. A hearing on the appeal was held on December 6, 2018. The hearing officer's decision and order was issued on December 26, 2018. [R.276-292]. The decision and order provided instructions for the planning commission:

The Commission shall reevaluate the application with respect to the mandatory conditions listed in KPB 21.29.050, as well as any voluntary conditions that Beachcomber may agree to. The Commission shall conduct a second public hearing at which it shall issue findings of fact, pertaining to the mandatory conditions listed in KPB 21.29.050, and shall reference specific evidence in the record in support of those findings. In issuing its findings, the Commission must comply with both local and common law requirements, which require the Commission to both issue findings supported by substantial evidence and to "articulate the reasons for their decisions."

[R.290-291]

Two parties filed timely motions for reconsideration in the matter and the hearing officer issued a decision denying reconsideration on February 5, 2019. [R.271-275].

The remand hearing was scheduled for March 25, 2019. Evidence of public notice of the hearing is in the record. [R.744-758]. Public notice of the remand hearing was mailed on March 4, 2019 to the 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at the Anchor Point post office. Public notice of the remand hearing on the application was published in the March 14, 2019 and March 21, 2019 issues of the *Homer News*. Sixty-three comment letters and other documents were received from the public, the applicant, and Alaska Department of Transportation and Public Facilities prior to the meeting. [R.293-373, R.375-465]. The planning commission also received a request for a continuance from the applicant's representative. [R.374]. At the hearing, additional comments, documents, and photos were submitted from area residents and from the applicant. [R.466-495]. The public, the applicant, and their legal representatives provided testimony at the hearing. [T.52-103].

Following conclusion of public comments, the planning commission voted to continue the public hearing to May 28, 2019. [T.78]. At the regular meeting of the planning commission on April 8, 2019, the applicant addressed the planning commission during the time period set aside for public comment on items not on the agenda, stating that he had a scheduling conflict on May 28, 2019, and requested that the continuation of the hearing be rescheduled to a different date. The commission then voted to amend after adoption the date of the continuation of the hearing and to publicly notice it for discussion at its next meeting. [T.100-101]. A notice was mailed to landowners or leaseholders of the parcels within one-half mile of the subject parcel informing them of the meeting to take place on April 22, 2019.³

Prior to the April 22, 2019 meeting, 19 written comments were received concerning the continuation date of the hearing. At its April 22, 2019 meeting, the commission received testimony from the applicant and six members of the public. [T.105-108]. Following the testimony, the planning commission scheduled the continuation of the remand hearing for June 10, 2019. [T.108-110].

³ This document was inadvertently omitted from the record.

Notice of the June 10, 2019 planning commission meeting was mailed on April 24, 2019. There were errors with the printing and mailing of this notice and it was resent on April 30, 2019. [R.762-763]. Notice was sent to the Anchor Point post office for posting and was published in the May 30, 2019 and June 6, 2019 editions of the *Homer News*. [R.767]. Prior to the meeting, 33 comment letters were received from the public, the applicant, and from Alaska Department of Natural Resources. [R.584-675].

At the June 10, 2019 hearing on remand, the applicant and his representatives addressed the commission and provided a video presentation. [T.119-122]. The commission also heard testimony from 31 members of the public. [T.122-150]. During the public comments, Lynn Whitmore, a neighboring property owner, displayed a live interactive version of the written evidence that he had submitted that is included in the record. [R.598-602]. At the hearing, the applicant volunteered a condition concerning the placement of the berms (rolling berms) and a condition concerning the use of white noise backup alarms. [T.122, 158]. Following public testimony and rebuttal from the applicant, the planning commission closed the public hearing and began deliberation. [T.159]. After some time spent in deliberation the commission voted to continue the deliberation to its next meeting to be held on June 24, 2019. [T.157-159].

Prior to the meeting on June 24, 2019, planning staff became aware of and obtained a copy of a comment letter from Alaska State Parks, dated May 1, 2019. [R.725]. This letter had not previously been received by the planning department and so it was provided to the planning commission for its June 24, 2019 meeting. There was also a letter sent directly to several of the planning commission members from a neighboring property owner. [R.731-732]. A copy of this letter was provided to all of the commission members. The applicant also submitted an additional volunteered condition that would restrict operations of the material site on certain holidays. The revised resolution staff provided to the planning commission for consideration on remand contained 21 conditions for the proposed material site permit. [R.715-716].

At the June 24, 2019 meeting, at the request of the applicant, staff recommended to the planning commission a revision to proposed condition #2 concerning the buffer along the northern 200 feet of the eastern most boundary. Staff also recommended the addition of the volunteered condition restricting operations on certain holidays. [R.729]. The final

revised resolution provided by staff to the planning commission for consideration contained 30 findings of fact. [R.711-715].

Staff also recommended that, if the volunteered condition concerning holiday restrictions was imposed, the planning commission should also adopt additional findings in support of the volunteered condition. [R.729-730]. At the meeting, the applicant was given the opportunity to rebut the additional information that was presented. [T.192-194]. Following deliberations, the planning commission voted to grant the CLUP via KPB Planning Commission Resolution 2018-23. [T.196-200]. Resolution 2018-23 adopts 30 findings of fact and imposes 22 conditions for the approved CLUP.

DISCUSSION

1. KPB 21.29 ESTABLISHES THE STANDARDS AND THE ONLY CONDITIONS APPLICABLE TO A MATERIAL SITE CLUP

KPB 21.25.020 provides:

It is the purpose of this chapter to require advance public notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes private property rights.

KPB 21.29.040 is more specific and explicit: the only conditions that may be placed on a material site CLUP are those set forth in KPB 21.29.050.

KPB 21.29.040 provides:

A. These material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. Only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards:

1. Protects against the lowering of water sources serving other properties;
2. Protects against physical damage to other properties;
3. Minimizes off-site movement of dust;
4. Minimizes noise disturbance to other properties;
5. Minimizes visual impacts; and
6. Provides for alternate post-mining land uses.

In the rural zoning district of the borough, the assembly has attempted to balance the health, safety, and welfare of the property owners adjacent to material sites by providing a list of mandatory conditions in KPB 21.29.050 that must be applied to each material site permit. It is through these conditions that the assembly has determined the extent to which the health, safety, and welfare will be protected in the material site permitting process.

A superior court decision has upheld the borough assembly's authority to adopt an ordinance that favors material site operations. This order further held that it is the planning commission's responsibility to abide by the legislative standards the assembly has established:

"[P]lanning authorities are 'bound by the terms and standards of the applicable zoning ordinance, and are not at liberty to either grant or deny conditional use permits in derogation of legislative standards.' ...

The assembly has specifically adopted ordinances that are protective of material site operators and rejected proposed ordinances that make it more difficult for the same to receive project approval. In adopting the material site code language, the Borough Task Force rejected language that placed a larger burden on the permit applicant. ...

[T]he Planning Commission would have violated the KPB Code by imposing conditions not authorized by the code. The Assembly could have chosen a policy that favors residential property owners, but instead it chose to adopt a policy that favors material site operators. This court will not disturb a reasonable policy decision of local concern..."⁴

In the present case, the CLUP approved by the planning commission imposes every required and allowed condition under borough code. The authority of the assembly to determine policy decisions should not be disturbed by the hearing officer.

⁴ See, Memorandum Decision and Order, *Warrington v. KPB*, Case No. 3KN-05-206 CI, pgs. 8 -10 (Citing *South Anchorage Coalition v. Coffey*, 862 P.2d 168 (Alaska 1993)).

2. THE MANDATORY AND VOLUNTARY CONDITIONS IMPOSED BY THE PLANNING COMMISSION'S DECISION MEET OR EXCEED THE KPB 21.29.040 STANDARDS

After multiple public hearings and hours of public testimony and deliberation, the planning commission made 30 findings of fact and adopted 22 permit conditions to meet the standards found in KPB 21.29.040. The decision represents the end result of over a yearlong public process. The decision was deliberative and supported by substantial evidence. All the mandatory conditions found in KPB 21.29.050 are addressed and satisfied in the findings and permit conditions. Only the KPB 21.29.050 conditions may be imposed by the planning commission. The permit satisfied all code requirements and the approval of the permit was the correct decision in accordance with borough code.

The mandatory KPB 21.29.050 conditions and the corresponding finding of fact adopted and condition(s) imposed by the permit, set forth in Resolution 2018-23, are as follows:

1. *Parcel boundaries* – KPB 21.29.050(A)(1)
 - i. Finding 16: All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - a. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - b. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
 - ii. Condition #1: The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - ii. Sufficiency: Meets or exceeds code requirement.
2. *Buffer zone* – KPB 21.29.050(A)(2)
 - i. Finding 17: A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - a. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - b. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - c. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that

is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.

- d. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
- e. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
- f. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
- g. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
- h. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that can provide visual and noise screening of the material site for some of the adjacent uses.
- i. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
- j. A 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
- k. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
- l. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
- m. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
- n. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
- o. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
- p. There has been testimony that the material site will mar the view of

Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.

- q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - r. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
- ii. Condition #2: The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
- A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.
 - A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
 - A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation.
 - A greater than 50-foot vegetated buffer along the western most parcel boundary.
- These buffers shall not overlap an easement.
- iii. Condition #3: The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
- iv. Condition #4: The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
- v. Sufficiency: Meets or exceeds code requirement.

3. *Processing* – KPB 21.29.050(A)(3)

- i. Finding 18: Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
 - a. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the

north property line.

- b. The applicant proposed the following justifications for waiving the processing setback: “Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant’s daughter & 169-022-08 is not developed.”
 - c. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - d. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - e. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
- ii. Condition #5: The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
 - iii. Sufficiency: Meets or exceeds code requirement.

4. *Water source separation* – KPB 21.29.050(A)(4)

- i. Finding 19: All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.
 - a. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - b. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - c. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
- ii. Condition #6: The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
- iii. Condition #7: The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
- iv. Condition #8: The permittee shall not dewater either by pumping, ditching or any other form of draining.
- v. Sufficiency: Meets or exceeds code requirement.

5. *Excavation in the water table* – KPB 21.29.050(A)(5)
- i. Finding 20: Excavation in the water table is not permitted; meets or exceeds code requirements.
6. *Waterbodies* – KPB 21.29.050(A)(6)
- i. Finding 21: An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
 - a. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - b. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - c. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - d. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - e. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - f. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - g. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - h. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - i. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
 - ii. Condition #9: The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
 - iii. Sufficiency: Meets or exceeds code requirement.

7. *Fuel storage* – KPB 21.20.050(A)(7)
- i. Finding 22: Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 - a. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.29.050(A)(7).
 - ii. Condition #10: The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
 - iii. Sufficiency: Meets or exceeds code requirement.
8. *Roads* – KPB 21.29.050(A)(8)
- i. Finding 23: Operations shall be conducted in a manner so as not to damage borough roads.
 - a. The submitted site plan indicates that the material site haul route will be Danver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - b. There was a significant number of public comments concerning the condition of Anchor Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
 - c. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
 - ii. Condition #11: The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
 - iii. Sufficiency: Meets or exceeds code requirement.
9. *Subdivision* – KPB 21.29.050(A)(9)
- i. Finding 24: Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
 - i. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
 - ii. Condition #12: The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
 - iii. Sufficiency: Meets or exceeds code requirement.

10. *Dust control* – KPB 21.29.050(A)(10)

- i. Finding 25: Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - a. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
- ii. Condition #13: The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
- iii. Sufficiency: Meets or exceeds code requirement.

11. *Hours of operation* – KPB 21.29.050(A)(11)

- i. Finding 26: Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - a. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - b. This condition reduces off-site noise impacts of the material site.
- ii. Condition #14: The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
- iii. Sufficiency: Meets or exceeds code requirement.

12. *Reclamation* – KPB 21.29.050(A)(12)

- i. Finding 27: Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - a. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - b. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - c. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
- ii. Condition #15: The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
- iii. Sufficiency: Meets or exceeds code requirement.

13. *Other permits* – KPB 21.29.050(A)(13)

- i. Finding 28: Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - a. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
- ii. Condition #16: The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
- iii. Sufficiency: Meets or exceeds code requirement

14. *Voluntary conditions* – KPB 21.29.050(A)(14)

- i. Finding 29: Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
 - a. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - b. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimizes the noise impacts of the material site.
 - c. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
 - d. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
 - e. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.
 - f. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.
 - g. The volunteered condition, to not operate on holidays, is in the best

interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.

- ii. Condition #21: The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
- iii. Condition #22: The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to also include:
 - Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
 - Saturday, Sunday, and Monday if July 4th is on a Tuesday
 - Saturday, Sunday, and Friday if July 4th is on a Thursday
- iv. Sufficiency: Meets or exceeds code requirement

15. *Other Signage* – KPB 21.29.050(A)(15)

- i. Finding 28: For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - a. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance
- ii. Condition #17: The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
- iii. Sufficiency: Meets or exceeds code requirement

Other conditions imposed on the subject CLUP:

Condition #18: The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.

Condition #19: This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.

Condition #20: Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

3. APPELLANT'S POINTS ON APPEAL

For purposes of this opening statement the Appellant's points on appeal have been grouped as follows:

Group #1: 'the buffers do not sufficiently minimize noise and visual impacts'
Appellant points on appeal A, B, D, E, L, N, and O

The appellant's points on appeal at paragraph "N" states that, "KPB 21.29.050 mandates buffer/berm to be of sufficient height and density." The appellant's statement is not entirely accurate. KPB 21.29.050(2)(c) provides, "[t]he vegetation and fence shall be of sufficient height and density to provide visual and noise screening of the proposed use as deemed appropriate by the planning commission or planning director." (Emphasis added). Per KPB 21.29.040 the material site regulations "are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts." (Emphasis added).

Minimization of impacts may only be accomplished through the imposition of KPB 21.29.050 mandatory conditions. A point of contention in this case is whether the term "minimize" should be read to mean "eliminate" or whether it should be read to mean "reduce". The borough interprets "minimize" to mean reduce. Elimination of all impacts of a gravel pit is impossible. The 22 conditions imposed by the planning commission satisfy the intent of the material site regulations by protecting against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts. The approved permit imposes all conditions allowed or required under borough code.

Group #2: 'staff and planning commission interpreted the code and evidence wrong'
Appellant points on appeal B, C, F, G, H, K, L, and P

Appellant's points on appeal B, C, F, G, H, K, L and P are related to the idea that "minimize" should be interpreted to mean "eliminate" and that a CLUP should be a denial process under borough code. In other words, the Appellant advocates an interpretation of KPB Chapters 21.25 and 21.29 to mean that if an applicant cannot eliminate perceived negative impacts to surrounding properties then the permit should be denied. The borough

does not agree with such a restrictive reading. The borough's position is that the borough assembly did not intend the CLUP process to prohibit uses on private land within the largely unregulated rural zoning district of the borough. The purpose of the CLUP process, under borough code, is to allow uses to occur with reasonable project specific conditions that reduce, not eliminate, impact on surrounding uses.

There will always be at least some noise and visual impacts to adjacent properties from a material site operation. Many material sites could be denied based on "insufficient" screening. In the history of the material site ordinance there has never been an interpretation that all surrounding properties must not be able to see or hear the material site at all. Instead, the interpretation applied consistently to all 96 material sites permits issued since 1996 is that the goal of the material site regulations is to reduce certain negative impacts. Full elimination of negative secondary impacts has never been discussed or required, nor is it feasible. Attempting to judge whether a permit should be denied based on how many people claim they are not sufficiently protected ultimately will lead to arbitrary decision making. Rather than relying on evidence this approach relies on surrounding property owners stacking the hall—whether a permit is approved or denied becomes a numbers game. If a large number of people oppose the material site it will be denied, regardless of whether other material sites that may have similar attributes have been approved. Such "negative community sentiment" is not a valid reason to deny a permit.⁵

KPB 21.25 houses the general notice and hearing requirements for conditional uses but the more specific language regulating material sites (KPB 21.29) governs interpretation issues.⁶ Given the mandate from the assembly that material sites be subject only to certain mandatory conditions a denial based on a conclusory statement that the buffers are insufficient to protect against noise and visual impacts cuts against the grain of the code. The planning commission supported its decision with extensive findings. The buffer conditions imposed by the planning commission pursuant to KPB 21.29.050(A)(2) sufficiently meet the standards found in KPB 21.29.040.

The planning commission's findings are required to be supported by the substantial evidence in the record. The "substantial evidence" in the record required to support the

⁵ *South Anchorage Coalition v. Coffey*, 862 P.2d 168, 172 n.11 (Alaska 1993)

⁶ *Nelson v. Municipality of Anchorage*, 267 P.3d 636, 642 (Alaska 2011)

planning commission's findings is not the same as a substantial number of people opposing the material site. Substantial evidence is defined as relevant evidence that a reasonable mind might accept to support a conclusion.⁷ While the record contains a substantial number of people testifying in opposition to the material site, unsupported conclusory statements about damage to property values and insufficiency of noise and visual impacts should not be considered substantial evidence. The borough will concede that the conditions will not eliminate all impacts of the proposed material site. Yet elimination is not the standard that must be met under borough code in order for the planning commission to approve a material site CLUP. The planning commission made specific findings regarding buffers that were supported by substantial evidence and imposed buffer conditions to protect against and minimize impacts of the proposed material site to the fullest extent allowed by code.

Group 3: 'procedural errors'
Appellant points on appeal I, J, M, O, P, and Q

Appellant's paragraph I. 'One or more commissioner should have recused'

Included in the desk packet for the meeting of March 25, 2019, was a memo from planning director, Max Best, and deputy borough attorney, Holly Montague, to the planning commission. [R.367-373]. The memo addresses two issues regarding planning commissioner conflict or bias. Prior to the opening of the hearing on March 25, 2019, Commissioner Brantley indicated that he had an appearance of a conflict of interest and asked to be recused and the chairman then recused him. [T.51]. Commissioner Venuti then indicated that he did not feel that he had a conflict of interest and felt that he could make a fair decision on the matter. He was not recused. [T.51].

Prior to the June 10, 2019 hearing, a comment letter was received alleging a bias on the part of Commissioner Ruffner, ex-parte communication on the part of Commissioner Foster, and the previously alleged bias or a conflict of interest on the part of commissioner Venuti. [R.594]. The allegation concerning commissioner Ruffner and Commissioner Foster was addressed at the Jun 24, 2019 meeting. [R.190]. Without more specifics from the Appellant, there is no indication that any planning commission member who voted on

⁷ KPB 21.20.210(A)(7).

Resolution 2018-23 should have been recused due to an impermissible conflict of interest or bias.

Appellant's paragraph J. 'Addition of last minute voluntary condition'

Throughout the public hearing process, many of the area residents expressed concerns about the impact of the proposed material site on the area campgrounds and RV parks. A comment letter was received from Alaska State Parks expressing concerns about the impact of the proposed material site on the nearby recreation area. [R.725]. The volunteered condition was in response to the concerns that had been expressed. It is a common practice of the planning commission to accept volunteered conditions, after close of public comments, which are offered as part of the rebuttal process to public comments. In this case, the applicant had not previously had an opportunity to rebut the comment letter from Alaska State Parks. [T.189-190]. The planning commission found that this volunteered condition was in the best interest of the borough and the surrounding property owners. [R.250-251].

Appellant's paragraph M. 'Absent commissioners did not see relevant evidence'

Slides of the presentation prepared by those opposed to the permit were provided to the planning commission. [R.598-601, 662-664, 726-728].

Appellant's paragraph O. 'failure to define rolling berm'

The applicant proposed the volunteered condition for the 'rolling berm' at the June 10, 2019 hearing. [T.121-122]. To reflect this volunteered condition, Resolution 2018-13 was changed to require that the berms be placed near the active extraction area rather than between the vegetated buffer and the extraction area. This change was discussed and explained at the June 24, 2019 meeting. [T.195]. Finding 17 contains the findings of fact concerning the adequacy of the buffers. [R.248-249].

Appellant's paragraph P. 'Commissioners did not understand code when voting'

Without specifics, it is not possible to respond to this point on appeal.

Appellant's paragraph Q. 'During deliberations there was confusing or conflicting page numbers in the record'

There was confusion concerning page numbering at the June 24, 2019 meeting. [T.197]. There is no reason to believe that the confusion was not quickly cleared up. [T.197].

4. HEARING OFFICER'S SCOPE OF APPELLATE REVIEW.

The hearing officer may remand, affirm, or reverse, or modify the planning commission's decision.⁸ Pursuant to KPB 21.20.320(A)(2), the hearing officer shall defer to the planning commission regarding findings of fact when they are supported by substantial evidence in the record. The hearing officer may exercise independent judgment on matters that relate to the interpretation or construction of ordinances; yet, due consideration will be given to the expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21.⁹ If the hearing officer determines that a finding by the planning commission is not supported by substantial evidence in the record, the hearing officer may make a different finding on the factual issues or may remand to the planning commission, as provided in KPB 21.20.330(B).¹⁰

In the present appeal the planning commission's findings of fact are supported by substantial evidence in the record. Therefore, with due consideration given to the expertise and experience of the planning commission in its interpretation of the code it is charged with administering, the hearing officer should affirm the planning commission's decision in this case.

5. THE RURAL ZONING DISTRICT

The proposed material site subject of this case sits within the rural zoning district of the borough. Subject to the limited restrictions found in borough code, the borough assembly made a policy decision to allow unrestricted use of property within the rural zoning district.¹¹ Landowners may operate a dog kennel, hair salon, day care, a material site under one acre,

⁸ KPB 21.20.330.

⁹ KPB 21.20.320(A)(1).

¹⁰ KPB 21.20.320(A)(3)

¹¹ KPB 21.04.010(B).

and many other uses without notifying the borough or applying for a permit. In addition, building permits are not required in the rural district of the borough. Thus, there are very few restrictions placed on a landowner within the rural zoning district desiring to put his or her real property to its highest and best use. The requirement that under certain situations landowners must obtain a permit for material extraction is one of the few restrictions that apply to property within the rural zoning district.

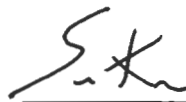

Since the CLUP process imposes greater restrictions on the use of a landowner's property than that of surrounding properties, it is imperative that the restrictions imposed are objective, fair, and justified. A key component of the fairness element is the fact that the borough's planning commission possesses limited discretion in denying a CLUP and no discretion to add conditions beyond the conditions listed in KPB 21.29.050. The fact that the Appellant may want more zoning or may want the code to allow for broader discretion to deny a CLUP is not relevant to this appeal. Policy decisions are made by the borough assembly. The planning commission must enforce the borough code as written. The planning commission would have violated the code if it required permit conditions not found in code or if it read code to require elimination of all impacts of a material site.

CONCLUSION

The planning commission's approval of the material site should be upheld. Only the conditions found in KPB 21.29.050 may be imposed to meet the standards set forth in 21.29.040. All the protections afforded through the mandatory conditions found in KPB 21.29.050 have been imposed. In total, the planning commission adopted 30 findings of fact and imposed 22 conditions on the permit. Issuance of the permit complies with borough code.

Dated this 1st day of October, 2019.

Kenai Peninsula Borough

SUBJECT: PC Decision to Disapprove Conditional Use Permit for KPB Parcel 169-010-67
Case 2019-01-PCA

RE: Opening Statement

Dear Hearing Officer Anmei Goldsmith:

McLane Consulting, Inc. was hired by the appellant, Beachcomber, LLC, to survey the parcel and prepare the CLUP permit documents and exhibits.

McLane Consulting concurs with the Planning Commission's decision to approve the Conditional Land Use Permit. The proposed application meets the permit conditions required by KPB 21.29.050 which according to KPB 21.29.040 are the only conditions set forth that may be imposed to minimize noise and visual impacts. The Planning Commission decision should be upheld.

McLane Consulting will respond to any technical surveying and engineering questions regarding the permit preparation and the site conditions raised in opening statements in a response statement.

Sincerely,

Gina M. DeBardelaben, PE
Principle

In the matter of the Kenai Peninsula Borough Planning Commission's decision to approve a conditional land use permit for a material site that was requested for KPB Parcel 169-010-67; Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District.

Hans Bilben,

Appellant,

Emmitt Trimble,
Beachcomber LLC,

Applicant.

Case No. 2019-01-PCA

APPLICANT'S OPENING STATEMENT

COMES NOW the Applicants Emmitt Trimble and Beachcomber LLC, by and through counsel of record, Holmes Weddle & Barcott, P.C. and hereby submits their Opening Statement.

I. STATEMENT OF FACTS

Applicant Beachcomber LLC ("Beachcomber") owns real property located at 74185 Anchor Point Road, with the legal description Tract B, McGee Tracts – Deed of Record Boundary Survey (Plat 80-104) – Deed recorded in Book 4, Page 116, Homer Recording District. Beachcomber applied for a Conditional Land Use Permit through the Kenai Peninsula Borough to conduct a sand, gravel, and peat extraction operation at the site of the real property, which was submitted on June 4, 2018. The Planning Commission held a public meeting and heard from community

members as to the application. Planning staff and Director stated that the application was appropriately completed and complied with all required conditions, and recommended approval. After a lengthy public hearing the Planning Commission hastily defeated a motion to extend hearing, and voted to deny the permit without any discussion, or establishment of legitimate Findings of Fact.¹

Following the Commission's denial, Beachcomber appealed in order to seek review of the decision. On January 8, 2019, the hearing officer issued a decision denying Beachcomber's request for issuance of the permit but remanded the permit application back to the Commission for further proceedings in accordance with its order. The basis for the remand was that the Commission exceeded its authority by finding that the permit conditions were insufficient to reduce noise and visual impact – rather that the Commission's role is only to determine whether the application complied with the requirements stated in the code, not to determine the effectiveness of those conditions. The Commission conducted a public hearing on June 10, 2019 to consider the issue on remand. The hearing was continued to June 24, 2019, wherein the Commission approved the permit.

II. PLANNING COMMISSION APPROVAL

Beachcomber asserts that the Kenai Peninsula Borough Planning Commission properly granted the Conditional Land Use Permit authorizing its material extraction at the proposed site.

¹ Beachcomber subsequently sought another application for extraction under the counter permit provision on July 30, 2018 for a smaller parcel on its property, which does not require public notice or approval by the Commission – this application was granted on August 15, 2018. Beachcomber has not taken any substantive action upon this permit to date, pending ongoing litigation.

III. ASSERTED ERRORS

Applicant asserts that the Planning Commission properly decided the matter before it and no errors were made.

IV. LEGAL AUTHORITY

- a. The Kenai Peninsula Borough Code 21.01.010 Allows for the Commission to Approve Applicant's Conditional Land Use Permit Application.

KPB 21.01.010 provides authority for the Borough to exercise all zoning powers on an areawide basis. As such, all zoning requests are submitted to the Borough Planning Commission for review, and the permit application filed by Beachcomber was properly considered by law by the Commission. The Commission approved the Conditional Land Use Permit on remand after the hearing officer found that the Commission had exceeded its authority by denying the permit based on two standards which it believed would not be adequately met. Applicant Beachcomber properly submitted the application and properly detailed how it would abide by the mandatory codes in accordance with KPB 21.29.040. Each condition was acknowledged by the Commission at its June 24, 2019 meeting.

Appellants appear to have the expectation that any proposed use of Beachcomber's property should be done so in a way that has no visual or noise impact on their property. The code does not require a complete prohibition on such impact. The Borough has established its desired means of regulating the activity occurring on its land areas, and is engaged in only "minimal zoning."² As such, it has no specified areas specifically zoned for strictly residential or strictly

² KPB Planning Commission Manual, at 7 (April 2019).

commercial use. It has only the code by which to govern its permitting procedure and regulations, limiting the Commission's authority only to ensuring the application procedure is fully followed.

Appellant's attempt to circumvent the Code and to persuade the Commission to act in a role beyond the scope designated by the Code must be denied. Appellant may have valid concerns for opposing the proposed use of the site; however, it is not the Commission's place to determine the effectiveness of the standards set forth; only that the standards mandated are sufficiently addressed in their application.

b. Appellants' Case Should Be Dismissed Upon Summary Judgment

Appellant no longer has a viable case available upon which to appeal. Appellant has made no argument that the Commission's decision upon remand was made inconsistent with the Code requirements of abiding by the permitting process. Summary judgment shall be granted when there is no genuine factual dispute and the moving party is entitled to judgment as a matter of law.³ Applicant Beachcomber argues that no genuine factual disputes exist and that as such, this matter should be dismissed.

Appellants' dispute is based upon its assertion that the Commission improperly granted the permit without substantial evidence that the standards under KPB 21.29.040 could not be met. Again, the Commission's role is not to determine whether Beachcomber's measures could adequately reduce noise and visual disturbance and dust, only that it has properly submitted a valid

application. The Commission does not have the capacity or duty to determine the effectiveness of Applicant's abatement measures.

III. CONCLUSION

Applicants Emmitt Trimble and Beachcomber, LLC maintain that the Kenai Peninsula Borough Planning Commission has properly approved its permit application. Beachcomber has submitted viable plans for its site to meet the required standards, as well as proposed voluntary standards to reduce the impact of its operations on neighboring properties. Beachcomber respectfully asserts that it has met all the standards set forth in the Kenai Peninsula Borough code such that Conditional Land Use Permit granted by the Commission should be upheld and Appellant's case dismissed summarily.

DATED this 18th day of October, 2019, at Anchorage, Alaska.

Applicant's Opening Statement regarding Kenai Peninsula Borough Planning Commission decision approving the issuance of the CLUP applied for by Beachcomber LLC:

Beachcomber finds no errors or omissions in the decision made by the Kenai Peninsula Borough Planning Commission to approve and issue the CLUP applied for by Beachcomber for extraction of material from Tract B McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) KPB Parcel 169-010-67.

Furthermore, as the Planning Staff and Commission determined, all conditions required by the application and ordinance have been met and complied with, including voluntary conditions. The Appellant has not provided any Substantial Evidence supporting Findings of Fact that would lead to a reversal of the Planning Commission's Findings and Decision, therefore the decision to issue the CLUP must be upheld.

Hi Johni,

I want to send this email to, once again, show my support for the CLUP approved for Beachcomber LLC. I hope to see the planning commission's decision to approve the permit reinforced at the appeal hearing.

Thank you,

Lauren Isenhour

3. Letter referenced by Commissioner Ecklund at the September 9, 2019 Planning Commission Meeting and Testimony of Commissioner Ecklund relating to that Letter.³

Central to procedural and substantive complaints of error raised by the applicant in this case is the question of whether Planning Commission members held erroneous views of the legal interpretation of the KPB Code relating to the disapproval of Conditional Land Use Permits for material site extractions and what affect that erroneous legal interpretation had on the outcome in this case.

At the conclusion of the June 24, 2019 hearing, additional comments were made relating to this CLUP application process that are not included in the verbatim transcript of the record.

Pursuant to the Minutes of that meeting the following occurred:

Commissioner Ecklund wanted to note that the Commission has denied material site extraction permits. Maybe they will have valid balanced reasons that can be used to represent all sides.

Commissioner Carluccio noted that several months ago she drove by the site that was reviewed earlier in the evening. She thinks it is a travesty that the Commission feels like it has to approve everything and that there does not seem to be anything that they can use to deny a gravel permit. She is disappointed that it was approved and the process. She agrees with some of the comments of the homeowners and it seems like that when there are so many people coming to try and protect their property that there should be a way to give them that protection.

Commissioner Foster noted he would be traveling but will be putting in his time on the Plat Committee. He noted that when they research the beginning of zoning, whether it is a community, as a city, or a borough, the bottom line was to preserve property rights and yet people don't want zoning. In the City where there are zoning powers there is a conditional use permit, it is a permitted use. Conditions are just put on it that help lessen the impact it might have. When there is no zoning the Commission's hands are tied. These are personal property rights that the individual wants to use his property. When he first got on the Commission it wasn't until he read through the entire Ordinance that he realized what conditions can be added to try to mitigate. It is an attempt to mitigate. He doesn't know if they can ever really say no. They have said no but the decision has been overturned. He would like to

³ A true and correct copy of the relevant portion of the Minutes referring to this Letter are attached hereto and can be found at https://www.kpb.us/components/com_papyruslist/document.php?d=2469557

see how Local Option Zoning, where some people are zoned and others are not and how that would work together.

These comments bear directly on a primary point on appeal: namely that the PC Members’ held an erroneous belief on the limitations of the code and that this erroneous belief impacted the decision made. Moreover, these comments related specifically to this site application and were made at the same hearing where the CLUP application was approved. The transcript of this additional discussion must be included pursuant to 21.20.270(A)(8).

Subsequent to the June 24, 2019 decision, additional Planning Commission hearings have been held to address the amendment to the CLUP material site extraction codes. In addressing the Planning Commission’s position on proposed amendments – not yet enacted nor submitted to the Assembly for consideration – Planning Commissioner Ecklund stated:

[S]he had issues with a long letter from a member of the borough staff that said the Planning Commission does not have the ability to disapprove a permit. The way it reads is that the Commission shall approve a permit that meets the mandatory conditions. That is what it said before and that is why staff said if it meets the conditions, they had to approve it.

As discussed above, KPB advisements to the Planning Commission members lack of authority to disapprove a CLUP for material site extraction were legally incorrect and apparently impacted PC Members determinations relating to this application. This letter is relevant and material to the question of what Commissioners received from Borough Staff in reaching their decision and the subsequent impact those submissions had on the Commissioners decision on this application. It must be included in the record pursuant to 21.20.270(A)(5). Similarly, the Planning Commission Manual is provided to individual members to instruct them on the procedure and policy to follow during this proceeding and is relevant to procedural errors raised by the Appellant. It is assumed that the Manual is expected to apply to all applications before the Commission. It should be included in the record on appeal.

EHRHARDT | ELSNER | COOLEY

A. Planning Commission Responsibilities and Functions

1. Under state statute and borough code, what are the functions and responsibilities of the Planning Commission?

The Planning Commission serves in a quasi-judicial capacity regarding numerous petitions concerning individual land use and development. The Planning Commission also acts in an advisory role to the mayor and assembly for both administrative and legislative decisions regarding land use issues. (The distinction between the quasi-judicial and advisory roles of the Planning Commission are discussed in section A-2 of this manual.)

Under state statute the Planning Commission has the following responsibilities:

- A. The Planning Commission prepares and submits to the assembly a proposed comprehensive plan in accordance with AS 29.40.030 for the systematic and organized development of the borough. AS 29.40.030 provides that the comprehensive plan is a compilation of policy statements, goals, standards, and maps for guiding the physical, social, and economic development, both private and public, of the borough and may include, but is not limited, to the following:
 - statements of policies, goals, and standards;
 - a land use plan;
 - a community facilities plan;
 - a transportation plan;
 - recommendations for implementation of the comprehensive plan;

- B. The Planning Commission reviews, recommends, and administers measures necessary to implement the comprehensive plan, including measures provided under AS 29.40.040. Under AS 29.40.040 these measures include, but are not limited to the following:
 - zoning regulations restricting the use of land and improvements by geographic districts;
 - land use permit requirements designed to encourage or discourage specified uses and construction of specified structures, or to minimize unfavorable effects of uses and the construction of structures;

- measures to further the goals and objectives of the comprehensive plan;
 - grant variances from land use regulations where the condition from which the applicant seeks relief was not caused by the applicant; where a use will not be permitted in a district where prohibited, the variance is not sought to solely relieve pecuniary hardship or inconvenience;
- C. The Plat Committee, as authorized by KPB 2.40.080 and AS 29.40.070, hears and decides cases involving platting. Four members of the Planning Commission must be present for the Plat Committee to meet.
- D. Pursuant to AS 29.40.170, the Planning Commission (or platting authority) where authorized by ordinance may delegate powers to hear and decide cases, including but not limited to:
- one or more members of the Planning Commission or platting authority;
 - other boards or commissions;
 - a hearing officer designated by the Planning Commission or platting authority.

Under the borough code, the Planning Commission has the following responsibilities:

- recommends school names (KPB 1.20.010);
- a Planning Commission member serves on the trails commission (KPB 2.75.020) (note: the trails commission is currently dormant);
- provides advice on solid waste disposal sites (KPB 10.04.020);
- names and renames streets outside cities (KPB 14.10.010);
- makes recommendations to the borough prior to acquisition of an interest in lands (KPB 17.10.040) and disposals (KPB 17.10.070(B));
- recommends the classification of borough lands to the borough assembly (KPB 17.10.080);
- makes recommendations to the assembly regarding petitions to modify deed restrictions (KPB 17.10.130(F)(3));
- recommends forest management plans to the assembly annually (KPB 17.50.010);

- holds public hearings and make recommendations to the assembly on forest management sale reports prepared by the administration (KPB 17.50.035(B));
- approves or rejects all plans, plats, or replats of land laid out in lots or plats, and the streets, alleys, or other dedications (KPB 2.40.070);
- may delegate authority to hear and decide plat cases by a committee composed of at least four Planning Commission members (KPB 2.40.080);
- the Planning Commission reviews decisions of the Plat Committee de novo (KPB 2.40.080(B));
- prepares plans for the systematic development and betterment of the borough as a place of residence or for business (KPB 2.40.040);
- may consider and investigate subject matter regarding the development and betterment of the borough and make recommendations as it considers advisable to borough departments and to the assembly; may make or have made surveys, maps or plans (KPB 2.40.050);
- investigate and report before final action is taken by the borough (or a borough department) on the location and design of any public building, dock, beach, ski ground, statue, memorial park, parkway, boulevard, street or alley, playground, public street, alley or the grade thereof (KPB 2.40.060);
- may by majority vote agree to serve as an incorporating sponsor and as a member of the Resource Conservation & Development District board with a Planning Commission member representative elected by the Planning Commission (KPB 2.40.100);
- hears and decides reconsiderations of the Planning Director's seizure of abandoned vehicles on borough or private property (KPB 12.06.020(C));
- hears appeals from Planning Director determinations regarding utility right-of-way permits (KPB 14.08.090);
- approves final plats where so requested by the Planning Director, a major redesign was a condition of preliminary approval, or final approval by the Planning Commission was a condition of preliminary plat approval (KPB 20.60.210-220);
- hears and decides exceptions to the platting regulations (KPB 20.50);

- denies vacation petitions or recommends approval of vacation petitions to the assembly (KPB 20.70.100);
- exercises jurisdiction within the rural and municipal districts regarding planning, platting, subdivision approval, siting of borough schools, buildings and other borough facilities, the planning and development of transportation networks and related facilities, the overall economic development of the borough, and regarding borough lands and natural resources taking into consideration any affected municipalities;
- grants variances to land use regulations in KPB Title 21 in accord with AS 29.40.040 and KPB 21.05;
- establishes a fee by resolution for rezoning applications in the municipal district (KPB 21.10.010(F));
- hold a public hearing and make recommendations regarding zoning amendments within the municipal district limited to the issue of whether the proposed amendment has a significant impact on land use and transportation in the area outside the municipal district. If there is significant impact, the Planning Commission shall recommend approval, denial, or modification of the amendment. If there is no significant impact outside the municipal district, the Planning Commission shall recommend to the assembly the action recommended by the city advisory Planning Commission. (KPB 21.10.020);
- initiate changes to rural district zoning, hold public hearings regarding the same, and make recommendations to the assembly (KPB 21.10.030);
- make recommendations to the assembly regarding changes to the comprehensive plans within the municipal districts (KPB 21.01.025);
- grants conditional use permits under KPB 21.18, anadromous habitat protection ordinance;
- hears and decides applications for conditional land use permits under KPB 21.25 (currently material site, and correctional community residential center permits);
- make recommendations to the assembly regarding the establishment or rezoning of local option zoning districts (KPB 21.44);
- hears appeals from nonconforming use determinations for local option zoning districts made by the Planning Director (KPB 21.44.110(B)).

2. What types of decisions does the Planning Commission make?

Most of the decisions the Planning Commission makes are classified as either advisory or quasi-judicial, although sometimes they may make legislative decisions. Advisory decisions are recommendations which are generally made to the mayor and/or assembly. The most common type of advisory decision is when the Planning Commission makes recommendations regarding ordinances pending before the assembly that affect land use issues. Other examples of advisory decisions include recommendations to the assembly regarding the acquisition and conveyances of land or recommendations regarding the approval of comprehensive plans. In these cases, another body (the assembly) is the final-decision maker; however, the advice and expertise of the Planning Commission is sought as part of that decision-making process.

Quasi-judicial decisions are those decisions where an adopted law or policy is applied to a specific person or property. The Planning Commission has decision-making authority and is not advisory on the quasi-judicial matters that come before it. Examples of quasi-judicial actions are plat applications and conditional use permits where the provisions of Titles 20 and 21 of the borough code are being applied to an individual's application.

The Planning Commission also occasionally makes quasi-legislative decisions. Examples of quasi-legislative decisions are when the Planning Commission has adopted resolutions that clarify and interpret the ordinances that govern the Planning Commission. Such resolutions, once adopted, should be consistently followed. Planning Commission Resolution 89-08 clarifying setback provisions under Title 20 is an example of such a quasi-legislative act.

Sometimes Planning Commission resolutions are more administrative in nature setting forth procedural rules for the conduct of the Planning Commission business that come before the Planning Commission. Resolution 96-12 establishing the meeting adjournment time and Resolution 89-04 (Sub) establishing a policy regarding Planning Commission absences are examples of such resolutions.

3. What is the purpose of the comprehensive plan and the Planning Commission's role in development of the plan?

The comprehensive plan serves as a long-range policy guide for development of the borough as a whole. Borough land use regulations are to be in accordance with the comprehensive plan. AS 29.40.040(a). Requiring zoning decisions to be in accord with the comprehensive plan helps to guard against prejudice, arbitrary decision making, and improper motives by providing substantive standards against which to measure individual zoning decisions. A comprehensive plan must be in place before borough zoning regulations can be implemented. This requirement is not a barrier to preexisting zoning regulations so long as they comply with the comprehensive plan.

AS 29.40.020(b)(1) mandates that the Planning Commission shall prepare and submit to the assembly a proposed comprehensive plan in accordance with AS 29.40.030 for the systematic and organized development of the borough. AS 29.40.030 provides that the

"comprehensive plan is a compilation of policy statements, goals, standards, and maps for guiding the physical, social, and economic development, both private and public, of the . . . second class borough, and may include, but is not limited to, the following:

- (1) statements of policies, goals, and standards;
- (2) a land use plan;
- (3) a community facilities plan;
- (4) a transportation plan; and
- (5) recommendations for implementation of the comprehensive plan."

AS 29.40.030(a).

AS 29.40.030(b) provides that "[w]ith the recommendations of the Planning Commission, the assembly shall adopt by ordinance a comprehensive plan. The assembly shall, after receiving the recommendations of the Planning Commission, periodically undertake an overall review of the comprehensive plan and update the plan as necessary."

AS 29.40.030(b).

The Planning Commission and staff can reference the comprehensive plan in making recommendations and decisions on issues and applications that come before them. The

comprehensive plan can also be used for guidance and support in drafting legislation for the borough.

4. What is the Planning Commission's role in land use regulation and what is zoning?

AS 29.40.040(a) authorizes both geographical zones and the specific use approach to land use regulation. All land use regulation, whether it be by zoning or specific use regulation must be consistent with the comprehensive plan. AS 29.40.020 specifically delegates to the Planning Commission the tasks of reviewing, recommending, and administering 1) measures necessary to implement the comprehensive plan including zoning regulations, 2) land use permit requirements designed to encourage or discourage specified uses and construction of specified structures or to minimize unfavorable effects of uses and structures, and 3) measures to further the goals of the comprehensive plan. The role of the Planning Commission is critical and it cannot be ignored or truncated by attempting to submit land use regulations to a popular vote for approval thus bypassing the Planning Commission's input.

Zoning is a form of land use regulation. Zoning is governmental regulation within a community of land, buildings and structures in accordance with a general plan and for the purposes set forth in the state enabling statute. AS 29.40.040 provides for restricting the use of land by geographic districts. It is typical under zoning by geographic districts for land to be divided into districts for the purpose of promoting or protecting certain uses within the district-- a community may have residential, commercial, industrial and other types of districts designated by use. Zoning is a prevalent form of governmental land use regulation but it is not the only form. Specific use regulation places restrictions on a particular land use regardless of location. Often these uses are the type that may create negative secondary impacts such as odors, noise, unsightliness, excessive traffic, or dangerous situations. Slaughterhouses, alcohol establishments and junkyards are activities that have been subject to specific use regulation. The borough's material site ordinance (KPB 21.29) is a specific use regulation.

The borough has engaged only in minimal zoning. The borough is divided into two districts, the rural district and the municipal district. The rural district is comprised of all areas outside the cities which have been delegated land use powers; land use is

unregulated unless either an overlay district within the rural district is created or a specific use regulation is adopted. The municipal district is comprised of the six organized cities in the borough that have been delegated land use powers. The borough retains the comprehensive planning powers for all six cities, but has delegated land use regulation to five of the cities. Platting powers have also been partially delegated to the extent that the cities may adopt their own platting standards. KPB 20.25.050-060. The borough retains jurisdiction over the subdivision approval process in all cities.

Within the rural district the borough has created several other districts that do not encompass the entire rural district but regulate uses within a specific geographic area. These districts include KPB 21.18 anadromous waters habitat protection district and several local option zoning districts.

5. What are variances and exceptions and when can they be granted?

A variance is a departure from the underlying land use regulation without changing the zoning of the parcel or the land use regulation. There are two types of variances: use variances and area variances. Use variances allow a use in a district that is otherwise prohibited by the zoning ordinance. Area variances address issues like building height, dimensions, and setbacks. Alaska law prohibits the granting of use variances. Under AS 29.40.040 variances may not be granted if 1) special conditions that require the variance are caused by the person seeking the variance; 2) the variance will permit a land use in a district in which that use is prohibited, or 3) the variance is sought solely to relieve pecuniary hardship or inconvenience. If any of these three factors exist, the variance cannot be granted.

The Planning Commission also grants exceptions to subdivision requirements pursuant to KPB Chapter 20.50. This exception process was created by the borough code and does not have the strict statutory standards that need to be met for a variance from a Title 21 land use regulation authorized by AS 29.40.040. In order to obtain an exception 1) there must be special circumstances or conditions affecting the property; 2) the exception must be necessary for the preservation and enjoyment of a substantial property right and is the most practical manner of complying with the intent of Title 20; and 3) that granting the exception will not be detrimental to the public welfare or injurious to other nearby

property. All three factors must be met in order to qualify for an exception. If there is a design requirement addressed by a land use regulation then the variance procedures will need to be followed rather than the exception process, i.e., the more flexible exception process in Title 20 cannot be used to avoid or circumvent the stricter variance standards applicable to Title 21 applications. The burden is on the applicant to justify the exception, although it is appropriate for staff to suggest a subdivision applicant apply for an exception if staff's review finds such an exception would be supportable.

If exceptions or variances are frequently granted for the same type of situation it is best to seek a legislative change to allow for the variation in the routine application of the ordinance.

B. Planning Commission Procedural Matters

1. How should motions be made for quasi-judicial questions?

The best practice is to make the motion in the positive, e.g., to approve a material site application. Under Roberts Rules of Order, if there is a tie vote the motion fails; therefore, a motion made in the negative could have the result of approving an action that a majority does not favor. While not always necessary in straightforward cases, a second motion should be made to specifically adopt the findings. If the commission is in total agreement with staff's recommended findings, then the motion may be as simple as one to approve staff's findings. This motion can be amended to modify staff's proposed findings based on the evidence the Planning Commission reviewed and their discussion of the matter. If the Planning Commission disagrees with staff's recommendation, then it is necessary for the Planning Commission to state findings supporting the Planning Commission's decision. For particularly complicated or controversial matters, it may be advisable for the Planning Commission to call a recess or even postpone the matter to another date in order that commissioners may work on findings and present them at a later time for approval.

2. What are "findings of fact" and why must they be made?

Put simply, findings are the commission's reasons for a particular decision. Findings need to be in writing and distributed to the parties who participated before the commission so that parties can determine why an application was approved or denied. Findings must be based on the evidence presented to the commission and the findings must support the ultimate decision reached. Additionally, findings must be based on the standards found in applicable statutes, borough ordinances, or other planning documents; otherwise, the decision may be viewed as arbitrary or without foundation. Without findings, parties cannot determine the reasons for the Planning Commission's decision or the grounds for an appeal. A reviewing body, such as the administrative hearing officer ("hearing officer") or court, also has difficulty determining which pieces of a Planning Commission discussion and evidence presented formed the basis for the commission's decision if the decisional document is void of findings. When findings are made by the Planning Commission, it

means the hearing officer will not have to fumble through the record in search of the reasons for the commission's decision; likewise, when the hearing officer makes findings of fact, the reviewing court, if any, will not have to glean support for the hearing officer's decision from the evidence spread across a voluminous record.

The most frequent failures in making findings are making conclusory findings, not making findings at all, or making findings that are unrelated to the applicable standards. A conclusory finding typically states that a standard in the code has or has not been met without explaining how. When denying an application, the findings should specifically reference the code sections that are not being met by the application. Staff should include citations to these code sections in the staff report to assist the Planning Commission with its analysis of the application. Evidence and testimony submitted by citizens should be considered to the extent that information is related to the standards applicable to the particular matter before the board. However, it is not appropriate to deny or condition a permit based on negative community sentiment alone when the applicable standards do not address the concerns being raised by the testimony. Planning Commission decisions are not based on the principles of the majority rules. The citizenry stacking the hall against or in favor of a particular application should not determine whether the application is approved or denied; rather, the application must be consistent with the goals and standards of the applicable statute or ordinance. The Planning Commission's decision must be supported by the substantial evidence in the record. "Substantial evidence" is defined as that relevant evidence which a reasonable mind would accept as adequate to support a conclusion.

3. What is the purpose of permit conditions and when are they appropriate?

Conditions are placed on a permit in order to aid compliance with the spirit and letter of the law (i.e., the borough code.) The conditions must be authorized by statute or local law or policy and further the goals of the regulation. Conditions should not be unrelated or excessive to meet the goals of the ordinance. As an example, it would be inappropriate to require a material site applicant to test his water source for contaminants since the material site ordinance only addresses water quantity not quality issues. It is also not defensible for a condition or exaction to be placed upon a subdivider which is not related to the burden his subdivision might place on the community. For example, it is reasonable

to require dedication (and construction if authorized by ordinance) of streets to support the traffic a subdivision will create, but it would not likely be defensible to require a subdivider to construct roads to a much higher standard than that required by the traffic generated by his subdivision plan.

4. Who are parties before the Planning Commission in quasi-judicial proceedings?

The answer of who is an appropriate party before the Planning Commission is found in statute, borough ordinances, and case law. AS 29.40.060(a) eliminates taxpayer-citizen standing in land use cases. The Alaska Supreme Court has held that a business competitor is not an appropriate party to an appeal from a nonconforming use (grandfather rights) appeal; the purpose of zoning with reference to land use is the preservation of the public interest in certain neighborhoods against uses believed to be deleterious to neighborhoods, i.e., zoning ordinances may protect residences against business, but not business against business. Additionally, the Alaska Supreme Court has specifically held that the borough itself has standing to appeal a Planning Commission decision. The Alaska Supreme Court upheld a local ordinance that defines an "aggrieved person" as one who potentially suffers an adverse effect on the use, enjoyment, or value of real property owned by the person seeking to appeal the Planning Commission's action. The general law has long favored limiting standing in land use cases to those personally affected by a Planning Commission decision in order to prevent excessive litigation and undue delay of final dispositions which could work against the welfare of the community.

AS 29.40.130 addressing notice in platting actions requires that "each affected property owner who did not sign the petition" receive notice of a replat or alteration. KPB 20.25.090(A) defines "affected party" for platting purposes as property owners within a proposed subdivision and persons who own property within 600 feet of the boundaries of a proposed subdivision. The Planning Director has the discretion to determine whether there are additional affected property owners based on population, density, ownership data, topography, and facilities in the area of the subdivision. Pursuant to KPB 20.25.090(D), the borough also provides notice to beneficial interest holders in platted property. Only those affected property owners who commented in writing or in person

may appeal a Planning Commission decision on a plat to the hearing officer. KPB 20.25.120 and 20.90.010.

AS 29.40.060 provides that the assembly defines the proper parties to an appeal from an administrative decision related to the enforcement, administration, or application of a land use regulation. There appears to be flexibility in how the borough defines an "aggrieved party". The borough's practice has been to define a notification radius (for example, 1/2 mile for material site applications) and property owners within that radius will receive written notice. Anyone can comment or give testimony in writing or verbally to the Planning Commission even if they are not in the 1/2 mile notice radius. This allows for a maximum amount of evidence and participation at the Planning Commission level. Anyone who participates by either written or personal testimony before the Planning Commission is given the opportunity to appeal to the hearing officer. However, at the hearing officer level a party must be an affected property owner to maintain the appeal before the hearing officer. This rule limits participation to those individuals who have a genuine and unique concern based on their property ownership in close proximity to the applicant parcel. A party must then participate at the hearing officer level in order to preserve their right to appeal to superior court as an aggrieved party.

5. What is staff's role before the Planning Commission?

Staff's functions vary depending on the matter that is before the commission. On all matters before the commission it is staff who will assemble the packet of information and make recommendations regarding the matter. However, staff's role somewhat varies depending on whether the issue before the Planning Commission is advisory or quasi-judicial. For example, on land classifications and conveyances, the Planning Commission is advisory to the assembly. Staff will prepare a report and a recommendation on how land should be classified incorporating a discussion of the standards set forth in KPB 17.10. Staff will then inform the assembly of the Planning Commission's recommendations as the assembly has the final authority over these matters. On quasi-judicial matters such as plats and conditional use permit applications staff will prepare a report with findings based on the standards in Title 20 or 21 of the borough code applicable to the application pending before the Planning Commission. The Planning Commission sits as a judge on these matters and a further appeal of their decision may

be taken to the hearing officer or court depending on the type of application. Staff's role is the equivalent of a party before the commission advocating for the findings and recommendations in the staff report. Just as any other aggrieved party may appeal a quasi-judicial Planning Commission decision, so may staff.

A related question that arises is whether staff must support the Planning Commission decision where the Planning Commission has taken a different position from the staff recommendation. Is staff obligated to pursue their original position or are they obligated to support the Planning Commission's decision? Neither course of action is required. If staff made a strong recommendation and still believes that its position is correct and consistent with the code, and the Planning Commission's decision is not, then staff should defend its original recommendation and can even appeal the Planning Commission's decision. In the interest of warding against unproductive appeals and maintaining a harmonious relationship between staff and the commission the latter course of action should probably only be pursued where there is no other party available to appeal the decision and the decision may set a trend for future erroneous decisions. However, where the decision is fact dependent and the Planning Commission hears additional facts to those that were submitted to staff or where the commission can reasonably interpret the facts or applicable standards differently than staff, staff may change its position and support the commission if the matter is further appealed.

6. What is the legal department's relationship to staff and the Planning Commission?

Similar to staff the legal department's role varies with the matter that is before the commission. If it's a legislative matter (or an advisory matter upon which the assembly will ultimately act in its legislative capacity) the lawyer may give advice to the commission regarding the matter, and has often drafted or reviewed and revised the resolution or ordinance subject to Planning Commission approval or recommendation.

In specific quasi-judicial cases before the commission the lawyer may have assisted staff in the preparation of its recommendation for the commission; this is most likely to occur in the Planning Commission's review of a Plat Committee decision or in an adversarial multi-meeting proceeding. At the Planning Commission hearing the lawyer may assist

staff by clarifying the rationale for staff's position and answering legal questions. Ethics rules governing lawyers prohibits a lawyer advocating staff's position and also advising the judge in the matter (in this case the Planning Commission). Therefore, if the Planning Commission convenes in a closed adjudicative session to consider its decision the lawyer should not enter private session. Also if staff has strongly advocated a position with a lawyers help ethics rules would prohibit the lawyer from changing sides and assisting the Planning Commission in a decision contrary to staff's recommendation without first consulting staff. When such a situation occurs it is best to postpone the decision to allow staff to consult the attorney to clarify if it is reasonable to take a position different from the one originally taken by staff so that both the lawyer and staff can assist the commission in reaching the most defensible position possible by proposing supplemental findings to support the commission's position. (It would be important in such a case to publicly copy all parties of record with the changed staff recommendation, again to avoid ex parte contact between staff and the commission and to promote transparency in the decision making process.) The commission itself, however, would not have to meet in public to deliberate the findings and decision, although it is required that the final decision be issued in writing with supporting findings so that all parties can understand the basis for the Planning Commission's decision.

Also with regards to various matters before the Planning Commission it is not unusual for the commission or staff to seek a verbal or written legal opinion on issues involving the interpretation of applicable borough code and statutes as well as procedural issues.

Reasonable minds can differ on the interpretation of code. However, if the Planning Commission or staff chose to make a recommendation or decision that is clearly contrary to the borough code, a statute, or applicable case law it is the lawyer's responsibility to recommend against such course of action. Ultimately the legal department's role is to assist in the issuance of fair and defensible Planning Commission decisions that comply with the standards set forth in borough code or other planning documents.

7. When should a Planning Commission member be recused from voting due to bias?

Bias is prejudging a matter. There is not a borough ordinance prohibiting bias. However, quasi-judicial decisions resulting from prejudice, arbitrary decision making, or improper motives may be invalidated under case law. The integrity required of public office-holders demands that even an "appearance of impropriety" be avoided. Whether bias requires recusal may vary depending on whether the Planning Commission is performing a quasi-judicial function as opposed to a quasi-legislative function.

Not all prejudgment eliminates a commissioner's ability to debate and decide issues. Often the Planning Commission serves in an advisory capacity on legislative issues, e.g., recommending the passage of a code ordinance which the commission helps administer. For this advisory and quasi-legislative role, it is expected that commissioners have preconceived notions regarding issues of law and policy. For example, planning commissioners are often selected by region because of their familiarity with local conditions and concern regarding land use issues. This type of familiarity is likely to result in the formation of opinions on the ordinances, resolutions, and policies that will be placed before the board or commission, and it is not generally grounds for recusal, but is rather seen as an advantage as the commissioner can educate his colleagues about issues in his district.

The Planning Commission is acting in a quasi-judicial capacity when it applies adopted laws and policy to an individual's application. When acting in a quasi-judicial capacity, it is analogous to a judge who must fairly hear and weigh the evidence received and objectively apply the established standards to the facts of the case. Commissioners who have prejudged the facts of an individual case pending before it to the extent that they can no longer be impartial are biased, and their participation in decisions may invalidate the commission's decision. A commissioner voicing a general opinion regarding certain types of issues does not necessarily mean he will judge a particular application regarding that type of issue without regard to the applicable standards. However, land use decisions are particularly prone to bias because commissioners are drawn from the immediate geographical area and because of the legislative, adjudicative, and political nature of the land use and zoning process.

The bias test is whether a commissioner has actually made up his mind regardless of any argument that might have been advanced at the hearing. Indicators of prejudgment include a commissioner making a clear statement suggesting that a decision has already been reached. The test is objective and queries whether a disinterested observer would conclude that the commissioner has in some measure adjudged the facts as well as the law of a particular case in advance of hearing it. Some cases indicate that the *appearance* of bias, rather than actual bias, disqualifies the board member or commissioner.

Following are types of acts that have been found to constitute bias: (1) ex parte contact with board or commission members;¹ (2) making public statements or authoring letters regarding a particular case prior to the case coming before the board or commission;² (3) paying expenses of board member to make a site visit; (4) vote-trading; (5) soliciting persons to testify for or against a permit or application and (6) gifts given to influence a vote.

It is recommended that commissioners keep an open mind. Commissioners should judge the permit or application based on whether it meets the standards in the borough code or other applicable law or policy which the board or commission is expected to apply. Commissioners should not make conclusory statements on or off the record about someone's application or permit before the close of hearing and the matter being turned over to the board for discussion and decision. Commissioners should ask the applicant, interested parties, and staff questions about the permit application and how it relates to the applicable standards. Planning commissioners should explain their reasons on the record for voting for or against an application. The reasons should relate to the applicable standards.

If a commissioner feels strongly about an individual permit one way or another so that the commissioner cannot keep an open mind and apply the general standards to the individual application, the commissioner should recuse himself from voting.

¹ Ex parte contact occurs when a commissioner has discussions or correspondence with a party interested in a matter pending before the board outside the application and hearing process. While such private contacts are appropriate and even encouraged in advisory and legislative matters, such contact can fatally undermine a fair hearing process in a quasi-judicial matter.

² Please note that even when the remarks were made prior to the commissioner or board member's appointment, they may still constitute bias. Also, a letter written or statement made in an individual capacity, rather than as a commissioner or board member, showing prejudgment of a particular case may still result in disqualifying bias.

If a commissioner has made statements that indicate prejudgment of an individual permit or application, those statements should be declared on the record and the commissioner should indicate that he has an open mind and will still apply the applicable standards to the permit or application. Caution: Whether this will cleanse the bias will depend on how strong the statements made were, when and where they were made, and how controversial the particular permit or application is. Since even the “appearance of impropriety” should be avoided if statements indicating bias have been made it may be in the best interest of the decision-making process for a commissioner to recuse himself even if he thinks he can still be fair and impartial. Recusal will best protect the decision’s credibility and avoid reversal on appeal based on bias.

8. When should a Planning Commission member recuse themselves due to a conflict of interest?

Conflict of interest differs from bias. Bias is prejudgment of an issue pending before the Planning Commission, i.e., the potential inability to keep an open mind. Bias is not governed by any statute or ordinance. The borough has an ordinance governing conflict of interest which occurs when a Planning Commission member or an immediate family member has a financial interest in a matter pending before the Planning Commission. KPBA Chapter 2.58 disallows a planning commissioner from entering a contract with the borough unless certain code requirements are met which involve filing a “notice of intent to do business” form with the borough clerk ten days before entering the contract disclosing the conflict, the nature of the business relationship, and specifying the department involved in the contract. Filing a notice of intent to do business, however, does not allow the affected member to vote on a matter where the member has a substantial direct or indirect financial interest in a matter pending before the board. A substantial financial interest is a pecuniary or material benefit accruing as a result of a private, business, or professional transaction with the borough. A planning commissioner is deemed to have an interest in the business affairs of your spouse, spousal equivalent, minor children or dependents, certain companies of which you are a member, employee, officer or director, or if you own more than 5 percent of the stock of a corporation. There are exceptions to the “substantial financial interest” provision including (1) where the Planning Commission member is only deemed to have an interest because they are an officer or employee of the contracting entity but their pay will not be directly affected by

the contract and their duties do not directly involve obtaining, preparing for, or performing the contract duties; (2) where the contract was entered before the Planning Commission member's appointment, but this would not authorize renewing the contract; (3) where the only interest is stockholdings and the stock is listed on the NY or American stock exchanges or less than 5 percent of the outstanding stock of the corporation is owned or controlled directly or indirectly by the official; and (4) a contract or sale where the total amount paid during the fiscal year does not exceed \$100.00.

Conflict issues are often not crystal clear. There are times where a conflict issue may be raised either by a commissioner about himself or by someone else about a commissioner. The chair can rule on whether the Planning Commission member has a substantial financial interest or refer the question of the commissioner's participation to the Planning Commission for a determination. If it is ruled that a commissioner has a conflict because of a substantial financial interest he must not vote on the issue.

9. When is a motion for reconsideration or a motion to rescind (amend after adoption) appropriate?

The motion for reconsideration under Robert's Rules may only be brought by a commissioner (or Plat Committee member) who voted on the prevailing side of a motion. It may be used when a member believes a decision was too hastily reached. The motion can fail for lack of a second. It must be made at the meeting in which the motion which is being reconsidered is approved. A committee of the whole (Planning Commission) would not reconsider a decision of a subcommittee (Plat Committee) under Robert's Rules. However, both Plat Committee and Planning Commission decisions are subject to this type of motion for reconsideration. If the motion to reconsider is adopted, then there is further consideration of the main motion.

A motion to rescind or to amend after adoption does not have to be brought by someone who voted on the prevailing side of the original motion, nor is it subject to the restrictive time frames of a motion to reconsider. The motion to rescind or amend after adoption may be made at any time prior to the meeting where the rescission will be considered. The motion to rescind or amend after adoption is not merely procedural as is the motion to reconsider; rather, the motion to rescind or amend after adoption directly gets to the

merits of the original motion. It may be amended and is debatable. If notice is given of the motion at the meeting where it will be considered, a 2/3 supermajority vote is required for it to pass. If prior notice is given, i.e., at a prior meeting or in the agenda for the meeting where the motion to rescind will be considered, then only a simple majority is required to adopt the motion. A motion to rescind or amend after adoption is not appropriate in any of the four instances: (1) when a motion for reconsideration has been made and the question can be reached by calling up the motion to reconsider; (2) when something has been done that would be impossible to undo as a result of the adoption of the main motion; (3) when the matter is of a contractual nature and the other party to the contract has been informed of the vote; (4) when a resignation, election, or expulsion of a member has been acted upon and the member was present or has been informed of the vote.³ Generally, unless the member wishes to rescind an action in its entirety, it is better to make a motion to amend after adoption because it provides the commission more flexibility to amend the original action rather than simply voting up or down to negate the original motion.

10. How does the Open Meetings Act apply to Planning Commission meetings?

The Open Meetings Act ("OMA") requires meetings of governmental bodies to be publicly noticed and open to the public. The OMA applies to the borough Planning Commission, although the applicability of the OMA may vary depending on the type of decision-making the Planning Commission is engaged in (i.e., quasi-judicial, legislative, or advisory). If more than three members are discussing an issue upon which the body is empowered to make a decision, the act applies, and the meeting must be noticed and open to the public. This is true even if the members involved did not plan to meet but just happen to bump into each other at the coffee shop. However, if the decision involved is merely advisory to another body, e.g. the assembly, then a violation only occurs if over three commissioners meet and the meeting was prearranged. However, if such an impromptu meeting occurs it should be terminated as soon as commissioners realize they are discussing business that should be conducted at a scheduled Planning Commission

³ Due to the nature of municipal government, it is unlikely that either the third or fourth instance would arise. With regard to Item 3, the mayor is the final contracting authority for the borough, so the Planning Commission's vote in such a case would most often be a recommendation to the mayor and or assembly. With regard to Item 4, the mayor appoints members of the Planning Commission, and, if necessary, removes members with assembly approval.

meeting. The best course of conduct is to not engage in “mini meetings” before or after regularly scheduled Planning Commission meetings. Also do not engage in serial meetings or play “telephone” by speaking to one after another of your fellow commissioners as it could lead to the deliberative process taking place outside the public process. It is likewise not appropriate to use someone who is not on the commission to poll or speak to other individual commissioners on your behalf.

The quasi-judicial deliberations the board enters are exempt from the act; the board’s deliberations are considered adjudicatory sessions and such deliberative sessions by commission members acting as judges do not have to be public. However, since quasi-judicial matters such as plats and conditional use permits still are subject to public hearings and notice requirements under AS 29 and/or provisions of the borough code, the actual hearing of such issues must be publicly held. These public notice and hearing requirements, of course, allow the Planning Commission to gather as much relevant information from the public as possible. Further, discussions of quasi-judicial matters should not be informally or privately held prior to the close of the public hearing process because of potential claims that due process was violated by some commissioners having more information or discussions to which other commissioners were not privy. Please note while quasi-judicial or adjudicatory decision-making allows Planning Commission members to deliberate with each other outside of a public meeting, it does not allow a member to discuss the issues with an individual party outside of a public meeting. This is known as *ex parte* contact and as discussed in section B-7 of this manual can lead to claims that the hearing process was unfair. While not required to be publicly held, it is recommended that the deliberative portion of a quasi-judicial process still be public because there are times where questions arise for participants before the board after the close of public hearing and all participants need to be aware of any questions or responses from the other participants. Additionally, the openness of deliberations assists the participants, including staff, in knowing the basis of the Planning Commission’s decision although the reasons for the decision should also be contained in written findings as discussed in Section B-2 of this manual.

Executive sessions, which exclude the public, are also exempt from the Open Meetings Act. However, it is rare that the Planning Commission would need to hold an executive session because of the advisory nature of the decisions they make which are not quasi-judicial. Executive sessions are allowed for (1) matters the immediate knowledge of which

would clearly have an adverse effect upon the finances of the borough; (2) subjects that tend to prejudice the reputation and character of any person, provided the person may request a public discussion; (3) matters which are required by law to be confidential; and (4) matters involving consideration of government records that by law are confidential. Since the assembly is the ultimate decision-maker regarding financial matters, the Planning Commission does not supervise any employees, and most matters that come before the commission are by their nature subject to public participation, the need for an executive session is rare. If possible, the borough attorney's office should be consulted if an executive session is being contemplated in order that any such session be in compliance with the OMA.

11. What hearing procedures should be followed for quasi-judicial hearings?

The following guidelines allow a fair quasi-judicial hearing format:

- 1) The chair introduces the agenda item.
- 2) Staff presents a report and staff recommendation.
- 3) Presentation by the applicant and their representatives.
- 4) Testimony by members of the public.
- 5) Response by staff to any testimony that was given and an opportunity for the Commission to ask questions of the staff.
- 6) Rebuttal by applicant. The applicant can rebut evidence or testimony but should not present new testimony or evidence. (If new evidence or testimony is allowed, the Planning Commission may question staff regarding the same and take additional public comment regarding the new evidence.)
- 7) The chairperson closes the hearing and then entertains a motion. The Commission deliberates and makes a decision.

Following are the rules by which the Planning Commission conducts a public hearing:

- 1) Persons wishing to testify must wait for recognition by the Chair and state their name and address for the record at the microphone provided for public comment.
- 2) Each speaker is limited to five minutes unless they have a prepared statement in which case they may request additional time.
- 3) All questions will be directed to the Chair. All questions and comments will be kept to the subject at hand and shall not deal with personalities.
- 4) The public shall maintain decorum at all times and treat all testifiers with respect. No applause or verbal outburst will be allowed.

12. What is the Planning Commission's decision making authority when reviewing quasi-judicial applications?

The answer to this question varies based on the type of application being reviewed. The most common applications the Planning Commission reviews are discussed below:

A. Preliminary Plats - KPB Title 20: The approval of preliminary plats is pursuant to authority granted by AS 29.40 and AS 40.15. The purpose of the platting provisions is to promote an adequate and efficient street and road system, provide necessary easements, provide minimum standards of survey accuracy and proper preparation of plats and protect and improve the health safety and general welfare of the people. KPB 20.10.010. It is through the adoption of the remaining provisions of KPB title 20 that the assembly has chosen to what extent to protect public health, safety and welfare. KPB 20.25.100 grants the Planning Commission authority to approve, conditionally approve, or deny a plat. It is rare, that a plat can be denied because the standards for plat approval that must be met are minimal. Unlike many municipalities the borough does not require roads be constructed prior to final plat approval nor does it require installation agreements for utilities. It is generally not difficult to meet the boroughs basic standards regarding lot size, legal access to the subdivision, internal dedications, and the form and content requirements for a preliminary plat. The Planning Commission also has discretion to grant or deny exceptions pursuant to KPB 20.50. Exceptions from the building setback

requirements under KPB 20.30.240 are one of the more common type of exception requests; however, exceptions to other provisions of the code may be requested as well. For example, the exception process has been used to allow private tracts to be used as roads, rather than dedication of rights-of-way. In using its discretion to grant exceptions the Planning Commission still must ensure the public welfare is not undermined by granting the exception. Exceptions are further addressed in Section A-5 of the Planning Commission manual.

B. Anadromous Habitat Protection - KPB 21.18: The Planning Commission has discretion to approve or deny and condition permits within the anadromous habitat protection district under KPB 21.18.081. There is a list of 12 types of conditional uses that may be granted. There are five standards set forth in KPB 21.8.081(D) that must be met in order to grant a permit. However, the Planning Commission may condition the permit in order to meet those standards, for example, by approving mitigation measures that would further protection of anadromous habitat. KPB 21.28.081(E)

C. Material Site Permits: Material sites are subject to a set list of mandatory conditions. KPB 21.19.050. Only those mandatory conditions may be placed on a permit. KPB 21.29.040. KPB 21.25.050 which is the general procedural ordinance for all conditional land permits that are now adopted authorizes the Planning Commission to approve, deny, or condition a permit. However, KPB 21.25.010 requires that the more specific CLUP ordinances, such as KPB 21.29 to apply. Thus, the general language providing for denial or modification of a permit application is only allowed to the extent KPB 21.29 would allow such denial or modification. The only discretion in the material site code is to enhance or waive buffers, grant variances if the applicant meets the statutory standards of AS 29.40 and KPB 21.05, and deny a permit if the application doesn't meet the mandatory conditions. An incomplete application should not reach the commission as staff is authorized to not process an application until it is deemed complete. KPB 21.25.050(A). However, the Planning Commission serves as a check and balance in this instance in the event an incomplete application is processed by staff and makes it to the commission level. In such a case postponement to allow the applicant to complete the application is recommended. If the applicant refuses to submit a complete application denial may be warranted.

D. Variances - AS 29.40(a)(3)(b); KPB 21.05: A variance proceeding is required by state statute. The variance process is addressed at Section A-5 of the Planning Commission manual. The Planning Commission has the discretion to approve, deny, or condition a variance consistent with the standards set forth in KPB 29.40 and KPB 21.05. The Planning Commission may grant a lesser variance than requested by the applicant in order that the variance be as consistent with the applicable code as possible.

Planning Commission
Minutes**

June 24, 2019

on the why would help. Commissioner Morgan felt that working with the group will help her understand it better.

Commissioner Bentz felt that a work session might be nice before the July meeting. If people did have alternate recommendations for the Ordinance they could review the memo on page 137. It goes through each change and shows the verbiage of the change but also the description. If someone is thinking about additional items such as safety they could come to the work session with some draft language and justifications to get it moving and have staff help.

Commissioner Brantley asked if the work session would be allowed. Mr. Best answered that it would be a public meeting with recordings and notice to the public.

Commissioner Ecklund wanted to clarify that the only Planning Commission meeting in July is July 15, 2019. She wanted to know if there was much scheduled yet. Ms. Hindman let her know that at this point there is a few things such as the Hazard Mitigation Plan and a street name change. Commissioner Ecklund asked if a work session could be scheduled at 4 prior to the plat committee. Mr. Best said it would be ideal for staff. Commissioner Ecklund asked how many could make a meeting at that time and by show of hands it appeared everyone could.

Commissioner Ecklund recommended that a work session be scheduled for 4:00 p.m. on July 15, 2019 to discuss the Material Site Ordinance.

SUBDIVISION PLAT PUBLIC HEARINGS

1. Commissioner Carluccio reported that the Plat Committee heard and approved 7 preliminary plats.

OTHER/NEW BUSINESS

K. OTHER/NEW BUSINESS

1. New Plat Committee (July, August, September 2019) – 5 Members / 2 Alternates

Ms. Hindman asked for 5 members and 2 alternates. Commissioner Whitney said he could attend all meeting but one in August.

New Plat Committee for July, August, September 2019 will be Commissioners Carluccio, Morgan, Foster, and Whitney. Commissioner Brantley is an alternate. Chairman Martin noted that all Commissioners may be called to sit as an alternate if needed.

DIRECTOR'S COMMENTS

Mr. Best noted that this was Ms. Montague's last meeting. He thanked her for her years of service and all the input she has given through the years.

COMMISSIONER COMMENTS

Commissioner Ecklund wanted to note that the Commission has denied material site extraction permits. Maybe they will have valid balanced reasons that can be used and represent all sides.

Commissioner Carluccio noted that several months ago she drove by the site that was reviewed earlier in the evening. She thinks that it is a travesty that the Commission feels like they have to approve everything and that there does not seem to be anything that they can use to deny a gravel pit. She is disappointed that it was approved and the process. She agrees with some of the comments from homeowners and it seems like that when there are so many people coming to try and protect their property that there should be a way to be give them that protection.

Commissioner Foster noted he would be traveling but will be putting in his time on the Plat Committee. He noted that when they research the beginning of zoning, whether it is a community, as a city, or a borough,

the bottom line was to preserve property rights and yet people don't want zoning. In the City where there are zoning powers there is a conditional use permit, it is a permitted use. Conditions are just put on it that help lessen the impact it might have. When there is no zoning the Commission's hands are tied. These are personal property rights that the individual wants to use his property. When he first got on the Commission it wasn't until he read through the entire Ordinance that he realized what conditions can be added to try to mitigate. It is an attempt to mitigate. He doesn't know if they can ever really say no. They have said no but the decision has been overturned. He would like to see how Local Option Zoning, where some people are zoned and others are not and how that could work together.

Commissioner Ruffner thanked Ms. Montague and said he learned a lot from her.

Chairman Martin also thanked Ms. Montague for her dedication and service to the borough.

ADJOURNMENT

MOTION: Commissioner Carluccio moved to adjourn the meeting at 11:08 p.m.

MOTION PASSED: Seeing and hearing no discussion or objection, the motion passed by unanimous consent.

Julie Hindman
Administrative Assistant

**Excerpt
Planning Commission
Minutes**

September 9, 2019

15	21.29.050 (A)(23)	Setback. Material site excavation areas shall be 250-feet from the property boundaries of any local option zoning district , existing public school ground, private school ground, college campus, child care facility, multi-purpose senior center , assisted living home , and licensed health care facility. If overlapping, the buffer areas of the excavation shall be included in the 250-foot setback.
15b	21.25.030	Assisted living home is a residential facility that serves three or more adults who are not related to the owner by blood or marriage, or that receives state or federal payment for services regardless of the number of adults served. The services and activities may include, but are not limited to, housing and food services to its residents, assistance with activities of daily living, and personal assistance, and that complies with Alaska Statutes 47.32.010—47.60.900, as currently written or hereafter amended.

Mr. Wall noted that items 16a and 16b would be an either / or situation. They are two different wordings to accomplish the same thing. These are in regards to language that was a concern to the Planning Commission. The language proposed by the working group is that the Planning Commission shall approve permit applications meeting the mandatory conditions. These two proposals will change the language. Item 16a it will add the additional wording "or shall disapprove permit applications that do not meet the mandatory conditions." Item 16b is drafted differently. The first sentence would be eliminated and replaced with "In order for a material site or counter permit to be approved the planning commission or planning director must conclude that the application meets the mandatory permit conditions." The table does not have it but it should say "as applicable" after planning director.

AMENDMENT 19 MOTION: Commissioner Ecklund moved, seconded by Commission Morgan, to approve item 16a, column 3.

Commissioner Bentz felt that the word disapprove was not the best choice and that maybe the word deny would be better. She thought that 16b read better. She asked legal if either of the options would be appropriate. Mr. Wall noted that "disapprove" was chosen because it mirrors the language in 21.25. that sets out the standards for conditional land use permits.

Commissioner Ruffner liked the language in 16b better but does not have strong feelings about either.

Commissioner Ecklund felt the difference between the two was that 16b was not strong enough in saying that the Planning Commission has the ability to deny or disapprove. It reads similar to how it has been read all along. If it meets the mandatory conditions then it needs to be approved. She wants something that says if the Planning Commission finds that the mandatory conditions are not meet, a permit can be disapproved.

Commissioner Bentz said she could see how that language sounds stronger but materially she did not see a lot of difference between the two options. It does not change the Planning Commission or Planning Directors powers. Chairman Martin noted that one is in the affirmative and the other is negative. The syntax is the same.

Commissioner Ecklund said she had issues with a long letter from a member of the borough staff that said the Planning Commission does not have the ability to disapprove a permit. The way it reads is that the Commission shall approve a permit that meets the mandatory conditions. That is what it said before and that is why staff said if it meets the conditions, they had to approve it. She wants the words included that say the Planning Commission has the power to disapprove a permit.

AMENDMENT 19 PASSED BY MAJORITY VOTE: 10 Yes, 1 No, 1 Absent

- Yes: Bentz, Brantley, Carluccio, Ecklund, Ernst, Fikes, Morgan, Ruffner, Venuti, Whitney
- No: Martin
- Absent: Foster

Case No. 2019-01-PCA

HEARING OFFICER'S DECISION ON MOTION TO EXPAND RECORD

Appellant Hans Bilben motioned the hearing officer to expand, or supplement, the record in this matter through a motion dated October 1, 2019. A copy of the motion is attached to this decision. Kenai Peninsula Borough Code (KPBC) 21.20.300 requires that the hearing officer shall allow a time for response to a motion by the nonmoving parties, within a time frame set by the hearing officer, after which the hearing officer shall render a decision.

The hearing in this matter is set for October 30. In order to prevent the parties from having to await the outcome of this motion before preparing their reply statements, the hearing officer shall provisionally accept the three documents put forth in Mr. Bilben's motion as additions to the record. Any party objecting to adding any of these three documents may make their objections in their reply statement, or in a stand alone response filed on or before the reply statement due date. After reviewing any objections, the hearing officer will make a final decision on whether each document shall be added to the record.

Dated this 2nd day of October, 2019.

L. Anmei Goldsmith, Hearing Officer

CERTIFICATE OF SERVICE

I, John Blankenship, Clerk of the Kenai Peninsula Borough, do hereby certify that, I served the Hearing Officer's Decision on Appellant's Motion to Expand the Record.

Reply Statement in Case No. 2019-01-PCA

Comes now Pete Kinneen who hereby files his reply statement.

Kinneen is aware of the elements of the Bilben reply statement. Rather than repeat those elements he affirms each and conceptually incorporates each into his reply statement.

In addition, he adds the following elements.

Warrington case citation is deceitful

As in the first administrative hearing in this matter, KPB tosses in the Warrington case and erroneously represents it as saying something it does not. In that instance the Girton reply statement brilliantly dismissed the KPB assertion. With never a rebuttal to Girton, KPB again drags out this dead rat.

One of the falsities of KPB misuse of Warrington is their assumedly deliberate failure to update the historical context.

Warrington is a 2005 case resulting in formal conclusion and decision relayed to KPB in first half of 2006.

During the same time frame there was widespread public and legislative debate over the very subject of gravel extraction and the rights of existing neighborhoods.

KPB fails in their Opening Statement to tell the result of that lengthy public struggle.

After Warrington, the people's legislators enacted the withdrawal of landowner's rights to extract more than a single acre of gravel from their land. As cited in Kinneen Opening Statement, the Assembly codified the withdrawal of landowner's Rights to extract more than a single acre of gravel from their land. During the second half of 2006 KPB Assembly (August 1, 2006) clarified in 21.29.010 the conditions under which the Right to mine gravel was exercisable.

All other attempts to extract gravel, whether on one's own land or on land of others, was reduced from an as-of-Right to a mere Privilege.

If the distinction between Right and Privilege is not addressed this entire issue is a case of who can yell the loudest. Once distinguished, everything within subject ordinance falls into place. Resulting in the proper decision being remand or reversal of latest decision.

To illustrate graphically the hierarchy of rights you might envision a standing person raising their right hand level out from their shoulder. And their left hand as straight out, as they can, from their knees.

In above graphic, the right hand illustrates the RIGHT of a person.

The left hand illustrates mere PRIVILEGE.

On August 1, 2006 KPB Assembly relegated the rights of existing neighbors to be as-of-rights while the aspirations to mine gravel in excess of a single acre are to be merely privilege. Legally, as opposed to everything KPB planning administration misstates, the as of rights trump the privilege of those wishing to obtain the privilege of a permit.

No one is born with the right to drive an automobile on public roads. Or to engage in the authorized practice of law. Or medicine.

Those wishing to do so must ask for the Privilege of doing so through earning or qualifying for the permit or license. With evenly regulated requirements to be met first. If requirements are not met, the permit is withheld.

Incredibly, KPB says the Privilege of a gravel permit is held Higher than the Rights of existing neighbors. And if the application is insufficient, you waive the failings and issue regardless. KPB shameful record is 97-0.

This is in clear contradiction to the plain meaning of the legislative words in the relevant ordinances. Indeed, the ordinance plainly states that if you fail to meet the standards you do not receive the Gravel extraction permit. The INTENT is the umbrella under which the rest of the ordinance is hung. Or framed.

21.29.050 A. "These material site regulations are INTENDED to protect against" and "only conditions set forth in ...may be imposed."

Plain reading says the INTENT is to protect "adjacent properties". Not to protect prospective miners.

KPB falsely says next that only these certain conditions may be imposed and even if the conditions do not meet the sufficiently minimized standards, you issue the permit regardless.

Proper reading of the plain words says if you fail your driver's test you do not get your driver's license. Or bar license. Or medical license. Etc. including gravel extraction license or permit.

KPB Assembly has spoken. KPB administration has misspoken. The correct and plain reading of the history of subject case is to remand the latest coerced Planning Commission decision. Or reverse per Bilben.

Respectfully submitted and filed on this 21st day of October, 2019 by Pete Kinneen.

CASE NO. 2019-01-PCA

REPLY STATEMENT

Comes Now Hans Bilben, by and through counsel, Katherine Elsner, and joined in filing – pursuant to KPB Code 21.20.280(A) – by Philip Brna, George Krier, David Gregory, Theresa Ann Jacobson, Rick Oliver, Shirley Gruber, Todd Bareman, Xochitl Lopez-Ayala, Richard and Marie Carlton, Mike and Linda Patrick, Joseph Sparkman, Vickey Hodnik, Michael Brantley, Gary Cullip, John Girton, Linda R. Bruce, Steve Thompson, Lynn Whitmore, Donald and Lori Horton, James Gorman, Linda Stevens, Gary and Eileen Sheridan, Thomas J. Brook, and Joshua and Christine Elmaleh, hereby files his reply statement.

Beachcomber and the Borough continue to promote their argument that the Commission is disallowed from granting a permit application. They furthermore misconstrue Appellant's argument by reframing it as somehow reading into the Code a requirement that *all* visual and aural impact be eliminated prior to the Commission having authority to grant a material site CLUP. Both

Reply Statement

1

the legal argument set forth by the Borough and Beachcomber, and the inaccurate reframing of Appellant's argument, are in error.

The argument that the 21.29.040 language that "only the conditions set forth in KPB 21.29.050 may be imposed to meet these standards" prohibits the Commission from disapproving a permit necessarily requires a "disapproval" be equated as a "condition." Otherwise the language plainly does not restrict the authority otherwise granted to the Commission to disapprove any CLUP application. This argument ignores the plain meaning of the words employed as well as the treatment of "conditions" throughout the rest of the Code.

The Code is replete with examples of how it is incongruous and illogical to read disapproval of a permit as a condition imposed upon the permit. For example, in discussing permit extensions, 21.29.07(c) allows a requested extension of a previously approved CLUP to be *denied* if "the permittee is otherwise in noncompliance with the original permit *conditions*." (emphasis added). In discussing permit termination, 21.29.080 directs that when "a permit expires, is *revoked*, or a permittee requests termination of their permit, a review of permit *conditions* and site inspections will be conducted by the planning department to ensure code compliance and verify site reclamation prior to termination." (emphasis added).

Moreover, this clear distinction between conditions to be imposed and the authority to approve, modify or disapprove an application for activity potentially permitted by the Code extends beyond just the material site permitting and conditional land use chapters. For example, 14.40.060 establishes a clear distinction between "conditions" and whether a permit should be *granted*: "A right-of-way construction permit may be *denied* if *conditions* cannot be placed on it to prevent damage to the rights-of-way, adjacent public or private property, or water bodies." (emphasis added).

Instead of requiring approval of the permit merely because the conditions are satisfied, the Code establishes and limits the box of tools available to the Commission to condition a permit. The Code does not allow the Commission to impose an infinite universe of conditions on a permit application. However, nowhere does the Code state that a permit application that is not capable of meeting the standards in 21.29.040 through employing the conditions in 21.29.050 must nevertheless be approved.

To the contrary, 21.25.050 specifically authorizes the Commission to disapprove a permit application. It requires that the proposed activity comply with the minimum requirements of 21.25. Through 21.25.010, the Chapter 21.25 requirements are applied to all CLUP applications, including those sought under Chapter 21.29. The clearly delineated purpose of the Code under 21.25.020 is to “require” that “minimum standards” are met prior to the issuance of any CLUP.

Although 21.25.010 provides that, if a conflict arises between the provisions of Chapter 21.25 and a CLUP chapter regulating a specific use, the more specific code provision applies, there is no conflict created between the language in 21.25.050 and 21.29.040. The provisions in 21.25.050 regulate the authority of the Commission to approve, disapprove and modify a permit application after measuring the application against the standards of the Code. The provisions in 21.29.040 limit the conditions that the Commission is allowed to impose on a material site application. There is no conflict in these provisions and they are clearly capable of being read in harmony.

By contrast, the provisions in 21.25.020 and 21.29.040 both address the “standards” and policy imposed by the Chapters. 21.25.050 generally imposes “minimum standards for certain land uses which may be potentially damaging to the public, health, safety and welfare....” By contrast, 21.29.040 more specifically imposes “regulations [which] are intended to protect against aquifer

disturbance, road damage, physical damage to adjacent properties, dust, noise and visual impacts.” As a result of this actual conflict in the purpose and standards created between application of 21.25.010 and 21.29.040, the requirements of 21.29.040 control. Because disapproval is simply not a condition imposed on a permit and because 21.25.050 and 21.29.040 are not in conflict, nothing in 21.29.040 supersedes 21.25.050 and disapproval is still a result the Commission is authorized reach.

It is also incorrect that Appellant’s position is that the impacts considered by 21.29.040 need to be eradicated completely before a permit can be approved. What the Code clearly and plainly requires is that the Commission determine whether the imposed conditions meet the standards set forth in 21.29.040 prior to approving a permit: that is, whether the impacts have been sufficiently *minimized*, as determined by the Commission. The Commission was improperly advised on the requirements of the Code when it was told that, no matter the decision it makes on the ability of the conditions to meet the standards, it completely lacks the authority to disapprove a permit once conditions are imposed. This erroneous interpretation of the Code led the Commission to grant this permit when it would not have done so if told it had the authority to disapprove— as it did in 2018 when presented with the same site plan and application.

Being unable to adequately explain how this permit and the associated conditions sufficiently minimize the visual and noise impact required by the Code, the Borough and Beachcomber reform Appellant’s argument into one that they can readily refute: that Appellant argues the Code mandates complete elimination of perceived negative impacts prior to approval. Instead, Appellant advocates a position that the Commission is both authorized and required to determine whether, after applying the 21.29.050 conditions to a permit application, such application is able to meet the 21.29.040 standards such that it should, under 21.25.050 be

approved. While the findings of fact recited by the Borough may set forth how the different permit conditions could result in some degree of reduction in the variably impactful and variably protected noise and visual repercussions to surrounding property, neither the Borough, Beachcomber, nor the adopted findings, are able to indicate how those impacts are *sufficiently* reduced so as to meet the standards imposed by 21.29.040 and to set forth a valid condition as required by 21.29.050(2)(c).

While the surrounding property owners submitted the greater quantity and volume of the evidence and testimony presented to the Commission, it is not urged that disapproval should have been decided based on numbers alone. It is the quality of that evidence - the documentary, visual and data-driven evidence - that supports the Commissions 2018 finding that the impact cannot be sufficiently minimized and is insubstantial to support the Commissions 2019 finding that the conditions imposed necessarily meet the standards set forth.

Finally, while accurate that the proposed material site sits within the rural zoning district, the Borough Assembly made a specific policy decision to explicitly limit a private property owner's ability to engage in material site extraction greater than 2.5 acres without public notice, comment and the approval of a quasi-judicial body *before* that extraction is allowed. Beachcomber acquired this property knowing that this restriction existed and knowing the geographic and topographical realities made this a location from which visual and aural impact to surrounding property owners could not possibly be sufficiently minimized or screened. When the Borough Assembly enacted regulations to support its policy decision to restrict free use of private property in this manner, it adopted code provisions specifically requiring the quasi-judicial body to ensure that the standards adopted by the Assembly and set forth in 21.29.040 are actually met and to disapprove any application where they are not.

As stated by the Commission in 2018, the noise from this site “will not be sufficiently reduced with any buffer or berm that could be added” and the “visual impact to the neighboring properties will not be reduced sufficiently.” Beachcomber’s application should be disapproved.

DATED October 15, 2019.

BEACHCOMBER, LLC,)

Applicants.)

**KPB's PARTIAL OPPOSITION TO MOTION TO EXPAND RECORD AND
REPLY**

The Kenai Peninsula Borough (KPB) hereby files this reply statement and partial opposition, or request for clarification, of the Appellant's Motion to Expand the Record and provisional acceptance decision by the hearing officer.

I. Appellant's Motion to Expand Record

The Appellant requested the hearing officer expand the record on appeal to include the following additional items:

- 1. *Kenai Peninsula Borough Planning Commission Manual*

KPB response: No objection to inclusion of the manual, which is also available online.

KENAI PENINSULA BOROUGH
OFFICE OF THE BOROUGH ATTORNEY
144 N. BINKLEY STREET
SOLDOTNA, ALASKA 99669-7520
Tele: (907) 714-2120 • legal@kpb.us

2. Transcript of the Commission Comments at the conclusion of the June 24, 2019 Planning Commission Meeting.

KPB response: KPB would not object to inclusion of the comments. However, if the request is for a full transcript of the June 24, 2019 meeting, or even just the complete transcript of the commissioner's comments made near the conclusion of the meeting, the KPB requests that the Applicant pay for the cost of the transcript. The transcript of any comments made after public hearing, deliberation, and vote by the planning commission falls outside of KPB 21.20.270(8).

3. Letter referenced by Commission Ecklund at the September 9, 2019 Planning Commission Meeting and Testimony of Commissioner Ecklund relating to that Letter.

KPB response: It is unclear what is being added to the record by way of the hearing officer's provisional decision. The motion and provisional decision included a one page excerpt, at page 39 of 39 of the PDF, of the September 9, 2019 Planning Commission meeting. In the last paragraph of the excerpt provided by the Appellant, Commission Ecklund references a "long letter". The letter was not included as part of the motion or decision. It is the KPB's understanding that the Appellant seeks to include the referenced "letter" not the excerpt page but clarification is required.

The borough is not aware of any letter sent from borough staff to the planning commissioners. The "letter" referenced by Commission Ecklund likely refers to either the KPB's Opening Statement in Case No. 2018-02 or the statement provided by Mr. Trimble at the March 25, 2019 planning commission meeting quoting the KPB's Opening Statement in Case No. 2018-02. [T52-T55].

Further the KPB objects to inclusion of the "letter" if the "letter" is in fact the KPB's opening statement in Case No. 2018-02. That document is a matter of public record and available online. The opening statement in Case No. 2018-02 would not constitute part of the record pursuant to KPB 21.20.270. Multiple KPB opening statements in the same appeal may only lead to confusion. That said, Mr. Trimble did read a portion of the opening statement into the record at the March 25, 2019 Planning Commission meeting, which is included in the record for this appeal. [T52-55].

II. Reply to Appellant's Opening Statement

A. Appellant's Argument Relating to Procedural Error

1. Alleged bias

The Appellant cites KPB 21.20.240(2) as code authority for disqualification of a Planning Commission member. This is not correct. KPB 21.20.240 is specific to the hearing officer. It does not regulate alleged bias or conflicts of interest of a planning commission member. The Appellant also cites the Planning Commission Manual which was identified by the Appellant as a manual created by KPB Staff for the benefit of the Planning Commission – essentially a training manual. The manual is not codified in borough code.

Specific to Commission Ruffner's comments to the news outlet, the comments related to the material site work group process and not any specific permit. In addition, Commission Ruffner clarified his comments at the June 24, 2019 Planning Commission meeting as part of the following exchange:

Mr. Wall: ... Can you state for the record the context of that statement [to KBBJ]?

Commissioner Ruffner: Sure. Through the chair. Yeah, I don't know what I recall verbatim what the comments or the context, but in general I would say that a number of times when material sites have come before this body, since I've been on the commission, it's been pretty clear to me that our job as commissioners is to interpret what the code is that has been laid forward from the Assembly.

And with respect to a denial, if a permit application comes in and it's complete and it meets conditions that have been set forth in 21.29, then those – and again, I'll just repeat, if those conditions are met, then we don't have the ability to deny the permit.

So that's my understating of how that is, because those elements that address the conditions are pretty specific in 21.29.050 I believe. That would be my address back to staff and to the public for clarification on those comments.

Mr. Wall: So it's my understanding that was in the context of your role as the chair of the material site work group?

Commission Ruffner: Yeah. I mean, I know they called me and asked about – KBBJ that is called and asked to do an interview on that. And it wasn't specific to any one gravel pit, it was the entire suite of code that we address right now.

[T. 190].

Whether misquoted or taken out of context, it appears Commissioner Ruffner's full understanding and what he attempted to convey to the news outlet, is that a complete application that demonstrates the ability to comply with all mandatory code conditions set

forth in KPB 21.29.050 cannot be denied by the Planning Commission. Borough code, as it relates to uses in the rural zoning district of the borough, generally does not grant the Planning Commission discretion to deny a complete material site permit application that meets or exceeds all the conditions found in KPB 21.29.050.¹ Commission Ruffner's clarification provided at the July 24, 2019 meeting shows that he understands applicable code. The clarification also makes it clear that the comments were made in relation to his role on the material site work group and unrelated to any specific gravel pit.

2. Failure to re-open public hearing

The Appellant cites no authority for this alleged procedural error beyond a manual that does not in fact dictate Planning Commission members' roles and responsibilities. The manual is a guide, used for training and refresher purposes. It is not code or adopted policy. In addition, the portion of the manual cited to by the Appellant states that the Planning Commission *may* take additional public comment.

Throughout this process the Planning Commission heard hours upon hours of public testimony over multiple meetings. Many of the same speakers, including the Appellant, participated at every step of the process. The Planning Commission also received many letters and comments from the public and from other agencies on this issue. The record in this appeal is more than 700 pages. The objections and concerns of the landowners in the area of the subject material site were articulated and well-known. The statement that the failure to re-open public testimony after the Applicant was provided a rebuttal opportunity somehow created an unfair proceeding is without merit. At the July 24, 2019, the applicant was provided time to respond to prior testimony and offer clarification on the volunteered, or extra, conditions pertaining to not operating on holidays and clarification that the white noise sounds (in lieu of standard back-up beepers) would be on equipment owned by the Applicant. It is highly unlikely that after a yearlong process the Planning Commission's decision was swayed or changed by a brief discussion about the holiday hours condition and clarification that the white noise back-up beepers would be on the applicant's equipment but not third parties' equipment.

¹ This is not an absolute however. For example, if an applicant has other outstanding violations of borough code than the Commission could and should deny the permit due to outstanding violations of borough code even if the application meets or exceeds all KPB 21.29.050 conditions.

No provision of borough code or state law requires the Planning Commission open public testimony following the Applicant's rebuttal. If there was any error, it was de minimis and harmless. Importantly, a review on the merits of the decision, including whether the adopted findings were supported by substantial evidence, will cure any alleged procedural error.²

B. Argument Relating to Substantive Error

1. Planning Commission can disallow a permit

A complete application that demonstrates the ability to comply with or exceed all the conditions set forth in KPB 21.29.050 should be approved *with conditions* by the Planning Commission.

AS 29.40.040 provides, in part:

- (a) In accordance with a comprehensive plan adopted under AS 29.40.030 and in order to implement the plan, the assembly by ordinance shall adopt or amend provisions governing the use and occupancy of land that may include, but are not limited to,
 - (1) zoning regulations restricting the use of land and improvements by geographic districts;
 - (2) land use permit requirements designed to encourage or discourage specified uses and construction of specified structures, or to minimize unfavorable effects of uses and the construction of structures;
 - (3) measures to further the goals and objectives of the comprehensive plan.

In the rural zoning district, the borough assembly chose not to adopt zoning regulations restricting the use of land by geographic districts. Rather, the assembly made the purposeful decision to allow all uses and only require a permit for specified uses to minimize potential unfavorable effects of those specified uses. AS 29.40.040(a)(2). Thus, the borough's code is not written in a way, or intended to be interpreted in a way, that restricts or prohibits a land use in the rural zoning district. The material site permit code requires CLUP applicants meet code specified conditions intended to reduce, not eliminate, potential undesirable impacts of the material site. The Borough Assembly determined that if the specified conditions are met, and the applicant is otherwise in compliance with borough code, then the use should be permitted. The Borough Assembly did not grant the Planning Commission discretion to deny a complete application that demonstrates the ability to

² See generally, *Brooks v. Brooks*, 2000 WL 34545824, page 2 (Alaska 2000) (citing to *Sanuita v. Common Laborer's and Hod Carriers Union of America*, 402 P.2d 199 (Alaska 1965)).

comply with all KPB 21.29.050 conditions, so long as the applicant is otherwise in compliance with all other provisions of borough code.

The Applicant's reply provides, "[t]o read KPB Code in a way to conclude that the Commission does not have the authority to disallow an application that the Planning Director has determined is complete is erroneous and necessarily renders the standards set forth in KPB 21.29.040 obsolete."³ While it is true that a complete application does not automatically equal approval, a complete application that demonstrates the ability to comply all KPB 21.29.050 conditions and other legal requirements should be approved.

2. The Planning Commission must independently find KPB 21.29.040 standards are met

It is the borough's position that a permit that meets or exceeds all the conditions in KPB 21.29.050 necessarily meets the standards and the legislative intent of KPB 21.29.040. If the borough assembly desired to impose additional conditions to meet the KPB 21.29.040 standards and intent, then that would be accomplished through legislative action.

No language in KPB 21.29 grants the Planning Commission discretion to deny a material site permit that meets or exceeds all the KPB 21.29.050 conditions.⁴ Read together the provisions of KPB 21.29 are clear: (1) **Only** the conditions set forth in KPB 21.29.050 may be imposed to meet the KPB 21.29.040 standards, and; (2) permits that imposes all KPB 21.29.050 conditions, including a requirement to comply with all applicable law, should be *approved with conditions*.

The Appellant's opening statement seems to indicate that KPB 21.25.050 requires the Commission make a specific finding that the standards of KPB 21.29.040 are met. KPB 21.25 is a procedural chapter that is applicable to all permits. KPB 21.29 is the more specific chapter relating to material sites. KPB 21.29 would control to the extent there are conflicts between the two chapters. However, there is no code conflict applicable to this case.

The Appellant argues that KPB 21.25.050(B) authorizes denial and that the planning commission was incorrectly instructed by borough staff on this point. As an initial matter, the Appellant's opening statement at page 8-9, footnote 10, provides an "Id." cite that

³ Appellant's Reply at page 9.

⁴ Assuming, again, that the applicant is compliance with all other provisions of borough code.

appears to be a mistake.⁵ The quote that begins on page 8 of the Appellant's opening statement comes from pages 10 and 13 of the hearing officer's remand decision in Case No. 2018-02. The quote is not from borough staff. In the transcript of the March 25, 2019 meeting, the KPB Planner, Bruce Wall, refers to the staff report and the hearing officer decision but does not direct or admonish the Commissioners in any way. [T.51-52].

Substantively, the Appellant's opening statement misinterprets KPB 21.25. KPB 21.25.020 provides: "It is the purpose of this chapter to require advance public notice, to provide an opportunity for public comment, and impose minimum standards for certain land uses which may be potentially damaging to the public health, safety and welfare, in a manner that recognizes private property rights." KPB 21.25 then provides the procedural requirements: application/permit, notice, hearing, and appeal rights. KPB 21.29 provides the requirements specific to material sites and conditions that may be placed on a permit application.

The Appellant's opening provides KPB 21.25.050(B) which includes the following language: "...Before granting the permit, the commission must find at a minimum the proposed activity complies with the requirements of this chapter." (Emphasis added by the Appellant.) "*This chapter*" refers to Chapter 25. The permit application and process in this case complied with KPB 21.25 and Resolution 2018-23 contains findings noting compliance. The Appellant has not argued on appeal that the borough failed to comply with KPB 21.25 procedural requirements. Rather, the Appellant appears to argue that KPB 21.25 should be read to mean: (i) the Commission has broad discretion to deny a permit that otherwise meets all requirements of KPB 21.29 and borough code, and that (ii) the Commission must make a specific finding pursuant to KPB 21.25.050 that the requirements of *Chapter 29* are met. That interpretation conflicts with a plain reading of KPB 21.25.050 and is logically flawed when Title 21 is read as a whole. Within Chapter 29, KPB 21.29.040 provides the purpose statement for material site permits.⁶ **Only** the conditions set forth in **KPB 21.29.050** may be imposed to meet the standards provided in KPB 21.29.040. No provision in KPB 21.29 provides the Commission unfettered denial authority.

⁵ The previous footnote in Appellant's opening statement cites to KPB 1.08.040(T) so the "Id" cite in footnote 10 would appear to incorrectly point to KPB 1.08.040(T).

⁶ KPB 21.29.040(A): "These material site regulations are intended to protect against..."

While the Appellant(s) may be unsatisfied with code protections against noise and visual impacts, neither the Commission nor the hearing officer have authority to change the code requirements for material site permits. The borough assembly chose to adopt a material site permit process that only limits material sites in the unzoned district of the borough to the extent provide for in KPB 21.29.050. Disagreement with that policy decision should be addressed before the assembly.

3. Applicant did not present substantial evidence to support findings

The Applicant is the proper party to defend the evidence it presented. As a preliminary matter, the Applicant provided a complete application and plan [R. 1-10]. The Planning Commission adopted 30 findings and attached them to the approval of the subject CLUP as the factual basis for the 22 conditions imposed on the permit. The findings are supported by substantial evidence in the record and speak for themselves. The hearing officer shall defer to the judgment of the planning commission regarding findings of fact if they are supported in the record by substantial evidence. KPB 21.20.320(2).

III. Conclusion

Planning authorities are “bound by the terms and standards of the applicable zoning ordinance, and are not at liberty to either grant or deny conditional use permits in derogation of legislative standards.”⁷ KPB 21.29.040 bars the Commission from imposing conditions in CLUPs that are not contained in KPB 21.29.050. The conditions set forth in KPB 21.29.050 are the exclusive conditions that may be applied. No additional conditions are required of the applicant by borough code and the Commission lacks the authority to impose additional conditions, unless voluntary conditions are offered by the applicant. Thus, compliance with KPB 21.29.050 necessarily means the applicant is in compliance with KPB 21.29.040.

Dated this 21 day of October, 2019.

Case No. 2019-01-PCA

**APPLICANT'S REPLY STATEMENT
AND OPPOSITION TO MOTION TO EXPAND THE RECORD**

COMES NOW the Applicants Emmitt Trimble and Beachcomber LLC (hereinafter
"Beachcomber"), by and through their counsel of record, Holmes Weddle & Barcott, P.C. and
hereby submits their Reply Statement and Opposition to Motion to Expand the Record.¹

I. STANDARD OF REVIEW

In appealing the Commission's decision, the hearing officer's review is limited to the
following:

1. The hearing officer may exercise independent judgment on matters that relate to the
interpretation or construction of ordinances or other provisions of law; however, due

¹ Beachcomber notes that of the eight opening statements filed, only two were adverse to the Planning Commission's
decision to grant the conditional land use permit. Therefore, this reply responds to the arguments raised in the
referenced two statements.

consideration shall be given to the expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21.

2. The hearing officer shall defer to the judgment of the planning commission regarding findings of fact if they are supported in the record by substantial evidence.
3. The hearing officer may revise and supplement the planning commission's findings of fact. Where the hearing officer decides that a finding of fact made by the planning commission is not supported by substantial evidence, the hearing officer may make a different finding on the factual issue, based upon the evidence, or may remand the matter to the planning commission as provided in KPB 21.20.330(B).²

II. REPLY STATEMENT

a. Planning Commission Members Overcame the Bias Test.

Appellant asserts that certain Planning Commission members should have been disqualified from voting on the application, but fails to demonstrate the bias upon which it makes its claim. Applicant does not dispute the manual's policy and procedure as to how bias is defined and treated;³ however, it does take issue with the quoted statement by Commissioner Ruffner as rising to a level of demonstrating bias. Commissioner Ruffner's statement appears to be a broad, blanket observation, without any implications as to Applicant's permit application. Appellant fails to add context to this comment, which, in the cited interview, is specific to the Commission's authority to deny a permit for extraction as long as it fits certain criteria surrounding noise, the

² KPB 21.20.320.

³ Planning Commission Manual – Rule 7 – The following acts are found to constitute bias: “(1) ex parte contact with board or commission members; (2) making public statements or authoring letters *regarding a particular case* prior to the case coming before the board or commission (emphasis added); (3) paying expenses of board member to make a site visit; (4) vote-trading; (5) soliciting persons to testify for or against a permit or applications, and (6) gifts given to influence a vote.”

visibility of the site and basic buffer zones among other standards.⁴ Further, Commissioner Ruffner was noted as having made inquiries at prior meetings regarding criteria which may result in a denial.

Appellant attempts to make the stretch to hold a Commissioner as biased on a particular permit based upon a statement which has no reference to Applicant; further, it does not demonstrate any prejudgment on the permit. When taken in its context, as it applies to the ordinance's requirements of the Planning Commission, it cannot be construed to amount to any particular bias in favor of Beachcomber, and certainly not to the level which would meet the bias test as laid forth in the Planning Commission Manual. Therefore, this argument has no merit and it was proper for Commissioner Ruffner to participate.

b. The Planning Commission Allowed Sufficient Public Comment.

Appellant posits that because public comment was not extended to address voluntary conditions discussed during Applicant's testimony, that the proceeding was unfair. Appellant appears to misunderstand the record cited in the transcript, as counsel for Beachcomber was rebutting evidence provided at that hearing – *not* submitting additional evidence. Additionally, the rebuttal offered by Applicant's counsel introduced absolutely no new voluntary conditions.⁵ No new facts or conditions came to light which would have invited further public comment. Applicant regards this attempt at misdirecting the hearing officer to new evidence that does not exist as a disingenuous effort to distract from the matter at hand.

Of greater consequence is the plain fact that the voluntary conditions mentioned were made during Applicant's rebuttal to the public comments made over the course of the meeting. Opening

⁴ Resolution 28-23 at 595.

⁵ Transcript 150 – 151.

public comment to every rebuttal would result in a never-ending loop of comment and rebuttal. The Planning Commission Manual at subpoint 11 lays out guidelines for a fair “quasi-judicial hearing format,”⁶ which does not provide for public comment at every occasion or mention of new evidence.

The Commission proceeded properly with regard to the hearing guidelines as to testimony and rebuttal.

c. The Planning Commission Can Disallow a Permit – and Has Determined in the Present Matter That the Permit is Authorized.

Appellant appears to believe that because the Commission did not find in its favor by denying the permit, that the Commission is acting in lockstep with the KPB Staff out of obligation. It was already found that the Commission’s denial of the permit in 2019 was improper, due to the Commission’s role as gatekeeper to ensure that the minimum standards are met. Appellant concludes that the Commission’s decision to approve the permit is based on a mandate from the Board telling it to decide in a particular way. This is inaccurate. The Commission made numerous findings of fact explaining its reasoning for voting in favor of the extraction site – none of the findings of fact cite to a directive from the Board to approve the permit. Appellant dismisses the

⁶ The guidelines state:

- 1) The chair introduces the agenda item.
- 2) Staff presents a report and staff recommendation.
- 3) Presentation by the applicant and their representatives.
- 4) Testimony by members of the public.
- 5) Response by staff to any testimony that was given and an opportunity for the Commission to ask questions of the staff.
- 6) Rebuttal by applicant. The applicant can rebut evidence or testimony but should not present new testimony or evidence. (If new evidence or testimony is allowed, the Planning Commission may question staff regarding the same and take additional public comment regarding the new evidence.)
- 7) The chairperson closes the hearing and then entertains a motion. The Commission deliberates and makes a decision.

Notably, these guidelines do in fact allow introduction of new testimony or evidence upon allowance by the Planning Commission, but it does not make allowances for new public comment to the rebuttal.

findings of fact and instead jumps straight to the conclusion that the Commission's reasons were illusory.

Appellant cites to *Mech. Contractors of Alaska, Inc. v. State, Dep't of Pub. Safety*, 91 P.3d 240 (Alaska 2004) and *Nat'l R.R. Passenger Corp. v. Boston & Me. Corp.*, 503 U.S. 407 (1992) in support of their argument that the legislative intent is that a precise and literal meaning be given to each word, sentence, or provision. This is undisputed. However, Appellant inflates that finding to encompass the KPB Code, claiming that the Commission finds itself bound to authorize permit applications. Appellant's argument lacks relevance, as there is no evidence to demonstrate that any Commissioners felt compelled to approve any and all permits. Appellant appears to disregard the core of the Commission's role, which is to determine whether the application is complete, and to authorize permits based upon the completion and compliance in the application. The quotes taken from individual Commission members and cited to within Appellant's opening statement are taken out of context and fail to point out that when a permit meets all of the requirements designated within the Code, the Commission does not, indeed, have blanket authority to deny it without reason.

It is notable that Appellant cited to *Farley v. Utah County*, 440 P.3d 856 (Utah App. 2019), which states that the County is given statutory discretion to approve, modify and approve, or reject an application based on the evaluation of certain factors in addition to listed criteria. Appellant also implicates *Da Vinci Investment, Ltd. P'ship v. City of Arlington, Texas*, 747 F. Appx. 223 (5th Cir. 2018)⁷ as supportive of its argument, quoting "there is no 'explicitly mandatory language' in the ordinances requiring city officials to approve a development plan,

⁷ *Da Vinci* is an unpublished decision and is from a different jurisdiction. Therefore, it is not binding on this tribunal and may only be considered as persuasive authority.

even where a plan meets all required guidelines, the city council had discretion to grant or deny the benefit.”

In the present matter, the Commission has undertaken precisely that burden of determining whether to grant or deny the permit application when reviewing Beachcomber’s application – in addition to the mandatory standards imposed, the Commission considered Applicant’s voluntary conditions as well, in an effort to creatively devise methods to further reduce any impact on surrounding properties. *Farley* specifically states that a decision is valid unless it is either illegal, or arbitrary and capricious.⁸ An illegal decision is one that is either “based on an incorrect interpretation of a land use regulation, or contrary to law.”⁹ Borrowing this definition from *Farley* and applying it to the Beachcomber permit authorization, any claim that the Commission incorrectly interpreted a land use regulation can be swiftly put to rest with a review of the relevant regulation and the legal procedure the Commission undertook throughout the course of this matter thus far: KPB Code 21.25.040(A)(2)

It shall be unlawful for any person to use land, or to assist another to use land, within the rural district of the Kenai Peninsula Borough for the following uses without first obtaining a permit from the Kenai Peninsula Borough in accordance with the terms of this ordinance. . . commercial sand, gravel, or material site pursuant to KPB 21.26.

Additionally, land use in the rural district is unrestricted unless otherwise provided in KPB Title 21. Clearly the Commission proceeded through the proper regulation in reviewing the permit by operating within its jurisdiction; holding the requisite public hearings; ensuring adequate notice was given; and proceeding with findings of fact in support its decision.

⁸ *Farley*, 440 P.3d 856, 860 (Utah App. 2019).

⁹ *Id.*

There are no plausible arguments that the Commission's decision is contrary to law, which leads the conclusion that Appellants deem the Commission's decision arbitrary and capricious. The only evidence Appellant provides in support of this argument is the volume of residents who wrote the Commission or appeared at the hearing in opposition of the material extraction site. As Appellant noted in bold and underlined text in its opening brief, the Commission in fact did find it within its authority in its July 16, 2018 decision to disapprove the permit. Only after appeal and remand, and a revisiting of all notice and public comment requirements, with additional voluntary conditions offered by Beachcomber to minimize impact on its neighbors, did the Commission then approve the permit. The Commission's findings of fact explicitly state in point 10 that "the Planning Commission in reviewing the application are not authorized by the code to consider those issues such as property values, water quality, wildlife preservation, a material site quota, and traffic safety." Applicant finds it incredulous that the Commission should be accused of arbitrary and capricious decision-making after it held numerous public hearings after remand, considered hours of testimony and large volumes of documentary evidence both in support of and against the proposed material extraction operation, and held a vote which was not even unanimously in favor of the permit.

Appellant's reference to *Da Vinci* in support of its argument that the Commission has the authority to deny a permit is also flawed – *Da Vinci* finds its genesis in a substantive due process argument, such that the appellants in that case claimed they had a constitutionally protected property right in an approval of a development plan.¹⁰ The court held that *Da Vinci*'s argument stating the council members had no discretion to deny a development plan because it met all

¹⁰ *Da Vinci* at 226.

ordinance guidelines was immaterial, as Appellants did not have a protected property right in the approval of its development plan.¹¹ Additionally, the appellants in *Da Vinci* sought to develop land specifically in a zoned area – in contrast to the property at issue in the present matter.¹² Because zoned land is subject to zoning regulations and restrictions, the governing body has far greater reach in determining what activity the subject parcel is exposed to. The property upon which Beachcomber sits is squarely within the unzoned area designated by the Kenai Peninsula Borough. As such, governmental reach is limited to what the ordinance requires and no more. Beachcomber has met the threshold of what the code requires, and no valid reason exists to deny the permit.

In considering the record, based on the evidence and testimony set forth in the record the application has met the standards required within the Code, and Appellant’s argument lacks any merit.

d. The Planning Commission Independently Found the Standards in the Application to Have Been Met.

The Planning Commission is tasked by the KPB Code with determining that the standards set forth for issuance of Conditional Land Use Permits are sufficiently met as described within the Code.¹³ It charges the Commission with finding at a minimum that “the proposed activity complies with the requirements of [the] chapter.”¹⁴ As discussed in Beachcomber’s Opening Statement, there is no requirement that the Commission guarantee the standards eliminate any impact to surrounding areas; rather, the Code mandates that the CLUP *minimize* impact. In parcels where the land’s composition may inhibit any measures taken to eliminate visual and auditory impact,

¹¹ *Id.*

¹² *Da Vinci* at 225.

¹³ KPB Code 21.25.050 – Permit considerations – public hearing required.

¹⁴ *Id.*

the applicant has a limited ability to change the topography but can nonetheless take measures to reduce any impact it may have. In fact, KPB Code 21.29.050(A)(2)(e) authorizes the Commission to waive buffer requirements if the land's topography makes those buffer permit conditions unnecessary or not feasible.¹⁵ The code as applied to Applicant's land may fall short of what the surrounding property owners would desire – but that is an issue which has no bearing on Beachcomber or its CLUP application. To further address the community's concerns, Beachcomber voluntarily imposed upon itself additional voluntary standards meant to reduce any impact it has on its neighbors, thus exceeding those standards set forth in the code.

Government restriction upon private property must be done in compliance with law in order to meet with constitutionally protected rights. Therefore, when considering permitting of developments upon privately owned land the Commission must carefully follow the law in order to ensure these rights are protected. Particularly the case wherein the code is written in an unzoned area to promote development and protect private property rights. Beachcomber has complied with the Code's standards and should be found to have met and even exceeded those minimum requirements.

e. Applicant Presented Substantial Evidence to Support the Findings

The Commission is responsible for determining whether the applicant has produced sufficient evidence to demonstrate that the proposed activity complies with the requirements of the Code in order to approve the permit application.¹⁶ Substantial evidence is defined as relevant evidence that a reasonable mind might accept to support a conclusion.¹⁷ The substantial evidence

¹⁵ KPB Code 21.29.050(A)(2)(e) states "Buffer requirements shall be made in consideration of and in accordance with existing adjacent property at the time of the approval of the permit."

¹⁶ KPB Code 21.25.050(B).

¹⁷ *Button v. Haines Borough*, 208 P.3d 194 (Alaska 2009).

test for administrative factual findings considers the “scope of review” to be findings supported by (1) the weight of the evidence, or (2) substantial evidence in light of the whole record.¹⁸

Applicant Beachcomber at the March 25, 2019 proceeding reminded the Commission that it presented substantial evidence to support approval of the permit,¹⁹ and this was reiterated in the KPB’s Opening Brief. The sheer number of opponents to development of a material extraction site is not substantial evidence against approving the permit if the basis of the opposition is emotionally fueled or speculation. Speculation does not rise to the level of evidence, least of all substantial evidence.

In the present case, Applicant has demonstrated the material extraction site is located in a rural, unzoned district of the borough. The extraction site proposal includes numerous measures attempting to minimize the impact on surrounding properties. The Commission has also acknowledged the challenge in reducing impact on neighboring and surrounding areas, however, in response to the same Applicant has included additional voluntary measures that exceed code requirements in order to further reduce any impact.

f. Allegations of Prosecutorial Misconduct Fall outside the Scope.

This argument is irrelevant to the present case and as such, has no reply beyond stating that this argument falls outside the scope of what the hearing officer is considering. Without further information, this point cannot be adequately addressed.

III. OPPOSITION TO MOTION TO EXPAND THE RECORD

Applicant opposes the request to expand the record beyond what was included in the hearing which occurred following the hearing officer’s remand. The motion asks the hearing

¹⁸ *State, Dep’t of Commerce, Community & Economic Development, Div. of Corp., Business & Prof. Licensing v. Wold*, 278 P.3d 266 (Alaska 2012).

¹⁹ T53.

officer to consider the Kenai Peninsula Borough Planning Commission Manual, the Transcript of the Commissioner Comments at the conclusion of the June 24, 2019 Planning Commission Meeting, and the Letter referenced by Commissioner Ecklund at the September 9, 2019 Planning Commission Meeting and Testimony of Commissioner Ecklund relating to that Letter.

The record is thorough insofar as it covers the facts and plans pertaining to Applicant's property and the surrounding the property, and community members' commentary. Appellants, had they found such records necessary and relevant to the proceedings while they occurred, had the opportunity to mention and bring such records into the proceeds. KPB Code 21.20.270 allows for particular materials to become a part of a record before the hearing officer.²⁰ Anything outside of that scope is not to be included. Specifically, the code cites to "all informational materials which were entered into the record or minutes of the proceeding before the commission." It should be noted that the Kenai Peninsula Borough Planning Commission Manual was not entered into the record or the minutes on the days referenced.

The hearing officer in the present matter is tasked with the duty of hearing and deciding appeals from quasi-judicial planning commission decisions.²¹ Appellants argue that the record should be expanded to include the comments made at the conclusion of the record. These

²⁰ KPB Code 21.20.270 - *Record; contents*. For the purposes of appeal, the record shall include:

1. The filed application or complaint which initiated the proceedings before the planning commission;
2. All informational materials supplied to the commission or relied upon by the planning director or staff in making its report or recommendations to the planning commission;
3. All informational materials which were entered into the record or minutes of the proceeding before the commission;
4. The report of the initial investigation by the planning department, and where applicable the enforcement order or decision of the planning director;
5. All testimony and all documents or other evidence received by the planning commission from the parties or other witnesses during the proceedings;
6. The decision of the planning commission;
7. The planning commission's findings of fact; and
8. The minutes of the planning commission and a verbatim transcript of the planning commission hearing.

²¹ KPB 21.20.220.

comments are not part of the record. Further, the comments which Appellant quotes in its motion cannot be considered anything more noteworthy than musings, none of which would be relevant to the vote that had just occurred. It appears these Commissioners are expressing personal opinion on the application and opinions on how the process should be altered, rather than statements reflecting the vote's legitimacy.

As to the letter referenced by Commissioner Ecklund, the letter itself does not appear to be submitted as part of the requested record expansion – without proper context, Applicant cannot adequately respond to the motion, and for that reason it should be denied. The link Appellant Bilben provided in its motion resolves to only the meeting minutes, without the letter.

For the foregoing reasons, Applicant objects to expanding the record beyond what is authorized by KPB 21.20.070.

IV. CONCLUSION

Applicant maintains that the Kenai Peninsula Borough Code authorizes not only the counter permit granted by the Kenai Peninsula Planning Department, but also the greater Conditional Land Use Permit which Beachcomber initially applied for. Beachcomber has submitted viable plans for its site to meet the required standards, as well as proposed voluntary standards to reduce the impact of its operations on neighboring properties. Appellant has failed to raise any argument that would defeat the determination by the Commission. Therefore, Beachcomber respectfully asserts that it has met all the standards set forth in the Kenai Peninsula Borough code such that Conditional Land Use Permit granted by the Commission should be upheld.

APPLICANT'S REPLY BRIEF AND OPPOSITION
TO MOTION TO EXPAND RECORD
KPB Planning Commission Appeal

Case No. 2019-01-PCA
Page 13 of 13

OCT 18 2019

Borough Clerk's Office
Kenai Peninsula Borough

Reply to Opening Statements, Case # 2019-01 PCA

Submitted by Rick Oliver

KPB and Trimble both claim that no substantial evidence was submitted by the neighboring property owners.

This picture is in the Record (R451), and was submitted as evidence during the July 16th 2108 Planning Commission Hearing. The picture is taken from my bedroom window. Grade level for my property is approximately 20 feet above grade level for the mine, and my house is classed as a 1 1/2 story with a basement—this would put the view from my bedroom window at approximately 28 feet above the proposed 12 foot earthen berm! I believe that the Borough must consider my bedroom to be “property” as evidenced by the fact that the assessed valuation of my “property” is based in part on the number of levels in the structure.

Bruce Wall has been to my property, and he has seen this picture. My property is located directly east and **adjacent** to the proposed gravel mine. We are located on Danver Street (which shows at the bottom of the photo). I am six feet tall +or- an inch, and I am holding a 10 foot board while standing about fifty feet inside the proposed mine. Planning Staff has concluded that a 50 foot vegetated buffer and a 12 foot berm (where I'm standing) will sufficiently minimize the dust, noise, and visual impact from my property. **All trees** behind me are in the mine area and **will be gone**—that leaves **one tree in the 50 foot vegetated buffer**, and a twelve foot berm to protect me! I am also standing on what would become the primary access road to the mine and the potential 10,000 dump trucks that would travel it annually for fifteen years. 250 feet behind me is the proposed location for the rock crusher.

The proposed buffering is neither in “consideration of existing use”, or of “sufficient height and density to provide visual and noise screening” as required by Code. (KPB 21.29.050)

My property is at a substantially lower elevation than all other and adjacent properties east of Danver Street, and at a substantially lower elevation than two or more impacted properties that are west of Danver Street (south of mine site). All properties that are at higher elevation in the neighborhood are even more affected by the visual and noise impact that this mine will inflict because of the fact that berms and buffers proposed in the application are well below their line of site, and their line of earshot. Standards 21.29.040 (A4) & (A5) which are required by Code can not be met as proposed, and the Planning Commissions Findings of Fact are incorrect.

All of this begs the question, where is the substantial evidence to support granting this permit? The answer, there is none, except Bruce Wall (Planner) says so!

Following is a brief summary of the scope of the proposed gravel mine which explains why so many concerned neighboring property owners "stacked the hall" as KPB contends in their Opening Statement.

1. The mine would include 27.7 acres and will have a projected life expectancy of **15 years**. The mine would be accessed by Anchor Point Road, which is about one mile in length and in a very advanced state of deterioration. Anchor Point Road is the only access to the Anchor River State Recreation Area which includes five state park campgrounds, two private RV parks, and the area's only launch facility to access Cook Inlet by boat. It is also the only access road for most of the roughly 200 people who own property within 1/2 mile of the mine. The mine site is an irregular shape that is bordered on the north by recreation and residential properties that are at or near the grade level of the mine, to the east by residential properties that are all at substantially higher elevation than the mine, and to the south by residential and recreational properties some of which are at substantially higher elevations, and some at or near the same elevation as the mine. This proposed mine site is centered in the heart of a residential/recreational area that is the lifeblood of Anchor Point.
2. The mine would be permitted for removal of up to 50,000 cubic yards of material per year. That, by permit stipulation, could equate to 5,000 ten yard dump trucks hauling out of the mine, and 5,000 ten yard dump trucks returning, for a total of **10,000 ten yard dump trucks** rumbling through the neighborhood each summer for 15 years. The access to Anchor Point Road from the north is via a bridge across the Anchor River which has been condemned, and weight restricted to 11 tons which is approximately the weight of an empty ten yard dump truck. Loaded trucks are not allowed on the bridge, and will be required to travel the Old Sterling Highway with their load. This brings the noise of large diesel engines and engine brakes to another population area, many of whom are within 1/2 mile of the proposed mine.
3. The application has provision for a processing area which includes a rock crusher. All mining is by its nature dusty and noisy. Anytime you move rocks, or break rocks with steel or iron machinery, there is substantial noise and dust generated.

While trucks, loaders, dozers, and all construction equipment produce undesirable sounds and emissions that would be very detrimental to the residential health, safety, and welfare of the neighborhood, the rock crusher is by far the noisiest, and dustiest of all processing equipment

Reply to APPLICANT'S OPENING STATEMENT:

(page 5 of 5) states "The Commission does not have the capacity or duty to determine the effectiveness of Applicant's abatement measures". KPB 21.25.050 states - "**Before granting the permit, the commission must find at a minimum that the proposed activity complies with the requirements of this chapter**". In plain English doesn't this say that the commission is absolutely duty bound to determine that so-called "abatement measures" will effectively satisfy the Conditions and Standards laid out in KPB 21.29? As to the "capacity", by utilizing KPB's GIS technology objective decisions can be made versus the subjective and arbitrary methods used by KPB and the applicant in the design of this application.

In the case of this application, the Applicant has produced **zero** substantial evidence to prove that Mandatory Conditions and Standards will be met.

Reply to KPB's OPENING STATEMENT:

1. KPB speaks only to "adjacent" properties (**P. 8-10, #2. Buffer Zone**) in its findings of fact, but refuses to address protections to "other" properties as required in KPB Standards 21.29.040. The amphitheater like topography combined with the substantial elevation differences between the proposed site and properties to the South and East of it should dictate that while the buffer zone "shall be made in consideration of and in accordance with existing uses of adjacent property..." (KPB 21.29.050 A, 2,e), **other** properties are afforded protection under KPB 21.29.040 A. 4&5.
2. **P. 15, #14** Voluntary Conditions do not meet the requirements of KPB 21.29.050 (A, 14) as they are **not in the best interest** of surrounding property owners.

a. **Voluntary Condition a.** states: “The applicant has volunteered to operate **his** equipment onsite with multi-frequency (white noise) back-up alarms...”. (emphasize “**his**”)

The applicant **does not have** equipment, a fact which is known to Planner Bruce Wall through site visits and communications with the applicant. A request to disclose this fact to commissioners was submitted by Hans Bilben to Planner Wall via email (**attached as Exhibit #1, paragraph 2**) at 11:49 a.m. on June 23rd—one day prior to the Planning Commission hearing. Request was denied, no public comment was allowed at June 24th hearing, and commissioners were not informed by Planner Wall that no such equipment existed. A second email to Planner Wall from Hans Bilben (**attached as Exhibit #2**) submitted at 2:45 p.m. on June 24th requested that public comment be re-opened concerning voluntary conditions some of which were only made known to the public in the Desk Packet which was posted that afternoon. Both of these emails were submitted in a timely manner, and mysteriously, **neither** of them appear in the Record.

b. **Voluntary Condition c.** states: “The applicant has volunteered a condition requiring the berm be placed **near** the active excavation area, damping the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.” No definition of “**near**” renders this condition worthless, and further, this condition speaks only to “excavation” while ignoring other undesirable aspects of the proposed use such as hauling and processing.

c. In the Record (T157 p.163 7-19) Commissioner Ecklund states that in order to work rolling /moving berms must always move toward the impacted properties. Commissioner Bentz (T198 p.41 1-15) brings up similar concerns but neither follow up with their correct observations. In order to effectively screen visual and noise impact to other properties a moving berm must **always** be located between the excavation area and the impacted properties, must be of **sufficient height**, and **MUST** move/roll toward said properties.

d. **Exhibit # 3** (attached) is a site plan depicting the proposed material site and some of the surrounding properties. It is important to note that impacted properties to the East of the site, and some properties to the South are at **much higher** elevation than the proposed mine.

As per the application, the mine would proceed starting with Phase I (6.1 acres on northeast portion of mine), move to Phase II (3.9 acres on southeast portion of mine).

Upon completion of Phase I the berm will necessarily have moved to the Eastern edge of the 50 foot vegetated buffer along Danver Street, and to the northernmost boundary of Phase II. As work progresses into Phase II the berm would move in that area to the south and to the east. At the completion of Phase II the 12 foot earthen berm would necessarily be located totally on the eastern parcel boundary inside of the 50 foot vegetated buffer, and on the southern boundary of that phase inside the vegetated buffer.

Phase III at 15.8 acres is more than double the area of the previous two phases combined, will include processing (the noisiest, dirtiest aspect of mining), and because of the design of the project will have little or no screening of the proposed use. Nowhere in the application or during the Hearing was it mentioned just how a rolling/ moving berm will protect properties east and south of the site when the moving berm can only move away from them in Phase III. With a projected life expectancy of 15 years this would mean that surrounding property owners would have no protection under the design of this application for many years into the future!!!!

e. The six GIS profile drawings (**R599-602 and R663-664**) submitted as evidence by Lynn Whitmore (**T128 p.48-49**) and (**T145 p.117 & T146 p. 118-119**) depict this exact situation and clearly show that because of the significant elevation differences between the six properties and the proposed site there is not sufficient screening of proposed use as required in KPB 21.29.050, and as a result standards in KPB 21.29.040 are not met. The proposed use is material extraction which encompasses all activity on the site including excavation, hauling, and processing.

f. GIS (**Geographic Information System**) is used by the KPB Planning Department on a daily basis and is known to be accurate and reliable. KPB employs several people solely to utilize and design projects with this technology and could easily determine accurate **objective** designs for the Buffer Zone in material site applications, but for unknown reasons they choose to determine berm height using arbitrary, subjective decision making. In the case at hand the 12 foot berm has no mathematical or

scientific basis—its just an arbitrary number that the KPB Planner and the applicant think might get past the planning commission!

g. From **P. 17 #3 Appellant's Points...** KPB claims that buffer zone is of sufficient height and density when GIS profile drawings show otherwise. *Minimization (reduction) of visual and noise impacts does not occur when line of sight profiles done with KPB's own technology clearly show the design defect of the application.*

3. **KPB falsely claims** that ***"The approved permit imposes all conditions allowed or required under borough code"***.

a. KPB 21.29.050 (A2) (a&c) allows the buffer zone to be a combination of minimum 6 foot fence, 50 foot vegetated buffer, and **minimum 6 foot earthen berm**. **Proposed Findings of Fact (R591-593)** were developed using KPB's GIS technology to accurately and objectively design a Buffer Zone that would effectively minimize noise and visual impacts to adjacent and other properties by **increasing berm heights as allowed under KPB Code**. KPB claims that a 12 foot berm will meet the requirements of KPB 21.29 when in fact their own technology proves them wrong. There is **no substantial evidence** to support their Findings, while there is substantial evidence to prove otherwise.

4. **Page 19**, last paragraph addresses the bias displayed by Commissioner Ruffner and claims that more "specifics" were needed to make such determination. Again, an email sent to Planner Wall from Hans Bilben (**attached as Exhibit #1, paragraph 1**) addressed just such issues. This email was timely, and for unknown reasons, never entered into the record. The interviewer for the article (**R595-596**) in which Ruffner shows his bias specifically references contentious gravel pits in Anchor Point—Beachcomber was the only permit in the works at the time of the interview.

5. In the **Conclusion on Page 22** KPB **again** makes a **false statement** stating that **"All the protections afforded through the mandatory conditions found in KPB 21.29,050 have been imposed"**. Code allows earthen berms of a **minimum 6 foot height**—**there is no maximum** and 12 foot is clearly not sufficient. Neighbors opposed to the permit did not ask for or expect permit conditions not found in the Code.

Conclusion

This application to place a large commercial mining operation in the heart of a residential/recreational neighborhood is poorly designed and incomplete in that it provides no substantial evidence or explanation as to how it will meet the requirements of the Code at all stages of development.

The Remand from 2018 came with instructions from the Hearing Officer to **Provide adequate findings of fact and provide the substantial evidence to support those findings**— This application does neither! Opponents to this permit proposed adequate Findings of Fact (**R588-593**) and included supporting substantial evidence in the form of profile and vector graphics (**R599-602 & R663-664**) designed with KPB owned GIS technology.

Conclusions made by the planning commission contain Findings of Fact which are not supported in the record by substantial evidence and as such the Hearing Officer must make a different finding, deny the application, or remand to the planning commission.

Bruce,

A couple items that need your attention prior to and during the 6/24 Planning Commission decision concerning the Beachcomber material site application:

1. In the Record, Meeting Packet Volume 2, (pages 47-49) I submitted information concerning possible conflict of interest and bias issues with three Commissioners—Ruffner, Foster, and Venuti. Foster and Venuti either did not see the information that I submitted, or determined that no conflict or bias existed, and chose to not recuse themselves from the June 10th hearing. Commissioner Ruffner was absent from the June 10th hearing, but will apparently be present on the 24th. Ruffner's comment ("...the planning commission doesn't have the authority to say no.") in an interview with Renee Gross of KBBI Radio on January 4, 2019 clearly shows bias. The KPB Planning Commission Manual (p.17) states:

Indicators of prejudgement include a commissioner making a clear statement suggesting that a decision has already been reached. Following are types of acts that have been found to constitute bias (2) making public statements or authoring letters regarding a particular case prior to the case coming before the board or commission.

The article references "...contentious debate in rural neighborhoods near Anchor Point..." which would indicate that Ruffner has actually made up his mind regardless of any argument that might be advanced at the hearing. Commissioner Ruffner should recuse himself from this hearing based upon the bias that he has shown. This needs to be brought to the attention of Chairman Martin prior to the hearing.

2. Finding of Fact #14 on page 23 in Meeting Packet Volume 1 is not an enforceable or legitimate Voluntary Condition as the applicant does not own or operate equipment that would be used to mine gravel. As the KPB Planner you have made several site visits, and have spoken with the applicant on many occasions. You are very aware that the applicant is a realtor and not an operator, and that he does not own, and has stated that he does not plan to own mining equipment. Fact #14 "volunteers" that he would use white noise backup alarms on just "his" equipment—of which he has **NONE!!** You are aware of this, and the Commissioners apparently are not—during deliberations in order for KPB to remain **fair and impartial** shouldn't it fall upon you to make this clear to them? Some Commissioners mistakenly seem to be of the opinion that a white noise backup alarm is the "cure-all" for all noise generated by a mining operation, and may base their decision in part upon this blatantly ridiculous "voluntary condition". Further, the idea that an applicant might "ask" contractors to disconnect their traditional backup alarms is illegitimate because it is not enforceable under the Code, and quite likely illegal. Both "voluntary conditions" (#13 and #14) that have been offered in this application bring to mind the parable of The Emperor's New Clothes—no one dares to say that they do not see any clothes (in this case protections as required in the Code) for fear that they will be seen as stupid or incompetent....

Bruce,

The KPB Planning Commission Manual on page 22 #11 item 6.
"If new evidence or testimony is allowed, the Planning
Commission may question Staff regarding the same and take
additional public comment regarding the new evidence".

I realize that this was not included in his rebuttal, but the
applicant has added more voluntary conditions since that time.
The neighboring property owners have not had an opportunity to
comment on these conditions and in fairness to them public
comment should be re-opened to discuss just voluntary
conditions. To do otherwise allows the applicant to unfairly
influence the decision making ability of the Planning
Commission.

CASE NO. 2019-01-PCA

MOTION FOR RECONSIDERATION

Hans Bilben, by and through counsel, hereby moves for reconsideration of the Hearing Officer Decision and Order, distributed November 15, 2019 pursuant to KPB Code 21.25.350 because the Hearing Officer, in reaching its decision, overlooked, misapplied and failed to consider a code provision that was directly controlling and the Hearing Officer overlooked or misconceived a material question in the case.

A hearing was held on this administrative appeal on October 30, 2019. The central questions posed on appeal were whether the Code interpretation imposed on the Planning Commission was correct and whether there was substantial evidence presented to justify the findings that were made. In resolving both questions presented in favor of the Applicant, the Hearing Officer determined that “the Commission acted within the scope of its authority in approving the Application. Due consideration must be given to the Commission’s expertise and experience in interpreting KPB titles 20 and 21, and the additional facts presented at the

Commission's 2019 public meetings on the Application provide the evidence to support the Commission's findings of fact."¹

1. In Reaching its Decision, the Hearing Officer Overlooked, Misapplied or Failed to Consider KPB Code Chapter 21.20.320(1).

In detailing the scope of appellate review, the KPB Code provides that "The hearing officer may exercise independent judgment on matters that relate to the interpretation of ordinances of other provisions of law; however, due consideration shall be given to the expertise and experience of the planning commission in its interpretations of KPB titles 20 and 21." In determining that the Commission's interpretation of the interplay between 21.29.040 and 21.29.050 is "reasonable," the Hearing Officer deferred to the Planning Commission's 2019 interpretation of those provisions. However, the record evidence in this case indicates that, in the Commission's experience and expertise, it does not interpret the Code to read that "[c]ompliance with the mandatory conditions in KPB 21.29.050, as detailed in the following findings, necessarily means that the application meets the standards contained in KPB 21.29.040."

The Commission first heard this application in 2018. At the conclusion of that hearing, the Commission determined that the application *did not meet* the standards articulated in 21.29.040 – a determination that did not turn on the application's compliance with the conditions set forth in 21.29.050. Six of the Planning Commissioners determined to disapprove this material site permit. Importantly, the entire panel of the nine Commissioners present at that July 16, 2018 meeting adopted a resolution that referred only to the standards contained in 21.29.040(A)(4) and (A)(5) as the unanimous basis to support the disapproval of the permit application. That is, in 2018 the Commission unanimously interpreted the Code to allow for disapproval of a permit

¹ November 15, 2019 Hearing Officer Decision and Order at 4.

application where it did not meet the standards set forth in 21.29.040 without consideration of whether the application complied with the 21.29.050 conditions.

Accordingly, this is not a situation where the Commission has routinely interpreted these particular code provisions in this particular manner. *National Bank of Alaska v. State, Dept. of Revenue*, 642 P.2d 811, 815 (Alaska 1982) (noting that where the agency interpretation being reviewed is neither longstanding nor consistent, it cannot play a strong role in reviewing the issue of statutory construction). Indeed, no evidence in the record was presented or supported any similar instance where the Commission previously interpreted the Code to require approval of an application because it contained 21.29.050 conditions even though it could not otherwise meet the standards in 21.29.040. To the contrary, the history of Commission experience and expertise in interpreting the Code in this record indicates that, before 2019, the Commission did not require 21.29.050 compliance to necessarily mean that the standards contained in 21.29.040 had been met.

The Hearing Officer misconceived the experience and expertise of the Planning Commission in interpreting the interplay between 21.29.040 and 21.29.050 and should have exercised its own independent judgment in construing and interpreting the Code – which expressly mandates that the Commission disapprove permit applications that do not meet the standards set out in the Code. This is especially true where, as here, the issue presented is one of pure statutory construction. *Id.*

2. In Reaching its Decision, the Hearing Officer Overlooked, Misapplied or Failed to Consider KPB Code Chapter 21.29.050(A)(2)(c) and Overlooked a Material Question of the Case.

Although the Appellant maintains that the Commission has the authority to deny a permit that does not meet the 21.29.040 standards, even under the interpretation adopted between 2018

and 2019 that compliance with 21.29.050 necessarily means compliance with 21.29.040, it is clear that the permit must comply with the mandatory conditions set forth in 21.29.050.

21.29.050(A)(2)(c) requires a determination that the “vegetation and fencing [contained in the buffer zone] *shall be of sufficient height and density to provide visual and noise screening of the proposed use* as deemed appropriate by the planning commission or planning director.” Notably absent from the findings of fact adopted by the Commission was a finding of fact that the Commission determined that 21.29.050(A)(2)(c) had been met. In reaching its decision that the findings of fact were sufficient and that they were supported by substantial evidence in the record, the Hearing Officer overlooked this Code provision and mandatory condition and, therefore, overlooked a material question in the case.

The language in 21.29.050(A)(2)(c) is mandatory. The 21.29.050 conditions regulating counter permits and CLUPs are “mandatory.” The Hearing Officer states that “Appellant does not call out any specific finding of fact that is allegedly unsupported by substantial evidence in the record.”² However, Appellant’s position was both that this finding of fact was required as a mandatory permit condition and that there was no substantial evidence in the record to support this finding.

When the 2018 Hearing Officer remanded the original decision back to the Planning Commission, it was with the instruction that it refer to *specific* substantial evidence in the record to support its findings. While the 2019 Hearing Officer notes that there was additional public comment presented in the 2019 hearings, neither the Planning Commission nor the Hearing Officer delineates what *specific evidence* supports a finding that there was sufficient noise and

² Decision at 9.

visual screening presented by the buffer zone proposed by the application that was not presented and did not exist when the same application was heard and addressed in 2018.

Instead, Lynn Whitmore, a surveyor and engineer with over 40 years' experience, developed substantial evidence using the Borough's own GIS technology to demonstrate the *ineffectiveness* of the proposed buffer zone at providing *sufficient* visual and noise screening.³ The GIS mappings of various adjacent and surrounding properties demonstrated that these properties would receive little to no screening from the uses proposed by the application: excavation, processing and transportation.

The Planning Commission was never asked to determine, as it must, whether or not there was substantial evidence to support the finding that the buffer zone presented sufficient visual and noise screening. The Planning Commission was not presented with substantial evidence to support this finding it did not make. In failing to address the omission of the mandatory condition contained in 21.29.050(A)(2)(c), the Hearing Officer overlooked or misconceived this question in the case.

3. Where there are a Lack of Findings, KPB Code 21.20.330 Mandates Remand.

Under 21.20.330(B): "Appeals from planning commission decisions which lack findings of fact and conclusions by the planning commission or contain findings of fact and conclusions which are not supported by substantial evidence *shall be remanded* to the planning commission with an order to make adequate findings of fact and conclusions."

As previously discussed, 21.29.050(A)(2)(c) contains mandatory language and is included as a mandatory condition which must be met before an application can be approved by the Commission. Because 21.29.050(A)(2)(c) was not imposed as a permit condition and because

the Commission made no findings of fact as to how it reached the conclusion that the proposed buffer zone provides sufficient visual and noise screening of the proposed use, this appeal must be remanded to the Commission. On remand, the Hearing Officer should instruct the Commission to make specific findings of fact detailing the specific evidence that allows it to reach the conclusion that the buffer zone sufficiently screens the proposed uses from nearby property owners.

4. Conclusion.

Reconsideration is appropriate where, as here, the Decision overlooks a directly controlling provision of law and overlooks a material question in the case. The Hearing Officer should not defer to a Commission interpretation that was adopted within the past year and which is directly opposed to the interpretation employed in 2018. The Commission is not allowed to approve an application that does not meet the mandatory conditions set forth in 21.29.050 and may not approve an application without detailing findings of fact and permit conditions demonstrating that all 21.29.050 mandatory conditions have been met. The Hearing Officer should reconsider the due consideration given to the Commission’s interpretation of the interplay between 21.29.040 and 21.29.050 and should remand the appeal to the Planning Commission for further findings and conclusions relating to mandatory condition 21.29.050(A)(2)(c).

DATED December 2, 2019.

Respectfully submitted and filed on behalf of Hans Bilben

RE: Conditional Land Use Permit Application
Applicant: Beachcomber, LLC
Parcel ID # 169-010-67
Anchor Point Area

OBJECTION TO DELIBERATION IN ADJUDICATIVE SESSION

Planning Commission Members,

On behalf of Hans Bilben, Jeanne Bilben, Lynn Whitmore, Rick Carlton, Marie Carlton, Linda Patrick, Mike Patrick, Gary Sheridan, Eileen Sheridan, Ann Cline, Richard Cline, Phil Brna, Todd Bareman, Xochitl Lopez-Ayala, Gary Cullip, Jay Sparkman, Rick Oliver, Vickey Hodnick, George Krier, Don Horton and Laurie Horton, please take notice of this objection to the Planning Commission Hearing Agenda for the Planning Commission Hearing scheduled for January 25, 2022 at 7:30 p.m. which indicates that “It is also possible that the Commission will elect to deliberate these matters in an adjudicative session.”

KPB Code 21.25.050 clearly requires that when Conditional Land Use Permits applications are being considered, public hearing is “*required.*” Indeed, such requirement is imposed in the very title of 21.25.050. Nowhere within 21.25.050 is private deliberation authorized or indeed contemplated, and such private deliberation would run contrary to the mandate and intent that all CLUP applications be subject to a public process. *See, e.g., Brookwood Area Homeowners Ass’n, Inc. v. Municipality of Anchorage*, 702 P.2d 1317, 1322 (Alaska 1985) (“Modern public meetings statutes reject the argument that only the moment of ultimate decision must be subject to public scrutiny, and require that preliminary deliberations be open as well....’ ‘deliberation connotes not only collective discussion, but the collective acquisition and exchange of facts preliminary to the ultimate decision....’ ‘An informal conference or caucus permits crystallization of secret decisions to a point just short of ceremonial acceptance. *There is rarely any purpose to a nonpublic pre-meeting conference except to conduct some part of the decisional process behind closed doors.*”

Only by embracing the collective inquiry and discussion stages, as well as the ultimate step of official action, can an open meeting regulation frustrate these evasive devices.”) (internal citations omitted) (emphasis in original).

While the Alaska Open Meetings Act may serve to exempt these types of adjudicatory sessions, the Kenai Peninsula Borough can, and has, adopted more stringent requirements relative to the public nature of these types of decisional meetings. While public comment has not been reopened in this matter, it remains an item of significant public concern. Regardless of the outcome, the public would still benefit from knowing not just the ultimate decision, but the thoughts and comments made by the Commissioners to understand how the decision is made. Not only will this understanding aid all sides in this particular instance, but it will also inform all participants in future hearings as to what the Commissioners find persuasive and meaningful as it relates to CLUP applications. This could reduce both the length of public comment as well as the number of future challenges. Accordingly, please be advised of this objection to any private deliberative discussions being conducted in adjudicatory session as it relates to the reconsideration of this CLUP application.

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2022-XX
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District, State of Alaska.

(DECISION ON REMAND)

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** KPB 21.29 provides that a conditional land use permit is required for material extraction which disturbs more than 2.5 cumulative acres; and
- WHEREAS,** on June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit (CLUP) application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 wherein the Planning Commission voted to deny the CLUP;
- WHEREAS,** following an administrative appeal to a hearing officer, the matter was remanded to the Planning Commission;
- WHEREAS,** on remand from the hearing officer, five additional public hearings were properly noticed and held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and July 24, 2019; and
- WHEREAS,** notice of the public hearings was mailed to 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice was published in the Homer News all as described in Resolution 2018-23 that was eventually voted on at the Planning Commissions June 24, 2019 meeting; and
- WHEREAS,** public comment was taken at all the public hearings but for the June 24, 2019 meeting where only the applicant was provided a final rebuttal opportunity after additional written

were provided to the Planning Commission after close of the public hearing on June 10, 2019; and

WHEREAS, after the Planning Commission voted to approve the CLUP at its June 24, 2019 meeting the matter was appealed to a hearing officer and then to the Kenai Superior Court; and

WHEREAS, on September 2, 2021, Kenai Superior Court Judge Gist remanded the matter back to the Planning Commission; and

WHEREAS, the Kenai Superior Court's remand decision was subsequently appealed to the Superior Court which stayed any action before the Planning Commission on remand; and

WHEREAS, on December 29, 2021, the Alaska Supreme Court denied Beachcomber, LLC's Petition for Review; and

WHEREAS, the Planning Commission recognizes that compliance with the mandatory conditions in KPB 21.29.050, as detailed in the findings, does not necessarily mean that the application meets the standards contained in the KPB 21.29.040; and

WHEREAS, at its regularly scheduled meeting on January 10, 2022, the Planning Commission unanimously voted to deliberate this matter on remand during a special meeting scheduled for January 25, 2022 and, through staff, provided email notice to all parties to the appeal in this matter; and

WHEREAS, the Planning Commission reviewed the remand decision entered by Superior Court Judge Gist on appeal and understands that it has discretion to "approve, modify, or disapprove" a permit application pursuant to KPB 21.25.050 and pursuant to the standards specific to material sand, gravel or material sites under KPB 21.29.040; and

WHEREAS, on January 25, 2022, at its special meeting, the Planning Commission deliberated this matter on remand; and

WHEREAS, this decision on remand rescinds, revokes and replaces Planning Commission Resolution 2018-23;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That PC Resolution 2018-23 is hereby revoked and replaced by this resolution.

SECTION 2. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.

5. The proposed disturbed area is approximately 27.7 acres.
6. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
7. A public hearing of the Planning Commission was first held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
8. Five additional public hearings were held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and June 24, 2019. Notice of the meetings was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
9. This application has been heard twice on remand, once after a hearing officer remand and then again after a superior court remand.
10. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line.
11. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter.
12. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
13. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
14. If granted, the Planning Commission would have imposed every mandatory condition under code and pursuant to KPB 21.29.050. The Applicant also offered two voluntary conditions related to rolling berms and white noise back-up alarms. Nonetheless, as outlined below the Planning Commission finds that even when all the conditions are imposed under KPB 21.29.050, the modification application does not meet the applicable standards under KPB 21.29.040.
15. DOT Letter of concerns (R563-VOL 2) & DNR State Parks (R725 – VOL 2)
16. This modification does not meet material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
 - a. Topography of the property setting, as a natural amphitheater, makes noise minimization and disturbance to other properties unfeasible with proposed existing natural buffer and proposed placement of barriers.
 - b. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will not reduce the sound level for the adjacent properties.
17. This modification does not meet material site standard 21.29.040(A5); "Minimizes visual impacts" as evidenced by:
 - a. Topography of the property setting and surrounding land uses, with many adjacent landowners located at a higher elevation, prevent screening or minimization of visual impacts.
 - b. Lidar imagery of east boundary demonstrates no visual screening for multiple property owners.

SECTION 3. That based on the above findings, the Planning Commission concludes as a matter of law that the application has met all the requirements of KPB 21.25 and KPB 21.29; notwithstanding, even after imposition of the conditions under KPB 21.29.050, and in accordance with the above findings of fact, the Planning Commission concludes as a matter of law that the application does not meet [two] of the standards found in KPB 21.29.040:

SECTION 4. That the material site conditional land use application filed by Beachcomber, LLC is denied.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON

THIS _____ DAY OF _____, 2022.

Blair J. Martin, Chairperson
Planning Commission

Soldotna, AK 99669

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2022-XX
HOMER RECORDING DISTRICT**

A resolution granting a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District, State of Alaska.

(DECISION ON REMAND)

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** KPB 21.29 provides that a conditional land use permit is required for material extraction which disturbs more than 2.5 cumulative acres; and
- WHEREAS,** on June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit (CLUP) application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 wherein the Planning Commission voted to deny the CLUP;
- WHEREAS,** following an administrative appeal to a hearing officer, the matter was remanded to the Planning Commission;
- WHEREAS,** on remand from the hearing officer, five additional public hearings were properly noticed and held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and July 24, 2019; and
- WHEREAS,** notice of the public hearings was mailed to 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice was published in the Homer News all as described in Resolution 2018-23 that was eventually voted on at the Planning Commissions June 24, 2019 meeting; and
- WHEREAS,** public comment was taken at all the public hearings but for the June 24, 2019 meeting where only the applicant was provided a final rebuttal opportunity after additional written

were provided to the Planning Commission after close of the public hearing on June 10, 2019; and

WHEREAS, after the Planning Commission voted to approve the CLUP at its June 24, 2019 meeting the matter was appealed to a hearing officer and then to the Kenai Superior Court; and

WHEREAS, on September 2, 2021, Kenai Superior Court Judge Gist remanded the matter back to the Planning Commission; and

WHEREAS, the Kenai Superior Court's remand decision was subsequently appealed to the Superior Court which stayed any action before the Planning Commission on remand; and

WHEREAS, on December 29, 2021, the Alaska Supreme Court denied Beachcomber, LLC's Petition for Review; and

WHEREAS, the Planning Commission recognizes that compliance with the mandatory conditions in KPB 21.29.050, as detailed in the findings, does not necessarily mean that the application meets the standards contained in the KPB 21.29.040; and

WHEREAS, at its regularly scheduled meeting on January 10, 2022, the Planning Commission unanimously voted to deliberate this matter on remand during a special meeting scheduled for January 25, 2022 and, through staff, provided email notice to all parties to the appeal in this matter; and

WHEREAS, the Planning Commission reviewed the remand decision entered by Superior Court Judge Gist on appeal and understands that it has discretion to "approve, modify, or disapprove" a permit application pursuant to KPB 21.25.050 and pursuant to the standards specific to material sand, gravel or material sites under KPB 21.29.040; and

WHEREAS, on January 25, 2022, at its special meeting, the Planning Commission deliberated this matter on remand;

WHEREAS, this decision on remand rescinds, revokes and replaces Planning Commission Resolution 2018-23; and

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That PC Resolution 2018-23 is hereby revoked and replaced by this resolution.

SECTION 2. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.

5. The proposed disturbed area is approximately 27.7 acres.
6. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
7. A public hearing of the Planning Commission was first held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
8. Five additional public hearings were held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and June 24, 2019. Notice of the meetings was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
9. This application has been heard twice on remand, once after a hearing officer remand and then again after a superior court remand.
10. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line.
11. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter.
12. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
13. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
14. *Parcel boundaries.* All boundaries of the subject parcel shall be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
 - a. The submitted site plan indicates the location of each of the parcel boundary stakes.
 - b. Planning staff has visited the site several times and has observed that the boundary stakes are in place.
15. *Buffer zone.* A buffer zone shall be maintained around the excavation perimeter or parcel boundaries.
 - a. The applicant has proposed to maintain a six-foot high berm along all excavation boundaries except the western most boundary and along the east 400 feet of the northern boundary, where a 50-foot vegetated buffer is proposed.
 - b. There are 16 parcels adjacent to the proposed material site (adjoining or separated only by a roadway).
 - c. Eight of the adjacent parcels are vacant; one of the vacant parcels is a Prior Existing Use material site. Six of the adjacent properties have a dwelling. One of the adjacent properties has a recreational vehicle that is used as a seasonal dwelling. One of the adjacent properties contains commercial recreational cabins.
 - d. The elevation of the commercial recreational cabins is at a lower elevation than the proposed excavation area. Three of the adjacent residences are at about the same elevation as the proposed excavation area. Four of the adjacent residences are at a higher elevation than the material site parcel.
 - e. Farther away, there are additional residences in the vicinity that are at higher elevations than the adjacent properties. These parcels are less impacted by the material site than the parcels adjacent to the material site as sound dissipates over distance.
 - f. Per the site plan there is a greater than 50-foot native vegetated buffer along the western most boundary of the material site.
 - g. Along the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm, staff recommends a 50-foot vegetated buffer along the property boundary with a 12-foot high berm between the extraction area and the vegetated buffer.
 - h. Over 40 percent of the southern and eastern property boundaries, where the applicant has proposed a six-foot high berm as the buffer, contains vegetation that

can provide visual and noise screening of the material site for some of the adjacent uses.

- i. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will reduce the sound level for the adjacent properties.
 - j. 12-foot high berm between the excavation perimeter and the vegetated buffer along the southern and eastern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - k. The total buffer width, as recommended by staff, along the southern and eastern property boundaries is 98-feet.
 - l. As the excavation extends deeper, the visual and noise impacts will decrease because the height of the berm relative to the excavation will increase.
 - m. A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain will provide additional visual and noise screening of the material site. The berm will also provide additional surface water protection.
 - n. A 12-foot high berm along the remaining northern property boundaries will increase visual and noise screening of the proposed use beyond that of a six-foot berm along those boundaries.
 - o. Borough staff will regularly monitor the material site to ensure that the required buffer will not cause surface water diversion that negatively affects adjacent properties or water bodies.
 - p. There has been testimony that the material site will mar the view of Mount Iliamna and Mount Redoubt. Condition 21.29.050(A)(2) is written to provide screening from the material site, not protect view sheds beyond the material site.
 - q. Each piece of real estate is uniquely situated and a material site cannot be conditioned so that all adjacent parcels are equally screened by the buffers. The different elevations of the parcels, varying vegetation on the surrounding parcels and the proposed material site, and distance of the material site from the various surrounding parcels necessarily means the surrounding parcels will not be equally impacted nor can they be equally screened from the material site.
 - r. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses.
16. *Processing.* Any equipment which conditions or processes material must be operated at least 300 feet from the parcel boundaries.
- a. The site plan indicates that the proposed processing area is 300 feet from the south and east property lines, and greater than 300 feet from the west property line. A processing distance waiver is being requested from the north property line.
 - b. The applicant proposed the following justifications for waiving the processing setback: "Although it is a large parcel, the configuration has limited potential process area. The waiver is requested to the north as 169-022-04 is owned by the applicant's daughter & 169-022-08 is not developed."
 - c. The 300-foot processing distance from the property lines is a mandatory condition imposed to decrease the visual and noise impact to adjacent properties.
 - d. The portion of the proposed processing area greater than 300 feet from the property line is very small, ranging from just a few feet wide to about 30 feet wide at the eastern edge of the proposed location.
 - e. There is a larger area in proposed phase III of the project that meets the requirement for a 300-foot processing distance setback, as such, there is adequate room to accommodate processing on the parcel while complying with 300-foot processing setback.
17. *Water source separation.* All permits shall be issued with a condition that prohibits any material extraction within 100 horizontal feet of any water source existing prior to original permit issuance. All CLUPs shall be issued with a condition that requires that a two-foot vertical separation from

the seasonal high water table be maintained. There shall be no dewatering by either pumping, ditching or some other form of draining.

- a. The submitted site plan and application indicates that there are not any wells within 100 feet of the proposed excavation. The 100-foot radius line on the site plan for the nearest well indicates that the proposed extraction is greater than 100 feet from this well.
 - b. Borough staff will regularly monitor the material site to ensure compliance with the two-foot vertical separation requirement.
 - c. Borough staff will regularly monitor the material site to ensure that dewatering does not take place in the material site.
18. *Excavation in the water table.* Excavation in the water table greater than 300 horizontal feet of a water source may be permitted with the approval of the planning commission.
- a. This permit approval does not allow excavation in the water table.
19. *Waterbodies.* An undisturbed buffer shall be left and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other waterbody, including riparian wetlands and mapped floodplains. In order to prevent discharge, diversion, or capture of surface water, an additional setback from lakes, rivers, anadromous streams, and riparian wetlands may be required.
- a. The Cook Inlet lies about 600 feet west of the proposed material extraction.
 - b. The Anchor River, which is an anadromous stream, is located about 1,000 feet north of the proposed material extraction.
 - c. The "Wetland Mapping and Classification of the Kenai Lowland, Alaska" maps, created by the Kenai Watershed Forum, show a riparian wetland in the northeast corner of the property.
 - d. The FEMA maps adopted by KPB 21.06 indicates a mapped floodplain in the northeast corner of the property. This mapped floodplain approximately matches the mapped riparian wetland.
 - e. The site plan indicates that the proposed extraction is 104 feet from the mapped riparian wetland. There is approximately two feet difference between the mapped riparian wetland and the floodplain boundary. This places the proposed excavation at about 102 feet from the floodplain.
 - f. A portion of the required 100-foot buffer adjacent to the riparian wetlands and the floodplain is an existing stripped area.
 - g. Prior to permit issuance the applicant is required to restore the 100-foot buffer adjacent to the riparian wetlands and the floodplain to an undisturbed state.
 - h. As stated on the site plan the buffer will provide protection via phytoremediation of any site run-off prior to entering the surface water. The site plan also indicates that the Alaska DEC user's manual, "Best Management practices for Gravel/Rock Aggregate Extraction Projects, Protecting Surface Water and Groundwater Quality in Alaska" will be utilized as a guideline to reduce potential impacts to water quality.
 - i. Borough staff will work with the applicant and regularly monitor the material site to ensure that excavation does not take place within 100 feet of the mapped floodplain, riparian wetland, or other water body and that the restored buffer remains undisturbed.
20. *Fuel storage.* Fuel storage for containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
- a. Borough staff will regularly monitor the material site to ensure compliance with mandatory condition KPB 21.20.050(A)(7).
21. *Roads.* Operations shall be conducted in a manner so as not to damage borough roads.
- a. The submitted site plan indicates that the material site haul route will be Denver Road, which is maintained by the Borough, and then to Anchor River Road, which is maintained by the state.
 - b. There was a significant number of public comments concerning the condition of Anchor

- Point Road. Anchor Point Road is a paved State of Alaska maintained road for which this condition is not applicable.
- c. If operations associated with the proposed material site damages borough roads, the remedies set forth in KPB 14.40 will be used to ensure compliance with this requirement imposing the condition that operations not damage borough roads.
22. *Subdivision.* Any further subdivision or return to acreage of a parcel subject to a conditional land use or counter permit requires the permittee to amend their permit.
 - a. Borough planning staff reviews all subdivision plats submitted to the Borough to ensure compliance with this requirement.
 23. *Dust control.* Dust suppression is required on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - a. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 24. *Hours of operation.* Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
 - a. If Borough staff becomes aware of a violation of this requirement action will be taken to ensure compliance.
 - b. This condition further reduces off-site noise impacts of the material site.
 25. *Reclamation.* Reclamation shall be consistent with the reclamation plan approved by the planning commission. The applicant shall post a bond to cover the anticipated reclamation costs in an amount to be determined by the planning director. This bonding requirement shall not apply to sand, gravel or material sites for which an exemption from state bond requirements for small operations is applicable pursuant to AS 27.19.050.
 - a. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - b. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C)(3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C)(3) is necessary to meet this material site condition.
 - c. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission
 - d. The application states that less than 50,000 cubic yards will be mined annually therefore the material site qualifies for a small quantity exception from bonding.
 26. *Other permits.* Permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits.
 - a. Any violation federal, state or local laws, applicable to the material site operation, reported to or observed by Borough staff will be forwarded to the appropriate agency for enforcement.
 27. *Voluntary permit conditions.* Conditions may be included in the permit upon agreement of the permittee and approval of the planning commission.
 - a. The applicant has volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 - b. The volunteered condition concerning back-up alarms is in the best interest of the Borough and the surrounding property owners because the multi-frequency alarms better minimizes the noise impacts of the material site.
 - c. The applicant has volunteered a condition requiring the berm be placed near the active excavation area, dampening the noise and reducing the visual impacts at the source. The berm will be moved as excavation progresses
 - d. The volunteered condition to place the berm near the active excavation area is in the best interest of the Borough and the surrounding property owners because this placement of the berm will better minimize the visual impacts of the material site.
 - e. The applicant has volunteered a condition a condition that prohibits material site operations on holiday weekends during the summer months.

- f. The volunteered condition, to not operate on holidays, is consistent with the standard to reduce noise disturbance to adjacent properties.
 - g. The volunteered condition, to not operate on holidays, is in the best interest of the Borough and the surrounding property owners because the Anchor River State Recreational Area has a significantly greater number of visitors on holidays and several of the neighbors and Alaska State Parks has expressed concern about the noise impacts to the recreational area.
28. *Signage.* For permitted parcels on which the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit.
 - a. If Borough staff determines that operations have not commenced after one year, action will be taken to ensure compliance
29. The proposed extraction **meets** material site standard 21.29.040(A1), "Protects against the lowering of water sources serving other properties", as evidenced by:
 - a. Permit condition number 6 requires that the permittee not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 - b. The submitted site plan shows several wells located within 300 feet of the parcel boundaries but none within 100 feet of the proposed excavation area.
 - c. Permit condition number 7 requires that the permittee maintain a 2-foot vertical separation from the seasonal high-water table.
 - d. The application indicates that the depth to groundwater is greater than 20 feet and that the depth of the proposed excavation is 18 feet.
 - e. Permit condition number 8 requires that the permittee not dewater either by pumping, ditching or any other form of draining.
 - f. [Reserved for additional findings of fact, if needed.]
 - g. [Reserved for additional findings of fact, if needed.]
30. The proposed extraction **meets** material site standard 21.29.040(A2); "Protects against physical damage to other properties".
 - a. There is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
 - b. [Reserved for additional findings of fact, if needed.]
 - c. [Reserved for additional findings of fact, if needed.]
31. The proposed extraction **meets** material site standard 21.29.040(A3); "Minimizes off-site movement of dust", as evidenced by:
 - a. Permit condition number 13 requires that the permittee provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
 - b. [Reserved for additional findings of fact, if needed.]
 - c. [Reserved for additional findings of fact, if needed.]
32. The proposed extraction **meets** material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
 - a. Permit condition number 2 requires that the permittee maintain the following buffers that will minimize, or reduce, the noise disturbance to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.

- c. Permit condition number 5 requires that the processing area be located greater than 300 feet from the property boundaries.
 - d. Permit condition number 14 requires that the permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
 - e. [Reserved for additional findings of fact, if needed.]
 - f. [Reserved for additional findings of fact, if needed.]
33. The proposed extraction **meets** material site standard 21.29.040(A5); “Minimizes visual impacts” as evidenced by permit condition number 2 that requires that the permittee maintain the following buffers that will minimize, or reduce, the visual impacts to other properties:
- a. Permit condition number 2 requires that the permittee maintain the following buffers that will minimize the visual impact to other properties:
 - 50-foot vegetated buffer adjacent to the section line easement on the east property line with a 6-foot high berm inside the vegetated buffer.
 - 50-foot vegetated buffer adjacent to the Echo Drive right-of-way and the north and west property line of the adjacent Lot 1, Block 1, Silver King Estates with a 6-foot high berm inside the vegetated buffer.
 - 12-foot high berm along the south property line where a 6-foot high berm is shown on the site plan adjacent to Lots 2 - 6, Block 1, Silver King Estates. The placement of the berm shall take place prior to removing the existing vegetation in the western portion of the material site.
 - Greater than 50-foot vegetated buffer west of the material site as shown on the site plan.
 - 50-foot vegetated buffer in the east 400 feet adjacent to the northern boundary of the material site as shown on the site plan.
 - 6-foot high berm along the northern property as shown on the site plan.
34. [Reserved for additional findings of fact, if needed.]
35. [Reserved for additional findings of fact, if needed.]
36. The proposed extraction **meets** material site standard 21.29.040(A6); “Provides for alternate post-mining land uses” as evidenced by:
- a. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - b. The applicant has submitted a reclamation plan that omits KPB 21.29.060(C3), which requires the placement of a minimum of four inches of topsoil with a minimum organic content of 5% and precludes the use of sticks and branches over 3 inches in diameter from being used in the reclamation topsoil. These measures are generally applicable to this type of excavation project. The inclusion of the requirements contained in KPB 21.29.060(C3) is necessary to meet this material site standard.
 - c. Permit condition number 15 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.
 - d. The bonding requirement of KPB 21.29.050(12)(b) will not apply to this material site if extraction in any one year does not exceed 50,000 cubic yards of material as stated in the application.
 - e. [Reserved for additional findings of fact, if needed.]
 - f. [Reserved for additional findings of fact, if needed.]

Section 3. That based on the above findings, the Planning Commission concludes as a matter of law that the application has met all the requirements of KPB 21.25 and KPB 21.29, and through imposition of the conditions under KPB 21.29.050 and imposed on the permit by Section 4 below, the Planning Commission concludes as a matter of law that the application meets the six standards found in KPB 21.29.040:

Conclusions of Law

- 1. Material site standard 21.29.040(A1) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings for fact, to be sufficient to protect against the lowering of water sources serving other properties.]

2. Material site standard 21.29.040(A)(2) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings of facts, to be sufficient to protect against physical damage to other properties.]

3. Material site standard 21.29.040(A)(3) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings of fact, to be sufficient to minimize off-site movement of dust.]

4. Material site standard 21.29.040(A)(4) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings of fact, to be sufficient to minimize noise disturbance; primarily through the buffer zone/noise screening and processing conditions as well as the condition that any rock crushing equipment will not be operated between 10:00 p.m. and 6:00 a.m.]

5. Material site standard 21.29.040(A)(5) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings of fact, to be sufficient to minimize or reduce visual impacts, through the buffer zone/visual screening and processing conditions.]

6. Material site standard 21.29.040(A)(6) is met because:

[The Planning Commission deems the conditions set forth below, and pursuant to the above findings of fact, to be sufficient to provide for alternate post-mining land uses and as provided in the reclamation plan.]

SECTION 4. That the land use and operations are described and shall be conducted as follows:

1. A portion KPB Tax Parcel 169-010-67. The proposed disturbed area within the parcel is approximately 27.7 acres.
2. Legal Description: **Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116**, Homer Recording District, Third Judicial District, State of Alaska.
3. The applicant, Beachcomber LLC, proposes to:
 - A. Extract gravel and sand from the subject parcel;
 - B. Reclaim the site to a stable condition upon depletion of material.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries:
 - A 50-foot vegetated buffer adjacent to the south boundary of Parcel 169-022-03 (Brantley) with a six-foot high berm placed near the active extraction area.
 - A six-foot high berm between the extraction area and the 100-foot setback from the riparian wetland and floodplain
 - A 12-foot high berm along the rest of the northern boundary.

- A 50-foot vegetated buffer adjacent to the southern parcel boundaries with a 12-foot high berm placed near the active extraction area.
- A 50-foot vegetated buffer adjacent to the eastern most parcel boundary; and a 12-foot high berm placed near the active extraction area except along the northern 200 feet of the proposed excavation.
- A greater than 50-foot vegetated buffer along the western most parcel boundary.

These buffers shall not overlap an easement.

3. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
5. The permittee shall operate all equipment which conditions or processes material at least 300 feet from the parcel boundaries.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 p.m. and 6:00 a.m.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel, and the requirements contained in KPB 21.29.060(C)(3) as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm, & Explosives regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the Planning Commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with

- KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.
 20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.
 21. The permittee shall operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
 22. The permittee shall not operate the material site or haul material from the site on Memorial Day weekend (Saturday through Monday), Labor Day weekend (Saturday through Monday), and the 4th of July holiday to also include:
 - Saturday and Sunday if July 4th is on a Saturday, Sunday, Monday, or Friday
 - Saturday, Sunday, and Monday if July 4th is on a Tuesday
 - Saturday, Sunday, and Friday if July 4th is on a Thursday

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2022-07
HOMER RECORDING DISTRICT**

A resolution denying a conditional land use permit to operate a sand, gravel, or material site for a parcel described as Tract B, McGee Tracts - Deed of Record Boundary Survey (Plat 80-104) - Deed recorded in Book 4, Page 116, Homer Recording District, State of Alaska.

(DECISION ON REMAND)

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.25.040 provides that a permit is required for a sand, gravel or material site; and
- WHEREAS,** KPB 21.29 provides that a conditional land use permit is required for material extraction which disturbs more than 2.5 cumulative acres; and
- WHEREAS,** on June 4, 2018, the applicant, Beachcomber LLC, submitted a conditional land use permit (CLUP) application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district; and
- WHEREAS,** public notice of the application was mailed on June 22, 2018 to the 200 landowners or leaseholders of the parcels within one-half mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** public notice of the application was published in the July 5, 2018 & July 12, 2018 issues of the Homer News; and
- WHEREAS,** a public hearing of the Planning Commission was held on July 16, 2018 wherein the Planning Commission voted to deny the CLUP;
- WHEREAS,** following an administrative appeal to a hearing officer, the matter was remanded to the Planning Commission;
- WHEREAS,** on remand from the hearing officer, five additional public hearings were properly noticed and held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and July 24, 2019; and
- WHEREAS,** notice of the public hearings was mailed to 203 landowners or leaseholders of the parcels within one-half mile of the subject parcel. Public notice was sent to the postmaster in Anchor Point requesting that it be posted at their location. Public notice was published in the Homer News all as described in Resolution 2018-23 that was eventually voted on at the Planning Commissions June 24, 2019 meeting; and
- WHEREAS,** public comment was taken at all the public hearings but for the June 24, 2019 meeting where only the applicant was provided a final rebuttal opportunity after additional written

were provided to the Planning Commission after close of the public hearing on June 10, 2019; and

WHEREAS, after the Planning Commission voted to approve the CLUP at its June 24, 2019 meeting the matter was appealed to a hearing officer and then to the Kenai Superior Court; and

WHEREAS, on September 2, 2021, Kenai Superior Court Judge Gist remanded the matter back to the Planning Commission; and

WHEREAS, the Kenai Superior Court's remand decision was subsequently appealed to the Superior Court which stayed any action before the Planning Commission on remand; and

WHEREAS, on December 29, 2021, the Alaska Supreme Court denied Beachcomber, LLC's Petition for Review; and

WHEREAS, the Planning Commission recognizes that compliance with the mandatory conditions in KPB 21.29.050, as detailed in the findings, does not necessarily mean that the application meets the standards contained in the KPB 21.29.040; and

WHEREAS, at its regularly scheduled meeting on January 10, 2022, the Planning Commission unanimously voted to deliberate this matter on remand during a special meeting scheduled for January 25, 2022 and, through staff, provided email notice to all parties to the appeal in this matter; and

WHEREAS, the Planning Commission reviewed the remand decision entered by Superior Court Judge Gist on appeal and understands that it has discretion to "approve, modify, or disapprove" a permit application pursuant to KPB 21.25.050 and pursuant to the standards specific to material sand, gravel or material sites under KPB 21.29.040; and

WHEREAS, on January 25, 2022, at its special meeting, the Planning Commission deliberated this matter on remand; and

WHEREAS, this decision on remand rescinds, revokes and replaces Planning Commission Resolution 2018-23;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. That PC Resolution 2018-23 is hereby revoked and replaced by this resolution.

SECTION 2. That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

Findings of Fact

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On June 4, 2018 the applicant, Beachcomber LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 169-010-67, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed disturbed area is approximately 27.7 acres.

6. The submitted application with its associated documents was reviewed by staff for compliance with the application requirements of KPB 21.29.030. Staff determined that the application was complete and scheduled the application for a public hearing.
7. A public hearing of the Planning Commission was first held on July 16, 2018 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
8. Five additional public hearings were held on March 25, 2019, April 8, 2019, April 22, 2019, June 10, 2019, and June 24, 2019. Notice of the meetings was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
9. This application has been heard twice on remand, once after a hearing officer remand and then again after a superior court remand.
10. The site plan indicates that the processing area is 300 feet from the south and east property lines and is greater than 300 feet from the west property line. A waiver was requested from the north property line.
11. The site plan shows the proposed processing area being 200 feet south of Parcel 169-022-08, which is undeveloped. Parcel 169-022-04 is developed and located within 300 feet of the proposed processing area; this parcel is owned by the applicant's daughter.
12. At the June 10, 2019 hearing, the applicant volunteered to utilize a moving, or rolling, berm rather than a stationary berm. The berms will be placed near the active excavation area to be moved as the extraction area and reclaimed areas expand.
13. At the June 10, 2019 hearing, the applicant volunteered to operate his equipment onsite with multi-frequency (white noise) back-up alarms rather than traditional (beep beep) back-up alarms.
14. If granted, the Planning Commission would have imposed every mandatory condition under code and pursuant to KPB 21.29.050. The Applicant also offered two voluntary conditions related to rolling berms and white noise back-up alarms. Nonetheless, as outlined below the Planning Commission finds that even when all the conditions are imposed under KPB 21.29.050, the modification application does not meet the applicable standards under KPB 21.29.040.
15. In a letter dated March 21, 2019, the Alaska DOT&PF expressed concerns on the suitability of the landing and staging at the intersection of Danver Street and the impacts to state owned Anchor River Road, and Alaska DOT&PF objects to the application for permit if the KPB does not commit to pavement repair in Anchor River Road in the event of damage.
16. In a letter dated May 1, 2019, the Alaska DPOR suggested the Planning Commission consider impacts from noise, dust and safety to the nearby Anchor River State Recreational Area.
17. This modification does not meet material site standard 21.29.040(A4); "Minimizes noise disturbance to other properties" as evidenced by:
 - a. Topography of the site, as a natural amphitheater with surrounding bluffs, makes noise minimization and disturbance to upslope neighboring properties unfeasible with proposed existing natural buffers and proposed placement of barriers.
 - b. For the remaining southern and eastern property boundaries, where the vegetation was previously removed, a 50-foot buffer will not reduce the sound level for the adjacent properties.
18. This modification does not meet material site standard 21.29.040(A5); "Minimizes visual impacts" as evidenced by:
 - a. Topography of the site, existing natural vegetation and surrounding land uses, prevents screening or minimization of visual impacts to upslope neighboring properties.
 - b. Elevation data from LiDAR of east boundary demonstrates no feasible visual screening methods for multiple property owners.

SECTION 3. That based on the above findings, the Planning Commission concludes as a matter of law that the application has met all the requirements of KPB 21.25 and KPB 21.29; notwithstanding, even after imposition of the conditions under KPB 21.29.050, and in accordance with the above findings of fact, the Planning Commission concludes as a matter of law that the application does not meet [two] of the standards found in KPB 21.29.040:

SECTION 4. That the material site conditional land use application filed by Beachcomber, LLC is denied.

E. NEW BUSINESS

- 1. Planning Commission Resolution 2022-13: A resolution recommending adoption of the updated 2022 Kenai Peninsula Borough Community Wildfire Protection Plan**

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2022-13**

**A RESOLUTION RECOMMENDING ADOPTION OF THE UPDATED 2022 KENAI
PENINSULA BOROUGH COMMUNITY WILDFIRE PROTECTION PLAN**

WHEREAS, the Kenai Peninsula Borough is vulnerable to damages from wildfire events which pose a threat to wildlife habitat, public health and safety and could result in property loss or economic hardship; and

WHEREAS, the KPB Community Wildfire Protection Plan (“Plan”) encompasses all lands and serves two audiences: 1) it provides recommended projects designed to greatly reduce wildfire risk to residents, ensuring that communities live safely in this fire prone environment; and 2) it provides guidance to fire and emergency managers, as well as agencies who manage large land holdings; and

WHEREAS, the 2022 Plan is aligned with the National Cohesive Wildland Fire Management Strategy and the 2018 All Lands All Hands Action Plan; and

WHEREAS, this project was funded in part by the Borough, Alaska Division of Forestry and Department of Natural Resources pursuant to USDA Forest Service Award No. 2018-DG-110106-810; and

WHEREAS, the Anchor Point Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended _____; and

WHEREAS, the Cooper Land Advisory Planning Commission at its regular scheduled meeting of March 16, 2022 recommended _____; and

WHEREAS, the Funny River Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended _____; and

WHEREAS, the Hope Advisory Planning Commission at its regular scheduled meeting of March 16, 2022 recommended _____; and

WHEREAS, the Kachemak Bay Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended _____; and

WHEREAS, the Kalifornsky Advisory Planning Commission at its regular scheduled meeting of March 16, 2022 recommended _____; and

WHEREAS, the Moose Pass Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended _____; and

WHEREAS, it is in the best interest of the Planning Commission to pass this resolution.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. The Planning Commission recommends adoption of the document entitled 2022 Kenai Peninsula Borough Community Wildfire Protection Plan.

SECTION 2. That this resolution takes effect immediately upon its enactment.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH THIS ___ DAY OF _____ 2022.

RE: Motion Recommending Adoption of the Updated 2022 Kenai Peninsula Borough Community Wildfire Protection Plan

The 2022 Community Wildfire Protection Plan (CWPP) update combines the former 17 plans developed in 2006 through 2009 and encompasses all lands, including unincorporated areas, municipalities and private land holdings as wildfire knows no boundaries across the landscape.

The CWPP project was driven a dedicated core team made of local, state, federal agencies as well as non-government agencies and residents. The team was tasked with decision making, data sharing, experience and communication with the communities. The core team conducted five meetings in addition to regular emails or conference calls. The project was broadly promoted throughout the borough, including public venues, comprehensive meetings with individual fire departments, Tribal entities, and critical infrastructure utilities and transportation agencies. The core team participated in a six-week review period to review the working draft. The Planning Commission was asked to participate in this review at the January 24, 2022 commission meeting.

Your consideration is greatly appreciated. The advisory planning commissions have been asked to review and to provide comments. This memo respectfully asks the advisory planning commissions to provide a motion supporting the 2022 Kenai Peninsula Borough Community Wildfire Protection Plan. The commissions' recommendations will be reflected in the March 21, 2022 Planning Commission resolution. An ordinance to adopt the plan by the Assembly is scheduled for public hearing April 5, 2022.

EXECUTIVE SUMMARY

WHAT IS THE PURPOSE OF THE KENAI PENINSULA BOROUGH COMMUNITY WILDFIRE PROTECTION PLAN?

The purpose of the 2022 Kenai Peninsula Borough (KPB or Borough) Community Wildfire Protection Plan (CWPP) update is to

- provide a peninsula-wide scale of wildfire risk and protection needs,
- bring together all responsible wildfire management and suppression entities in the planning area to address identified needs, and
- provide a framework for future planning and implementation of necessary mitigation measures.

This CWPP aims to assist in protecting human life and reducing property loss due to wildfire throughout the KPB. This 2022 updated plan was compiled from reports, documents, data, and the original 17 community-level CWPPs produced between 2006 and 2009, as KPB's first peninsula-wide CWPP. All versions of the CWPP, including the 17 community-level CWPPs produced between 2006 and 2009, have been developed in response to the federal Healthy Forests Restoration Act of 2003 (HFRA).

The CWPP meets the requirements of the HFRA by addressing the following:

- Having been developed collaboratively by multiple agencies at the state and local levels in consultation with federal agencies and other interested parties
- Prioritizing and identifying fuel reduction treatments and recommending the types and methods of treatments to protect at-risk communities and pertinent infrastructure
- Suggesting multi-party mitigation, monitoring, and outreach
- Recommending measures and action items that residents and communities can take to reduce the ignitability of structures
- Soliciting input from the public on the draft KPB CWPP

WHAT ARE THE KEY ISSUES ADDRESSED?

Issues addressed in this CWPP include the following:

- Spruce bark beetle (SBB) outbreaks and associated tree mortality
- Increasing capacity to remove dead and downed trees on public and private land
- Fuel treatment recommendations for land management agencies and homeowners to mitigate hazard and risk
- Prioritizing hazardous fuels reduction in the wildland urban interface (WUI)
- Raising awareness about the natural role that fire plays in ecosystem and maintaining resilient landscapes

- Public education and outreach to homeowners to enable individuals to reduce the risk of fire to their properties, particularly with an emphasis on the importance of personal responsibility in rural areas as additional time is required for fire response to remote communities
- Constant and consistent messaging for residents and visitors
- Increasing public access to information through online materials, including the story map created for this project
- Investing and supporting fire response at all levels, including resources for local fire departments to increase capacity to serve rural communities
- Increasing public understanding of the fire response process
- Continuing to address wildfire issues at the landscape level, across multiple jurisdictions
- Managing fire to protect values and accomplish resource management goals, including protection and enhancement of wildfire habitat, water supply and quality, and mitigation against forest insect and disease outbreaks
- Recent climate patterns and associated changes to the wildland fire environment

HOW IS THE PLAN ORGANIZED?

The CWPP provides a risk assessment, action items, project recommendations, and background information about the KPB's wildland fire environment as well as land management plans and agencies. Most of the background information is housed in several appendices.

Chapter 1 provides a general overview of CWPPs, the Core Team, project area, land ownership, and public involvement.

Chapter 2 presents an overview of the WUI and fire environment, as well as specific information about vegetation, fire history, fire management, and response.

Chapter 3 describes the risk assessment, results of the risk assessment, and community values at risk.

Chapter 4 provides mitigation strategies in accordance with the National Cohesive Wildfire Strategy as well as post-fire protocols and rehabilitation strategies.

Chapter 5 presents monitoring strategies to assist in tracking project progress and in evaluating work accomplished.

Appendix A contains background information on the KPB, including fire policy, past planning efforts, challenges to forest health, public education programs, and federal, state, and tribal land management agencies.

Appendix B presents the Chugach All-Lands Wildfire Risk Assessment.

Appendix C lists the Core Team members and contacts.

Appendix D provides the community risk assessments for WUI communities and contains the community risk descriptions and hazard ratings.

Appendix E presents a sample form of the National Fire Protection Association Wildfire Fire Risk and Hazard Severity Form 1144.

Appendix F details funding opportunities.

Appendix G contains additional resources, including a guide to manage spruce beetles and a homeowners wildfire mitigation guide.

Appendix H presents information on public outreach and engagement with regard to this CWPP.

Appendix I describes strategic infrastructure recommendations.

WHAT IS THE GOAL OF A CWPP?

The goal of a CWPP is to enable local communities to improve their wildfire-mitigation capacity, while working with government agencies to identify high fire risk areas and prioritize areas for mitigation, fire suppression, and emergency preparedness. Another goal of a CWPP is to enhance public awareness by helping residents better understand the natural- and human-caused risks of wildland fires that threaten lives, safety, and the local economy. The minimum requirements for a CWPP, as stated in the HFRA, are the following (Society of American Foresters [SAF] 2004):

- **Collaboration:** Local and state government representatives, in consultation with federal agencies or other interested groups, must collaboratively develop a CWPP.
- **Prioritized Fuel Reduction:** A CWPP must identify and prioritize areas for hazardous fuels reduction and treatments and recommend the types and methods of treatment that will protect one or more communities at risk and their essential infrastructures.
- **Treatments of Structural Ignitability:** A CWPP must recommend measures that homeowners and communities can take to reduce the ignitability of structures throughout the area addressed by the plan.

HOW WAS THE KENAI PENINSULA BOROUGH CWPP UPDATE DEVELOPED?

The CWPP update is built on a body of work completed by the All Lands/All Hands (ALAH) interagency group beginning in 2004 and continuing through today. Based on guidance provided by the ALAH group in the 2018 ALAH Action Plan update, the KPB and the Division of Forestry led the initiative to update the original 17 CWPPs located throughout the KPB. The KPB successfully applied for and received funding from the U.S. Forest Service to support this planning effort. Rather than updating 17 unique plans, the KPB engaged in a substantially different approach to develop one landscape-level plan for the entire KPB.

In 2019, the Chugach National Forest contracted the development of a Chugach All Lands Quantitative Wildfire Risk Assessment (QWRA, known as ARRA) that includes the Chugach National Forest and surrounding federal and non-federal land totaling approximately 30 million acres in south-central Alaska (Pyrologix 2021). The ARRA provides a model of potential losses associated with fire, based on fire behavior throughout the KPB and the location and density of values at risk. To complement this risk assessment, on-the-ground community risk assessments were completed to identify hazards and risks locally and provide a summary for each WUI community in the KPB. Additionally, any recommendations made in the original 17 CWPPs that are still relevant have been incorporated in the 2022 CWPP.

WHY CREATE A STORY MAP FOR THE PROJECT?

The Borough opted to develop a story map (online web content) to disseminate information to the public and provide an opportunity for the public to provide input into the plan content. The story map presents the CWPP in a web layout with accompanying web maps and includes a project tracker. In addition to facilitating information sharing, the story map also provides the Borough with a platform that can be readily revised to keep the CWPP document current. The CWPP is shared on the KPB's webpage at kpb.us/cwpp.

WHO PARTICIPATED IN DEVELOPING THE PLAN?

A group of multijurisdictional agencies (federal, state, local, and tribal), organizations, and residents, joined together as a Core Team to develop this CWPP. Land managers across the KPB convened about 15 years ago to treat fire management as a landscape effort and created the ALAH interagency group. This group, along with some additional community and organization representatives, served as the Core Team for this CWPP update and drove the decision-making process. Several Core Team members have many years of experience working together in fire management for the Borough and have contributed their expertise to this CWPP.

WHERE IS THE PROJECT AREA?

The project area includes the entire KPB as delineated by its geographic and political boundaries. The project boundary encompasses all communities that were included in the original 17 CWPPs.

WHAT WAS THE PUBLIC INVOLVEMENT?

The Core Team engaged in public outreach using a multimedia approach, using the story map created for the project, social media posts, community surveys, radio interviews, and information distributed through mass emails. The Core Team hosted five public meetings from July 20 through July 24, 2021, throughout the Borough. By incorporating public and Core Team input into the recommendations, treatments are tailored specifically for the Borough.

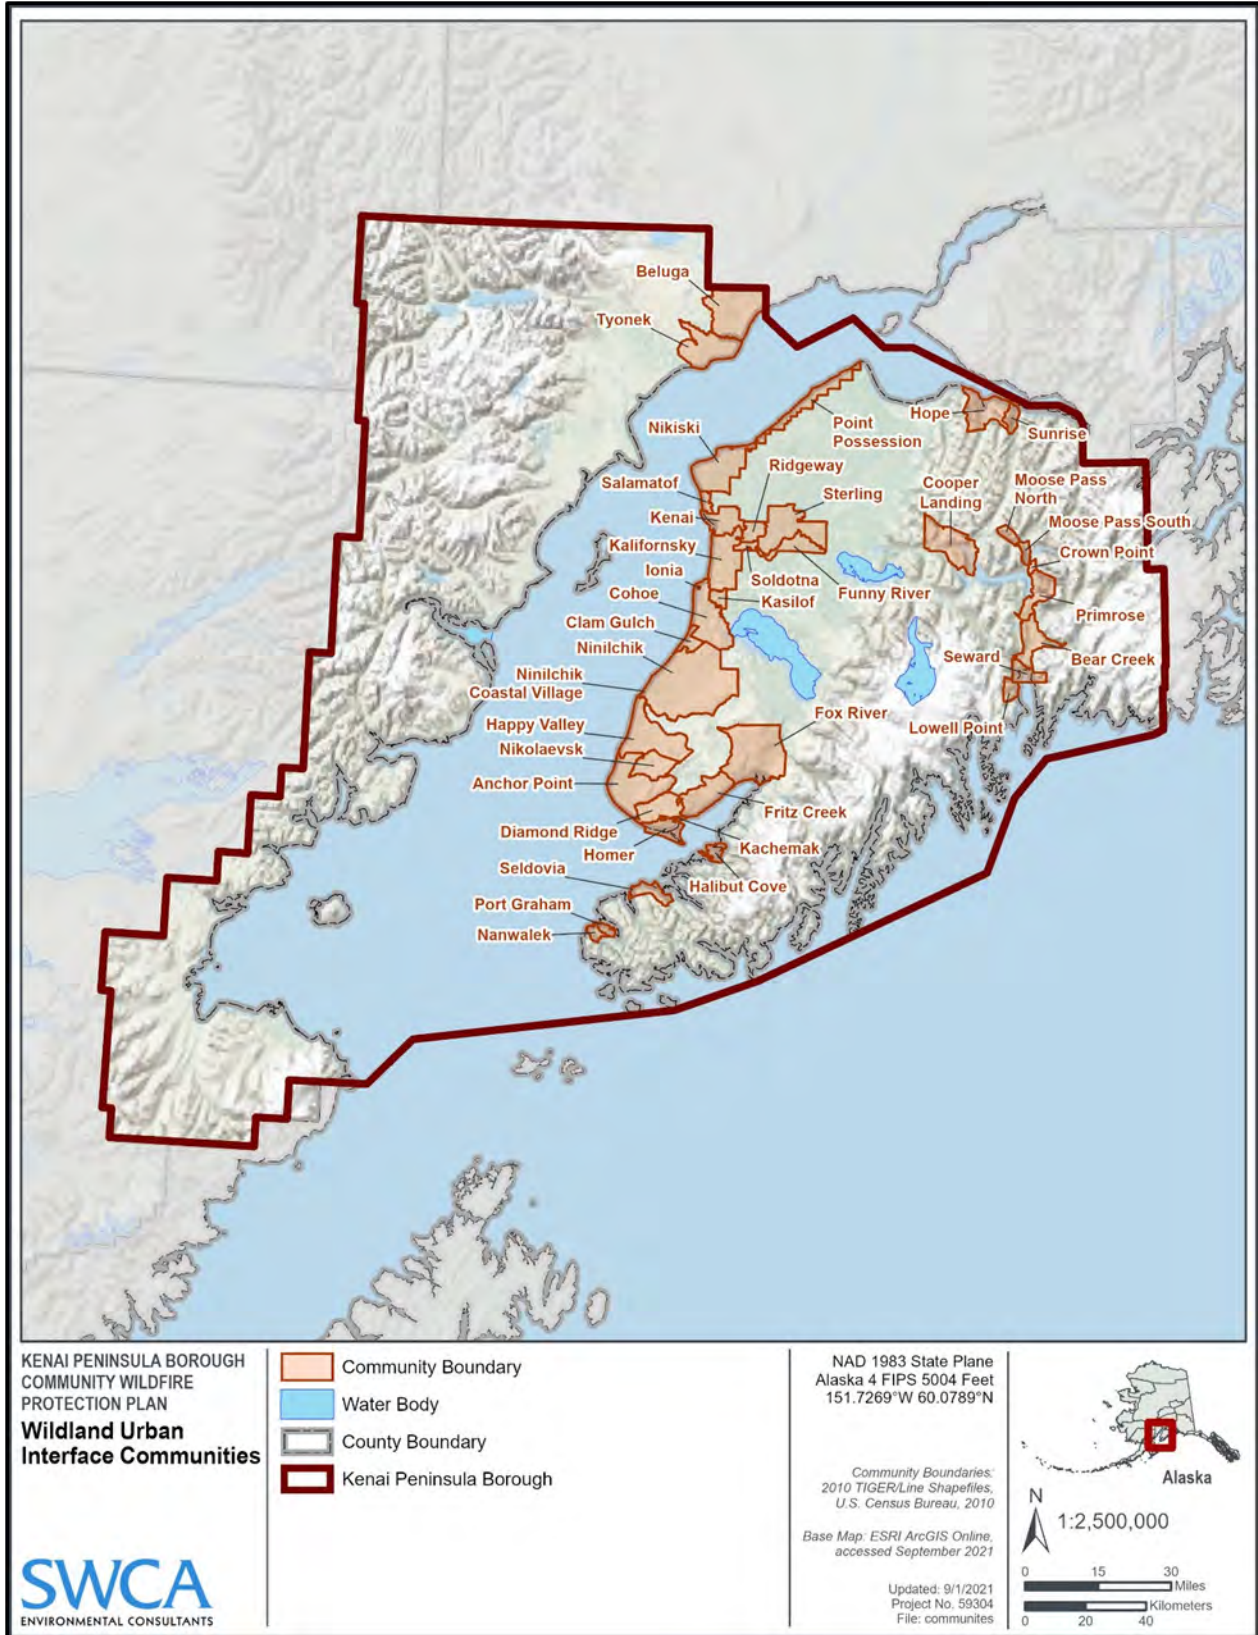

Figure E1.1. KPB CWPP project area.

WHAT IS THE CURRENT WILDFIRE SITUATION?

Abnormally warm temperatures have created conditions conducive to problematic insects as well as increased fire risk on the Kenai Peninsula. In the 1990s, there was an unusually dry and warm trend in Alaska, which was accompanied by a significant increase in SBB (KPB 2006a). Specifically, Alaska's Kenai Peninsula and Copper River Valley experienced an SBB outbreak that had infested about 2.3 million acres, killing most large-diameter spruce trees (National Park Service 2021a). In essence, unusually warm temperatures favor the pattern of SBB induced tree mortality, increased dead fuel, and the persistence and amplification of frequent and large fires. The warmer climate pattern has also triggered the onset of earlier-than-average snow-free events, which brings the premature arrival of the fire season. Under such circumstances, the drying of vegetation occurs more readily and for longer periods of time. Additionally, the shifting climate patterns create conditions that amplify the occurrence of lightning strikes. The combination of increased lightning strikes and ample fuels increases the risk of catastrophic wildfire on the Kenai Peninsula (KPB 2006a).

Recent findings suggest that SBB outbreaks are likely to persist. In 2016, another outbreak was recorded. A 2016 aerial detection study mapped 190,000 acres of SBB damage (National Park Service 2021a). Since the 2016 outbreak began, more than 1 million acres in south-central Alaska have been impacted, with 145,000 acres of SBB damage recorded in 2020 alone (U.S. Forest Service 2021d). Beetle-killed trees are a complex fuel type and pose an escalated risk for wildfire. The needles remain on the branches an entire season after the tree dies, leaving the tree relatively more flammable during this period. As the tree dries, branches and crowns are perfect fuel ladders for surface fires. Stem breakage in deceased trees usually starts around 5 years after mortality and when combined with forest surface debris (needles, grasses, and organic layers), result in a particularly dangerous fuel complex (KPB 2009a).

WHAT RECENT FIRES OCCURRED HERE?

The Borough and surrounding environment consist of diverse landscapes that produce a complex wildfire setting due to variable topography, high levels of SBB-induced tree mortality, an assortment of vegetation types, and development schemes. As such, the Borough is familiar with large fires. Many fires have occurred in and around the western region of the peninsula, including two of the Borough's largest recent wildfires—the 2014 Funny River Fire and the 2019 Swan Lake Fire.

WHAT IS THE PURPOSE OF THE RISK ASSESSMENT?

The purpose of the risk assessment is to provide information about wildfire hazard and risk to highly valued resources and assets (HVRAs) for the Chugach National Forest and surrounding areas in south-central Alaska (Pyrologix 2021).

The risk assessment considers:

- Likelihood of fire burning
- Intensity of a fire
- Exposure of assets and resources based on their locations
- Susceptibility of those assets and resources to wildfire

Some of the highest risk areas identified in the planning area are communities located within and near the Kenai National Wildlife Refuge, Chugach National Forest, Kachemak Bay, and the WUI.

HOW IS MY COMMUNITY RATED?

Community risk assessments, describing risk and hazard rankings for communities located in the WUI, throughout the KPB, are provided in this plan. A team from SWCA Environmental Consultants conducted on-the-ground community risk assessment surveys throughout the KPB between July 20 and 27, 2021, using the National Fire Protection Association 1144 standard for assessing structure ignitability in the WUI. Using this standard provided a consistent process for assessing wildland fire hazards around existing structures to determine the potential for structure ignition from wildland fire ignitions.

The assessments provide a total score of risk and hazard based on various parameters observed during the surveys, and a corresponding descriptive rating of low, moderate, or high are available in Appendix D.

WHAT ARE THE STRATEGIES TO ADDRESS WILDFIRE CONCERNS?

Goal 1 of the Cohesive Strategy and the Western Regional Action Plan is **Restore and Maintain Landscapes**: Landscapes across all jurisdictions are resilient to fire and other disturbances in accordance with management objectives.

Recommendations for hazardous fuels treatments include:

- Removing standing dead trees on public and private property
- Increasing workforce capacity to respond to hazardous fuel treatment needs
- Addressing existing limitations of slash disposal facilities
- Enhancing road right-of-way clearance to facilitate safe ingress and egress in areas that have been impacted by SBB

Goal 2 of the Cohesive Strategy/Western Regional Action Plan is: **Fire-Adapted Communities**: Human populations and infrastructure can withstand a wildfire without loss of life and property.

Recommendations for public outreach and education include:

- Developing an education campaign for beetle-killed tree removal
- Promoting Firewise participation (there are currently no Firewise certified communities within the KPB)
- Increasing education and outreach about the range of wildfire response strategies, also known as Fire Management Options, which are used by the Alaska Interagency Wildland Fire Coordinating Group
- Identifying vulnerable populations who may require assistance during fire prevention, fire response, and post-fire phases

Recommendations for reducing structural ignitability include:

- Increasing structure hardening of public buildings and structures
- Building self-planning tools to enable individuals to reduce the risk of fire to their properties

Goal 3 of the Cohesive Strategy/Western Regional Action Plan is **Wildfire Response:**

All jurisdictions participate in making and implementing safe, effective, efficient risk-based wildfire management decisions.

Recommendations for improving fire response capabilities include:

- Supporting additional wildland crews with peninsula-wide capacity.
- Improving fire notifications and coordination between Alaskan Native villages and Incident Command Teams.
- Developing and coordinating a peninsula-wide comprehensive online emergency preparedness, response, and recovery plan.
- Facilitating greater preparedness for evacuations.

WHAT DOES POST-FIRE RESPONSE AND RECOVERY INVOLVE?

There are many aspects to post-fire response recovery, including but not limited to:

- Returning home and checking for hazards
- Coordinating and mobilizing a group of teams in the community to respond to emergencies
- Rebuilding communities and assessing economic needs—securing the financial resources necessary for communities to rebuild homes, business, and infrastructure
- Restoring the damaged landscape—restoration of watersheds, soil stabilization, and tree planting
- Prioritizing the needs of vulnerable and disadvantaged communities during response and disaster recovery efforts
- Evaluating and updating disaster recovery plans every 5 years to respond to changing needs and characteristics of the community
- Coordinating with planning, housing, health, and human services, and other local, regional, or state agencies to develop contingency plans for meeting the short-term, temporary housing needs of those displaced during a catastrophic wildfire event

HOW WILL THE PLAN BE IMPLEMENTED?

The CWPP does not require implementation of any of the recommendations, but the message throughout this document is that the greatest fire mitigation could be achieved through the joint actions of individual homeowners, tribes, and local, state, and federal governments.

The recommendations for fuels reduction projects are general in nature; site-specific planning that addresses location, access, land ownership, topography, soils, and fuels would need to be employed upon implementation. Also, it is important to note that the recommendations are specific to WUI areas and are expected to reduce the loss of life and property.

In addition, implementation of fuels reduction projects need to be tailored to the specific project and will be unique to the location depending on available resources and regulations. In an effort to streamline project implementation, this CWPP has identified the pertinent land management/ownership agencies

associated with each recommendation. On-the-ground implementation of the recommendations in the CWPP planning area will require development of an action plan and assessment strategy for completing each project.

WHEN DOES THE CWPP NEED TO BE UPDATED?

The CWPP should be treated as a live document to be updated annually or immediately following a significant fire event. The plan should continue to be revised to reflect changes, modification, or new information. These elements are essential to the success of mitigating wildfire risk throughout the Borough and will be critical in maintaining the ideas and priorities of the plan and the communities in the future.

ACKNOWLEDGEMENTS

Thank you to the Core Team and all stakeholders who participated in the planning process, gave their time, and shared their expertise. These contributions lead to creating resilient landscapes, implementing public education, reducing structural ignitability, and ensuring safe and effective wildfire response.

This publication was funded in part by the Kenai Peninsula Borough and the Alaska Division of Forestry Department of Natural Resources pursuant to U.S. Forest Service Award No. 2018-G11100106-810.

CHAPTER 1 – INTRODUCTION

PURPOSE

Wildfire is the leading disturbance in Alaskan boreal forests, and roughly 80% of Alaskans reside in areas potentially at risk from wildland fire (University of Alaska Fairbanks [UAF] 2018). Communities within the Kenai Peninsula Borough (KPB or Borough) planning area are familiar with community fire planning, having developed 17 community wildfire protection plans since the early 2000s, covering 33 communities (KPB 2019a). Because wildfire does not respect political boundaries, however, the KPB and other land management entities have been working together collaboratively for more than 15 years to treat fire management as a landscape effort, forming the All Lands/All Hands (ALAH) interagency organization, comprising a comprehensive body of land and resource managers across all jurisdictions, who collaborate on landscape-scale planning efforts to prepare the original ALAH Action Plan and supplemental updates (KPB Interagency 2018).

In support of this collaborative management approach, the purpose of the 2022 community wildfire protection plan (CWPP) update is to

- provide a peninsula-wide scale of wildfire risk and protection needs,
- bring together all the responsible wildfire management and suppression entities in the planning area to address the identified needs, and
- provide a framework for future planning and implementation of necessary mitigation measures.

This CWPP update process involves looking at past fires and treatment accomplishments using the knowledge and expertise of the land and resource managers who work for the various agencies and governing entities in the planning area. This update process incorporates a new assessment of wildfire risk and hazard and supplements local knowledge with relevant science and literature from the northwest region.

NAVIGATION

The CWPP provides a risk assessment, action items, project recommendations, and background information about the KPB's wildland fire environment as well as land management plans and agencies. Most of the background information is housed in several appendices. The CWPP is designed to be used by the residents of the Borough, as well as stakeholders tasked with forest, fire, and emergency management. Some information is therefore highly technical in order to provide sufficient detail to aid in project implementation.

Chapter 1 provides a general overview of CWPPs, the Core Team, project area, land ownership, and public involvement.

Chapter 2 presents an overview of the WUI and fire environment, as well as specific information about vegetation, fire history, fire management, and response.

Chapter 3 describes the risk assessment, results of the risk assessment, and community values at risk.

Chapter 4 provides mitigation strategies in accordance with the National Cohesive Wildfire Strategy as well as post-fire protocols and rehabilitation strategies.

Chapter 5 presents monitoring strategies to assist in tracking project progress and in evaluating work accomplished.

Appendix A contains background information on the KPB, including fire policy, past planning efforts, challenges to forest health, public education programs, and federal, state, and tribal land management agencies.

Appendix B presents the Chugach All-Lands Wildfire Risk Assessment.

Appendix C lists the Core Team members and contacts.

Appendix D provides the community risk assessments for WUI communities and contains the community risk descriptions and hazard ratings.

Appendix E presents a sample form of the National Fire Protection Association Wildfire Fire Risk and Hazard Severity Form 1144.

Appendix F details funding opportunities.

Appendix G contains additional resources, including a guide to manage spruce beetles and a homeowners wildfire mitigation guide.

Appendix H presents information on public outreach and engagement with regard to this CWPP.

Appendix I describes strategic infrastructure recommendations.

The CWPP does not require implementation of any of the recommendations; however, these recommendations may be used as guidelines for the implementation process if funding opportunities become available. The recommendations for fuels reduction projects are general in nature; site-specific planning that addresses location, access, land ownership, topography, soils, and fuels would need to be employed upon implementation. Also, it is important to note that the recommendations are specific to wildland urban interface (WUI) areas and are expected to reduce the loss of life and property. All recommendation tables are provided within Chapter 4.

In developing the CWPP, a large amount of background information on the Borough is compiled and analyzed, including the CWPP planning process, fire policy, past planning efforts, location and land use data, population, and demographics, climate and weather data, and other supporting background information. This information is presented in Appendix A, Community and CWPP Background Information.

OVERVIEW OF COMMUNITY WILDFIRE PROTECTION PLANS

BACKGROUND

In response to a landmark fire season in 2000, the National Fire Plan (NFP) was established to develop a collaborative approach among various governmental agencies to actively respond to severe wildland fires and ensure sufficient firefighting capacity for the future fuels (U.S. Department of the Interior [USDI] and U.S. Department of Agriculture [USDA] 2000). The NFP was followed by a report in 2001 entitled [*A Collaborative Approach for Reducing Wildland Fire Risks to Communities and the Environment: A 10-year Comprehensive Strategy*](#), which was updated in 2002 to include an implementation plan. This plan was updated once more in 2006, with a similar focus on using a collaborative framework for restoring fire-adapted ecosystems, reducing hazardous fuels, mitigating risks to communities, providing economic benefits, and improving fire prevention and suppression strategies. The 2006 implementation plan also emphasizes information sharing and monitoring of accomplishments and forest conditions, a long-term commitment to maintaining the essential resources for implementation, a landscape-level vision for restoration of fire-adapted ecosystems, the importance of using fire as a management tool, and continued improvements to collaboration efforts (Forests and Rangelands 2006). Progress reports and lessons learned reports for community fire prevention are provided annually.

In 2003, the U.S. Congress recognized widespread declining forest health by passing the [*Healthy Forests Restoration Act \(HFRA\)*](#), and President Bush signed the act into law (Public Law 108–148, 2003). The HFRA was revised in 2009 to address changes to funding and provide a renewed focus on wildfire mitigation (H.R. 4233 - Healthy Forest Restoration Amendments Act of 2009). The HFRA expedites the development and implementation of hazardous fuels reduction projects on federal land and emphasizes the need for federal agencies to work collaboratively with communities. A key component of the HFRA is the development of CWPPs to facilitate collaboration between federal agencies and communities in order to develop hazardous fuels reduction projects and place priority on treatment areas identified by communities. A CWPP also allows communities to establish their own definition of the WUI, which is used to delineate priority areas for treatment. In addition, priority is placed on municipal watersheds, critical wildlife habitat, and areas impacted by wind throw, insects, and disease. Communities with an established CWPP are given priority for funding of hazardous fuels reduction projects carried out in accordance with the HFRA.

ALIGNMENT WITH THE NATIONAL COHESIVE STRATEGY

In 2014, the final stage of the development of a national cohesive strategy for wildfire was developed: *The National Strategy: The Final Phase in the Development of the National Cohesive Wildland Fire Management Strategy* (Forests and Rangelands 2014). The national strategy takes a holistic approach to the future of wildfire management:

To safely and effectively extinguish fire, when needed; use fire where allowable; manage our natural resources; and as a Nation, live with wildland fire.

In order to achieve this vision, the national strategy goals are:

Restore and maintain landscapes: Landscapes across all jurisdictions are resilient to fire-related disturbances in accordance with management objectives.

Fire-adapted communities: Human populations and infrastructure can withstand a wildfire without loss of life and property.

Wildfire response: All jurisdictions participate in making and implementing safe, effective, efficient risk-based wildfire management decisions. (Forests and Rangelands 2014:3)

Like the 2014 national strategy, the NFP, state fire plans, 10-year comprehensive strategy, and Federal Emergency Management Agency (FEMA) Disaster Mitigation Act of 2000, all mandate community-based planning efforts with full stakeholder participation, coordination, project identification, prioritization, funding review, and multiagency cooperation. This collaboration aligns with the mission and goals of the ALAH Plan (KPB Interagency 2018). In compliance with Title 1 of the HFRA, a CWPP must be mutually agreed upon by the local government, local fire departments, and the state agency responsible for forest management (Alaska Department of Natural Resources [ADNR], Division of Forestry [DOF]). As outlined in the HFRA, this CWPP is developed in consultation with interested parties and the federal agencies managing land surrounding the at-risk communities.

As part of the 2022 update to the CWPP, the plan has been aligned with the Cohesive Strategy and its Phase III Western Regional Action Plan by adhering to the nationwide goal “*to safely and effectively extinguish fire, when needed; use fire where allowable; manage our natural resources; and as a Nation, live with wildland fire*” (Forests and Rangelands 2014:3).

For more information on the Cohesive Strategy, please visit: <https://www.forestsandrangelands.gov/strategy/documents/strategy/CSPhaseIIINationalStrategyApr2014.pdf>

Alignment with these Cohesive Strategy goals is described in more detail in Chapter 4, Mitigation Strategies.

GOAL OF A COMMUNITY WILDFIRE PROTECTION PLAN

The goal of a CWPP is to enable local communities to improve their wildfire-mitigation capacity, while working with government agencies to identify high fire risk areas and prioritize areas for mitigation, fire suppression, and emergency preparedness. Another goal of the CWPP is to enhance public awareness by helping residents better understand the natural- and human-caused risks of wildland fires that threaten lives, safety, and the local economy. The minimum requirements for a CWPP, as stated in the HFRA, are

Collaboration: Local and state government representatives, in consultation with federal agencies or other interested groups, must collaboratively develop a CWPP (Society of American Foresters [SAF] 2004).

Prioritized Fuel Reduction: A CWPP must identify and prioritize areas for hazardous fuels reduction and treatments and recommend the types and methods of treatment that will protect one or more communities at risk (CARs) and their essential infrastructures (SAF 2004).

Treatments of Structural Ignitability: A CWPP must recommend measures that homeowners and communities can take to reduce the ignitability of structures throughout the area addressed by the plan (SAF 2004).

CWPP PLANNING PROCESS

The SAF, in collaboration with the National Association of Counties and the National Association of State Foresters, developed a guide entitled *Preparing a Community Wildfire Protection Plan: A Handbook for Wildland-Urban Interface Communities* (SAF 2004) to provide communities with a clear process in developing a CWPP. The guide outlines eight steps for developing a CWPP, which have been followed in preparing the KPB CWPP:

Step One: Convene Decision-makers. Form a Core Team made up of representatives from the appropriate local governments, local fire authorities, and state agencies responsible for forest management.

Step Two: Involve Federal Agencies. Identify and engage local federal representatives and contact and involve other land management agencies as appropriate.

Step Three: Engage Interested Parties. Contact and encourage active involvement in plan development from a broad range of interested organizations and stakeholders.

Step Four: Establish a Community Base Map. Work with partners to establish a base map(s) defining the community's WUI and showing inhabited areas at risk, wildland areas that contain critical human infrastructure, and wildland areas at risk for large-scale fire disturbance.

Step Five: Develop a Community Risk Assessment. Work with partners to develop a community risk assessment that considers fuel hazards; risk of wildfire occurrence; homes, businesses, and essential infrastructure at risk; other community values that may be at risk from wildfire and local preparedness capability. Rate the level of risk for each factor and incorporate this information into the base map as appropriate.

Step Six: Establish Community Priorities and Recommendations. Use the base map and community risk assessment to facilitate a collaborative community discussion that leads to the identification of local priorities for treating fuels and reducing structural ignitability, as well as other issues of interest, such as improving fire response capability. Clearly indicate whether priority projects are directly related to the protection of communities and essential infrastructure or to reducing wildfire risks to other community values.

Step Seven: Develop an Action Plan and Assessment Strategy. Consider developing a detailed implementation strategy to accompany the CWPP as well as a monitoring plan that will ensure its long-term success.

Step Eight: Finalize Community Wildfire Protection Plan. Finalize the CWPP and communicate the results to the community and key partners.

Background and Process for Developing the Kenai CWPP Update

In 2003, the enactment of the [HFRA](#) provided an incentive to communities to engage in comprehensive forest planning across the United States. This community-based forest planning and prioritization led to the formation of the Kenai Forest, Wildfire Protection, and Fuels Management Coordinating Committee, comprised of federal, state, local and tribal governments. The committee's goal was to increase collaboration and coordination for strategic and project-level planning to address the impacts of spruce bark beetle (SBB), that had been ravaging the KPB for years. In November 2003, the committee met to develop an ALAH 5-Year Action Plan, which is frequently updated to serve as a guiding document for forest and wildfire management within the KPB.

In 2004, the first ALAH 5-Year Action Plan was developed.

The purpose of the plan was to introduce a collaborative interagency approach to mitigating wildfire risk through a "from the back porch out" philosophy that emphasizes the need to implement fuel reduction, defensible space, and other mitigation efforts from the back porch outward (KPB Interagency 2018). Since 2004, the ALAH Action Plan has been updated in 2012 and 2018, with both updates reflecting lessons learned, new land management approaches, and project implementation guidance. The framework for all ALAH plans was shaped by the NFP and associated HFRA. The [2018 ALAH Action Plan](#) update considers past KPB CWPPs, the FEMA-approved KPB Hazard Mitigation Plan (2019 update), the 2018 Comprehensive Plan, and the 2009 FLAME2 Act, and was developed in alignment with the 2014 National Cohesive Wildland Fire Management Strategy and associated goals (KPB Interagency 2018).

Guidance from the 2003 HFRA combined with KPB's high-risk status resulted in the 2004 ALAH Action Plan designating a need for communities within the KPB to develop CWPPs (KPB Interagency 2018). This need triggered the development of the original 17 CWPPs.

Based on guidance provided by the ALAH group in the 2018 ALAH Action Plan update, the KPB and the DOF led the initiative to update the original 17 CWPPs located throughout the KPB. The KPB successfully applied for and received funding from the U.S. Forest Service (USFS) to support this planning effort. Rather than updating 17 unique plans, the KPB engaged in a substantially different approach to develop one landscape-level plan for the entire KPB.

Both high-level and small-scale assessment of hazard and risk, as well as recommendations, are provided within this plan. In 2019, the Chugach National Forest contracted the development of a Chugach All Lands Quantitative Wildfire Risk Assessment (QWRA, known as ARRA) that includes the Chugach National Forest and surrounding federal and non-federal land totaling approximately 30 million acres in south-central Alaska (Pyrologix 2021). This comprehensive assessment encompassed the entire peninsula, and therefore, the KPB chose to integrate the assessment into the development of the CWPP. The ARRA provides a landscape-level model of potential losses associated with fire, based on fire behavior throughout the KPB and the location and density of values at risk. To complement this broad risk assessment, an on-the-ground community assessment was completed to identify hazards and risks locally and to provide a summary for each WUI community in the KPB. Additionally, any

The CWPP update is built on a body of work completed by the ALAH interagency group beginning in 2004 and continuing through today. Recognizing the need to plan for and mitigate the elevated wildfire risk associated with the spruce bark beetle (SBB) outbreaks in spruce forests throughout the peninsula beginning in the 1990s, the ALAH interagency group, formerly called the Kenai Forest, Wildfire Protection and Fuels Management Coordinating Committee, led the charge to proactively develop plans to address wildfire risk in the KPB.

recommendations made in the original CWPPs that prove still relevant have been incorporated in the 2022 CWPP.

Why a CWPP is Needed

The United States is facing urgent forest and watershed health concerns. Reducing human vulnerability to the impacts of uncharacteristically severe wildfires depends not only on our ability to understand the science, but also upon our ability to integrate that knowledge to residents, fire and emergency managers, and local, state, and federal agencies. While fires are a natural phenomenon across much of the western United States, the presence of humans living, working, and recreating within the WUI means that every year people face the impacts of wildfire within their communities, and as fires are becoming more severe, those impacts are harder to recover from. While the number of annual wildfires has been slightly decreasing (67,700 fires in 2016 vs. 59,000 fires in 2020), the number of acres burned has been on the rise (Congressional Research Service [CRS] 2021). An average of 7 million acres burn every year due to wildfire, more than doubling the annual average of acres burned in the 1990s (CRS 2021). Communities are experiencing the most destructive wildfire seasons in history. The 2015 fire season had the most acreage impacted in a single year since 1960 at 10.13 million acres. 2020 came in second with 10.12 million acres, and 2017 was not far behind at 10.03 million acres (CRS 2021). Furthermore, with increased fires comes increased suppression costs; 2018 beat all previous records, with federal firefighting costs hitting \$3,143,256,000 (National Interagency Fire Center 2021).

Alaska is no stranger to wildfire, but the state is facing an intensified pattern of wildfire due to rapidly escalating temperatures, extended growing seasons, and SBB outbreaks. Regardless of season-to-season variability, evidence suggests that wildfire is burning more acres and expanding into new regions of the state (International Arctic Research Center [IARC] 2021). This has statewide consequences, including increased wildfire risk for people, property, and natural resources. Residents of Alaska are especially vulnerable, with an estimated 80% of the population living in areas at risk of wildfire (IARC 2021). The KPB alone has over 10.25 million acres of forested lands with 65% of communities located in areas of extreme wildfire risk (KPB 2019a). Population growth and continued expansion in conjunction with dispersed settlement patterns on the Borough create a large WUI (USFS 2017). The total value of structures (e.g., homes, businesses) on private land is expected to increase by 66% during the next five decades—increasing the wildfire vulnerability of the Borough (USFS 2017). Moreover, population dynamics and distribution combined with insect and disease impacts on vegetation are further escalating wildfire risk. Therefore, planning and management regarding climate change, the WUI, and vegetation is a significant need within the Borough (KPB Interagency 2018).

The average annual number of large wildfires has nearly doubled in recent years, from approximately 23 (1950s–1980s) to 40 (1990s–2010s) (IARC 2021). In addition to this increase in the quantity of wildfires, the annual average number of acres burned doubled from 1 million during 1990–2000 to 2 million during 2001–2010. Furthermore, 2001–2010 set a new record for acres burned at 20 million acres (IARC 2021). With increased fire events comes increased suppression costs. 2019 was Alaska's costliest fire season, with costs exceeding \$300 million. The 2019 Swan Lake Fire alone cost \$46 million (IARC 2021). However, this figure does not include the cost to Alaskans who had their land scorched and homes burned. In addition to economic impacts, wildfires cause loss of life and injury, health problems related to smoke, and ecosystem changes (IARC 2021).

As wildfire severity increases, communities need a plan to help prepare for, reduce the risk of, and adapt to wildland fire events. CWPPs help accomplish these goals. A CWPP provides recommendations that are intended to reduce, but not eliminate, the extreme severity or risk of wildland fire, and seek to build natural and social resilience to wildfire impacts.

Story Map

The KPB and DOF decided to develop an interactive website called a story map (online web content) to disseminate information to the public and provide an opportunity for the public to provide input into the plan content. In addition to facilitating information sharing, the story map also provides the Borough with a platform that can be readily revised to keep the CWPP document current. The story map is hosted on the KPB website and acts as a 1-stop shop source of information for all Borough residents.

Wildfire is considered to be 'bad' or in most cases catastrophic, whenever homes and other structures are involved; timber values are lost; critical wildlife habitat is degraded; or other values are lost depending on the location, extent, and intensity of the wildfire. Wildfire can also be 'good' and have positive effects, mainly environmental, such as creating an environment for fire-dependent or fire-tolerant plant species to flourish, enhancing wildlife habitat by diversifying vegetation species and age classes, or removing surface fuels and other downed woody debris to limit the intensity of future wildfires (KPB Interagency 2018:9).

Figure 1.1. KPB story map hub.

CORE TEAM

The ALAH group, along with some others representing additional communities or entities, served as the Core Team for the CWPP update. The Core Team list is provided in Appendix C.

Building on the existing ALAH group membership, the Core Team continued to evolve and expand. The Core Team consists of the following:

- Kenai Peninsula Borough (KPB)
- Alaska Division of Forestry - Kenai/Kodiak

- KPB Office of Emergency Management
- KPB Bear Creek Fire
- KPB Central Emergency Services
- KPB Nikiski Fire
- KPB Kachemak Emergency Services
- KPB Western Emergency Services
- KPB Land Management
- U.S. Fish and Wildlife Service (USFWS), Kenai National Wildlife Refuge
- U.S. Forest Service (USFS), Chugach National Forest
- Alaska Department of Fish and Game (ADFG)
- Cities of Homer, Kachemak, Kenai, Seldovia, Seward, Soldotna
- Chugachmiut
- Seldovia Village Tribe
- Volunteer Fire Departments
- Cooper Landing Emergency Services
- Homer Electric Association
- SWCA Environmental Consultants
- Jim Butler, Incident Response Group
- Residents

The Core Team drives the planning process in its decision making, data sharing, experience, and communication with community members who are not on the Core Team. SWCA and the KPB had a project kickoff meeting in February 2020. SWCA facilitated the first Core Team meeting in person on March 12, 2020, and the second Core Team meeting virtually via Zoom on May 14, 2020. Due to the COVID-19 pandemic in 2020, the KPB decided to tactically pause the project from May 2020 through May 2021. In May 2021, the KPB and SWCA re-started the project. SWCA facilitated the third Core Team meeting in person on July 26, 2021, and the fourth Core Team meeting virtually in October 25. All other Core Team communications were limited to email and conference calls. SWCA and the KPB contacted the 10 entities representing Native Alaskan interests to inquire about their community values at risk, project recommendations, and fire response capabilities (see the Community Assessments sections for more information).

PROJECT AREA

The project area includes the entire KPB as delineated by its geographic and political boundaries. The project boundary encompasses all communities that were included in the original round of CWPPs (Figure 1.2). The most populated municipality is the census-designated area of Kalifornsky.

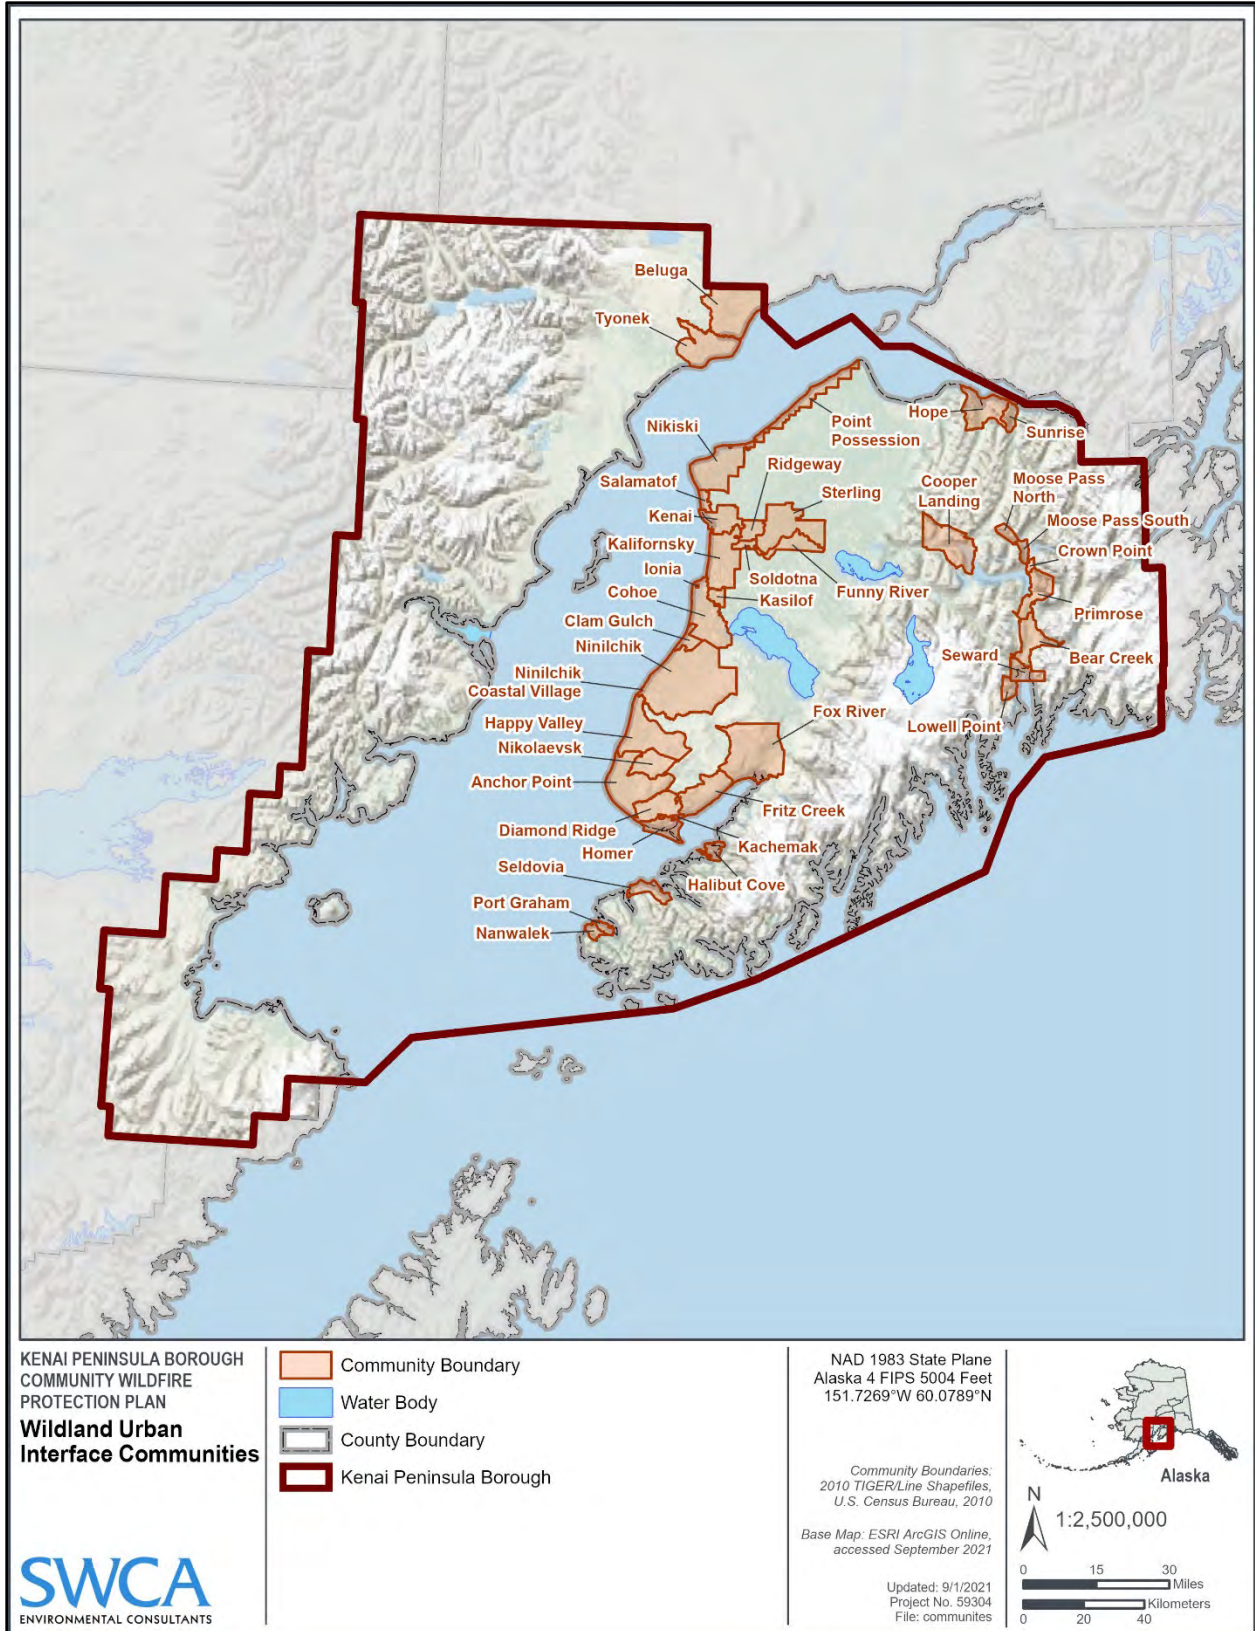

Figure 1.2. KPB CWPP project area and WUI communities.

LAND OWNERSHIP

The KPB has varied land ownership, including large areas of USFS, National Park Service (NPS), USFWS, Bureau of Land Management (BLM), tribal, state, and municipal land (Figure 1.3). Alaska Natives have a unique structure of ownership and management in Alaska, which is different from the system used in the lower 48 states. There are 12 geographic regions in Alaska identified by the Alaska Native Claims Settlement Act of 1971 (ANCSA) as both ethnic and geographic Native regions. Native entities that were created were first in the form of Tribes, next regional Native corporations, and finally Native village corporations. Each region created a non-profit organization to assume the federal responsibilities for the health and welfare of the Alaska Native peoples by use of a compact agreement with the federal government. The Alaska Native Corporations (both regional and village) hold title to a majority of Native land. Additional information regarding land ownership is provided in Appendix A.

PUBLIC INVOLVEMENT

The Core Team offered multiple public engagement opportunities throughout the planning process. Detailed information regarding public involvement is provided in Appendix H.

Engaging interested parties is critical in the CWPP process; substantive input from the public will ensure that the final document reflects the highest priorities of the local community. A key element in the CWPP process is the meaningful discussions it generates among community members regarding their priorities for local fire protection and forest management (SAF 2004).

The Core Team engaged in outreach using a multimedia approach, using the story map created for the project, social media posts, community surveys, radio interviews, and information distributed through mass emails. The Core Team hosted five public meetings from July 20 through July 24, 2021, throughout the Borough (see Table H.1 in Appendix H for dates and locations). The public meetings were designed using an open house format to encourage interactive communication with stakeholders. In some communities that had not received significant previous wildfire mitigation outreach, a public presentation about the project was held prior to the open house. This two-way communication was intended to increase understanding and build trust, rather than simply provide information. The goal of the public engagement was to inform the public about the KPB CWPP update and to gather feedback about specific topics related to this project, as well as general wildfire concerns. In addition to the open house style of public meetings, the Core Team also hosted an informational booth at a community festival.

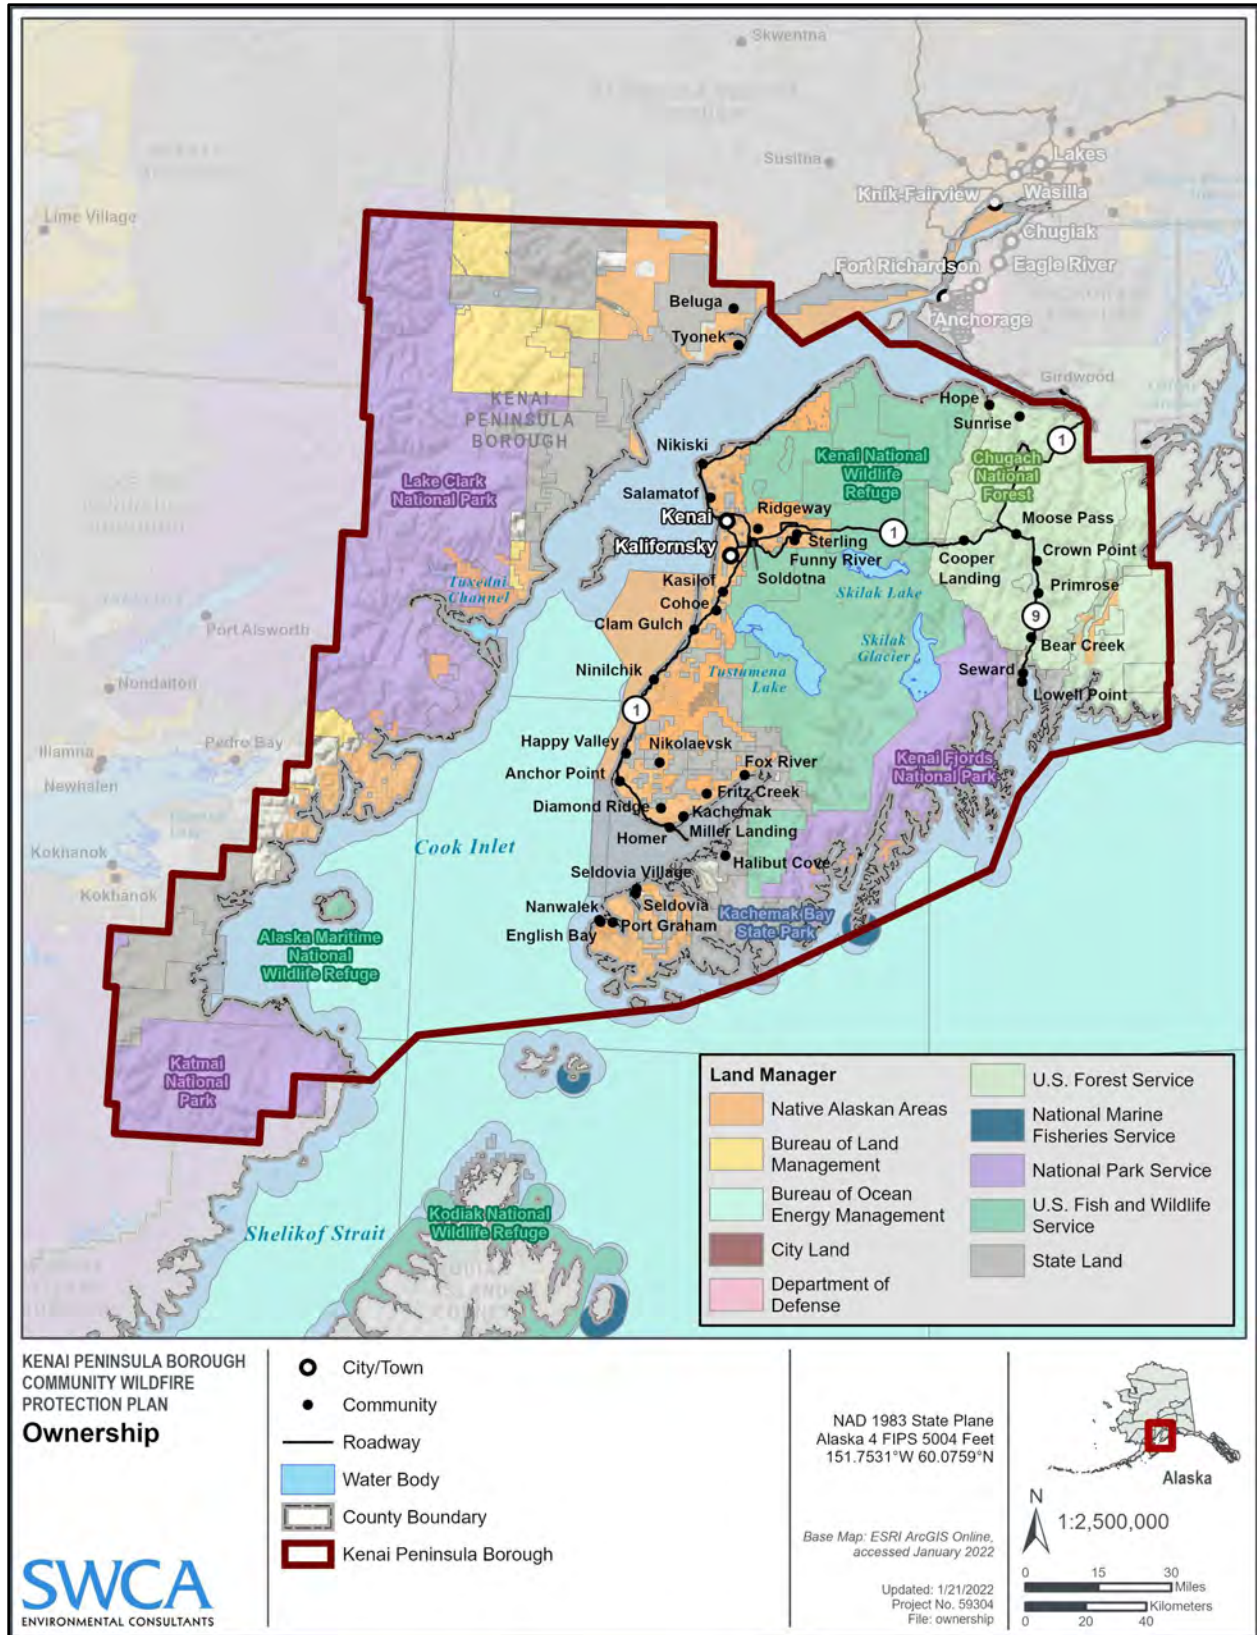

Figure 1.3. KPB land ownership.

WILDLAND URBAN INTERFACE

A WUI is composed of both interface and intermix communities and is generally defined as areas where human habitation and development meet or intermix with wildland fuels (USDI and USDA 2001:752–753). Interface areas include housing developments that meet or are in the vicinity of continuous vegetation. Intermix areas are those areas where structures are scattered throughout a wildland area where the cover of continuous vegetation and fuels is often greater than cover by human habitation.

The WUI creates an environment in which fire can move readily between structural and vegetative fuels, increasing the potential for wildland fire ignitions and the corresponding potential loss of life and property. Human encroachment upon wildland ecosystems within recent decades is increasing the extent of the WUI throughout the country as a whole, which is having a significant influence on wildland fire management practices. Combined with the collective effects of fire management policies, resource management practices, land use patterns, warming trends, and insect and disease infestations, the expansion of the WUI into areas with high fire risk has created a need to modify fire management practices and policies and to understand and manage fire risk effectively in the WUI (Pyne 2001; Stephens and Ruth 2005). Mitigation techniques for fuels and fire management can be strategically planned and implemented in WUI areas; for example, with the development of defensible space around homes and structures (Figures 2.1 and 2.2).

A CWPP offers the opportunity for collaboration of land managers to establish a definition and a boundary for the local WUI; to better understand the unique resources, fuels, topography, and climatic and structural characteristics of the area; and to prioritize and plan fuels treatments to mitigate fire risks. At least 50% of all funds appropriated for projects under the HFRA must be used within the WUI area.

Figure 2.1. Example of a coastal WUI in the Borough.

Figure 2.2. Example of forested WUI in the Borough.

This CWPP update aligns the WUI definition and delineation with those previously defined in the existing 17 community CWPPs (Figure 2.3). Those community plans align their WUI delineation with the HFRA as comprising “areas within or adjacent to at-risk communities.” The WUI delineations around the at-risk communities were created through a collaborative process with the initial core teams for each community plan and were based on fuel composition, locations of values at risk, alignment with roads that may be used for emergency ingress and egress, and presence of wildfire risk and hazard.

Under HFRA Section 101(1), an at-risk community is one that:

- Comprises a group of homes and other structures with basic infrastructure and services
- Has conditions conducive to a large-scale wildland fire
- Faces a significant threat to human life or property as a result of a wildland fire

The HFRA definition of WUI recognizes the WUI as a buffer extending 0.5 mile from the boundary of an at-risk community.

The WUI delineation should be reviewed and revised as needed during updates to the CWPP and by communities looking to develop and implement CWPPs at a smaller community scale.

WUI fires challenge suppression agencies in Alaska just as they do in other parts of the country. The most acute increase in population and subsequent increased housing density at the interface, on the road system, is occurring on the Kenai Peninsula, in the Matanuska-Susitna Borough, and near Anchorage and Fairbanks. These areas have the classic WUI problems associated with rapid population growth without adequate zoning or fire planning (KPB 2009a).

FIRE HISTORY

HISTORIC FOREST USE

Since the last Ice Age, Alaska Native peoples and Alaskan forests have played an integral part in each other’s lives. As the original forest stewards, Alaska Natives place significant cultural and spiritual value, in addition to subsistence value, on the forest land. The most noticeable forest management tool used by Alaska Natives was fire. Fire was used in boreal forests to control insects, preserve wildlife habitat, and maintain crops (DOF 2020a). Historical records note that Native people set fires along the Copper River across Alaska in the late nineteenth century and early twentieth century (Fryer 2014).

The Kenai Peninsula has been the home of the Kenaitze Indian Tribe for centuries and was developed by non-Natives for its plentiful resources, including oil, timber, fish, coal, gold, and wildlife (USFWS 2014). Early settlement brought increased population and infrastructure development; this increased human activity and development resulted in fire regime changes, with many fires occurring along roadways and towns. Throughout the nineteenth and twentieth centuries, the population of the Kenai Peninsula continued to grow. The population increased dramatically following World War II, giving rise to intensive development and other land use changes such as oil and gas development, increased recreational use, vegetation control, and infrastructure expansion (USFWS 2014).

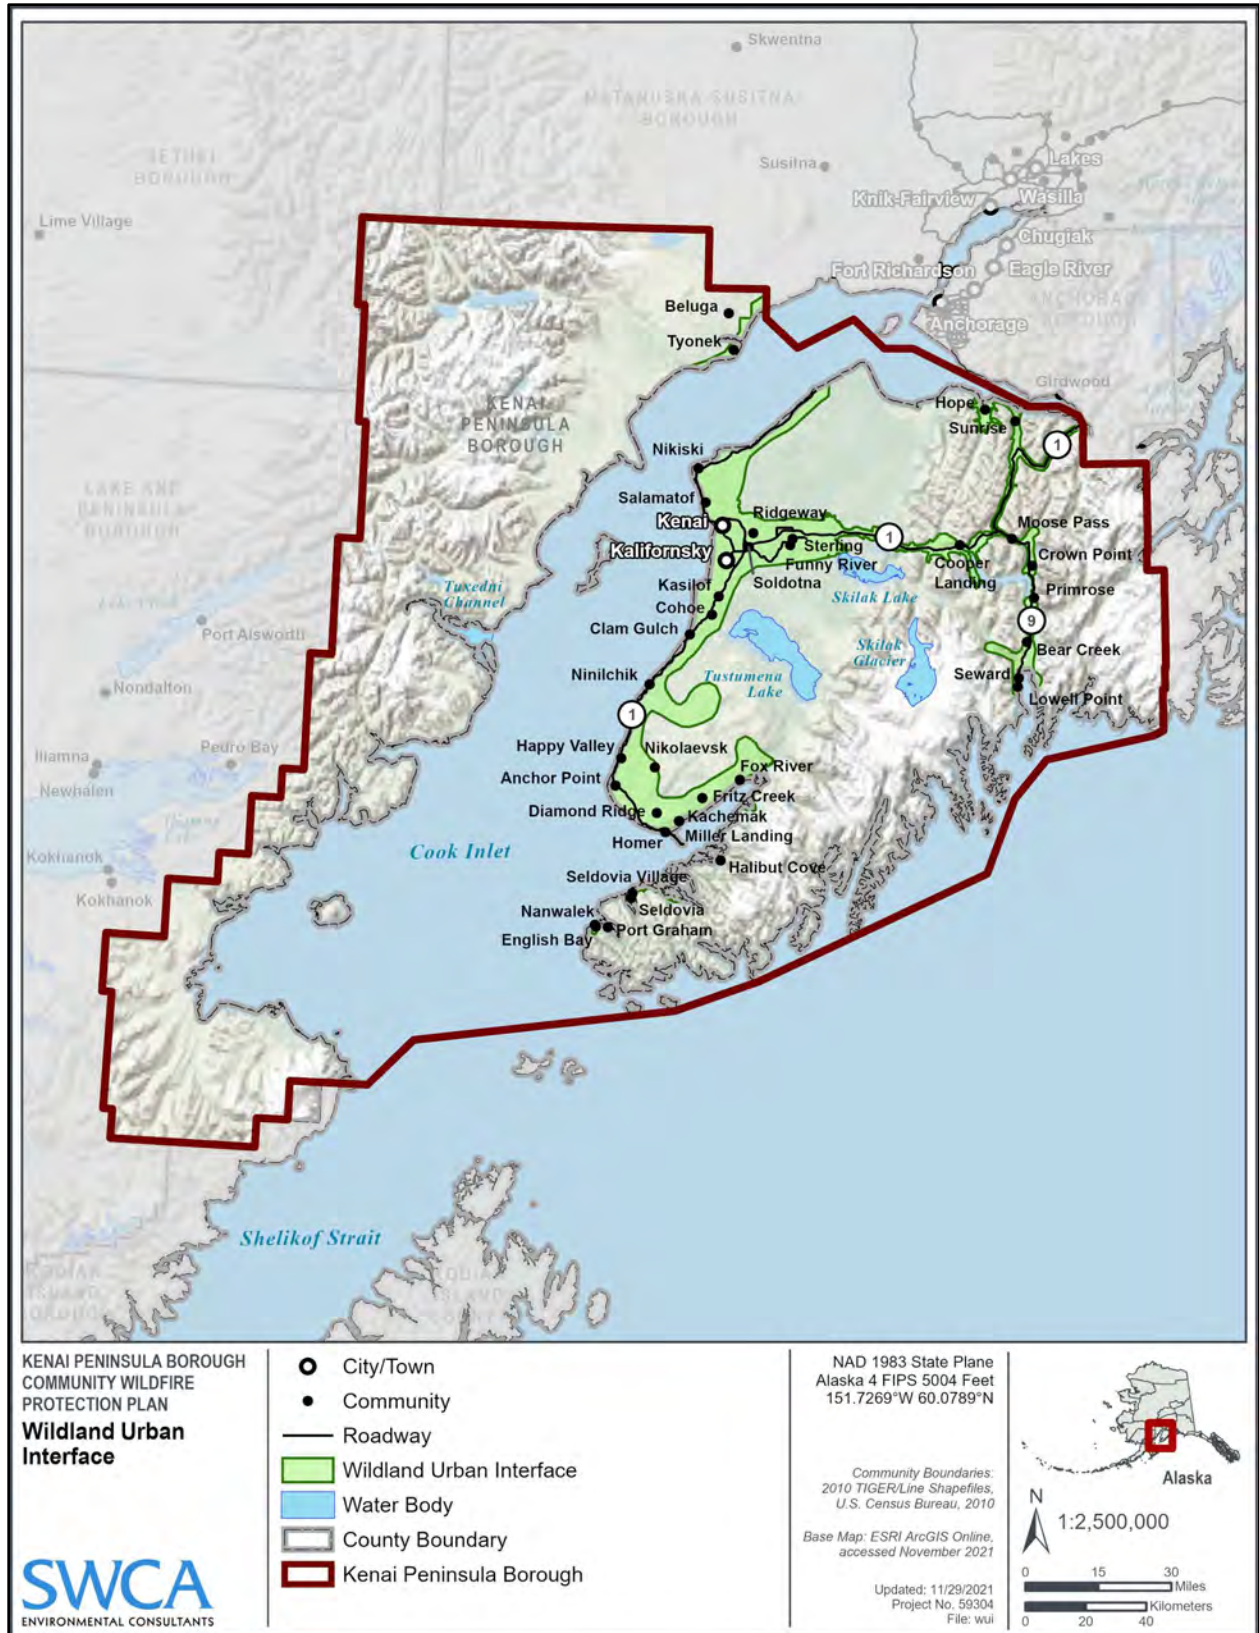

Figure 2.3. WUI delineation for the KPB.

HISTORIC FREQUENCY

Fire frequency is influenced by an interplay between numerous factors, including season, temperature, precipitation, lightning occurrence, forest health, topography, elevation, wind, aspect, and forest species composition and distribution. Therefore, how repeatedly a particular forest burns is determined by location-specific conditions (Fryer 2014).

Forest fires have been prevalent throughout the history of development of Alaska's boreal forests. Studies of the paradigms of big, historic fires in Alaska's taiga indicated that wildfire frequency was episodic, with most fires taking place during brief periods of high fire years (KPB 2006a). In Alaskan taiga, mean fire-return intervals (MFRIs) since the eighteenth century vary from 40 to 200 years. Fire frequency data from 1708 through 2004 indicate that historic fire frequency for black spruce forests on the Kenai Peninsula ranged from 25 to 185 years, with an average of 89 years (Fryer 2014). Some sections of the local forests on the Kenai Peninsula have evolved with fire, including large and severe fires. As such, these forests are typically adapted to large and severe fires (Wahrenbrock 2022).

Anthropogenic activity is another important factor in determining how often a forest will burn. Studies conducted in Alaska's taiga, including the Kenai Peninsula, indicate that before the European settlement of Alaska, the fire regime was distinguished by small fires ($\leq 50,000$ acres) and infrequent larger fires. Post European settlement, the Kenai Peninsula underwent an increase in the occurrence and acreage of fires linked to the increased presence of people (Ecology and Environment 2006).

FIRE SEASON

The majority of wildfires in the Alaskan boreal forests occur in summer; however, variation in fire season is significant. The fire season in the Kenai Peninsula usually extends from the beginning of April to the end of September, with May through late August being the most active fire months. This is because the period from May through late August has the highest average temperatures and lowest average humidity and precipitation (Fryer 2014). Fire season for the state of Alaska is defined as April 1 through August 31 by state law (Alaska Wildland Fire Coordinating Group Group[AWFCG] 2021). However, it should be noted that climatic shifts have been implicated in the earlier arrival and extension of the fire season.

A multitude of studies have reached the conclusion that the Earth's climate is getting warmer. This warming trend has been especially profound in recent decades. In the early 2000s, in Alaskan boreal forests, increases in mean annual air temperatures were accompanied by a trend toward larger, more frequent fires (Fryer 2014). In addition to increased fire frequency and severity, climatic warming has also been responsible for retreating glaciers, shrinking icefields, and decreasing lake levels and ponds (KPB 2006a).

Abnormally warm temperatures have created conditions conducive to problematic insects, as well as increased fire risk on the Kenai Peninsula. SBB thrive in warmer temperatures, and spruce trees weakened by drought stress are more susceptible to infestations and fire. In the 1990s, there was an unusually dry and warm trend in Alaska, which was accompanied by an exponential increase in SBB (KPB 2006a). Specifically, Alaska's Kenai Peninsula and Copper River Valley experienced an SBB outbreak that infested approximately 2.3 million acres, killing most large-diameter spruce trees (NPS 2021a). In essence, unusually warm temperatures favor the pattern of SBB-induced tree mortality, increased dead fuel, and the persistence and amplification of frequent and large fires. The warmer climate pattern has also triggered the onset of earlier-than-average snow-free events, which brings a premature arrival of the fire season. Under such circumstances, the desiccation of vegetation occurs

more readily and for longer periods of time. Additionally, the shifting climate patterns create conditions that amplify the occurrence of lightning strikes. The combination of increased lightning strikes and ample fuels increases the risk of catastrophic wildfire on the Kenai Peninsula (KPB 2006a).

RECENT FIRE OCCURRENCE

While wildfires are typically rare within coastal Alaska (USFS 2011c), recent wildfire history for the Kenai Peninsula suggests that the risk of uncharacteristically large and severe wildfires remains elevated. Recent fires include the 2004 Glacier Creek Fire (8,600 acres), 2005 Fox Creek Fire (25,500 acres), 2005 Tracy Avenue Fire (5,400 acres), 2005 King County Creek Fire (10,000 acres), 2007 Caribou Hills Fire (55,000 acres), 2009 Shanta Creek Fire (13,000 acres), 2014 Funny River Fire (196,000 acres), 2015 Card Street Fire (8,900 acres), and the 2017 East Fork Fire (1,000 acres) (KPB 2006a).

More recently, in 2019, south-central Alaska had an extraordinarily hot, dry spring and summer season. June (2019) was the second-warmest month in the state's history, which, combined with higher-than-average lightning strikes, created ideal conditions for extreme wildfires (National Oceanic and Atmospheric Administration [NOAA] 2021a). Consequently, the 2019 wildfire fire season was the second-most destructive in Alaska (ADNR 2019). One of the largest fires of the 2019 fire season was the Swan Lake Fire (Figure 2.4), a lightning-caused wildfire that burned approximately 170,000 acres between Sterling and Cooper Landing on the Kenai Peninsula (Figure 2.4).

Figure 2.4. Swan Lake burned area, showing extensive landscape-scale damage.

Historic data indicate that most wildfires in Alaskan black spruce communities, including those on the Kenai Peninsula, are ignited by summer lightning. Yet humans are increasingly the culprit of ignitions in black spruce communities. Human-caused fires from 1956 through 2000 averaged 131 fires per year; in comparison, lightning strikes caused an average of 136 fires per year (Fryer 2014). More recent fire

management records also demonstrate an increasing trend of human-caused fires. The records from 1990 through 2005 for the Kenai Peninsula show a total of 1,079 fires; of those, 1,052 (97.5%) were determined to be human caused (Ecology and Environment 2006).

The Borough’s recent wildland fire history (1990–2020) shows that fire occurrence follows a cyclical pattern, with brief periods of elevated fire events and longer periods with fewer fire events (Figure 2.5). For the period of 1990 through 2020, the top two causes of fire events were lightning and human activity (Figure 2.6). Human-caused fires represent 95% of the fire causes; however, it should be noted that human-caused fires are generally smaller than lightning-caused fires (Fryer 2014). In addition, there has been an increasing trend toward fires larger than 5 acres; the period of 1990 through 2020 is anomalous compared with the historic pattern, which shows fire events less than 5 acres in size (Figure 2.7).

While most fires on the Kenai Peninsula are human caused, lightning-caused fires typically consume more acreage (Fryer 2014). Dense forest stands resulting from decades of fire suppression policies create a conducive environment to large fires. Therefore, fuels treatments such as prescribed burns that thin and reduce forest stands may minimize the impact and extent of large, lightning-caused fires (ADFG 2003).

Moreover, for a period of 80 years (1940–2020), a total of 946,052 acres have burned in areas throughout the Borough (Figures 2.8 and 2.9). The decadal graph also shows a recent trend toward increasing acreage burned in the 2010 through 2020 period (see Figure 2.8).

VEGETATION AND FIRE ECOLOGY

Vegetation zones within the KPB are primarily a function of elevation, slope, aspect, substrate, and associated climatic regimes. Because a broad range in elevation and topography exists across the Borough, characteristics in vegetative communities are quite variable from site to site (Figure 2.10).

The KPB is predominantly composed of spruce (needleleaf) and hardwood (broadleaf) forests (Table 2.1). Black, white, Sitka, and hybrid Lutz spruce present volatile fuels due to high needle resin content and branch configuration. Hardwood species include paper birch, balsam poplar, quaking aspen, and green alder (tall shrub), which are less flammable than spruce species. Forests on the KPB can be composed of individual species as well as mixed-species communities (mixed forest).

Fire plays an important role in the ecology of spruce forests in Alaska and is the main catalyst of change in the boreal forest system. Fires clear the ground from organic layers and expose fertile ground that promotes seed germination. However, it should be noted that fire intensity is directly related to reforestation success. Generally, fires that burn after a long period of dry weather or drought conditions have greater organic duff consumption and, in turn, create microsites favorable for tree seed germination. Early season burns and fires that occur on grasslands have less surface fuel consumption and usually produce spotty or poor post-fire reforestation (Wahrenbrock 2022). Black spruce are dependent on fire for optimal regeneration. White spruce and Sitka may benefit significantly from fire but will positively respond to most forms of site clearance, such as windstorms, with respect to regeneration (Wahrenbrock 2022).

Although black spruce are easily damaged by fire, black spruce seedlings prosper in post-fire conditions. Fire assists in opening cones, and the open seedbed prepared by the fire provides conditions for optimal growth (KPB 2006a). In addition, some sections of the local forests on the Kenai Peninsula have evolved with fire, including large and severe fires. As such, these forests are typically adapted to large and severe fires (Wahrenbrock 2022).

The USFS, in collaboration with other land management organizations, including federal, state, borough, tribal, and non-profit partners, prepared an existing vegetation map for the Kenai Peninsula (USFS 2020a). The map covers the entire Kenai Peninsula; however, it omits a small part of the Borough—the Tyonek and Beluga communities across the Cook Inlet (see Figure 2.10). Vegetation data for the omitted areas can be accessed through the National Land Cover Database (U.S. Geological Survey 2019). Vegetation in and surrounding Tyonek and Beluga is composed primarily of mixed and deciduous forest, sedge/herbaceous communities, and wetlands. Minor vegetation types in the area include dispersed patches of evergreen forest and shrub/scrub communities.

For more details on vegetation, visit the vegetation map developed by the USFS:

<https://www.arcgis.com/apps/MapSeries/index.html?appid=4e21c25d5eac421babaef3222004cccfc>

For additional information on fuels, visit the Fuel Models Guide to Alaska Vegetation by the AWFCG:

https://www.frames.gov/documents/alaska/docs/awfcg_2018_FuelModelGuideAlaskaVegetation_withCitationV2.pdf

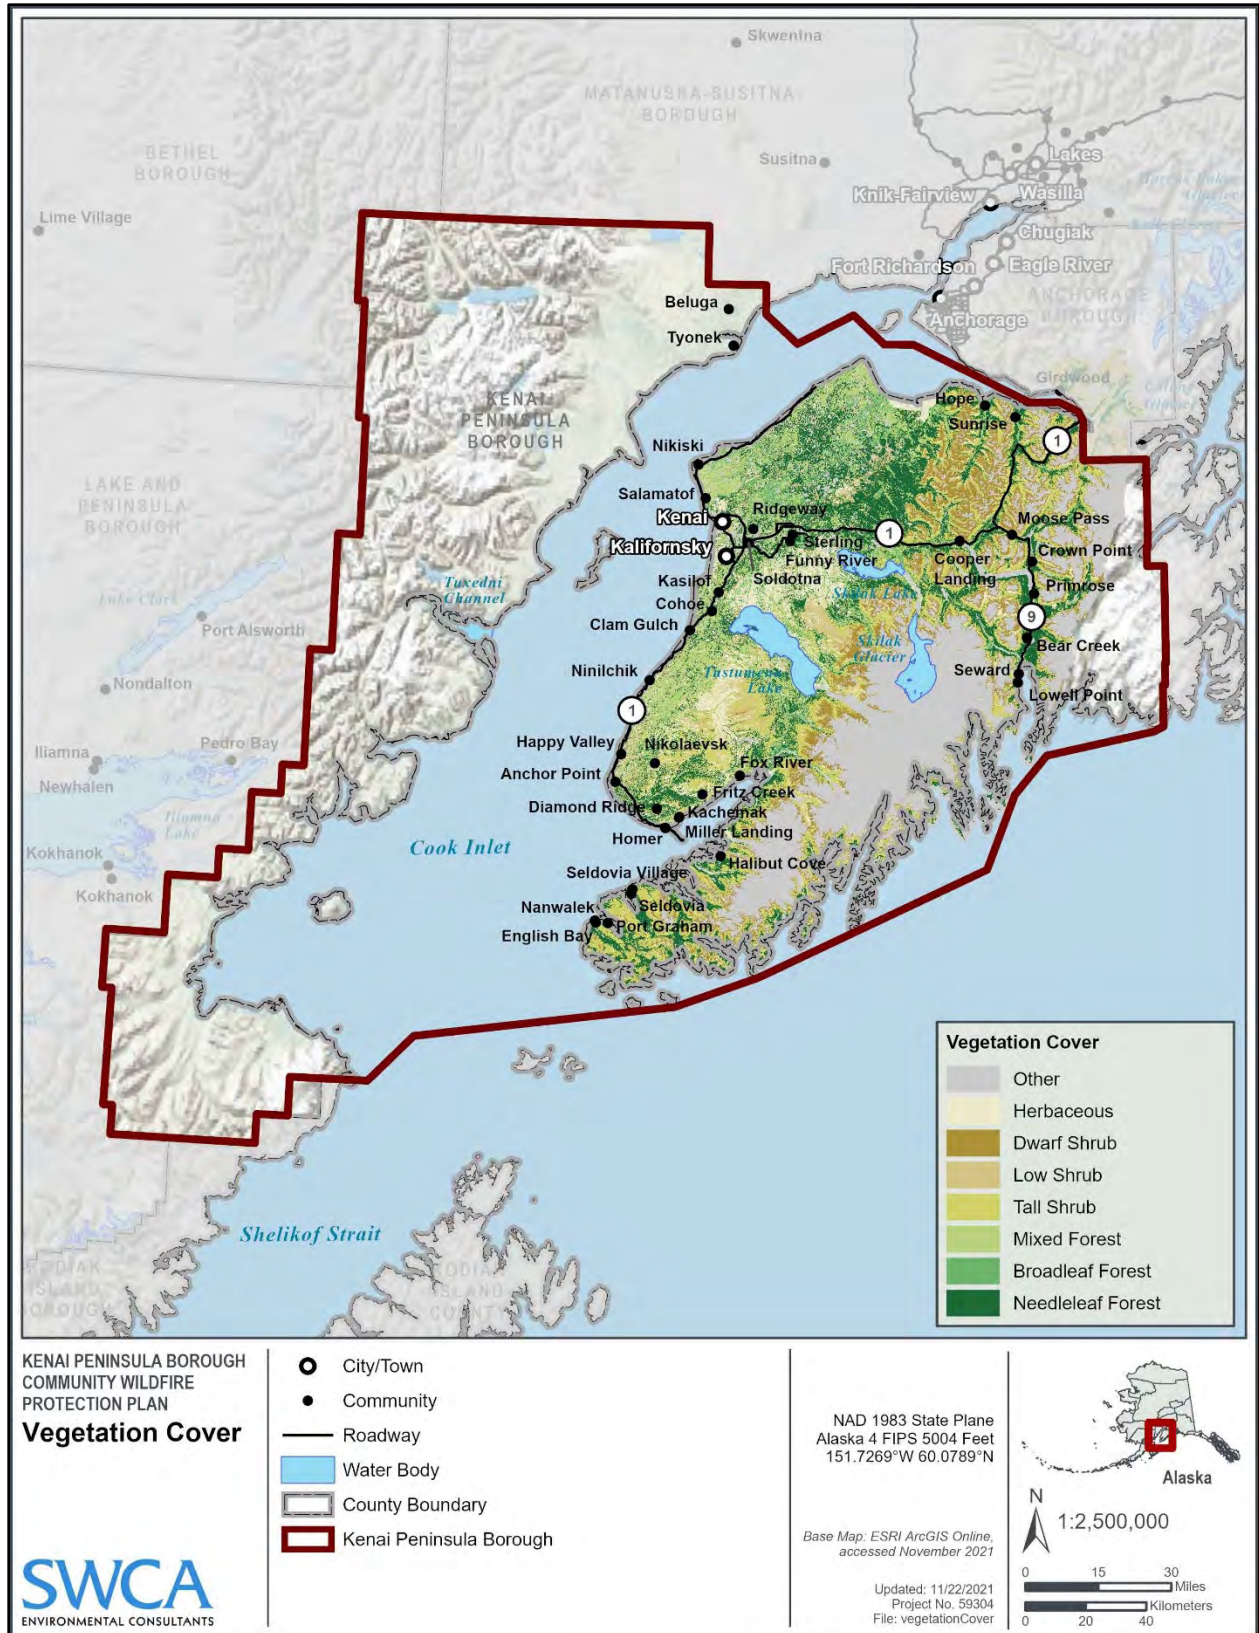

Figure 2.10. Existing vegetation cover within the KPB.

Table 2.1. Major Vegetation Types within the Borough

Existing Vegetation Type*	Acres	Percent
Other	1,956,370	36%
Needleleaf Forest	1,052,638	19%
Tall Shrub	580,651	11%
Mixed Forest	506,055	9%
Dwarf Shrub	483,065	9%
Herbaceous	469,115	8%
Low Shrub	247,041	5%
Broadleaf Forest	153,351	3%

*Based on data from the USFS story map (USFS 2020a)

Spruce Forests

Black spruce is the most common type of forest in the Kenai Peninsula. However, other species of spruce trees are also present, including white spruce, Sitka spruce, and the hybrid Lutz spruce. The multilayered structure—branches covering the trunk from top to bottom, with twigs angled downward—and chemical composition of black spruce make them highly flammable (NPS 2015a). Additionally, recurring infestations of SBB have altered the forest composition; downed trees open the canopy and allow for light, flammable fuels, e.g., Canada bluejoint reedgrass, to colonize the forest floor. Light and flammable fuels, such as grasses, combined with weakened or beetle-killed trees create the perfect conditions for intensified fire risk (KPB 2006a).

Black Spruce Forests

Black spruce is the most common forest type in Alaska, yet it covers only roughly 10% of the KPB. However, black spruce is found in many WUI settings and is intermingled around residential sites, thus creating a challenge with regard to protecting life and property during wildland fire events (Wahrenbrock 2022). When compared with other Alaskan vegetation types, black spruce forests have short to medium MFRIs. MFRIs since the 1700s in black spruce range from 40 to 200 years. How often black spruce stands burn is determined by the site's stand composition, solar insulation, altitude, slope, drainage, presence and thickness of permafrost, and fire history. Fire return intervals of less than 30 years can result in black spruce recruitment failure. On the Kenai Peninsula, studies have demonstrated at least 35 years between fires in black spruce forests. Small fires are more common in black spruce stands, although large fires occasionally do occur. All fires are typically crown fires with associated surface and ground fire. Live black spruce trees are very flammable because the needles contain low moisture levels and are dense. Furthermore, a thick forest floor of detritus and resinous shrubs in the understory typically are associated with black spruce stands. Fine fuels on the black spruce forest floor react quickly to dry conditions and increase extreme fire behavior. Black spruce is partially dependent on stand-replacing fires because cones are opened by canopy fire, exposing the seeds (Fryer 2014).

Human-caused fires are more common recently in the WUI on the Kenai Peninsula. In the early 2000s, there was a shift toward larger, more frequent fires compared with the last half of the twentieth century. These increases have been attributed to increased temperature, resulting in drought stress in black spruce.

White/Lutz Spruce Forests

White spruce is widespread in Alaska, particularly in the interior regions. The distribution of white spruce stands is influenced by elevation, soil drainage, fire history, topography, presence of permafrost, and climate. Upland white spruce communities occur on warm, well-drained, south-facing slopes. White spruce typically displays less intense fire behavior than black spruce. Historically, MFRIs in white spruce communities range from 40 to over 250 years. Fire return intervals of 40 years or less can result in white spruce recruitment failure. Floodplain, stringer (thin strip of trees), and treeline white spruce may have longer MFRIs. Ground, surface, and crown fires can all occur in white spruce stands, but crown fires are less typical in white spruce than in black spruce. On Kenai lowlands, fires burning in black spruce often stop upon reaching white spruce forests. When white spruce does burn, canopy mortality is high. White spruce stands experience less frequent crown fire than black spruce due to an absence of ladder fuels and lower needle resin content. Most fires in white spruce are stand-replacing (Abrahamson 2014).

On the Kenai Peninsula, only two fires over 10,000 hectares have been recorded in white spruce as of 2014, one fire occurring in the late 1800s and the other in 2014. Lightning is a historical source of ignition in the Alaskan boreal forest and is still a common ignition source on the Kenai Peninsula. Temperature changes and extended dry periods may increase the size and severity of fires as a result of longer fire seasons, drought, and higher ignition rates.

Sitka Spruce Forests

On the Kenai Peninsula, Sitka spruce dominates valley bottoms and lower side slopes. Along the eastern coast of the Kenai Peninsula, Sitka spruce forests occur at all elevations. However, Sitka spruce stands are more abundant at low elevations and in areas with periodic disturbances such as water movement, wind, soil mass movement, and salt spray. Sitka spruce is often favored post-fire, as it is well adapted to large openings, and when mineral soil is exposed. Generalized studies of fire in coastal Sitka spruce forests describe large, stand-replacing fires. However, these fires in Sitka spruce stands are rare on the Kenai Peninsula (Zouhar 2017).

Mixed-Wood Forests

White/black spruce with paper birch and/or aspen communities primarily occur in Alaska's interior and in south-central Alaska, with minimal occurrence in northwest and southwest Alaska. These communities can have open or closed stands and consist of paper birch and/or aspen with white/Lutz or black spruce or a combination of those species. Spruce trees are typically more prominent in older stands. Typical herbaceous plants in these communities include bluejoint reedgrass, horsetail, twinflower, and bunchberry dogwood. Lichen may occur in open stands. The primary carrier of fire is usually leaf litter, and the number of spruce trees in the stand increases the rate of spread (AWFCG 2018). Paper birch found in mixed-wood forest and boreal spruce types has an MFRi of 50 to 150 years (Uchytel 1991).

Hardwood Forests

Hardwood species common on the Kenai Peninsula include paper birch, cottonwood, quaking aspen, and Sitka alder. These species are less flammable than spruce species. Hardwood species do not burn with high intensity but, when they do burn, can be difficult to extinguish due to deep leaf litter and longer intervals between fires. Quaking aspen is a minor but widespread forest type in Alaska. Aspen generally occupy warm slopes lacking permafrost. Quaking aspen generally succeed to spruce forests in the absence of stand-replacing fire. Quaking aspen MFRIs range from 40 to over 200 years in Alaska. Fires are low severity and typically stay on the surface, but stand-replacing fires can occur infrequently. Climate

warming may favor quaking aspen at the expense of spruce forests due to decreasing fire return intervals. Another common hardwood species, cottonwood, is confined to floodplains and is succeeded by white spruce in the absence of stand-replacing fire. Balsam poplar forests have infrequent, low-severity surface and infrequent stand-replacing fires (Fryer 2014).

Grasslands and Shrublands

Grasslands on the Kenai Peninsula, particularly where there have been disturbances, consist primarily of bluejoint reedgrass and perennial bunch grasses. Bluejoint reedgrass species occurs particularly where stands of white spruce were attacked by SBB. Additionally, repeated, severe fires may result in replacement by shrub or herb communities such as bluejoint reedgrass sedge meadows. This species shift raises concerns regarding increased fuel loads and altered fuel characteristics that increase the risk of severe fire. Bluejoint reedgrass is the primary carrier of wildland fire in south-central Alaska due to dangerous fire behavior. High winds can quickly spread a small grass fire over a large area, often spreading hundreds of acres before first responders can arrive. Alaska sub-boreal mesic subalpine alder shrublands can be intermixed with bluejoint reedgrass and other fireweed communities (Zouhar 2017).

FUTURE CHALLENGES FOR FIRE REGIMES

Impact of Spruce Bark Beetle

The SBB is a category of bark beetle. Bark beetles bore through a tree's bark to feed on its carbohydrate-rich phloem tissue and to nest in the galleries created by boring. Significant disruption in the trees vascular tissue (phloem), such as a large number of beetles feeding, starves the tree and typically results in tree mortality. SBB also carry a blue-stain fungus that blocks the water-transporting tissue (xylem), accelerating tree mortality (NPS 2021a).

As a natural component of Alaska's forest habitats, the native SBB has a history of initiating large spruce die-off occurrences in many areas of the state. The species primarily infests white, Sitka, and Lutz spruce, and rarely black spruce. In the 1990s, the Kenai Peninsula and Copper River Valley experienced a SBB outbreak that affected close to 2.3 million acres by 1996, killing nearly all large-diameter spruce trees. In 2016, another outbreak was recorded. A 2016 aerial detection study mapped 190,000 acres of SBB damage (NPS 2021a). Since the 2016 outbreak began, more than 1 million acres in south-central Alaska have been impacted, with 145,000 acres of SBB damage recorded in 2020 alone (USFS 2021d). Beetle-killed trees are a complex fuel type and pose an escalated risk for wildfire (Figure 2.11). The needles remain on the branches an entire season after the tree dies and make the tree relatively more flammable during this period. After needle loss, numerous species of lichen often use tree branches as a growth platform and can become abundant in volume. This lichen acts as a fine fuel that is dry during low air humidity conditions and is quite flammable. This material is easily ignited by fire embers, causing spot fires in advance of wildland fires (Wahrenbrock 2022). As trees dry, branches and crowns are perfect fuel ladders for surface fires. Stem breakage in deceased trees usually starts around 5 years after mortality and, when combined with forest surface debris (needles, grasses, and organic layers), results in a particularly dangerous fuel complex (KPB 2009a).

In its Alaska Forest Health Conditions report, the USFS's aerial surveys detected about 115,000 acres of SBB activity, of which 108,00 acres were recent mortality (USFS 2021d); 96% of the damage mapped is within south-central Alaska. On the Kenai Peninsula, 18,330 acres of SBB activity were detected. Specifically, SBB activity increased substantially in the Cooper Landing area in 2020, with patches of damage observed along Sterling Highway and the Kenai River from around Quartz Creek campground to

Skilak Lake Road. SBB-caused mortality was also dispersed along the Russian River several miles upstream from its confluence with the Kenai River. Moreover, SBB activity continued to expand in the Kenai and Soldotna areas, with activity continuing in the Kenai National Wildlife Refuge and in the vicinity of the Kenai Spur Highway from Soldotna to Kenai. Equally extensive damage was noted in the Soldotna vicinity, particularly along the south side of the Kenai River and continuing to Kasilof. Additional areas with SBB activity include Tustumena Lake in Caribou Hills, Port Dick Creek, the Rocky River, Seldovia Lake, and the Perl and Elizabeth Islands (USFS 2021d).

SBB outbreaks tend to affect forest composition and soil properties. Forest canopy reductions via diseased or killed trees cause the canopy to open, which can allow for an entirely different community of plants to emerge. For example, Canada bluejoint reedgrass is a plant that thrives with the increased light penetration allowed by reduced or absent canopies. The grass grows thick and tall in areas of the Kenai Peninsula where there are many dead trees. The cover of dense grass decreases soil temperatures, altering the growing environment for understory plants. Some plants, such as shrubs, prosper in these new environments (ADFG 2021a). Shrubs and grasses are light and flashy fuels that colonize affected areas. For instance, one survey found that grass coverage in the understory had increased from approximately 5% to above 55% 5 years following SBB infestation. Mixed grass, shrubs, and beetle-killed trees provide abundant fuels for wildfires (KPB 2006a).

Temperature is one of the major controls on SBB population numbers. For example, during abnormally warm springs, SBB may become active sooner in the season. Contrarily, an extreme winter may kill SBB wintering above the snowline (NPS 2021a). As a result, SBB outbreaks are associated with warmer temperatures. Berg et al. (2006) determined that SBB outbreaks on the Kenai Peninsula are attributed to relatively long periods of elevated summer temperatures that enhance both rapid growth of SBB and extensive drought stress of host trees. With the warming trend persisting, SBB outbreaks will likely continue to increase in frequency and severity and expand their geographical and host ranges (Berg et al. 2006).

Figure 2.11. SBB-killed trees visible along the roadside.

Impact of Climate Change

In Alaska, global warming trends have been especially dramatic; the rate at which Alaska's temperature has been increasing is two times as fast as the global average since the middle of the twentieth century (U.S. Global Change Research Program [USGCRP] 2018). Average temperatures throughout the state for 2014, 2015, and 2016 were exceptionally warmer relative to previous decades, with 2016 being the warmest on record (Figure 2.12). In 2019, the record was set again when an average temperature of 58.1 degrees Fahrenheit (°F) was recorded for the month of July (NOAA 2019). The trend toward hotter temperatures is projected to increase; climate models indicate that by mid-century (2046–2065) the highest daily maximum temperature is expected to increase 4°F to 8°F relative to the average for 1981 through 2000 (USGCRP 2018). However, climate shifts are not evenly distributed throughout the state. Interior regions, along with the Arctic, are expected to warm faster than the southern and coastal regions of Alaska. Additionally, maximum 1-day precipitation is also projected to increase by 5% to 10% in southeastern Alaska and by more than 15% in the rest of Alaska, yet the longest dry and wet spells are not expected to change over much of the state. Therefore, long periods of dry weather are expected to persist (USGCRP 2018).

Figure 2.12. Average KPB temperature from 1950 through 2020.

Source: NOAA (2021c)

The shifting climate patterns have broad implications for wildfire occurrence and susceptibility. Hotter temperatures drive the early disappearance of snow, reduced fuel moisture content, higher surface heating, longer fire seasons, and shifts in forest composition. The longest fire season on record was recorded in 2016, which began with a wildfire in April and ended with a WUI fire in October (UAF 2018). In addition, the changing weather also creates conditions conducive to the occurrence of lightning strikes (KPB 2006a). In June 2015, a cascade of lightning in Alaska ignited 295 fires over a period of 7 days,

which eventually consumed 5.1 million acres and 80 homes. State and federal fire expenditures in Alaska in 2015 alone were \$188 million (UAF 2018).

Climate warming is impacting fire potential on the Kenai Peninsula and in Alaska overall. The annual area burned by wildfires varies significantly on an annual basis, but the frequency of big fire years (>2 million acres) has been increasing—since the year 2000, three of the top four fire years (in terms of acres burned) have occurred (USGCRP 2018). Models suggest that this trend will persist and amplify; predictions gauging the area burned for 2006 through 2100 are estimated at 120 million acres under a high scenario and 98 million acres under a low scenario (USGCRP 2018).

Although black spruce trees are fire adapted, dramatic changes in fire regimes undermine resilience and often result in recruitment failure (Baltzer et al. 2020). Consequently, forest composition in many regions of Alaska have changed, with a general shift toward shrubs and less acreage of older spruce forest. Additionally, shrubs and other light fuels have been expanding their range with the warming temperatures, increasing the spatial extent of areas susceptible to severe wildfires (USGCRP 2018).

A recent study, *Climate Change Vulnerability Assessment for the Chugach National Forest and the Kenai Peninsula*, by the USFS evaluates the impacts of future climate change on a set of ecosystems in the Kenai Peninsula and Chugach National Forest regions (USFS 2017). The study highlights the potential effects of climate change on the fire environment. With respect to assessing future vulnerability to wildfire the USFS found that 1) most of the area in the southwestern Kenai Peninsula could potentially change from forest to grassland as a result of environmental factors, including insects, insect disease, and a warming and drying climate (although field observations indicate that most of the SBB-impacted areas are currently transitioning to healthy stands of young spruce trees [Wahrenbrock 2022]) and 2) the distribution of land cover types dominated by black spruce is projected to remain similar to the current distribution. Therefore, vegetation types currently classified as high hazard will likely remain high over the next 50 years. Furthermore, the total value of structures (e.g., homes, businesses) on private land is expected to increase by 66% over the next 50 years. Population growth and expansion in conjunction with dispersed settlement patterns on the peninsula create a large WUI. As such, the wildfire vulnerability of the Kenai Peninsula is expected to increase (USFS 2017).

FIRE RESPONSE

Alaska fire management planning, preparedness, suppression operations, prescribed fire, and related activities are coordinated on an interagency basis with the full involvement of state, federal, and local government cooperators. The Alaska Interagency Wildland Fire Management Plan, 2021 (AIWFMP) details operational guidance under the Alaska Master Cooperative Wildland Fire Management and Stafford Act Response Agreement (Alaska Master Agreement) and the Alaska Statewide Operating Plan (AWFCG 2021). Its purpose is to “*promote a cooperative, consistent, cost-effective, interagency approach to wildland fire management; and it is the interagency reference for wildland fire operational information*” (AWFCG 2021:1).

The AIWFMP does not supersede any individual agency fire policies and requirements and, therefore, must be applied in conjunction with individual land and resource management plans and fire management plans when they exist (AWFCG 2021).

The collaborative nature of the interagency wildland fire organization allows fire response agencies to coordinate response for enhanced public safety and coordinate other fire management activities for the purpose of enhancing ecosystem health. It also enables fire response agencies to serve communities that

do not have their own fire departments or have very limited fire response capabilities, such as Nanwalek, Port Graham, Seldovia, Tyonek, Beluga, Razdolna, Voznesenka, Kachemak-Selo, and others.

By Alaska statute, the DOF has fire protection responsibility for state, private, and municipal land; and the BLM, USFWS, and the USFS have legal responsibility for fires on federal land. In addition, the DOF works collaboratively with numerous local governments, as well as tribal and volunteer fire departments, throughout the Borough to provide wildfire protection.

Under the ANCSA, the federal government is directed to provide wildland fire suppression on land conveyed to Native regional and village corporations, as discussed in detail in the Tribal Response Resources section.

The KPB Office of Emergency Management (OEM) implements evacuation and communication plans for the Borough and, in partnership with DOF, oversees the development and maintenance of CWPPs.

FIRE MANAGEMENT OPTIONS

Wildfire response across the state is guided by the AIWFMP and fire management options. Firefighter and public safety is of the highest priority for all options. The various suppression strategies include critical protection, full protection, modified protection, and limited protection and provide a full range of suppression responses, from aggressive control to surveillance (Figure 2.13). The fire management options are described as follows (AWFCG 2021):

Critical Protection

Suppression action provided on a wildland fire that threatens human life, inhabited property, designated physical developments, and structural resources such as those designated as National Historic Landmarks. The suppression objective is to provide complete protection to identified sites and control the fire at the smallest acreage reasonably possible. The allocation of suppression resources to fires threatening critical sites is given the highest priority.

Full Protection

Suppression action provided on a wildland fire that threatens uninhabited private property, highly valued natural resource areas, and other highly valued areas such as identified cultural and historical sites. The suppression objective is to control the fire at the smallest acreage reasonably possible. The allocation of suppression resources to fires receiving the full protection option is second in priority only to fires threatening a critical protection area.

Modified Protection

Suppression action provided on a wildland fire in areas where values to be protected do not justify the expense of full protection. The suppression objective is to reduce overall suppression costs without compromising protection of more highly valued adjacent resources. The allocation of suppression resources to fires receiving the modified protection option is of a lower priority than those in critical and full protection areas. A higher level of protection may be given during the peak burning periods of the fire season than early or late in the fire season.

Limited Protection

Lowest level of suppression action provided on a wildland fire in areas where values to be protected do not justify the expense of a higher level of protection, and where opportunities can be provided for fire to help achieve land and resource protection objectives. The suppression objective is to minimize suppression costs without compromising protection of more highly valued adjacent resources. The allocation of suppression resources to fires receiving the limited protection option is of the lowest priority. Surveillance is an acceptable suppression response as long as more highly valued adjacent resources are not threatened.

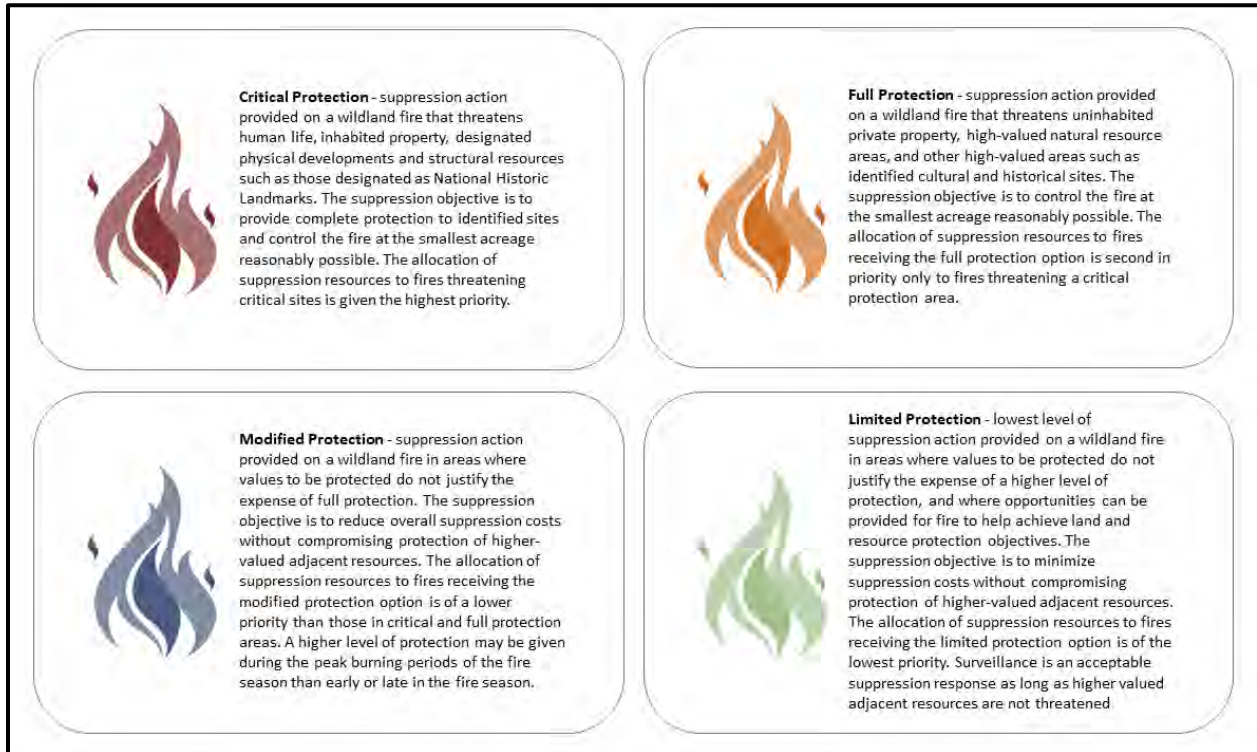

Figure 2.13. Alaska fire management options.

Costs associated with wildfires are contingent on response zones. More resources are used on wildfires in the full and critical zones due to the elevated risk to human health and property. However, there are patches within the limited and modified zones that necessitate a suppression response. For instance, Alaskan Native allotments are usually located in areas that are difficult to access. Still, fire protection is legally mandated in these areas. Although most wildfires in isolated Alaskan wilderness are permitted to burn under supervision, any wildfire threatening an Alaskan Native land allotment must be suppressed with state or federal firefighting resources (UAF 2018). Fire response resources are depicted in Figure 2.14.

MUTUAL AID AND AGREEMENTS

The wildland fire community is well known for its development of mutual aid agreements at the federal, state, and local levels. Aid agreements allow for closest forces to respond to an incident as quickly as possible regardless of jurisdiction. Such agreements may also describe how reimbursement will be conducted; state resources responding to wildfires on federal land may have their associated costs

reimbursed by the responsible federal agency, and the reverse is true for federal resources suppressing a wildfire on state land. There are three main types of aid agreements within the planning area (FEMA 2017):

1. **Local Mutual Aid:** Local mutual aid agreements between neighboring jurisdictions or organizations involve a formal request for assistance and generally cover a larger geographic area than local automatic mutual aid agreements do. Under these agreements, local resources may be used to assist federal departments and agencies in fulfilling their missions under special circumstances, and vice versa. Incorporating private sector, nongovernmental organizations, and community- and faith-based organizations into the mutual aid network provides parties with access to significant additional resources.
2. **Local Automatic Aid:** Local automatic mutual aid agreements permit the automatic dispatch and response of requested resources without incident-specific approvals or consideration of entity boundaries. These agreements are usually basic contracts between or among neighboring local entities (local entities may include nearby governments (including federal government installations), private sector facilities, nongovernmental organizations, and faith-based organizations) and are used under conditions when time is of the essence to save lives, prevent human suffering, or mitigate property damage following an incident.
3. **Regional, Intrastate, or Statewide Mutual Aid:** Sub-state regional mutual aid agreements are between multiple jurisdictions and are often sponsored by a council of governments or a similar regional body. Statewide/intrastate mutual aid agreements are often coordinated through the state and incorporate both state and local governmental and nongovernmental assets in an attempt to increase preparedness statewide. This approach can help reduce the number of local and jurisdiction-to-jurisdiction mutual aid agreements. In some instances, state law requires participation in an intrastate mutual aid system.

The ADNR operates under the [Master Cooperative Wildland Fire Management and Stafford Act Agreement](#) (the agreement), which documents the coordination and exchange of personnel, equipment, supplies, services, and funds between land management agencies. The agreement details wildland fire management activities such as prevention, preparedness, communication and education, fuels treatment and hazard mitigation, fire planning, response strategies, tactics and alternatives, suppression and post-fire rehabilitation and restoration. Agencies participating in the agreement include the BLM (Region 11 [Alaska]), NPS (Region 11), Bureau of Indian Affairs (Alaska Region), USFWS (Region 11), USDA (Region 10 [Alaska]), and the ADNR. This agreement does not supersede individual agency policies and requirements.

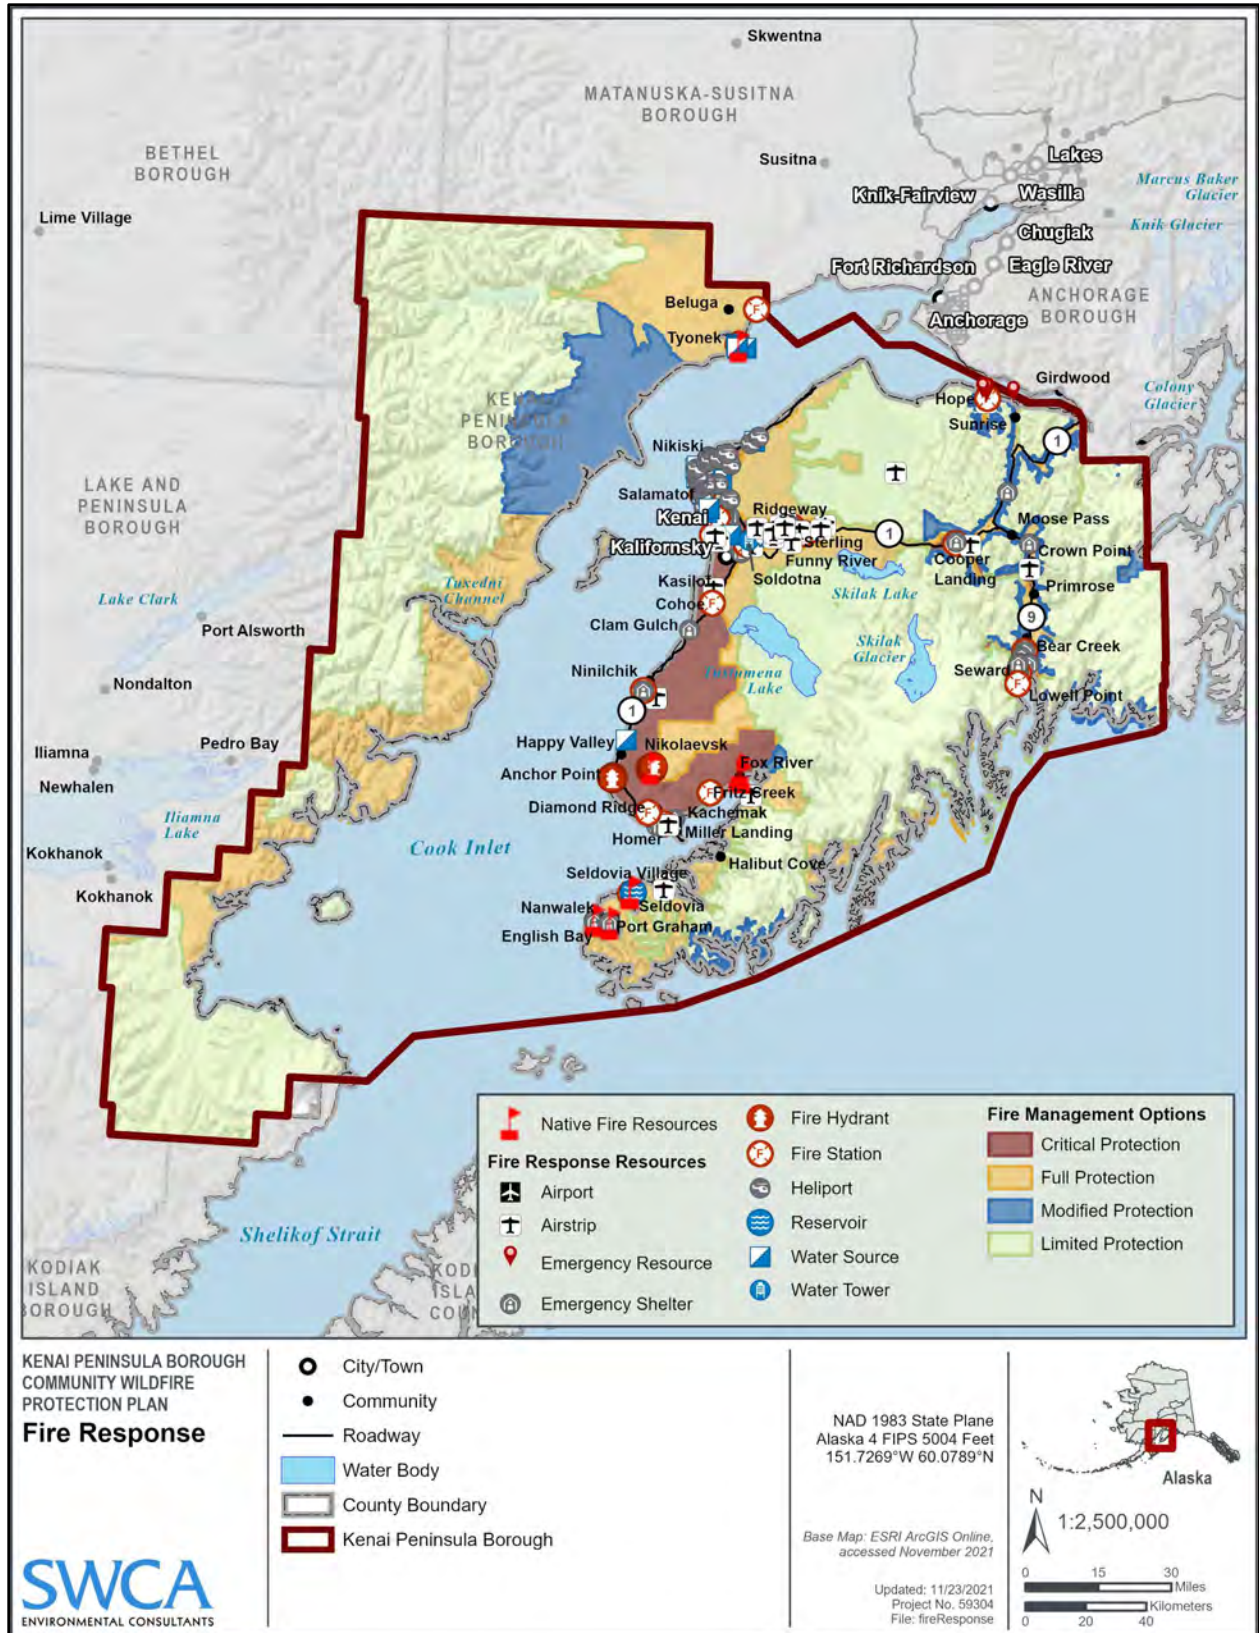

Figure 2.14. Fire management options and response resources.

LOCAL RESPONSE RESOURCES

Local Fire Departments

There are 15 fire departments, nine career and six volunteer-based, within the Borough serving a population of 58,799 people. Departments include KPB departments, volunteer departments, and regional departments, like the Central Emergency Services, which includes six stations and serves several communities. In addition to responding to calls for fire suppression, local fire departments respond to medical emergencies, incidents involving hazardous materials, rescue calls, and motor vehicle or other accidents. Due to the remote nature of some communities and varied road conditions, fire response on the peninsula can sometimes be more complicated than in other regions (Figures 2.15 and 2.16).

Figure 2.15. Narrow unpaved road that may make fire response difficult.

Figure 2.16. Very remote communities may be accessible only by ATV or UTV, requiring the fire departments to have suitable apparatus and equipment in order to serve these areas.

Volunteer and career firefighters at the community level have similar capabilities throughout the entire year, while state and federal responders are affected by fire season. In spite of the continuous level of capabilities, ebbs and flows occur within the volunteer service. Recruiting and retaining volunteers is challenging due to people's lifestyles and the training requirements one must follow to be a volunteer firefighter. Although several volunteer firefighters are present in the Borough, not all are available to respond to every fire.

The KPB's public information call center is managed by the Public Information Officer and overseen by the Incident Commander and/or the Emergency Management Director. For incidents that require coordination between two or more local jurisdictions, the KPB OEM is responsible for managing and coordinating those activities. The purpose of the call center is to ensure that adequate KPB emergency services, mainly its 911 center, remain in normal operations and are not hindered due to incident-specific traffic.

Incident Command Center

The KPB's public information call center is managed by the Public Information Officer and overseen by the Incident Commander and/or the Emergency Management Director. For incidents that require coordination between two or more local jurisdictions the KPB OEM is responsible for managing and coordinating those activities. The purpose of the call center is to ensure that adequate KPB emergency services, mainly its 911 center, remain in normal operations and are not hindered due to incident specific traffic. Public information and emergency notifications such as fire evacuation notices, tsunami warnings, volcano eruptions, and flood warnings are usually issued through the KPB Public Information Officer; if multiple agencies are involved in response activities, public information will be communicated through a Joint Information System/Center (JIS/C). The JIS/C is a coordinated effort between multiple emergency

response agencies (KPB 2020). Local firefighting capabilities, resources, and apparatus are described in detail in Appendix D.

STATE RESPONSE RESOURCES

Alaska Division of Forestry

The DOF's Fire and Aviation Program aims to provide safe, cost-effective, and efficient fire protection services and management on state, private, and municipal land, and land negotiated through agreement. By Alaska statute, the DOF, with support from local fire departments, is responsible for fire response and protection on state, private, and municipal land. In addition, the DOF provides fire protection services to Native Alaskan land through mutual aid agreements (AWFCG 2021). Under the "closest forces" principle, applying cooperative agreements, agencies are permitted to respond to fire events within their protection areas regardless of land ownership. This approach reduces response time and duplicated efforts, thereby increasing safety, effectiveness, and cost efficacy (KPB 2006a). The DOF is not bound by federal fire management policies on land under state jurisdiction (AWFCG 2021).

For most of the KPB, dispatch, coordination, and logistical support is provided via the Kenai-Kodiak Area Office in Soldotna (AICC 2021), which operates under the AICC. The Chugach National Forest Office serves the northeastern portion of the KPB, which also operates under the AICC. The AICC functions as the focal point for initial attack resource coordination and logistics support for all state and federal agencies involved in wildland fire management and suppression in Alaska. The AICC is a collaborative effort between various agencies, including the DOF, BLM, USFS, NPS, Bureau of Indian Affairs, and USFWS (AICC 2021).

Fire response resources within the Kenai-Kodiak Area Office include 12 seasonal fire technicians and one contract helicopter (from the third week of April through the first week of August).

Success in fire-suppression efforts is influenced by an effective initial response. In turn, the effectiveness of an initial response is determined by the level of training and experience of the labor force as well as the availability of firefighting equipment. The DOF attempts to train extra staff to respond during emergencies. Emergency firefighters are hired as needed to supplement the workforce in all aspects of firefighting duties. The DOF also aims to train sufficient emergency firefighters to keep a 16-person hand crew that is ready to immediately respond to wildland fires. Extra emergency firefighters are hired to serve as helitack or engine crewmen, aviation assistants, or warehouse employees during a wildland fire event (KPB 2006a).

The DOF usually contracts two air tankers in preparedness for the fire season. Air tanker support bases are typically located at the Palmer Airport and the Kenai Airport. The BLM in Fairbanks also contracts aircraft for dispatch to the KPB contingent on the statewide fire activity level. Additionally, on-call water-scooping air tankers may be operated out of the lakes on the KPB and the Cook Inlet. Other aerial firefighting resources include aircraft rental companies on the KPB, which may have available helicopters for helitack operations and water drops. Statewide tactical resources may be strategically positioned at the Kenai Airport base during periods of high fire danger (KPB 2006a).

Firefighting resources for the DOF include (DOF 2021a):

- Wildland Fire and Resource Technicians
- Division of Forestry Agency Fire Crews
- Pioneer Peak Interagency Hotshot Crew
- Gannett Glacier Type 2 Initial Attack Crew
- White Mountain Type 2 Initial Attack Crew
- Type 2 EFF Crews

- Support Positions
- Alaska Incident Management Teams
- Interagency Resources

TRIBAL RESPONSE RESOURCES

Under the ANCSA, the federal government is directed to provide wildland fire suppression on land conveyed to Native regional and village corporations. ANCSA [43 United States Code 1620(e)] provides for forest fire protection services from the United States at no cost to Native individuals or to Native groups, villages, and regional corporations organized under ANCSA, as long as there are no substantial revenues from such land (USFWS 2013).

Jurisdictional agencies have land management responsibility for a specified geographical area as designated by federal, state, or local law. Jurisdictional agencies are required to create and implement agency planning documents detailing wildland fire and fuels management programs at the unit level. In 1971, the ANCSA transferred 45 million acres to Native corporations. However, some lands are pending conveyance; jurisdiction for the pending lands remains with the federal government. Surface and subsurface jurisdiction for a parcel of land may differ. Generally, the surface jurisdiction is responsible for fire planning and management (AWFCG 2021).

Chugachmiut -Yukon Fire Crew

Chugachmiut is a non-profit Native tribal consortium serving the seven tribes of the Chugach region of Alaska. Chugachmiut has compacted the federal trust management responsibilities for Native allotments and Trust townsite lots in and around the communities of Nanwalek and Port Graham, Alaska. Chugachmiut has been involved in developing fire fuel breaks around Sterling, Soldotna, Kenai, Nikiski, Cooper Landing, and the Moose Pass area on Native corporation, USFS, USFWS, and various state and private lands, especially areas near or adjacent to Native land.

Chugachmiut started the Yukon Fire Crew, originally based out of McGrath, Alaska, in 2005. In 2009, the crew moved to Soldotna, Alaska, and have been fighting fire on the Kenai Peninsula ever since.

The Yukon Fire Crew is typically assembled between late May and October each fire season and is the only standing wildland fire crew located on the KPB. When not fighting fires, the crew spends time conducting hazard fuel mitigation projects, including the Funny River Fuel Break, the Sterling Fuel Break, hazard tree mitigation at the Russian River Campground, Firewise treatments on elders’ homes, and Firewise treatment on KPB schools.

FEDERAL RESPONSE RESOURCES

U.S. Department of Agriculture: U.S. Forest Service

The USFS is responsible for fire response on all National Forest land and grasslands. Overall, the USFS provides wildfire response and management for over 193 million acres of National Forest System land (CRS 2021).

Chugach National Forest

The USFS furnishes wildfire protection services for land and inholdings within the Chugach National Forest boundary. This may involve cooperative agreements with local volunteer fire departments for mutual aid support as well as local incident requests. The Chugach National Forest facilitates the coordination and exchange of personnel, equipment, supplies, and services in sustaining wildland fire management activities such as prevention, preparedness, communication and education, fuels treatment and hazard mitigation, fire planning, response strategies, tactics and alternatives, suppression, and post-fire rehabilitation and restoration.

Fire response within the Chugach National Forest is dispatched by the Chugach National Forest Office. The USFS maintains mutual aid agreements with the BLM and DOF (AWFCG 2021).

U.S. Department of the Interior: U.S. Fish and Wildlife Service and National Park Service

In 1974, the state of Alaska was required to assume wildland fire responsibilities according to the Statehood Act of 1959. At that time, state forestry operations encompassed a small group of personnel in the ADNOR, Division of Lands. Through an agreement with the federal government, Alaska assumed responsibility for south-central Alaska first and then expanded to cover all state land in the next 5 to 6 years. Following this shift in wildland fire responsibility, the Alaska State Legislature created the Division of Forest, Land and Water Management in 1978 and the Division of Forestry as a distinct management agency in 1981. The creation of these agencies coincided with the statewide agreement through which the BLM held responsibility for fire management north of the Yukon River and the state held responsibility for the southern portion of the state. In addition, the USFS held responsibility for fire management in national forest land. Through the agreement, the participating agencies opted to create fire management zones (full, critical, and limited protection) instead of suppressing all fires (Wahrenbrock 2022)

The BLM Alaska Fire Service is assigned the lead role as the Wildland Fire Protecting Agency for the USDI agencies in Alaska (USFWS 2013). The State of Alaska established a wildland fire suppression organization in the DOF and began to gradually assume suppression responsibilities in southwest Alaska, including the KPB, starting in the 1970s. The Master Agreement, with its exhibits, defines the roles and responsibilities of the jurisdictional and protection agencies, as well as operating procedures (USFWS 2013).

Kenai National Wildlife Refuge

The Kenai National Wildlife Refuge Fire Management Plan (USFWS 2013) guides all fire management operations on and for the refuge. The refuge is in the process of transitioning fire planning to a spatial format under the Wildland Fire Decision Support System. The fire management plan addresses a full range of potential wildfires and considers a full spectrum of tactical options (from monitoring to intensive management actions) for wildfires in order to meet Fire Management Unit objectives (USFWS 2013).

The DOF is the designated fire protection agency for the Kenai National Wildlife Refuge per the Master Agreement (AWFCG 2021). However, the refuge is responsible for collaboration with fire response and prevention activities. The Refuge Fire Management Officer is required to be available by phone or radio to respond to the DOF and other cooperating emergency management agencies at all times during fire season. In addition, qualified refuge staff commonly take part in prevention patrols during periods of high fire danger and will contribute to initial and extended attack suppression efforts on refuge fires (USFWS 2013).

Fire response in the refuge is dispatched and coordinated by the Kenai-Kodiak Area Office (USFWS 2013).

Kenai Fjords National Park

The DOF is responsible for fire protection in the Kenai Fjords National Park (KFNP) (AWFCG 2021), while the NPS manages the land (NPS 1984). Dispatch, coordination, and logistical support is provided via the Kenai-Kodiak Area Office (AICC 2021).

There is no existing fire management plan for the KFNP; this is because the NPS is required to have fire management plans only for parks with burnable vegetation (NPS 2021c). The KFNP is generally not vulnerable to severe fires; the glaciers, streams, and fjords serve as natural fire barriers (NPS 1984).

Lake Clark National Park and Preserve

The DOF is responsible for fire response in the Lake Clark National Park and Preserve (AWFCG 2021). However, the NPS is responsible for other fire management activities. NPS fire professionals and staff reduce the risk around park structures by clearing flammable vegetation. NPS personnel also monitor the impacts of fires. In addition, the NPS shares responsibilities with the DOF to protect life, property, and natural and cultural resources. They also collaborate with communities, and local, state, federal, and Native organizations to keep people and ecosystems healthy (NPS 2020b).

There is no current fire management plan for the Lake Clark National Park and Preserve. Fire response in the Lake Clark National Park is dispatched and coordinated by the Southwest District Office, which operates under the AICC (AICC 2021).

EVACUATION RESOURCES

The KPB OEM implements evacuation and communication plans for the KPB. The latest evacuation guide can be found here: <https://www.kpb.us/images/KPB/OEM/EOP/Annex1.pdf>

As part of emergency management protocols, the KPB has adopted the Ready, Set, Go! protocols for community evacuation: <http://kpboem.blogspot.com/2019/08/82619-cooper-landing-and-sterling.html>

The Kenai wildfire disaster preparedness webpage is here: <https://www.kpb.us/emergency-mgmt/disaster/fire>.

To increase public safety and awareness, tsunami evacuation signs are posted on evacuation routes throughout the peninsula (Figure 2.17). The OEM utilizes the Community Alert Network to telephone residents within a specified zone to convey evacuation procedures. The Community Alert Network can also dial emergency responders and assign tasks based on the results of an automated query. The OEM has pinpointed potential emergency shelters. However, emergency evacuation routes have not been designated due to the distinct nature of each wildfire event (Ecology and Environment 2006).

Figure 2.17. Tsunami evacuation signage in Lowell Point.

Livestock and Pets

Some homes on the KPB have horses and other large animals and livestock, and pets are common in homes throughout the planning area. In the event of a wildfire, it is important that residents and fire responders have a plan for evacuation of pets and livestock. Evacuation planning often neglects to

describe how animals will be evacuated and where they will be taken. The loading of horses, for example, during a fire and smoke situation, and transport of stock vehicles down narrow roads under stressful situations, can be very difficult.

The Borough recommends developing an emergency plan for animals, including a safe place to bring animals during an emergency, an emergency to-go kit with supplies such as food, water, medication, first aid kit, familiar items, and photographs in case residents and pets become separated (KPB 2021).

Kenai Pet Preparedness information is here: <https://www.kpb.us/emergency-mgmt/disaster/pets>

The Kenai Pet Plan checklist can be viewed here: https://www.kpb.us/images/KPB/OEM/Pet_Plan.pdf

There is a need to pre-identify where animals can be taken, such as using fairgrounds as a large animal shelter. Similarly, locations where small animals such as dogs and cats picked up in the fire area should also be pre-identified, as well as the lead agencies, such as humane societies, coordinating this work.

WATER AVAILABILITY AND SUPPLY

Water supply is variable around the Borough and may be provided by hydrants, wells, lakes, sprinklers, and pumps. Many rural and unincorporated communities lack water for fire suppression. Upgrades are currently being implemented in some communities, including installation of additional water lines and hydrants. Additional water storage is still needed in many areas.

In some cases, ponds and rivers are suitable alternatives for sources of water supply for suppression.

Limited water supply can impact Insurance Services Office (ISO) ratings for fire departments, so improvements to water infrastructure have been identified as a priority for this CWPP update. The hydrant location dataset for the KPB is incomplete, and therefore, mapping is necessary in this CWPP update.

PUBLIC EDUCATION AND OUTREACH PROGRAMS

Public education and outreach programs are a common factor in virtually every agency and organization involved with the wildfire issue. Detailed information on these programs is provided in Appendix A.

This page intentionally left blank.

CHAPTER 3 – WUI HAZARD AND RISK ASSESSMENT

PURPOSE

The WUI hazard and risk assessment for the CWPP is based on the Chugach All-Lands Wildfire Risk Assessment (known as ARRA), developed between 2019 and 2021 by Pyrologix, under contract to the USFS.¹ The purpose of the ARRA is to provide foundational information about wildfire hazard and risk to highly valued resources and assets (HVRAs) for the Chugach National Forest and surrounding areas in south-central Alaska (Pyrologix 2021). The ARRA provides a quantitative analysis of the assets and resources across the landscape and how they are potentially impacted by fire. The analysis is described in detail in the final ARRA report, but in summary it considers (Pyrologix 2021):

- Likelihood of fire burning
- Intensity of a fire
- Exposure of assets and resources based on their locations
- Susceptibility of those assets and resources to wildfire

The assessment defines assets as “human-made features, such as commercial structures, critical facilities, housing etc., that have specific importance or value”, while resources are defined as “natural features such as wildlife habitat, vegetation type, or water, that also have specific value or importance” (Pyrologix 2021).

The ARRA is based on a risk modeling framework that is a function of two main factors: 1) wildfire hazard and 2) HVRA vulnerability (Figure 3.1).

¹ ARRA is an acronym for the original title of the project – Alaska Region Risk Assessment (Pyrologix 2021).

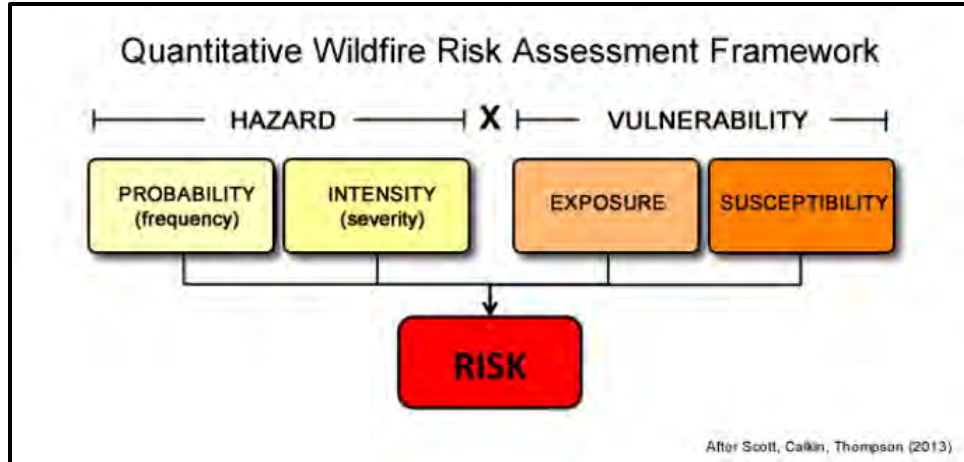

Figure 3.1. The components of the QWRA framework used for the ARRA.

Source: Pyrologix (2021)

Wildfire hazard under the QWRA framework is measured by burn probability (likelihood of burning) and fire intensity (flame length, fireline intensity, etc.) (Thompson et al. 2013). Vulnerability to identified HVRAs is composed of exposure and susceptibility. Exposure is the placement of an HVRA in a hazardous environment (e.g., a home in a flammable landscape), and susceptibility is how easily an HVRA is damaged by wildfire (e.g., some homes or structures might be hardened to mitigate wildfire damage).

The ARRA assessment is a tool that allows land use managers, fire officials, planners, and others to identify high-risk/hazard areas on the landscape and prepare strategies and methods for reducing the threat of wildfire, as well as work with community members to educate them about methods for reducing the negative consequences of fire.

The QWRA framework and the ARRA process is described in detail in the ARRA report (located in Appendix B). The following provides a synopsis of some of the main features of the report that are pertinent to the CWPP.

RISK ASSESSMENT COMPONENTS

The ARRA uses the FSim large-fire simulator to quantify the likelihood of a large fire (a fire that would grow to over 100 acres) occurring across the Analysis Area based on current fuelscape and historical weather conditions (Finney et al. 2011; Pyrologix 2021).

FUELSCAPE

The fuelscape represents the vegetative fuels and topography across the analysis area. Several geospatial datasets comprise the fuelscape, including fuel models, canopy characteristics of trees and other vegetation, and topographical characteristics. A significant degree of data compilation occurs during development of the fuelscape, as well as calibration to address disturbances from recent wildfires, mortality resulting from insect and disease, wind damage, and mechanical or prescribed fire treatments. The fuelscape development also integrated findings from the Kenai Peninsula Vegetation Mapping project, which provided information on tree cover and vegetation height.

WILDFIRE OCCURRENCE

Wildfire occurrence across the analysis area was based on data gathered from the Fire Occurrence Database for a period from 1992 through 2017. The analysis focuses only on historic fires that grew to over 100 acres. These data are used in FSim to generate the most accurate estimate of wildfire likelihood.

HISTORICAL WEATHER

FSim incorporates weather inputs for wind speed, fuel moistures, and Energy Release Component collected from Remote Automated Weather Stations (RAWS) located throughout the analysis area.

WILDFIRE SIMULATION

Figure 3.2 shows the components that go into the wildfire simulation and outputs of those simulations in FSim.

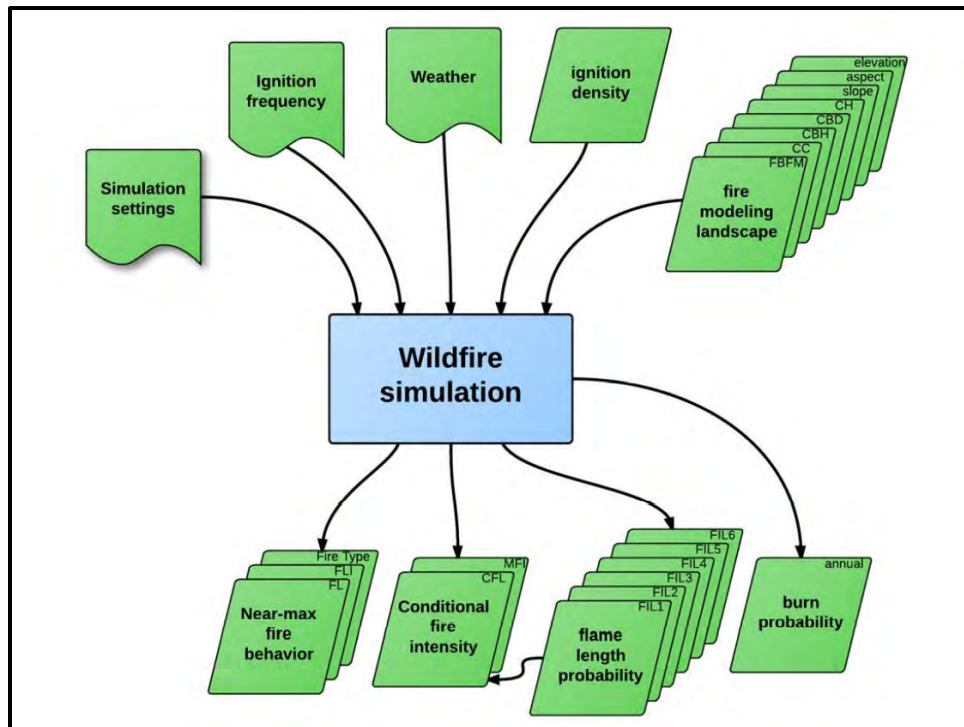

Figure 3.2. The primary elements used to derive burn probability in FSim.

Source: Pyrologix (2021)

HVRA CHARACTERIZATION

HVRAs are the resources and assets on the landscape most likely to warrant protection if found to be at risk of wildfire (Pyrologix 2021). The identification and compilation of HVRAs was a collaborative effort by stakeholders in the region. In order to be included in the ARRA, an HVRA must be of greatest importance to the region, the spatial data must be readily available, and the spatial extent of the identified HVRA

must be complete (Pyrologix 2021). Eleven HVRA were selected for the ARRA under the major categories of people and property, infrastructure, carbon, and watershed (Table 3.1). Each HVRA selected is also assigned a response function, meaning how that HVRA responds to wildfire, whether positive or negative.

Table 3.1. HVRA and sub-HVRA identified for the ARRA

HVRA & Sub-HVRA	Data Source
People and Property	
People and Property	Represents housing unity density data produced by Pyrologix using the building footprints and U.S. Census - Census Block population data. Data depicting building locations was provided by Chugach NF and adjusted by Pyrologix.
Native Allotments	The data was provided by the Bureau of Land Management, Alaska State Office, representing areas designated as 'Conveyed Native Allotments' within Alaska.
Infrastructure	
Electric transmission lines – high & low voltage	The provided linear features represent electric power transmission lines. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Communication Sites	Data represents the location of communication sites. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Power: Power Plants & Substations	The provided data represents the locations of power plants and substations. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Oil & Gas Wells	The data contains the location of surface wells & structures. Well locations were limited to those designated as active wells; structures were limited to items designated as oil/gas buildings. Data was provided by Chugach NF.
Pipelines	The data depicts pipeline locations in Alaska as digitized from USGS maps. Ancillary source documentation was provided by the AK DNR and used as necessary for updates.
Fish Hatcheries	These sport subsistence sites represent the known locations of sport and commercial fish rearing facilities (commercial salmon fishery) located in Southcentral AK. Data was provided by Chugach NF.
Recreation & Administrative Sites	The data contains the locations of administrative buildings, offices, recreation sites, and service/utility structures on lands owned by Alaska State Parks, USDA (Forest Service) lands, and the National Park Service. Data was provided by Chugach NF.
Carbon	
Carbon Credits	Mapped areas represent forested land used in carbon trading markets and identify areas of biomass (forest) marketable as carbon credits. Data provided by Chugach NF.
Watershed	
Critical Watersheds	Surface drinking water protection areas (Zone C, G boundaries) were delineated from local topography and anticipated effects on the drinking water source intake. Data provided by Chugach NF and Alaska DEC Open Data.

Source: Pyrologix (2021)

During the stakeholder workshops, each HVRA was also assigned a relative importance or rank (Figure 3.3). Each HVRA and sub-HVRA, and its response function and relative importance, is described in detail in Section 3.4 of the ARRA report. That section describes the impacts that might occur to each HVRA as a result of varying levels of fire intensity (based on modeled flame length). Some HVRA are expected to experience increasing potential loss with increasing fire intensities; for example, recreation and administrative sites are vulnerable to higher flame lengths, and therefore, the negative response function increases with flame length. Other HVRA that are more hardened to wildfire with established defensible space (for example, oil well pads) have a very low response to fire and low potential loss. Forested carbon sequestration areas are susceptible to wildfire and therefore exhibit a strong negative response and potential loss at fire intensities over 8 feet.

Sometimes, within HVRA there may be varying response functions based on the sub-HVRA type; for example, low-voltage power distribution lines constructed with wooden poles have a higher potential loss from fire compared with higher-voltage transmission lines that are constructed on metal pylons. Drinking water protection areas and their associated water facilities contributed 11% to the overall relative importance in the ARRA, demonstrating the importance that this resource has to communities. At high wildfire intensities, these resources have a very high potential for loss due to the potential post-fire impacts on the watershed.

Figure 3.3. Overall HVRA relative importance included in the ARRA.

Source: Pyrologix (2021)

RISK ASSESSMENT RESULTS

The ARRA describes wildfire risk based on the conditional and expected change in value from wildfire disturbance to all HVRA included in the analysis. The expected net value change (eNVC) has the added utility that it captures the relative likelihood of wildfire disturbance (burn probability), and therefore is the metric that is included in the CWPP. Burn probability is illustrated in Figure 3.4.

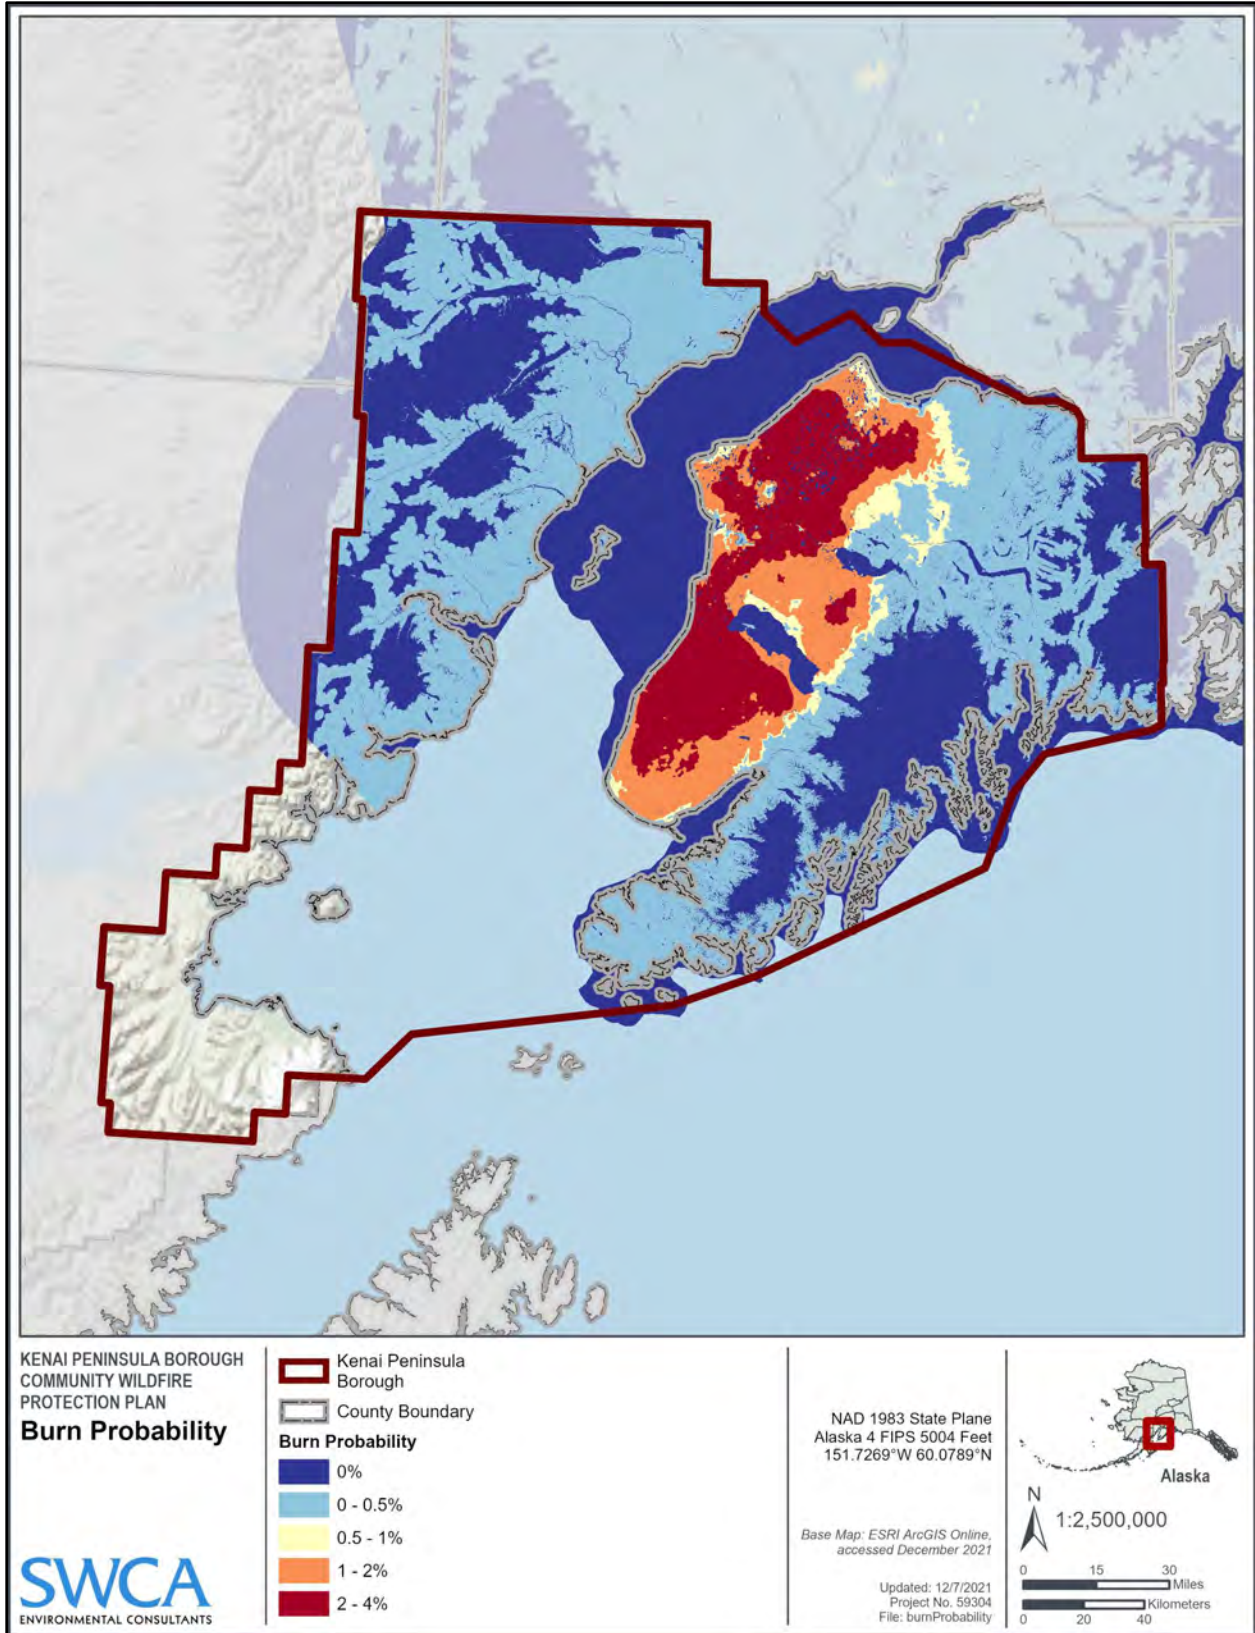

Figure 3.4. Map of integrated FSim burn probability.

Source: Pyrologix (2021)

Cumulative effects of wildfire across the landscape vary by HVRA, with a net negative eNVC for all the HVRAs. People and property show the greatest cumulative wildfire losses, followed by infrastructure, drinking water, and carbon as the HVRAs with the greatest cumulative risk (Pyrologix 2021) (Figure 3.5). Figure 3.6 illustrates the spatial spread of negative outcomes to HVRAs based on the likelihood of an HVRA being impacted by fire (burn probability).

Figure 3.5. Weighted net response for HVRAs in the assessment listed in order of net value change and scaled to eNVC values for the people and property HVRA.

Source: Pyrologix (2021)

The ARRA assessment also provides an assessment of mean eNVC on a watershed scale (Figure 3.7). This metric can help to prioritize mitigation actions across the landscape by showing which watersheds house HVRAs that could experience the greatest potential loss.

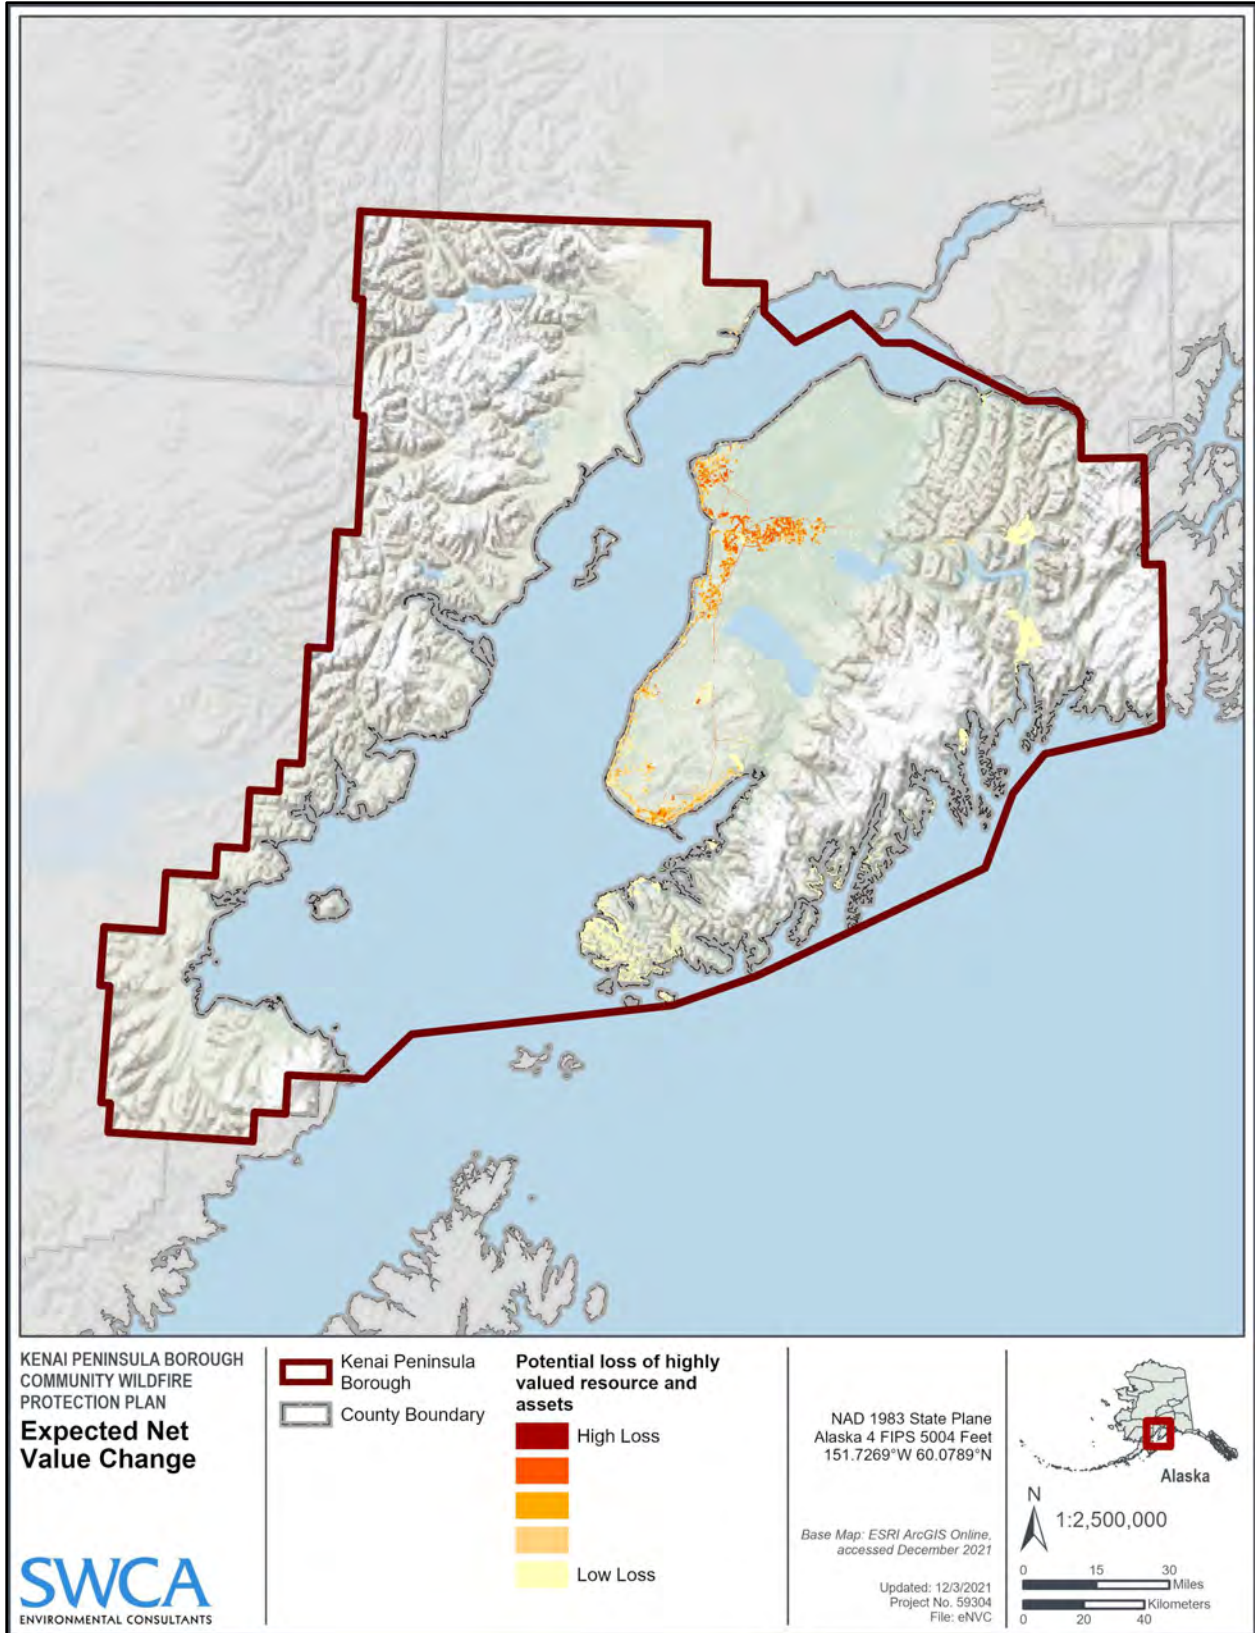

Figure 3.6. Map of eNVC for the KPBC CWPP portion of the ARRA analysis area.

COMMUNITY ASSESSMENTS

In order to properly assess the hazards in and around the Kenai Peninsula communities, a team from SWCA conducted community assessments in summer 2021 using the NFPA Wildland Fire Risk and Hazard Severity Form 1144 (Appendix E). This form is based on the NFPA Standard for Reducing Structure Ignition Hazards from Wildland Fire 2013 Edition. The NFPA standard focuses on individual structure hazards and requires a spatial approach to assessing and mitigating wildfire hazards around existing structures. It also includes ignition-resistant requirements for new construction and is used by planners and developers in areas that are threatened by wildfire and is commonly applied in the development of Firewise Communities (for more information, see www.firewise.org).

Each area was rated based on conditions within the community and immediately surrounding structures, including access, adjacent vegetation (fuels), defensible space, adjacent topography, roof and building characteristics, available fire protection, and placement of utilities. Where a range of conditions was less easily parsed out, a range of values was assigned on a single assessment form. Each score was given a corresponding adjective rating of low, moderate, or high. An example of the assessment form used in this plan is in Appendix E.

The purpose of the community WUI assessment and subsequent hazard ratings is to identify fire hazard and risks and prioritize areas requiring mitigation and more detailed planning. These assessments should not be seen as tactical pre-suppression or triage plans. The community assessment helps to drive the recommendations for mitigation of structural ignitability, community preparedness, and public education. The assessment also helps to prioritize areas for fuels treatment based on the hazard rating. The hazard ratings from the community assessment and the GIS hazard/risk assessment are provided in Appendix D.

Figure 3.8. Example of yard debris, a common finding of the 1144 assessments.

COMMUNITY VALUES

The ARRA incorporated data compilation of several HVRAs across the peninsula. In addition to those datasets, during CWPP meetings, the public and Core Team were invited to share their lists of resources and assets that they value in and around their communities, so that those resources could be integrated into development of mitigation measures (Figures 3.9 and 3.10). In addition to critical infrastructure, these community values can also include natural, social, and cultural resources.

During discussions with the Core Team and public, it became evident that wildlife resources are incredibly important to residents and to agencies entrusted with the management of public lands. However, due to complexities inherent in the risk assessment process (Pyrologix, 2021), wildlife resources were not integrated into the ARRA specifically. In order to acknowledge the importance of wildlife and integrate those values into the CWPP planning process, the Core Team considered these resources during the development of the project recommendations, for example developing recommendations to align hazardous fuels treatments with projects that provide mutual benefit for wildlife habitat improvement, and ensuring that projects to mitigate fuels are implemented in a way that is sensitive to wildlife protection measures.

It is important to note that, although an identification of valued resources and assets can inform treatment recommendations, a number of factors must be considered in order to fully prioritize areas for treatment; these factors include appropriateness of treatment, land ownership constraints, locations of ongoing projects, available resources, and other physical, social, or ecological barriers to treatment.

The scope of this CWPP does not allow determination of the absolute natural, socioeconomic, and cultural values that could be impacted by wildfire in the planning area. In terms of socioeconomic values, the impact due to wildfire would cross many scales and sectors of the economy and call upon resources locally, regionally, and nationally.

During discussions with the Core Team and public, it became evident that wildlife resources are incredibly important to residents and to agencies entrusted with the management of public lands. However, due to complexities inherent in the risk assessment process (Pyrologix,

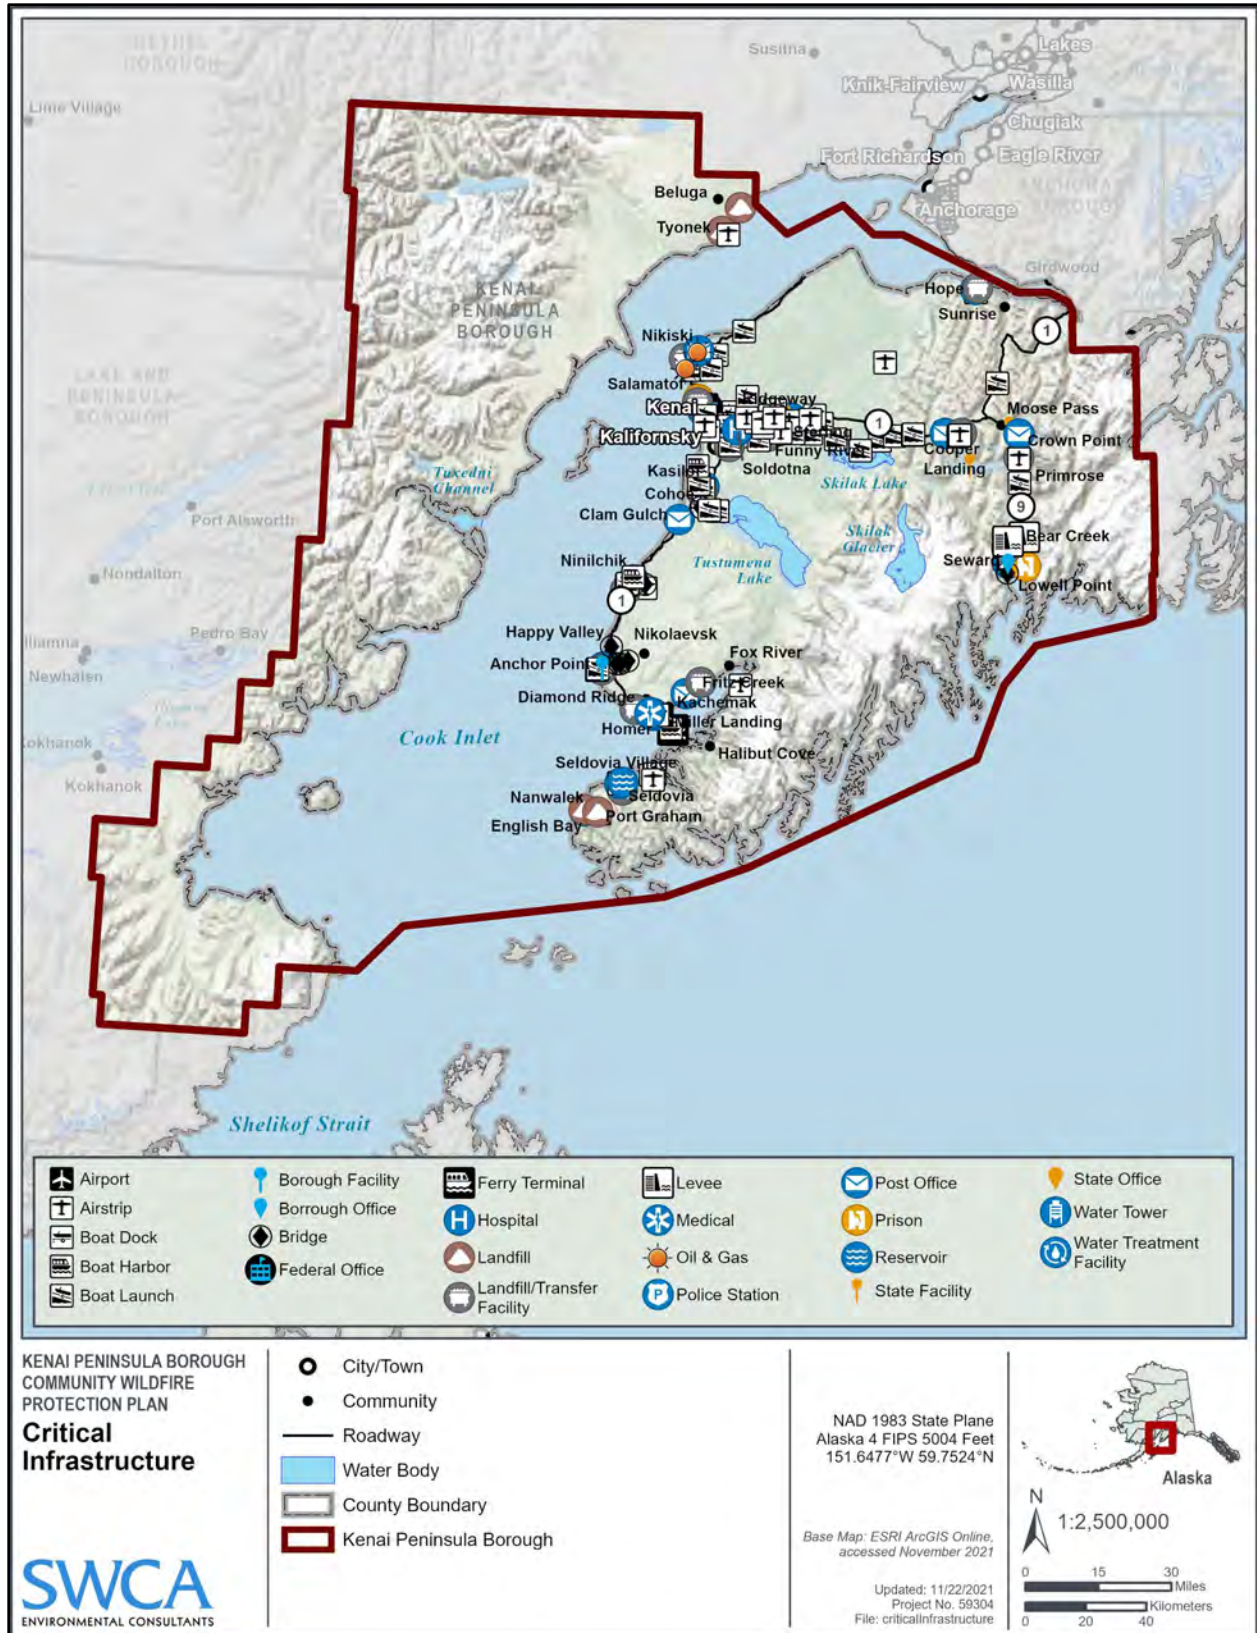

Figure 3.9. Critical infrastructure.

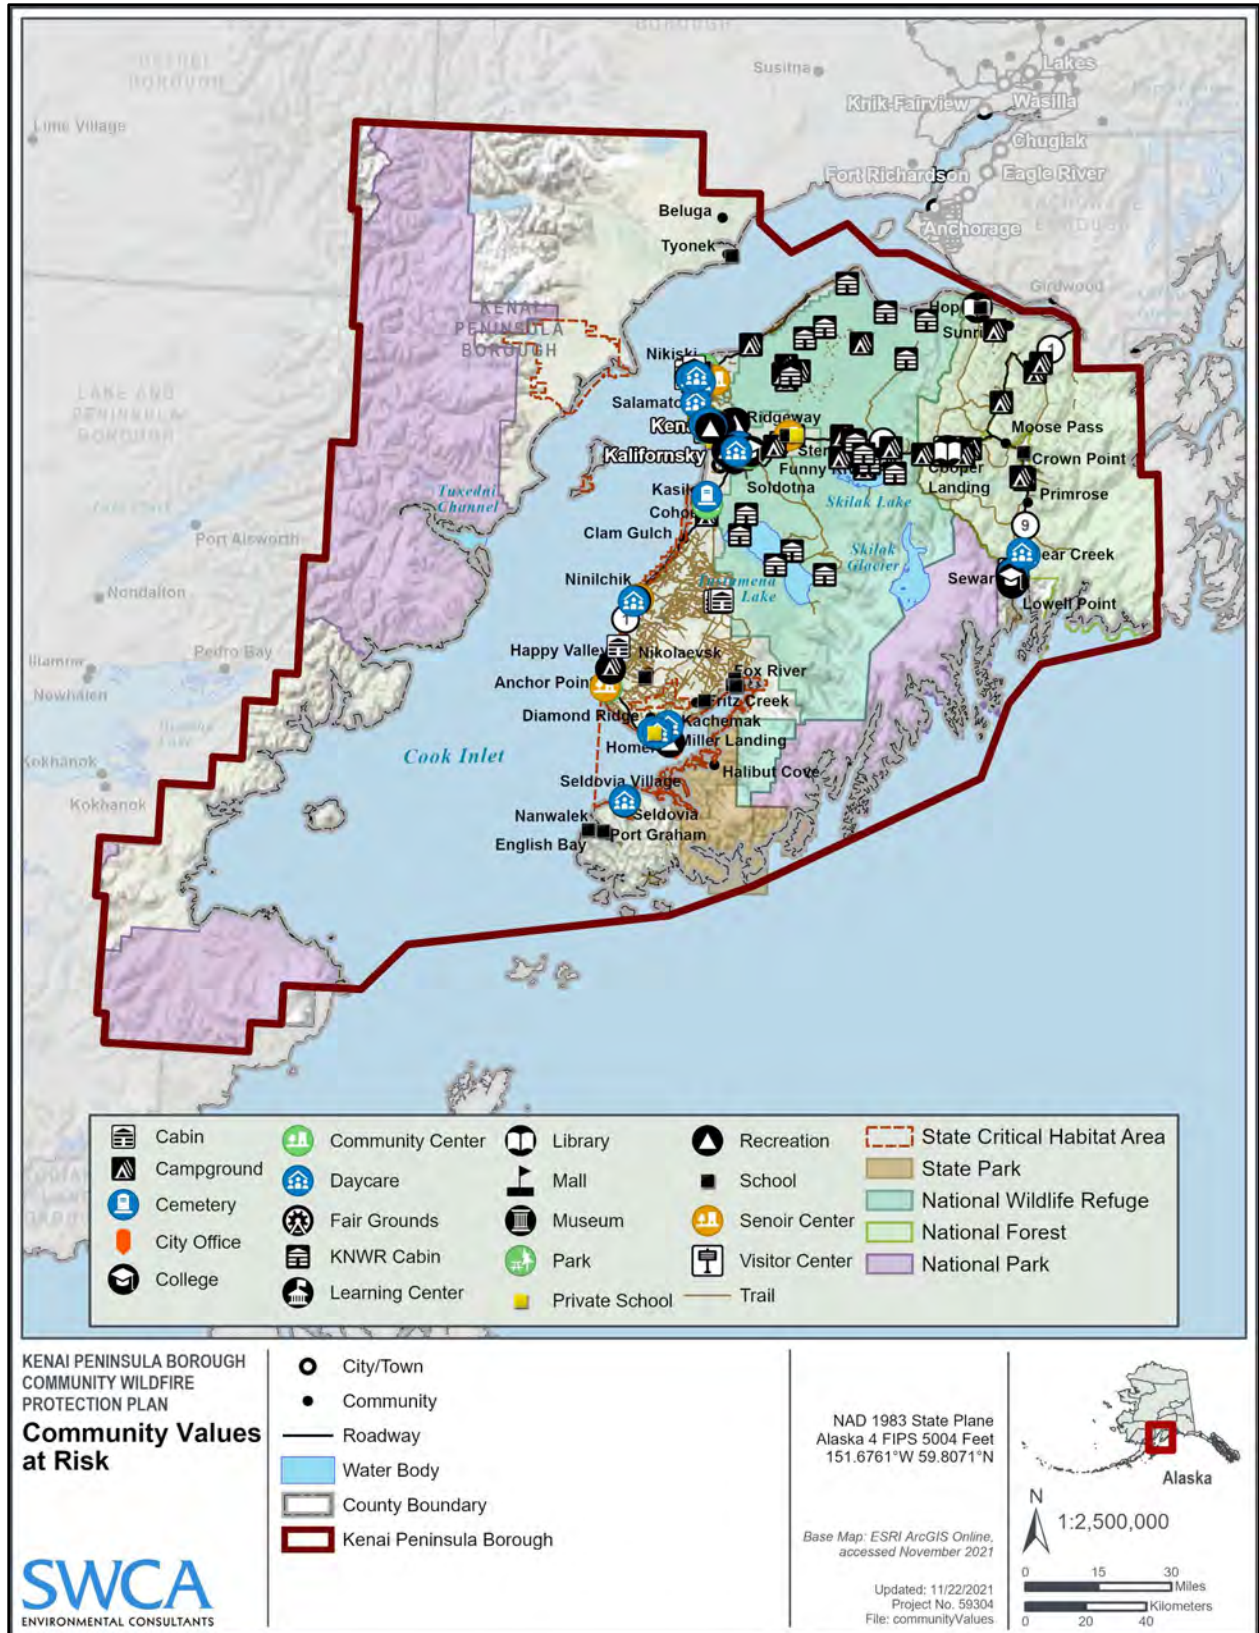

Figure 3.10. Community values across the Kenai Peninsula.

NATURAL VALUES

The CWPP planning area has a variety of natural resources of particular concern to land managers, such as rare habitats and listed plant and wildlife species. Public outreach throughout the planning area has emphasized the importance of natural/ecological values to the general public. As discussed previously, the integration of valued natural resources (especially wildlife and watershed health) into the CWPP planning process was an important component in the development of the CWPP recommendations.

Examples of natural values identified by the public and the Core Team include the following:

- Public land
- Hunting areas
- Watersheds and water quality
- Agricultural land
- Forest land
- Wildlife habitat and game species (Figure 3.11)

Figure 3.11. Example of natural values, wildlife species

SOCIOECONOMIC VALUES

Socioeconomic values include population, recreation, infrastructure, agriculture, and the built environment. Much of the built environment in the planning area falls within the WUI zones that comprise the community assessments (Appendix D). Examples include the following:

- Pipelines
- Utility facilities
- Tourism (Figure 3.12)
- Staging areas
- Docks and barge landings
- Highways and road systems
- Medical facilities
- Schools
- Water storage
- Fire departments
- Recreation sites

Figure 3.12. Example of a socioeconomic value, a café in a historic building.

CULTURAL VALUES

Many historical landmarks are scattered throughout the planning area. Particular cultural values that have been identified by the Core Team and the public in the CWPP planning area are the following:

- Pit houses
- Gathering centers (e.g., Tribal center)
- Village corporations
- Archeological resources
- Village cemetery
- Coastal fishing camps
- Churches (Figure 3.13)
- Shirley Lodging Facility

Figure 3.13. Example of a cultural value, a church

In developing this KPB-wide CWPP, the plan has been aligned with the Cohesive Strategy and its Phase III Western Regional Action Plan by adhering to the nationwide goal “to safely and effectively extinguish fire, when needed; use fire where allowable; manage our natural resources; and as a Nation, live with wildland fire” (Forests and Rangelands 2014:3).

In order to do this, the CWPP recommendations have been structured around the three main goals of the Cohesive Strategy: restoring and maintaining landscapes, fire-adapted communities, and wildfire response.

This chapter provides guidance for implementing recommendations under each Cohesive Strategy goal. Recommendations were developed based on input from Core Team, Tribal, and stakeholder meetings, including a unique stakeholder group focused on strategic infrastructure (see Strategic Infrastructure Recommendations, Appendix I, for more recommendations related to infrastructure resilience).

Many of these community-specific recommendations can be implemented at the homeowner or community level. Projects requiring large-scale support should be prioritized based on the ARRA developed for the Borough.

COHESIVE STRATEGY GOAL 1: RESTORE AND MAINTAIN LANDSCAPES

Goal 1 of the Cohesive Strategy and the Western Regional Action Plan is Restore and Maintain Landscapes: Landscapes across all jurisdictions are resilient to fire and other disturbances in accordance with management objectives.

“Sustaining landscape resiliency and the role of wildland fire as a critical ecological process requires a mix of actions that are consistent with management objectives. The West will use all available methods and tools for active management of the landscape to consider and conserve a diversity of ecological, social, and economic values. The West will coordinate with all partners and seek continued stakeholder engagement in developing market-based, flexible

and proactive solutions that can take advantage of economies of scale. All aspects of wildland fire will be used to restore and maintain resilient landscapes. Emphasis will be placed on protecting the middle lands near communities.” (Western Regional Strategy Committee 2013:14).

Strategic actions listed within the ALAH Action Plan to serve the goal of **restoring and maintaining landscapes include** (KPB Interagency 2018):

- Develop methods to assist and inform private landowners with managing fuels.
- Promote prescribed fire certification and training to provide safe use of fire.
- Promote landscape-scale fuels management activities, such as prescribed fire and wildland fire, that address the creation and maintenance of resilient landscapes.
- Include fuels reduction and fire risk management activities into existing and future land management programs.
- Promote cost-effective, active forest management.

Forest managers in the region are addressing land management objectives through the use of mechanical and manual treatments to promote more resilient forest land. Figure 4.1 illustrates ongoing fuels management on the peninsula. Private, state, and federal lands are interspersed, creating a matrix of land ownership, which is often a hurdle to implementation of landscape-level treatments. By working with private landowners, forest managers are enhancing landscape-scale efforts to create more resilient forest communities. In this CWPP, recommendations to restore and maintain landscapes focus on vegetation management and hazardous fuel reduction.

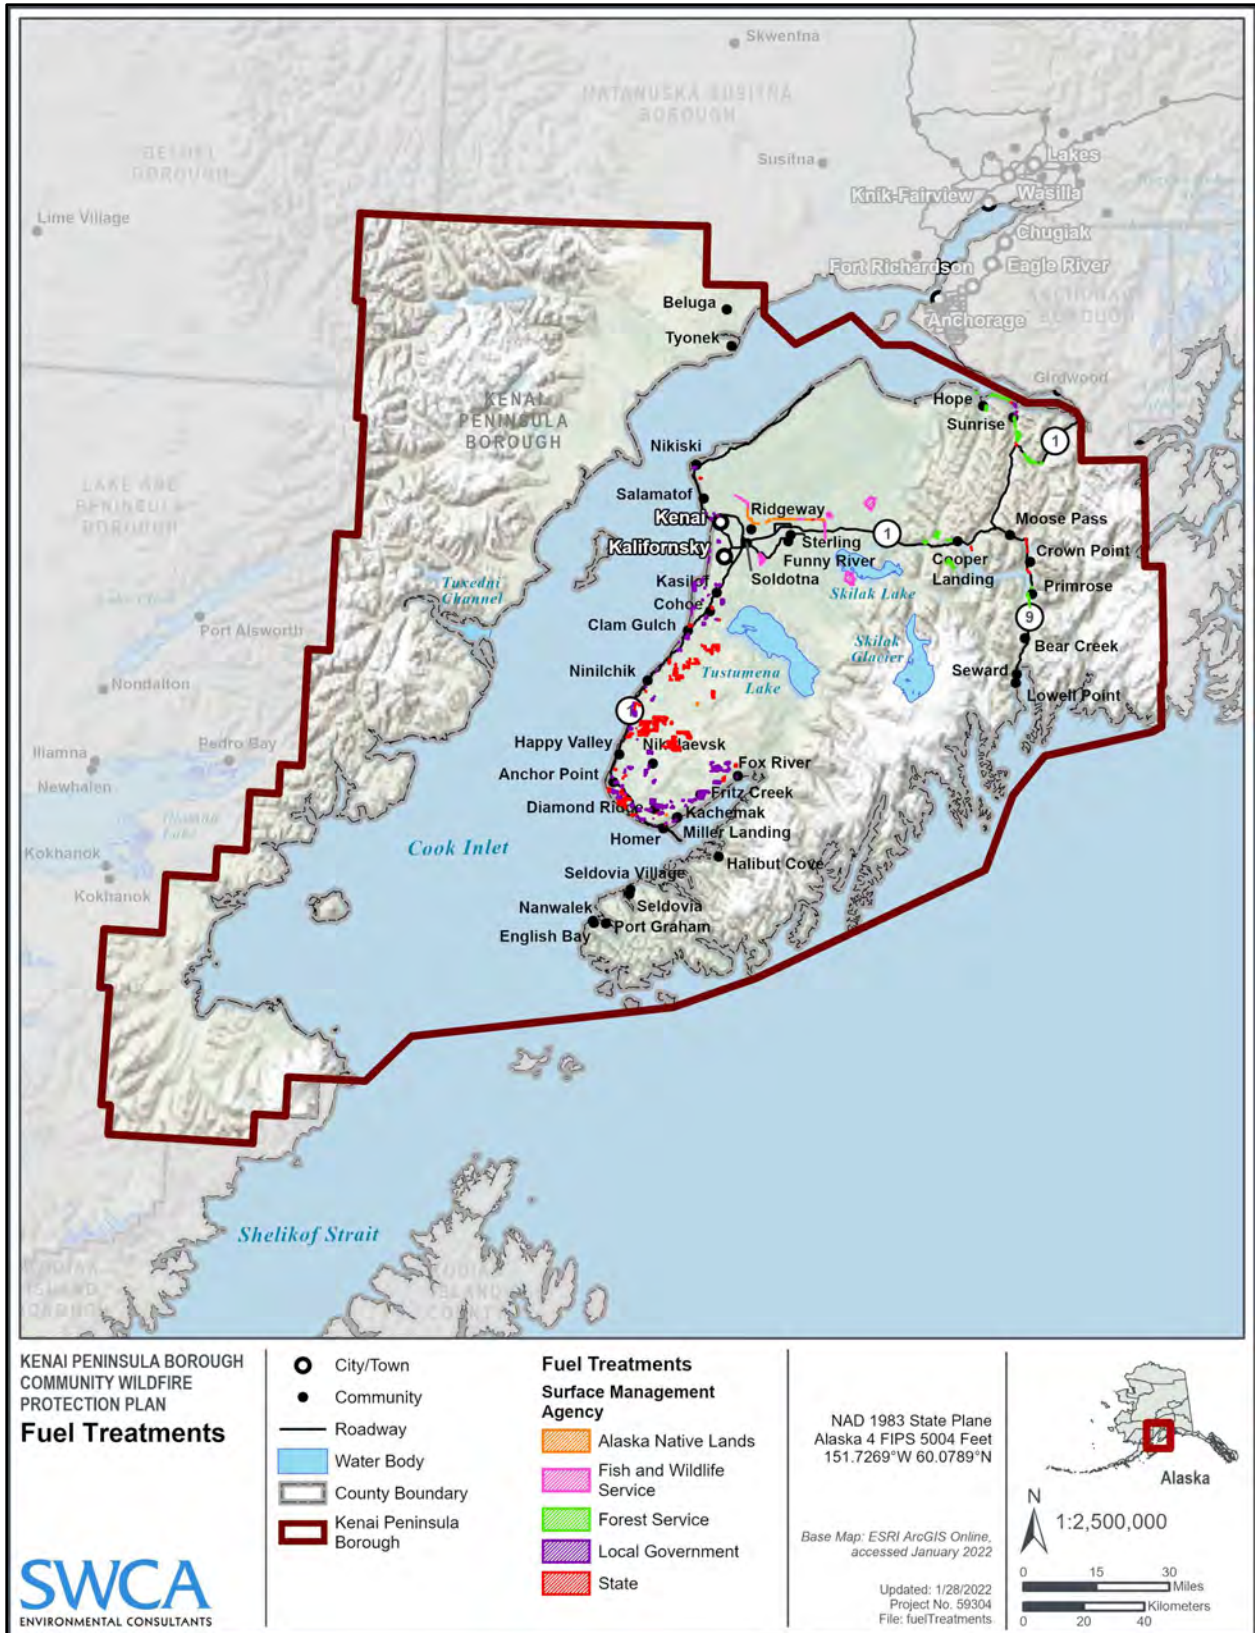

Figure 4.1. Ongoing fuel treatments implemented across the peninsula.

RECOMMENDATIONS FOR HAZARDOUS FUEL REDUCTION

Fuels management of public and private land is key to the survival of structures during a wildfire event, as well as the means to meet the criteria of Goal 1, creating resilient landscapes. As wildfire frequency, size, destruction, and restoration costs have been on an incline, the need for wildfire mitigation via fuels treatment is at an all-time high (UAF 2018). The importance of fuels management is reflected in forest policy at the federal level, with the HFRA requiring that federal land management agencies spend at least 50% of their fuels reduction funds on projects in the WUI. In addition, various Alaskan studies have proven the success of fuels treatments regarding mitigating wildfire intensity and damage (UAF 2018).

A case study done in 2014 during the Funny River Fire concluded that fuel treatments were imperative in preventing fire spread. In addition, field samples and photographic evidence from the Eagle Trail (2010), Funny River (2014), Card Street (2015), and Nenana Ridge (2009 and 2015) Fires indicate fuel treatments resulted in lower fire behavior, increased accessibility, and decreased visual obstructions (due to fuel treatments such as canopy thinning). Furthermore, those treatments gave firefighters the ability to use treatments, such as fuel breaks, to anchor backfiring operations and burn out other treated areas (UAF 2018). Of the documented cases described in UAF (2018), all showed that fuel breaks in Alaska significantly alter fire behavior; fires in untreated areas grew to active crown fires, then dropped down to surface fire in the treated areas. However, fuel breaks alone may not stop a fire from advancing, so it is important to integrate multiple treatment methods (UAF 2018).

Fuels should be modified with a strategic approach across the planning area to reduce the threat that high-intensity wildfires pose to lives, property, and other values. Pursuant to these objectives, recommendations have been developed in the context of existing and planned fuels management projects. These recommendations initially focus on areas adjacent to structures (defensible space), then near community boundaries (fuel breaks, cleanup of adjacent open spaces), and finally in the wildlands beyond community boundaries (larger-scale forest health and restoration treatments).

While not necessarily at odds with one another, the emphasis of each of these treatment types is different. Proximate to structures, the recommendations focus on reducing fire intensity consistent with Firewise. Further into open space areas, treatments will tend to emphasize forest health and increasing resiliency to catastrophic wildfire and other disturbances, including SBB infestation. Cooperators in fuels management should include federal, state, and local agencies as well as interested members of the public. Federal land management plans focus on these more landscape-level treatments, so the CWPP incorporates most federal land management by reference to those land management planning documents. The CWPP focuses primarily on projects within or adjacent to WUI areas.

Table 4.1 summarizes the types of treatments recommended throughout the planning area, and Figure 4.3 delineates areas of concern where treatments should be prioritized. These areas of concern were delineated collaboratively during the fourth Core Team meeting and were identified based on stakeholder knowledge, an intention to connect new proposed treatments to existing treatments (as illustrated in Figure 4.1), and the ARRA findings related to potential loss as a consequence of modeled extreme fire behavior. Areas projected in ARRA to have the greatest potential loss (eNVC) include HVRAs that are susceptible to intense wildfire behavior. Many of these areas are close to communities due to the density of HVRAs in those areas. These areas are delineated as areas of concern in Figure 4.3 so that land managers can prioritize fuel mitigation treatments to protect HVRAs.

It is recommended that treatment plans be developed to execute mitigation measures in these areas. Treatment types will be site specific but should address a need to slow fire spread or mitigate potential extreme fire behavior parameters, such as high flame lengths or fireline intensity.

Many of these treatment recommendations in Table 4.1 are general and apply to many communities because similar conditions and concerns were raised for all communities that border wildland areas. Community-specific recommendations can be found in Appendix D, Community Descriptions. Table 4.1 also addresses the requirement for an action plan and assessment strategy by providing monitoring guidelines and a timeline for implementation. This timeline is obviously dependent on available funding and resources, as well as National Environmental Policy Act (NEPA) protocols for any treatments pursued on public land.

The treatment list is by no means exhaustive and should be considered a sample of projects for the future management of the planning area. Many projects may be eligible for grant funds available from federal and/or state sources. A key source of funding for implementing hazardous fuel reduction are funds available through the Western Regional Action Plan, which is the reason this CWPP tiers to those goals. Because much of the wildfire risk is associated with extreme volumes of SBB infested, dead and dying trees, securing funding to address the ongoing outbreaks in these forests should be a significant focus for land managers. For an additional list of funding sources, please refer to Appendix F.

Each land management agency has a different set of policies governing the planning and implementation of fuels reduction projects. A thorough assessment of current fuel loading is an important prerequisite for any fuels prescription (see Figure 4.2 for an example of fuel loading), and all treatment recommendations should be based on the best possible science. When possible, simultaneously planning for the management of multiple resources (for example wildlife habitat improvements or watershed health initiatives) while reducing fuels will ensure that the land remains viable for multiple uses in the long term. The effectiveness of any fuels reduction treatment depends on the degree of maintenance and monitoring that is employed. Monitoring will also ensure that objectives are being met in a cost-effective manner.

Fire management cannot be a one-size-fits-all endeavor; this plan is designed to be flexible. Treatment approaches and methods will be site-specific and should be adapted to best meet the needs of the landowner and the resources available. Moreover, each treatment recommendation should address protection of valued resources and assets, particularly the protection of threatened and endangered species. Specifically, impacts to anadromous waters should be considered when designing site-specific fuel treatments.

Fuels Treatment Scales

Defensible Space

Defensible space is perhaps the fastest, most cost-effective, and most efficacious means of reducing the risk of loss of life and property. Although fire agencies can be valuable in providing guidance and assistance, creating defensible space is the responsibility of the individual homeowner (Figure 4.4).

Figure 4.4. Defensible space providing clearance between a structure and adjacent woodland or forest fuels.

Source: [Alaska Firewise](#)

Effective defensible space consists of creating an essentially fire-free zone adjacent to the home, a treated secondary zone that is thinned and cleaned of surface fuels, and (if the parcel is large enough) a transitional third zone that is basically a managed forest area. These components work together in a proven and predictable manner. Zone 1 keeps fire from burning directly to the home; Zone 2 reduces the adjacent fire intensity and the likelihood of torching, crown fire, and ember production; and Zone 3 does the same at a broader scale, keeping the fire intensity lower by maintaining a more natural, historic condition (Figures 4.4 and 4.5).

Figure 4.5. Defensible space zones.

Source: www.firewise.org.

Three zones for defensible space actions are described below:

Zone 1: This zone, which consists of an area of 0 to 30 feet around the structure, features the most intense modification and treatment. This distance is measured from the outside edge of the home's eaves and any attached structures, such as decks. Do not plant directly beneath windows or next to foundation vents. Frequently prune and maintain plants in this zone to ensure vigorous growth and a low growth habit. Remove dead branches, stems, and leaves. Do not store firewood or other combustible materials in this area. Enclose or screen decks with metal screening. Extend gravel coverage under the decks. Do not use areas under decks for storage. Prune low-lying branches (ladder fuels that would allow a surface fire to climb into the tree) and any branches that interfere with the roof or are within 10 feet of the chimney. In all other areas, prune all branches of shrubs or trees up to a height of 10 feet above ground (or one-third the height, whichever is the least).

Zone 2: This zone features fuel reduction efforts and serves as a transitional area between Zones 1 and 3. The size of Zone 2 depends on the slope of the ground where the structure is built. Typically, the defensible space should extend at least 100 feet from the structure. Remove stressed, diseased, dead, or dying trees and shrubs, following guidance from forestry professionals (Appendix G). Thin and prune the remaining larger trees and shrubs. Be sure to extend thinning along either side of your driveway all the way to your main access road. These actions help eliminate the continuous fuel surrounding a structure while enhancing home site safety and the aesthetics of the property. Keep grass and wildflowers under 8 inches in height. Regularly remove leaf and needle debris from the yard.

Zone 3: This area extends from the edge of your defensible space to your property boundaries. The healthiest forest is one that has multiple ages, sizes, and species of trees where adequate growing room is maintained over time, so maintain a distance of at least 10 feet between the tops of trees. Remove ladder fuels, creating a separation between low-level vegetation and tree branches to keep fire from climbing up trees. A greater number of wildlife trees can remain in Zone 3, but regularly remove dead trees and shrubs. Ensure trees in this area do not pose a threat to power lines or access roads.

It should be emphasized that defensible space is just that—an area that allows firefighters to work effectively and with some degree of safety to defend structures. While defensible space may increase a home's chance of surviving a fire on its own, a structure's survival is not guaranteed, with or without

firefighter protection. Nevertheless, when these principles are consistently applied across a neighborhood, everybody benefits.

Specific recommendations should be based on the hazards adjacent to a structure such as slope steepness and fuel type. Firewise guidelines and the Homeowner's Guide (Appendix G) are excellent resources but creating defensible space does not have to be an overwhelming process. The National Fire Protection Association (NFPA) offers a free [Community Wildfire Risk Assessment Tutorial](#) and an online learning module, [Understanding the Wildfire Threat to Homes](#). Both tools are great resources for learning about, and implementing, defensible space.

Assisting neighbors in defensible space activities may be essential in many cases in order to expand the extent of treatments on private lands. Homeowners should consider assisting the elderly, sharing ladders for gutter cleaning, and assisting neighbors with large thinning needs. Homeowner actions have been found to also motivate neighbors to act, increasing the scope of the wildfire mitigation across a community (Evans et al. 2015). The DOF has been tracking homeowners' activities related to defensible space. Figure 4.6 shows the number of completed homeowners' defensible space activities beginning in 2015 and through 2021. This information conveys that many residents are already taking responsibility for mitigating their own properties, but more work is needed in order to provide greater effect on fuels in the WUI (Figure 4.7).

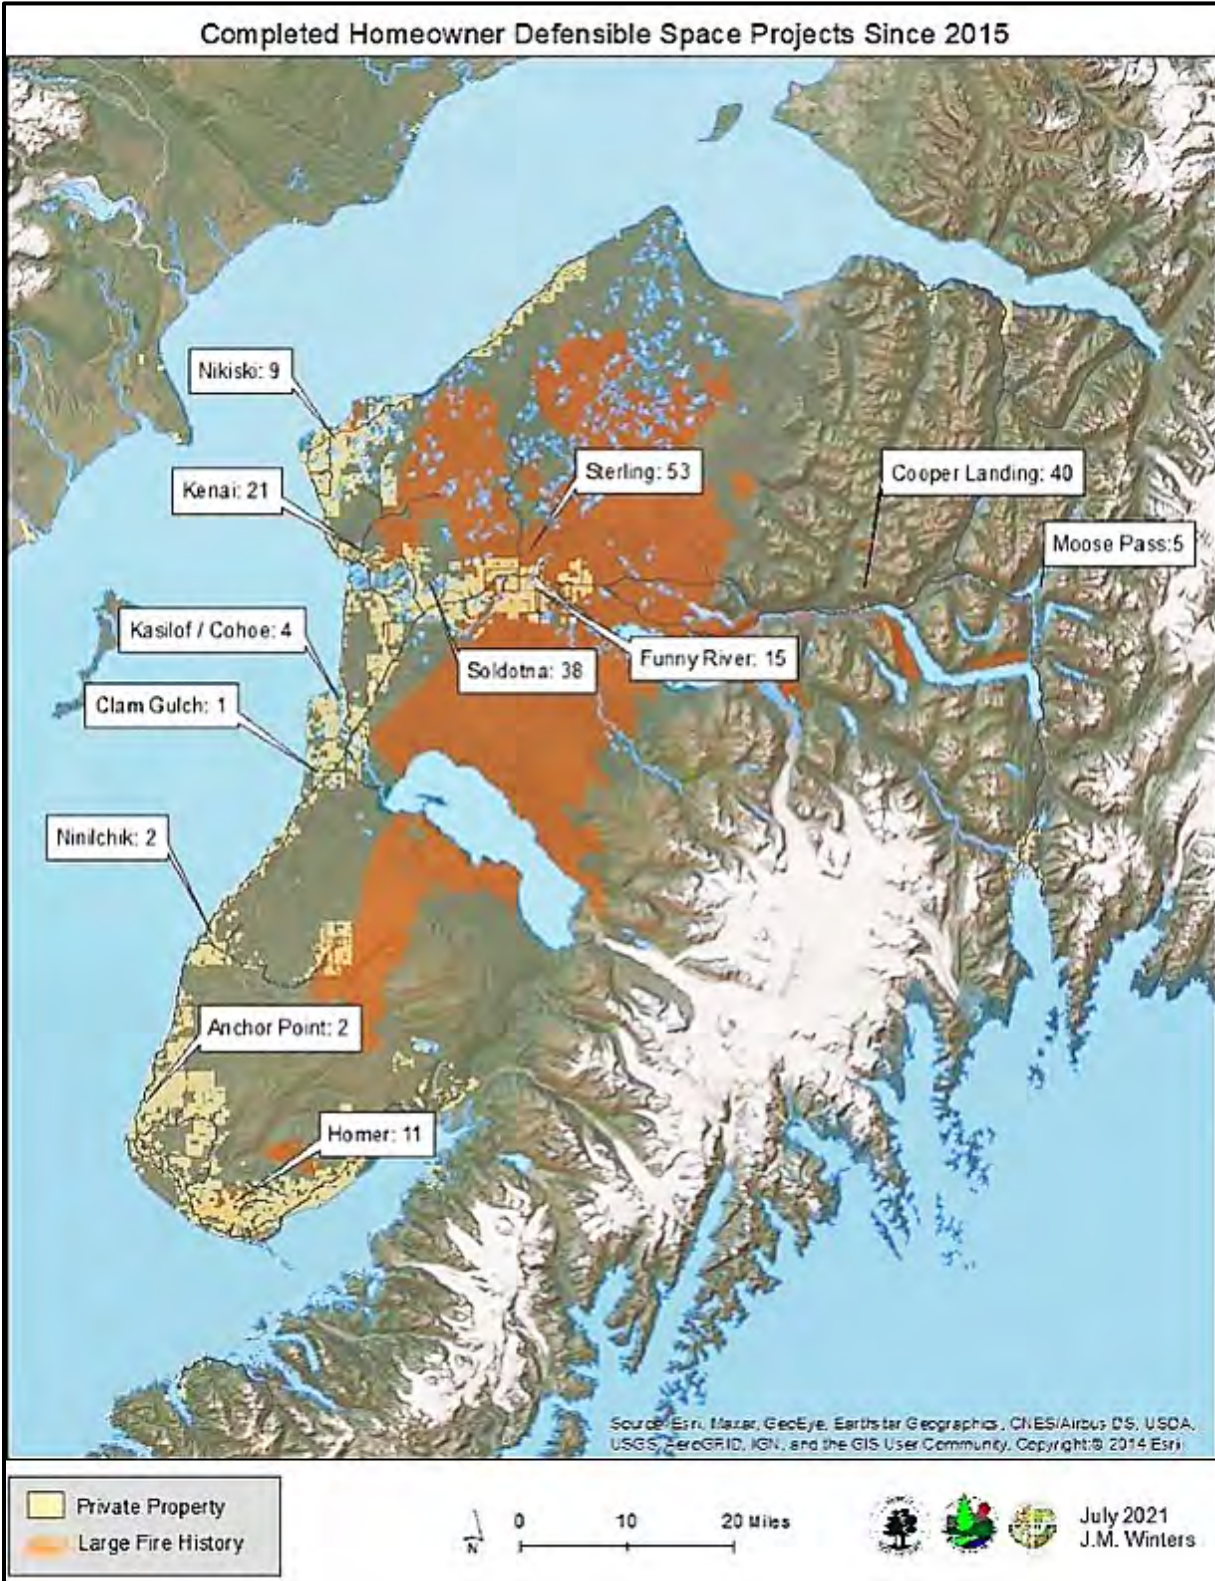

Figure 4.6 Homeowner defensible space from 2015 through 2021.

Source: DOF.

Figure 4.7. Example of poor defensible space.

Adopting a phased approach to home hardening can make the process more manageable and encourage maintenance (Table 4.2).

Table 4.2. Example of a Phased Approach to Mitigating Home Ignitability

Year	Project	Actions
1	Basic yard cleanup (annual)	<ul style="list-style-type: none"> Dispose of clutter in the yard and under porches. Remove dead branches from yard. Mow and rake. Clean off roofs and gutters. Remove combustible vegetation near structures. Coordinate disposal as a neighborhood or community. Post 4-inch reflective address numbers visible from road.
2	Understory thinning near structures	<ul style="list-style-type: none"> Repeat basic yard cleanup. Limb trees up to 6–10 feet. Trim branches back 15 feet from chimneys. Trim or cut down brush. Remove young trees that can carry fire into forest canopy. Coordinate disposal as a neighborhood or community. To limit the spread of invasive grasses, familiarize yourself with invasive plants in your area and treat them on your property. Wash and dry all equipment before and after thinning vegetation.
3	Understory thinning on private property along roads and drainages	<ul style="list-style-type: none"> Limb trees up to 6–10 feet. Trim or cut down brush. Remove young trees that can carry fire into forest canopy. Coordinate disposal as a neighborhood or community.

Year	Project	Actions
4	Overstory treatments on private property	Evaluate the need to thin mature or diseased trees. Prioritize and coordinate tree removal within neighborhoods to increase cost effectiveness.
5	Restart defensible space treatment cycle	Continue the annual basic yard cleanup. Evaluate need to revisit past efforts or catch those that were bypassed.

Fuel Breaks

Fuel treatments are methods for controlling live and dead vegetation with the purpose of minimizing the negative impacts of an area burning during a wildfire. Fuel breaks are not expected to stop fires entirely but are typically designed to provide fire managers with strategic locations near communities or important infrastructure that allow crews to conduct burnout of fuels to limit advancement of wildland fires. Fuel breaks may stop fire spread during mild weather conditions but usually require tactical response from fire suppression personnel to effectively contain the spread (Wahrenbrock 2022). Furthermore, fuel break utility is contingent upon regular maintenance, as regrowth in a fuel break can quickly reduce its effectiveness and vegetation in this ecosystem is known to quickly re-sprout and reestablish. Maintenance of existing breaks could be more cost efficient than installation of new features.

Well-managed fuels reduction projects often result in ecological benefits to wildlife and watershed health. Simultaneously, planning and resource management efforts should occur when possible while reducing fuels to ensure that the land remains viable for multiple uses in the long term. For example, fuel breaks could be aligned with existing areas of ROW clearance by working with utility companies and combining resources. Similarly, fuel breaks could be developed in conjunction with recreational trails to serve multiple purposes and provide access to the community. The effectiveness of any fuels reduction treatment will increase over time with a maintenance and monitoring plan. Monitoring will also ensure that objectives are being met in a cost-effective manner.

It is not possible to provide a standard treatment prescription for the entire landscape because fuel break dimensions should be based on the local fuel conditions and prevailing weather patterns. For example, in some areas, clearing an area too wide could open the landscape to strong winds that could generate more intense fire behavior and/or create wind throw. Fire behavior in the CWPP planning area has been modeled as part of the QWRA. This assessment provides estimates of flame length and other fire behavior; the information should be used by land managers when prescribing treatments.

Strategic placement of fuel breaks is critical to prevent fire from moving from wildland fuels into adjacent neighborhoods. For effective management of most fuels, fuel breaks should be prescribed based on the conditions in each particular treatment area. Some examples of this would be to place fuel breaks in areas where fuels are heavier, in areas with easy access for fire crews, or in areas where strong winds are expected to increase fire spread. In areas where the vegetation is discontinuous, fuel treatments may not be necessary. In this situation it is best to leave the site in its current condition to avoid the introduction of more flammable, exotic species which may respond readily following disturbance.

Fuel Breaks on the Peninsula

The use of fuel breaks is well practiced across the Borough, with several large fuel break projects in place or in planning. The majority of fuel treatments in Alaskan communities have been inserted as firebreaks (a section of bare, open space to stop the spread of fire) or fuel breaks (a section of vegetation that has been modified to decrease fire behavior) (UAF 2018). The idea is that fuel treatments that reduce fuel

loading or alter fuel properties can result in modifications in fire behavior such as limiting a fire to the surface as opposed to a canopy fire (UAF 2018). Lower intensity surface fires may even be beneficial to the ecosystem and allow for improved firefighter access.

Fuel treatments can have a wide range of impacts on the local ecosystem, including unintended impacts. For instance, a study by the UAF and USFS, *Evaluating Fuel Treatments in Alaska* (the study) (UAF 2018), found that a couple sites receiving cleared fuel breaks experienced surface drying, increased flammable surface fuels, and higher mid-flame windspeeds. Another important finding of the study was that fuel breaks can result in unintended tree damage and loss. Pruning punctures and thinning shock increase susceptibility to insect infestation and increases the risk of tree mortality. Additionally, the degree of change in understory plant communities is influenced by fuel treatment type. For example, the study found that significant vegetation shifts occurred with a higher frequency in cleared breaks than in shaded breaks.

Removing or significantly reducing canopy cover alters the ecology of the treated landscape. Negative impacts such as the growth of light and flashy fuels, thawing of the permafrost layer, and increasing tree susceptibility to wind and insect infestation have been noted in treated areas. Therefore, fuel treatments should be planned to keep as much of the canopy cover as possible to shade the understory, decrease wind speeds, and decrease the potential growth of light and flashy fuels. The study determined that a maximum spacing of 8 × 8 feet with pruning from below in interior Alaskan black spruce forests could decrease the potential negative ecological effects of fuel treatment while maintaining the positive benefits of lowering canopy fire potential and allowing for easier fire response access. The study also discovered that rates of spread were often higher in cleared breaks (canopy removal) relative to shaded fuel breaks in white spruce hardwood stands. They also detected the shift from timber understory to a grass and shrub community, with the associated increased rates of spread and flame lengths due to the nature of the new fuels.

Models gauging the effect of fuel breaks on fire behavior indicate that changes to fire behavior persist as much as 14 years post treatment, specifically in interior Alaskan black spruce forests. (UAF 2018). The models were executed under average summer conditions and drier summer conditions; both scenarios showed that fuel treatment lowered fire behavior properties, including rate of spread, flame length, and Fireline intensity (UAF 2018). Overall, the study found that fuel treatments minimize fire behavior potential under a range of weather conditions; however, benefits start decreasing with increasing wind speed. It should also be noted that fuel treatments, particularly around communities, should not be expected to stop a fire without human intervention. Instead, fuel treatments should be planned and implemented within a cohesive fire suppression plan or CWPP that details how the treated area will be utilized to assist fire suppression efforts.

Maintenance of fuel treatments on a consistent schedule will allow for treatments to retain the properties required for reducing fire behavior potential. UAF's 2018 modeling results indicate that changes to fire behavior remain as long as 14 years after treatment, particularly in interior Alaskan black spruce forests. Therefore, UAF (2018) recommends fuel treatments maintenance on a 10- to 15-year period, although slow-growing interior black spruce stands may necessitate longer maintenance periods. UAF (2018) also recommends fuel treatments to be arranged and maintained within a broad fire management plan that details how the treated areas will be utilized by fire personnel in the event of advancing wildfires and the frequency of treatment maintenance.

An example of a recent fuel break on the KPB is the Strategic (also known as Sterling) Fuel Break. The fuel break has been under construction since 2016, and in 2020, the fuel break covered approximately 12 miles along the WUI between Sterling and the Kenai Wildlife Refuge. The fuel break is

around 300 feet wide and was constructed using an assortment of methods, equipment, and resources. The next phase of the project is a proposed extension, named the Kenai Fuel Break. This break would be around 8 miles long and 300 feet wide, situated on Kenai Wildlife Refuge land roughly 8 miles northwest of the community of Kenai, and connecting an area between Marathon Road and Spirit Lake, buffering the Homer Electric and ENSTAR natural gas utility corridor. The proposed area for the Kenai Fuel Break is unique in that the area has a large amount of beetle-killed spruce trees; treatment of these areas would require felling of dead trees (USFWS 2020a).

Fuel Breaks and Open Space Cleanup

The next location priority for fuels treatments should be where the community meets the wildland. This may be the outer margins of a town or an area adjacent to occluded open spaces such as a park. Fuel breaks (also known as shaded fuel breaks) are strips of land where fuel (for example living trees and brush, and dead branches, leaves or downed logs) has been modified or reduced to limit the fire's ability to spread rapidly (Figure 4.8). Fuel breaks should not be confused with firebreaks, which are areas where vegetation and organic matter is removed down to mineral soil. Shaded fuel breaks may be created to provide options for suppression resources or to provide opportunities to introduce prescribed fire. In many cases, shaded fuel breaks may be created by thinning along roads. This provides access for mitigation resources and firefighters, as well as enhancing the safety of evacuation routes.

Figure 4.8. Fuel break area with deciduous regrowth.

Larger-scale Treatments

Farther away from WUI communities, the emphasis of treatments often becomes broader. While reducing the buildup of hazardous fuels remains important, other objectives are often included, such as forest health and resiliency to catastrophic wildfire and climate change considerations. Wildfires frequently burn across jurisdictional boundaries, sometimes on landscape scales. As such, these larger treatments need to be coordinated on a strategic level. This requires coordination between projects and jurisdictions, as is currently occurring. Land managers have carried out numerous forest restoration projects across the

Borough and have ongoing projects planned on public land that are designed to reduce hazardous fuels to protect communities and resources, while restoring fire-adapted communities (see Figure 4.1).

SBB infestation is the top cause of death for mature spruce trees in Alaska and is currently responsible for about 900,000 acres of deceased and dying trees in the southcentral portion of the state. The length of time it takes for SBB-killed trees to fall varies from site to site and is contingent on factors such as existing diseases, wind patterns, and ground moisture (UAF 2013). SBB-killed trees have been reported falling as early as 1 to 3 years (USFS 2021e) to as late as 15 years after mortality, with a typical period of 5 years (Wahrenbrock 2022). The buildup of dead and downed trees on the surface can impact wildfire behavior. As such, SBB mitigation efforts are in progress in the Chugach National Forest. The mitigation efforts are being implemented in five USFS campgrounds: Cooper Creek, Quartz Creek, Russian River, Crescent Creek, and Tenderfoot. Mitigation methods are focused on removing dead and dying trees to minimize the risk of wildfire hazards. Contingent on the degree of SBB infestation, treatment options include removal of entire stands of infected trees, thinning infected areas of dense stands, or applying inhibitory agents to protect healthy trees from SBB infestation (USFS 2021e).

Another large-scale treatment currently in progress on the Kenai Peninsula is the Kenai Peninsula Habitat Enhancement project. The project area comprises over 117 acres and is located on the southern Kenai Peninsula in the Anchor River/Fritz Creek critical habitat area. The project focuses on enhancing moose habitat by stimulating willow regeneration. Treatment consists mainly of mowing mature willows to stimulate regeneration from the base of plants. Other treatments include top-killing or felling of hardwood trees, such as cottonwoods, to encourage stump sprouting (ADFG 2021b).

Fuel Treatment Methods

Since specifics of the treatments are not provided in detail in Table 4.1, different fuels reduction methods are outlined in the following narrative.

Several treatment methods are commonly used, including manual and mechanized treatments and targeted treatments to address hazard trees and beetle kill (Appendix G); prescribed fire is another treatment option that is being considered for additional use in forest and fuels management (Table 4.3). This brief synopsis of treatment options is provided for general knowledge; specific projects will require further planning. The appropriate treatment method and cost will vary depending on factors such as the following:

- Diameter of materials
- Proximity to structures
- Acreage of project
- Fuel costs
- Steepness of slope
- Area accessibility
- Density of fuels
- Project objectives

It is imperative that long-term monitoring and maintenance of all treatments is implemented. Post-treatment rehabilitation such as seeding with native plants and erosion control may be necessary.

Table 4.3. Summary of Fuels Treatment Methods

Treatment	Comments
Machine mowing	Appropriate for large, flat, grassy areas on relatively flat terrain.
Prescribed fire	Not widely used on the Borough but could be integrated into vegetation management through further interagency coordination. Can be very cost effective. Ecologically beneficial. Utilize fire to maintain fire adapted ecosystems. Can be used as training opportunities for firefighters. May require manual or mechanical pretreatment. Carries risk of escape, which may be unacceptable in some WUI areas. Unreliable scheduling due to weather and smoke management constraints.
Brush mastication	Brush species tend to re-sprout vigorously after mechanical treatment. Frequent maintenance of treatments are typically necessary. Mastication tends to be less expensive than manual (chainsaw) treatment and eliminates disposal issues.
Timber mastication	Materials up to 10 inches in diameter and slopes up to 30% can be treated. Eliminates disposal issues. Environmental impact of residue being left on site is still being studied.
Manual treatment with chipping or pile burning	Requires chipping, hauling, pile burning of slash in cases where lop and scatter is inappropriate. Pile burning must comply with smoke management policy.
Feller buncher	Mechanical treatment on slopes more than 30% or of materials more than 10 inches in diameter may require a feller buncher rather than a masticator. Costs tend to be considerably higher than masticator.

Manual Treatment

Manual treatment refers to crew-implemented cutting with chainsaws. Although it can be more expensive than mechanized treatment, crews can access many areas that are too steep or otherwise inaccessible with machines. Treatments can often be implemented with more precision than prescribed fire or mechanized methods allow. Merchantable materials and firewood can be removed, while non-merchantable materials are often lopped and scattered, chipped, or piled and burned on-site. Care should be exercised to not increase the fire hazard by failing to remove or treat discarded material in a site-appropriate manner. In addition, impacts to anadromous waters should be considered when designing and implementing site-specific fuels treatments.

Strategic timing and placement of fuels treatments is critical for effective fuels management practices and should be prescribed based on the conditions of each particular treatment area. Some examples of this would be to place fuel breaks in areas where the fuels are heavier and in the path of prevailing winds and to mow grasses just before they cure and become flammable. Also, burning during the hotter end of the prescription is important since hotter fires are typically more effective at reducing heavy fuels and shrub growth. In areas where the vegetation is sparse and not continuous, fuels treatments may not be necessary to create a defensible area where firefighters can work. In this situation, where the amount of fuel to carry a fire is minimal, it is best to leave the site in its current condition to avoid the introduction of exotic species.

Mechanized Treatments

Mechanized treatments include mowing, mastication (ground-up timber into small pieces), and whole tree felling. These treatments allow for more precision than prescribed fire and are often more cost-effective than manual treatment (Figures 4.9–4.13).

Figure 4.9. Fire crew burning out a treated area.

Photo Credit: Chugachmiut Forestry

Figure 4.12. Example of treated stand.

Photo Credit: Chugachmiut Forestry

Figure 4.13. Sterling Fuel Break.

Photo Credit: USFWS (2017)

Mechanized treatments utilize heavy equipment, which may involve crossing over water bodies during transportation. As such, impacts to anadromous waters should be considered when designing site-specific mechanized treatments.

Mowing, including ATV- and tractor-pulled mower decks, can effectively reduce grass fuels adjacent to structures and along highway rights-of-way (Figure 4.14) and fence lines. For heavier fuels, a number of different masticating machines can be used, including drum- or blade-type masticating heads mounted on machines and ranging in size from a small skid-steer to large front-end loaders. Some masticators are capable of grinding standing timber up to 10 inches in diameter. Other masticators are more effective for use in brush or surface fuels. Mowing and mastication do not actually reduce the amount of on-site biomass but alter the fuel arrangement to a less combustible profile.

In existing fuel break areas, maintenance is crucial especially in areas of encroaching shrubs or trees. In extreme risk areas more intensive fuels treatments may be necessary to keep the fire on the ground surface and reduce flame lengths. Within the fuel break, shrubs should be removed, and the branches of trees should be pruned from the ground surface to a height of 4 to 8 feet, depending on the height of the fuel below the canopy, and thinned with a spacing of at least two to three times the height of the trees to avoid movement of an active fire into the canopy.

Mechanical shears mounted on feller bunchers are used for whole tree removal (Figure 4.15). The stems are typically hauled off-site for utilization while the limbs are discarded. The discarded material may be masticated, chipped, or burned in order to reduce the wildfire hazard and to speed the recycling of nutrients.

Figure 4.14. Example of fuels along roadways.

Figure 4.15. Feller equipped with a full-tree processing head that fells, delimits, and then cuts tree stem to desired length or diameter log size.

Prescribed Burning

Prescribed burning is also a useful tool to reduce the threat of extreme fire behavior by removing excessive standing plant material, litter, and woody debris while limiting the encroachment of shrubby vegetation. Intentionally burning many areas of small acreage through prescribed fire can mitigate the potential damage (in terms of acreage burned) of uncontrolled wildfires. While not commonly practiced

currently on the Borough, in the future, the reintroduction of fire through prescribed methods, would provide ecological benefit to many vegetation communities. Land managers are currently strategizing to increase prescribed burning within the Borough.

If a prescribed burn program is introduced, all prescribed fire operations would be conducted in accordance with federal and state laws and regulations. Public safety would be the primary consideration in the design of any prescribed burn plan so as to not negatively impact the WUI. Agency use of prescribed fire on public lands would be carried out within the confines of the agency's fire management planning documents and would require individual prescribed burn plans that consider smoke management concerns, air quality criteria, and sensitive receptors within the WUI. All burn plans must be approved by the Agency Administrator (AWFCG 2021). In addition, all prescribed burn operations must be in accordance with the latest Alaska Department of Environmental Conservation (ADEC) [Enhanced Smoke Management Plan](#). The [Interagency Prescribed Fire Planning and Implementation Procedures Guide](#) may be used to supplement burn planning. Furthermore, under Alaska regulation, permits are required for prescribed burn operations depending on the burn size and/or time of year. The ADEC administers permits for burns 40 acres or larger, and the DOF administers permits for burns 40 acres or less from April 1 through September 1.

Following any type of fuels reduction treatment, post-treatment monitoring should ensure that management actions continue to be effective throughout the fire season. The vegetation within this ecosystem can change rapidly in response to drought or moisture from year to year and during the course of the season, so fuels treatments should be adjusted accordingly.

Several re-entries may be needed to meet full resource management objectives, so a solid maintenance plan is needed to ensure success.

Impacts of Prescribed Fire on Communities

Managing smoke from prescribed fires is an important part of planning for prescribed burning. The ADEC, Division of Air Quality, has smoke management guidelines to protect the health and welfare of Alaskans from the impacts of smoke (AWFCG 2021). Smoke from burning vegetation produces air pollutants that are regulated by both the U.S. Environmental Protection Agency and the State of Alaska.

More information regarding open burn regulations is provided here: <https://dec.alaska.gov/air/air-permit/open-burn-info>

Thinning and Prescribed Fire Combined

Combining thinning and prescribed fire can be the most effective treatment (Graham et al. 2004). In forests where fire exclusion or disease has created a buildup of hazardous fuels, prescribed fire cannot be safely applied, and pre-burn thinning is required. The subsequent use of fire can further reduce residual fuels and reintroduce this ecologically imperative process.

Management of Non-Native Plants

The ADNR, Division of Agriculture, maintains a list of noxious weeds rated from A to C based on the current degree of infestation of the species and the potential for eradication (ADNR 2021a). Fuel treatment approaches should always consider the potential for introduction or proliferation of invasive non-native species as a result of management actions.

The list of noxious weeds is available here: <http://plants.alaska.gov/invasives/noxious-weeds.htm>

The Strategic Plan for Invasive Weed & Agricultural Pest Management and Prevention in Alaska is located here: <http://plants.alaska.gov/invasives/strategic-plan.htm>

Wildlife Habitat and Species Protections

Alaska contains 365.5 million acres of land, 28.8 million acres of freshwater lakes, rivers and ponds, and 6,640 miles of coastline. Around 88% of the state is in public ownership and many areas are set aside to protect their natural features, including a broad variety of fish and wildlife habitats. These areas differ in their specific purposes and include sanctuaries, critical habitat areas, state wildlife refuges, and waters important to anadromous fish (ADFG 2021c).

Many of the rivers, lakes, and streams in Alaska support a variety of anadromous fish, including Pacific salmon, several species of trout, char, whitefish, lamprey, and smelt. Due to the importance of these fish to Alaska's economy and environment, these waters receive special protections to ensure they keep supporting abundant runs of fish. These protections require that individuals or governmental agencies seeking to construct a hydraulic project or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream must notify the ADFG (ADFG 2021d). The protections apply to all parts of streams, rivers, and lakes—regardless of size—that are important for the spawning, rearing, or migration of anadromous fish (Alaska State Legislature 2022).

Critical habitat areas, state wildlife refuges, and wildlife sanctuaries are designated as special areas by the Alaska State Legislature. These areas were created to protect fish and wildlife habitats. Most recreational activities such as fishing, hunting, and wildlife viewing on these lands do not require a permit. However, many other activities that have the potential to impact fish, wildlife, or habitats require a permit. Activities requiring a permit include, but are not limited to, clearing or disturbing vegetation, construction or placement of structures, streambank or shoreline modifications, and any activity that is likely to have a significant effect on vegetation, drainage, water quality, soil stability, fish, wildlife, or their habitat (ADFG 2021e).

Because stream crossing and water withdrawals during wildland fire suppression activities constitute a disruption to fish and their habitat, the DOF has obtained a permit from the ADFG for fire response activities on the peninsula. The permit is valid from December 21, 2020, through December 31, 2025. The permit applies to waterbodies throughout the state and allows for the following (ADFG 2020):

- Crossing all resident fish waterbodies and the extents of catalogued waterbodies not designated as spawning habitat for anadromous fish with vehicles and heavy equipment.
- The potential construction of reinforced crossing structures, aerial scooping, and subsurface pumping of water from waterbodies during wildland fire-related suppression activities.

In addition, the permit stipulates that projects proposed by the DOF should not have adverse impacts on anadromous fish or their habitat and should not obstruct the free passage of fish, in accordance with the Anadromous Fish Act and Fishway Act (ADFG 2020).

There are several special areas within the KPB managed by a number of agencies that may require special treatment.

More information about ADFG protected areas can be found here: <https://www.adfg.alaska.gov/index.cfm?adfg=conservationareas.locator>

The ADFG protected waters on the Kenai Peninsula can be found in the Anadromous Water Catalog: <https://www.adfg.alaska.gov/sf/SARR/AWC/index.cfm?ADFG=maps.displayViewer> Information about protected areas on federally managed land is provided in Appendix A.

Land treatments that are used to reduce fuels are also potentially beneficial to wildlife and their habitats. Crushing and burning vegetation may not appear to be ecosystem enhancements, but wildland fires are a natural part of the interior Alaska ecosystem, and animals and plants have adapted to periodic fires. Plants like willow, fireweed, aspen, and birch are nutritious, high-quality forage for moose. These plants typically regenerate and thrive after specific kinds of disturbances, such as mechanical crushing by roller choppers or fire. Renewing growth isn't the only benefit of fire. Standing dead trees provide roosts for birds of prey and homes for cavity nesters such as woodpeckers. Downed trees provide cover for hares, voles, and marten—shelter that is critically needed in winter (ADFG 2015).

Another process that stimulates plant growth is ice scouring where large chunks of ice that are rafted down rivers and rake riverbanks and gravel bars shear off willow and thereby stimulate regeneration in the next growing season. Mechanical crushing imitates the process on upland sites and encourages plant regeneration as well. For instance, when aspen are cut down, they resprout quickly by producing root suckers. Different age classes of aspen provide varied resources to ruffed grouse throughout the year. Older aged aspens provide breeding and wintering habitat. Younger, denser aspen stands provide cover for clutches of chicks in summer, shielding them from predators (ADFG 2015).

COHESIVE STRATEGY GOAL 2: FIRE ADAPTED COMMUNITIES

Goal 2 of the Cohesive Strategy/Western Regional Action Plan is Fire-Adapted

Communities: Human populations and infrastructure can withstand a wildfire without loss of life and property. The basic premise of this goal is:

“Preventing or minimizing the loss of life and property due to wildfire requires a combination of thorough pre-fire planning and action, followed by prudent and immediate response during a wildfire event. Post-fire activities can also speed community recovery efforts and help limit the long-term effects and costs of wildfire. CWPPs should identify high-risk areas and actions residents can take to reduce their risk. Fuels treatments in and near communities can provide buffer zones to protect structures, important community values and evacuation routes. Collaboration, self-sufficiency, acceptance of the risks and consequences of actions (or non-action), assisting those who need assistance (such as the elderly) and encouraging cultural and behavioral changes regarding fire and fire protection are important concepts. Attention will be paid to values to be protected in the middle ground (lands between the community and the forest) including: watersheds, viewsheds, utility and transportation corridors, cultural and historic values, etc.” (Western Regional Strategy Committee 2013:15).

Strategic actions listed within the ALAH Action Plan that serve the goal of **creating fire adapted communities** include (KPB Interagency 2018) the following:

- Inform and support communities that want to participate as a FAC that shares the responsibility for wildland fire mitigation practices.
- Collaboratively update and implement CWPPs.
- Promote fire resilient structures and defensible space practices advocated through nationally recognized programs.
- Support local response agencies with the capability to help communities prepare for and respond to wildland fires, including but not limited to establishing and promoting evacuation procedures and routes.

- Ensure that cooperative agreements among response agencies are current.
- Influence governing codes or ordinances that guide development within the WUI.
- Include as many stakeholders as possible in the design and implementation of fuel breaks to ensure a community-wide approach to fuels reduction projects.

In this CWPP update, recommendations for fire-adapted communities include public education and outreach actions and actions to reduce structural ignitability.

RECOMMENDATIONS FOR PUBLIC EDUCATION AND OUTREACH

Just as environmental hazards need to be mitigated to reduce the risk of fire loss, so do the human hazards. Lack of knowledge, lack of positive actions, and negative actions all contribute to increased risk of loss in the WUI.

Many residents understand the risk that wildfire poses to their communities. However, it is important to continually raise awareness of fire risk and improve fire education, particularly because the Borough is composed of such a vast area of forested public land that has been experiencing an intensified wildfire pattern (IARC 2021a). It is also important to keep in mind the ways in which wildfire impacts vulnerable populations. In particular, people who rely on electricity-dependent medical equipment and devices could experience life-threatening consequences due to prolonged power outages in the event of a wildfire. Table 4.4 lists recommendations for improving public education and outreach.

There are currently no Firewise certified communities within the Kenai Peninsula Borough. The Borough would benefit from greater exposure to the [Firewise Communities](#) (NFPA 2021), [Fire Adapted Communities](#) (Fire Adapted 2021), and a modified [Ready, Set, Go!](#) Program that is not dependent on color themes (International Association of Fire Chiefs 2021). Firewise programs have been found to motivate residents to carry out defensible space and other actions within their community, empower residents to take control of addressing wildfire risk, improve community cohesion through collective actions, and encourage coordination of outside agencies (Evan et al. 2019). Continuing enthusiasm over long periods is difficult however, particularly if a community “spark plug” or active coordinator leaves or steps down (Evans et al. 2015). Greater participation in these programs could improve local understanding of wildfire and, in turn, improve protection and preparedness.

Other methods to improve public education could include increasing awareness about fire department response and fire department resource needs; providing workshops at demonstration sites showing Firewise Communities landscaping techniques or fuels treatment projects; organizing community cleanups to remove green waste; publicizing availability of government funds for thinning and prescribed burning on private lands; and, most importantly, improving communication between homeowners and local land management agencies to improve and build trust, particularly because the implementation of fuel treatments and better maintenance of existing treatments needs to occur in the interface between public and private lands.

Considering the shared nature of wildfire risk experienced by numerous WUI communities, getting homeowners to implement fuel treatments on their property is usually a challenging task. However, it has been suggested that willingness to private wildfire risk mitigation activities is influenced by the presence and category of fuel treatment on adjacent public lands. A survey conducted by UAF (2018) found that homeowners were more likely to perform fuel treatments on their property if the neighboring lands had been treated. Homeowners were also more likely to execute the fuel treatment if the type was shaded fuel

breaks as opposed to cleared fuel breaks. Furthermore, fuel breaks around communities endow a sense of protection in the event of a wildfire; thus, allowing communities to respond calmly in the event of a potentially dangerous situation (UAF 2018). However, it is important to stress that fuel breaks are not expected to stop a fire, rather they provide a place where firefighters can strategically locate resources to contain a fire. Table 4.4 lists public education and outreach projects recommended for implementation in the Borough.

RECOMMENDATIONS FOR REDUCING STRUCTURAL IGNITABILITY

Table 4.4 also provides a list of community-based recommendations to reduce structural ignitability that should be implemented throughout the CWPP planning area. Reduction of structural ignitability depends largely on public education that provides homeowners the information they need to take responsibility for protecting their own properties. A list of action items that individual homeowners can follow can be found below. Carrying out fuels reduction treatments on public land may only be effective in reducing fire risk to some communities; however, if homeowners have failed to provide mitigation efforts on their own land, the risk of home ignition remains high, and firefighter lives are put at risk when they carry out structural defense.

Preparing for wildland fire by creating defensible space around the home is an effective strategy for reducing structural ignitability. Studies have shown that burning vegetation beyond 120 feet of a structure is unlikely to ignite that property through radiant heat (Butler and Cohen 1996), but fire brands that travel independently of the flaming front have been known to destroy houses that had not been impacted by direct flame impingement. Hardening the home to ignition from embers, including maintaining vent coverings and other openings are also strongly advised as measures to protect a home from structural ignitability. Education about managing the landscape around a structure, such as removing weeds and debris within a 30-foot radius and keeping the roof and gutters of a home clean, are maintenance measures proven to limit combustible materials that could provide an ember bed and ignite the structure. Educating people about the benefits of proper maintenance of their property that includes pruning and trimming trees and shrubs and, where warranted, the removal of trees and other vegetation, and using Firewise Communities landscaping methods on their property is also essential for successful household protection.

It is important to note that no two properties are the same. Homeowners and communities are encouraged to research which treatments would have the most effect for their properties. Owners of properties on steep slopes, for example, should be aware that when constructing defensible space, they have to factor in slope and topography, which would require extensions to the conventional 30-foot recommendations. More detailed information on reducing structural ignitability can also be found in Appendix G (Additional Resources).

Some structural ignitability hazards are related to homes being in disrepair, vacant or abandoned lots, and minimal yard maintenance. In order to influence change in homeowner behavior, local ordinances may be needed.

In addition to protection of residences and other values, the Core Team convened a focus group meeting with KPB utility providers and fire responders, to discuss protection of strategic infrastructure. Those recommendations are provided in Table 4.4.

Action Items for Homeowners to Reduce Structural Ignitability

Low or No Cost Investment (<\$50)

Regularly check fire extinguishers and have a 100-foot hose available to wet perimeter.

Maintain defensible space for 30 feet around home. Work with neighbors to provide adequate fuels mitigation in the event of overlapping property boundaries.

Make every effort to keep lawn mowed and green during fire season.

Screen vents with non-combustible meshing with mesh opening not to exceed nominal ¼-inch size.

Ensure that house numbers are easily viewed from the street.

Keep wooden fence perimeters free of dry leaves and combustible materials. If possible, non-combustible material should link the house and the fence.

Keep gutters free of vegetative litter. Gutters can act as collecting points for fire brands and ashes.

Store combustible materials (firewood, propane tanks, grills) away from the house; in shed, if available.

Clear out materials from under decks and/or stacked against the structure. Stack firewood at least 30 feet from the home, if possible.

Reduce your workload by considering local weather patterns. Because prevailing winds in the area are often from the west-southwest, consider mitigating hazards on the west corner of your property first, then work around to cover the entire area.

Seal up any gaps in roofing material and enclose gaps that could allow fire brands to enter under the roof tiles or shingles.

Remove flammable materials from around propane tanks.

Minimal Investment (<\$250)

When landscaping in the home ignition zone (HIZ) (approximately 30 feet around the property), select non-combustible plants, lawn furniture, and landscaping material. Combustible plant material like junipers and ornamental conifers should be pruned and kept away from siding. If possible, trees should be planted in islands and no closer than 10 feet to the house. Tree crowns should have a spacing of at least 18 feet when within the HIZ. Vegetation at the greatest distance from the structure and closest to wildland fuels should be carefully trimmed and pruned to reduce ladder fuels, and density should be reduced with approximately 6-foot spacing between trees crowns.

Box in eaves, attic ventilation, and crawl spaces with non-combustible material.

Work on mitigating hazards on adjoining structures. Sheds, garages, barns, etc., can act as ignition points to your home.

Enclose open space underneath permanently located manufactured homes using non-combustible skirting.

Clear and thin vegetation along driveways and access roads so they can act as a safe evacuation route and allow emergency responders to access the home.

Purchase or use a National Oceanic and Atmospheric Administration weather alert radio to hear fire weather announcements.

Moderate to High Investment (>\$250)

Construct a non-combustible wall or barrier between your property and wildland fuels. This could be particularly effective at mitigating the effect of radiant heat and fire spread where 30 feet of defensible space is not available around the structure.

Construct or retrofit overhanging projections with heavy timber that is less combustible.

Replace exterior windows and skylights with tempered glass or multilayered glazed panels.

Invest in updating your roof to non-combustible construction. Look for materials that have been treated and given a fire-resistant roof classification of Class A. Wood materials are highly combustible unless they have gone through a pressure-impregnation fire-retardant process.

Construct a gravel turnaround in your driveway to improve access and mobilization of fire responders.

Treat construction materials with fire-retardant chemicals.

Install a roof irrigation system.

Replace wood or vinyl siding with nonflammable materials.

Relocate propane tanks underground.

COHESIVE STRATEGY GOAL 3: WILDFIRE RESPONSE

Goal 3 of the Cohesive Strategy/Western Regional Action Plan is Wildfire Response:

All jurisdictions participate in making and implementing safe, effective, efficient risk-based wildfire management decisions.

“A balanced wildfire response requires integrated pre-fire planning with effective, efficient, and coordinated emergency response. Pre-fire planning helps tailor responses to wildfires across jurisdictions and landscape units that have different uses and management objectives. Improved prediction and understanding of weather, burning conditions, and various contingencies during wildfire events can improve firefighting effectiveness, thereby reducing losses and minimizing risks to firefighter and public health and safety. Wildfire response capability will consider the responsibilities identified in the Federal Response Framework. Local fire districts and municipalities with statutory responsibility for wildland fire response are not fully represented throughout the existing wildland fire governance structure, particularly at the NWCG, NMAC, and GACC levels.” (Western Regional Strategy Committee 2013:15).

Strategic actions listed within the ALAH Action Plan to serve the goal of **safe and effective wildfire response** include (KPB Interagency 2018):

- Develop and implement standards and protocols that strengthen national mobilization capabilities.
- Invest in the wildland firefighting workforce at all levels (federal, state, tribal, territorial, and local) to meet the increasing complexities and demands of firefighting in the wildland urban interface.
- Manage wildfires to both protect values and accomplish resource management objectives

RECOMMENDATIONS FOR IMPROVING FIRE RESPONSE CAPABILITIES

Educating the public so they can reduce dependence on fire departments is essential because these resources are often stretched thin due to limited personnel and the scale of the response area. Table 4.5 provides recommendations for improving firefighting capabilities. Many of these recommendations are general in nature with more specific community related recommendations presented in Appendix D.

Table 4.5. Fire Response Capability Recommendations

Project Description	Location	Land Ownership/Lead Agency	Methodology/Approach	Serves to:	Timeline for Action	Priority (H, M, L)	Monitoring or Maintenance Requirements	Funding Sources
Enhance situational awareness and communications	Kenai Peninsula-wide	ALAH group	<ul style="list-style-type: none"> ALAH provides a model for interagency cooperation. Continue to encourage open communication. Pursue annual updates. Utilize the QWRA to guide treatments. POST-FIRE RESPONSE AND REHABILITATION

Fires, especially severe fires, can have significant impacts on vegetation and soil. The significant physical properties of soil affected by a fire are structure stability, water repellency, texture, temperature, and amount of surface organic matter. Erosion is typically associated with post-fire effects because of its impact on water quality and the potential for debris flow (USFS 2011c). Although post-fire flooding and mudflows are uncommon on the KPB, high intensity fires may destabilize soil and increase runoff rates. Typical concerns for areas that have recently burned include the potential for debris flow to nearby transportation corridors and recreational areas, and impacts to fish habitat (National BAER Team 2020). The potential impacts of wildfires may be observed in a recent large fire that occurred on the Kenai Peninsula. The 2019 Swan Lake Fire was a lightning-caused fire that burned roughly 170,000 acres between Sterling and Cooper Landing. Main concerns for the burned area consisted of (National BAER Team 2020):

- The threat of increased runoff and potential debris flow to public safety and highway infrastructure
- The threat of excess runoff and sediment reaching streams and deteriorating fish habitat in anadromous streams
- Damage to recreational areas and associated hazards
- Damage to historic structures, archaeological sites, and traditional cultural properties

The time needed for a forest to recover following a fire is contingent on three factors: whether vegetation survives a fire, seedling recruitment from either seed banks in the soil or transported to the site or sprouting new growth from roots (USFS 2011c). However, each forest is unique in how it recovers following a wildfire. The degree to which a forest can recover following a fire is contingent on the forest composition, soils, fire frequency, and climate. For instance, birch has seeds that disperse long distances; aspen has prolific roots that allow sprouting after a fire; black spruce has cones that open when exposed to heat; and white spruce produces large seed crops following a hot, dry summer (USFS 2011c). Additionally, some sections of the local forests on the Kenai Peninsula have evolved with fire, including large and severe fires. As such, these forests are typically adapted to large and severe fires (Wahrenbrock 2022).

Furthermore, post-fire restoration patterns in forest stands affected by SBB infestation vary significantly from those with little or no SBB-induced tree mortality. Typically, most spruce trees that survive the SBB outbreak are killed from canopy fire and surface fire heat. As such, spruce seed is scarcely available for dispersion in the burn areas. The early recovery period in forest stands affected by SBB is dominated by birch trees. The 2001 Kenai Lake Fire illustrates this pattern. Prior to the fire, birch represented around 1% to 2% of the forest composition within the fire perimeter. However, birch represented roughly 95% of the forest stand in the post-fire environment, with the exception of some patches of hemlock and cottonwood in low-intensity burn sites (Wahrenbrock 2022).

Figure 4.16. Vegetation recovery in the Swan Lake burn area.

Creating a plan that outlines steps for agencies, municipalities, and the local government to follow will streamline post-fire recovery efforts and reduce the inherent stress to the community.

There are many facets to post-fire recovery, including but not limited to:

- Ensuring public health and safety—prompt removal of downed and hazard trees, addressing watershed damage, and mitigating potential flooding.
- Rebuilding communities and assessing economic needs—securing the financial resources necessary for communities to rebuild homes, business, and infrastructure.
- Restoring the damaged landscape—restoration of watersheds, soil stabilization, and tree planting.
- Reducing fire risk in the future—identifying hazard areas and implementing mitigation.
- Prioritizing the needs of vulnerable and disadvantaged communities during response and disaster recovery efforts.
- Reducing post fire recovery time by replanting native species.
- Ensuring fire protection measures enhance sustainability of restoration projects.
- Retaining downed logs for erosion control and habitat maintenance.
- Evaluating and updating disaster recovery plans every 5 years to respond to changing needs and characteristics of the community.
- Coordinating with planning, housing, health, and human services, and other local, regional or state agencies to develop contingency plans for meeting short-term, temporary housing needs of those displaced during a catastrophic wildfire event.
- Incorporating forecasted impacts from climate change into trends and projections of future risk and consideration of policies to address identified risk.

Recovery of the vegetated landscape is often more straightforward than recovery of the human environment. Assessments of the burned landscape are often well-coordinated using interagency crews who are mobilized immediately after a fire to assess the post-fire environment and make recommendations for rehabilitation efforts.

For the community impacted by fire, however, there is often very little planning at the local level to guide their return after the fire. Residents impacted by the fire need assistance making insurance claims; finding temporary accommodation for themselves, pets, and livestock; rebuilding or repairing damaged property; removing debris and burned trees; stabilizing the land for construction; mitigating potential flood damage; repairing infrastructure; reconnecting to utilities; and mitigating impacts to health. Oftentimes, physical impacts can be mitigated over time, but emotional impacts of the loss and change to surroundings are long-lasting and require support and compassion from the community.

AFTER THE FIRE: RECOMMENDATIONS FOR HOMEOWNERS

Returning Home

First and foremost, follow the advice and recommendations of emergency management agencies, fire departments, utility companies, and local aid organizations regarding activities following the wildfire. Do not attempt to return to your home until fire personnel have deemed it safe to do so.

Even if the fire did not damage your house, do not expect to return to normal routines immediately. Expect that utility infrastructure may have been damaged and repairs may be necessary. When you return to your home, check for hazards, such as gas or water leaks and electrical shorts. Turn off damaged utilities if you did not do so previously. Request that the fire department or utility companies turn the utilities back on once the area is secured. Similarly, water supply systems may have been damaged; do not drink from the tap until you have been advised that it is safe to do so. Finally, keep a “fire watch”; look for smoke or sparks in houses and other buildings.

When returning home after a wildfire (FEMA 2021a):

- Avoid hot ash, charred trees, smoldering debris, and embers. The ground may have hot spots that can burn you or ignite another fire.
- Use a respirator to limit your exposure to dust particles; wet debris to minimize aerosolization. People with asthma, chronic obstructive pulmonary disease, or other lung ailments should take precautions in areas with poor air quality.
- Send text messages or use social media to contact family and friends. Phone lines are often busy following a disaster. Limit calls to emergencies only.

Once at home, conduct the following (AWFCG 2009):

- Check the roof and perimeter of the home right away; extinguish any smoldering debris and sparks.
- Be aware of downed power lines and other hazards.
- Check propane tanks, regulators, and lines before turning on gas. Only a qualified technician should turn on utilities.
- Check the house carefully for hidden embers or smoldering fires.

- Check inside the attic for embers.
- Check the yard for burning vegetation, woodpiles, fences, or other materials.
- Keep doors and windows closed.
- Document property damage with photographs. Conduct an inventory of damaged or missing items and contact your insurance company for assistance.

Wildland fire smoke is particulate matter, a mixture of micro solids and liquid droplets suspended in air. The size of the particles is linked to their potential for causing health issues. Particles less than 2.5 micrometers in diameter present the greatest issues, since they can penetrate deep into the lungs, or even the bloodstream. Wildland fire smoke particles are generally smaller than 0.5 microns in diameter. Exposure to these particles can impact both lung and heart health. Particles larger than 10 micrometers in diameter are less of a concern; however, they can irritate eyes, nose, throat, and skin. Follow these tips to reduce your exposure to smoke (ADEC 2021):

- Pay attention to local air quality reports and stay alert to any health warnings related to smoke.
- Use common sense. If it's smoky outside, limit time outdoors and do not allow children to play outdoors.
- Close windows and doors when smoky.
- Clean air filters and vents in home.
- Plan activities away from dense smoke.

Insurance Claims

Preparedness is a crucial factor in the event of a catastrophe. Reviewing your insurance policy now can prevent total loss later. Once there is an imminent disaster, insurance carriers may decide against adding or amending coverage. Be aware whether you have adequate coverage—if you have replacement cost or actual cash value coverage. Replacement cost is the amount it would take to rebuild or replace your home and its contents with similar materials or goods. Actual cash value is replacement cost minus depreciation (Alaska Department of Commerce, Community, and Economic Development [ADCCED] 2021).

Tips for knowing your insurance coverage (ADCCED 2021):

- Carefully read and understand your insurance policy, particularly all endorsements/riders.
- Verify that your policy covers additional living expenses, including temporary housing, if you can't return home.
- Consider adding increased cost of construction or building ordinance coverage. This pays for any increased cost to replace or repair the home to meet requirements of current laws or ordinances.
- Consider special coverage for valuables. This covers jewelry, furs, coins, guns, stamps, computers, antiques, musical instruments, and other high-value possession that exceed normal policy limits.

Your insurance agent is the best source of information for submitting a claim. It is recommended you take photos of your home in preparation of an emergency and keep the photos in a safe place as this will make the insurance claim process easier. Most of the expenses incurred during the time you are forced to live elsewhere may be reimbursed, so be sure to keep all receipts.

Tips for streamlining insurance claims (ADCCED 2019):

- Keep copies and records of all communication between you and the adjuster.
- Take photos and videos of the damage before things are repaired to present to the adjuster.
- Prepare a detailed list of the destroyed or damaged items.
- Wait on making repairs until your insurance company has inspected the property and you have reached an agreement on the cost of repairs.
- If it's safe, make temporary repairs to prevent further damage by covering leaking roofs, broken windows, and damaged walls. Keep receipts for the adjuster.
- If you can't stay in your home due to damage, most policies have coverage for additional living expenses while repairs are being made.
- Save all receipts, including food and hotel as well as any other necessities.

Community Safety: Post-Fire Floods and Debris Flows

Large-scale wildfires significantly modify the terrain and surface conditions. Usually, vegetation absorbs rainfall, reducing the amount of runoff. However, wildfires leave the ground, barren, charred, and unable to absorb water, creating the perfect conditions for flash flooding, mudflows, and debris flows. Floods are the most common and costly natural hazard in the nation. Flash floods are particularly common after wildfires and can occur within minutes after the beginning of a rainstorm. Even areas that are not usually susceptible to floods are at risk, due to the altered landscape (FEMA 2021b).

Factors that contribute to flooding and debris flows are steep slopes, heavy rainfall, weak or loose rock and soil, and improper construction and grading. Even small rainfall can cause a flash flood, transporting debris and damaging homes and other structures. Flood risk remains significantly higher until vegetation is restored, which can be up to 5 years after a wildfire. Flooding and flood damage is likely more extreme, as debris and ash left from the fire can form mudflows. As rainwater moves across barren terrain, it can also pick up and transport soil and sediment—causing greater damage (FEMA 2021b).

A post-fire flood doesn't have to be a catastrophic event to bring high damage expenses, and it is not necessary to live in a high-risk flood area to incur flood damage. In fact, from 2014 to 2018, policyholders not residing in high-risk flood areas filed over 40% of all National Flood Insurance Program claims (FEMA 2021b).

Property owners should remember to (FEMA 2021b):

- Be prepared. Develop an evacuation plan, keep important papers in a safe, waterproof place, and itemize and record (take photos) of valuables and other possessions inside and outside the home.
- Buy flood insurance. Most standard policies do not cover flood damage.
- Plan ahead. Gather supplies in case of a storm, upgrade your home against damage, and review insurance coverage.

Mobilizing Your Community

Several factors make the KPB face significant emergency management challenges. Some of the factors include the lack of a widespread interconnected road system; unusual and unpredictable weather;

geographic isolation; an aging community infrastructure; and communication issues. In some cases, it may take up to a week for disaster assistance to reach impacted communities. Thus, it is important to create local community response and recovery teams. The local Emergency Manager will collaborate with state and federal partners to manage disaster response and urgent needs. Still, mobilizing a response and recovery team or a group of teams in a community can function as a vital part of the recovery procedure (Alaska Division of Homeland Security & Emergency Management [DHSEM] 2011).

Objectives for response and recovery teams include (DHSEM 2011):

- Safety/damage assessment of homes, businesses, and public infrastructure.
- Identify people in shelters who require special care and those who need to be relocated into specialized-care facilities.
- Locating and opening relief-supply food-distribution points.
- Produce, update, and distribute a disaster fact sheet. Include critical public information to aid emergency responders, residents, and the media.
- Track costs for local responders. This will help recovering costs if determined eligible for state or federal disaster assistance.
- Monitor and address hazardous environmental situations such as air quality, mudslides, and weakened trees.
- Assess the need to identify specific routes and timeframes for critical relief supplies.

Residents throughout Alaska are encouraged to join forces to create local Alaskan Firewise Communities (AFCs) to minimize and prevent wildfire losses. AFCs are community-based organizations that mobilize residents to protect their properties, communities, and environments from disastrous wildfires. AFCs educate homeowners about community wildfire preparedness activities while collaborating with local fire officials to plan and implement projects that increase the wildfire resilience of their communities (AWFCG 2009).

The following resources may be helpful for the post-fire and volunteer coordinators (DHSEM 2011):

- Alaska Housing Finance Corporation
- Food Bank of Kenai Peninsula
- American Red Cross
- Salvation Army
- AK Division of Homeland Security & Emergency Management
- FEMA
- Small Business Administration
- Tribal nonprofits
- Churches and other faith-based organizations
- Voluntary organizations active in disaster
- National Flood Insurance Program
- Individual and family assistance programs

Communication

After a team is assembled and immediate tasks are identified, find the best way to spread information in your community. You may distribute flyers, set up a voicemail box, work to find pets or livestock that have been displaced, develop a mailing list for property owners, hold regular public meetings, etc. It is important that a long-term communications plan is developed (FEMA 2011). Applying the following steps can aid in successful communication (FEMA 2011):

- Convey post-wildfire hazards to the public.
- Develop and maintain emergency notification systems that allow authorized official to alert residents of emergency situations.
- Public meetings to inform the public about programs and services available in the community.
- Determine the best way to relay information, e.g., phone calls, radio, TV, or social media.
- Find out how emergency response teams, local officials, and volunteers will communicate with the community.

Post-Fire Rehabilitation and Resources

Wildfires that cause extensive damage necessitate dedicated efforts to avert issues afterwards. Loss of vegetation increases soil susceptibility to erosion; water runoff may increase and lead to flooding; sediment and debris may be transported downstream and damage properties or saturate reservoirs putting endangered species and water reserves at risk (USFS 2021b). Following a fire, the primary priority is emergency stabilization to prevent additional damage to life, property, or natural resources. The soil stabilization work starts immediately and may proceed for up to a year. The rehabilitation effort to restore damage caused by the fire starts after the fire is out and may persist for various years. For the most part, rehabilitation efforts focus on the lands not likely to recover naturally from wildfire damage (USFS 2021b).

The USFS's post-fire emergency stabilization program is called the Burned Area Emergency Response (BAER) program. The goal of the BAER program is to discover post-wildfire threats to human life and safety, property, and critical natural or cultural resources on USFS lands and take appropriate actions to mitigate unacceptable risks (USFS 2021c). BAER groups are composed of trained professionals in different fields: soil scientists, engineers, hydrologists, biologists, botanists, archaeologists, and others who quickly assess the burned area and advise emergency stabilization treatments (USFS 2021c).

The Natural Resources Conservation Service (NRCS) Emergency Watershed Protection (EWP) program aids communities recover from natural disasters by providing technical and financial services for watershed repair on public (state and local) and private land. The goal is reduced flood risk via funding and expert advice for land treatments. The EWP program can provide up to 75% of funds; local sponsors must acquire the remaining 25% in cash or in-kind services (NRCS 2021a).

Examples of potential treatments include (USFS 2021c):

- Hillside stabilization (for example, placing bundles of straw parallel to the slope to slow erosion)
- Hazard tree cutting
- Felling trees perpendicular to the slope contour to reduce runoff
- Mulching areas seeded with native vegetation
- Stream enhancements and construction of catchments to control erosion, runoff, and debris flows

- Planting or seeding native species to limit spread of invasive species

A comparison of potential hillside, channel, and road treatments is available at <https://www.afterwildfirenm.org/post-fire-treatments/which-treatment-do-i-use>.

The effectiveness of various treatments is described at https://www.fws.gov/fire/downloads/ES_BAR/Post-Fire_Hillslope_Treatment_Synthesis.pdf.

Specific Treatment Details

Hillslope Treatments

Cover Applications:

- Dry mulch provides immediate ground cover with mulch to reduce erosion and downstream flow.
- Wet mulch (hydromulch) provides immediate cover to hold moisture and seeds on slopes using a combination of organic fibers, glue, suspension agents, and seeds (most effective on inaccessible slopes).
- Slash spreading provides ground cover to reduce erosion by felling trees in burned areas.
- Seeding reduces soil erosion over time with an application of native seed mixtures (most successful in combination with mulching). Breaking up and loosening topsoil to break down the hydrophobic layer on top of the soil is also effective.

Erosion Barrier Applications:

- Erosion control mat: organic mats staked on the soil surface to provide stability for vegetation establishment.
- Log erosion barrier: trees felled perpendicular to the hillslope to slow runoff.
- Fiber rolls (wattles): rolls placed perpendicular to the hillslope to reduce surface flows and reduce erosion.
- Silt fencing: permeable fabric fencing installed parallel to the slope contour to trap sediment as water flows down the hillslope.

Channel Treatments

- Check dam: small dams built to trap and store sediment in stream channels.
- In-channel tree felling: felling trees in a staggered pattern in a channel to trap debris and sediment.
- Grade stabilizer: structures made of natural materials placed in ephemeral channels for stabilization.
- Stream bank armoring: reinforcing streambanks with natural materials to reduce bank cutting during stream flow.
- Channel deflector: an engineered structure to direct flow away from unstable banks or nearby roads.
- Debris basin: constructed to store large amounts of sediment moving in a stream channel.

Road and Trail Treatments

- Outsloping and rolling dips (water bars) alter the road shape or template to disperse water and reduce erosion.
- Overflow structures protect the road by controlling runoff and diverting stream flow to constructed channels.
- Low water stream crossing: culverts replaced by natural fords to prevent stream diversion and keep water in the natural channel.
- Culvert modification: upgrading culvert size to prevent road damage.
- Debris rack and deflectors: structure placed in a stream channel to collect debris before reaching a culvert.
- Riser pipes filter out debris and allow the passage of water in stream channels.
- Catchment-basin cleanout: using machinery to clean debris and sediment out of stream channels and catchment basins.
- Trail stabilization: constructing water bars and spillways to provide drainage away from the trail surface.

These treatments and descriptions are further detailed at <https://afterwildfirenm.org/post-fire-treatments/treatment-descriptions>.

For more information about how to install and build treatments, see the Wildfire Restoration Handbook at https://www.rmfi.org/sites/default/files/hero-content-files/Fire-Restoration-HandbookDraft_2015_2_compressed_0.pdf.

Timber Salvage

Many private landowners may decide to harvest trees killed in the fire, a decision that can be highly controversial. Any remaining trees post-fire can be instrumental for soil and wildlife habitat recovery. Furthermore, burned soils are especially susceptible to soil compaction and erosion. Therefore, timber salvage must be performed by professionals. Several programs assist landowners with timber salvage, including the NRCS Environmental Quality Incentives Program (EQIP) (NRCS 2021b).

Invasive Species Management and Native Revegetation

The BLM has identified more than 27,000 invasive weed infestations in Alaska. Further complicating the invasive weed problem are more frequent and intense wildfires. Wildfire provides opportunity for many invasive species to dominate the landscape because many of these species thrive on recently burned landscapes. Therefore, it is imperative that landowners prevent invasive establishment by eradicating weeds early, planting native species, and limiting invasive seed dispersal (BLM 2021).

Planting native seeds is an economical way to restore a disturbed landscape. Vegetation provides protection against erosion and stabilizes exposed soils. To be successful, seeds must be planted during the proper time of year and using correct techniques. Use a native seed mixture with a diversity of species and consider the species' ability to compete with invasive species. Before planting, the seedbed must be prepared with topsoil and by raking to break up the hydrophobic soil layer. If you choose to transplant or plant native species, consider whether the landscape has made a sufficient recovery to ensure the safety of the individuals (ADNR, Division of Agriculture [DOA] 2008).

A comprehensive revegetation manual for Alaska can be found here:

<http://dnr.alaska.gov/ag/akpmc/pdf/RevegManual.pdf>

Long-Term Community Recovery

On non-federal land, recovery efforts are the responsibility of local governments and private landowners. Challenges associated with long-term recovery include homes that were severely damaged or were saved but are located in high-severity burn areas. Furthermore, homes saved but located on unstable slopes or in areas in danger of flooding or landslides present a more complicated challenge.

Economically, essential businesses that were burned or were otherwise forced to close pose a challenge to communities of all sizes. Given these complications, rebuilding and recovery efforts can last for years, with invasive species control and ecosystem restoration lasting even longer (CUSP 2016). It is critical that a long-term plan is in place and there is sufficient funding and support for all necessary ecosystem and community recovery. To learn about more post-fire recovery resources, visit the After the Flames website here: <https://aftertheflames.com/resources/>

This page intentionally left blank.

Developing an action plan and an assessment strategy that identifies roles and responsibilities, funding needs, and timetables for completing highest-priority projects is an important step in organizing the implementation of the CWPP. Table 4.1 in the previous section identifies tentative timelines and monitoring protocols for fuels reduction treatments, the details of which are outlined below.

All stakeholders and signatories to this CWPP desire worthwhile outcomes. Risk reduction work on the ground, for the most part, is often not attainable in a few months—or even years. The amount of money and effort invested in implementing a plan such as this requires that there be a means to describe, quantitatively or qualitatively, if the goals and objectives expressed in this plan are being accomplished according to expectations.

This section will present a suite of recommended CWPP monitoring strategies intended to help track progress, evaluate work accomplished, and assist planners in adaptive management.

The strategies outlined in this section take into account several variables:

- Do the priorities identified for treatment reflect the goals stated in the plan? Monitoring protocols can help address this question.
- Can there be ecological consequences associated with fuels work? We may be concerned about soil movement and/or invasive species encroachment post-treatment. Relatively cost-effective monitoring may help clarify changes.
- Vegetation will grow back. Thus, fuel break maintenance and fuels modification in both the home ignition zone and at the landscape scale require periodic assessment. Monitoring these changes can help decision-makers identify appropriate treatment intervals.

As the CWPP evolves over time, there may be a need to track changes in policy, requirements, stakeholder changes, and levels of preparedness. These can be significant for any future revisions and/or addendums to the CWPP.

Table 5.1 identifies recommended monitoring strategies, both quantifiable and non-quantifiable, for assessing the progress of the CWPP. It must be emphasized that these strategies are 1) not exhaustive (new strategies and protocols can evolve with new CWPP action items) and 2) dependent on available funds and personnel to implement them.

There are many resources for designing and implementing community based, multi-party monitoring that could support and further inform a monitoring program for the CWPP (Egan 2013). Multiparty monitoring involves a diverse group consisting of community members, community-based groups, regional and national interest groups, and public agencies. This approach increases understanding of the effects of restoration efforts and trust among restoration partners. Multiparty monitoring may be more time-consuming due to the collaborative nature of the work; therefore, a clear and concise monitoring plan must be developed.

Table 5.1. Recommended Monitoring Strategies

Strategy	Task/Tool	Lead	Remarks
Photographic record (documents pre- and post-fuels reduction work, evacuation routes, workshops, classes, field trips, changes in open space, treatment type, etc.)	Establish field global positioning system (GPS) location; photo points of cardinal directions; keep photos protected in archival location	Core Team member	Relatively low cost; repeatable over time; used for programs, and tracking objectives
Number of acres treated (by fuel type, treatment method)	GPS/GIS/fire behavior prediction system	Core Team member	Evaluating costs, potential fire behavior
Number of home ignition zones/defensible space treated to reduce structural ignitability	GPS	Homeowner	Structure protection
Number of residents/citizens participating in any CWPP projects and events	Meetings, media interviews, articles	Core Team member	Evaluate culture change objective
Number of homeowner contacts (brochures, flyers, posters, etc.)	Visits, phone	Agency representative	Evaluate objective
Number of jobs created	Contracts and grants	Core Team member	Evaluate local job growth
Education outreach: number, kinds of involvement	Workshops, classes, field trips, signage	Core Team member	Evaluate objectives
Emergency management: changes in agency response capacity	Track changes in capacity	Agency representative	Evaluate mutual aid
Codes and policy changes affecting CWPP	Qualitative	Core Team	CWPP changes
Number of stakeholders	Added or dropped	Core Team	CWPP changes
Wildfire acres burned, human injuries/fatalities, infrastructure loss, environmental damage, suppression and rehabilitation costs	Wildfire records	Core Team	Compare with 5- or 10-year average

An often overlooked but critical component of fuel treatment is monitoring. It is important to evaluate whether fuel treatments have accomplished their defined objectives and whether any unexpected outcomes have occurred. In addition to monitoring mechanical treatments, it is important to carry out comprehensive monitoring of burned areas to establish the success of fuels reduction treatments on fire behavior, as well as monitoring for ecological impacts, repercussions of burning on wildlife, and effects on soil chemistry and physics. Adaptive management is a term that refers to adjusting future management

based on the effects of past management. Monitoring is required to gather the information necessary to inform future management decisions. Economic and legal questions may also be addressed through monitoring. In addition, monitoring activities can provide valuable educational opportunities for students.

The monitoring of each fuel's reduction project would be site-specific, and decisions regarding the timeline for monitoring and the type of monitoring to be used would be determined by project. Monitoring and reporting contribute to the long-term evaluation of changes in ecosystems, as well as the knowledge base about how natural resource management decisions affect both the environment and the people who live in it.

The most important part of choosing a monitoring program is selecting a method appropriate to the people, place, and available time. Several levels of monitoring activities meet different objectives, have different levels of time intensity, and are appropriate for different groups of people. They include the following:

Minimum—Level 1: Pre- and Post-project Photographs

Appropriate for many individual homeowners who conduct fuels reduction projects on their properties.

Moderate—Level 2: Multiple Permanent Photo Points

Permanent photo locations are established using rebar or wood posts, global positioning system (GPS)-recorded locations, and photographs taken on a regular basis. Ideally, this process would continue over several years. This approach might be appropriate for more enthusiastic homeowners or for agencies conducting small-scale, general treatments.

High—Level 3: Basic Vegetation Plots

A series of plots can allow monitors to evaluate vegetation characteristics such as species composition, percentage of cover, and frequency. Monitors then can record site characteristics such as slope, aspect, and elevation. Parameters would be assessed pre- and post-treatment. The monitoring agency should establish plot protocols based on the types of vegetation present and the level of detail needed to analyze the management objectives.

Intense—Level 4: Basic Vegetation Plus Dead and Downed Fuels Inventory

The protocol for this level would include the vegetation plots described above but would add more details regarding fuel loading. Crown height or canopy closure might be included for live fuels. Dead and downed fuels could be assessed using other methods, such as Brown's transects (Brown 1974), an appropriate photo series (Ottmar et al. 2000), or fire monitoring (Fire Effects Monitoring and Inventory System [FIREMON]; Lutes et al. 2006) plots.

CWPP EVALUATION

CWPPs are intended to reduce the risk from wildfire for a community and surrounding environment. However, over time, communities change and expand, vegetation grows back, and forests and wildlands evolve. As such, the risk of wildfire to communities is constantly changing. The plans and methods to reduce risk must be dynamic to keep pace with the changing environment. An evaluation of the CWPP will gather information and identify whether the plans and strategies are on course to meet the desired outcomes or if modifications are needed to meet expectations.

Four general steps can be used to evaluate the CWPP:

1. Identify objectives: What are the goals identified in the plan? How are they reached? Is the plan performing as intended?

- a. Structural ignitability
 - b. Fuel treatments
 - c. Public education and outreach
 - d. Multi-agency collaboration
 - e. Emergency response
2. Assess the changing environment: How have population characteristics and the wildfire environment changed?
- a. Population change
 - i. Increase or decrease
 - ii. Demographics
 - b. Population settlement patterns
 - i. Distribution
 - ii. Expansion into the WUI
 - c. Vegetation
 - i. Fuel quantity and type
 - ii. Drought and disease impacts
3. Review action items: Are actions consistent with the plan's objectives?
- a. Check for status, i.e., completed/started/not started
 - b. Identify completed work and accomplishments
 - c. Identify challenges and limitations
 - d. Identify next steps
4. Assess results: What are the outcomes of the action items?
- a. Multi-agency collaboration
 - i. Who was involved in the development of the CWPP?
 - ii. Have partners involved in the development process remained involved in the implementation?
 - iii. How has the planning process promoted implementation of the CWPP?
 - iv. Have CWPP partnerships and collaboration had a beneficial impact on the community?
 - b. Risk assessment
 - i. How is the risk assessment utilized to make decisions about fuel treatment priorities?

- ii. Have there been new wildfire-related regulations?
- iii. Are at-risk communities involved in mitigating wildfire risk?
- c. Hazardous fuels
 - i. How many acres have been treated?
 - ii. How many projects are cross-boundary?
 - iii. How many residents have participated in creating defensible space?
- d. Structural ignitability
 - i. Have there been updates to fire codes and ordinances?
 - ii. How many structures have been lost to wildfire?
 - iii. Has the CWPP increased public awareness of structural ignitability and reduction strategies?
- e. Public education and outreach
 - i. Has public awareness of wildfire and mitigation strategies increased?
 - ii. Have residents been involved in wildfire mitigation activities?
 - iii. Has there been public involvement?
 - iv. Have vulnerable populations been involved?
- f. Emergency response
 - i. Has the CWPP been integrated into relevant plans (e.g., hazard mitigation or emergency operations)?
 - ii. Is the CWPP congruent with other hazard mitigation planning efforts?
 - iii. Has availability and capacity of local fire departments changed since the CWPP was developed?

IMPLEMENTATION

This CWPP makes recommendations for prioritized fuels reduction projects and measures to reduce structural ignitability, carry out public education and outreach and improve wildfire response capabilities. Implementation of fuels reduction projects need to be tailored to the specific project and will be unique to the location depending on available resources and regulations. On-the-ground implementation of the recommendations in the CWPP planning area will require development of an action plan and assessment strategy for completing each project. This step will identify the roles and responsibilities of the people and agencies involved, as well as funding needs and timetables for completing the highest-priority projects (SAF 2004). Information pertaining to funding is provided in Appendix F.

IDENTIFY TIMELINE FOR UPDATING THE CWPP

The HFRA allows for maximum flexibility in the CWPP planning process, permitting the Core Team to determine the time frame for updating the CWPP; it is suggested that a formal revision be made on the fifth anniversary of signing and every 5 years following. The Core Team members are encouraged to meet on an annual basis to review the project list, discuss project successes, and strategize regarding project implementation funding. If possible, the CWPP revision should coincide with the revision of the Borough HMP. Recommendations: 1) develop a cursory update and crosswalk of changes completed in 2023 to align with the ALAH Update and the borough HMP, and 2) complete the comprehensive revision in 2028 and every 5 years thereafter. A goal of the 2018 ALAH Plan is to maintain and implement the CWPP, including project recommendations.

GLOSSARY OF TERMS

Aspect: Cardinal direction toward which a slope faces in relation to the sun (National Wildfire Coordinating Group [NWCG] 2021a).

Active Crown Fire: A crown fire in which the entire fuel complex is involved in flame, but the crowning phase remains dependent on heat released from surface fuel for continued spread. An active crown fire presents a solid wall of flame from the surface through the canopy fuel layers. Flames appear to emanate from the canopy as a whole rather than from individual trees within the canopy. Active crown fire is one of several types of crown fire and is contrasted with **passive crown fires**, which are less vigorous types of crown fire that do not emit continuous, solid flames from the canopy (SWCA).

Available Canopy Fuel: The mass of canopy fuel per unit area consumed in a crown fire. There is no post-frontal combustion in canopy fuels, so only fine canopy fuels are consumed. We assume that only the foliage and a small fraction of the branchwood is available (Twisp 2021).

Available Fuel: The total mass of ground, surface and canopy fuel per unit area available fuel consumed by a fire, including fuels consumed in postfrontal combustion of duff, organic soils, and large woody fuels (Twisp 2021).

Backfiring: Intentionally setting fire to fuels inside a control line to contain a fire (Twisp 2021).

Biomass: Organic material. Also refers to the weight of organic material (e.g., biomass roots, branches, needles, and leaves) within a given ecosystem (Twisp 2021).

Burn Severity: A qualitative assessment of the heat pulse directed toward the ground during a fire. Burn severity relates to soil heating, large fuel and duff consumption, consumption of the litter and organic layer beneath trees and isolated shrubs, and mortality of buried plant parts (SWCA).

Canopy: The more or less continuous cover of branches and foliage formed collectively by adjacent trees and other woody species in a forest stand. Where significant height differences occur between trees within a stand, formation of a multiple canopy (multi-layered) condition can result (SWCA).

Chain: Unit of measure in land survey, equal to 66 feet (20 M) (80 chains equal 1 mile). Commonly used to report fire perimeters and other fireline distances. Popular in fire management because of its convenience in calculating acreage (example: 10 square chains equal one acre) (New Mexico FFA 2021).

Climate Adaptation: Adaptation is an adjustment in natural or human systems to a new or changing environment. Adaptation to climate change refers to adjustment in natural or human systems in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities (Governor's Office of Planning and Research [GOPR] 2020).

Climate Change: A change of climate that is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and that is in addition to natural climate variability observed over comparable time periods (GOPR 2020).

Community Assessment: An analysis designed to identify factors that increase the potential and/or severity of undesirable fire outcomes in wildland urban interface communities (SWCA).

Communities at Risk: Defined by the Healthy Forest Restoration Act of 2003 as "Wildland-Urban Interface Communities within the vicinity of federal lands that are at high risk from wildfire" (GOPR 2020).

Community Emergency Response Team (CERT): The CERT program educates volunteers about disaster preparedness for the hazards that may impact their area and trains them in basic disaster

response skills, such as fire safety, light search and rescue, team organization, and disaster medical operations. CERT offers a consistent, nationwide approach to volunteer training and organization that professional responders can rely on during disaster situations, allowing them to focus on more complex tasks.

Community Wildfire Protection Plan (CWPP): A planning document that seeks to reduce the threat to life and property from wildfire by identifying and mitigating wildfire hazards to communities and infrastructure located in the WUI as developed from the Healthy Forest Restoration Act of 2003. Addresses issues such as wildfire response, hazard mitigation, community preparedness, or structure protection (SWCA).

Conditional Surface Fire: A potential type of fire in which conditions for sustained conditional surface fire active crown fire spread are met but conditions for crown fire initiation are not. If the fire begins as a surface fire, it is expected to remain so. If it begins as an active crown fire in an adjacent stand, it may continue to spread as an active crown fire (Twisp 2021).

Contain: A tactical point at which a fire's spread is stopped by and within specific contain features, constructed or natural; also, the result of stopping a fire's spread so that no further spread is expected under foreseeable conditions. For reporting purposes, the time and date of containment. This term no longer has a strategic meaning in Federal wildland fire policy (Twisp 2021).

Control: To construct fireline or use natural features to surround a fire and any control spot fires therefrom and reduce its burning potential to a point that it no longer threatens further spread or resource damage under foreseeable conditions. For reporting purposes, the time and date of control. This term no longer has a strategic meaning in Federal wildland fire policy (Twisp 2021).

Cover Type: The type of vegetation (or lack of it) growing on an area, based on cover type minimum and maximum percent cover of the dominant species, species group or non-living land cover (such as water, rock, etc.). The cover type defines both a qualitative aspect (the dominant cover type) as well as a quantitative aspect (the abundance of the predominant features of that cover type) (Twisp 2021).

Creeping Fire: A low intensity fire with a negligible rate of spread (Twisp 2021).

Crown Fire: A fire that advances at great speed from crown to crown in tree canopies, often well in advance of the fire on the ground (National Geographic Society 2021).

Defensible Space: An area around a structure where fuels and vegetation are modified, cleared, or reduced to slow the spread of wildfire toward or from a structure. The design and distance of the defensible space is based on fuels, topography, and the design/materials used in the construction of the structure (SWCA).

Duff: The layer of decomposing organic materials lying below the litter layer of freshly fallen twigs, needles, and leaves and immediately above the mineral soil (SWCA).

Ecosystem: An interacting natural system including all the component organisms together with the abiotic environment and processes affecting them (SWCA).

Environmental Conditions: That part of the fire environment that undergoes short-term changes: weather, which is most commonly manifest as windspeed, and dead fuel moisture content (Twisp 2021).

Escape Route: A preplanned and understood route firefighters take to move to a safety zone or other low-risk area. When escape routes deviate from a defined physical path, they should be clearly marked (flagged) (SWCA).

Evacuation: The temporary movement of people and their possessions from locations threatened by wildfire (SWCA).

Fire-Adapted Communities: A fire-adapted community collaborates to identify its wildfire risk and works collectively on actionable steps to reduce its risk of loss. This work protects property and increases the safety of firefighters and residents (USFA 2021a).

Fire Behavior: The manner in which fuel ignites, flame develops, and fire spread and exhibits other related phenomena as determined by the interaction of fuels, weather, and topography (Frames 2021).

Fire Break: Areas where vegetation and organic matter are removed down to mineral soil (SWCA).

Fire Environment: The characteristics of a site that influence fire behavior. In fire modeling the fire environment is described by surface and canopy fuel characteristics, windspeed and direction, relative humidity, and slope steepness (Twisp 2021).

Fire Frequency: A broad measure of the rate of fire occurrence in a particular area. For historical analyses, fire frequency is often expressed using the fire return interval calculation. For modern-era analyses, where data on timing and size of fires are recorded, fire frequency is often best expressed using fire rotation (SWCA)

Fire Hazard: Fire hazard is the potential fire behavior or fire intensity in an area, given the type(s) of fuel present – including both the natural and built environment – and their combustibility (GOPR 2020).

Fire Hazard Severity Zones: Fire hazard severity zones are defined based on vegetation, topography, and weather (temperature, humidity and wind), and represents the likelihood of an area burning over a 30- to 50-year time period without considering modifications such as fuel reduction efforts (GOPR 2020).

Fire History: The chronological record of the occurrence of fire in an ecosystem or at a specific site. The fire history of an area may inform planners and residents about the level of wildfire hazard in that area (SWCA).

Fire Intensity: A general term relating to the heat energy released in a fire (SWCA).

Fireline Intensity: Amount of heat release per unit time per unit length of fire front. Numerically, the product of the heat of combustion, quantity of fuel consumed per unit area in the fire front, and the rate of spread of a fire, expressed in kilowatts per minute (SWCA). This expression is commonly used to describe the power of wildland fires, but it does not necessarily follow that the severity, defined as the vegetation mortality, will be correspondingly high (Twisp 2021).

Fire Prevention: Activities such as public education, community outreach, planning, building code enforcement, engineering (construction standards), and reduction of fuel hazards that is intended to reduce the incidence of unwanted human-caused wildfires and the risks they pose to life, property or resources (GOPR 2020).

Fire Regime: A measure of the general pattern of fire frequency and severity typical to a particular area or type of landscape: The regime can include other metrics of the fire, including seasonality and typical fire size, as well as a measure of the pattern of variability in characteristics (SWCA).

Fire Regime Condition Class: Condition classes are a function of the degree of fire regime condition class departure from historical fire regimes resulting in alterations of key ecosystem components such as composition structural stage, stand age, and canopy closure (Twisp 2021).

Fire Return Interval: Number of years (interval) between two successive fires in a designated area (SWCA).

Fire Risk: “Risk” takes into account the intensity and likelihood of a fire event to occur as well as the chance, whether high or low, that a hazard such as a wildfire will cause harm. Fire risk can be determined by identifying the susceptibility of a value or asset to the potential direct or indirect impacts of wildfire hazard events (GOPR 2020).

Fire Severity: A qualitative measure of the immediate effects of fire on the fire severity ecosystem. It relates to the extent of mortality and survival of plant and animal life both aboveground and belowground and to loss of organic matter. It is determined by heat released aboveground and belowground. Fire Severity is dependent on intensity and residence time of the burn. For trees, severity is often measured as percentage of basal area removed. An intense fire may not necessarily be severe (Twisp 2021).

Flammability: The relative ease with which fuels ignite and burn regardless of the quantity of the fuels (SWCA).

Flame Length: The length of flames in the propagating fire front measured along the slant of the flame from the midpoint of its base to its tip. It is mathematically related to fireline intensity and tree crown scorch height (Twisp 2021).

Foliar Moisture content: Moisture content (dry weight basis) of live foliage, foliar moisture content expressed as a percent. Effective foliar moisture content incorporates the moisture content of other canopy fuels such as lichen, dead foliage, and live and dead branchwood (Twisp 2021).

Forest Fire: uncontrolled burning of a woodland area (National Geographic Society 2021).

Fuel Break: A natural or manmade change in fuel characteristics which affects fire behavior so that fires burning into them can be more readily controlled (NWCG 2021b).

Fuel Complex: The combination of ground, surface, and canopy fuel strata (Twisp 2021).

Fuel Condition: Relative flammability of fuel as determined by fuel type and environmental conditions (SWCA).

Fuel Continuity: A qualitative description of the distribution of fuel both horizontally and vertically. Continuous fuels readily support fire spread. The larger the fuel discontinuity, the greater the fire intensity required for fire spread (Twisp 2021).

Fuel Loading: The volume of fuel in a given area generally expressed in tons per acre (SWCA). Dead woody fuel loadings are commonly described for small material in diameter classes of 0 to 0.25, 0.25 to 1, and 1 to 3 inches and for large material greater than 3 inches (Twisp 2021).

Fuel Management/Fuel Reduction: Manipulation or removal of fuels to reduce the likelihood of ignition and to reduce potential damage in case of a wildfire. Fuel reduction methods include prescribed fire, mechanical treatments (mowing, chopping), herbicides, biomass removal (thinning or harvesting of trees, harvesting of pine straw), and grazing. Fuel management techniques may sometimes be combined for greater effect (SWCA).

Fuel Model: A set of surface fuel bed characteristics (load and surface-area-to- fuel model volume-ratio by size class, heat content, and depth) organized for input to a fire model (Twisp 2021).

Fuel Modification: The manipulation or removal of fuels (i.e., combustible biomass such as wood, leaves, grass, or other vegetation) to reduce the likelihood of igniting and to reduce fire intensity. Fuel modification activities may include lopping, chipping, crushing, piling and burning, including prescribed burning. These activities may be performed using mechanical treatments or by hand crews. Herbicides and prescribed herbivory (grazing) may also be used in some cases. Fuel modification may also sometimes be referred to as “vegetation treatment” (GOPR 2020).

Fuel Moisture Content: This is expressed as a percent or fraction of oven dry fuel moisture content weight of fuel. It is the most important fuel property controlling flammability. In living plants, it is physiologically bound. Its daily fluctuations vary considerably by species but are usually above 80 to 100 percent. As plants mature, moisture content decreases. When herbaceous plants cure, their moisture

content responds as dead fuel moisture content, which fluctuates according to changes in temperature, humidity, and precipitation (Twisp 2021).

Fuel Treatment: The manipulation or removal of fuels to minimize the probability of ignition and/or to reduce potential damage and resistance to fire suppression activities (NWCG 2021g). Synonymous with fuel modification.

Grazing: There are two types of grazing: 1) traditional grazing, and 2) targeted grazing. Traditional grazing refers to cattle that are managed in extensive pastures to produce meat. Targeted grazing involves having livestock graze at a specific density for a given period of time for the purpose of managing vegetation. Even though both kinds of grazing manage fuel loading in range- and forested lands, targeted grazing is different in that its sole purpose is to manage fuels. Targeted grazing is done by a variety of livestock species such as sheep, goats, or cows (UC, Agriculture and Natural Resources 2019).

Ground Fire: Fire that burns organic matter in the soil, or humus; usually does not appear at the surface (National Geographic Society 2021).

Ground Fuels: Fuels that lie beneath surface fuels, such as organic soils, duff, decomposing litter, buried logs, roots, and the below-surface portion of stumps (Twisp 2021).

Hazard: A “hazard” can be defined generally as an event that could cause harm or damage to human health, safety, or property (GOPR 2020).

Hazardous Areas: Those wildland areas where the combination of vegetation, topography, weather, and the threat of fire to life and property create difficult and dangerous problems (SWCA).

Hazardous Fuels: A fuel complex defined by type, arrangement, volume, condition, and location that poses a threat of ignition and resistance to fire suppression (NWCG 2021h).

Hazardous Fuels Reduction: Any strategy that reduces the amount of flammable material in a fire-prone ecosystem. Two common strategies are mechanical thinning and controlled burning (Twisp 2021).

Hazard Reduction: Any treatment that reduces the threat of ignition and spread of fire (SWCA).

Highly Valued Resources and Assets (HVRAs): Landscape features that are influenced positively and/or negatively by fire. Resources are naturally occurring, while Assets are human-made (Interagency Fuel Treatment Decision Support System [IFTDSS] 2021).

Ignition: The action of setting something on fire or starting to burn.

Incident: An occurrence or event, either natural or person-caused, which requires an emergency response to prevent loss of life or damage to property or natural resources (Twisp 2021).

Influence Zone: An area that, with respect to wildland and urban fire, has a set of conditions that facilitate the opportunity for fire to burn from wildland fuels to the home and or structure ignition zone (NWCG 2021).

Initial Attack: The actions taken by the first resources to arrive at a wildfire to protect lives and property, and prevent further extension of the fire (SWCA).

Ladder Fuels: Fuels that provide vertical continuity allowing fire to carry from surface fuels into the crowns of trees or shrubs with relative ease (SWCA).

Litter: Recently fallen plant material that is only partially decomposed and is still discernible (SWCA).

Manual Treatments: Felling and piling of fuels done by hand. The volume of material generated from a manual fuel treatment is typically too small to warrant a biomass sale therefore collected material is

disposed of by burning or chipping. The work can be performed by either a single individual or a large organized crew with powered equipment (UC, Agriculture and Natural Resources 2021a).

Mechanized Treatments: Mechanical treatments pulverize large continuous patches of fuel to reduce the volume and continuity of material. Mechanical treatments can be applied as either mastication or chipping treatments. Both treatments shred woody material, but mastication leaves residue on-site while chipping collects the particles for transportation off site. Similar to hand treatments, mechanical treatments can target specific areas and vegetation while excluding areas of concern. In addition, mechanical treatment is easily scalable to large areas (>30 acres) with little added cost. (UC, Agriculture and Natural Resources 2021b).

Mitigation: Action that moderates the severity of a fire hazard or risk (SWCA).

Mutual Aid: Assistance in firefighting or investigation by fire agencies, irrespective of jurisdictional boundaries (NWCG 2021j).

National Cohesive Strategy: The National Cohesive Wildland Fire Management Strategy is a strategic push to work collaboratively among all stakeholders and across all landscapes, using best science, to make meaningful progress towards the three goals:

- Resilient Landscapes
- Fire Adapted Communities
- Safe and Effective Wildfire Response

Vision: To safely and effectively extinguish fire when needed; use fire where allowable; manage our natural resources; and as a nation, to live with wildland fire (Forests and Rangelands 2021).

Native Revegetation: The process of replanting and rebuilding the soil of disturbed land (e.g., burned) with native plant species (USDA 2005).

Native Species: A species that evolved naturally in the habitat, ecosystem, or region as determined by climate, soil, and biotic factors (USDA 2005).

Overstory: That portion of the trees in a forest which forms the upper or uppermost layer (SWCA).

Passive Crown Fire: A type of crown fire in which the crowns of individual trees or small groups of trees burn, but solid flaming in the canopy cannot be maintained except for short periods. Passive crown fire encompasses a wide range of crown fire behavior, from occasional torching of isolated trees to nearly active crown fire. Passive crown fire is also called torching or candling. A fire in the crowns of the trees in which trees or groups of trees torch, ignited by the passing front of the fire. The torching trees reinforce the spread rate, but these fires are not basically different from surface (SWCA).

Prescribed Burning: Any fire ignited by management actions under specific, predetermined conditions to meet specific objectives related to hazardous fuels or habitat improvement. Usually, a written, approved prescribed fire plan must exist, and NEPA requirements must be met, prior to ignition (USFS 2021g).

Rate of Spread: The relative activity of a fire in extending its horizontal dimensions. It is expressed as rate of increase of the total perimeter of the fire, as rate of forward spread of the fire front, or as rate of increase in area, depending on the intended use of the information. Usually, it is expressed in chains or acres per hour for a specific period in the fire's history (NWCG 2021d).

Resilience: Resilience is the capacity of any entity – an individual, a community, an organization, or a natural system – to prepare for disruptions, to recover from shocks and stresses, and to adapt and grow from a disruptive experience (GOPR 2020).

Response: Movement of an individual firefighting resource from its assigned standby location to another location or to an incident in reaction to dispatch orders or to a reported alarm (SWCA).

Safety Element: One of the seven mandatory elements of a local general plan (a community plan that forms the foundation for future development), the safety element must identify hazards and hazard abatement provisions to guide local decisions related to zoning, subdivisions, and entitlement permits. The element should contain general hazard and risk reduction strategies and policies supporting hazard mitigation measures (GOPR 2020).

Slash: Debris left after logging, pruning, thinning, or brush cutting. Slash includes logs, chips, bark, branches, stumps, and broken trees or brush that may be fuel for a wildfire (SWCA).

Slope Percent: The ratio between the amount of vertical rise of a slope and horizontal distance as expressed in a percent. One hundred feet of rise to 100 feet of horizontal distance equals 100 percent (NWCG 2021e).

Suppression: The most aggressive fire protection strategy, it leads to the total extinguishment of a fire (SWCA).

Surface Fire: fire that typically burns only surface litter and undergrowth (National Geographic Society 2021).

Surface Fuel: Fuels lying on or near the surface of the ground, consisting of leaf and needle litter, dead branch material, downed logs, bark, tree cones, and low stature living plants (SWCA).

Structural Ignitability: The ability of structures (such as homes or fences) to catch fire (SWCA).

Topography: The arrangement of the natural and artificial physical features of an area.

Total Fuel Load: The mass of fuel per unit area that could possibly be consumed in a hypothetical fire of the highest intensity in the driest fuels (Twisp 2021).

Tree Crown: The primary and secondary branches growing out from the main stem, together with twigs and foliage (SWCA).

Understory: Low-growing vegetation (herbaceous, brush or reproduction) growing under a stand of trees. Also, that portion of trees in a forest stand below the overstory (SWCA).

Understory Fire: A fire burning in the understory, more intense than a surface fire with flame lengths of 1 to 3 m (Twisp 2021).

Values and Assets at Risk: The elements of a community or natural area considered valuable by an individual or community that could be negatively impacted by a wildfire or wildfire operations. These values can vary by community and can include public and private assets (natural and manmade), such as homes, specific structures, water supply, power grids, natural and cultural resources, and community infrastructure, as well as other economic, environmental, and social values (GOPR 2020).

Vulnerable Community: Vulnerable communities experience heightened risk and increased sensitivity to natural hazard and climate change impacts and have less capacity and fewer resources to cope with, adapt to, or recover from the impacts of natural hazards and increasingly severe hazard events because of climate change. These disproportionate effects are caused by physical (built and environmental), social, political, and/ or economic factor(s), which are exacerbated by climate impacts. These factors include, but are not limited to, race, class, sexual orientation and identification, national origin, and income inequality (GOPR 2020).

Wildfire: A “wildfire” can be generally defined as any unplanned fire in a “wildland” area or in the WUI (GOPR 2020).

Wildfire Exposure: During fire suppression activities, an exposure is any area/property that is threatened by the initial fire, but in National Fire Incident Reporting System a reportable exposure is any fire that is caused by another fire, i.e., a fire resulting from another fire outside that building, structure, or vehicle, or a fire that extends to an outside property from a building, structure, or vehicle (USFA 2020).

Wildfire Influence Zone: A wildland area with susceptible vegetation up to 1.5 miles from the interface or intermix WUI (GOPR 2020).

Wildland: Those unincorporated areas covered wholly or in part by trees, brush, grass, or other flammable vegetation (GOPR 2020).

Wildland Fire: Fire that occurs in the wildland as the result of an unplanned ignition (GOPR 2020).

Wildland Fuels (aka fuels): Fuel is the material that is burning. It can be any kind of combustible material, especially petroleum-based products, and wildland fuels. For wildland fire, it is usually live, or dead plant material, but can also include artificial materials such as houses, sheds, fences, pipelines, and trash piles. In terms of vegetation, there are 6 wildland fuel types (Fuel Type: An identifiable association of fuel elements of distinctive species, form, size, arrangement, or other characteristics that will cause a predictable rate of spread or resistance to control under specified weather conditions.) The 6 wildland fuel types are (NWCG 2021f):

4. Grass
5. Shrub
6. Grass-Shrub
7. Timber Litter
8. Timber-Understory
9. Slash-Blowdown

Wildland Urban Interface (WUI): The WUI is the zone of transition between unoccupied land and human development. It is the line, area or zone where structures and other human development meet or intermingle with undeveloped wildland or vegetative fuels (USFA 2021b). In the absence of a Community Wildfire Protection Plan, Section 101 (16) of the Healthy Foresters Restoration Act defines the wildland urban interface as “ (I) an area extending ½ mile from the boundary of an at-risk community; (II) an area within 1 ½ miles of the boundary of an at-risk community, including any land that (1) has a sustained steep slope that creates the potential for wildfire behavior endangering the at-risk community; (2) has a geographic feature that aids in creating an effective fire break, such as a road or ridge top; or (3) is in condition class 3, as documented by the Secretary in the project-specific environmental analysis; (III) an area that is adjacent to an evacuation route for an at-risk community that the Secretary determines, in cooperation with the at-risk community, requires hazardous fuels reduction to provide safer evacuation from the at-risk community.” A Community Wildfire Protection Plan offers the opportunity to establish a localized definition and boundary for the wildland urban interface (USFS 2021h)

APPENDIX A:

Community and CWPP Background Information

SWCA

FIRE MANAGEMENT POLICY

The primary responsibility for WUI fire prevention and protection lies with property owners and state and local governments. Property owners must comply with existing state statutes and local regulations. These primary responsibilities should be carried out in partnership with the federal government and private sector areas. The current Federal Fire Policy states that protection priorities are 1) life, 2) property, and 3) natural resources. These priorities often limit flexibility in the decision-making process, especially when a wildland fire occurs within the WUI.

LAWS, ORDINANCES, STANDARDS, AND CODES FOR WILDFIRE PREVENTION

Municipal Direction

There are currently no WUI or Fire codes within the Kenai Peninsula Borough.

State Direction

The text in the following sections is taken verbatim from the Alaska Wildland Fire Coordinating Group, 2021 Alaska Interagency Wildland Fire Management Plan.

Department of Natural Resources (DOF)

“Alaska Statutes sections 41.15.010 - 41.15.240 mandate the Department of Natural Resources to manage the wildland fire program for the State of Alaska. Statute 41.15.010 addresses “protection from wildland fire and other destructive agents, commensurate with the values at risk, on land that is owned privately, by the state, or by a municipality.” Alaska State House Bill 395 signed on May 4, 2005 defines the official Alaska Fire Season as April 1 to August 31; this was incorporated into state law under statute 41.15.050. In 2018, the Alaska State Legislature updated and approved House Bill 355 which brought additional changes, revisions and updates to the existing Alaska wildland fire protection laws. Links to the updated statutes and regulations can be found on the Alaska Division of Forestry webpage- (<http://forestry.alaska.gov/>).” (AWFCG 2021:5)

The State of Alaska is not constrained by federal fire management policies on lands under state jurisdiction, i.e. state, private and municipal lands. However, the DOF is bound by the Alaska statutes and administrative code sections, the *Alaska Forest Resources and Practices Act*, and *Alaska Forest Resources and Practices Regulations* that directly regulate forest management endeavors on state forest lands (AWFCG 2021). Information regarding the state fire management and forest health programs, including burn permits, available grants, Community Wildfire Protection Plans, and Firewise, is available on the Alaska Division of Forestry webpage (<http://forestry.alaska.gov/>) (AWFCG 2021:6).

Alaska Department of Game and Fish (ADF&G)

“Pursuant to Alaska Statute 16.20, ADF&G shares jurisdictional authority with the Department of Natural Resources for 32 state game refuges, critical habitat areas, and wildlife sanctuaries across the state, totaling 3 million acres. ADF&G manages the wildlife and habitat within these legislatively designated areas. Alaska Statute 16.05.871(a) requires ADF&G to specify the various rivers, lakes, and streams,

or parts of them, that are important for spawning, rearing, or migration of anadromous fishes. Protection of these specified water bodies is addressed by other sections of AS 16.05.871, which requires persons or governmental agencies to submit plans and specifications to ADF&G and receive written approval in the form of a Fish Habitat Permit or concurrence prior to beginning the proposed use, construction or activity that would take place in specified water bodies.” (AWFCG 2021:6)

In order to uphold their mission to protect, maintain and improve fish, game and aquatic plant resources, the ADF&G 2009 fire management policy incorporates an aim to encourage wildland and prescribed fire management policies, practices, and decisions that are beneficial to the fish and wildlife resource (ADFG 2009).

Alaska Department of Environmental Conservation (ADEC)

“ADEC has primacy for implementing the federal Clean Air Act (CAA) and maintaining and enforcing the National Ambient Air Quality Standards (NAAQS) within the State (AS 46.03.020(a)). ADEC’s policy is to minimize air pollution that is injurious to human health or welfare, animal or plant life, or property, or that would unreasonably interfere with the enjoyment of life or property. All prescribed burning in the state, whether requiring written approval from ADEC or not, must be done in a way that maintains maximum combustion efficiency throughout the burning period.” (AWFCG 2021:6 2021a).

Tribal Direction

More detailed information is available in the Alaska Native Organizations and Lands of the Alaska Statewide Operating Plan.

Policy affecting fire management responsibilities relating to Alaska Native organizations and lands can be found in the following documents (AWFCG 2021:7):

- 1891 Townsite Act
- 1906 Alaska Native Allotment Act (amended 1956)
- 1971 Alaska Native Claims Settlement Act (ANCSA)
- 1980 Alaska National Interest Lands Conservation Act (ANILCA)
- 1998 Alaska Native Veteran Allotment Act
- Department of the Interior Manual 620 Chapter 5.3

ANCSA Native Corporations

“Alaska Regional and Village Native Corporations (ANCSA Corporations) were established in 1971 by the Alaska Native Claims Settlement Act (ANCSA). Individual ANCSA Corporations are considered the Jurisdictional Agency for their lands and are annually given the opportunity to validate or change the AIWFMP Fire Management Options for those lands. As specified in DOI manual 620 Chapter 5.3, BLM-Alaska Fire Service (AFS) is responsible for fire protection on ANCSA Corporation lands. BLM-AFS provides fire management liaisons to the ANCSA Corporations to ensure they are informed about fires occurring on or threatening their lands and interests are represented in fire management decisions.” (AWFCG 2021:7)

Tribal Governments

“There are 229 federally recognized tribes in Alaska. Most have tribal councils as their governing bodies. Tribal governments in Alaska are distinct from ANCSA Regional and Village Corporations and have the same governmental status as other federally recognized Indian tribes by virtue of their status as Indian tribes. They have a government-to-government relationship with the United States, and are entitled to the same protections, immunities, and privileges as other federally recognized tribes. Some tribes receive funding from BIA to provide certain fire management services such as advising protection agencies of their needs during active wildfires and fuels management work. Even though ANCSA places its land entitlement with the ANCSA Corporations, most tribes in Alaska own some land. Tribally owned land is in fee simple status and in Alaska is not considered held in Trust for jurisdictional purposes. Although tribally owned lands are in fee simple status, and fire management responsibilities are not identified in ANCSA, ANILCA, or 620 DM 5.3, tribal lands are currently treated similarly to ANCSA Corporation lands for fire management purposes.” (AWFCG 2021:7)

FEDERALLY ADMINISTERED INDIAN TRUST LANDS (INCLUDING NATIVE ALLOTMENTS)

“Federally administered Indian trust lands in Alaska include the Annette Island Indian Reservation and some Town Site lots created under the 1891 Townsite Act. Lands placed into trust under the fee-into trust regulation that was broadened to include Alaska tribes in 2013 are also included. A Native Allotment is a parcel or parcels of land, totaling up to 160 acres, conveyed by restricted title to an Alaska Native under the terms and conditions of the Alaska Native Allotment Act of 1906 and 1956 amendment; and the Alaska Native Veteran Allotment Act of 1998. 43 U.S.C. §§ 357, 357a, 357b. The restricted title exempts the land from taxes and specifies that the federal government will maintain the land and associated trust assets in perpetuity. Restricted-title Alaska Native Allotments are treated as trust lands for the purpose of fire protection. The Native Allotment itself is a value that needs to be protected from fire. Other trust assets (values) such as timber, cultural sites, houses, fish camps, exist on the allotments. Allotments are placed in Full protection regardless of the fire management option selected on surrounding lands by other agencies. The Department of the Interior, Bureau of Indian Affairs (BIA) has been tasked with the protection of Alaska native trust lands and serves as the Jurisdictional Agency for fire management purposes. Some of Alaska’s federally recognized tribes, as well as several tribal consortiums, have compacted with the BIA through their Tribal Governments to become a service provider for some allotment owners. These providers serve as additional points of contact for fire managers. The BIA is still ultimately responsible for ensuring that the federal government’s trust responsibilities are met. Where an additional provider exists, both BIA and the provider need to be notified of wildfires and included in the decision-making process. BIA will assist with this. Per DOI Manual 620, Chapter 5.3, the BLM-AFS provides fire protection for the BIA, in some parts of the state DNR or USFS have agreed to carry out AFS’ responsibility and protect BIA land through the Statewide Master Agreement. Thus, both BIA and AFS will be involved in fire management decisions in order to ensure the federal responsibilities are met.” (AWFCG 2021:8)

Federal Direction

“Federal wildland fire policy forms the basis for Department of the Interior (Bureau of Indian Affairs, Bureau of Land Management, National Park Service, and U.S. Fish and Wildlife Service) and Department of Agriculture (U.S. Forest Service) fire management programs in Alaska. Additional guidance for the lands withdrawn for military use can be found in memorandum of agreements and annual operating plans

between BLM-AFS and the Department of Defense agencies. Federal policies and programs are implemented through Congressional appropriations and funding levels vary annually.” (AWFCG 2021:2)

Guidance for Implementation of Federal Wildland Fire Management Policy

“The Federal Wildland Fire Management Policy and Program Review Final Report (December 18, 1995) was the first joint comprehensive fire policy for the Departments of the Interior and Agriculture. The Final Report contained guiding principles that directed federal agencies to achieve a balance between suppression to protect life, property and resources, and fire use to regulate fuels and maintain healthy ecosystems. It promoted the use of wildland fire to accomplish resource management objectives and supported implementation of policies and recommendations in conjunction with states, tribes, and local governments. The review and update of the 1995 Federal Wildland Fire Management Policy (January 2001) contained specific actions to enhance wildland fire management and seeks to build on the strengths of the original policy. Firefighter and public safety is listed as the first priority and the 2001 policy directs all fire management plans and activities to reflect this commitment. The 2001 guiding principle and policy statements guide the philosophy, direction, and implementation of fire planning, activities and projects on federal lands. All the principles and policy statements are incorporated by reference into this Plan and, where appropriate, the statements are included within this Plan. The first Interagency Strategy for the Implementation of Federal Wildland Fire Management Policy was issued in 2003; it was replaced by the Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009). The 2009 Guidance affirmed the soundness of the 2001 review and update, and clarifies implementation direction to achieve the intent of the 2001 policy.” (AWFCG 2021:3)

National Fire Plan

“The National Fire Plan (NFP) was developed in August 2000, following a landmark wildland fire season in the Lower 48, with the intent of actively responding to severe wildfires and their impacts to communities while ensuring sufficient firefighting capacity for the future. The NFP addresses five key points: firefighting, rehabilitation, hazardous fuels reduction, community assistance, and accountability.” (AWFCG 2021:3)

Healthy Forests Initiative and Restoration Act

“Fuels management was addressed further in the Healthy Forests Initiative (August 2002) which sought to reduce the risks severe wildfires pose to people, communities, and the environment. The Initiative was followed by the Healthy Forests Restoration Act of 2003 which contains a variety of provisions to speed up hazardous-fuel reduction and forest-restoration projects on specific types of federal land that are at risk of wildfire and/or of insect and disease epidemics.” (AWFCG 2021:3)

Good Neighbor Authority

“The Good Neighbor Authority authorizes the Forest Service and BLM to partner with states, local governments, and tribes in order to implement watershed and forest management activities on federal lands. The authority was permanently authorized in the 2014 Farm Bill. It is intended to expand limited federal capacity to implement and plan projects, and addresses shared, cross boundary priorities like fire risk, invasive species, and water quality and wood products supply. The authority is broad, allowing for a wide range of restoration services that will improve ‘forest, rangeland, or watershed health.’” (AWFCG 2021:3)

Federal Aid in Wildlife Restoration (Pittman-Robertson Act)

“The Pittman-Robertson Act, passed in 1937, now known as Federal Aid in Wildlife Restoration, imposes an excise tax on the sale of firearms and ammunition to help fund wildlife conservation in the United State. Revenues generated from these excise taxes are apportioned to state wildlife agencies for their conservation efforts, hunter education programs, and operation of archery and shooting ranges. ADF&G has been able to leverage funds generated through this act for habitat restoration projects.” (AWFCG 2021:4)

Reserved Treaty Right Lands (RTRL)

“Beginning in FY 2015, Fuels Management Funding has been appropriated for the purpose of treating and restoring tribal landscapes within and adjacent to reserved treaty right lands. The Department’s Reserved Treaty Right Lands (RTRL) program enables Tribes to participate in collaborative projects with non-Tribal landowners to enhance the health and resiliency of priority tribal natural resources at high risk to wildland fire. The RTRL allocation is provided to the BIA through the DOI’s Wildland Fire Management appropriation and is made available through the fuels management program.” (AWFCG 2021:4)

Cohesive Wildland Fire Management Strategy

“The National Strategy is the result of a collaborative effort by Federal, state, local, and tribal governments and non- governmental partners and public stakeholders, in conjunction with scientific data analysis. It recognizes and accepts fire as a natural process necessary for the maintenance of many ecosystems, and strives to reduce conflicts between fire-prone landscapes and people. By simultaneously considering the role of fire in the landscape, the ability of humans to plan for and adapt to living with fire, and the need to be prepared to respond to fire when it occurs, the Cohesive Strategy takes a holistic approach to the future of wildland fire management.” (AWFCG 2021:4)

Dingell Act

“Public Law 116-9, the [John D. Dingell, Jr. Conservation, Management, and Recreation Act of March 12, 2019 \(Dingell Act\)](#) is a combined package of more than 100 individual bills introduced by over 50 members of Congress. It lays out provisions for various programs and activities affecting the management and conservation of natural resources on federal lands, to include wildland fire operations. Section 1114 of the Dingell Act, titled Wildfire Technology Modernization, mandates interagency collaboration to expand the use of unmanned aircraft systems, location trackers, and decision management systems. It also calls for the enhancement of smoke projections, erosion data, and predictive services.” (AWFCG 2021:5)

Executive Order 13855

“In response to the deadly wildfires of 2017 and 2018, the President signed Executive Order 13855 - Promoting Active Management of America's Forests, Rangelands, and Other Federal Lands To Improve Conditions and Reduce Wildfire Risk on December 21, 2018 calling for federal land managers to improve conditions and reduce wildfire risk through active management of their lands. Executive Order 13855 emphasizes that federal agencies must collaborate with state and local institutions and incorporate active management principles into all land management planning efforts in order to address the challenges of wildland fire. Quoting from Section 1: “With the same vigor and commitment that characterizes our efforts to fight wildfires, we must actively manage our forests, rangelands, and other Federal lands to improve conditions and reduce wildfire risk.” Section 5 of the executive order directs the Secretaries of Interior and

Agriculture to jointly develop a Wildfire Strategy in collaboration with Federal, State, tribal, and local partners that supports local Federal land managers in project decision-making and informs local fire management decisions related to forests, rangelands, and other Federal lands, thereby protecting habitats and communities, and reducing risks to physical infrastructure.” (AWFCG 2021:5)

EMERGENCY MANAGEMENT PLANNING

The Kenai Peninsula Borough updated its Hazard Mitigation Plan (HMP) in 2019. This CWPP dovetails with the wildfire section of the HMP by incorporating wildfire hazard mitigations identified in that plan. In the future, the Borough should consider revising both plans in unison.

PUBLIC LAND MANAGEMENT

Past Land Management Strategies

Beginning in the early 1900s, the policy for handling wildland fire leaned heavily toward suppression. Over the years, other agencies, such as the BLM, the Bureau of Indian Affairs, and the NPS, followed the lead of the USFS and adopted fire suppression as the primary means for protecting the nation from wildfire. As a result, many areas now have excessive fuel buildups, dense and continuous vegetative cover, and tree and shrub encroachment into open grasslands.

Over the past few decades, several elements have compounded to alter forest composition, understory and overstory composition, fuel dynamics, and historical fire regimes. Insect outbreaks, changes in land use practices, the shifting climate, and increased human presence and activity have all been implicated as contributing elements (Fryer 2014). Although black spruce trees are fire adapted, significant changes in fire regimes undermine resilience and often result in recruitment failure (Baltzer et al. 2020). As a result, forest composition in many regions of Alaska has changed; there has been a general shift toward shrubs and less acreage of older spruce forest. The shifts in forest composition are likely to increase forest flammability and shorten fire-return intervals (Fryer 2014). Moreover, shrubs and other light fuels have been expanding their range with the warming temperatures—increasing the spatial extent of areas susceptible to severe wildfires (USGCRP 2018).

Current Land Management Strategies

The KPB has a long history of SBB outbreaks. In 1999, SBB damage reached a high point with over 1.2 million acres impacted (KPB Interagency 2018). Southcentral Alaska is currently undergoing another SBB outbreak. More than 1.2 million acres have been impacted since the outbreak began in 2016. In 2020 alone, 145,000 acres of SBB activity was recorded, with 18,330 acres located on the KPB (USFS 2021d).

The 2018 ALAH plan focuses on managing wildfire risk and the hazards linked with trees damaged by SBB. Accordingly, the aim of the ALAH plan is to address fire hazards and forest health. Strategic actions include (KPB Interagency 2018):

- The promotion of prescribed fire training and certification, landscape scale fuels treatments, and active forest management
- The development of methods to assist and inform private landowners with fuels management

- The integration of fuels reduction and fire risk management methods into existing and future land management plans

For SBB management, implementation tasks include the prioritization of hazard tree removal linked with SBB in areas with high human activity to reduce public safety hazard and protect critical infrastructure (KPB Interagency 2018).

Alaska Division of Forestry

The mission of the DOF is to develop, conserve, and enhance Alaska's forests to provide a sustainable supply of forest resources for Alaskans (AWFCG 2021). Within the DOF is the Wildland Fire and Aviation Program. This program operates with the mission of providing safe, cost-effective, and efficient fire protection services and related fire and aviation management activities on state, private, municipal lands, and lands negotiated through agreement, commensurate with the values at risk (AWFCG 2021).

National and State Forest priorities, as defined in the State Forest Action Plan are to (DOF 2020a):

- Conserve and manage working forest landscapes for multiple values and uses
- Protect forests from threats
- Enhance public benefits from trees and forests

Further detail on the priorities listed above is provided in Figure A.1.

Figure A.1. Statewide forest resource priorities and accompanying strategies as delineated by the 2020 Alaska Forest Action Plan.

Source: Alaska DOF (2020)

Alaska Department of Fish and Game

The State of Alaska, Department of Fish and Game (ADF&G) follows a mission to protect, maintain, and improve the fish, game, and aquatic plant resources of the state, and manage their use and development

in the best interest of the economy and the well-being of the people of the state, consistent with the sustained yield principle (AWFCG 2021).

The 2009 ADFG fire management policy aims to implement strategic practices and decisions which benefit Alaskan resources, including wildland fire and prescribed fire management policies (AWFCG 2021).

All Lands, All Hands Action Group

According to the ALAH Action Plan, continued expansion of the WUI, the effects of a changing climate on wildfire extent and seasonality, and vegetation that has been unfavorably affected by insect infestations are main concerns within the KPB that require planning and management. To address these forest health concerns and increasing wildfire risk, the ALAH Action Plan has aligned all goals, and corresponding desired outcomes, strategic actions, implementation tasks, and performance measures for the years 2018-2022 with the three main goals of the Cohesive Strategy (KPB Interagency 2018).

FIRE PLANNING – PAST EFFORTS

There is a number of existing documents relating to fire management in the Borough, the main fire management document being the [Alaska Interagency Wildland Fire Management Plan](#) (AIWFMP), which provides more detailed information regarding operational procedures relating to wildfire on state and federal lands. This CWPP is meant to supplement and not replace the AIWFMP or any other existing plans.

Regional Plans

2018 All Lands All Hands Action Plan:

In 2018, the KPB Interagency prepared the All Lands All Hands Action Plan Update for the Borough. The plan was created to be a working document that also considers the FEMA-approved Hazard Mitigation Plan and 2018 Comprehensive Plan, 2009 Federal Land Assistance, Management, and Enhancement Act (FLAME), and integrates the 2014 Cohesive Strategy (KPB Interagency 2018). The plan focuses on the use of science-based data analysis to support planning, decision making, and implementation as a mechanism to produce substantial reductions in wildfire risk both in the short and long-term. The plan also integrates monitoring and evaluation of these efforts to evaluate progress towards the desired outcomes. Specifically, the plan identifies actions and tasks with respect to restoring and maintaining landscapes, fire adapted communities, and wildfire response (KPB Interagency 2018).

2019 Kenai Peninsula Borough Hazard Mitigation Plan:

In 2019 the KPB updated its 2019 Hazard Mitigation Plan. The update modifies the previous plan to integrate information regarding hazard risk assessment, climate, geography, and population demographics, among others. The objective of the plan is to minimize or eliminate injuries or fatalities, damages and losses from natural and human-caused hazards (KPB 2019a). This plan was developed to review past disasters, predict the potential of future disasters, and determine mitigation priorities. The document provides an overview of the Borough and its communities, a description of the planning process, updates to mitigation goals, a risk assessment, capabilities assessment, goals and strategies, and implementation measures.

State Plans

2018 Alaska Disaster Response Plan

In 2018, the Alaska Department of Environmental Conservation (DEC) developed the Disaster Response Plan (DEC 2018). This plan was designed to act as a guideline or reference for organizing and coordinating disaster response at the agency level. The plan establishes a framework to improve coordinated emergency response efforts between communities, local and tribal organizations, state and federal agencies, and first responders. The plan prioritizes 5 objectives in responding to disaster emergencies: safety, health, environment, cleanup, and recovery. In addition, the plan outlines the DEC's responsibilities in assisting emergency response agencies during disaster emergencies (DEC 2018).

In 2011, the DHSEM developed the **Alaska Emergency Response Guide for Small Communities** (DHSEM 2011). The guide was created to assist local governments in emergency response and preparation planning in their communities. The guide provides several recommended actions during the first 72 hours of a disaster and details efforts to begin the recovery phase (DHSEM 2011).

2020 Annual Report

In 2020, the DOF published the 2020 Annual Report. The report reviews many aspects of and relating to Alaska state forests, including forest practices, forest management, fire programs, fire management, forest health status, resource development, and cooperative forestry programs. The report details past and current forest projects such as fuels reduction, timber harvesting, and forest health monitoring. The report also includes a fire section describing 2020's fire season, which covers fire causes, fire statistics, fire impacts, and weather patterns (DOF 2020b).

2020 Alaska Forest Action Plan:

In 2020 the DOF developed the 2020 Alaska Forest Action Plan. The plan aims to identify threats facing Alaska's forests and the opportunities to improve the benefits of Alaska's Forests, and to present a guide of methods that can be utilized by landowners across Alaska. The overall purpose of the Forest Action Plan is to guide the use of federal, state, local, and private funding to conserve Alaska's forest resources and maximize the public benefits of Alaska's forests. The plan is guided by three national priorities: to conserve and manage working forest landscapes for multiple uses and values, to protect forests from threats, and to enhance public benefits from forests (DOF 2020a).

2021 Alaska Interagency Wildland Fire Management Plan:

In 2021, the Alaska Wildland Fire Coordinating Group, an organization composed of various state, federal, and native organizations, updated the Alaska Interagency Wildland Fire Management Plan for Alaska (AWFCG 2021). The plan was developed to promote a consistent, cooperative, and cost-effective interagency approach to wildland fire management. The plan emphasizes firefighter and public safety as the overriding priority in all fire management activities for all agencies. Strategies outlined within the plan include vegetation management, prevention of human starts, wildfire investigation, adjustment of fire management options to changing environmental and regulatory conditions, and the integration of a wide range of economically and ecologically sound fire management options (AWFCG 2021).

Federal Plans

2013 Kenai National Wildlife Refuge Fire Management Plan:

In 2013, the USFWS updated the Kenai National Wildlife Refuge 2001 Fire Management Plan. The plan provides the framework and management direction necessary to ensure refuge objectives are met, while providing for the protection and/or enhancement of cultural and natural resources and life and personal property (USFWS 2013). To meet its objectives, the plan emphasizes public engagement, prescribed fire, hazardous fuel reductions, and coordination with cooperating agencies. These plans are typically evaluated after 15 years but may be updated earlier as needed. Future updates of the Kenai National Wildlife refuge FMP will follow the 15-year Comprehensive Conservation Plan revision cycle to provide uniformity in objectives and management strategy development (USFWS 2013).

2020 Forest Health Conditions in Alaska:

In 2020, the USFS published the Forest Health Conditions in Alaska report. The report summarizes monitoring data collected annually by the Forest Health Protection team and integrates information from many sources to inform land managers, resource professionals, decision-makers, and other interested parties on forest health conditions. In addition, the report fulfills the congressional mandate (The Cooperative Forestry Assistance Act of 1978) that requires surveying, monitoring, and annual reports of the health of the forests (USFS 2021d).

2020 Chugach National Forest Land Management Plan:

In 2020, the USFS published the Chugach National Forest Land Management Plan (Forest Plan). The purpose of the Forest Plan is to sustain the health, diversity, and productivity of the Nation's forests and grasslands to meet the needs of present and future generations. The Forest Plan provides management direction for the National Forest System lands within the boundary of the Chugach National Forest. It emphasizes coordination and communication with communities, tribes, and federal, state, borough, and local governments for hazard fuel management, community wildfire protection planning, preparedness actions, and wildfire response (USFS 2020b).

LOCATION AND GEOGRAPHY

The KPB is roughly 10 million acres and is bordered by the Gulf of Alaska to the southeast, the Cook Inlet to the southwest, and Anchorage to the north. The KPB is at the southern terminus of Alaska. The main transportation corridors include the Sterling and Seward Highways. The Sterling Highway connects the Borough to Anchorage and the mainland. The Seward Highway originates at Tern Lake in Moose Pass and provides access to Seward City. Land ownership information is provided in Table A.1.

Land ownership in the Borough is spread across different agencies, organizations, and tribes. Major federal landowners include the NPS, USFWS, USFS, and BLM. The state and local governments also own a considerable amount of land (23%). Native lands and allotments constitute about 11% of land ownership in the Borough. Lastly, private landowners represent a little over 2% of the entire area (Table A.1; Figure A.2).

Table A.1. Breakdown of Land Ownership in Borough

Land Ownership	Acres	Percentage of Land Owned within the Borough
National Park Service	3,003,770	29%
State	2,333,304	22%
U.S. Fish and Wildlife Service	1,822,810	17%
U.S. Forest Service	1,250,793	12%
Alaska Native Lands Patented or Interim Conveyed	1,004,335	10%
Bureau of Land Management	475,230	5%
Undetermined	255,286	2%
Private	251,932	2%
Local Government	89,072	<1%
Alaska Native Allotment	16,533	<1%
Coast Guard	1,696	<1%
Federal Aviation Administration	179	<1%
Other Federal	125	<1%
Army	32	<1%
Air Force	11	<1%
Department of Defense	10	<1%
United States Postal Service	10	<1%

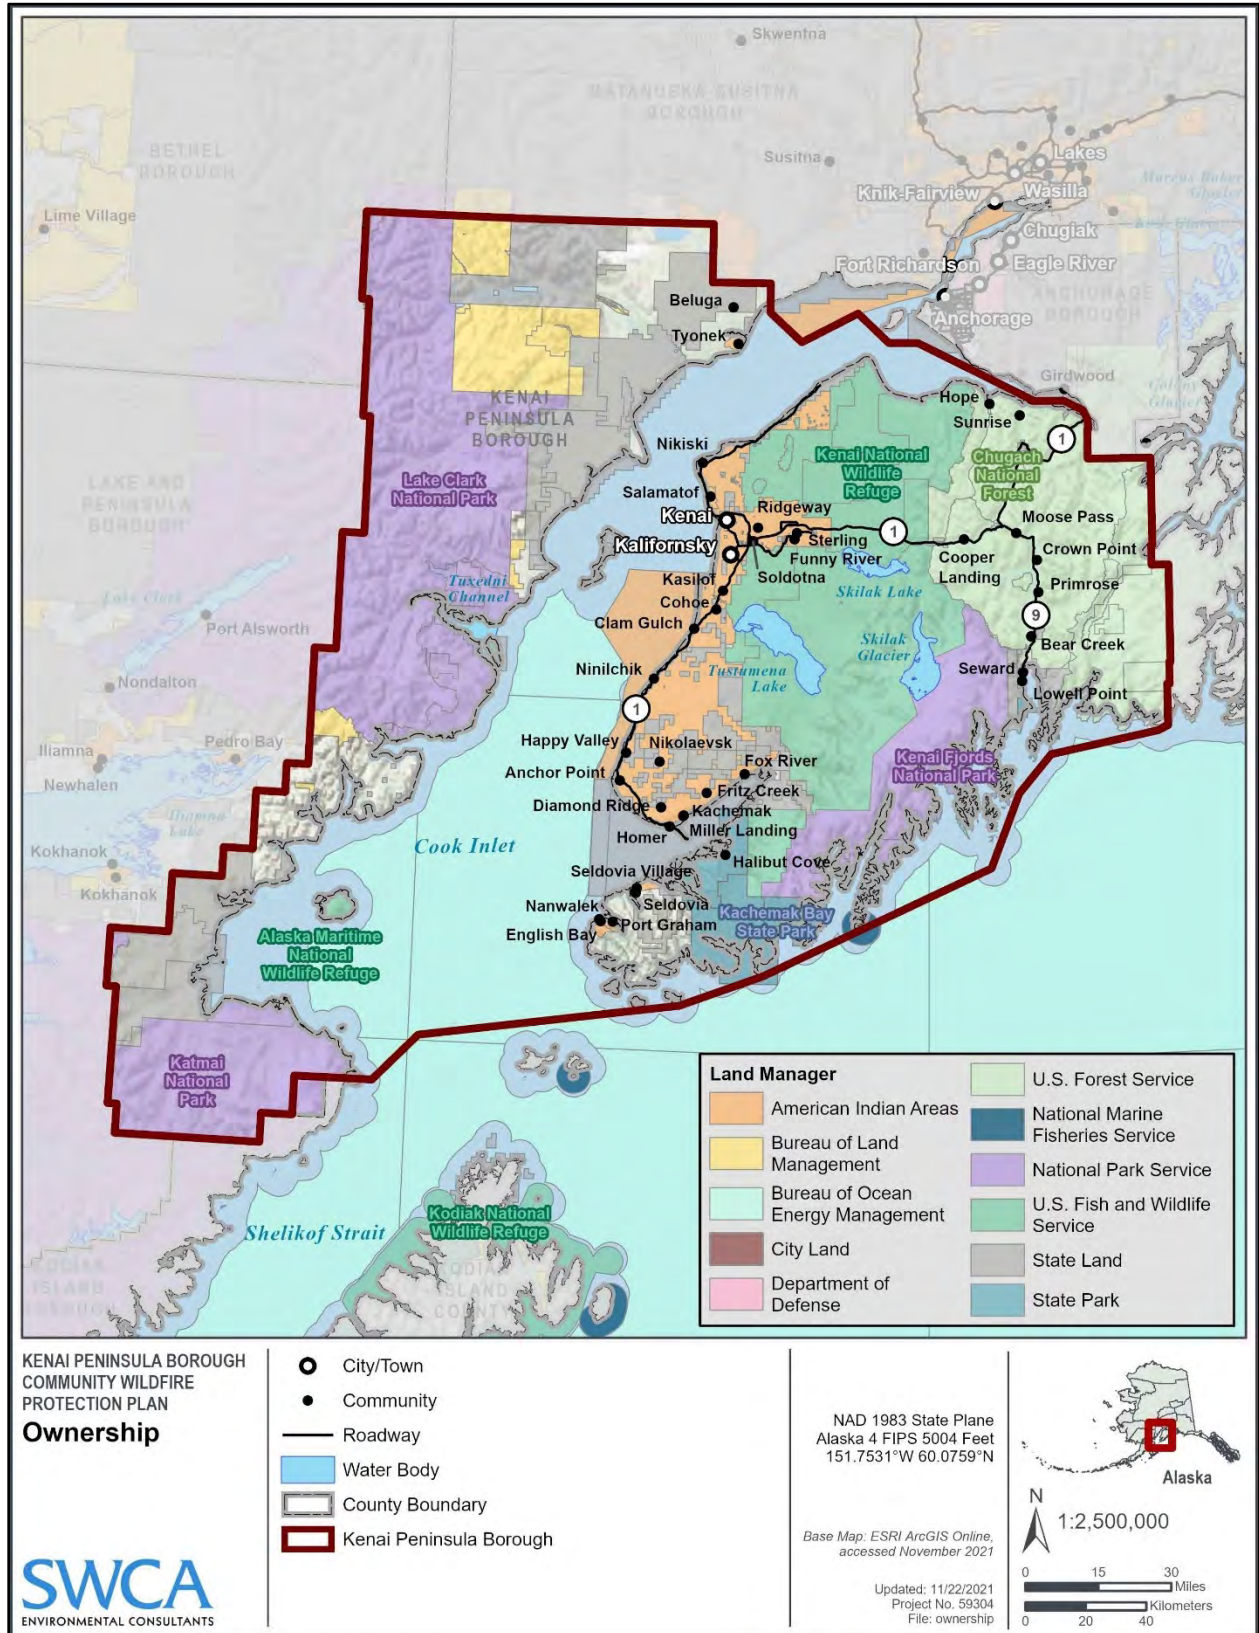

Figure A.2. Land ownership within the KPB.

FEDERAL, STATE, AND TRIBAL LANDS

Federal Lands

Kenai National Wildlife Refuge

The Kenai Wildlife Refuge is in the western portion Kenai Peninsula and comprises approximately 2 million acres. The Refuge stretches across the western slopes of the Kenai Mountains, forested lowlands along Cook Inlet, wetlands, rivers, and series of lakes. A variety of habitats are present in the Refuge, including ice fields and glaciers, mountain tundra, lakes and wetlands, rivers, and boreal forests. The diverse ecosystems support a diversity of wildlife, including brown and black bears, mountain goats, caribou, moose, eagles, wolves, lynx, and trumpeter swans. The Refuge is part of the National Wildlife Refuge System, a diverse network of lands and waters dedicated to conserve America's fish and wildlife heritage and is managed by the U.S. Fish and Wildlife Service (USFWS) (2021).

The Refuge is managed by the USFWS, and the leading fire management document is the Kenai National Wildlife Refuge 2013 Fire Management Plan. The plan was created to guide all fire management activities on and for the Refuge. The Refuge is divided into four Fire Management Units (FMUs): Wilderness, Minimal, Moderate, and Intensive. The four FMUs are described below (USFWS 2013):

- The Wilderness FMU manages areas designated as units of the National Wilderness Preservations System, which represent the largest area of the Refuge. Management within the Wilderness FMU aims to preserve all values and resources of the area.
- The Minimal FMU manages the second largest area of the Refuge (26%). Management within the Minimal FMU operates under the goal of maintaining the natural environment, therefore allowing natural ecosystem fluctuations to occur, and keeping public use disturbances to a minimum.
- The Moderate FMU manages about 50,000 acres on the northern end of the Refuge. Management guidelines for the Moderate FMU permits activities that may result in small-scale temporary or permanent changes, but do not disrupt natural processes. While human disturbance may be evident, the goal of this FMU is to restore, maintain, or enhance habitat.
- The Intensive FMU manages approximately 50,000 acres with the management objective of allowing compatible actions. This means activities are permitted to cause alteration to the natural environment, obvious human disturbance is acceptable, and habitat conditions may be altered or controlled for habitat improvement.

Kenai Fjords National Park

The Kenai Fjords National Park (KFNP) encompasses an area of 600,000 acres of icefields, glaciers, water bodies, valleys, mountains, and fjords (NPS 2020a). The KFNP spans from the southern edge of the city of Seward to the northern end of the Kachemak Bay State Park. The KFNP supports a diversity of wildlife such as lynx, mountain goats, moose, wolverines, orcas, humpback whales, sea otters, and harbor seals. The Park also provides important habitat for many migratory and resident birds, including cormorants, pigeon guillemots, kittiwakes, eagles, and puffins (NPS 2021b).

KFNP lands are managed by the NPS (NPS 1984). There is no existing fire management plan for the KFNP; this is because the NPS is required to have fire management plans only for parks with burnable vegetation (NPS 2021c). The KFNP is generally not vulnerable to severe fires; the glaciers, streams, and fjords serve as natural fire barriers (NPS 1984). However, the NPS develops State of the Park reports to

assess the overall conditions and trends of park resources. The latest State of the Park report for the Kenai Fjords National Park was completed in 2017 (NPS 2021d).

Lake Clark National Park and Preserve

Lake Clark National Park and Preserve (LCNPP) is located on the western edge of Cook Inlet and comprises about 4 million acres. The LCNPP ranges in elevation from sea level to over 10,000 feet and stretches across the Aleutian Range, wetlands, rivers, lakes, volcanoes, tundra, and boreal forest. The diverse ecosystems provide habitat for a diversity of wildlife, including Dall sheep, brown and black bears, porcupine, caribou, moose, subarctic fish, wolves, lynx, and numerous species of birds. In addition, Lake Clark maintains the ancestral homelands of the Dena'ina people, an intact ecosystem with the largest sockeye salmon fishery in the world (NPS 2020c).

The LCNPP is managed by the NPS. There is no current fire management plan for the LCNPP. However, the NPS implements fire management activities such as clearing flammable vegetation around structures and monitoring the impacts of fires. In addition, the NPS shares responsibilities with the DOF to protect life, property, and natural and cultural resources. They also collaborate with communities, local, state, federal, and native organizations to keep people and ecosystems healthy (NPS 2020b).

Chugach National Forest

The Chugach National Forest is located in south-central Alaska and encompasses an area of 5.4 million acres. It is the nation's second-largest forest and spans from the waters and peaks of Prince William Sound to the streams of the Kenai Peninsula. The Forest is composed of three discrete landscapes: the Copper River Delta, Eastern Kenai Peninsula and Prince William Sound. The various landscapes contain rain forests, coastal inlets, wetlands, boreal woods, glaciers, and rivers. The Forest is also home to several of Alaska's Native peoples, including Chugach, Eyak, Dena'ina, and Ahtna.

The Forest is managed by the U.S. Forest Service (USFS 2021a), and the main fire management document is the Chugach National Forest Land Management Plan (USFS 2020b). The Forest is divided into eight Management Areas (MAs), and each of these areas determines suitable uses and activities. However, only five of the eight MAs are located on the KPB (USFS 2020b):

- The Wilderness Study Area MA covers 1,944 acres on the KPB. Management objectives in these areas are to protect ecological properties of all the wilderness areas and to preserve their existing state.
- The Wild, Scenic, and Recreational Rivers MA covers 28,345 acres on the KPB. Management objectives in this MA are to preserve and safeguard the free-flowing properties of specific river sections that display significant natural and recreational values.
- The Research Natural Areas MA covers 5,951 acres on the KPB. Management objectives in this MA are to preserve the unique properties of natural environments. Ecosystems in these areas are representative of undisturbed environments, which serve as controls to gauge ecosystem effects relative to disturbed areas. These areas present perfect opportunities for monitoring, observation, and research activities.
- The Backcountry Areas MA covers 1,013,205 acres on the KPB. Management objectives in these areas are to enhance backcountry environments to promote varied recreational activities. Ecosystems in these areas are preserved and natural processes are mostly unaltered by human activity.

- The Front Country MA covers 104,566 acres on the KPB. Areas under this MA have high levels of human activities and associated construction, including utilities, trails, and roads. Management objectives in these areas are to restore fish and wildlife habitat and to manage forest vegetation to mitigate wildfire risk.

State Lands

Critical Habitat Areas

Seven critical habitat areas are managed by the ADFG on the Kenai Peninsula: Fox River Flats, Kachemak Bay, Anchor River/Fritz Creek, Homer Airport, Clam Gulch, Kalgin Island, and Redoubt Bay. These areas are managed to protect and preserve habitat regions important to the perpetuation of fish and wildlife, and to restrict other uses that are not compatible with the primary purpose (ADFG 2021f). These areas comprise many types of landscapes and environments: wetlands, riparian habitats, bays, estuaries, mud flats, marshlands, rivers, spruce forests, and subalpine meadows. These habitats support a wide range of wildlife and fish, including anadromous fish, shellfish, sea otters, porpoise, waterfowl, shorebirds, seabirds, whales, moose, black and brown bear, coyote, wolves, red fox, mink, and muskrat (ADFG 2021f).

Kachemak Bay State Park and Kachemak Bay State Wilderness Park

The Kachemak Bay State Park and Kachemak Bay State Wilderness Park are managed by the ADNR and span an area of 400,000 acres of forests, mountains, glaciers, and ocean. It extends from the southern boundary of the Kenai Mountains to the Gulf of Alaska (ADNR 2021b).

The DOF has primary responsibility for wildland fire response in the parks. The Management Plan for Kachemak Bay State Park and Kachemak Bay State Wilderness Park (1995) is the guiding policy document for forest and fire management on the forest (ADNR 1995). However, the plan does not include a fire management component. An updated plan that will integrate fire management is in progress (ADNR 2020).

Tribal Lands - Alaska Native Regional Corporations and Non-profits on the Kenai Peninsula

Regional corporations were created by the Alaska Native Claims Settlement Act of 1971 (ANCSA) assume the federal responsibilities for the health and welfare of the Alaska Native peoples by use of a compact agreement with the federal government. Native owned corporations provide stewardship of ancestral lands, resources and finances for Alaska's native people. In addition to these regional corporations, some villages formed their own village corporations who take responsibility for leadership roles in native communities and villages in Alaska.

Cook Inlet Region, Inc (CIRI)

Cook Inlet Region, Inc (CIRI) is one of 12 Alaska Native regional corporations created by the ANCSA and is located on the Kenai Peninsula Borough. ANCSA addressed the aboriginal claim to land by Alaska Native people by mandating the formation of for-profit corporations representing various regions, and by providing land and seed capital to those corporations (CIRI 2021).

ANCSA created 12 distinct regional and over 200 village corporations representing over 79,000 Alaska Native people. The Act provided for the conveyance of 44 million acres of land, allocating land to each of the regional and village corporations (CIRI 2021).

Ninilchik, Seldovia, Seldovia and Tyonek are native villages located in the Kenai Peninsula. They are CIRI shareholders and each has its own village corporation.

Chugachmiut

Chugachmiut is a native consortium and regional non-profit. The seven tribes in the Chugach Region developed a cooperative agreement seven to develop a health and social services regional non-profit, which has become Chugachmiut. (As a non-profit, Chugachmiut does not use a business nomenclature such as “Inc”, “Company”, or “LLC” or other such construction for a business name.) Chugachmiut represents the two tribal communities of Nanwalek and Port Graham on the Kenai Peninsula providing health and social services to the members of these communities. Chugachmiut works as an agent for the Native landowners both Native allotment owners and Trust townsite lot owners associated with Nanwalek and Port Graham. Chugachmiut also represents Qutekcak Native Tribe out of Seward, Alaska.

TOPOGRAPHY

The KPB is in southern Alaska and is topographically varied. The KPB has distinct topographical zones: mountain, valley, and foothill regions. The landscapes present on the KPB include ice fields, forests, fjords, and coastal areas. The western half of the KPB is lower in elevation relative to the eastern half. The eastern portion of the KPB contains the Kenai mountains, which reach up to 7,000 feet in elevation. Additionally, the KPB encompasses 14 major watershed and contains over 20,000 miles of stream habitat as well as more than 350,000 acres of wetland habitat (KPB 2019b).

ROAD SYSTEMS

Some of the KPB is accessible via surfaced roads and highways; however, some communities are accessed only via unsurfaced roads (Figure A.4), which in more remote areas are often narrow and windy with many dead-end roads (Figure A.5). These routes may prove hazardous during emergency evacuation, especially where they are adjacent to forested land with vegetation close to or overhanging the road. Fuel treatment may be needed along some roads where vegetation is overhanging and could prevent safe evacuation of residents or safe access by emergency responders.

Figure A.4. Example of an unsurfaced road that has not been well maintained or frequently traveled.

Figure A.5. Example of narrow roads within the KPB.

TRANSPORTATION CORRIDORS

The two main transportation corridors serving the KPB are the Sterling and Seward corridors. The Sterling Highway connects the KPB to Anchorage, running from south Anchorage to Homer. The Sterling Highway intersects many communities on the western border, including Soldotna, Sterling, Kasilof, Clam Gulch, Ninilchik, Anchor Point, and Happy Valley. The Seward highway starts in Moose Pass and terminates in the city of Seward and intersects many communities on the eastern border such as Moose Pass, Crown Point, Primrose, Bear Creek, and Seward.

In addition to the surfaced highways, numerous smaller roads, and forest roads traverse the KPB, with variable road conditions. Some steep grades and gravel road surfaces may impede travel in the event of a wildfire evacuation or emergency response (Figures A.6 and A.7).

Figure A.6. Photograph showing typical road surface on side roads in the Borough.

Figure A.7. One of many dead-end roads on the Borough that may impede ingress and egress.

POPULATION

The following information is drawn primarily from U.S. census data (U.S. Census Bureau 2020). In 2020, the population estimate of the KPB was 58,799 persons, an increase of 6% over the 2010 census numbers of 55,400. In 2019, there were 31,439 housing units on the KPB. The KPB has a population density of 3.4 people per square mile.

RECREATION

Outdoor recreation is extremely popular on the KPB, with the Kachemak Bay State Park, Kenai Fjords National Park, Chugach National Forest, and Kenai Wildlife Refuge attracting thousands of visitors. Hunting, fishing, and camping are popular on public land (Figure A.8).

Tourism has been one of the fastest growing sectors in the KPB. Each summer, around 500,000 people visit the Borough, with outdoor recreation and sport fishing representing the major visiting activities (Kenai Chamber of Commerce 2021). During these peak seasons and large events, a significant number of people can congregate in a relatively small space, which constitutes a large population to evacuate.

Figure A.8. Peak of salmon fishing on the Kenai River.

CLIMATE AND WEATHER PATTERNS

There are two major forest climates within the planning area: coastal and boreal. The coastal forest is grouped under the maritime climate zone and is characterized by year-round precipitation, cloudy cool summers with temperatures (in °F) averaging upper 50s, and mild winters with temperatures ranging from low 20s to mid-30s (DOF 2020a). However, precipitation levels and precipitation type vary significantly by geographic location. Coastal forests located in the northern part of the state see cooler temperatures and less precipitation than coastal forests in the southern portion of the state. To compare extremes, the northern edge of coastal forested areas near Homer receives only 24 inches of precipitation a year while the southernmost coastal forests in Alaska receive 220 inches of precipitation per year. Furthermore, rain is the common precipitation form in areas with lower elevations, while areas with higher elevation levels see snow and ice. The snow encourages the development of ice fields and glaciers, driving glacial winds. Winter storms with Gale-force winds are common from October to February (DOF 2020a).

Boreal forests extend into both the transitional and continental climate zones and are characterized by temperature extremes. Summer months show temperatures in the upper 90s° F while winter months experience temperatures as low as -40 F, with significant temperature inversions between ridgetops and valley bottoms (DOF 2020a). The mean annual temperature for Alaskan boreal forests sits between 20°F and 30°F with an annual precipitation level of 6 to 12 inches. Despite low precipitation levels, the low evaporation rates, and lack of drainage due to permafrost create wetland ecosystems within boreal forests. River flooding is relatively common due to snow and ice melt in the spring and heavy rain in the summer. In addition, valley entrances and coastal areas frequently experience strong winds (DOF 2020a).

Differences in topographical characteristics throughout the state of Alaska and the KPB contribute to the divergent climatic regimes within the planning area. Maritime, transitional, continental, and arctic are the four major climatic zones of the state (DOF 2020a). Despite having organized climatic zones, weather prediction is difficult as there is no “typical” weather pattern for the state of Alaska (KPB 2009a). Strong high-pressure systems may linger for days at a time, bringing in warm temperatures and low humidity levels. Those high-pressure systems may result in daily thunderstorm activity and atmospheric conditions,

contributing to high-intensity, plume-dominated, blow-up fires. On the contrary, the high-pressure systems can break down with ease, bringing in cool, humid, arctic air which is rapidly followed by replaced high pressure and favorable burning conditions (KPB 2009a). In addition to the various weather systems, the state sees 24 hours of daylight in June and July. Under normal light conditions, fire activity dramatically decreases in the night hours as humidity levels rise. The constant sunlight experienced in June and July significantly limits the ability for humidity levels to “recover” (KPB 2009a), resulting in increased fire risk.

Table A.2. Mean Annual Temperature and Precipitation by Station within the KPB

Station	Period of Record	Mean Annual Precipitation (Inches)	Mean Annual Temperature (°F)		
			Max	Min	Mean Annual
Campbell Creek Science Center	1991-2020	17.81	43.9	24.3	34.1
Kenai Airport	1991-2020	18.27	43.5	27.7	35.6
Seldovia Airport	1991-2020	40.39	45.4	33.6	39.5
Seward Airport	1991-2020	69.71	46.3	34.5	40.4

Source: NOAA (2021b)

July is generally the warmest month of the year in the KPB, with average monthly maximum temperatures ranging from 61.8°F in Seldovia (Seldovia Airport) to 68.6°F in Anchorage (Campbell Creek Science Center). January is the coldest month, with average temperatures ranging from 19.1°F in Anchorage to 31.3°F in Seward. Mean annual temperatures do not vary significantly across the KPB, mean annual temperatures only range from approximately 34.1°F in Anchorage to 40.2°F in Seward. Within the KPB, maximum mean annual temperatures vary even less with a range from 43.5°F in Kenai to 46.3°F in Seward. Minimum annual temperatures range from 24.3°F in Anchorage to 34.5°F in Seward (Table A.2) (National Oceanic and Atmospheric Administration [NOAA] 2021b).

The mean annual precipitation within the KPB is light to abundant, ranging from 17.81 inches in Anchorage to 69.71 inches in Seward. The maximum annual rainfall within the planning area has been recorded as high as 71.81 inches in 2009 in Big River Lakes. Homer had the lowest minimum average annual precipitation at 12.95 inches in 1996 (Western Regional Climate Center 2021). The highest precipitation levels typically occur from late summer to early fall in the KPB. September and October are usually the wettest months of the year, with monthly averages ranging from 3.14 inches in September in Anchorage to 9.9 inches in September in Seward. The lowest precipitation levels occur from spring to early summer in the KPB. March through June are typically the driest months of the year, with monthly precipitation averages ranging from 0.34 inch in April in Anchorage to 2.34 inches in June in Seward.

Monthly climate normals (30-year averages) for the KPB are graphed by weather station below (Figures A.9–A.12).

FOREST HEALTH CONSIDERATIONS

INVASIVE PLANT SPECIES

Invasive plant species are those that take over the habitat of other species (native), displacing the native species from their natural environment. Invasive species are highly adaptive, competitive, and successful at reproducing quickly in varied environments, including the KPB. The KPB has vast natural areas such as national forests, state parks, conservation areas, and scenic waterways. These resources are being threatened by invasive species. While trade and travel increase so does the risk of new invasion. Invasion can devastate industries such as fisheries, agriculture, recreation, tourism, and hydroelectric. Invasion and establishment of invasive plant species can also destabilize soil and alter the hydrology of rivers, lakes, streams, and wetlands (Alaska Department of Natural Resources, Division of Agriculture [DOA] 2021).

The following list includes some of the invasive plants that have been identified as high priority in the Chugach National Forest.

European bird cherry (*Prunus padus*) is a low-branched tree which disperses by seed and can reach up to 35 feet in height. European bird cherry (EBC) can create tall shrub layers, eliminating native willow layers underneath. The plant occurs along urban streams and rivers, displacing native trees and shrubs. EBC is known to reduce the quality of willow-dominated foraging sites for moose. Also, EBC can be toxic to deer, moose, sheep, goats, and cattle (University of Alaska Anchorage [UAA] 2011a).

Orange hawkweed (*Hieracium aurantiacum*) is a perennial herb that has shallow, fibrous roots. Stems can reach a height of around 31 cm. Orange hawkweeds establish dense monocultures that lower biodiversity and diminish the forage value of grasslands for grazing animals. The plant also reduces soil moisture and nutrient availability (UAA 2011b).

Reed canarygrass (*Phalaris arundinacea*) is a tall, reed-like perennial that invades wetlands. Reed canarygrass outcompetes all native vegetation, threatening waterfowl habitat. The grass also threatens salmon streams by increasing silt deposition and contracting water ways, modifying stream hydrology and degrading salmon habitat (Homer Soil and Water Conservation District 2021).

White sweet clover (*Melilotus albus*) is a biennial plant that grows from 61 to 152 cm tall. Each plant can produce up to 350,000 seeds, which can remain viable in the soil for up to 80 years. Natural and human-caused fires generate ideal growing conditions since they open seeds and promote germinations. White sweet clover degrades natural grassland communities by overtopping and shading native species. It is toxic to some animals and can alter sedimentation rates of river ecosystems (UAA 2011c).

In addition, over 70 invasive plant species were recorded in 2019 on the Kenai National Wildlife Refuge (USFWS 2020b). A considerable number of invasive plants have also been detected on the Kenai Fjords National Park (NPS 2015b).

INSECTS

Native insect epidemics within plant communities are usually part of a natural disturbance cycle similar to wildfire. They are often cyclic in nature and are usually followed by the natural succession of vegetation over time. Of primary interest are those that attack tree species because of the implications for fire management.

Present-day insect epidemics in Alaska's spruce forests are on the rise. Spruce beetle infestation is the top cause of death for mature spruce trees in Alaska and is currently responsible for about 900,000 acres of deceased and dying trees in the southcentral portion of the state (USFS 2021e).

SBB outbreaks are linked to drought-related stress and/or faster completion of life cycles due to warmer climate regimes (NPS 2021a). Stands of trees that have been killed by insects have varying degrees of associated fire danger depending on the time lapse following an insect attack and structure of the dead fuels that remain. However, forests with a large degree of mortality following an insect attack may have the potential to experience extremely high fire danger, especially if a large degree of needle cover remains in the canopy.

Southcentral Alaska is currently undergoing a SBB outbreak. More than 1.2 million acres have been impacted since the outbreak began in 2016. In 2020 alone, 145,000 acres of SBB activity was recorded, with 18,330 acres located on the Kenai Peninsula (USFS 2021d). SBB history, ecological impacts, and recent outbreak specifics are detailed in chapter 2. This section covers other problematic insects.

Insects that have infested or have the potential to infect the forests within and around the planning area are discussed below.

Battered sawfly moth (*Sunira verberata*) is a generalist hardwood defoliator. The battered sawfly moth (BSM) attacks aspen, birch, willows, soapberry, highbush cranberry, roses, and nearly any other broad-leaved plant. In 2020, outbreaks of BSM were observed on the Kenai Peninsula, particularly in the Kenai National Wildlife refuge and in the areas from Cooper Landing to Sterling to Kasilof (USFS 2021d). Even though deciduous trees and shrubs like alders and willows usually endure defoliation from BSM without incurring lasting damage, severe outbreaks can lead to mortality. For instance, the largest recorded outbreak on the Peninsula (2003-2006) resulted in alder mortality on mountain slopes over vast areas (Friends of Alaska National Wildlife Refuge 2021).

Birch aphid (*Eucraphis betulae*) is a non-native, sap-sucking, asexually reproducing insect. These insects typically pierce leaves to derive nutritional needs. Birch aphids primarily attack birch tree, specifically silver birch. Although aphid damage to Alaska birch forests is usually negligible, aphid feeding causes a decline in tree vigor and, in some instances, tree mortality (USFS 2011a). In 2020, the USFS recorded birch aphid activity in the Sterling area; however, the outbreaks were of moderate size (USFS 2021d).

Aspen leafminer (*Phyllocnistis populiella*) adults are tiny, lance-shaped moths with white wings speckled with brown and black markings. Aspen leafminers are hardwood defoliators; their hosts include aspen, poplar, willow, and cottonwood. Damage due to feeding is generally described as cosmetic. However, severely mined leaves have been shown to lose their photosynthetic capacity, causing the leaves to dry and turn brown, which is suspected to result in branch dieback and top-kill (USFS 2011b). In 2020, around 50 acres of aspen leafminer damage was recorded in the Kenai and Soldotna areas (USFS 2021d).

DISEASES

Diseases of trees, such as parasitic plants, fungi, and bacteria, can also affect forests on the KP. These diseases impact forest systems by degrading the productivity and health of the forest. Some of the more common forest diseases that are found on the KP are described below. Trees that are killed by disease have the similar potential to increase fire hazards.

Spruce needle casts/blights are a disease complex of spruce in Alaska that is caused by different fungi: *Lirula macrospora*, *Lophodermium piceae*, and *Rhizosphaera pini*. Fungal spores are typically spread by splashing water or wind. Host trees consist of black, Sitka, and white spruce. Symptoms include needle discoloration and black fruiting bodies. Trees are not usually killed by needle cast. However, the disease results in large quantities of dry needles on the trees and the forest floor (USFS 2021f). In 2020, the 3 fungi were detected infecting black, Sitka, and white spruce on the Kenai Peninsula (USFS 2021d).

Spruce needle rust (*Chrysomyxa ledicola*) is a fungus infecting white, black, and Sitka spruce and Labrador tea. The fungus has 5 life stages and completes its life cycle between two different hosts: spruce trees and Labrador tea. Severely infected trees have pale orange to yellow spore masses projecting from infected needles (USFS 2001). Spruce trees are typically not killed by needle rust, but high infection levels may limit growth and increase stress. In 2020, USFS ground surveys detected multiple incidences of needle rust on the Kenai Peninsula affecting white, black, and Sitka spruce as well as Labrador tea (USFS 2021d).

Spruce bud blight is a disease caused by the fungal parasites *Camarosporium* sp., *Dichomera gemmicloa*, and *Gemmamyces piceae*. These parasites cause loss of buds, which strips the tree's ability to produce new needles. Fungi transmission is through, rain, wind, or insect vectors. Although *Gemmamyces piceae* is known to cause tree mortality in Colorado blue spruce, mortality has not been documented in Alaska. In 2020, spruce bud blight was detected throughout southcentral and interior Alaska (USFS 2021d).

Spruce broom rust is a disease caused by the fungus *Chrysomyxa arctostaphyli*. The fungus affects white, black, and Sitka spruce trees in Alaska, particularly in the interior and southcentral regions. However, the fungus needs bearberry and spruce to complete its life cycle. Therefore, rust infection closely follows the distribution of bearberry. Infected trees have dense clusters of branches with a yellow-orange appearance. Depending on the severity of infection, the disease may cause reduced growth, top-kill, or tree mortality. In 2020, spruce broom rust was observed on the northeastern portion of the Peninsula (USFS 2021d).

Alder canker (*Valsa melanodiscus*; *Valsalnicola* spp.) is a disease caused by fungal pathogens. The primary hosts for these pathogens are alder trees. Symptoms include bumpy, fruiting outgrowths from the trunk of the tree. In 2020, alder dieback was extensive on the Kenai Peninsula, with 650 acres of dieback detected near Tustumena Lake (USFS 2021d).

Other diseases detected in 2020 on the Kenai Peninsula include Canker-rot of birch, brown crumbly rot, trunk rot of aspen, trunk rot of birch, red ring rot, and armillaria root disease (USFS 2021d).

1 OVERVIEW OF THE ASSESSMENT

1.1 PURPOSE OF THE ASSESSMENT

The purpose of the Chugach All-Lands Wildfire Risk Assessment (hereafter called ARRA¹) is to provide foundational information about wildfire hazard and risk to highly valued resources and assets for the Chugach National Forest and surrounding areas in Southcentral Alaska. Such information supports wildfire response, fuel management planning, and revisions to land and resource management plans. A wildfire risk assessment is a quantitative analysis of the assets and resources across a specific landscape and how they are potentially impacted by wildfire. The ARRA analysis considers several different components, each resolved spatially across the region, including:

- likelihood of a fire burning,
- the intensity of a fire if one should occur,
- the exposure of assets and resources based on their locations, and
- the susceptibility of those assets and resources to wildfire.

Assets are human-made features, such as commercial structures, critical facilities, housing, etc., that have specific importance or value. Resources are natural features, such as wildlife habitat, vegetation type, or water, etc. These also have specific importance or value. Generally, the term “values at risk” has been used to describe both assets and resources. For the ARRA assessment, the term Highly Valued Resources and Assets (HVRA) is used to describe what has previously been labeled values at risk. There are two reasons for this change in terminology. First, resources and assets are not themselves “values” in any way that term is conventionally defined—they *have* value (importance). Second, while resources and assets may be exposed to wildfire, they are not necessarily “at-risk”—that is the purpose of the assessment.

To manage wildfire in Southcentral Alaska, accurate wildfire risk data are essential to inform land and fire management strategies. These risk outputs can be used to aid in the planning, prioritization, and implementation of prevention and mitigation activities. In addition, the risk data can be used to support fire operations in response to wildfire incidents by identifying those assets and resources most susceptible to fire.

1.2 QUANTITATIVE RISK MODELING FRAMEWORK

The basis for a quantitative framework for assessing wildfire risk to highly valued resources and assets (HVRAs) has been established for many years (Finney, 2005; Scott, 2006). The framework has been implemented across a range of scales, from an individual county (Ager, 2017), a portion of a national forest (Thompson et al., 2013b), individual states (Buckley et al., 2014), to the entire

¹ ARRA is an acronym for the original title of the project—Alaska Region Risk Assessment.

continental United States (Calkin et al., 2010). In this framework, wildfire risk is a function of two main factors: 1) wildfire hazard and 2) HVRA vulnerability (Figure 1).

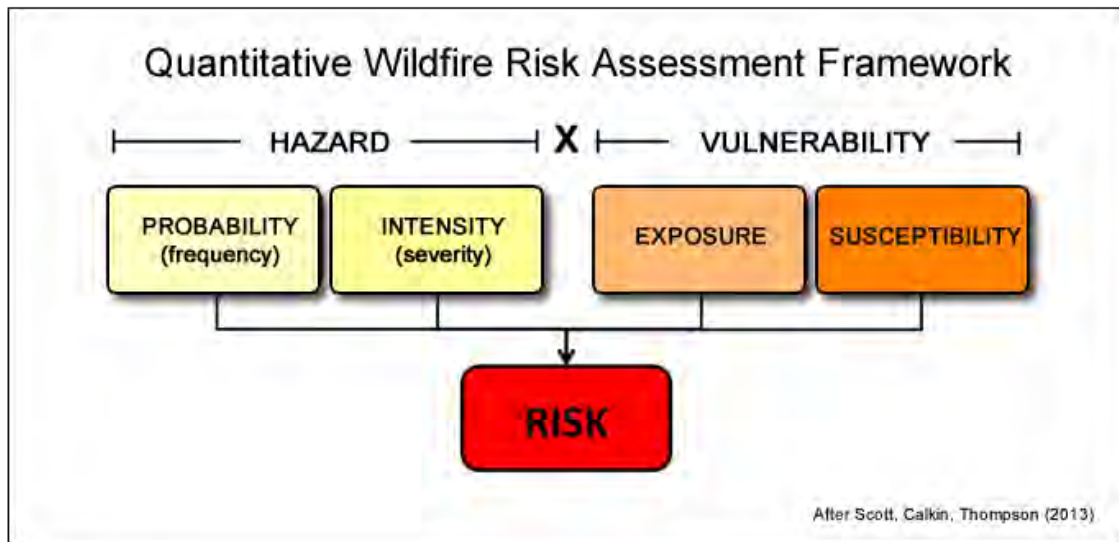

Figure 1. The components of the Quantitative Wildfire Risk Assessment Framework used for ARRA.

Wildfire hazard is a physical situation with the potential for causing damage to vulnerable resources or assets. Quantitatively, wildfire hazard is measured by two main factors: 1) burn probability (or likelihood of burning), and 2) fire intensity (measured as flame length, fireline intensity, or other similar measures).

HVRA vulnerability is also composed of two factors: 1) exposure and 2) susceptibility. Exposure is the placement (or coincidental location) of an HVRA in a hazardous environment—for example, building a home within a flammable landscape. Some HVRA, like wildlife habitat or vegetation types, are not movable; they are not "placed" in hazardous locations. Still, their exposure to wildfire is the wildfire hazard where the habitat exists. Finally, the susceptibility of an HVRA to wildfire is how easily it is damaged by wildfire of different types and intensities. Some assets are fire-hardened and can withstand very intense fires without damage, whereas others are easily damaged by even low-intensity fire.

1.3 LANDSCAPE ZONES

1.3.1 ANALYSIS AREA

The Analysis Area is the area for which valid burn probability results are produced. The Analysis Area for the ARRA project was defined as the great Chugach National Forest area, including the Kenai Peninsula (ARRA).

1.3.2 FIRE OCCURRENCE AREAS

To prevent edge effects and ensure valid BP results, it is necessary to allow FSim fires to also start outside of the Analysis Area and burn inwards. This larger area where simulated fires are started is

called the Fire Occurrence Area (FOA). We established the FOA extent as a 30 km buffer on the Analysis Area. The buffer provides sufficient area to ensure that all fires capable of reaching the Analysis Area are simulated. The Fire Occurrence Area covers roughly 36.2 million acres characterized by diverse topographic and vegetation conditions. Such a large and diverse area will have highly variable historical fire occurrence and fire weather. To model the area's diversity more accurately, the overall fire occurrence area was divided into two FOAs. Individual FOA boundaries were developed to group geographic areas that experience similar wildfire occurrence. These boundaries were generated using a variety of inputs, including larger fire occurrence boundaries developed for national-level work (Short, 2020), aggregated level IV EPA Ecoregions, and local fire staff input. For consistency with other FSim projects, we numbered these FOAs 101 and 102.

1.3.3 FUELSCAPE EXTENT

The available fuelscape extent was determined by adding a 30 km buffer to the FOA extent. This buffer allows fires starting within the FOA to grow unhindered by the edge of the fuelscape. Without such a buffer, fire growth would be artificially truncated and affect the fire-size distribution introducing errors in the calibration process. A map of the Analysis Area, FOA boundaries, and fuelscape extent are presented in Figure 2.

Figure 2. Overview of landscape zones for ARRA FSim project.

2 ANALYSIS METHODS AND INPUT DATA

The FSim large-fire simulator was used to quantify wildfire likelihood across the Analysis Area at a pixel size of 120 meters. FSim is a comprehensive fire occurrence, growth, behavior, and suppression simulation system that uses locally relevant fuel, weather, topography, and historical fire occurrence information to make a spatially resolved estimate of the contemporary likelihood and intensity of wildfire across the landscape (Finney et al., 2011).

FSim focuses on the relatively small fraction of wildfires that escape initial attack and become "large" (>100 acres). Since the occurrence of large fires is relatively rare, FSim generates many thousands of years of simulations to capture a sample size large enough to generate burn probabilities for the entire landscape. An FSim iteration spans one entire year. All FOAs within the ARRA project area were run with 100,000 iterations.

There is no temporal component to FSim beyond a single wildfire season, consisting of up to 365 days. FSim performs independent (and varying) iterations of one year, defined by the fuel, weather, topography, and wildfire occurrence inputs provided. FSim does not account for how a simulated wildfire might influence the likelihood or intensity of future wildfires (even within the same simulation year). Each year represents an independent realization of how fires might burn given the current fuelscape and historical weather conditions. FSim integrates all simulated iterations into a probabilistic result of wildfire likelihood.

2.1 FUELSCAPE

A fuelscape is a quantitative raster representation of the fuels and topography of a landscape. The fuelscape consists of geospatial datasets representing surface fuel model (FM40), canopy cover (CC), canopy height (CH), canopy bulk density (CBD), canopy base height (CBH), and topography characteristics (slope, aspect, elevation). These datasets can be combined into a single landscape (LCP) file and used as a fuelscape in fire modeling programs.

In the following sections, we discuss the process of generating and updating the fuelscape. After development, the fuelscape was resampled to 120 meters for wildfire simulation. Additional information on customizing a fuelscape can be found in the LANDFIRE data modification guide (Helmbrecht and Blankenship, 2016).

2.1.1 FUELSCAPE INPUTS

The vegetation and disturbance inputs for the ARRA Fuelscape were derived from a combination of LANDFIRE 2014 (LF2014) 30 m raster data² and the Kenai Vegetation Mapping Project³. Capitalizing on the new Kenai Peninsula data release, Pyrologix developed a custom fuelscape methodology. The approach is discussed in the following two sections. Although a custom approach

² Additional information can be found on the LANDFIRE website at www.LANDFIRE.org.

³ Additional information can be found on the Kenai Vegetation Mapping Project at <https://www.arcgis.com/apps/MapSeries/index.html?appid=4e21c25d5eac421babaef3222004cccf>

was used to integrate the Kenai Peninsula vegetation data, the LANDFIRE Total Fuel Change Toolbar (LFTFCT, Smail et al., 2011) was used to generate the surface fuel (FM40) dataset.

2.1.1.1 ARRA FUELSCAPE

The ARRA fuelscape was created using the LANDFIRE Total Fuel Change Toolbar (LFTFCT). LFTFCT allows users to input existing vegetation and disturbance data, define fuel rulesets, and generate fuel grids. See the LFTFCT Users Guide for more information (Smail et al., 2011). The resulting LFTFCT output fuel grids can then be combined into a single landscape (LCP) file and used as a fuelscape input in various fire modeling programs.

2.1.2 FUELSCAPE CALIBRATION

The LANDFIRE fuel mapping process assigns fuel model and canopy characteristics using two primary input layers: Existing Vegetation Type (EVT) and LANDFIRE map zone. Using these inputs (and information about the fuel disturbance(s), vegetation height and cover, and biophysical setting), a surface fuel model assignment is queried from the LANDFIRE ruleset database and, if applicable, canopy characteristics for the given EVT and map zone. When working with a large project extent, such as ARRA, numerous map zones are present. The challenge in fuelscape calibration is to produce a fuelscape without artificial and often arbitrary seamlines. To do so, the rules from multiple zones must be reconciled and filtered to one rule set per EVT. As an unbiased approach to reconciling rules from multiple map zones, we determined which zone holds the greatest share of each EVT on the landscape and applied those rules across the entire fuelscape. These rulesets were then unified to produce a preliminary Fuelscape. A Fuelscape calibration workshop was then conducted to further customize and calibrate rulesets to the project's area of interest.

Prior to the fuel calibration workshop, we produced an initial set of fire behavior results with gNexus⁴ using the preliminary fuelscape. The gNexus results include maps of Rate of Spread (ROS), Heat Per Unit Area (HPUA), Flame Length (FL), Fireline Intensity (FIL), Crown Fraction Burned (CFRB), Torching Index (TI), and Crowning Index (CI). These maps were then summarized by rule in the LFTFCT database for landscape critique and evaluation by workshop participants.

From this analysis, a prioritized list of EVTs was determined to focus calibration efforts. The set of EVTs reviewed in the fuel calibration workshop were identified as being among the top ten most abundant EVTs, EVTs that encompass a large portion of the Analysis Area, and EVTs with inconsistencies in fire behavior across the range of vegetation cover and height values (i.e. passive crown fire is possible at all windspeeds for part of the rule while the remainder of the rule could only experience surface fire under all observable windspeeds).

The ARRA fuel calibration workshop was held on September 24-25, 2019 in Anchorage, AK. At the workshop, we solicited feedback from local fire and fuels staff from the Chugach National Forest as well as interagency partners across the Southcentral AK. The intent of the workshop was to review

⁴ gNexus is a custom spatial implementation of the fire behavior calculator software, NEXUS 2.1 (available at <http://pyrologix.com/downloads/>)

the preliminary gNexus fire modeling results and refine the rulesets to produce fire behavior results consistent with the experience of workshop participants.

In addition to calibrating fuel rulesets, both the surface and canopy inputs were updated to reflect fuel disturbances occurring between 2015 and 2019, inclusively. Pyrologix gathered fuel disturbances across the region and assigned appropriate disturbance codes. Fuel disturbances included events such as mechanical treatments, prescribed fire, wind events, insect mortality, and wildfires. Datasets were collected from a variety of sources but included sources such as the USFS Forest Service Activity Tracking System (FACTS) and the Department of Interior National Fire Plan Operations & Reporting System (NFPORS).

Pyrologix incorporated recent wildfire disturbances using three different sources: Monitoring Trends in Burn Severity (MTBS) data, Burned Area Reflectance Classification (BARC), and Alaska Interagency Coordination Center (AICC) perimeter data. We gathered severity data as available from MTBS and BARC, where severity data were unavailable, we relied on final perimeters from AICC. We cross-walked MTBS/BARC severity to the appropriate LANDFIRE disturbance code (112, 122, or 132) corresponding with fire disturbances of low, moderate, or high severity, occurring in the past one to five years. AICC perimeters were assigned a severity disturbance code of 122.

After disturbances were incorporated into the final calibrated fuelscape, we generated the ARRA fuel raster shown by the fuel-model group in Figure 3.

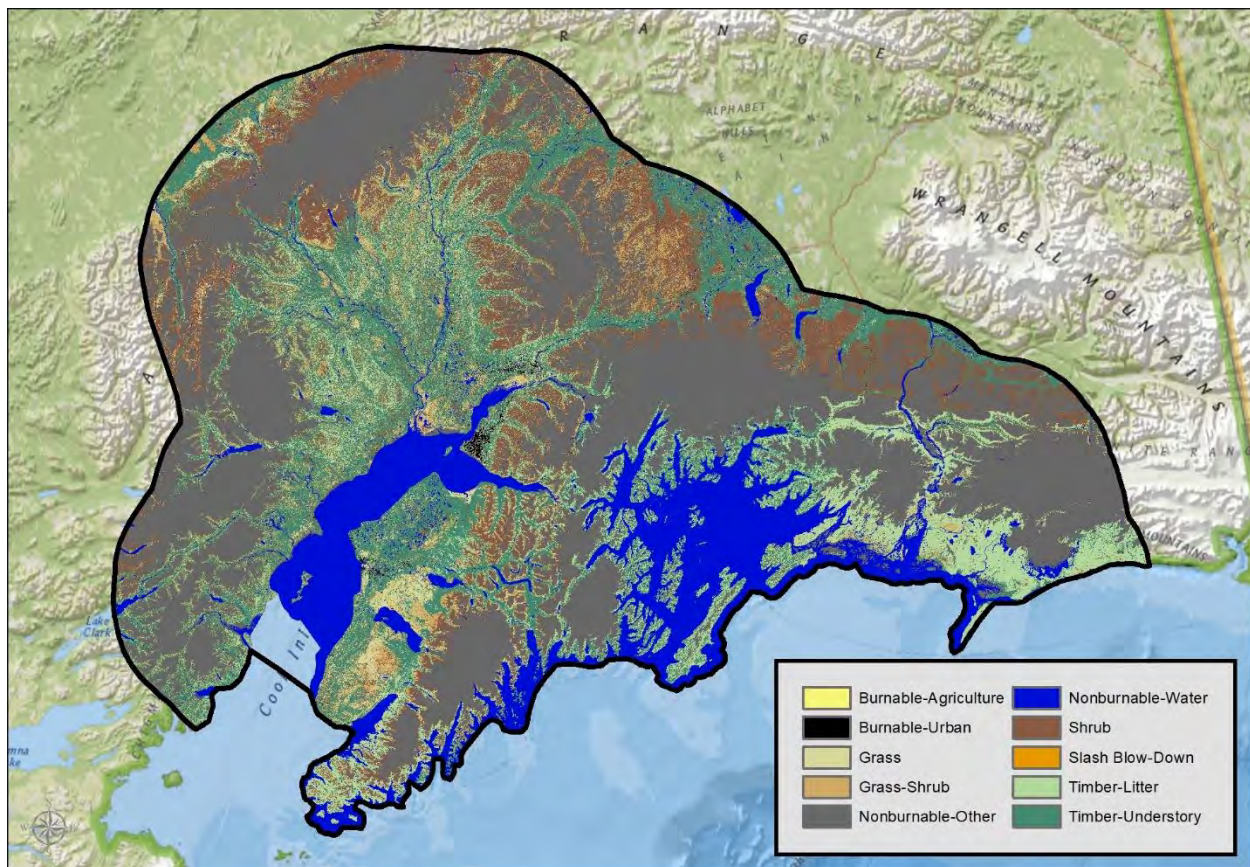

Figure 3. Map of fuel-model groups across the ARRA LCP extent.

An additional ARRA fuelscape edit warrants highlighting: the development of a “Ghost Canopy” for EVT 2604 (Western North American Boreal Mesic Black Spruce Forest). The edit involved a ‘Ghost Canopy’ adjustment for the Western North American Boreal Mesic Black Spruce Forest vegetation type, EVT 2604. This adjustment better captures fire behavior associated with the vegetation type through the use of the appropriate surface fuel model, but with canopy fuel parameters to allow for embers without the wind reduction influence on the rate of spread. To achieve this effect, specific surface and canopy fuel values were hardwired to mimic the desired wind reduction (FM40 = SH5/145, Set CC = 5%; CH = 17.5 m; CBH = 1.5 m; CBD = 0.01 kg/m³). These canopy adjustments allow the EVT loft embers but keep the rate of spread and fire intensity unchanged.

The complete set of calibrated EVTs are listed in the final ‘Fuel Boxes’ spreadsheet provided with the project deliverables⁵.

2.1.3 CUSTOM FUEL MODELS

The 40 Scott and Burgan Fire Behavior Fuel Models (FBFM40) represent distinct distributions of fuel loading found among surface fuel components, size classes, and fuel types. The spatial representation of fuel model assignments serves as input into wildfire simulation modeling systems like FARSITE, FlamMap, and FSim. Such spatial wildfire simulation systems associate certain simulation inputs to a fuel model assignment. Although the FBFM40 fuel models cover a wide array of fuel bed scenarios, it is sometimes necessary to develop custom fuel model assignments to simulate fire behavior not reflected in the standard fuel models.

For example, FSim allows for adjustments to the rate of spread (adjustment factor) and live/dead fuel moisture content to vary by fuel model. The use of a custom fuel model in this instance allows for specified locations to be given different simulation inputs. For example, certain high-elevation locations may be characterized by a standard fuel model, but with different fuel moisture inputs. In that case, a custom fuel model can be made with the same parameters as the standard fuel model but a different fuel model number. Then, because the fuel model number is different, it can be given different fuel moisture inputs

The ARRA fuelscape applied such a custom fuel model assignment for a specific scenario related to burnable urban areas. By assigning these areas custom fuel models (using different fuel model numbers than the standard model FBFM40), we were able to control the weather scenarios during which simulated fire spread could take place.

Burnable urban areas were originally mapped by LANDFIRE as non-burnable, and therefore, do not allow simulated wildfire spread into urban areas as observed in past wildfire events. In this application of custom fuel models, the parameters are identical to standard FBFM40 fuel models but are labeled with custom numbers allowing for additional customization within FSim. The burnable urban custom fuel models were spatially identified using the LANDFIRE EVTs designated as low and moderate-intensity developed and represented with 251/BU1; identical to TL9. The addition of the custom burnable urban fuel models allows for the transmission of wildfire in simulation across these areas. To not overestimate the likelihood of wildfire in custom fuel models,

⁵ ChugachAllLands_FuelRuleBoxes_20190924.xlsx

fuel moisture inputs were edited to allow for wildfire only under 97th percentile ERC conditions. Fuel moisture inputs are further detailed in section 2.3.3.

2.1.4 KENAI PENINSULA FUELSCAPE ADJUSTMENTS

The ARRA fuelscape was initially developed using LANDFIRE 2014 (LF 2014 - LF 1.4.0) data products. In the Spring of 2020, Pyrologix updated the fuelscape with data from the Kenai Peninsula Vegetation Map and calibrated fuel model assignments from the ARRA Fuelscape. During the September 2019 ARRA calibration workshop, held at the Chugach National Forest Supervisor's Office, a Kenai dominant vegetation type-to-LF14 EVT crosswalk was developed by local experts. This document served as the foundation of the Kenai Peninsula fuelscape.

The Kenai Peninsula Vegetation Map provided data for tree cover, tall shrub cover, and vegetation height. To incorporate the data into the fuelscape, they were resampled from 5 m to 30 m and crosswalked to the LF14 vegetation codes for EVT, EVC, and EVH. A spatial review of the tree cover and tall shrub cover showed the two datasets to be mutually exclusive. They were subsequently merged and cross-referenced against EVT/dominant lifeform ensuring alignment with LANDFIRE'S 2-digit codes for water, snow/ice, barren, and developed.

A review of the merged cover and height data highlighted areas of tree or tall shrub cover lacking height assignments. The ESRI ArcGIS Focal Statistics tool was used to perform two filters at the 30 m resolution, calculating the mean height value, within a 3-pixel by 3-pixel moving window. This allowed us to "backfill" height pixels that were coincident with tree and shrub cover. A vegetation lifeform mask was used during processing to ensure cover and height vegetation type alignment. Any remaining areas mapped with herbaceous or other non-tree/shrub vegetation types (EVTs) were backfilled using LF14 cover and height.

The resulting vegetation type, cover, and height data layers were used as inputs to create a Kenai Peninsula fuelscape. The fuelscape used calibrated rules from the ARRA calibration workshop and was processed using the LANDFIRE Total Fuel Change Toolbar (LFTFCT). The resulting Kenai Peninsula fuelscape was mosaicked along the boundaries of ice, barren, water, or rock with the calibrated ARRA fuelscape to eliminate seamlines.

It is important to highlight two Kenai Peninsula fuelscape post-processing adjustments implemented before the final mosaic. A review of the ARRA and Kenai Peninsula fuelscapes revealed differences in the mapping of developed spaces. The LANDFIRE existing vegetation type for developed areas has more detailed classes, capturing developed areas of high intensity, moderate intensity, low intensity, and open space. Developed areas in the Kenai Peninsula were mapped into a single class, high intensity developed. While this difference does not seem hugely significant, only having a single developed classification does cause difficulties in representing burnable urban areas of a fuelscape. Due to this difference, develop areas (high intensity developed) within Kenai Peninsula were adjusted to reflect the LANDFIRE classes in areas overlap.

The second adjustment involved the use of a spatial 'wildcard' to differentiate the vegetation characteristics (and associated fuel model assignment) for EVT 2611 (Western North American Sub-boreal Mesic Bluejoint Meadow) within the Kenai Peninsula. Areas with this vegetation type outside of the Kenai Peninsula are assumed to have more of a shrub component and received a

GS2/122 fuel model assignment; while areas within the peninsula are assumed to have more of a grass component and were assigned a GR2/102 fuel model assignment.

The ARRA-Kenai Peninsula mosaicked fuelscape was then updated to include disturbances from treatment activities and past wildfire events occurring in 2015 through 2018, rendering this fuelscape capable for use in 2019. Because 2019 was an influential fire year on this landscape, we added 2019 wildfire perimeters and fuel disturbance information available through the Fall of 2019. In terms of timing, the landscape is ‘dated’ current to 2019 with a bonus year of disturbances from 2019 added in. Disturbances occurring in the time since disturbance block two (TSD2) of zero to five years include the years 2014 through 2019. All disturbances before 2014 are in TSD3 (2005-2013). The standard LANDFIRE approach is to keep only the past 10 years of disturbance information, but that would cause fire scars like the 2007-Caribou Hill fire to be mapped as non-disturbed fuel. To prevent the aging out of these fires’ influence on fuel and fire behavior, we chose to keep the additional four years of disturbance history in TSD3.

2.2 HISTORICAL WILDFIRE OCCURRENCE

The Fire Occurrence Database (FOD) that spans the 26 years from 1992-2017 was used to quantify historical large-fire occurrence (Short, 2017). Historical wildfire occurrence data were used to develop model inputs (the fire-day distribution file [FDist] and ignition density grid [IDG]) as well as model calibration targets. Table 1 summarizes the annual number of large fires per million acres, mean large-fire size, and annual area burned by large fires per million acres for each FOA. For this analysis, we defined a large fire as one greater than 100 acres.

Table 1. Historical large-fire occurrence, 1992-2017, in the ARRA FSim project FOAs.

FOA	Mean annual number of large fires	FOA area (M ac)	Mean annual number of large fires per M ac	Mean large-fire size (ac)	Mean annual large-fire area burned (ac)	FOA-mean burn probability
101	0.9	18.07	0.05	2,899	2,564	0.0001
102	1.0	18.49	0.05	13,963	13,963	0.0008

Historical wildfire occurrence varied substantially by FOA (Table 1). While FOA 101 and 102 experienced a similar number of large fires per million acres per year the average size of those fires was 13,963 acres in FOA 102 and only 2,899 in FOA 101.

To account for the spatial variability in historical wildfire occurrence across the landscape, FSim uses a geospatial layer representing the relative, large-fire ignition density. FSim stochastically places wildfires according to this density grid during a simulation. The entire landscape is saturated with wildfire over the 100,000 simulated iterations, but more ignitions are simulated in areas that have previously allowed for large-fire development.

The Ignition Density Grid (IDG) was generated using a mixed-methods approach by averaging the two grids resulting from the Kernel Density and Point Density tools within ArcGIS, using a 120 m, output cell size, and a 75 km search radius. All fires equal to or larger than 100 acres reported in the

FOD were used as inputs to the IDG. The IDG was divided up for each FOA by setting to zero all areas outside of the fire occurrence boundary of that FOA. This allows for a natural blending of results across adjacent FOA boundaries by allowing fires to start only within a single FOA but burn onto adjacent FOAs. Additionally, all burnable urban, and small burnable areas less than 50 acres within other non-burnable or urban areas were masked out of the IDG layer. The IDG enables FSim to produce a spatial pattern of large-fire occurrence consistent with what was observed historically. Figure 4 shows the ignition density grid for the ARRA Fire Occurrence Area.

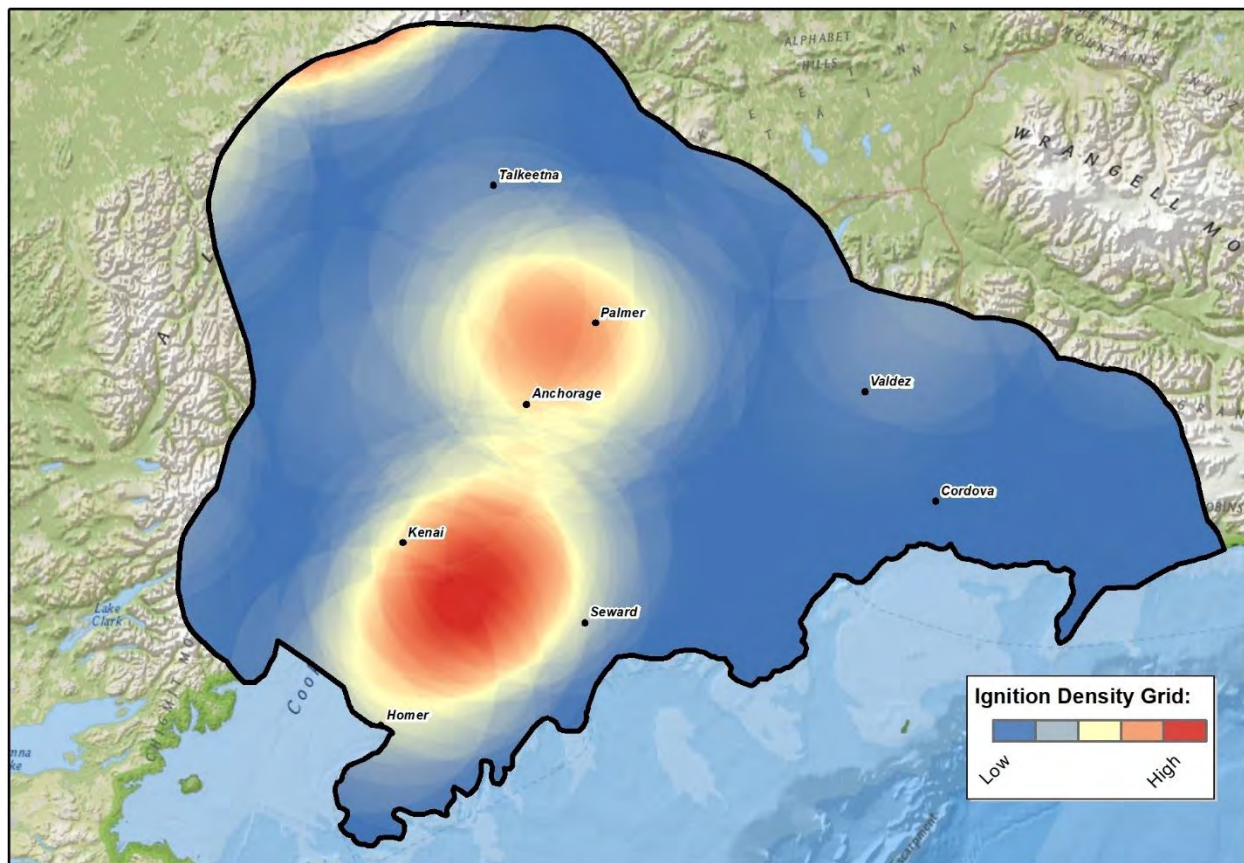

Figure 4. Ignition density grid used in FSim simulations.

2.2.1 TRENDS IN WILDFIRE OCCURRENCE

The FSim model was calibrated using the USFS Fire Occurrence Database (FOD; 1992-2017). Wildfire occurrence within the ARRA analysis area was observed to be non-stationary and therefore not accurately represented by the 26-year FOD mean. A linear model was fit to fire size and frequency with time as the dependent variable (Figure 5). FSim model results were then calibrated to the predicted 2020 mean fire size and frequency.

Figure 5. Graph of historical wildfire occurrence 1992 - 2017

Calibrating to the 2020 FOD trend resulted in an increase of 1.28X in the annual number of simulated fires and a 2.28X increase in mean large fire size. The FSim model was calibrated to the 2020 FOD trend to generate the most accurate estimate possible of wildfire likelihood.

2.3 HISTORICAL WEATHER

FSim requires three weather-related inputs: monthly distribution of wind speed and direction, live and dead fuel moisture content by year-round percentile of the Energy Release Component (ERC) variable of the National Fire Danger Rating System (NFDRS, 2002) for fuel model G (ERC-G) class, and seasonal trend (daily) in the mean and standard deviation of ERC-G. We used two data sources for these weather inputs. For the wind speed and direction distributions, we used the hourly (1200 to 2000 hours), 10-minute average values (2 mph calm wind), recorded at selected Remote Automatic Weather Stations (RAWS). Stations with relatively long and consistent records and moderate wind activity were preferentially selected to produce the most stable FSim results.

Energy Release Component (ERC) values were extracted from a Special Interest group (SIG) of four RAWS. Issues with downtime within the RAWS record required that multiple stations be used to have a sufficient sample of ERCs to cover all historical fire events. The RAWS stations selected for winds and ERC sample sites are shown in Figure 6 and discussed further in the following sections.

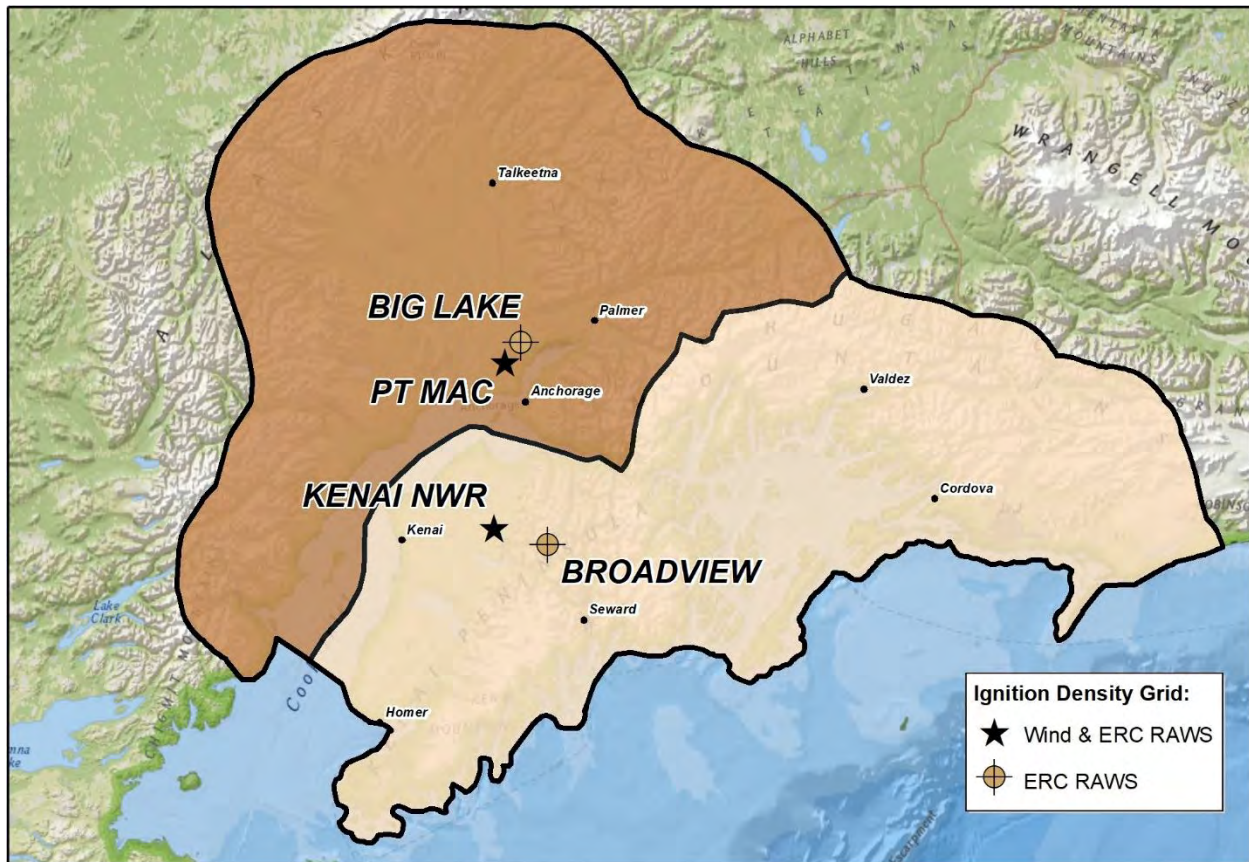

Figure 6. RAWS stations and ERC sample sites used for the ARRA FSim project. Selected RAWS data were used for hourly sustained wind speed and direction as well as ERCs.

2.3.1 FIRE-DAY DISTRIBUTION FILE (FDIST)

Fire-day Distribution files are used by FSim to generate stochastic fire ignitions as a function of ERC. The FDist files were generated using an R script that summarizes historical ERC and wildfire occurrence data, performs logistic regression, and then formats the results into the required FDist format.

The FDist file provides FSim with logistic regression coefficients that predict the likelihood of a large-fire occurrence based on the historical relationship between large fires and ERC and tabulates the distribution of large fires by large-fire day. A large fire day is a day when at least one large fire occurred historically. The logistic regression coefficients together describe large-fire day likelihood $P(LFD)$ at a given $ERC(G)$ as follows:

$$P(LFD) = \frac{1}{1 + e^{-B_a * -B_b * ERC(G)}}$$

Coefficient a describes the likelihood of a large fire at the lowest ERCs, and coefficient b determines the relative difference in the likelihood of a large fire at lower versus higher ERC values.

2.3.2 FIRE RISK FILE (FRISK)

Fire risk files were generated for each RAWS using FireFamilyPlus version 4.1 and updated to incorporate simulated ERC percentiles (as described in section 2.3.4). These files summarize the historical ERC stream for the FOA, along with wind speed and direction data for the selected RAWS.

2.3.3 Fuel Moisture File (FMS)

Modeled fire behavior is robust to minor changes in dead fuel moisture, so a standardized set of stylized FMS input files (representing the 80th, 90th, and 97th percentile conditions) for 1-,10-, 100-hour, live herbaceous, and live woody fuels was developed (Table 2).

Table 2. Fuel Moisture values used in wildfire simulation for the 80th/90th/97th percentile ERCs

Fuel Model Group	1-hr	10-hr	100-hr	Live-Herb	Live-Woody
Grass / Shrub	7 / 5 / 4	8 / 6 / 5	9 / 7 / 6	90 / 60 / 40	110 / 80 / 60
Timber / Slash	9 / 7 / 6	10 / 8 / 7	11 / 9 / 8	90 / 60 / 40	110 / 80 / 60
Burnable Urban	45 / 45 / 6	45 / 45 / 7	45 / 45 / 8	120 / 120 / 40	110 / 110 / 60

Fuel moistures in the custom, Burnable Urban (FM 251) fuel models were set above the moisture of extinction for the 80th and 90th percentile ERC bins. This was done to restrict simulated wildfires to burn within these fuel groups only under the most extreme weather conditions (97th percentile). This method maintains the potential for fire intensity while not vastly over-predicting burn probability. The custom fuel models are further described above in section 2.1.3.

2.3.4 Energy Release Component File (ERC)

We sampled historical ERC-G values from a Special Interest group (SIG) of four RAWS (Big Lake, PT Mac, Kenai NWR, and Broadview). A 1,000 iteration FSim was simulated to generate a sample of 365,000 days of ERCs. The generated ERC stream was used in both FOA 101 and FOA 102 to provide a “coordinated” ERC stream across the analysis area. The simulated ERC values are “coordinated” so a given year and day for one FOA corresponds to the same year and day in all FOAs. This coordination permits the analysis of fire-year information across all FOAs.

2.4 WILDFIRE SIMULATION

The FSim large-fire simulator was used to quantify wildfire hazard across the landscape at a pixel size of 120 m (4 acres per pixel). FSim is a comprehensive fire occurrence, growth, behavior, and suppression simulation system that uses locally relevant fuel, weather, topography, and historical fire occurrence information to make a spatially resolved estimate of the contemporary likelihood and intensity of wildfire across the landscape (Finney et al., 2011). Figure 7 diagrams the many components needed as inputs to FSim.

Due to the highly varied nature of weather and fire occurrence across the large landscape, we ran FSim for each of the two FOAs independently and then compiled the two runs into a single data

product. For each FOA, we parameterized and calibrated FSim based on the location of historical fire ignitions within the FOA, which is consistent with how the historical record is compiled. We then used FSim to start fires only within each FOA but allowed those fires to spread outside of the FOA. This, too, is consistent with how the historical record is compiled.

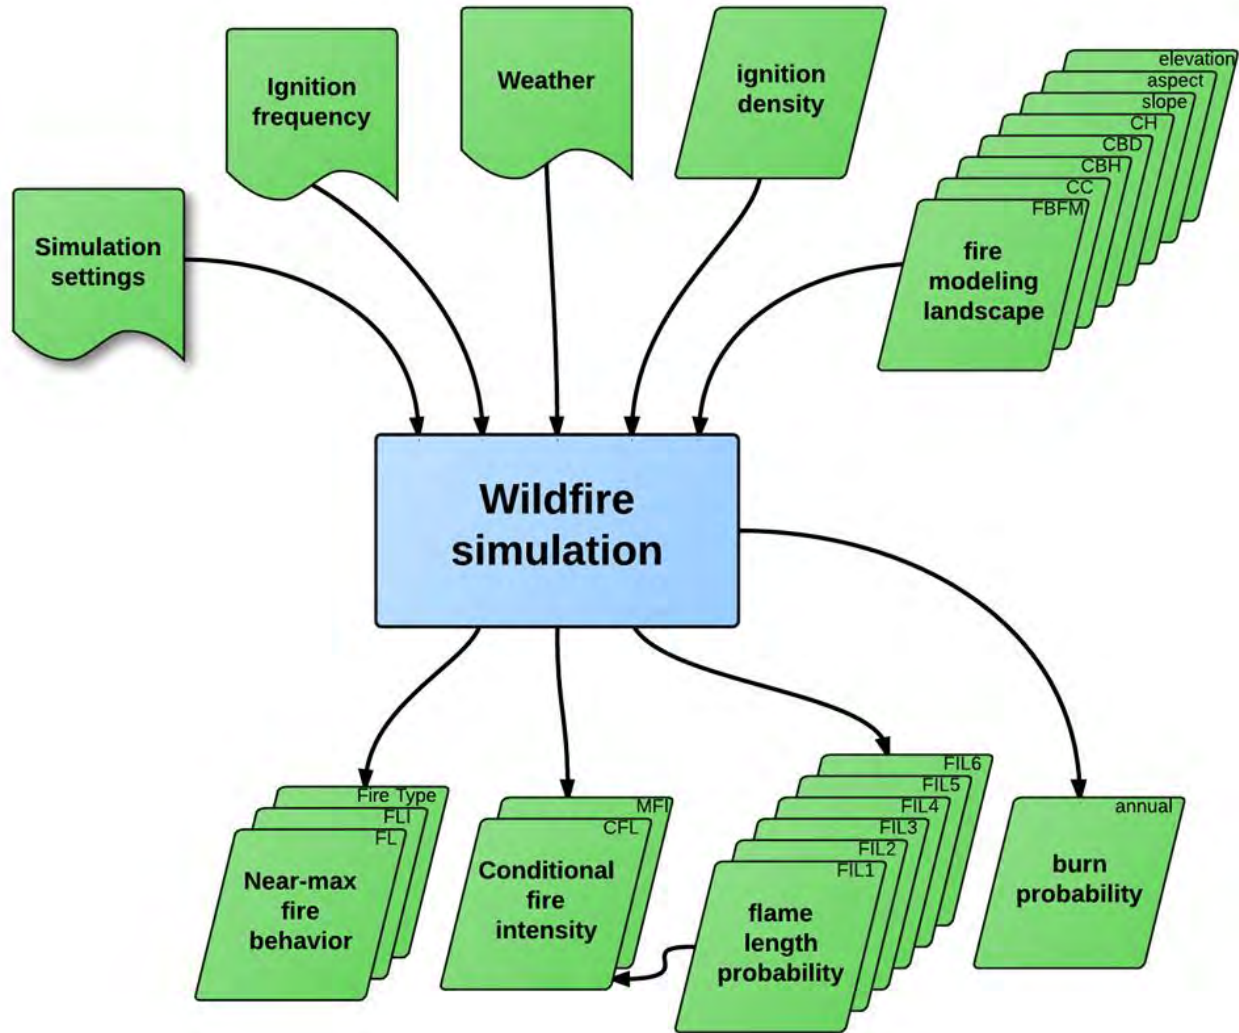

Figure 7. Diagram showing the primary elements used to derive burn probability.

2.4.1 MODEL CALIBRATION

FSim simulations for each FOA were calibrated to a 2020 trend analysis of historical large fire occurrence including mean historical large-fire size, and mean annual area burned per million acres. Calibration targets were adjusted upward from the mean values over the historical record based on methods outlined in section 2.2.1. Additionally, care was taken to match simulated wildfire size distributions to the historical record and allow for the occurrence of simulated fires larger than any observed historically. While only large-fire sizes (>100 acres) were considered in calibration, numerous small fires were also simulated. However, the impact of small fires on landscape-level burn probability is negligible.

To calibrate each FOA, we started with baseline inputs and a starting rate-of-spread adjustment (ADJ) factor file informed by experience on previous projects. The final model inputs can be seen below in Table 3. All runs were completed at 120 m resolution. Each FOA was calibrated separately, and final simulations were run with 100,000 iterations. The two FOAs were then integrated into an overall result for the analysis area.

Table 3. Summary of final-run inputs for each FOA

Final run	Number of Iterations	ADJ file	Trimming factor	Frisk	FDist file	LCP file
101r15	100,000	Foa101v8	2.5	Foa101v3	Foa101v4	FOA_101_120v6
102r15	100,000	Foa102v8	2.5	Foa102v3	Foa102v4	FOA_102_120v6

2.4.2 INTEGRATING FOAS

We used the natural-weighting method of integrating adjacent FOAs that we developed on an earlier project (Thompson et al., 2013a). With this method, well within the boundary of FOA (roughly 30 km from any boundary), the results are influenced only by that FOA. Near the border with another FOA, the results will be influenced by that adjacent FOA. The weighting of each FOA is in proportion to its contribution to the overall burn probability at each pixel.

Figure 8. Map of integrated FSim burn probability results for the ARRA Analysis Area at 120 m resolution.

3 HVRA CHARACTERIZATION

Highly Valued Resources and Assets (HVRA) are the resources and assets on the landscape most likely to warrant protection if found to be at risk of wildfire. The key criteria for inclusion in the ARRA assessment is an HVRA must be of greatest importance to the region, the spatial data must be readily available, and the spatial extent of the identified HVRA must be complete.

There are three primary components to HVRA characterization: HVRA must be identified and their spatial extent mapped, their response to fire (negative, or neutral) must be characterized, and their relative importance to each other must be determined.

3.1 HVRA IDENTIFICATION

A set of HVRA was identified through a workshop held in Anchorage, Alaska, on September 26, 2019. A group consisting of the Forest Service employees, Resource Specialists, Geospatial Analysts, and Interagency Partners from USFS Region 10 identified eleven HVRA in total: nine assets and two resources. The complete list of HVRA and their associated data sources are listed in Table 4.

Table 4. HVRA and sub-HVRA identified for the Chugach All-Lands Wildfire Risk Assessment and associated data sources.

HVRA & Sub-HVRA	Data Source
People and Property	
People and Property	Represents housing unity density data produced by Pyrologix using the building footprints and U.S. Census - Census Block population data. Data depicting building locations was provided by Chugach NF and adjusted by Pyrologix.
Native Allotments	The data was provided by the Bureau of Land Management, Alaska State Office, representing areas designated as 'Conveyed Native Allotments' within Alaska.
Infrastructure	
Electric transmission lines - high & low voltage	The provided linear features represent electric power transmission lines. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Communication Sites	Data represents the location of communication sites. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Power: Power Plants & Substations	The provided data represents the locations of power plants and substations. Data was provided by Chugach NF and supplemented with data from the Homeland Infrastructure Foundation-Level Data (HIFLD) program.
Oil & Gas Wells	The data contains the location of surface wells & structures. Well locations were limited to those designated as active wells; structures were limited to items designated as oil/gas buildings. Data was provided by Chugach NF.
Pipelines	The data depicts pipeline locations in Alaska as digitized from USGS maps. Ancillary source documentation was provided by the AK DNR and used as necessary for updates.
Fish Hatcheries	These sport subsistence sites represent the known locations of sport and commercial fish rearing facilities (commercial salmon fishery) located in Southcentral AK. Data was provided by Chugach NF.
Recreation & Administrative Sites	The data contains the locations of administrative buildings, offices, recreation sites, and service/utility structures on lands owned by Alaska State Parks, USDA (Forest Service) lands, and the National Park Service. Data was provided by Chugach NF.
Carbon	
Carbon Credits	Mapped areas represent forested land used in carbon trading markets and identify areas of biomass (forest) marketable as carbon credits. Data provided by Chugach NF.
Watershed	
Critical Watersheds	Surface drinking water protection areas (Zone C, G boundaries) were delineated from local topography and anticipated effects on the drinking water source intake. Data provided by Chugach NF and Alaska DEC Open Data.

To the degree possible, HVRA are mapped to the extent of the Analysis Area boundary (Figure 2). This is the boundary used to summarize the final risk results.

3.2 RESPONSE FUNCTIONS

Each HVRA selected for the assessment must also have an associated response to wildfire, whether neutral or negative. We relied on input from the Forest Service and interagency representatives, and additional fire and resource staff at a virtual Fire Effects workshop held on January 27, 2021. In the workshop, the group discussed each resource or asset's response to fires of different intensity levels and characterized the HVRA response using values ranging from -100 to 100. The flame-length values corresponding to the fire intensity levels reported by FSim are shown in Table 5. The response functions (RFs) used in the risk results are shown in Table 6 thru Table 16 below.

Table 5. Flame-length values corresponding to Fire Intensity Levels used in assigning response functions.

Fire Intensity Level (FIL)	1	2	3	4	5	6
Flame Length Range (feet)	0-2	2-4	4-6	6-8	8-12	12+

3.3 RELATIVE IMPORTANCE

The relative importance (RI) assignments are needed to integrate results across all HVRA. Without this input from leadership to prioritize among HVRA, the default is to assume equal-weighting among HVRA – a result that is never a desired outcome. The virtual RI workshop was held on March 2, 2021, and was attended by the Line Officers, Area Fire Management Officers, and interagency representatives. The focus of this workshop was to establish the importance and ranking of the primary HVRA relative to each other. The People and Property HVRA received the greatest share of RI at 69 percent, followed by the Infrastructure (14%) and Water (11%) HVRA. The remaining share of RI is composed of the Carbon (6%) HVRA (Figure 9). These importance percentages reflect the overall importance of the primary HVRA relative to each other.

Sub-HVRA relative importance was also determined at the RI workshop. Sub-RIs consider both the relative importance per unit area and the mapped extent of the Sub-HVRA layers within the primary HVRA category. These calculations need to account for the relative extent of each HVRA to avoid overemphasizing HVRA covering many acres. This was accomplished by normalizing the calculations by the relative extent of each HVRA in the assessment area. Here, relative extent refers to the number of 30 pixels mapped in each HVRA. In using this method, the relative importance of each HVRA is spread out over the HVRA's extent. An HVRA with few pixels can have a high importance per pixel; an HVRA with a great many pixels can have a low importance per pixel. A weighting factor (called Relative Importance Per Pixel [RIPP]) representing both the relative importance per unit area and overall importance was calculated for each HVRA.

In Table 6 thru Table 16, we provide the share of HVRA relative importance within each primary HVRA.

Figure 9. Overall HVRA Relative Importance for the primary HVRA included in ARRA.

3.4 HVRA CHARACTERIZATION RESULTS

Each HVRA was characterized by one or more data layers of sub-HVRA and, where necessary, further categorized by an appropriate covariate. Covariates separate HVRA by their response to wildfire, such as different response functions for transmission lines by voltage classes and different response functions for people and property by vegetation lifeform. The main HVRA in ARRA are mapped below along with a table containing the assigned response functions, the within-HVRA share of relative importance, and total acres for each sub-HVRA. These components are used along with fire behavior results from FSim in the wildfire risk calculations described in section 3.5.1.

3.4.1 PEOPLE AND PROPERTY

3.4.1.1 HOUSING UNIT DENSITY (HUDEN)

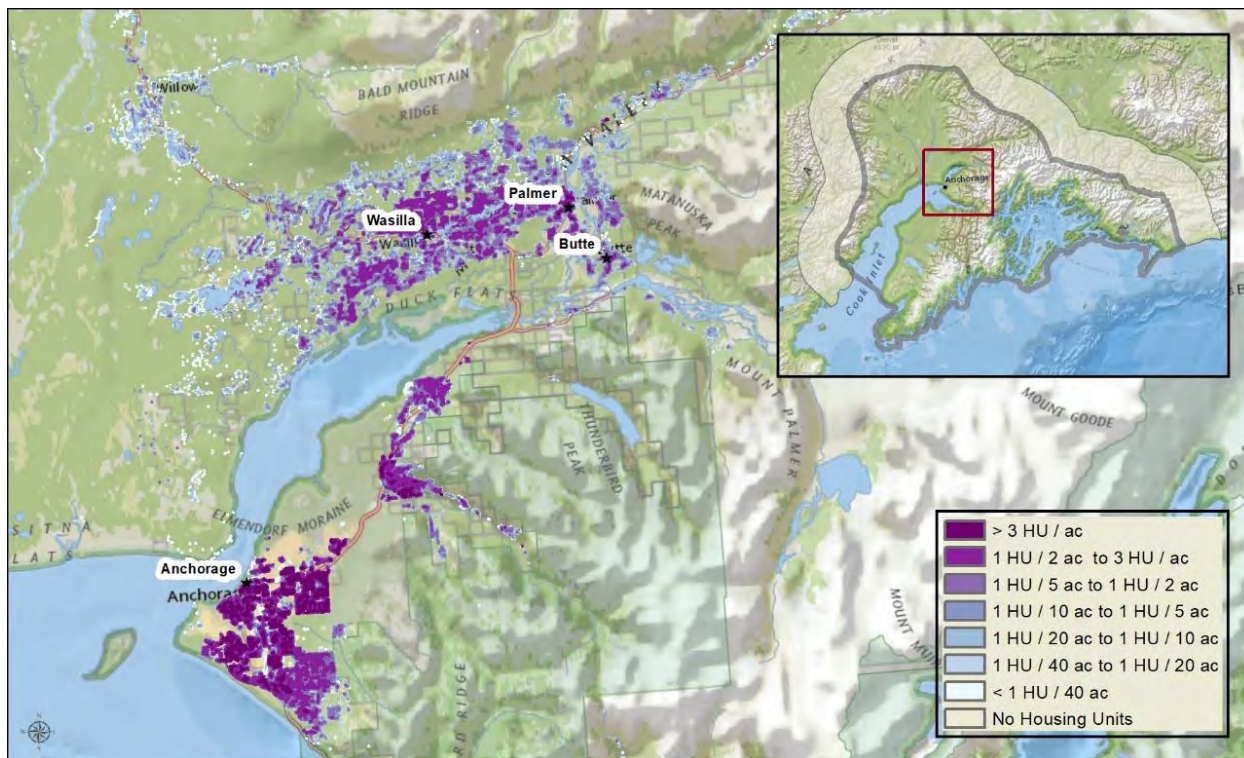

Figure 10. Map of Housing Unit Density within the ARRA Analysis Area

The HUDen raster was produced by Pyrologix using data depicting building locations provided by Chugach National Forest and U.S. Census - Census Block population data. Population estimates were brought forward to 2018 county population estimates. Our approach estimates housing-unit count for a census block then allocates that count to the portions of the block likely to contain those housing units, identified where the buildings are located within the block. This methodology was developed for the Wildfire Risk to Communities project (Scott et. al, 2020) and refined in this project by removing false positives and duplicates from the provided data.

Response Functions were applied in conjunction with burnable vegetation types derived from the LANDFIRE Existing Vegetation Type (EVT). A value of '1' was assigned to sites associated with deciduous tree or shrub lifeforms, a value of '2' for sites designated as grass, and a value of '3' for Spruce/Mixed-wood sites. The same set of response functions was applied to all HU density classes within each vegetation classification.

The People and Property (HUDEN) HVRA received negative response functions for all vegetation types and fire intensity levels (Table 6). People and Property HVRA located in spruce and mixed-wood lifeforms were assigned a stronger negative response due to the likelihood of ember-cast from these fuel types and the suppression difficulty presented with such fire behavior. Conversely, People and Property HVRA located in grass pixels may present fewer challenges to fire suppression efforts—resulting in less loss overall.

Table 6. Response functions for the People and Property HVRA to highlight HUDEN.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
P&P - HUDEN Tree/Shrub	-5	-15	-30	-50	-80	-95	16.1%	128,537
P&P - HUDEN Grass	-10	-30	-40	-60	-70	-80	5.8%	50,236
P&P - HUDEN Spruce/Mixed	-20	-40	-50	-80	-90	-95	70.9%	309,352

¹ Within-HVRA relative importance.

3.4.1.2 NATIVE ALLOTMENTS

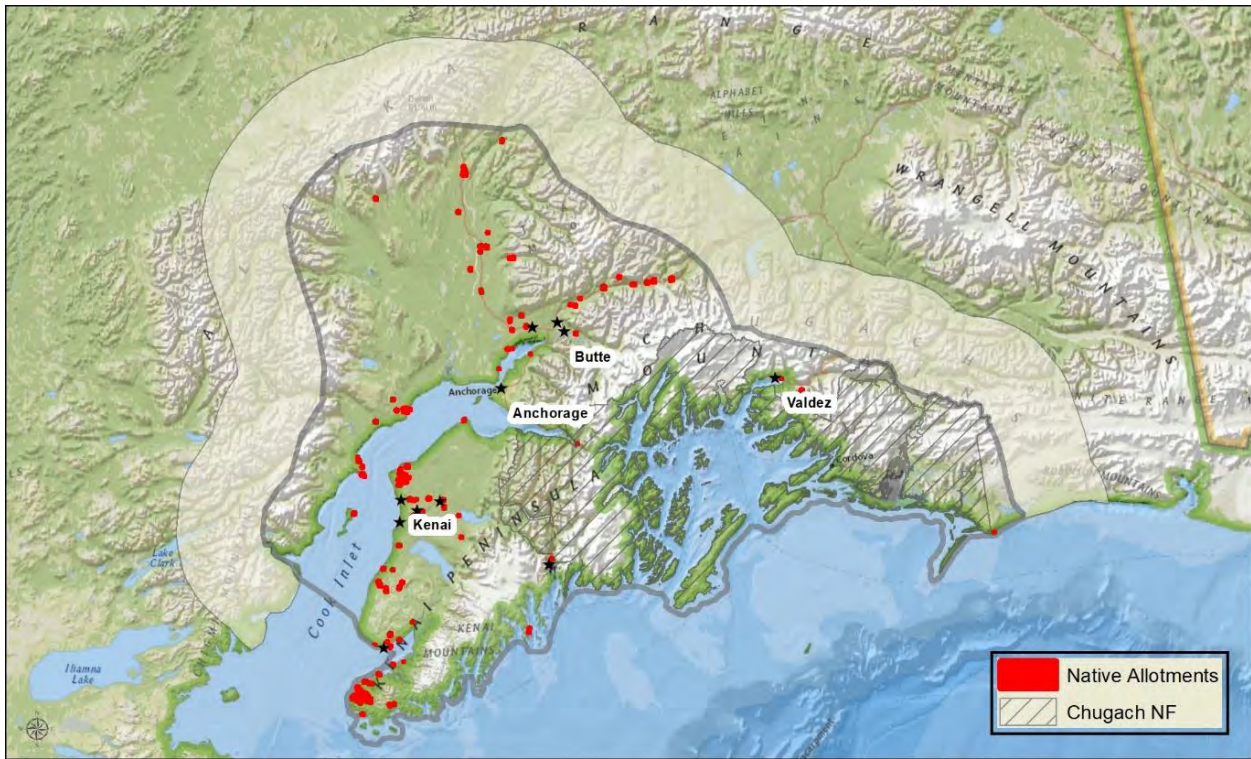

Figure 11. Map of Native Allotments within the ARRA analysis area.

Native allotment delineations for the analysis area (Figure 11) were provided by Chugach National Forest. The provided data represents mapped areas within the PLSS native allotment network. Data were extracted from the *Conveyed Native Allotments within the Alaska*⁶ data set and converted to a 30 m raster. Due to the sensitive/protected nature of Native Allotments and a variety of land-use applications, the response function assignments for Native Allotments demonstrate a negative response to fire (Table 7). At low flame lengths, Native Allotments demonstrate moderate loss that quickly increases as fire intensity increases, reaching total loss by FIL5. Native Allotment delineations were allocated 7 percent of the share of the People and Property HVRA. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 7. Response functions for the People and Property HVRA to highlight Native Allotments.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Native Allotments	-30	-60	-70	-80	-100	-100	7.1%	20,715

¹ Within-HVRA relative importance.

⁶ https://navigator.blm.gov/data?keyword=allotments&fs_publicRegion=Alaska

3.4.2 INFRASTRUCTURE

3.4.2.1 COMMUNICATION SITES

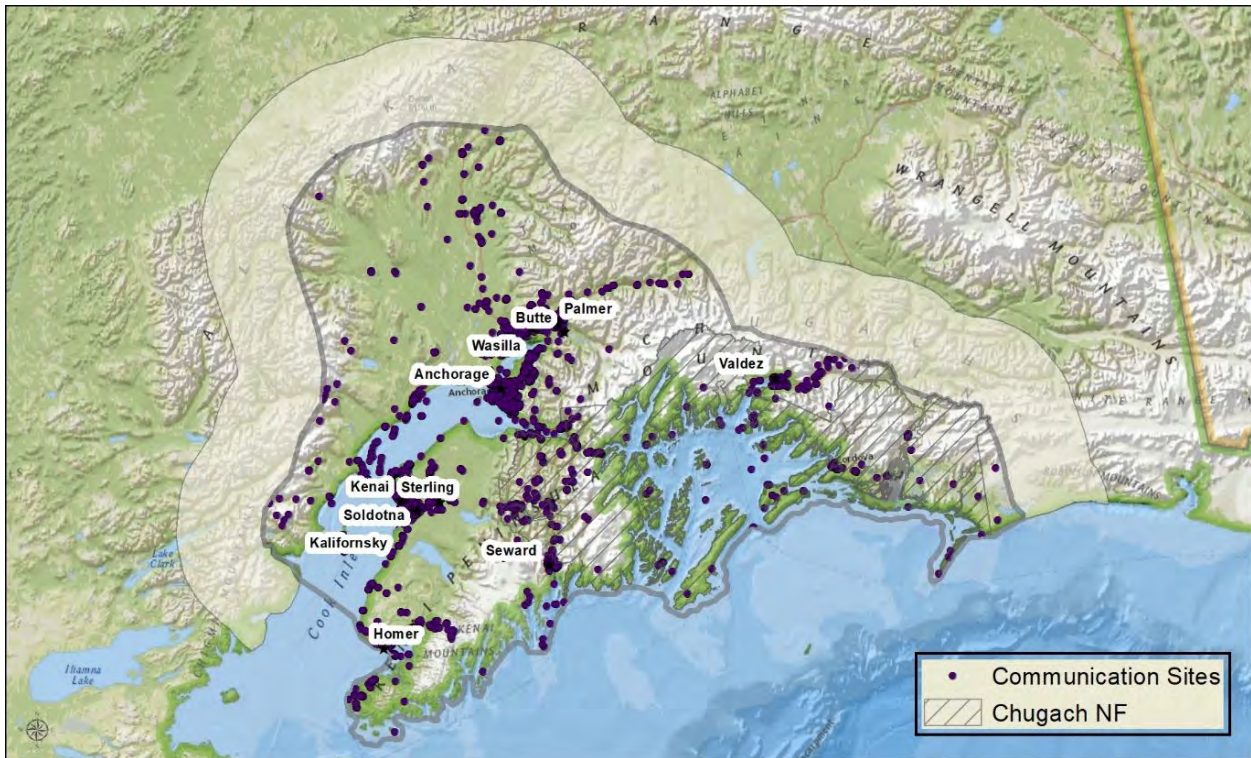

Figure 12. Map of Communication Sites within the ARRA analysis area.

Communication sites for the analysis area (Figure 12) were provided by Chugach National Forest (covering Forest Service and non-Forest Service lands) and supplemented using data acquired from the Homeland Infrastructure Foundation-Level Data (HIFLD)⁷. The types of communication sites compiled for the assessment include cellular towers, FS repeaters, aviation navigation aids, web cameras, RAWs, seismic stations, land mobile towers, FM/AM transmission towers, microwave service towers, paging transmission towers, antenna structure, TV analog/digital transmitters, broadband radio transmitters, internet service providers, and internet exchange points. All communication sites were merged into a single feature class and converted to 30 m pixels using the ArcGIS Focal Statistics tool. Focal statistics were calculated using the sum of an annulus neighborhood with an inner radius of zero and an outer radius of two, resulting in a point feature being represented by thirteen, 30 m pixels.

The response functions for communication sites demonstrate a pattern indicative of their hardened structures and defensible space, showing a neutral response at lower flame lengths, with increasing negativity to fires of increasing intensity (Table 8). Each communication site was also assigned a type classification (high value or other), giving those sites designated as 'high' more importance per pixel (cell towers, radio transmission, and navigational aids) relative to the 'other' sites (general

⁷ HIFLD data on communication sites was downloaded from <https://hifld-geoplatform.opendata.arcgis.com/> on 5/12/2020

communication equipment, scientific instruments, and microwave service towers) due to the nature of their use.

Communication sites were allocated 43 percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 8. Response functions for the Infrastructure HVRA to highlight Communication Sites.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Communication Sites - High	0	0	-20	-30	-40	-50	40.6%	2,503
Communication Sites	0	0	-20	-30	-40	-50	2.7%	1,994

¹Within-HVRA relative importance.

3.4.2.2 TRANSMISSION LINES

Figure 13. Map of Transmission Lines within the ARRA analysis area.

Transmission Lines within the analysis area (Figure 13) were acquired from the Homeland Infrastructure Foundation-Level Data (HIFLD)⁷. Ancillary data were provided by Copper Valley Electric to supplement the data and capture missing features. The lines were classified using a voltage break of 230 volts (transmission lines carrying less than 230 volts classified as '1', and those greater than 230, classified as '2'). The data were converted to a 30 m raster and expanded out one additional pixel (per side) using the ArcGIS *Expand* tool to capture more of the area impacted by wildfire.

Low voltage lines (<230 kV) are mostly wooden poles, and therefore, respond with a strongly negative response to all fire intensities. Total loss was expected for fires greater than FIL4 (Table 9). High voltage transmission lines (≥ 230 kV) are expected to be constructed of largely non-burnable materials that can withstand exposure to lower fire intensities and experience less loss at the higher intensity classes. Therefore, high voltage transmission lines have an initial neutral response at lower intensities and transition to moderate loss as intensity increases due to the associated heat damage to lines (Table 9).

Due to the number of acres mapped on the landscape and their importance to infrastructure, electric transmission lines received 32 percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 9. Response functions for the Infrastructure HVRA to highlight Transmission Lines.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
High Volt (> 230)	0	0	-20	-30	-50	-60	3.3%	4,041
Low Volt (wooden poles)	-40	-50	-70	-90	-100	-100	28.7%	35,280

¹Within-HVRA relative importance.

3.4.2.3 POWER: POWER PLANTS & SUBSTATIONS

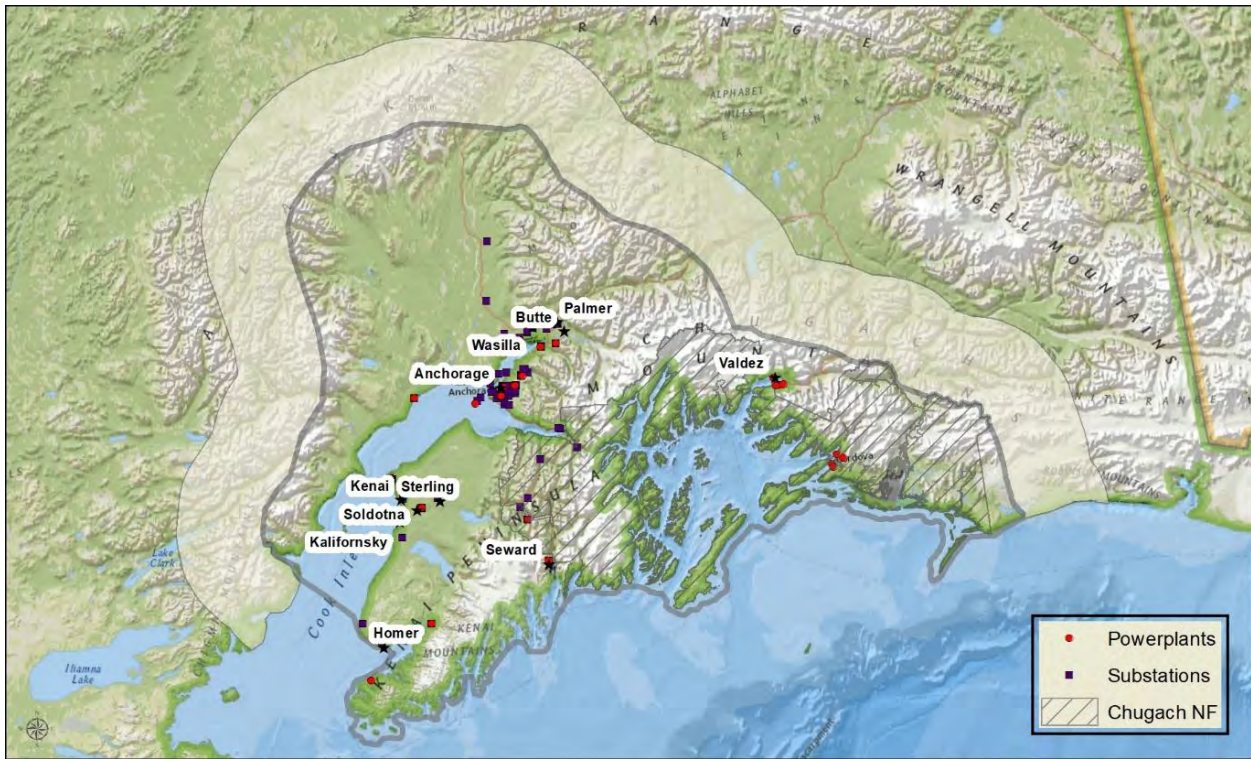

Figure 14. Map of Power Plants and Substations within the ARRA analysis area.

The location of power plants and substations within the analysis area (Figure 14) was derived from a combination of data provided by Chugach National Forest (covering Forest Service and non-forest service lands) and Homeland Infrastructure Foundation-Level Data (HIFLD)⁷. The acquired data was converted to 30 m pixels using the ArcGIS Focal Statistics tool. Focal statistics were calculated using the sum of an annulus neighborhood with an inner radius of zero and an outer radius of two, resulting in a point feature being represented by thirteen, 30 m pixels. Due to the hardened nature of the structures and defensible space, the response function assignments for power plants and substations demonstrate a neutral response to nearly all fire intensities. They only demonstrate a response to fires of higher intensity and will show minimal loss (Table 10).

Power plants and substations were allocated six percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 10. Response functions for the Infrastructure HVRA to highlight Power Plants and Substations.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Power Plants	0	0	0	-10	-20	-30	1.7%	62
Substations	0	0	0	-10	-20	-30	4.3%	197

¹Within-HVRA relative importance.

3.4.2.4 OIL & GAS WELLS

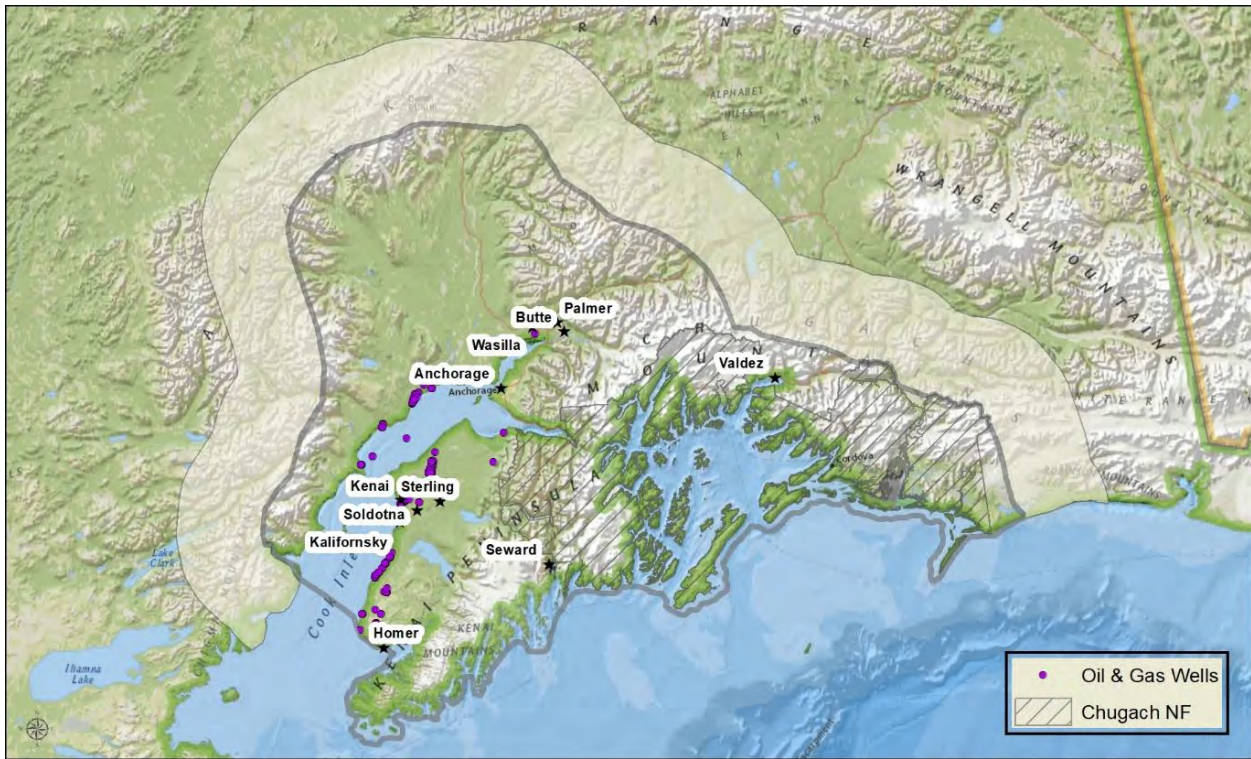

Figure 15. Map of Oil and Wells within the ARRA analysis area.

Oil and gas wells for the analysis area (Figure 15) were provided by Chugach National Forest. The provided data contains the location of surface wells designated as 'active' (extracted from Alaska Oil and Gas Conservation Commission) and structures limited to those designated as 'oil/gas buildings' within the Known Sites database. The acquired data was converted to 30 m pixels using the ArcGIS Focal Statistics tool. Focal statistics were calculated using the sum of an annulus neighborhood with an inner radius of zero and an outer radius of two, resulting in a point feature being represented by thirteen, 30 m pixels. Due to the established, defensible space surrounding well pads, the response functions are similar to that of power plants and substations. Fires of low intensity will have little to no effect and not until FIL3 will they demonstrate a very low negative response to fire (Table 11). This negative trend continues as fire intensity increases but never surpasses mild loss. Oil and gas wells were allocated 4 percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 11. Response functions for the Infrastructure HVRA to highlight Oil and Gas Wells.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Oil & Gas Wells	0	0	-10	-20	-30	-30	4.0%	493

¹ Within-HVRA relative importance.

3.4.2.5 PIPELINES

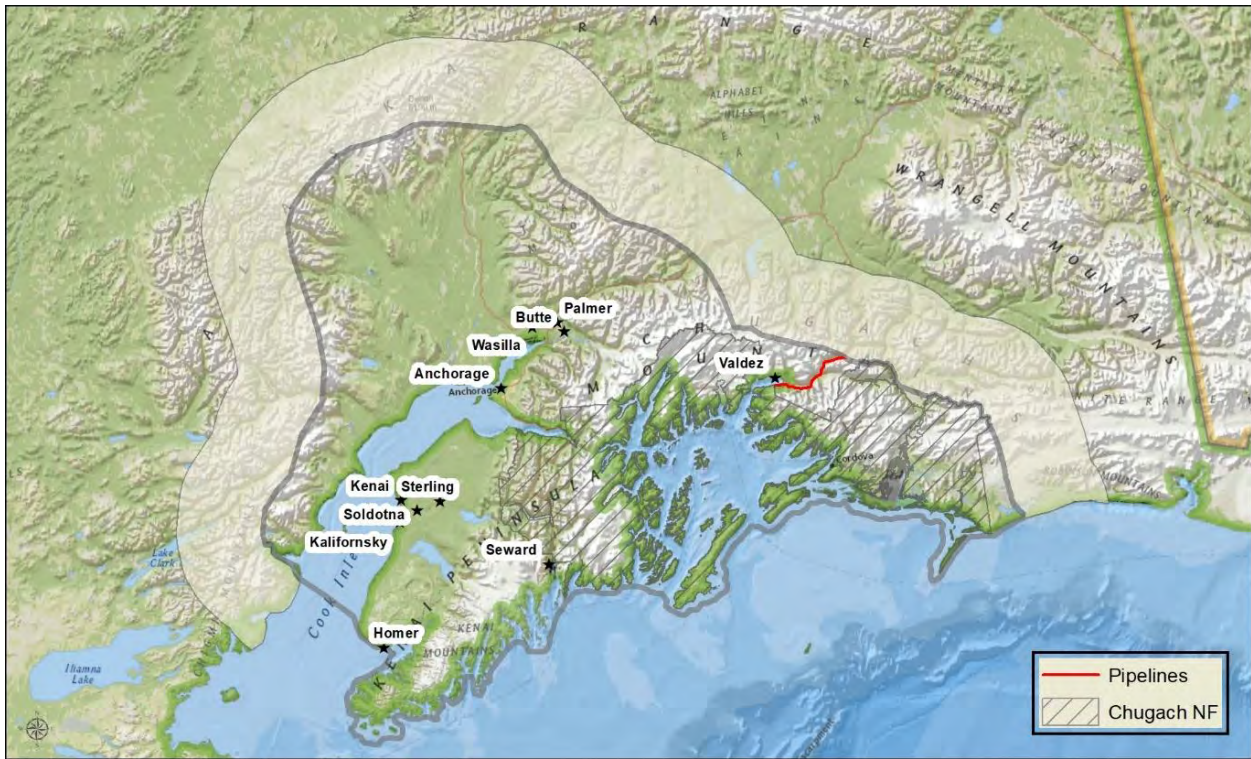

Figure 16. Map of Pipelines within the ARRA analysis area.

Pipelines for the analysis area (Figure 16) were provided by Chugach National Forest. The provided data depicts pipeline locations in Alaska as digitized from USGS maps and updated using ancillary source documentation from the Alaska DNR. The pipelines were converted to a 30 m raster and expanded out one additional pixel (per side) using the ArcGIS *Expand* tool to capture more of the area impacted by wildfire.

The response function assignments for pipelines show a neutral response for nearly all fire intensities. Not until 8-12-foot flame lengths (FIL3) is there a transition to a negative response. As fire intensity increases, the response functions show an increasingly negative response but remain relatively low (Table 12).

Pipelines were allocated 9 percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 12. Response functions for the Infrastructure HVRA to highlight Pipelines.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Pipelines	0	0	0	0	-10	-30	9.3%	1,716

¹Within-HVRA relative importance.

3.4.2.6 FISH HATCHERIES

Figure 17. Map of Fish Hatcheries within the ARRA analysis area.

The location of fish hatcheries within the analysis area (Figure 17) was provided by Chugach National Forest via the Alaska Department of Fish & Game. The provided data represents the known locations of sport and commercial fish rearing facilities (commercial salmon fisheries) located in Southcentral Alaska. For use in this analysis, the data were converted to 30 m pixels using the ArcGIS Focal Statistics tool. Focal statistics were calculated using the sum of an annulus neighborhood with an inner radius of zero and an outer radius of two, resulting in a point feature being represented by thirteen, 30 m pixels.

In this assessment, sites designated as hatcheries were associated with commercial locations. Due to the established, developed, and defensible space associated with these hatcheries, the response function assignments demonstrate neutral response at lower fire intensities. Although remaining moderate, the response functions do show increasingly negative responses as fire intensity increases (Table 13).

Fish hatcheries were allocated less than one percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 13. Response functions for the Infrastructure HVRA to highlight Fish Hatcheries.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Fish Hatcheries	0	0	0	-10	-20	-30	0.2%	14

¹Within-HVRA relative importance.

3.4.2.7 RECREATION & ADMINISTRATIVE SITES

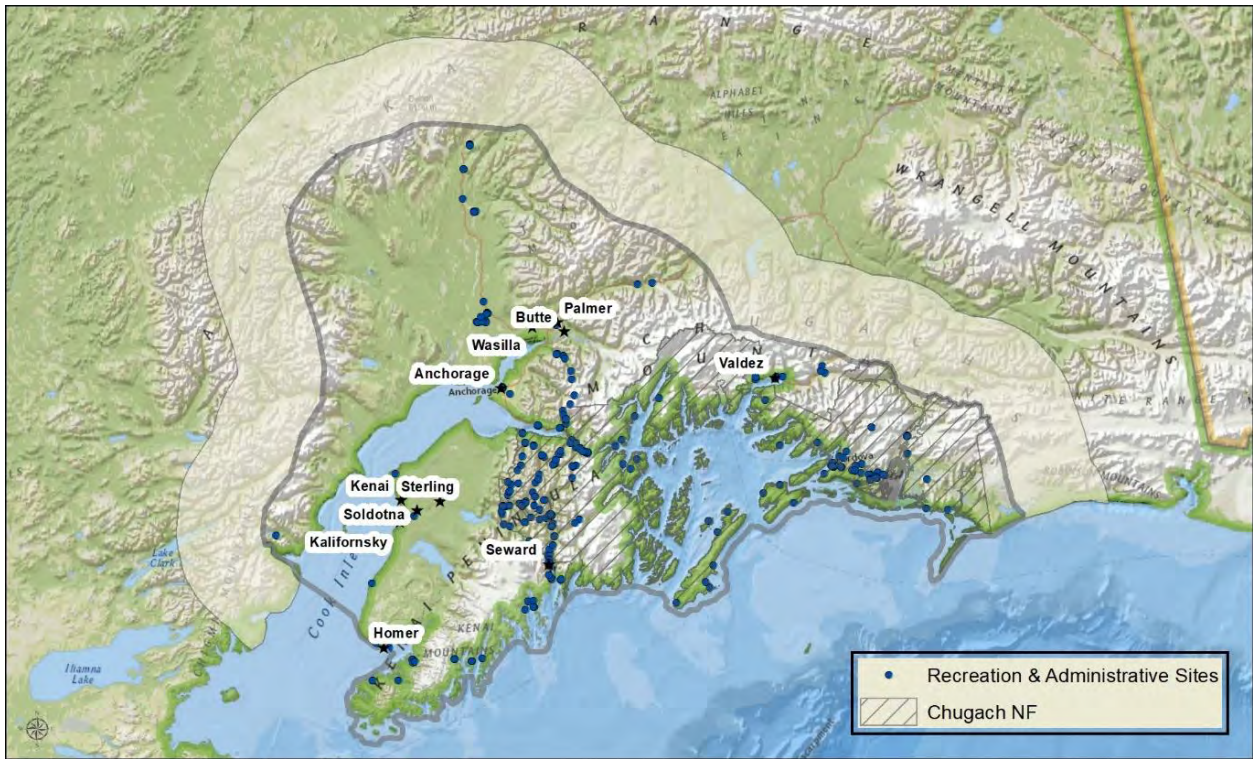

Figure 18. Map of Recreation and Administrative Sites within the ARRA analysis area.

Recreation and administrative sites for the analysis area (Figure 18) were provided by Chugach National Forest and the National Park Service (Alaska Region GIS Team). The provided data contains the locations of administrative buildings, offices, recreation sites, and service/utility structures on lands owned by Alaska State Parks, USDA (Forest Service) lands, and the National Park Service. For use in this analysis, the data were extracted to the analysis area, assigned a rank (high or low) based on the locations associated importance level (all sites are assumed to have the same wildfire susceptibility), and converted to 30 m pixels using the ArcGIS Focal Statistics tool. Focal statistics were calculated using the sum of an annulus neighborhood with an inner radius of zero and an outer radius of two, resulting in a point feature being represented by thirteen, 30 m pixels.

Due to their susceptibility to fire, the response function assignments for all recreation and administrative sites demonstrate a pattern of increasing loss as fire intensity increases (Table 14). Those sites designated as high importance show a greater loss across all fire intensities due to their associated investment level. For instance, sites such as regional headquarters or district offices show greater losses relative to campgrounds or day-use areas.

Recreation and administrative sites were allocated 5 percent of the share of the Infrastructure HVRA importance. The share of HVRA importance is based on relative importance per unit area and mapped extent.

Table 14. Response functions for the Infrastructure HVRA to highlight Recreation and Administrative Sites.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Rec Admin Sites - High	-20	-40	-50	-80	-90	-95	4.2%	310
Rec Admin Sites - Low	-10	-30	-40	-60	-70	-80	1.0%	378

¹Within-HVRA relative importance.

3.4.3 CARBON

3.4.3.1 CARBON CREDITS

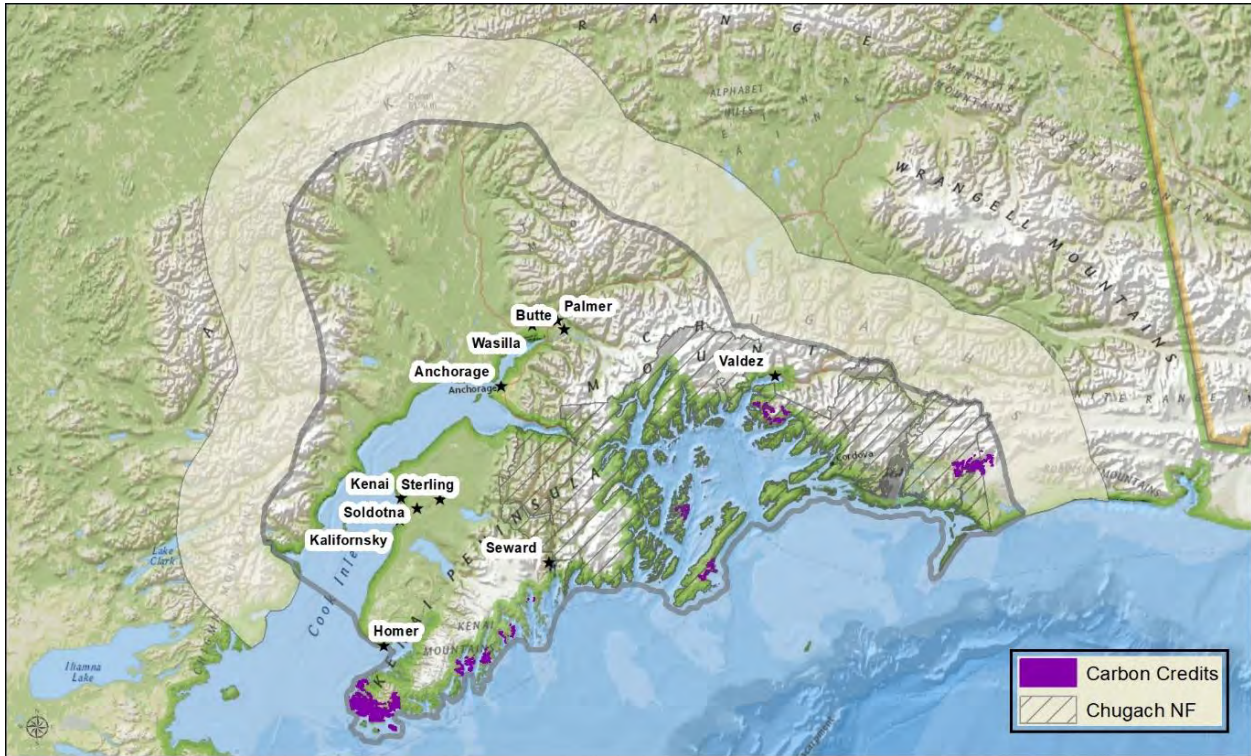

Figure 19. Map of Carbon Credit delineations within the ARRA analysis area.

Carbon credit delineations within the analysis area (Figure 19) were provided by Chugach National Forest and the Chugachmiut Native Corporation. The mapped areas represent forested land used in carbon trading markets, identifying forested areas of biomass marketable as carbon credits. The provided data was converted to a 30 m raster for use in the analysis.

Due to the susceptible and sensitive nature of forested carbon sequestration areas, the response function assignments for carbon credit delineations demonstrate an initial strong negative response to fire. This trend continues as fire intensity increases, reaching total loss by 8-foot flame lengths (Table 15).

Table 15. Response functions for the Carbon HVRA to highlight Carbon Credit delineations.

Sub-HVRA	FIL1	FIL2	FIL3	FIL4	FIL5	FIL6	Share of RI ¹	Acres
Carbon Credits	-30	-50	-70	-80	-100	-100	100.0%	94,663

¹Within-HVRA relative importance.

3.4.4 CRITICAL WATERSHEDS

3.4.4.1 DRINKING-WATER PROTECTION AREAS

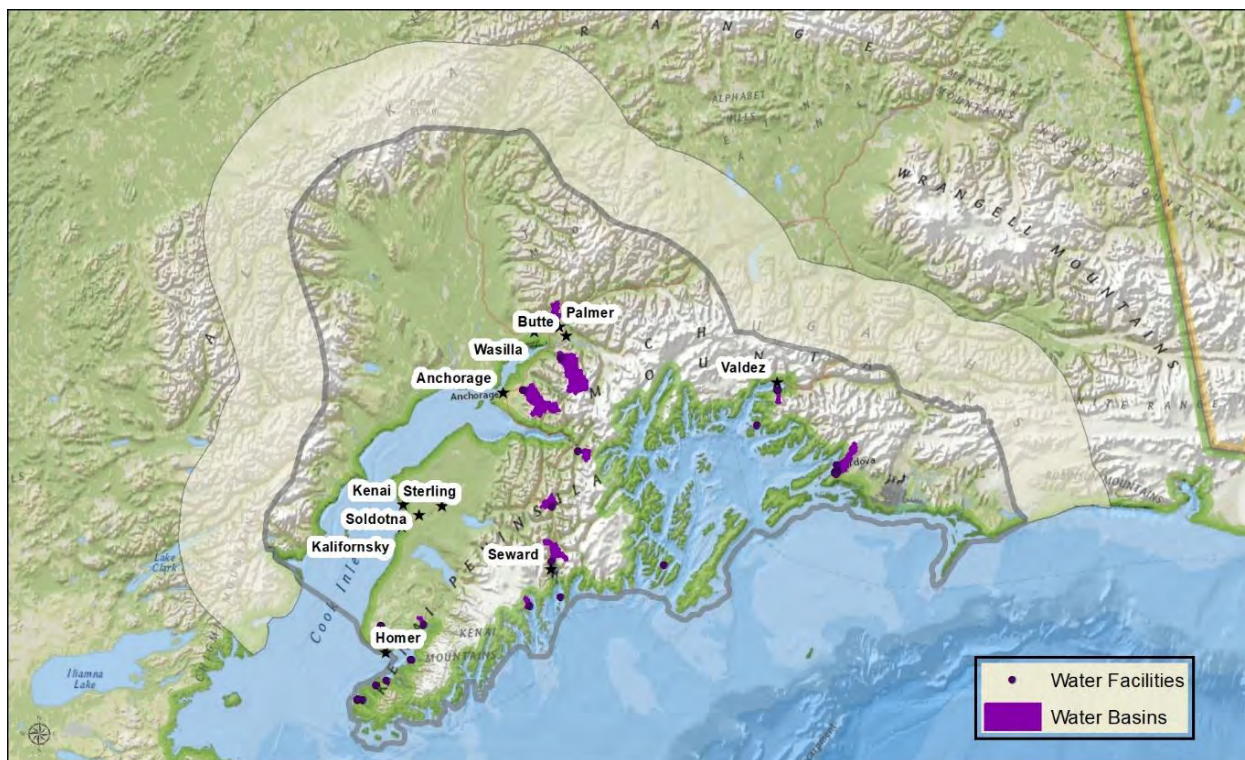

Figure 20. Map of Drinking Water Protection Areas within the ARRA analysis area.

Drinking water protection areas were mapped using Alaska DEC Open Data⁸ (Zone C and G), provided by Chugach National Forest. The dataset included drinking water protection areas (critical water basins) and their associated water facilities. The selected water basins were reviewed by a Forest Service hydrologist and water facilities were limited to those associated with surface water and/or groundwater under the influence of surface water. The resulting critical watershed map is shown (Figure 20).

For the QWRA, watershed resources were analyzed using a custom approach to determine the importance of each pixel within a basin, based on population served and distance to intake. We calculated the Euclidean distance to the drinking water intake for each pixel within its associated watershed. We then divided the result by the Euclidean distance to create a proportion of importance based on the distance to the intake, and to prevent the values from decaying as rapidly we divided distance by 1/3. We then multiplied by the intake's population served. The sum of the importance for each watershed was then normalized to the total population served to prevent overweighting the largest watersheds. A single pixel can belong to one or more overlapping watersheds; therefore values are cumulative across any overlapping watersheds.

⁸ <https://hub.arcgis.com/datasets/ADEC::zone-c-surface-water-watershed-boundary?geometry=44.708%2C42.010%2C19.219%2C72.703>

¹Within-HVRA relative importance.

3.5 EFFECTS ANALYSIS METHODS

An effects analysis quantifies wildfire risk as to the expected value of net response (Finney, 2005; Scott *et al.*, 2013) also known as expected net value change (eNVC). Effects analysis relies on input from resource specialists to produce a tabular response function for each HVRA occurring in the analysis area. A response function is a tabulation of the relative change in the value of an HVRA if it were to burn in each of six flame-length classes. A positive value in a response function indicates a benefit or increase in value; a negative value indicates a loss or decrease in value. Response function values for the ARRA ranged from -100 (greatest possible loss of value) to 0 (no change in value).

3.5.1 EFFECTS ANALYSIS CALCULATIONS

Integrating HVRAs with differing units of measure (for example, habitat vs. homes) requires relative importance (RI) values for each HVRA/sub-HVRA. These values were identified in the RI workshop, as discussed in Section 3.3. The final importance weight used in the risk calculations is a function of overall HVRA importance, sub-HVRA importance, and relative extent (pixel count) of each sub-HVRA. This value is therefore called relative importance per pixel (RIPP).

The RF and RIPP values were combined with estimates of the flame-length probability (FLP) in each of the six flame-length classes to estimate conditional NVC (cNVC) as the sum-product of flame-length probability (FLP) and response function value (RF) over all the six flame-length classes, with a weighting factor adjustment for the relative importance per unit area of each HVRA, as follows:

$$cNVC_j = \sum_i^n FLP_i * RF_{ij} * RIPP_j$$

where i refers to flame length class ($n = 6$), j refers to each HVRA, and RIPP is the weighting factor based on the relative importance and relative extent (number of pixels) of each HVRA. The cNVC calculation shown above places each pixel of each resource on a common scale (relative importance), allowing them to be summed across all resources to produce the total cNVC at a given pixel:

$$cNVC = \sum_j^m cNVC_j$$

where cNVC is calculated for each pixel in the analysis area. Finally, eNVC for each pixel is calculated as the product of cNVC and annual BP:

$$eNVC = cNVC * BP$$

3.5.2 UPSAMPLING FSIM RESULTS FOR EFFECTS ANALYSIS

FSim's stochastic simulation approach can be computationally intensive and time constraining on large landscapes. The challenge is to determine a resolution sufficiently fine to retain detail in fuel and terrain features while producing calibrated results in a reasonable timeframe. Moreover, HVRA are often mapped at the same resolution as the final BP produced by FSim. To enable greater

resolution on HVRA mapping, we chose to upsample the FSim burn probability (BP) and flame-length probability (FLP) rasters to 30 m, consistent with HVRA mapping at 30 m.

As discussed in the Fuelscape section (Section 2.1) above, the fire behavior modeling in ARRA included the custom, burnable-urban fuel model. Without accounting for any potential burnability in developed areas, simulated wildfires would stop at the edge of burnable fuel. To address this issue, we allowed fires to spread through burnable-urban pixels which produced simulated fire perimeters that spread through developed areas. However, because of the many unknowns and challenges in modeling the potential for home-to-home spread in landscape-scale fire modeling, we ultimately minimized the influence of burn probability values associated with burnable-urban pixels and spread probabilities from adjacent wildlands with a series of focal window smoothing steps as described below.

We upscaled the FSim BP raster using a multi-step process. First, we used the ESRI ArcGIS Focal Statistics tool to perform two, rectangular, low-pass filters at the 120 m resolution, calculating the mean value of burnable pixels only (including burn probability values on burnable-urban pixels), within a 3-pixel by 3-pixel moving window. These steps allowed us to “backfill” burnable pixels at 30 m that were coincident with non-burnable fuel at 120 m. We subsequently resampled the 120 m FSim BP raster to 30 m using bilinear resampling. If, after running two low-pass filters, burnable pixels had BP values of zero, we set a threshold value of 1-in-10,000 to avoid assigning zero values on burnable pixels with some likelihood of burning.

As discussed above, we chose to smooth burn probability values from nearby burnable fuel onto adjacent non-burnable pixels to capture the low likelihood, but high-consequence event of wildfire spreading onto developed pixels. Before running the smoothing steps, we masked the 30 m resampled raster to burnable pixels only, removing BP values from burnable-urban pixels. Additionally, we removed BP values from small, burnable islands less than 500 ha. The purpose of removing burnable urban, non-burnable fuel, and small burnable islands is to prevent smoothing from these pixels, and in particular, to prevent golf courses and urban parks from spreading wildfires to nearby homes.

The resulting resampled raster was then smoothed again using the ESRI ArcGIS Focal Statistics tool to perform three low-pass filters at a 300 m resolution, allowing for spread from burnable pixels to nearby non-burnable pixels. Each focal smoothing operation incrementally reduces burn probability by including zero values on non-burnable pixels (other than water and ice) in the focal mean calculation. This reduces burn probability on non-burnable fuel relative to the burnable areas nearby. The 900 m smoothing distance is consistent with work by Caggiano et al. (2020) showing that all home losses to wildfire from 2000 to 2018 were within 850 m of wildland vegetation. Further, by removing burnable-urban and instead of smoothing burn probability onto those pixels, we reduce wildfire likelihood and control the distance those values are spread. As a final step, if small burnable islands were not populated through BP smoothing, they were assigned a threshold value of 1-in-100,000 (0.00001).

FSim flame-length probability (FLP) rasters were upscaled like the burn probability layer for use in effects analysis calculations. We used the ESRI ArcGIS Focal Statistics tool to perform two low-pass filters at the 120 m resolution, calculating the mean value of burnable pixels only, within a 3-pixel by 3-pixel moving window. This allowed us to “backfill” burnable pixels at 30 m that were

coincident with non-burnable fuel at 120 m. We then resampled the 120 m FSim FLP rasters to 30 m using bilinear resampling and masked the result to burnable pixels at 30 m (removing FLP values from burnable-urban pixels). To match the extent of the smoothed BP raster, we performed three, 300 m focal windows. Instead of allowing intensity values to decay with each pass, we kept only non-zero probabilities with each smoothing pass. Final values were then rescaled or normalized so the sum of all FLPs equals one.

3.5.3 WILDFIRE TRANSMISSION (RISK-SOURCE)

The potential for wildfires to transmit risk is a function of the spatial variation in fire occurrence and fire growth potential, in conjunction with spatial variation in HVRA location. To evaluate this potential, the total cNVC – the sum of all HVRA (People and Property, Infrastructure, Recreation, Range, Culture, Critical Watersheds, Aquatic Species, Wildland Species, Timber and Limited & Rare Vegetation) – was determined for each simulated FSim fire perimeter. The sum of total cNVC within each fire perimeter was then attributed to its associated ignition point. Summaries were limited to "large" fire perimeters, defined here as having at least five, 3.6-acre pixels per fire. Below this perimeter size, simulated fire-size distributions do not match historical distributions.

The final raster dataset created from the perimeter overlay exercise (risk-source) represents the expected annual risk per km² (or total wildfire transmission risk) for all HVRA from ignitions across the landscape. We refer to this raster as Expected Impact (elmpact).

The elmpact raster was generated using a multi-stage process. The ARRA analysis area includes two Fire Occurrence Areas (FOAs) that were each simulated with 100,000 iterations. The number of iterations used in the simulation was added to the attribute table for each fire and a new attribute representing cNVC per iteration was generated. Including the number of iterations in the calculation provides the "expected" or likelihood component of risk-source. Using the ArcGIS Point Statistics tool, the sum of cNVC per iteration within a 5-km moving window radius was calculated for a 30 m output cell size. The second step involved calculating the sum of the ignitable⁹ land area using the same tool and parameters on a point feature class differentiating ignitable and nonignitable fuel models. Finally, the sum of cNVC per iteration was divided by the sum of ignitable land area per km² to get the expected risk-source per km² of source-area. These results can be used to look at the relative likelihood and consequence of ignitions occurring across the landscape.

The mean consequence of an ignition, given a fire starts, is called Conditional Impact (clmpact). The clmpact raster is calculated by dividing the sum of cNVC per iteration by the sum of "1/iterations" to remove the annual estimate of the number of fire-starts from the calculation. clmpact characterizes the mean impact of ignition in different parts of the landscape, without consideration of how likely they are to occur.

⁹ Ignitable fuel includes burnable fuel, but not the custom burnable-urban fuel model.

3.5.4 TABULATED WILDFIRE RISK SUMMARIES

Summarizing wildfire risk and hazard products to a coarser summary unit facilitates comparison of risk and hazard across the landscape and between HVRA – quickly highlighting areas of concentrated risk that warrant further investigation at a more detailed, 30 m resolution. Additionally, tabulating the results in spreadsheet form facilitates sorting among and between attributes and ranking of high-risk areas.

For the ARRA QWRA, we summarized a set of Effects Analysis results for ARRA using 6th-level watershed polygons. Within each polygon zone we summarized exposed acres, burn probability, total eNVC (sum of all pixels) for each HVRA individually and for all HVRA combined, mean eNVC (calculated as the sum of eNVC divided by exposed acres/100 acres) for each HVRA individually and all HVRA combined, and mean cNVC (calculated as the sum of eNVC divided by the sum of burn probability) for each HVRA individually and all HVRA combined. An example of the NVC summary results for ARRA 6th-Level Watersheds is shown in Table 17.

4 RESULTS

4.1 EFFECTS ANALYSIS RESULTS

The cumulative results of the wildfire risk calculations described in section 3.5.1 are the spatial grids of cNVC and eNVC, representing both the conditional and expected change in value from wildfire disturbance to all HVRA included in the analysis. Results are limited to those pixels that have at least one HVRA and a non-zero burn probability. Both cNVC and eNVC reflect an HVRA's response to fire and their relative importance within the context of the assessment, while eNVC additionally captures the relative likelihood of wildfire disturbance. Cumulative effects of wildfire across the landscape vary by HVRA (Figure 21) with a net negative eNVC for all the HVRA. Results are scaled to cumulative eNVC values for the People and Property HVRA in the ARRA analysis area. People and Property show the greatest cumulative wildfire losses (eNVC) result followed by Infrastructure, Drinking Water, and Carbon as the HVRA with the greatest cumulative risk.

Figure 22 shows cNVC results at a 30 m resolution across the analysis area. The most adverse effects are shown in dark red and are largely concentrated around ARRA communities. Adjusting cNVC by fire likelihood (i.e., burn probability) narrows the range of values for negative outcomes and highlights areas more likely to be visited by wildfire as seen in the eNVC map in Figure 23.

Figure 24 and Figure 25 show the upsampled BP and FLEPs results, as discussed in Section 3.5.2. Figure 26 shows the wildfire transmission results, as discussed in Section 3.5.3.

Figure 21. Weighted net response overall highly valued resources and assets (HVRA) in the assessment. The HVRA are listed in order of net value change and scaled to eNVC values for the People and Property HVRA.

4.1.1 CONSEQUENCE - CONDITIONAL NET VALUE CHANGE (CNVC)

4.1.2 RISK - EXPECTED NET VALUE CHANGE (ENVC) - TOTAL

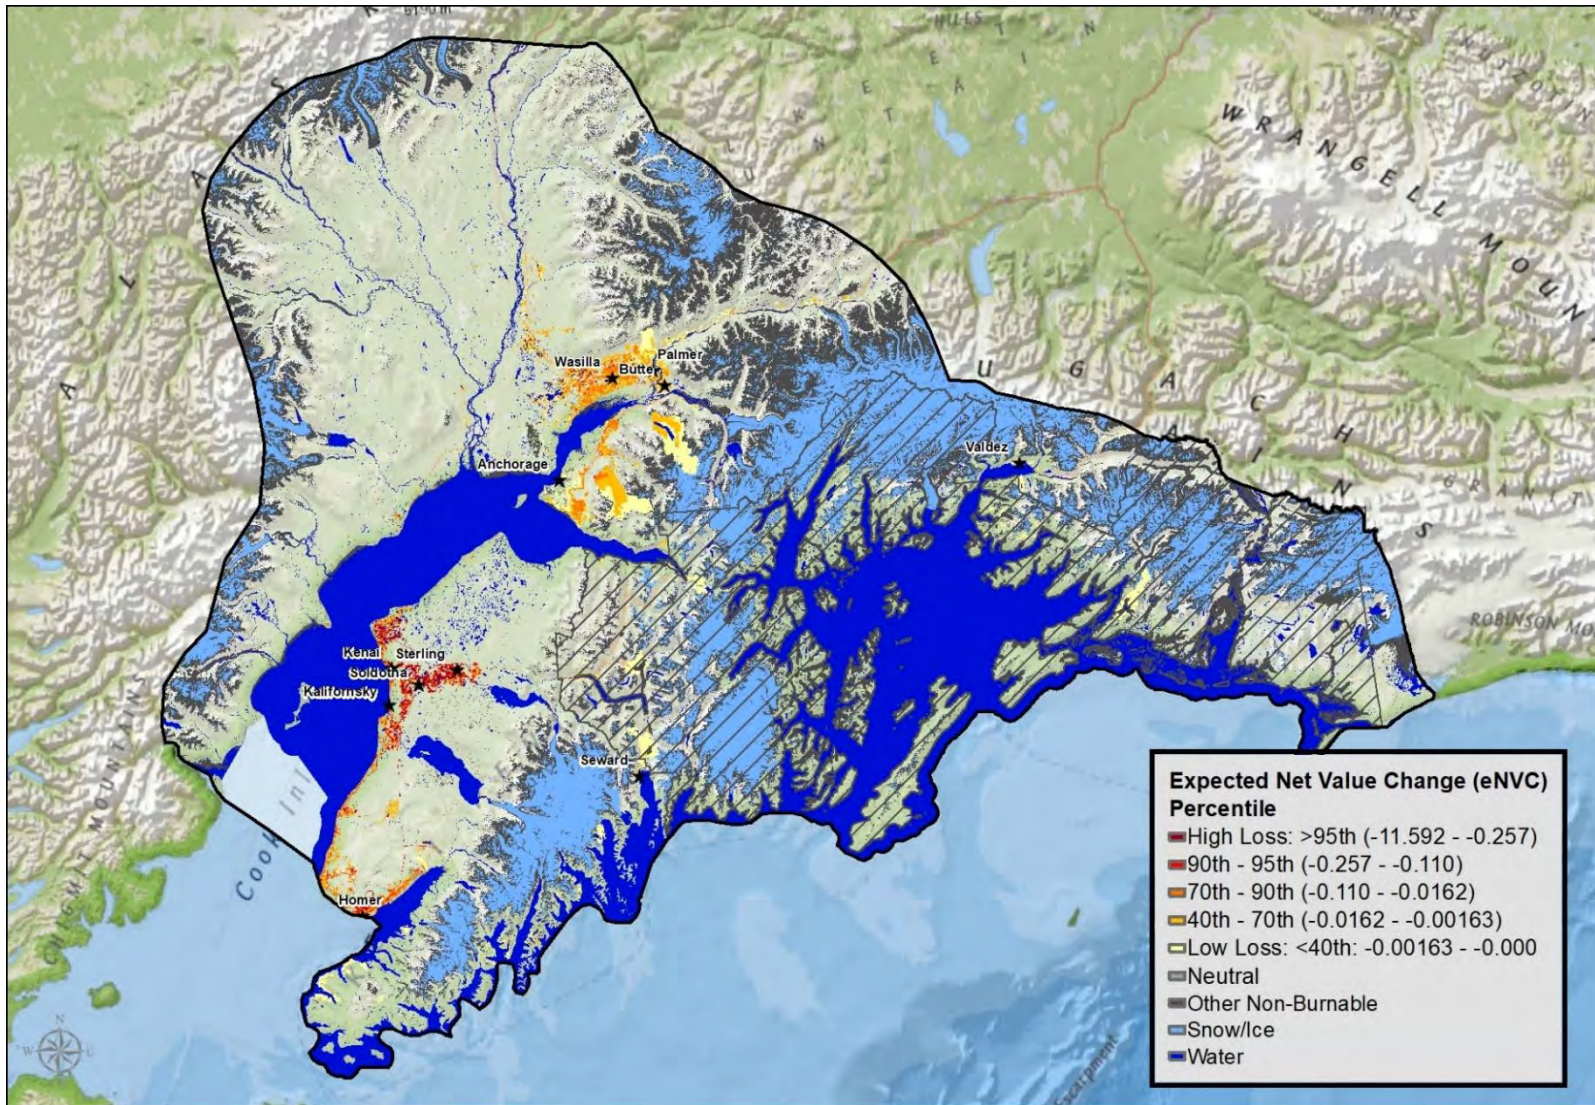

Figure 23. Map of Expected Net Value Change (eNVC) at 30 m for the ARRA analysis area.

4.1.3 LIKELIHOOD – ANNUAL BURN PROBABILITY (BP)

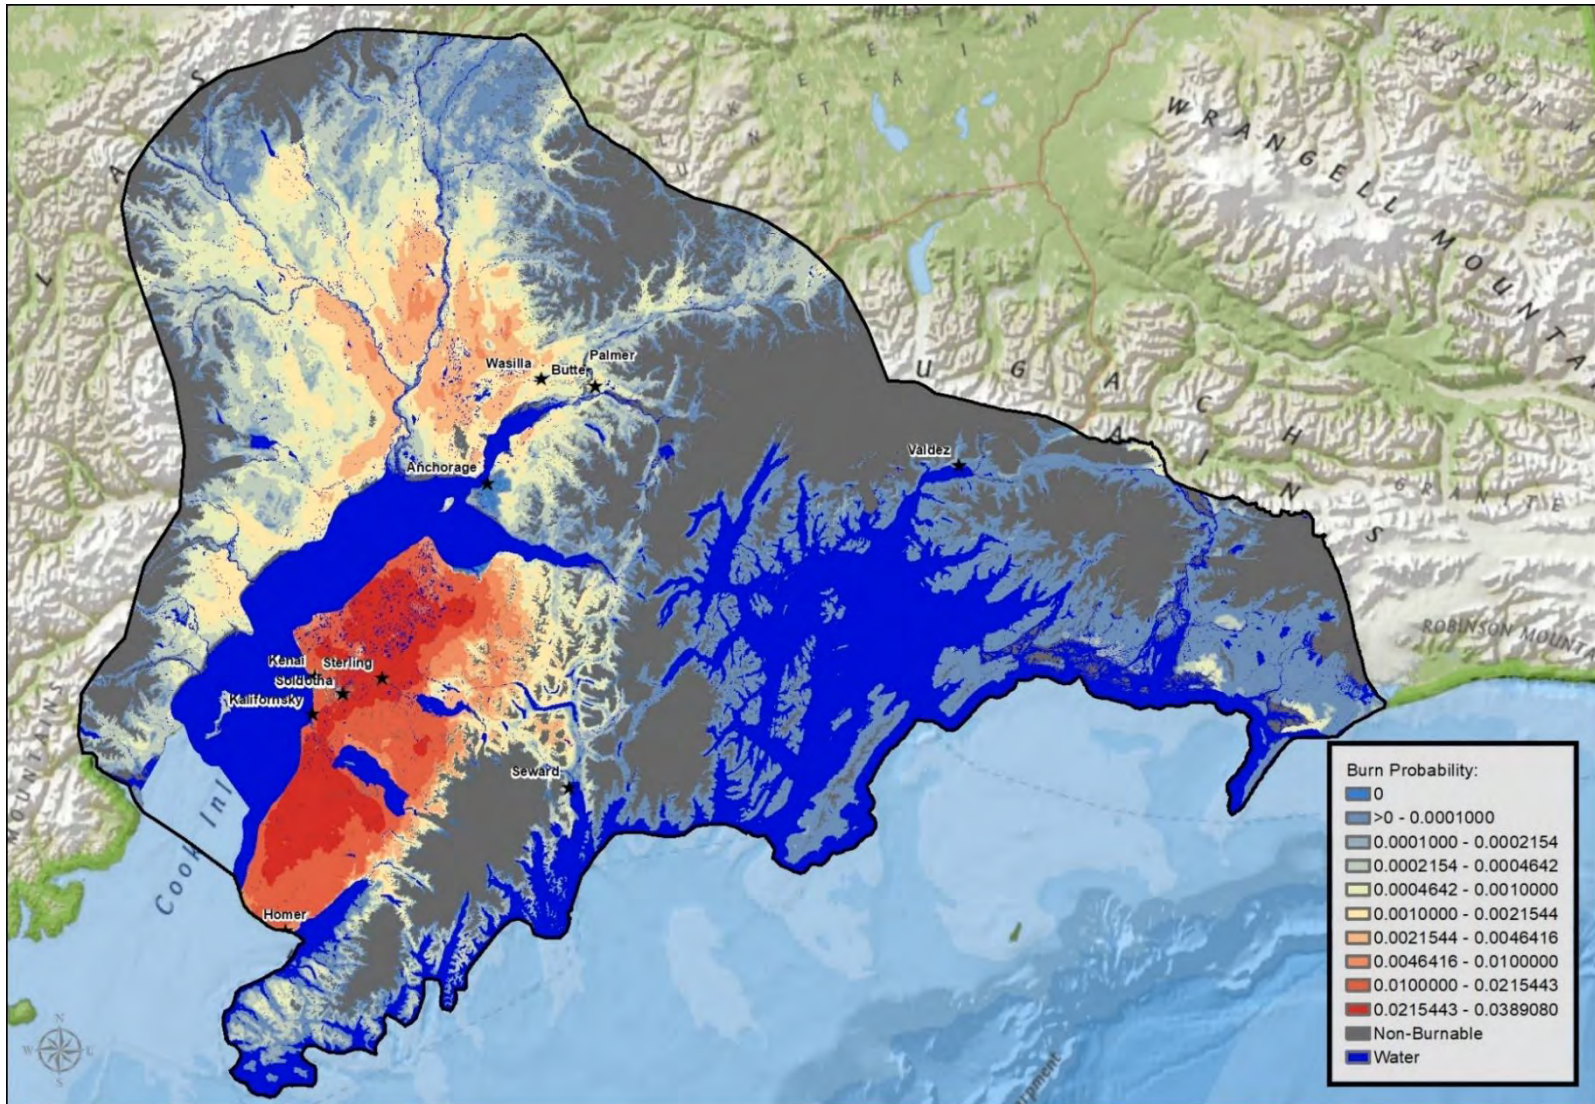

Figure 24. Map of integrated FSim burn probability results upsampled to 30 m resolution for the ARRA analysis area.

4.1.4 FLAME-LENGTH EXCEEDANCE PROBABILITIES

Flame-length exceedance probabilities (FLEP) represent the conditional probability of exceeding a nominal flame-length value. A FLEP of six is the conditional probability of a wildfire exceeding a six-foot flame length. FLEPs are a useful way to visualize individual FSim flame-length probabilities (FLPs). The FLEPs shown in Figure 23 were derived from the same FLPs used in the effects analysis calculations and upsampled to 30 m from the native 120 m using the methods outlined in section 3.5.2.

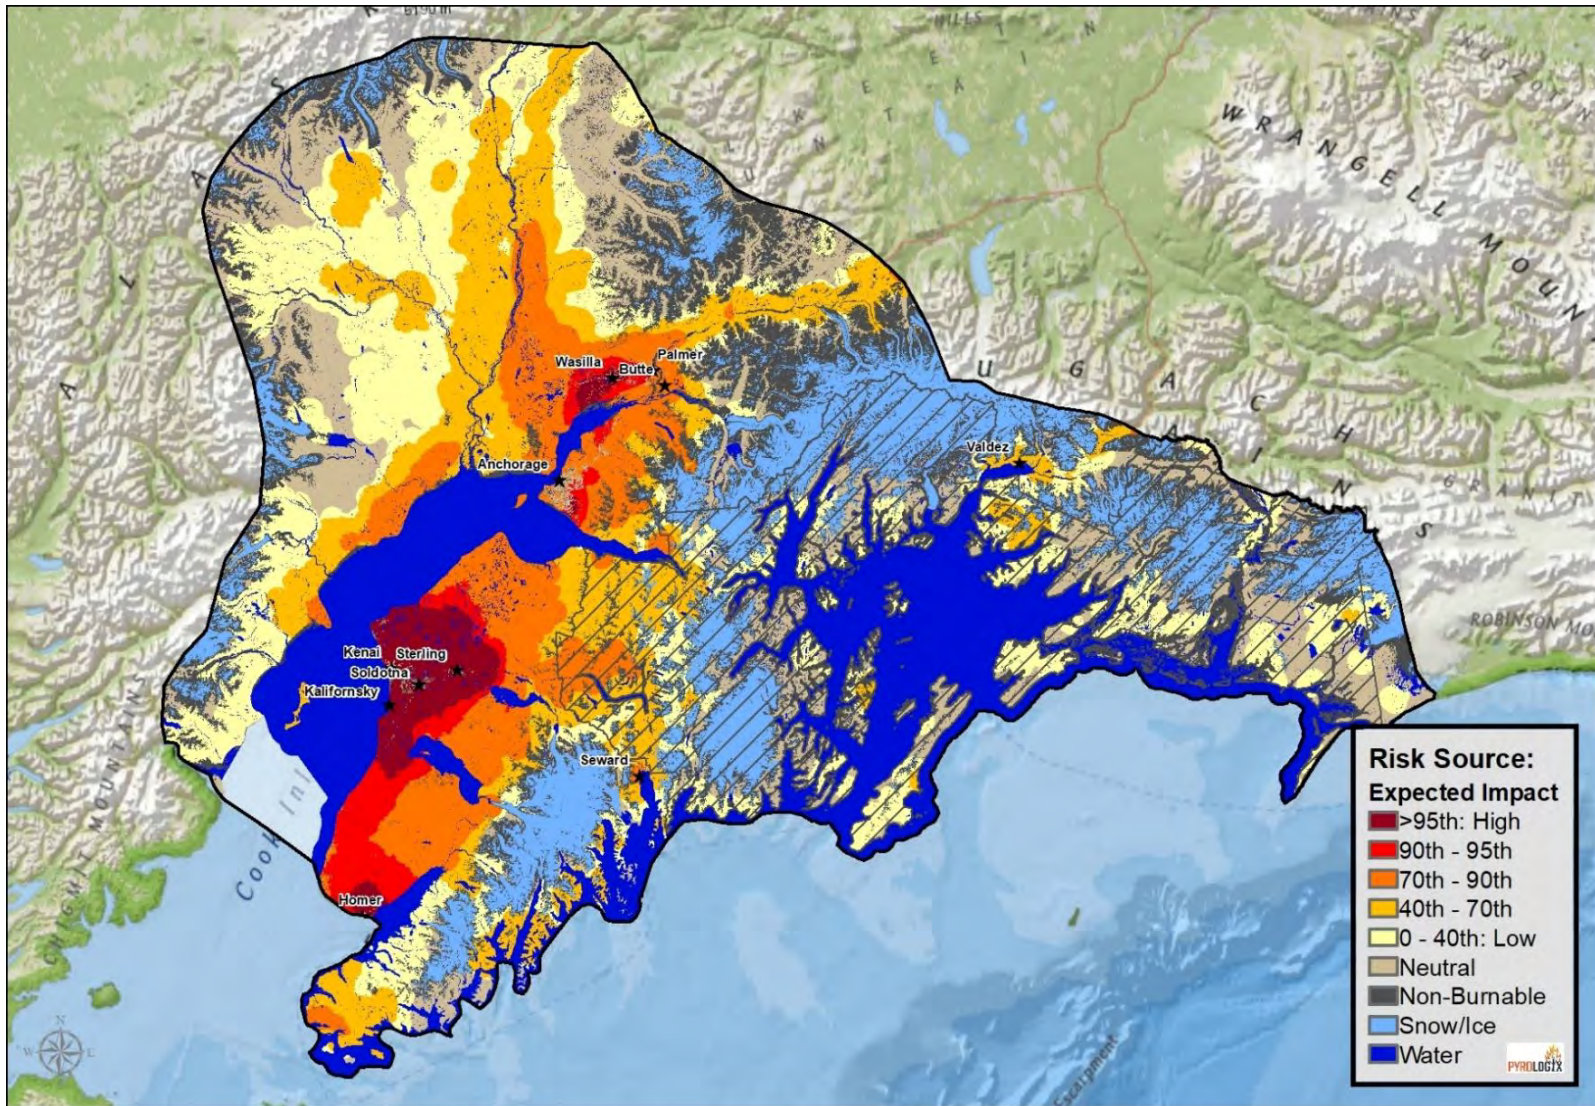

Figure 26. Map of the annual wildfire transmission risk (eImpact) to all HVRA from ignitions across the landscape.

4.1.6 TABULATED SUMMARIES FOR ARRA 6TH-LEVEL WATERSHEDS

The summary of mean wildfire risk (mean eNVC) for all HVRA by 6th-level HUCs is provided in Table 17. The table highlights a sample of the risk attributes summarized for each watershed polygon outlined in Section 3.5.4. The tabular summaries provided with the complete set of project deliverables include the full list of risk attributes¹⁰, but Table 17 displays a limited set of attributes to compare between mean eNVC and total eNVC for all HUCs.

The total eNVC metric highlights which HUCs have the greatest cumulative risk, but because watershed sizes are variable, it is useful to also examine risk concentration, or mean eNVC. Ranking by mean eNVC is most useful to examine which watersheds, on average, have the greatest wildfire risk. The mean eNVC by HVRA shows which HVRA are most at risk in each watershed and which contribute to the overall mean eNVC. Mean eNVC can help identify which watersheds might be prioritized for potential wildfire risk mitigation efforts, but the level of funding and mitigation efforts must be informed by the total eNVC.

Mean eNVC is a useful metric for larger summary zones, however, for smaller HUC polygons with very few burnable acres, the mean can be arbitrarily inflated by the small number of burnable acres in the denominator. Caution must be used when interpreting these results and establishing a minimum threshold for burnable acres may be needed to accurately rank mean eNVC values.

For the ARRA QWRA, we summarized a set of Effects Analysis results for ARRA using 6th-level watershed polygons (Figure 20. Map of Drinking Water Protection Areas within the ARRA analysis area. Figure 27).

¹⁰ For the full summaries by 6th-level watersheds please see: ARRA_6th_Level_Watershed_NVC_results.xls

5 ANALYSIS SUMMARY

The Chugach All-Lands (ARRA) Wildfire Risk Assessment provides foundational information about wildfire hazard and risk for Southcentral Alaska. The results represent the best available science across a range of disciplines. While this report was generated by Pyrologix LLC, the overall analysis was developed as a collaborative effort with numerous agencies, across a range of disciplines. This analysis can provide great utility in a range of applications including resource planning, prioritization and implementation of prevention and mitigation activities, and wildfire incident response planning. Lastly, this analysis should be viewed as a living document. While the effort to parameterize and calibrate model inputs should remain static, the landscape file should be periodically revisited and updated to account for future forest disturbances.

APPENDIX A - WILDFIRE RISK TO COMMUNITIES

In addition to the wildfire risk assessment analysis, we completed an assessment of hazard and risk to communities in Southcentral AK. Much of the data used in this assessment is leveraged from the assessment but includes some slight modifications which warrant explanation in the sections below.

6.1 DATASETS USED

6.1.1 HOUSING-UNIT DENSITY

The housing-unit density (HUDen) map used here is the same source dataset as was introduced in Section 3.4.1.1 above. Here, housing-unit density was converted to a count of homes by multiplying by the area in square kilometers of a 30m pixel (0.0009). We use continuous values of housing units rather than grouping by a density class as was done for the HUDen HVRA used in the risk assessment analysis.

6.1.2 RISK TO POTENTIAL STRUCTURES (RPS)

For this assessment, we use an integrated hazard dataset that uses burn probability, flame-length probabilities, and a response function (RF) to generally characterize loss to homes. This raster dataset is called Risk to Potential Structures (RPS) is created by calculating “loss to homes” for every pixel on the landscape, regardless of whether a home is present there. The RF used here does not vary by home and different building materials, nor does it consider nuances of each the immediate vegetation characteristics around each home.

Table 18. Response function used in Risk to Potential Structures (RPS).

Fire Intensity Level	Response Function value
0<FL<2	25
2<FL<4	40
4<FL<6	55
6<FL<8	70
8<FL<12	85
12<FL	100

6.1.3 HOUSING-UNIT RISK (HURISK)

The product of housing-unit count and RPS is called housing-unit risk (HURisk). This raster layer incorporates all of the risk elements including burn probability and intensity information, susceptibility characterized by the response function in Table 18, and exposure by identifying where homes are along with an estimated count in each pixel. It takes *both* the presence of non-zero burn probability and intensity and the presence of housing units to have a value of HURisk greater than zero.

6.1.4 COMMUNITIES

For this assessment, a community “core” was defined as a Populated Place Area (PPA) as identified by the U.S. Census Bureau. PPAs include incorporated cities and towns as well as Census Designated Places (CDPs). A CDP is an unincorporated concentration of population—a statistical counterpart to incorporated cities and towns.

We refer to the U.S. Census PPA delineation as the community “core”, but the summary unit of interest to us is the “Expanded Community” which includes the populated area and structures surrounding the PPAs. Ager and others (2019) used a travel-time analysis to delineate the land areas closest by drive-time to each PPA core, up to a maximum of 45 minutes travel time.

Approximately 99.7 percent of the housing units identified by HUDen within the project’s LCP extent can be found within these Expanded Community areas (Figure 28). Less than 1 percent of the total housing units are not within 45-minutes travel time of any expanded community (hereafter, “community”) identified in southcentral AK.

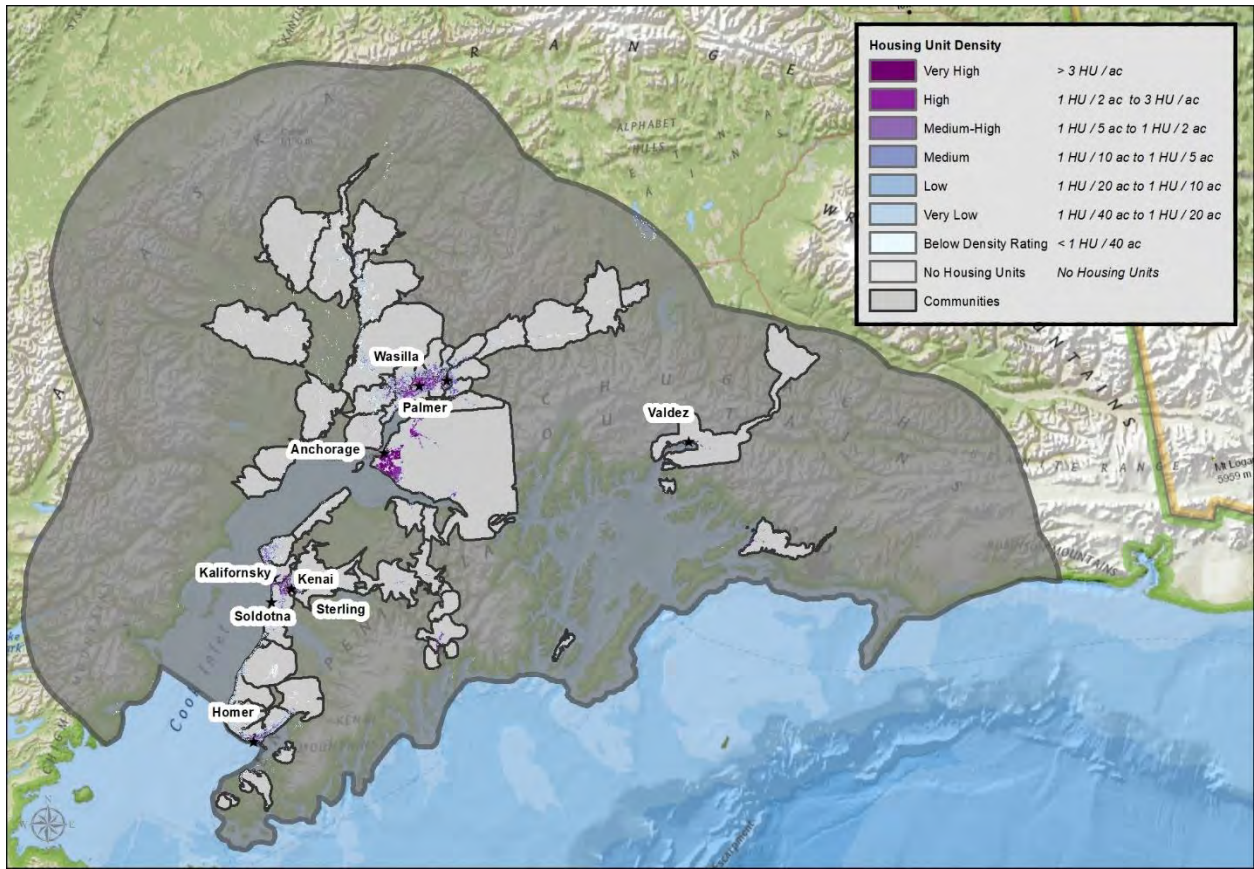

Figure 28. Housing units mapped in ARRA and the community boundaries with which they are associated. Note that very few housing units are located beyond a community boundary.

6.2 RESULTS

6.2.1 SUMMARIZING BY COMMUNITIES

We summarize numerous population, housing-unit, hazard, and risk attributes to produce the assessment we call Wildfire Risk to Communities. The results of this analysis are spreadsheet tables of attributes by community name and associated GEOID and a feature class of Community “zones” with these attributes joined back to each feature. The feature class can be used to make maps of the top at-risk communities, overlaying wildfire hazard or risk maps, or to make thematic maps of mean hazard or risk by community. These attributes provide a wealth of information to sort and rank communities by the various metrics. Table 19 provides a subset of attributes to highlight the top communities at risk.

6.2.2 MEAN RISK TO POTENTIAL STRUCTURES

We calculated the mean RPS where housing units are located within each community. This measure represents the mean likelihood that a given housing unit in a community will experience loss to wildfire in one year. The higher this value, the more likely it is that an individual housing unit within the community will experience a wildfire. Mean RPS is not a cumulative measure for a community, so it does not necessarily increase as the number of housing units increases. Instead, this measure is sensitive to the general location of a community relative to the mapped wildfire hazard and the specific locations of housing units with each community.

Ranking communities by RPS highlights the communities with the greatest potential for wildfire losses but does not consider the population or number of housing units residing in the community. The hazard rating provides information useful in prioritizing mitigation efforts, i.e. this community is most likely to experience losses, but without the magnitude of wildfire impacts, the scope of needed mitigation is unknown.

Figure 29 displays a scatterplot showing the relationship between mean burn probability and mean Conditional Risk to Structures (CRPS) – the components of mean Risk to Potential Structures.

Figure 29. Scatterplot of Mean Burn Probability and Mean Conditional Risk to Potential Structures - the product of which is Risk to Potential Structures (RPS).

Table 19. The top 25 communities as ranked by greatest mean Risk to Potential Structures (RPS) near where structures are found in the community.

6.2.3 TOTAL HOUSING-UNIT RISK

As a measure of cumulative wildfire risk to housing units, we calculated the product of housing units per pixel and RPS and sum that value for all pixels in a community. This measure is useful in resource allocation and can address the question: “In which communities are the total consequence of wildfire the greatest?” Unlike the previous measure, the total number of housing units strongly influences the Total Housing-Unit Risk (HURisk). Some communities, like Anchorage, have relatively low mean RPS, but rank high in total HURisk because of the very high number of housing units. Figure 30 displays a scatterplot showing the relationship between mean Risk to Potential Structures and total exposed housing units – the components of total HURisk.

Housing-unit risk is the secondary variable by which the summary communities are ranked (Table 20).

Figure 30. Scatterplot of Mean Risk to Potential Structures (RPS) and estimated number of exposed housing units per community - the product of which is the total housing unit risk (HURisk).

Table 20. The top 25 most at-risk communities as ranked by expected annual housing-unit risk.

KENAI PENINSULA BOROUGH COMMUNITY RISK ASSESSMENTS

WILDLAND URBAN INTERFACE COMMUNITIES

SWCA conducted on-the-ground community risk assessment surveys between July 20 and 27, 2021, using the National Fire Protection Association (NFPA) 1144 standard for assessing structure ignitability in the Wildland Urban Interface (WUI). The 1144 form (Appendix E) provides a process for assessing wildland fire hazards around existing structures to determine the potential for structure ignition from wildland fire ignitions. The following summaries provide a total score of risk and hazard based on various parameters observed during the surveys. Conditions are averaged across each polygon to provide an overarching risk rating for each WUI area and are identified in the community descriptions below. The surveys highlight the percentage of land classified as WUI, amount of land impacted by modeled wildfire related loss, dominant fuel types, potential fire behavior, fire response capacity, current fire and fuel management programs and plans, positive and negative attributes associated with structural hazards in each community polygon, and suggested mitigation focus areas. The information in the suggested mitigation focus sections was compiled collaboratively through Core Team input, public meetings, existing community CWPPs, and public feedback.

This updated CWPP provides an assessment of risk to wildfire throughout the entire peninsula. However, the Community Risk Assessments provide information about risk for each community in the Kenai Peninsula. This finer scale assessment is intended to allow communities are to identify and prepare for risk locally.

These assessments also provide information about fire response capabilities, so that those data can be found in once place in the document. Within each community, there is a local protocol for fire response. Additionally, there is a larger-scale fire response agreement between the State of Alaska and land management agencies. The State of Alaska, Department of Natural Resources (DNR), operates under the Master Cooperative Wildland Fire Management and Stafford Act Agreement (the Agreement), which documents the coordination and exchange of personnel, equipment, supplies, services, and funds between land management agencies. The Agreement details wildland fire management activities such as prevention, preparedness, communication and education, fuels treatment and hazard mitigation, fire planning, response strategies, tactics and alternatives, suppression and post-fire rehabilitation and restoration. This Agreement does not supersede individual agency policies and requirements.

SWCA and the KPB contacted the following entities representing Native Alaskan interests to inquire about their community values at risk, project recommendations and fire response capabilities.

1. Port Graham Village Council
2. Native Village of Tyonek
3. Seldovia Village Tribe
4. Qutekcak Native Tribe
5. Ninilchik Village Tribe
6. Nanwalek IRA Council
7. Kenaitze Indian Tribe

8. Salamatof Native Association
9. Chugachmiut
10. Cook Inlet Region, Inc (CIRI)

Four entities, Chugachmiut, (representing Nanwalek and Port Graham), CIRI (an Alaska Native Corporation and the largest private landowner in Southcentral Alaska), Salamatof Native Association and Native Village of Tyonek, were available to engage in this conversation. In some cases, they provided recommendations, which are included within the appropriate community polygon.

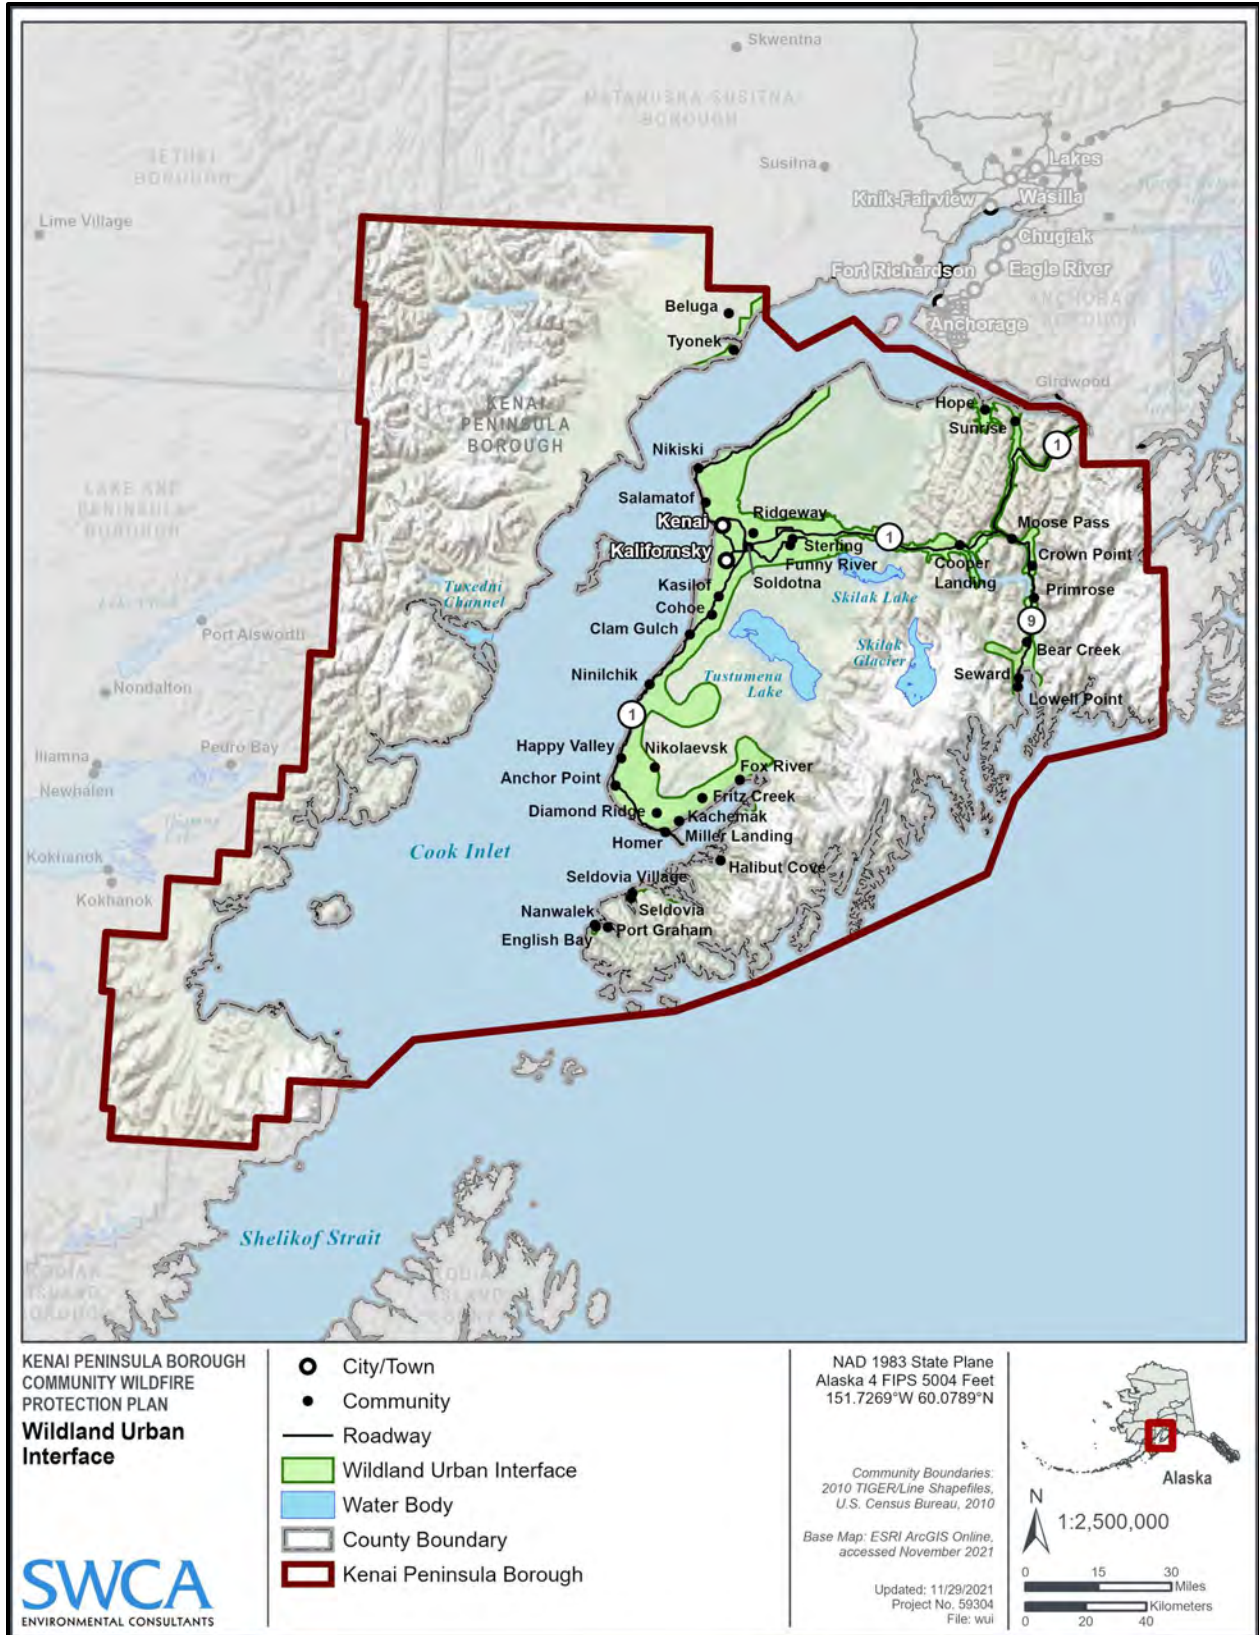

Figure D.1 Identifies all WUI areas delineated across the Kenai Peninsula.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES ANCHOR POINT POLYGON SUMMARY STATISTICS

Community Description

Anchor Point is located on the Kenai Peninsula at the junction of the Anchor River and its North Fork, 14 miles northwest of Homer. It lies at mile 156 of the Sterling Highway at approximately 59.776670° north latitude and -151.83139° west longitude. Anchor Point is located in the Homer Recording District. The area encompasses 90.8 square miles of land. January temperatures range from -40° F to 42° F. July temperatures range from 46° F to 75° F. Average annual precipitation is 20 inches. Western Emergency Services (formerly Anchor Point Volunteer Fire Department) and the Alaska Division of Forestry provides fire protection to Anchor Point residents (Kenai Peninsula Borough [KPB], 2006a). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006a).

 - 2006 Anchor Point/Happy Valley/Nikolaevsk Community Wildfire Protection Plan.

Community Polygon NFPA 1144 Survey Summary

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: mixture of grass, shrub, timber understory, and timber litter fuels • Defensible space: moderate • Building construction: metal and composite roofs dominant • Slope: area has a 10% to 20% slope • Water source: hydrants present 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal

- Suggested Mitigation Focus Area**
- Areas of Concern
- Whiskey Gulch East of Sterling Highway, Old Sterling and Dusty Street area, South Fork of Anchor River land is steep; picnic areas, such as State Parks, and shooting areas need to be cleared (Anchor Point / Happy Valley / Nikolaevsk CWPP, 2006).
 - Campgrounds
 - Nikolaevsk, North Fork area (Anchor Point), and Oilwell Road area (Ninilchik).
- Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)
- Need a lumber market and processing to support increased fuel treatments
 - Spruce bark beetle damage is moderate or minimal
 - Gradient winds in the area. Pressure differences between land and sea elevates fire danger.
 - Many buildings have no exterior siding, which exposes the home to potential ember penetration and reduces the home's resistance to convective heat.

- Clean downed timber and piles through chipping and burns (Anchor Point / Happy Valley / Nikolaevsk CWPP, 2006).
- Provide public disposal site for brush/slash to be burned by the KPB once or twice per year (Anchor Point / Happy Valley / Nikolaevsk CWPP, 2006).

Fire Department Concerns:

- Nikolaevsk, North Fork area (Anchor Point) and Oilwell road area (Ninilchik) are highest risk
- Goals (in order of importance): training, hazardous fuels reduction, ecological management

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES BEAR CREEK POLYGON SUMMARY STATISTICS

Community Description

Bear Creek is located on the Kenai Peninsula, next to Resurrection Bay. It is bordered to the north by Primrose and to the south by Seward. Bear Creek encompasses an area of 37.4 square miles. Bear Creek is situated at approximately 60.136420° north latitude and -149.382348° west longitude. Bear Creek is in the Seward Recording District (ADNR 2021). Winter temperatures range from 4 degrees F to 27 on average. Some winters it has been 20 below. Summer temperatures vary from 45 to 65 degrees. Bear Creek Volunteer Fire and the Alaska Division of Forestry provide fire protection to the Bear Creek area (KPB, 2021a).

Community Polygon Summary

<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: more humid forest cover • Building construction: metal and composite roofs dominant • Organized response: fire department in community • History of fire occurrence: low • Severe fire weather potential: low; high humidity 	<ul style="list-style-type: none"> • Building construction: combustible siding • Water source: no water availability through hydrants but do have water tender • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Fire response access to private residences: weak bridges • Defensible space: minimal, with some homes with poor maintenance and refuse in yard.

Suggested Mitigation Focus AreaAreas of Concern:

- Forest Acres subdivision and the base of Mt. Marathon.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document):

- Need a lumber market and processing to support increased fuel treatments
- Need fire weather reports that are specific to east-side peninsula communities. Currently using Kodiak reports. Using weather reporting from outside of the peninsula can impact fire danger ratings and burn restrictions.
- Address access concerns within Bear Creek, especially weak bridges to private residences.
- Address yard maintenance and derelict property concerns in Bear Creek.
- Address ignition concern on adjacent USFS property through education campaigns on safe campfire use.

Fire Department Concerns:

- Goals (in order of importance): training, hazardous fuels reduction, forest management.
- The department would like to offer volunteers a weekend-long training option.
- Need more frequent inventory of PPE and equipment.
- Ensure all fire fighters have appropriate PPE.

Figure D.3. Example of homes in Bear Creek with very minimal defensible space.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES BELUGA POLYGON SUMMARY STATISTICS

Community Description

Beluga is located on the Kenai Peninsula, on the western side of the Cook Inlet. It is bordered by Tyonek to the southwest and encompasses an area of 95.3 square miles. Beluga is situated at approximately 61.182384° north latitude and -151.069518° west longitude. Beluga is in the Anchorage Recording District (Alaska Department of Natural Resources [ADNR] 2021). Winter temperatures range from -10° F to 35° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. The Tyonek Volunteer Fire Department and the Nikiski Fire Service provide fire protection to Beluga residents (KPB, 2021b).

Community Polygon NFPA 1144 Survey Summary (No assessments completed during 2021 CWPP update. Desktop analysis only)	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Values at risk: Low population density • Separation of adjacent structures: good • Slope: area has a 10% to 20% slope • Street signs: visible and reflective • Building construction: metal and composite roofs dominant 	<ul style="list-style-type: none"> • Ingress and egress: Very inaccessible. Sea and air access only • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Vegetation type: timber understory- flammable • Fire response from Nikiski

Suggested Mitigation Focus Area
<u>Areas of Concern:</u>
<ul style="list-style-type: none"> • Island Lake Area, Holt-Lamplight Area, Captain Cook State Park, and KNWR.
<u>Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)</u>
<ul style="list-style-type: none"> • Increase defensible space around values at risk and safety shelters. • Implement understory thinning and overall fuel reduction in areas determined to be at risk of intense fire behavior as determined by the risk assessment. • Relocate wood piles to 100+ feet away from structures and install a fire break with a 10-foot buffer around the wood pile. • Increase fuel free buffers along roads to prevent fire jumping the road. Remove or prune alder trees that impede on the roadways. • Partner with logging companies to harvest and sell beetle kill wood or look for opportunities to utilize as fuel wood.

- Implement regular wildland fire training events for local volunteer fire responders.
- Increase defensible space and road access – install fuel breaks and response vehicle turn-outs along narrow roads.
- Install firebreaks around all above ground utility tanks with a 15-foot buffer.
- Distribute wildfire education resources in regard to home hardening, defensible space, structural ignitability, and how to shelter in place if you will not evacuate.
- Consider the use of prescribed fire (where appropriate) to maintain grassland areas.
- Implement fuel breaks in strategic locations to slow fire spread, for example in areas perpendicular to prevailing winds on the edge of the community.
- Host firefighter recruitment events.
- Implement regular prescribed fire training events.

Fire Department Concerns:

- Need volunteers for local fire department
- Need training to respond to wildfire and to do prescribed burns

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES CLAM GULCH POLYGON SUMMARY STATISTICS

Community Description

Located on the Kenai Peninsula, Clam Gulch lies on Sterling Highway 24 miles south of the City of Kenai at approximately 60.231110° north latitude and -151.39361° west longitude. Clam Gulch is in the Kenai Recording District. The area encompasses 13.3 square miles of land. January temperatures range from 4° F to 22° F degrees Fahrenheit. July temperatures vary from 46° F to 65° F degrees. Average annual precipitation is 20 inches. Fire and EMS protection is provided to Clam Gulch area residents by the KPB Central Emergency Services (CES). The Alaska Division of Forestry also provides wildland fire protection to the area. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer (KPB, 2006b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006b).

Community Polygon NFPA 1144 Survey Summary

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved and more than one road in and out of most subdivisions • Street signs: visible and reflective • Vegetation type: timber understory • Building construction: metal and composite roofs dominant • Slope: area has a 10% to 20% slope • Water source: hydrants 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal

- Suggested Mitigation Focus Area**
- Areas of concern
- Johnson Lake Road, Cohoe Loop, Tustumena Lake Road, north of Clamshell Lodge, Captain Cook subdivision from Wayside Park (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).
 - State Park hazard fuel reduction. Create defensible space/safe zones at State Park facilities (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).

- Caribou Hills area (far east of Clam Gulch) has many cabins and no water. Could make significant improvements by increasing defensible space in the area. Due to limited access, people need to be more self-sufficient in mitigation.
- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments.
- Homes off of borough roads need maintenance and have very limited access.
- Evaluate electric grid in subdivisions and identify need for electric generators
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Support Firewise programs
- The Caribou Lakes area has a high hazardous fuel loading and is not easily accessible (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).
- Public slash disposal site in Kasilof/Clam Gulch area (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).
- Continue removal of dead trees and brush piles on public and private land (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).
- State Park hazard fuel reduction. Create defensible space/safe zones at State Park facilities (Kalifornsky/ Kasilof /Cohoe/Clam Gulch CWPP, 2006).

Fire Department Concerns:

- Fuel hazards, beetle kill throughout the interface both in developed areas and open areas.
- Goals (in order of importance): training, hazardous fuels reduction, ecological management
- Kasilof/Cohoe, Funny River, Tustumena are highest risk

Figure D.4. Example of an unsurfaced road, a frequent occurrence within the community.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES COHOE POLYGON SUMMARY STATISTICS

Community Description

Cohoe is located on the Kenai Peninsula on the west bank of the Kasilof River, 13 miles south of the City of Kenai on the Sterling Highway at approximately 60.368030° north latitude and - 151.3086° west longitude. Cohoe is in the Kenai Recording District. The area encompasses 69.9 square miles of land. January temperatures range from 4° F to 22° F. July temperatures vary from 46° F to 65° F. Average annual precipitation is 20 inches. Fire and EMS protection is provided to the Cohoe area residents by KPB Central Emergency Services (CES). The Alaska Division of Forestry also provides wildland fire protection to the area. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer (KPB, 2006b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006b).

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES COOPER LANDING POLYGON SUMMARY STATISTICS

Community Description

Cooper Landing lies at the west end of Kenai Lake on a stretch of the Sterling Highway, 30 miles northwest of Seward in the Chugach Mountains. Its coordinates are approximately 60.49° North Latitude and -149.83417° West Longitude. Cooper Landing is in the Seward Recording District. The area encompasses 65.3 sq. miles of land. January temperatures range from 4 to 22 degrees Fahrenheit. July temperatures vary from 46 to 65 degrees Fahrenheit. Average annual precipitation is 20 inches. Fire protection is provided to the area by Cooper Landing Emergency Services (ES) and the Alaska Division of Forestry. Other fire agencies such as USFS, Moose Pass VFD, Girdwood FD are at a minimum 45 minutes to one hour away. Cooper Landing ES and the Forest Service have joint cooperative agreements in place (Ecology and Environment [E&E], 2006a). Additional information about community background and demographics can be found in the community CWPP (E&E, 2006a).

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: significant buffer to continuous heavy fuels due to Swan Lake fire extent adjacent to community • Building construction: metal and composite roofs dominant • Slope: minimal slope adjacent to most homes • Water: available but gallon-capacity limited • Defensible space: moderate 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal spacing between some homes • Fire occurrence history: high • Severe fire weather potential • <u>Ingress and egress: most subdivisions off main highway with one road in and out</u>

Suggested Mitigation Focus Area

Areas of Concern:

- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a solution for green waste disposal. Snug Harbor Road dump fills up rapidly.
- Education on wildfire risk (even post Swan Lake) is needed across the community.
- Need to target education at seasonal homeowners.
- Need to provide Firewise type assessments to homeowners to provide specific action items for mitigation. Include Emergency Vehicle Access. Many homeowners clear space for personal vehicle size, not large equipment
- Need to look into incentives for defensible space actions.
- Need to address threats to HEA lines associated with wind throw.
-
- Institute a voluntary Firewise Inspection program within the community as a benefit to community residents to bring recommendations to protect their homes and structures (Cooper Landing CWPP, 2006).
- Establish fire patrols. - Not needed during 2021 Season. Fluctuates based on weather conditions (Cooper Landing CWPP, 2006).
- Develop contingency plans for voluntary community evacuation (Cooper Landing CWPP, 2006).
- Survey private and public structures for main power shut-offs, fuel storage, etc. for fire personnel safety Meet and coordinate with all agencies that would be involved in an incident (Cooper Landing CWPP, 2006).

Fire Department Concerns:

- Need local training opportunities for volunteer firefighters. Local, specific to CL. 1 hour Travel each way discourages volunteer training.
- Need to seek funding to provide programmable radios to the fire department.
- Need to purchase a new brush truck. Current Forestry-owned/loaned vehicle is 1985. Mechanically broken, 5x since Swan Lake.
- Upgrade the Quartz Creek bridge to allow passage of fire response vehicles. - Still Needed. Largest Vehicles unable to transverse 11 Ton Capacity limited bridge (Cooper Landing CWPP, 2006).
- Establish Dry Hydrant/Year Round Draft Site (Cooper Landing CWPP, 2006).
- Improve Water Supply beyond on-board apparatus tanks (Cooper Landing CWPP, 2006).
- Long Term, Replacement of CL Fire Station to support large scale staging/mitigation teams during events such as Swan Lake Fire. Existing facility undersize, largely outdated and does not match standards.

Figure D.6. Cooper Landing has a density of tourist values at risk from fire and was recently impacted by the Swan Lake Fire.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES CROWN POINT POLYGON SUMMARY STATISTICS

Community Description

Crown Point is located on the Kenai Peninsula within the Moose Pass area. Crown Point is an unincorporated community located approximately 22 miles north of Seward. Winter temperatures range from 4 degrees F to 27 on average. Some winters it has reached 20 below. Summer temperatures vary from 45 to 65 degrees. Annual precipitation ranges from 20 inches at the south end of the valley to 24 inches at the north end. The Moose Pass Volunteer Fire Company and the United States Forest Service provide initial attack fire protection to Crown Point area residents. Operations are based out of the fire station located at 35390 Seward Highway Moose Pass (KPB, 2006c). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006c).

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Topography: limited slope • Previous fire occurrence: low • Potential for severe fire weather: low • Separation of structures: good, large plots (except around some USFS infrastructure) • Roofing: metal • Water source: hydrants and tanks • Emergency shelter in polygon • Firefighting resources in polygon enhancing fire response capacity: USFS resources; Lawing Airstrip. Moose Pass FD provides fire response. 	<ul style="list-style-type: none"> • Ingress and egress: main highway is paved, but still one road in and out to access community • Ingress and egress: some narrow unsurfaced roads around USFS infrastructure and campgrounds • Ingress and egress: poor turnaround space for apparatus • Defensible space: limited clearance around some structures. • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground • High density of values at risk in and adjacent to the polygon (i.e., campsites, USFS resources)

Suggested Mitigation Focus Area

Areas of Concern

- Individual homeowner preparedness (Moose Pass Area CWPP 2006).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Improve access by creating additional turnaround spaces.
- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening and safe debris disposal.
- Reduce heavy fuel loads on a landscape scale and create fuel breaks around community values at risk, especially critical infrastructure utilized for fire protection.
- Enhance fuel breaks with naturally occurring birch or willow.
- Manage popular recreation sites with outreach to users.
- Seek funding for water tender (Moose Pass Area CWPP 2006).
- Seek funding for portable water storage (Moose Pass Area CWPP 2006).
- Seek additional USFS and DOF training opportunities (Moose Pass Area CWPP 2006).
- Create equipment cache on north and south end of Moose Pass, Crown Point area (Moose Pass Area CWPP 2006).
- Create a pre-attack suppression plan with a focus on protection of cultural resources (Moose Pass Area CWPP 2006).
- Expand CERT and Fire Corps program (Moose Pass Area CWPP 2006).
- Encourage residents to develop a secondary water source (Moose Pass Area CWPP 2006).
- Restrict motorized access into areas where hazardous fuels exist on public land (Moose Pass Area CWPP 2006).

Fire Department Concerns:

- Fuels Hazards
- Beetle kill throughout the interface both developed and undeveloped areas
- Goals, in order of importance:
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.7. Example of cabins and other values at risk with limited defensible space, suggesting fire response concerns.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES DIAMOND RIDGE POLYGON SUMMARY STATISTICS

Community Description

The Diamond Ridge area is located on the bluff above Homer. It lies just south of Anchor Point at approximately 59.699040° north latitude and -151.56071° west longitude. Diamond Ridge is in the Homer Recording District. The area encompasses 42.4 square miles of land. January temperatures range from -10°F to +35° F. July temperatures vary from 46° F to 65° F. Average annual precipitation is 20 inches.

The Kachemak Emergency Services Area (KESA), Homer Volunteer Fire Department (HVFD), and the Alaska Division of Forestry provide fire protection to the Diamond Point residents. KESA currently contracts with the City of Homer (HVFD) for fire and emergency medical services. The KESA station houses fire response equipment and is large enough to host training sessions. HVFD Fire Division firefighters are state certified at the Firefighter I, II, or Fire Officer I levels (KPB, 2006d). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006d).

<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Diamond Ridge/Fritz Creek/Fox River Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: mixture of timber-understory and timber-litter fuels • Defensible space: good • Building construction: metal and composite roofs dominant • Water source: hydrants 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Slope: 31% to 40% • Topographic features: steep slopes with ridge top homes that are exposed to fire spread

Suggested Mitigation Focus AreaAreas of Concern:

- On bluff beyond Vosnesenka School (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Baycrest skiing and hiking areas are surrounded by subdivisions. Much of the area is state and borough lands at extreme risk for wildfire. This would be an excellent location for demonstration projects (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Kachemak Bay State Park (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- The Caribou Lakes area has a high hazardous fuel loading and is not easily accessible (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- East End Road,
- Skyline Drive,
- Caribou Lake
- Diamond Ridge

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- The local road system needs improvement. Many roads are not part of city or borough management and fall outside regular state maintenance. Skyline, Olson Mountain, and Hutler Roads need year-round access, with a better road base. They are impassable at critical times of the year, e.g., during spring “break up.” (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Identify EERd location for slash disposal to be burned, possibly with KPB incinerator (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Pursue public slash pickup/disposal service (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Create firebreaks along section lines and around perimeters of areas with heavy fuel loading that are within 0.25 mile of structures (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).

Fire Department Concerns:

- N/A

Figure D.8. Example of a ridge which many homes are located.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES FOX RIVER POLYGON SUMMARY STATISTICS

Community Description

The Fox River area comprises of 127 square miles of land and consists of small communities: Voznesenka, Razdolna, and Kachemak Selo. The three Russian Old Believer villages at the head of Kachemak Bay are similar in history and composition. Razdolna is located on a bluff on the east side of Swift Creek at the end of five-mile-long Circle Lake Road which branches off East End Road to the north about 19 miles east of Homer. The community of Voznesenka is located about 21 miles east of Homer and makes up the final occupied area on East End Road before the road ends and descends as a trail down the “Switchback” to the shore at the head of Kachemak Bay. The village stretches mainly along the final two miles of the road as well as along one side road that parallels the last mile of the main road. Most of the dwellings are on individual lots of 1 to 5 acres. Kachemak Selo lies on the shore of the head of Kachemak Bay at the bottom of the Switchback and northeast about 1 mile along the shore. The Switchback allows four-wheel drive traffic most of the year. The houses of the village are mostly on small individual lots. Kachemak Emergency Services, and the Alaska Division of Forestry provide fire protection to the residents of Fox Creek. Kachemak Emergency Services Area currently contracts with the Homer Volunteer Fire Department (HVFD) for fire and emergency medical services. HVFD Fire Department firefighters are state certified at the Firefighter I, II, or Fire Officer I levels. (KPB, 2006d) Additional information about community background and demographics can be found in the community CWPP (KPB, 2006d).

Community Polygon NFPA 1144 Survey Summary

Positive Attributes (Low Scores)

- Street signs: visible and reflective
- Vegetation type: timber and grass mixture. Grass and grass shrubs at higher elevation.
- Defensible space: good; well-maintained homes and yards in many areas
- Building construction: metal and composite roofs dominant
- Water source: hydrants

Negative Attributes (High Scores)

- Ingress and egress: one road in and out
- Building construction: combustible siding
- Utility placement: aboveground
- Decking and fencing: combustible
- Separation of adjacent structures: minimal
- Slope: area has a 31% to 40% slope
- Topographic features: steep slopes with ridge top homes that are exposed to fire spread

Suggested Mitigation Focus Area

Areas of Concern:

- On bluff beyond Vosnesenka School (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Baycrest skiing and hiking areas are surrounded by subdivisions. Much of the area is state and borough lands at extreme risk for wildfire. This would be an excellent location for demonstration projects (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Kachemak Bay State Park (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- East End Road,
- Skyline Drive,
- Caribou Lake
- Diamond Ridge

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Scenic values, cultural values and historic buildings need to be protected.
- The local road system needs improvement. Many roads are not part of city or borough management and fall outside regular state maintenance. Skyline, Olson Mountain, and Hutler Roads need year-round access, with a better road base. They are impassable at critical times of the year, e.g., during spring "break up." (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Identify EERd location for slash disposal to be burned, possibly with KPB incinerator (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).
- Pursue public slash pickup/disposal service (Diamond Ridge/Fritz Creek/Fox River CWPP, 2006).

Fire Department Concerns:

- N/A

Figure D.9. Fox River is sparsely populated and comprises many cultural and natural values at risk, including critical habitat.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES FRITZ CREEK POLYGON SUMMARY STATISTICS

Community Description

Fritz Creek is located 7 miles northeast of Homer, on the north shore of Kachemak Bay, off East End Road. It lies at the foot of Bald Mountain at approximately 59.748420° north latitude and - 151.2778° west longitude. Fritz Creek is in the Homer Recording District. The area encompasses 54 square miles of land. Winter temperatures range from -10° F to +35° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. The Kachemak Emergency Services Area (KESA), Homer Volunteer Fire Department (HVFD), and the Alaska Division of Forestry provide fire protection to the Fritz Creek residents. Kachemak Emergency Services Area currently contracts with the City of Homer (HVFD) for fire and emergency medical services. HVFD Fire Division firefighters are state certified at the Firefighter I, II, or Fire Officer I levels. (KPB, 2006d) Additional information about community background and demographics can be found in the community CWPP (KPB, 2006d).

<ul style="list-style-type: none"> • Ingress and egress: good turnarounds for most homes • Defensible space: very good clearance for some homes. • Topography: flat • History for fire occurrence: low • Potential for severe fire weather: low • Separation of adjacent structures: good, larger lots • Water source: drafting from river possible • Station close to community • Signage: present and reflective 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Ingress and egress: some unsurfaced and poorly maintained roads with narrow sections • Vegetation type: timber and understory fuels • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground

Suggested Mitigation Focus Area

Areas of Concern

- State Park (Funny River Area CWPP, 2009).
- East end of Funny River Road (Funny River Area CWPP, 2009).
- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Reduce structure ignition potential through use of home ignition zone training.
- Develop projects and seek funding for fuel treatments at Funny River State Park.
- Develop options for the public to access beetle killed trees for firewood.
- Identify slash disposal sites.
- Widen utility ROW for use as fire breaks.
- Develop programs to support vulnerable populations with defensible space actions
- Support Firewise programs
- Locate and identify alternative routes to serve as escape routes
- Identify safety zones.
- Map water sources.
- Identify and map fill sites.
- Create alternative ingress/egress route for Funny River (currently only one ingress/egress).
- Road widening is needed in some places to accommodate tankers and other large equipment.
- Evaluate electric grid in subdivisions and identify need for electric generators
- Develop residential inspection program for structural ignitability
- Increase/expand use of CERT and associated training (Funny River Area CWPP, 2009).
- Develop a CWPP media outreach plan (Funny River Area CWPP, 2009).
- Develop a “rapid notify in place” system for the area (Funny River Area CWPP, 2009).
- Develop a boat escape plan (Funny River Area CWPP, 2009).

Fire Department Concerns:

- Pre-season fire planning to identify critical infrastructure where point protection should be applied.

Figure D.11. Example of good defensible space around a home in Funny River.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES HALIBUT COVE POLYGON SUMMARY STATISTICS

Community Description

The Halibut Cove area includes 25 miles of mountainous shoreline from Bear Cove to Jakolof Bay. There are an increasing number of secondary and primary homes throughout the numerous coves and bays. The area is primarily bordered by the southern shore of Kachemak Bay. The Halibut Cove area encompasses 8.3 square miles. There is no local or state fire department to house equipment or provide training. The nearest wildland fire resources are a seasonal State Forestry crew based in Homer which responds by local hire helicopter or marine vessel. The Division of Forestry, Soldotna base, hosts a contract helicopter starting in mid-April each season for wildland fire response. The ship is staffed with a helitack crew and a bucket for delivery of water drops. Air attack retardant provided by State Forestry is based in Palmer, though during high fire danger it can be pre-positioned at the Kenai airport (Terry Anderson Consulting [TAC] 2008a). Additional information about community background and demographics can be found in the community CWPP (TAC 2008a).

<ul style="list-style-type: none"> There is no local fire department. Suppression efforts are dependent upon State Forestry resources. There are no wildland or structural engines available to the area, past suppression efforts were provided via boat.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES HAPPY VALLEY POLYGON SUMMARY STATISTICS

Community Description

Happy Valley lies on the west coast of the Kenai Peninsula on Sterling Highway, 22 miles northwest of Homer, on Happy Valley Creek at approximately 59.935830° north latitude and - 151.73722° west longitude. Happy Valley is in the Homer Recording District. The area encompasses 88 square miles of land. Winter temperatures range from -40° F to 37° F; summer temperatures vary from 45° F to 80° F. Average annual precipitation is 24 inches. Western Emergency Services (formerly Anchor Point Volunteer Fire Department) and the Alaska Division of Forestry provide fire protection to Anchor Point residents (KPB, 2006a). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006a).

<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: main highway paved and more than one road in and out of most subdivisions • Street signs: visible and reflective • Vegetation type: open forest and grassland mixture • Building construction: metal and composite roofs dominant • Poor defensible space • Slope: area slope is 10% to 20% • Water source: hydrants 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal

Suggested Mitigation Focus AreaAreas of Concern

- Whiskey Gulch east of Sterling Highway, Old Sterling and Dusty Street area, South Fork of Anchor River land is steep, Picnic areas, such as State Parks, and shooting areas need to be cleared.
- Nikolaevsk, North Fork area (Anchor Point), and Oilwell Road area (Ninilchik).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Commercial, tourism, coastal resource, fishing and industry values to be protected.
- Clean downed timber and piles through chipping and burns (Anchor Point/Happy Valley/Nikolaevsk CWPP, 2006).
- Provide public disposal site for brush/slash to be burned by the KPB once or twice a year (Anchor Point/Happy Valley/Nikolaevsk CWPP, 2006).

Fire Department Concerns:

- Nikolaevsk, North Fork area (Anchor Point) and Oilwell road area (Ninilchik) are highest risk
- Goals (in order of importance):
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.12. Example of the landscape in Happy Valley.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES HOMER POLYGON SUMMARY STATISTICS

Community Description

The City of Homer is located on the north shore of Kachemak Bay on the southwestern edge of the Kenai Peninsula. The Homer Spit, a 4.5-mile-long bar of gravel, extends from the Homer shoreline. Homer is 227 road miles south of Anchorage, at the southernmost point of Sterling Highway. It lies at approximately 59.6425° north latitude and -151.54833° west longitude. Homer is in the Homer Recording District. The area encompasses 14 square miles of uplands, including Beluga Lake. Homer lies in the maritime climate zone. During the winter, temperatures range from 14°F to 27° F; summer temperatures vary from 45°F to 65° F. Average annual precipitation is 24 inches, including 55 inches of snow. The Homer Fire Volunteer Department (HVFD), Kenai Emergency Services, and the Alaska Division of Forestry provide fire protection to the Homer area. HFD Fire Division firefighters are state certified at the Firefighter I, II, or Fire Officer I levels. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer. International Organization for Standardization (ISO) fire protection Class-3 rating has been provided in areas equipped with hydrants (KPB, 2006e). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006e).

Community Polygon Summary

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: grass and shrub in coastal areas, mixture of grasses and timber-understory at higher elevation • Building construction: metal and composite roofs dominant • Water source: hydrants but some are low flow • Defensible space is good 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Some homes located on slopes (mid and top of slope)

Suggested Mitigation Focus Area

Areas of Concern

- East End Road, Skyline Drive, Caribou Lake, and Diamond Ridge.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- High volume of tourism in summer. Consider addressing seasonal visitors and sharing fire education messaging to tourists using signage on heavily trafficked roads.
- Tsunami evacuation route well marked.
- Suggestion to create a trails network as a fuel break

Fire Department Concerns:

- Goals (in order of importance): training, hazardous fuels reduction, ecological management
- Would like to purchase a couple of new brush trucks
- Would like ATV or UTV to increase access into narrow areas.
- Would like a Class A Pumper
- Areas of risk depend upon the fire season and conditions.
- Area north of the airport is a concern due to grass/fine fuel hazard.
- Sprucewood Drive area is a concern due to no hydrants.
- Areas along the bluff are more inaccessible and have slow response times.
- Easter Day Road and North Fork Fire Area is a concern due to continued fire danger. Need Firewise recommendations applied in the area.
- Evacuation concerns for communities in eastern portion. Russian villages – Razdolna- would be impossible to evacuate. They need a safety zone so they can shelter in place. Would require fuel treatments and education to community members. Hayfields (only if hayed) could provide shelter in place.
- Kachemak Selo – switchbacks and slow response and evacuation. Beach could be a safety zone in worst case scenario
- Firewise program used to be more active. It has stagnated recently. Need to reinvigorate.

Figure D.13. The Homer WUI is composed of some scattered homes transitioning to more densely populated urban area.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES HOPE POLYGON SUMMARY STATISTICS

Community Description

Hope lies on the northern end of Kenai Peninsula, on the south shore of the Turnagain Arm of Cook Inlet. The community lies on the 17-mile Hope Highway, northwest of the Seward Highway, near the mouth of Resurrection Creek. It lies at approximately 60.920280° North Latitude and -149.64028° West Longitude. Hope is in the Seward Recording District. The area encompasses 51.6 sq. miles of land. Winter temperatures range from 14 to 27; summer temperatures vary from 45 to 65. Average annual precipitation is 20 inches. Fire protection is provided to the Hope area by the Hope-Sunrise Volunteer Fire Department (HSVFD). Other fire agencies, for example, USFS, Moose Pass Volunteer Fire Department, Girdwood Fire Department are at a minimum 45 minutes to one hour away. The HSVFD and the Forest Service have a joint cooperative agreement in place (E&E, 2006b). Additional information about community background and demographics can be found in the community CWPP (E&E, 2006b).

<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Hope-Sunrise-Summit Lake Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • History of fire occurrence: low • Humid environment • Street signs: visible and reflective 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Ingress and egress: non-surfaced road with narrow sections throughout community • Ingress and egress: limited turnaround space for some homes • Building construction: combustible siding • Decking and fencing: combustible • Vegetation type: timber is thick and continuous adjacent to community; coastal and riparian vegetation close to town; beetle killed trees • Topography: steep and variable topography along access route • Separation of adjacent structures: minimal • Water source: no water availability • Utility placement: aboveground • Severe weather potential- extreme winds

Suggested Mitigation Focus AreaAreas of Concern

- Utility ROW (Hope-Sunrise-Summit Lake CWPP 2006).
- Critical infrastructure: roads and powerlines (Hope-Sunrise-Summit Lake CWPP 2006).
- Prioritize fire breaks based on fuel hazard (see 2006 plan) (Hope-Sunrise-Summit Lake CWPP 2006).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Develop strategies for evacuation and alternative ingress/egress routes.
- Promote individual homeowner preparedness.
- Identify vulnerable populations that require additional assistance for evacuation.
- Map water locations available for strategic firefighting.
- Create alternative ingress/egress route for Hope (currently only one ingress/egress).
- Implement a volunteer fire wise community program and associated home inspections (Hope-Sunrise-Summit Lake CWPP 2006).
- Educate community about vigilance during electrical storms, windstorms and camping (Hope-Sunrise-Summit Lake CWPP 2006).
- Utilize town meeting format for public education and preparedness (Hope-Sunrise-Summit Lake CWPP 2006).
- Implement fuel breaks along slopes above Hope Road (Hope-Sunrise-Summit Lake CWPP 2006).
- Purchase community satellite phones for emergency communications (Hope-Sunrise-Summit Lake CWPP 2006).
- Build economic community capacity (Hope-Sunrise-Summit Lake CWPP 2006).
- Define and promote stewardship contracting (Hope-Sunrise-Summit Lake CWPP 2006).
- Create water resources map (Hope-Sunrise-Summit Lake CWPP 2006).
- Appeal to USFS to create year-round fire training center in Hope (Hope-Sunrise-Summit Lake CWPP 2006).
- Develop and execute annual pre-season exercises with agency partners (Hope-Sunrise-Summit Lake CWPP 2006).
- Establish fire patrols during peak season (Hope-Sunrise-Summit Lake CWPP 2006).
- Create cache of emergency supplies (water, food, medical supplies) at fire station (Hope-Sunrise-Summit Lake CWPP 2006).

Fire Department Concerns:

- Increase firefighting training
- Purchase chipper for green waste disposal
- Increasing population, new tracts of land have been developed and sold. Fire department does not have a good road map of where everyone lives, nor up-to-date records on new tracts of land.
- No street numbers on new homes
- Many homes do not have defensible space
- Community doesn't have fire break zones
- Need to improve and expand working relationship to increase training opportunities and work with other departments throughout the peninsula
- Coordinating resources and equipment throughout the peninsula. (Fire department has trucks they can loan).
- Fire Department needs an administrator, they are currently seeking funding.

Figure D.14. Hope Historic District has many historic community values at risk from wildfire.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES IONIA POLYGON SUMMARY STATISTICS

Community Description

Ionia is located on the Kenai Peninsula on the west bank of the Kasilof River, 13 miles south of the City of Kenai on the Sterling Highway at approximately 60.375053° north latitude and - 151.319077° west longitude. Ionia is in the Kenai Recording District. The area encompasses 0.2 square miles of land. January temperatures range from 4° F to 22° F. July temperatures vary from 46° F to 65° F. Average annual precipitation is 20 inches. Fire protection is provided to the Ionia area residents by KPB Central Emergency Services (CES) (KPB, 2006b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006b).

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: timber with grass or shrub understory; some fuel treatments carried out around larger buildings; large meadow areas and agricultural land create buffer to fire spread. • Defensible space: good; wood piles are moved away from main community buildings • Slope: area slope is 9% or less • Building construction: metal and composite roofs dominant • Building construction: siding materials (stucco) are fire resistive • Water sources: sprinklers, wells, and pumps 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal

Suggested Mitigation Focus AreaAreas of Concern:

- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments.
- Community buildings, agricultural and residential values at risk and need to be protected.
- Main community buildings have good access. Residential loop is narrower and has fuels close to the road.
- Community has a goal to secure water independence (ability to respond to fire without assistance from others). Working to set up sprinklers on the peaks of community building roofs.
- Community has fire mitigation plan and fire crew.
- Need to continue to remove spruce beetle killed trees (have already removed numerous trees).
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Support Firewise programs

Fire Department Concerns:

- N/A

Figure D.15. The Ionia community has many timber framed buildings, but have implemented fire protection measures with defensible space and installation of sprinklers on community buildings.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES KACHEMAK POLYGON SUMMARY STATISTICS

Community Description

The Kachemak polygon comprises Kachemak City and the separate Kachemak Emergency Service Area (KESA). The assessment averages conditions across the City and KESA.

The City of Kachemak is located adjacent to and northeast of the City of Homer on East End Road. It lies on the northern shore of Kachemak Bay, within the Kenai Peninsula Borough, approximately 59.67° north latitude and -151.43417° west longitude. Kachemak is in the Homer Recording District. The area encompasses 1.6 square miles of land. Winter temperatures average 14° F to 27° F; summer temperatures typically range from 45° F to 65° F. Average annual precipitation is 24 inches. The Homer Volunteer Fire Department (HVFD), Kachemak Emergency Services, and the Alaska Division of Forestry provide fire protection to the City of Kachemak. HVFD Fire Department firefighters are state certified at the Firefighter I, II, or Fire Officer I levels. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer (KPB, 2006e). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006e).

Critical Protection around urban areas: 99%	Full Protection around WUI: 0%
--	---------------------------------------

* Kachemak is also supported by Kachemak Emergency Service Area (KESA). KESA serves areas outside of Kachemak City boundaries.

Current Fire and Fuel Management Programs and Plans

- 2018 ALAH Action Plan
- 2019 Kenai Peninsula Borough Hazard Mitigation Plan
- 2006 City of Homer and Kachemak City Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: primarily grass with timber and shrub overstories • Building construction: metal and composite roofs dominant • Moderate defensible space • Slope: 10% to 20% (steep elevation in some areas) 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Severe fire weather potential (extreme wind shifts) • Water source: Some hydrants within Kachemak City boundaries, but no hydrants within the KESA, with exception of Russian Village of Vonesenka within the KESA protection area this only services the villages and some adjoining roads. This is a private water system fed by a 300,000 water tower.

Suggested Mitigation Focus Area

Areas of concern:

- Prioritize protection of homes, structures, and infrastructure (City of Homer and Kachemak City CWPP 2006).
- Schools and churches identified as emergency shelters in KPB disaster plan must have maintained defensible space (City of Homer and Kachemak City CWPP 2006).
- The forested area north of Beluga Lake and near Paul Banks school contains heavy hazard fuels loading (City of Homer and Kachemak City CWPP 2006).
- Skyline/West Hill, Toulon/Olson, and Bridge Creek Watershed areas (City of Homer and Kachemak City CWPP 2006).
- The water treatment plant needs to be protected from wildfire (City of Homer and Kachemak City CWPP 2006).
- Far east side of town due to poor access
- There has been a lot of new development across the area, and the fire dept has seen an increase in call volume in last few years.
- East End Road, Skyline Drive, Caribou Lake, and Diamond Ridge.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document):

- Need a lumber market and processing to support increased fuel treatments.
- Viewshed, tourism, and residential values at risk and need to be protected.
- Need to recognize the evacuation risks for communities in eastern portion. The Russian villages (Razdolna in particular) would be impossible to evacuate. They need a safety zone so they can shelter in place.
- Fuel treatments needed and education to community members. Hayfields (only if hayed) could provide shelter in place.
- Kachemak Selo has switchbacks on the roads and slow response and difficult evacuation. Beach could be a safety zone.
- Kachemak Selo may be building a new school, which potentially would be a value at risk to be protected
- Reduce thick fuels located at Olson Mountain
- The community has been implementing some defensible space in some areas and needs to continue this effort.
- Need to reinvigorate Firewise program.
- Need a green waste disposal site.
- There is a weather phenomenon in the area that contributes to extreme (180 degree) wind shifts. Observed during several recent fires.
- There are no hydrants in Kachemak area. Identify locations for strategic water storage/water tanks.
- Utilize a “pump to dump” water operation, using drafting and then transport in tanks.
- Baycrest Ski and Hiking areas & Demonstration Forest (City of Homer and Kachemak City CWPP 2006):
 - Location for demonstration projects.
 - Much of the area is state and borough lands at extreme risk for wildfire and surrounded by subdivisions.

Fire Department Concerns:

- East End Road, Skyline Drive, Caribou Lake, Diamond Ridge are highest risk
- Goals (in order of importance): training, hazardous fuels reduction, ecological management

Figure D.16. The Kachemak WUI includes some scattered homes located in varied topography.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES KALIFORNSKY POLYGON SUMMARY STATISTICS

Community Description

Kalifornsky is located on the Kenai Peninsula on the east shore of Cook Inlet. This area lies on Kalifornsky Beach Road. It lies off the Sterling Highway, 10 miles south of the City of Kenai at approximately 60.418330° north latitude and -151.29° west longitude. Kalifornsky is in the Kenai Recording District. The area encompasses 68.2 square miles of land. Winter temperatures range from 14° F to 27° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. Fire and EMS protection is provided to the Kalifornsky area residents by KPB Central Emergency Services (CES). The Alaska Division of Forestry also provides wildland fire protection to the area. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer (KPB, 2006b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006b).

<ul style="list-style-type: none"> • Ingress and egress: main highway paved, and more than one road in and out of most subdivisions • Street signs: visible and reflective • Vegetation type: timber-understory, younger and smaller-diameter trees, open forest • Building construction: metal and composite roofs dominant • Organized response: fire department in community • Water source: hydrants • Slope: minimal slope adjacent to most homes • Defensible space: moderate; yards are well-kept. 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: moderate

Suggested Mitigation Focus Area

Areas of concern

- Johnson Lake Road, Cohoe Loop, Tustumena Lake Road, North of Clamshell Lodge, The Captain Cook subdivision from Wayside Park (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- State Park hazard fuel reduction (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments on the east side of Peninsula.
- Industrial and commercial values are present in the community and need to be protected
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Support Firewise programs
- Public slash disposal site in Kasilof/Clam Gulch area (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- Continue removal of dead trees and brush piles on public and private lands (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- State Park hazard fuel reduction. Create defensible space/safe zones at State Park facilities (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).

Fire Department Concerns:

- Fuel hazards, beetle kill throughout the interface both in developed areas as well as open areas.
- Kasilof/Cohoe, Funny River, Tustumena are highest risk
- Goals (in order of importance):
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.17. Example of typical Kalifornsky landscape

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES KASILOF POLYGON SUMMARY STATISTICS

Community Description

Kasilof is located on the east shore of Cook Inlet on the Kenai Peninsula. It lies on Sterling Highway, 12 miles south of the City of Kenai at approximately 60.336920° north latitude and - 151.27665° west longitude. Kasilof is in the Kenai Recording District. The area encompasses 10.4 square miles of land. Winter temperatures range from 14° F to 27° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. Fire and EMS protection is provided to the Kasilof area residents by KPB Central Emergency Services (CES). The Alaska Division of Forestry also provides wildland fire protection to the area. DOF bases its Kenai Peninsula operations at the Kenai-Kodiak Area Office (KKAO) located in Soldotna with a seasonal field office in Homer (KPB, 2006b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006b).

Suggested Mitigation Focus Area

Areas of concern

- Johnson Lake Road, Cohoe Loop, Tustumena Lake Road, North of Clamshell Lodge, The Captain Cook subdivision from Wayside Park (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- State Park hazard fuel reduction (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- Kasilof/Cohoe, Funny River, and Tustumena.
- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments.
- Reduce heavy fuel loads on a landscape scale (interagency), target dead beetle killed trees, create additional fuel breaks around community.
- Implement aggressive fuel breaks around population centers
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Support Firewise programs
- Public slash disposal site in Kasilof/Clam Gulch area (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- Continue removal of dead trees and brush piles on public and private lands (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).
- State Park hazard fuel reduction. Create defensible space/safe zones at state park facilities (Kalifornsky/Kasilof/Cohoe/Clam Gulch CWPP, 2006).

Fire Department Concerns:

- Fuel hazards, beetle kill throughout the interface both in developed areas as well as open areas.
- Kasilof/Cohoe, Funny River, Tustumena are highest risk
- Goals (in order of importance):
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.18. The Central Emergency Services, Kasilof station serves the community.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES KENAI POLYGON SUMMARY STATISTICS

Community Description

Kenai is located on the western coast of the Kenai Peninsula, fronting Cook Inlet. It lies on the western boundary of the Kenai National Wildlife Refuge, on the Kenai Spur Highway. It is approximately 155 highway miles southwest of Anchorage via Sterling Highway. It lies at approximately 60.34° north latitude and 151.15° west longitude. Kenai is in the Kenai Recording District. The area encompasses 29.5 square miles of land. Winter temperatures range from 4° F to 22° F; summer temperatures average from 46° F to 65° F. Average annual precipitation is 20 inches. The City of Kenai Fire Department and the Alaska Division of Forestry provide fire protection to Kenai area residents. Kenai Fire Department firefighters are state certified at the Firefighter I and II levels. International Organization for Standardization (ISO) fire protection Class-3 rating has been provided in areas served by hydrants (KPB, 2006f). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006f).

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved with minimal grade • Ingress and egress: more than one road in and out • Ingress and egress: moderate turnarounds around many homes • Street signs: visible and reflective • Topography: flat • Water source: hydrants throughout community • Fire protection: fire department in community • Separation of adjacent structures: mixed • Building construction: metal and composite roofs dominant 	<ul style="list-style-type: none"> • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground • Vegetation: spruce bark beetle mortality; combination of timber and grass understory • Heavy density of values at risk • Significant development activity in the WUI

Suggested Mitigation Focus Area

Areas of Concern

- Kenai River Delta (Kenai Area CWPP, 2006).
- Treed gullies (Kenai Area CWPP, 2006).
- Hilly terrain (Kenai Area CWPP, 2006).
- ROW - north end of city (along Spur Road) (Kenai Area CWPP, 2006).
- Historic portion of town (Kenai Area CWPP, 2006).
- Areas behind Sears Elementary and Mtn View Elementary (Kenai Area CWPP, 2006).
- Auk Subdivision (Kenai Area CWPP, 2006).
- Beaver Creek Drainage (Kenai Area CWPP, 2006).
- State land north of Spur Highway (Kenai Area CWPP, 2006).
- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Support individual property owners making properties Firewise:
 - Targeted and coordinated public outreach campaign focused on defensible space, structure hardening etc. Utilize community events. Repeat messaging.
 - Initiate a community program for hazardous fuel reduction- chipper days, subdivision cleanup etc.
 - Develop home assessment program using an NFPA 1144 methodology or similar.
 - Consider monetary reimbursement to support landowners with costs associated with clearing property.
- Make escape route a priority for North Kenai. Consider paving.
- Create fire breaks using mechanized approaches:
 - Create 300-foot fuel break around Kenai refinery. Remove beetle killed trees.
 - Identify and implement (in conjunction with oil and gas operators) strategic fuels treatments around oil and gas infrastructure and Right of Ways throughout Kenai Gas Field areas.
 - Create fuel breaks along edges of existing subdivisions.
- Remove hazardous fuels along Beaver Creek Road
- Clear dead and dying trees out of creek gullies.
- Provide incentives (tax break, insurance reduction) to homeowners for implementing Firewise techniques (Kenai Area CWPP, 2006).
- Establish new slash disposal site (Kenai Area CWPP, 2006).
- Identify contractors who can carry out tree removal (Kenai Area CWPP, 2006).
- Pursue adoption of the International WUI Code (Kenai Area CWPP, 2006).
- Educate land developers, realtors etc., on Firewise techniques (Kenai Area CWPP, 2006).
- Provide fire prevention education at the Kenai Visitors Center (targeting tourists) (Kenai Area CWPP, 2006).
- Improve public notifications of emergency situations (Kenai Area CWPP, 2006).
- Educate residents on evacuation district procedures (Kenai Area CWPP, 2006).
- Address concerns related to smoke on highway as part of education campaign (Kenai Area CWPP, 2006).

Fire Department Concerns:

- Equipment needs- tanker and wildland engine with a CAFS unit (Kenai Area CWPP, 2006).
- Increase water supply to air retardant base (Kenai Area CWPP, 2006).
- Expand number of firefighting water storage or drafting sites (Kenai Area CWPP, 2006).
- Recruit and train more personnel (Kenai Area CWPP, 2006).
- Build a substation in Beaver Creek Area (Kenai Area CWPP, 2006).
- Provide National Incident Management training (NIMS) (Kenai Area CWPP, 2006).

Figure D.19. Some parts of the community are more urban with landscaping and minimal vegetation.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES LOWELL POINT POLYGON SUMMARY STATISTICS

Community Description

Lowell Point is located on the Kenai Peninsula, adjacent to Resurrection Bay. It is bordered to the north by Seward. Lowell Point encompasses an area of 11.9 square miles. Lowell Point is situated at approximately 60.074769° north latitude and -149.468314° west longitude. Lowell Point is in the Seward Recording District (ADNR 2021). Winter temperatures range from 4 degrees F to 27 on average. Some winters it has been 20 below. Summer temperatures vary from 45 to 65 degrees. Lowell Point Volunteer Fire Department and the Alaska Division of Forestry provide fire protection to Lowell Point residents (Lowell Point Community Council, 2021).

<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Street Signs: visible and reflective • Vegetation type: more humid forest cover • Previous fire history: low • Potential for severe weather potential: low • Building construction: metal and composite roofs dominant • Water: hydrants – No hydrants in the area – Purpose built, 20,000 Gallon underground tank with submersible pump for water source • Fire protection: fire station in community 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: one road in and out • Ingress and egress: very limited turnaround space • Defensible space: very limited • Topography: steep topography adjacent to community • Separation of adjacent structures: minimal • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground – 90% of utilities are underground

Suggested Mitigation Focus Area
<u>Areas of Concern</u> <ul style="list-style-type: none"> • Evacuation • Forest Acres subdivision and the base of Mt. Marathon.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need fire weather reports specific to this portion of the Peninsula.
- Targeted and coordinated public outreach campaign focused on defensible space, structure hardening etc. Utilize community events. Repeat messaging.
- Develop home assessment program using an NFPA 1144 methodology or similar.
- Look at options to create greater turnaround areas to improve ingress and egress of fire equipment.

Fire Department Concerns:

- Limited fire response resources. Depend on Seward for support. Mutual Automatic Aid Agreements with Seward Fire and Bear Creek
- Need strategies to address evacuation concerns.
- Need increased training options for volunteers (weekends, etc.) and more focus on wildland training.
- Need to inventory wildland PPE and provide appropriate equipment for all volunteers and new recruits.

Figure D.20. Because the community is compact and encapsulated due to topography, many homes have limited defensible space or structure separation.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES MOOSE PASS SOUTH POLYGON SUMMARY STATISTICS

Community Description

The Moose Pass area encompasses 8.3 square miles and is comprised of the communities of Moose Pass, Crown Point, Lawing, Lakeview, and Primrose. All are unincorporated communities located from 17 miles to 32 miles north of Seward. Although separate communities they all consider themselves to be part of the Moose Pass area. The communities are all located in the Seward Recording District. Winter temperatures range from 4 degrees F to 27 on average. Some winters it has been 20 below. Summer temperatures vary from 45 to 65 F. Annual precipitation ranges from 20 inches at the south end of the valley to 24 inches at the north end. The Moose Pass Volunteer Fire Company and the United States Forest Service provide initial attack efforts to community residents. Operations are based out of the fire station located at [35390 Seward Highway](#) Moose Pass (KPB, 2006c). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006c).

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Ingress and egress: good turnaround areas, short driveways • Street signs: visible and reflective • Topography: limited in WUI • Previous fire history: low • Potential for severe weather: low • Separation of adjacent structures: good • Building construction: metal and composite roofs dominant • Fire protection: station in community 	<ul style="list-style-type: none"> • Vegetation: timber and understory; spruce bark beetle; some previous treatments but have not been well maintained • Building construction: combustible siding • Defensible space: some homes have poor defensible space • Decking and fencing: combustible • Utility placement: aboveground • Water source: no water availability through hydrants; need to shuttle water

Suggested Mitigation Focus Area
<u>Areas of Concern:</u>
<ul style="list-style-type: none"> • Individual homeowner preparedness (Moose Pass Area CWPP, 2006). • Ignition concerns from road and railroad

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document):

- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening and safe debris disposal.
- Reduce heavy fuel loads on a landscape scale, target dead trees, create fuel breaks around community values at risk, especially critical infrastructure utilized for fire protection.
- Enhance fuel breaks with naturally occurring birch or willow.
- Connect previous treatments and extend from Tern Lake to the Crown Point area.
- Work with private landowners to support removal of beetle killed trees (Bean Creek Road identified as area of concern).
- Manage popular recreation sites with outreach to users.
- Seek funding for water tender (Moose Pass Area CWPP, 2006).
- Seek funding for portable water storage (Moose Pass Area CWPP, 2006).
- Seek additional USFS and DOF training opportunities (Moose Pass Area CWPP, 2006).
- Create equipment cache on north and south end of Moose Pass, Crown Point area (Moose Pass Area CWPP, 2006).
- Create a pre-attack suppression plan with a focus on protection of cultural resources (Moose Pass Area CWPP, 2006).
- Expand CERT and Fire Corps program (Moose Pass Area CWPP, 2006).
- Encourage residents to develop a secondary water source (Moose Pass Area CWPP, 2006).
- Restrict motorized access into areas where hazardous fuels exist on public lands (Moose Pass Area CWPP, 2006).

Fire Department Concerns:

- Increased response capacity, education, fuel reduction, and ignition source management.
- Fuels Hazards
- Beetle kill throughout the interface both developed and undeveloped areas
- Goals, in order of importance:
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.21. Moose Pass homes and structures are typically surrounded by forested lands, sometimes with limited defensible space.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES MOOSE PASS NORTH POLYGON SUMMARY STATISTICS

Community Description

The Moose Pass North area encompasses 9.3 square miles. Winter temperatures range from 4 degrees F to 27 on average. Some winters it has been 20 below. Summer temperatures vary from 45 to 65 degrees. Annual precipitation ranges from 20 inches at the south end of the valley to 24 inches at the north end. The Moose Pass Volunteer Fire Company and the United States Forest Service provide initial attack efforts to community residents. Operations are based out of the fire station located at 35390 Seward Highway Moose Pass (KPB, 2006c). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006c).

Figure D.22. Some homes have an abundance of yard debris and hazards that increase the risk ratings.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES NANWALEK POLYGON SUMMARY STATISTICS

Community Description

Nanwalek is located at the southern tip of the Kenai Peninsula, 10 miles southwest of Seldovia and four miles east of Port Graham. The area encompasses 8.1 square miles of land. Winter temperatures range from 14 to 27 degrees. Summer temperatures vary from 45 to 60. Average annual precipitation is 24 inches. Fire protection is provided to the area by the Alaska Division of Forestry. Wildland and structure fire equipment is provided by the Alaska State Fire Marshals' Project Code Red program. This consists of a compressed air foam system, portable pumps, and wildland fire tools. A secondary resource for wildland firefighting is the Division of Forestry personnel based in Homer, who can respond by local hire helicopter or marine vessels. The DOF, Soldotna base, hosts a contract helicopter starting in mid-April each season for wildland fire response. The ship is staffed with a helitack crew and a bucket for delivery of water drops (TAC 2008d). Additional information about community background and demographics can be found in the community CWPP (TAC 2008d).

The Bureau of Indian Affairs has trust responsibility to manage native allotment lands on behalf of their owners. The majority of the land in Nanwalek is designated as Native Allotment. Chugachmiut, a non-profit Native consortium, works as an agent for the Native landowners both Native allotment owners and Trust townsite lot owners associated with Nanwalek and Port Graham, Alaska.

** The Nanwalek VFD service area is currently installing new water lines and fire hydrants.

*** There is no list of active volunteers. However, if a fire occurs the volunteers will support suppression efforts. Chief is currently looking into options to increase recruitment.

****Chugachmiut, KPBC, and AK DOF are currently updating Fire Management options for Nanwalek and status will be changed from Full to Critical

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2008 Nanwalek Community Wildfire Protection Plan

Community Polygon NFPA 1144 Summaries**(No assessments completed during 2021 CWPP update. Desktop analysis only)**Positive Attributes (Low Scores)

- Vegetation type: more humid forest cover
- Building construction: metal and composite roofs dominant
- Fire History: low
- Values at risk: lower density

Negative Attributes (High Scores)

- Ingress and egress: Bad. Access by air and sea
- Topography: steep topography adjacent to community
- Separation of adjacent structures: minimal
- Building construction: combustible siding
- Decking and fencing: combustible
- Utility placement: aboveground

Suggested Mitigation Focus AreaAreas of Concern

- No organized fire response (Nanwalek CWPP 2008).
- No fire resources (Nanwalek CWPP 2008).
- Limited fresh water supply for fire suppression (Nanwalek CWPP 2008).
- Low fire risk (Nanwalek CWPP 2008).
- Limited fire mitigation around homes (Nanwalek CWPP 2008).
- Poor access (Nanwalek CWPP 2008).
- The Nanwalek airport is difficult to use
- An unnamed creek is the primary source of drinking water and often dries in the summer months (Bottles of drinking water need to be brought to the community during these times)
- English Bay River is extremely important for salmon fishing
- Cabins surrounding lakes which are used by community members for fishing and hunting

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Procure a small air compressor to effectively fight fire with compressed air foam (Nanwalek CWPP 2008).
- Procure a shipping container to house fire equipment (Nanwalek CWPP 2008).
- Inventory all homes for smoke detectors and fire extinguishers (Nanwalek CWPP 2008).
- Conduct Firewise assessments and home assessments to identify mitigation needs (Nanwalek CWPP 2008).
- Provide fire (structure and wildland) protection training to community members (Nanwalek CWPP 2008).
- Provide school curriculum to students on wildfire prevention and mitigation (Nanwalek CWPP 2008).
- Increase public awareness through mail campaign (Nanwalek CWPP 2008).
- Support water improvement projects, creating adequate supply for fire suppression (Nanwalek CWPP 2008).
- Sign mutual aid agreement with all South Kachemak communities for fire response (Nanwalek CWPP 2008).
- Water resources and habitat are highly valued in Nanwalek and the protection of riparian areas, fisheries, particularly for salmon, and drinking water is critical
- Many cultural values need to be protected
- Need to create a map to identify the location transmission/distribution line between Port Graham and Nanwalek and work with HEA to identify any needed upgrades to the line and/or vegetation management actions needed to enhance fire resilience and protection. There is a trail that is not maintained regularly that may be used to access the lines, but the trail is not accessible by vehicle.
- Consider enhancing ROW for the transmission line to serve as a fuel break recreational trail.
- Enhance existing road access. Look at feasibility of connecting and expanding existing road network, while protecting resources. (Currently a BIA roads project is in planning phase).
- Enhance road connections between Port Graham and Nanwalek to facilitate transport of fire crews from Port Graham airport into Nanwalek.
- Build firefighting resources and capabilities for wildland fire. Procure wildland fire equipment and PPE and identify location and resources to build appropriate storage. Provide optional training for residents in basic wildland fire fighting.
- Pre-season planning to practice bringing in resources from the sea.

- Initiate a public education campaign to inform residents of the threat of wildfire and focus efforts on encouraging defensible space practices around properties and values at risk, and preparedness and evacuation.
- Identify location(s) for evacuation shelter and safety zones and provide messaging to the community on those locations.
- Identify evacuation routes and develop maintenance schedule to ensure they remain safe routes for residents to utilize.
- Ensure that all previous treatments are maintained to preserve effectiveness.
- Identify vulnerable residents and build a plan to address preparedness and response needs for those populations.
- Improve the existing or build a new airport

Fire Department Concerns:

- Fire crews need to enter and exit Nanwalek through the Nanwalek airport, which is known to be difficult to use due to its location and the physical landscape (steep cliffs).
- Fire department is 100% volunteer and are focused on structural fires, not wildland fire.
- Do not have firefighting hand tools. Have significant equipment needs. They currently have a code red trailer, but it may not be functional. A code red trailer was brought to Nanwalek prior to 2009. The level of maintenance of the equipment is unclear.
 - Code red trailer: A trailer used to house fire response equipment
- Need to identify a designated site for evacuation and evacuation routes

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES NIKISKI POLYGON SUMMARY STATISTICS

Community Description

Nikiski is located on the Kenai Peninsula, 9 miles north of the City of Kenai, on the Kenai Spur Road. It is also known as Port Nikiski and Nikishka. It lies at approximately 60.716050° north latitude and -151.34066° west longitude. Nikiski is in the Kenai Recording District. The area encompasses 67.4 square miles of land. Winter temperatures range from -10° F to 35° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. The Nikiski Fire Department (NFD) and Alaska Division of Forestry provide fire protection to Nikiski area residents. The NFD firefighters are state-certified at the Firefighter I, II, or Fire Officer I levels (KPB, 2006g). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006g).

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Nikiski /Salamatof Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved and more than one road in and out of most subdivision areas • Street signs: visible and reflective • Vegetation type: hardwood dominant with conifer component • Building construction: metal and composite roofs dominant • Defensible space: moderate 	<ul style="list-style-type: none"> • Building construction: combustible siding • Water source: hydrants only in some areas • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Northern portion of community has poor access

Suggested Mitigation Focus Area
<u>Areas of concern</u>
<ul style="list-style-type: none"> • Captain Cook State Park mitigation and fuel reduction. Create defensible space/safe zones (Nikiski/Salamatof CWPP, 2006). • Include Cottonwood Lane and Admiralty Drive (Nikiski/Salamatof CWPP, 2006). • Empty/abandoned buildings and vehicles pose a fire/safety hazard and should be removed (Nikiski/Salamatof CWPP, 2006). • Island Lake Area, Holt-Lamplight Area, Captain Cook State Park, and KNWR. • Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments.
- The Strategic Fuel Break is adjacent to Nikiski and will continue to be extended. There is strong support for extending the fuel break and continuing to maintain the fuel break.
- Need a fill site closer to Halibouty. An underground cistern would work.
- Transient population in the Halibouty area. In the event of a wildfire, there may be people who haven't been recognized, who would need to evacuate.
- Investigate access issues including turn-around and access areas for Puppy Dog Lake, Tauriainan Trail, Goode Lake, Beck Lake, Bishops Creek, and Northwoods subdivision at Bishop Creek Bar, Halibouty Road.
- Build a fuel break from Funny River to Homer using the easement Right of Way. Integrate the fuel break with recreational uses such as snowmobilers.
- Develop community evacuation plans, with goal of developing subdivision plans. Provide outreach to educate population on evacuation routes.
- Define and provide education on "shelter in place" vs. evacuation.
- Implement education campaign on the importance of defensible space.
- Implement defensible space and hazardous fuel reduction projects within Captain Cook State Park
- Identify and implement (in conjunction with oil and gas operators) strategic fuels treatments around oil and gas infrastructure and Right of Ways throughout Kenai Gas Field areas.
- Lisburne/Pipeline is a very long road, and access problems will occur if traffic is backed up along Lisburne to Basteen. Improve section of Basteen (Nikiski/Salamatof CWPP, 2006).
- Empty/abandoned buildings and vehicles pose a fire/safety hazard and should be removed (Nikiski/Salamatof CWPP, 2006).

Fire Department Concerns:

- Island Lake Area, Holt-Lamplight Area, Captain Cook State Park and KNWR are highest risk
- Goals (in order of importance): training, hazardous fuels reduction, ecological management
- Need additional staff

Figure D.23. The community is served by the Nikiski Fire Department.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES NIKOLAESVK POLYGON SUMMARY STATISTICS

Community Description

Nikolaevsk is located inland on the Kenai Peninsula, near Anchor Point. It lies on a road leading from North Fork Road and the Sterling Highway. It was named to honor St. Nicholas, the patron saint of the town's church. It lies at approximately 59.811940° north latitude and -151.61056° west longitude. Nikolaevsk is in the Homer Recording District. The area encompasses 34.8 square miles of land. Winter temperatures range from -40° F to 37° F; summer temperatures vary from 45° F to 80° F. Average annual precipitation is 24 inches. Western Emergency Services (formerly Anchor Point Volunteer Fire Department) and the Alaska Division of Forestry provide fire protection to Anchor Point residents (KPB, 2006a). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006a).

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: mixture of timber litter, timber understory, grass and shrub fuels, open woodland, and forest patches • Defensible space: moderate • Water source: hydrants • Slope: area has a 10% to 20% slope 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: one road in and out • Building construction: combustible siding • Water source: limited numbers of hydrants but do have water tender. • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • History fire occurrence: high • Building construction: pressure-treated composite shakes and shingles

Suggested Mitigation Focus Area
<u>Areas of Concern</u> <ul style="list-style-type: none"> • Whiskey Gulch East of Sterling Highway, Old Sterling and Dusty Street area, South Fork of Anchor River land is steep, Picnic areas, such as State parks, and shooting areas need to be cleared (Anchor Point/Happy Valley/Nikolaevsk CWPP, 2006). • Bull Crossing Road is area of concern. Recent fires and poor access. • North of Nikolaevsk is very poor access. Poor maintenance of roads. Need improvements and increased Right of Way.

- Nikolaevsk, North Fork area (Anchor Point), and Oilwell Road area (Ninilchik).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Cultural values at risk in village
- Education and outreach about defensible space and home hardening is needed here as many homes are close together, homes are missing siding and have poor yard maintenance.
- There are many logging slash piles that need to be removed and managed. They increase hazard, especially in early winter when it could dry out.
- During a recent fire in Caribou Hills Fire, they observed poor access. Need to improve access.
- In poor access areas the Division of Forestry can provide heli-crews to improve access for suppression. This is more limited during a busy fire season.
- There are a lot of locked gates.
- There is a lot of potential development. Lots of platted land with poor access.
- A fuel break is needed around the community.
- Clean downed timber and piles through chipping and burns (Anchor Point/Happy Valley/Nikolaevsk CWPP, 2006).
- Provide public disposal site for brush/slash to be burned by the KPB once or twice a year (Anchor Point/Happy Valley/Nikolaevsk CWPP, 2006).

Fire Department Concerns:

- Nikolaevsk, North Fork area (Anchor Point) and Oilwell Road area (Ninilchik) are highest risk
- Goals (in order of importance): training, hazardous fuels reduction, ecological management

Figure D.24. Example of limited defensible space in Nikolaevsk.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES NINILCHIK VILLAGE POLYGON SUMMARY STATISTICS

Community Description

Ninilchik Village lies on the west coast of the Kenai Peninsula on the Sterling Highway, 38 miles southwest of the City of Kenai, and 188 road miles from Anchorage. The community lies between mileposts 119 and 144 of the Sterling Highway. It lies at approximately 60.051390° north latitude and -151.66889° west longitude. Ninilchik is in the Homer Recording District. The area encompasses 0.1 square miles of land. Winter temperatures range from 14° F to 27° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. The Ninilchik Emergency Services (NES) and the Alaska Division of Forestry provide fire protection to the Ninilchik area. The NES fire service area extends from milepost 144 to 119 on the Sterling Highway and along secondary roads, including Oil Well Road. They officially respond to wildfires located up to 1,000 feet off an established roadway (KPB, 2006h). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006h).

<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: timber with grass or shrub understory • Defensible space: moderate • Building construction: metal and composite roofs dominant • Slope: 9% or less • Water source: hydrants 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • History of fire occurrence: high

Suggested Mitigation Focus Area

Areas of Concern

- State land east of Forties along transmission line (Ninilchik Area CWPP, 2006).
- Clear rights-of-way along roadways (Ninilchik Area CWPP, 2006).
- State Park hazard fuel reduction. Create defensible space/safe zones at state park facilities (Ninilchik Area CWPP, 2006).
- The residential area north of the Ninilchik River (Ninilchik Area CWPP, 2006).
- Marion Street near Oil Well Road and Oil Well Road up to Holly (Ninilchik Area CWPP, 2006).
- Remove dead trees from along gas pipeline ROW, between the highway and the pipeline (Ninilchik Area CWPP, 2006).
- MP 120, Marathon gas pad (Ninilchik Area CWPP, 2006).
- Fuel break between the Crooked Creek Fire area running southeast to tie into fire-resistant alpine areas (Ninilchik Area CWPP, 2006).
- Nikolaevsk, North Fork area (Anchor Point), and Oilwell Road area (Ninilchik).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Need to improve access
- Some roads do not meet Borough standards
- Old Sterling Highway and New Sterling Highway have created confusion in dispatch issues due to road names. Name differentiation and clarification is needed.
- Educate the public on emergency evacuation routes, procedures, including CAN system, and shelters are needed (Ninilchik Area CWPP, 2006).
- Set up slash disposal sites. Brush chipped or incinerated by KPB equipment (Ninilchik Area CWPP, 2006).
- Create buffers and defensible space around areas of cultural value.
- Explore the potential for a Ninilchik Traditional Council fire crew. Would require training and equipment purchases.
- Integrate fire planning into existing land management plans.
- Continue to look for opportunities to combine hazardous fuels mitigation with moose habitat improvements.
- Utilize CIRI non-profits to be a conduit for outreach to native communities.

Fire Department Concerns:

- N/A

Figure D.26. Example of minimal yard maintenance contributing to hazardous fuels and poor defensible space.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES POINT POSSESSION POLYGON SUMMARY STATISTICS

Community Description

Point Possession is located on the Kenai Peninsula, 35 miles north of the City of Kenai. It lies at approximately 60.89279° north latitude and -150.62071° west longitude. Nikiski is in the Kenai Recording District. The area encompasses 40.9 square miles of land. Winter temperatures range from -10° F to 35° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. The Nikiski Fire Department (NFD) and Alaska Division of Forestry provide fire protection to Point Possession area residents. (KPB, 2006g). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006g).

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Nikiski/Salamatof Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: more deciduous and coastal vegetation (birch), lower fire danger • Previous fire history: low, not within polygon but on adjacent land • Topography: flat but cliffs • Severe weather potential: low 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: one road in and out, unsurfaced • Ingress and egress: extremely limited turnaround space • Defensible space: limited • Separation of adjacent structures: minimal • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground • Water: none; need to shuttle water, which is slow due to road conditions • Fire protection: none; Nikiski serves the area • Potential development and expansion of WUI

Suggested Mitigation Focus AreaAreas of Concern

- Rapid expansion of WUI
- Extremely limited road access
- Existing structures with poor defensible space
- Island Lake Area, Holt-Lamplight Area, Captain Cook State Park, and KNWR.
- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening and safe debris disposal.
- Determine alternative evacuation routes
- Carry out road improvements. Create turnarounds and passing spaces.
- The Borough and Nikiski Fire should clear some parcels north of Nikiski to serve as a staging area for fire resources, equipment, water for Captain Cook area and Gray Cliffs.
- Increase ROW width and roadside clearing
- Support vulnerable populations who are not able to do necessary mitigation work
- Identify and publicize potential shelter locations (Nikiski/Salamatof CWPP, 2006).
- Develop community evacuation plans (Nikiski/Salamatof CWPP, 2006).
- Develop a public notification system (Nikiski/Salamatof CWPP, 2006).
- Develop alternative telephone system (Nikiski/Salamatof CWPP, 2006).
- Consider community wide evacuation drills (Nikiski/Salamatof CWPP, 2006).
- Define and provide education on “shelter in place” vs evacuation (Nikiski/Salamatof CWPP, 2006).
- Educate new residents on fire prevention and escape routes/facilities (Nikiski/Salamatof CWPP, 2006).
- Educate school children on fire prevention and safety (Nikiski/Salamatof CWPP, 2006).
- Identify and engage absentee landowners in fuel mitigation on land yet to be developed (Nikiski/Salamatof CWPP, 2006).
- Utilize a range of forums for public education (Nikiski/Salamatof CWPP, 2006).
- Develop a list of water resources (Nikiski/Salamatof CWPP, 2006).
- Look into options for emergency power outages- generators (Nikiski/Salamatof CWPP, 2006).

Fire Department Concerns:

- Increased response capacity- additional fire fighters needed to address growing WUI
- Increase response times- road improvements
- Facilitate safe access- wider roads and turnarounds
- Create a fire cache for equipment and water storage tanks
- Have GPS, GIS and computer mapping available on all fire trucks (Nikiski/Salamatof CWPP, 2006).

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES PORT GRAHAM POLYGON SUMMARY STATISTICS

Community Description

The village of Port Graham is located close to the southern tip of the Kenai Peninsula facing Port Graham Bay, an arm of Cook Inlet. The location is approximately 24 miles southwest of Homer and is accessible by plane or boat. It is located 4 miles from Nanwalek, which is accessible by foot trail, plane, or boat. Seldovia, the nearest service center, is 7.5 miles away. The Port Graham Volunteer Fire Department and the Alaska Division of Forestry accompanied by local community resources provides fire response for the community. Fire equipment is located at a maintained and heated public safety building in the Community. Secondary fire response resources are located 25 miles away in Homer with a four person Alaska Division of Forestry fire crew. This crew historically responds via local hire helicopter or marine vessels. Soldotna State Forestry has a dedicated helicopter fire crew based in Soldotna (TAC 2008b). Additional information about community background and demographics can be found in the community CWPP (TAC 2008b).

The Bureau of Indian Affairs has trust responsibility to manage native allotment lands on behalf of their owners. The majority of the land in Port Graham is designated as Native Allotment. Chugachmiut, a non-profit Native consortium, works as an agent for the Native landowners both Native allotment owners and Trust townsite lot owners associated with Nanwalek and Port Graham, Alaska.

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2008 Port Graham Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
(No 1144 assessments completed during 2021 CWPP update. Desktop analysis only)	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Vegetation type: more humid forest cover • Building construction: metal and composite roofs dominant • Fire History: low • Values at risk: lower density 	<ul style="list-style-type: none"> • Ingress and egress: Bad. Access by air and sea • Separation of adjacent structures: minimal • Defensible space: minimal • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground

Suggested Mitigation Focus AreaAreas of Concern

- Organized fire response is limited (Port Graham CWPP, 2008).
- Low fire risk (Port Graham CWPP, 2008).
- Limited fire mitigation around homes (Port Graham CWPP, 2008).
- Poor access and slow response times (Port Graham CWPP, 2008).
- Tribal headquarters, clinic, and mush building (serves as a safe community gathering place in the event of a tsunami)
- Port Graham Corporation Fishing Cannery stores 100,000+ gallons of fuel and gasoline and serves as a source of backup generation for Port Graham and Nanwalek when there is a power outage. (Homer Electric Association must travel to Port Graham to restore power in the event of a power outage, meaning additional time is needed to respond. In the interim the community relies on the backup generation as the primary source of power.)
- Dock is important infrastructure especially for small boats

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Procure additional wildland fire equipment for the community (Port Graham CWPP, 2008).
- Procure a 4WD brush ATV for fast initial attack (Port Graham CWPP, 2008).
- Require wildland and structural fire refreshers annually (Port Graham CWPP, 2008).
- Port Graham Central Village need additional hydrants (Port Graham CWPP, 2008).
- Inventory all homes for smoke detectors and fire extinguishers (Port Graham CWPP, 2008).
- Conduct Firewise assessments and home assessments to identify mitigation needs (Port Graham CWPP, 2008).
- Provide fire (structure and wildland) protection training to community members (Port Graham CWPP, 2008).
- Provide school curriculum to students on wildfire prevention and mitigation (Port Graham CWPP, 2008).
- Increase public awareness through mail campaign (Port Graham CWPP, 2008).
- Sign mutual aid agreement with all South Kachemak communities for fire response (Port Graham CWPP, 2008).
- Provide for an annual project list of fuel reduction priorities in the WUI (Port Graham CWPP, 2008).
- Maintain clearance around airport, remove slash (Port Graham CWPP, 2008).
- Need to create a map to identify the location transmission/distribution line between Port Graham and Nanwalek and work with HEA to identify any needed upgrades to the line and/or vegetation management actions needed to enhance fire resilience and protection. There is a trail that is not maintained regularly that may be used to access the lines, but the trail is not accessible by vehicle.
- When the new road for the airport is built, it is recommended to bury the transmission line during construction.
- Look for opportunities to incorporate new development (airport and road) with enhancements for fire protection and fire response.
- Assess fire mitigation needs for cabins and infrastructure protection along road to Rocky and Windy Bay. Protect area for subsistence hunting.
- Make improvements to the road to Windy and Rocky Bay.
- Build firefighting resources and capabilities for wildland fire. Procure wildland fire equipment and PPE and identify location and resources to build appropriate storage. Provide optional training for residents in basic wildland fire fighting.
- Initiate a public education campaign to inform residents of the threat of wildfire and focus efforts on encouraging defensible space practices around properties and values at risk, and preparedness and evacuation.
- Identify location(s) for evacuation shelter and safety zones and provide messaging to the community on those locations.
- Identify evacuation routes and develop maintenance schedule to ensure they remain safe routes for residents to utilize.

Fire Department Concerns:

- Fire department is 100% volunteer and are focused on structural fires, not wildland fire.
- Significant equipment needs

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES PRIMROSE POLYGON SUMMARY STATISTICS

Community Description

Primrose is located on the Kenai Peninsula within the Moose Pass area. Primrose is an unincorporated community located approximately 26 miles north of Seward. Winter temperatures range from 4 degrees F to 27 on average. Some winters it has reached 20 below. Summer temperatures vary from 45 to 65 degrees. Annual precipitation ranges from 20 inches at the south end of the valley to 24 inches at the north end. The Moose Pass Volunteer Fire Company and the United States Forest Service provide initial attack fire protection to Primrose area residents. Operations are based out of the fire station located at 35390 Seward Highway in Moose Pass (KPB, 2006c). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006c).

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Moose Pass Area Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: good turnaround space • Street signs: visible and reflective • Previous fire history: low • Topography: some moderate slope • Severe weather potential: low • Separation of adjacent structures: good, larger lots 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out; some areas unsurfaced • Vegetation type: timber and understory high fire danger; spruce bark beetle mortality. • Defensible space: limited • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground • Water: none; need to shuttle water; could draft from lake • Fire protection: none • Values at risk: campsite and trails (potential ignition source)

Suggested Mitigation Focus Area

Areas of Concern

- Individual homeowner preparedness (Moose Pass Area CWPP, 2006).
- Lack of water system (Moose Pass Area CWPP, 2006).

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening and safe debris disposal.
- Reduce heavy fuel loads on a landscape scale, target dead trees, create fuel breaks around campground.
- Manage campsite with outreach to users on fire mitigation and campfire safety.
- Protect Primrose campground and trails (Moose Pass Area CWPP, 2006).
- Develop water sources (Moose Pass Area CWPP, 2006).
- Seek funding for portable water storage (Moose Pass Area CWPP, 2006).
- Seek funding for brush truck with CAFS (Moose Pass Area CWPP, 2006).
- Seek additional USFS and DOF training opportunities (Moose Pass Area CWPP, 2006).
- Create equipment cache on north and south end of Moose Pass, Crown Point, Primrose area (Moose Pass Area CWPP, 2006).
- Create a pre-attack suppression plan with a focus on protection of cultural resources (Moose Pass Area CWPP, 2006).
- Expand CERT and Fire Corps program (Moose Pass Area CWPP, 2006).
- Encourage residents to develop a secondary water source (Moose Pass Area CWPP, 2006).
- Restrict motorized access into areas where hazardous fuels exist on public lands (Moose Pass Area CWPP, 2006).

Fire Department Concerns:

- Increased response capacity, education, fuel reduction, and ignition source management.
- Fuels Hazards
- Beetle kill throughout the interface both developed and undeveloped areas
- Goals, in order of importance:
 - Training
 - Hazardous fuels reduction
 - Ecological management

Figure D.27. USFS camp sites adjacent to the polygon could create ignition hazards under dry conditions.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES RIDGEWAY POLYGON SUMMARY STATISTICS

Community Description

Ridgeway is an unincorporated community located on the Sterling Highway on the Kenai Peninsula. It is adjacent to the cities of Kenai, Soldotna and Sterling. Ridgeway is in the Kenai Recording District. The area encompasses 16.4 square miles of land. Central Emergency Services, volunteer fire departments, and the Alaska Division of Forestry provide fire protection to Ridgeway residents (KPB, 2009b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2009b).

Suggested Mitigation Focus Area

Areas of Concern

- Beetle killed trees
- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening, home ignition zone and safe debris disposal.
- Reduce heavy fuel loads on a landscape scale (inter-agency), target dead beetle killed trees, create additional fuel breaks around community.
- Connect with Sterling fuel break
- Increase outreach to the community on the status and progress of the Sterling Fuel Break
- Support Firewise programs
- Provide solutions for debris removal- chipper, incinerator etc.
- Assess electric grid in subdivisions and need for electric generators
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Continue Firewise home assessment project (Soldotna Ridgeway Area CWPP, 2009).
- Develop a CWPP media action plan (Soldotna Ridgeway Area CWPP, 2009).
- Provide incentives for Firewise landscaping (Soldotna Ridgeway Area CWPP, 2009).
- Provide 100 ft buffers along main roads for safe evacuation (Soldotna Ridgeway Area CWPP, 2009).
- Provide additional wildland engine for CES (Soldotna Ridgeway Area CWPP, 2009).
- Implement an evacuation planning project for the CWPP area (Soldotna Ridgeway Area CWPP, 2009).
- Joint training and exercises for fire agencies and the public (Soldotna Ridgeway Area CWPP, 2009).

Fire Department Concerns:

- Need a maneuverable squad truck
- Concerned about reduction in VFA grant funding
- Need a training solution where agency trainers can come to community.
- Need additional funding to support training

Figure D.28. Example of heavy vegetation along roadways.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES SALAMATOF POLYGON SUMMARY STATISTICS

Community Description

Salamatof is on the Kenai Peninsula, on the east shore of Cook Inlet at the mouth of Salamatof Creek, 5.5 miles northwest of the City of Kenai. It lies at approximately 60.618890° north latitude and -151.3425° west longitude. Salamatof is in the Kenai Recording District. The area encompasses 8 square miles of land. Winter temperatures range from 4° F to 22° F; summer temperatures vary from 46° F to 65° F. Average annual precipitation is 20 inches. The Nikiski Fire Department (NFD) and Alaska Division of Forestry provide fire protection to Salamatof area residents. NFD firefighters are state-certified at the Firefighter I, II, or Fire Officer I levels (KPB, 2006g). Additional information about community background and demographics can be found in the community CWPP (KPB, 2006g).

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2006 Nikiski/Salamatof Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: timber understory is dominant. • Building construction: metal and composite roofs dominant • Slopes: less than 9% • Water source: hydrants 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Building construction: combustible siding • Defensible space: poor • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal

Suggested Mitigation Focus Area
<u>Areas of Concern:</u> <ul style="list-style-type: none"> • Structures needing defensible space clearing and maintenance of fuel breaks, especially emergency shelters (Nikiski/Salamatof CWPP 2006). • Lisburne/Pipeline is a very long road, and access problems will occur if traffic is backed up along Lisburne to Basteen. Improve section of Basteen (Nikiski/Salamatof CWPP 2006). • The Grey Cliffs area is rapidly increasing in population and does not have road access (Nikiski/Salamatof CWPP 2006). • Investigate access issues including turn-around and access areas for Puppy Dog Lake, Tauriainan Trail, Goode Lake, Beck Lake, Bishops Creek, and Northwoods subdivision at Bishop Creek Bar, Halibouty Road (Nikiski/Salamatof CWPP 2006). • Empty/abandoned buildings and vehicles pose a fire/safety hazard and should be removed (Nikiski/Salamatof CWPP 2006).

- Captain Cook State Park mitigation and fuel reduction. Create defensible space/safe zones (Nikiski/Salamatof CWPP 2006).
- Include Cottonwood Lane and Admiralty Drive (Nikiski/Salamatof CWPP 2006).
- Empty/abandoned buildings and vehicles pose a fire/safety hazard and should be removed (Nikiski/Salamatof CWPP 2006).
- Have access to a chipper and air curtain incinerator for slash disposal (Nikiski/Salamatof CWPP 2006).
- Island Lake Area, Holt-Lamplight Area, Captain Cook State Park, and KNWR.
- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Industrial, commercial and residential values at risk and need to be protected
- Identify and implement (in conjunction with oil and gas operators) strategic fuels treatments around oil and gas infrastructure and Right of Ways throughout Kenai Gas Field areas.

Recommendations from Salamatof Native Association, Inc

- Salamatof Native Association, Inc (SNAI) and Cook Inlet Region, Inc, known as CIRI are partners working together to create the Sterling fuel break. SNAI may do a shaded fuel break instead of full clearance.
- Protect many cultural values at risk. Identify areas of cultural importance with broad buffers using the "known sites" database.
- Protect subsistence hunting
- Maintain and restore forest health
- Focus mitigation measures on values at risk.
- Work to address ongoing beetle infestation and removal of dead trees
- Combine fuel treatments with protection and enhancement of wildlife habitat, whenever possible.
- Inventory water availability for fire suppression resources and address deficiencies with placement of mobile units or improvements to water system infrastructure.
- Address problem of unauthorized access and potential for human ignitions resulting from access violations. Education and enforcement campaign to reduce unlawful access, tree cutting and trash dumping.
- Use appropriate channels within the native community to share educational messaging regarding fire prevention and education.
- Enhance coordination between the native corporation and fire departments on fire preparedness and fire planning.
- Use the newsletter, Raven Circle, to provide information to shareholders

Fire Department Concerns:

- There are no concerns from SNAI at this time. Communication with FMOs is very good.

Figure D.29. Example of the landscape in Salamatof.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES SELDOVIA POLYGON SUMMARY STATISTICS

Community Description

The area is primarily bordered on the north side by the southern shore of Kachemak Bay. The Seldovia area encompasses 18.4 square miles and includes the first-class city of Seldovia, Seldovia Village, Seldovia Bay, the Barabara Point area, the area along Jakolof Road towards Windy River, and McDonald Spit. Fire protection is provided to the area by the Alaska Division of Forestry and Seldovia Fire & Rescue and the Barbara Heights fire department. These departments rely on volunteers and employ part time paid administrators (TAC 2008c). Additional information about community background and demographics can be found in the community CWPP (TAC 2008c).

Community Polygon NFPA 1144 Survey Summary
(No 1144 assessments completed during 2021 CWPP update. Desktop analysis only)

<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Vegetation type: more humid forest cover • Building construction: metal and composite roofs dominant • Fire History: low • Values at risk: lower density 	<ul style="list-style-type: none"> • Ingress and egress: Bad. Access by air and sea • Topography: steep topography adjacent to community • Separation of adjacent structures: minimal • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground

- Suggested Mitigation Focus Area**
- Areas of Concern:
- Structures (residential and commercial) (Seldovia CWPP, 2006).
 - Infrastructure (Seldovia CWPP, 2006).
 - Cultural sites (Seldovia CWPP, 2006).
 - Natural resource values (Seldovia CWPP, 2006).
- Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)
- The SVFD provides dispatch, EMS, and fire services. Of these, dispatch and EMS are most active, as they have low fire activity. The department is focused on maintaining current capabilities and equipment.
- Fire Department Concerns:
- Construct a pond at Barabara Point fire station (Seldovia CWPP, 2006).
 - Procure 2 water tender trucks to haul water (Seldovia CWPP, 2006).
 - Acquire additional supplies for firefighting (Seldovia CWPP, 2006).

- Provide water tanks and equipment to stage each summer at McDonald Spit (Seldovia CWPP, 2006).
- Procure an additional ATV trailer and pump to fill foal units (Seldovia CWPP, 2006).
- Provide a program to distribute fire extinguishers and smoke detectors for residents (Seldovia CWPP, 2006).
- An incentive and retention program is necessary to keep volunteers active within the fire department (Seldovia CWPP, 2006).
- Present a mutual aid request to SOS for the use of their oil spill skiff for fire emergencies along the waterfront areas of the CWPP (Seldovia CWPP, 2006).
- Maintaining a reasonable capacity for a small community (Seldovia CWPP, 2006).
- Personal and knowledge retention; managing operational and administrative demands on personnel (Seldovia CWPP, 2006).
- Equipment upkeep (Seldovia CWPP, 2006).
- Effective utilization of and respect for scarce human capital and the competing life and community demands placed on volunteers (Seldovia CWPP, 2006).
- Reliance on key personnel who may be absent from the community during incidents (Seldovia CWPP, 2006).
- Communication difficulties (Seldovia CWPP, 2006).
- Difficulty evacuating EMS patients to definitive care at times (Seldovia CWPP, 2006).
- Managing community expectations (Seldovia CWPP, 2006).

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES SEWARD POINT POLYGON SUMMARY STATISTICS

Community Description

Seward is located on Resurrection Bay, on the Kenai Peninsula. It is bordered by Lowell Point to the southwest and by Bear Creek to the northeast. Seward encompasses an area of 24.6 square miles. Seward is situated at approximately 60.105627° north latitude and -149.442973 ° west longitude. Seward is in the Seward Recording District (ADNR 2021). Winter temperatures range from 4 degrees F to 27 on average. Some winters it has been 20 below. Summer temperatures vary from 45 to 65 degrees. Annual precipitation ranges from 20 inches at the south end of the valley to 24 inches at the north end. Seward Volunteer Fire Department and the Alaska Division of Forestry provide fire protection to Seward residents (City of Seward, Alaska, 2020).

* Mutual Aid: In other events outside of structure fires, Seward, Bear Creek, and Lowell Point can request the assistance of neighboring jurisdictions through mutual aid.

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Street signs: visible and reflective • Urban character with mixture of non-burnable fuels and good road network in town • Vegetation type: more humid forest cover • Previous fire history: low • Potential for severe weather potential: low • Building construction: metal and composite roofs dominant • Water: hydrants • Fire protection: station in community 	<ul style="list-style-type: none"> • Ingress and egress: one road in and out • Topography: steep topography adjacent to community • Separation of adjacent structures: minimal • Building construction: combustible siding • Decking and fencing: combustible • Utility placement: aboveground • High density of values at risk

Suggested Mitigation Focus AreaAreas of Concern:

- Heavy concentration of values at risk
- Evacuation concerns
- Concern that residents don't understand the risk
- Forest Acres subdivision and the base of Mt. Marathon.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document):

- Need fire weather reports specific to this portion of the Peninsula.
- Targeted and coordinated public outreach campaign focused on defensible space, structure hardening etc. Utilize community events. Repeat messaging.
- Develop home assessment program using an NFPA 1144 methodology or similar.
- Develop education campaign on evacuation.
- Install a Smokey Sign for Seward with accurate weather monitoring.
- Create alternative ingress/egress route for Seward (East End Road) (Currently they only have one ingress/egress).

Fire Department Concerns:

- Evacuation concerns.
- Need increased training options for volunteers (weekends etc.) and more focus on wildland training.
- Need to inventory wildland PPE and provide appropriate equipment for all volunteers and new recruits.

Figure D.30. Homes located along forested slopes in Seward are at the greatest risk within the Seward WUI.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES SOLDOTNA POLYGON SUMMARY STATISTICS

Community Description

Soldotna is located on the Kenai Peninsula, 150 highway miles south of Anchorage, at the junction of the Sterling and Kenai Spur Highways. It lies 10 miles inland from Cook Inlet, and borders the Kenai River. It lies at approximately 60.48 degrees north latitude and 151.05 degrees west longitude. Soldotna is in the Kenai Recording District. The area encompasses 7.38 square miles of land (ADCCED 2007). Central Emergency Services and the Alaska Division of Forestry provide fire protection to Soldotna residents (KPB, 2009b). Additional information about community background and demographics can be found in the community CWPP (KPB, 2009b).

Community Polygon Summary		
Community Polygon Name: Soldotna	Total Score: 51	Rating: Moderate
Town: Soldotna		
Land Area (mi.²): 7.3*		
Population Density (people/mi.²): 596.7		
Home Density (housing units/ mi.²): 361.6		

* After review by the Core Team the land area was changed from 8.61 to 7.3. However, the land area data provided by the KPB, were used to generate the figures in this plan and do not reflect the revised values in the text.

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> Ingress and egress: more than one road in and out Ingress and egress: good turnaround space Street signs: visible and reflective Previous fire history: low Topography: minimal Vegetation type: timber and understory in some areas, but mixed with grass, urban fuels Severe weather potential: low Water: hydrants Fire protection: no fire department in community. The community of Soldotna relies on Central Emergency Services 	<ul style="list-style-type: none"> Defensible space: limited in some areas Building construction: combustible siding Decking and fencing: combustible Utility placement: aboveground Separation of adjacent structures: limited, more urban mix with smaller lots sizes Heavy concentration of values at risk Wide-spread spruce bark beetle epidemic has killed many spruce trees

Suggested Mitigation Focus Area

Areas of Concern

- Values at risk
- Kasilof/Cohoe, Funny River, and Tustumena.

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Increase fire prevention and mitigation outreach to public, with a focus on defensible space, structure hardening, home ignition zone and safe debris disposal.
- Reduce heavy fuel loads on a landscape scale (inter-agency), target dead beetle killed trees, create additional fuel breaks around community.
- Increase outreach to the community on the status and progress of existing fuel treatment work
- Support Firewise programs
- Provide solutions for debris removal- chipper, incinerator etc.
- Implement aggressive fuel breaks around population centers
- Support/foster timber industry to allow mitigation efforts while providing market for treated fuels
- Pre-season fire planning to identify critical infrastructure where point protection should be applied
- Continue Firewise home assessment project (Soldotna Ridgeway Area CWPP, 2009).
- Develop a CWPP media action plan (Soldotna Ridgeway Area CWPP, 2009).
- Provide incentives for Firewise landscaping (Soldotna Ridgeway Area CWPP, 2009).
- Provide 100 ft buffers along main roads for safe evacuation (Soldotna Ridgeway Area CWPP, 2009).
- Provide additional wildland engine for CES (Soldotna Ridgeway Area CWPP, 2009).
- Implement an evacuation planning project for the CWPP area (Soldotna Ridgeway Area CWPP, 2009).
- Joint training and exercises for fire agencies and the public (Soldotna Ridgeway Area CWPP, 2009).

Fire Department Concerns:

- Need a maneuverable squad truck
- Concerned about reduction in VFA grant funding
- Need a training solution where agency trainers can come to community.
- Need additional funding to support training
- Upgrade radios
- Seek funding to purchase a boat

Figure D.31. Example of Soldotna homes located in heavy forested areas with poor defensible space.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES STERLING POLYGON SUMMARY STATISTICS

Community Description

Sterling is located on the Sterling Highway near the junction of the Moose and Kenai Rivers, 18 miles east of the City of Kenai. The Sterling area encompasses 77.1 square miles. It lies at approximately 60.53 degrees north latitude and 150.76 degrees west longitude. Sterling is in the Kenai Recording District. The Sterling Central Emergency Services station and the Alaska Division of Forestry provides fire protection to Sterling residents (KPB, 2009c). Additional information about community background and demographics can be found in the community CWPP (KPB, 2009c).

Fire Management Options:				
Critical Protection around urban areas: 68%			Full Protection around WUI: 12%	

* USFWS lands within Sterling are also supported by the Kenai National Wildlife Refuge.

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan • 2009 Sterling Community Wildfire Protection Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Ingress and egress: main highway paved • Street signs: visible and reflective • Vegetation type: timber with grass or shrub understory. • Building construction: metal and composite roofs dominant • Slope: 10% to 20% • Water source: hydrants 	<ul style="list-style-type: none"> • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Separation of adjacent structures: minimal • Defensible space: poor • History of fire occurrence: high • Severe fire weather potential • Only one fire station in the area, and some of the outlying areas are more than 5 miles away

Suggested Mitigation Focus AreaAreas of Concern:

- Kasilof/Cohoe, Funny River, and Tustumena.
- Sterling, Nikiski, and Kenai

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Need a lumber market and processing to support increased fuel treatments
- Many standing dead bark beetle trees and need to be removed
- Morgan Landing State Park and Industrial values at risk to be protected
- Homes around river are surrounded by riparian fuels and need fuel reduction
- Potential for new growth and development. New roads have been developed, but homes not built yet. Opportunity to plan with the goal of reducing wildfire risk.
- Continue to maintain and expand Strategic Fuel Break (about 200 – 350 feet wide) including Western Extension of Sterling (Ridgeway) and Nikiski to Grey Cliffs. Maintenance already completed includes mastication to keep grass to a minimum.
- Outreach to the public about progress on the fuel break is requested by members of the public.
- Education about risk is needed.
- Support Firewise programs
- Remove hazardous fuels along Swansong Road
- Provide turnouts on the Sterling Highway and all major roads to reduce congestion in an emergency (Sterling CWPP, 2009).
- Develop project to seek funding for State Park Recreation Site(s) hazard fuels removal (Sterling CWPP, 2009).
- Develop public access program on borough, state, and federal lands. Provide for a streamlined permitting process that targets hazard fuels removal and utilization (fuel-wood cutting) (Sterling CWPP, 2009).
- Develop Sterling area road fuels reduction projects to improve access during fire situations (Sterling CWPP, 2009).
- Identify slash disposal (woodlot) sites and firewood cutting areas (Sterling CWPP, 2009).
- Identify opportunities for underground utilities to reduce ignitions (Sterling CWPP, 2009).
- Widen utility Right of Ways for use as fire breaks. Correct easement mapping errors (Sterling CWPP, 2009).
- Identify High Hazards on absentee landowner's property and coordinate woody debris disposal (Sterling CWPP, 2009).

Fire Department Concerns:

- Fuel hazards, beetle kill throughout the interface both in developed areas as well as open areas.
- Goals (in order of importance): Training, hazardous fuels reduction, ecological management

Figure D.32. Example of road conditions (narrow and unsurfaced) with limited defensible space.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES SUNRISE POLYGON SUMMARY STATISTICS

Community Description

Sunrise is located 7 miles southeast of Hope, at the mouth of Sixmile Creek, on the south shore of the Turnagain Arm of Cook Inlet. The community lies on the Hope Highway, northwest of the Seward Highway in the Kenai Peninsula Borough. It lies at approximately 60.889720° North Latitude and -149.42111° West Longitude. Sunrise is in the Seward Recording District. The area encompasses 12.9 sq. miles of land. Winter temperatures range from 14 to 27; summer temperatures vary from 45 to 65. Average annual precipitation is 20 inches. Fire protection is provided to the Sunrise area by the Hope-Sunrise Volunteer Fire Department (HSVFD). Other fire agencies, for example, USFS, Moose Pass Volunteer Fire Department, Girdwood Fire Department are at a minimum 45 minutes to one hour away. The HSVFD and the Forest Service have a joint cooperative agreement in place (E&E, 2006b). Additional information about community background and demographics can be found in the community CWPP (E&E, 2006b).

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u> <ul style="list-style-type: none"> • Street signs: visible and reflective • Vegetation type: timber litter and hardwood mixture, moving into shrub at higher elevation • Slope: less than 9% • Building construction: metal and composite roofs dominant • Water source: hydrants 	<u>Negative Attributes (High Scores)</u> <ul style="list-style-type: none"> • Ingress and egress: one road in and out • Building construction: combustibile siding • Utility placement: aboveground • Decking and fencing: combustibile • Separation of adjacent structures: minimal • Defensible space: poor • Topographic features: steep terrain and potential for channeling of winds

Suggested Mitigation Focus Area
<u>Areas of Concern:</u> <ul style="list-style-type: none"> • N/A
<u>Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)</u> <ul style="list-style-type: none"> • Need a lumber market and processing to support increased fuel treatments • Clear powerline right-of-way to the maximum extent possible as it parallels Hope Highway, coordinate with Chugach Electric, DOT, and USFS (Hope-Sunrise-Summit Lake CWPP, 2006).
<u>Fire Department Concerns:</u> <ul style="list-style-type: none"> • Increase firefighting training • Purchase chipper for green waste disposal

- Increasing population, new tracts of land have been developed and sold. Fire department does not have a good road map of where everyone lives, nor up-to-date records on new tracts of land.
- No street numbers on new homes
- Many homes do not have defensible space
- Community doesn't have fire break zones
- Need to improve and expand working relationship to increase training opportunities and work with other departments throughout the peninsula
- Coordinating resources and equipment throughout the peninsula. (Fire department has trucks they can loan).
- Fire Department needs an administrator and is currently seeking funding.

Figure D.33. Example of the landscape in Sunrise.

KENAI PENINSULA BOROUGH WILDLAND URBAN INTERFACE COMMUNITIES TYONEK POLYGON SUMMARY STATISTICS

Community Description

Tyonek Point is located on the Kenai Peninsula, across from Point Possession. It is bordered by Beluga to the northeast and encompasses an area of 66.8 square miles. Tyonek Point is situated at approximately 61.068580° north latitude and -151.224956° west longitude. Tyonek Point is in the Anchorage Recording District (ADNR, 2021). Winter temperatures range from -10° F to 35° F; summer temperatures vary from 45° F to 65° F. Average annual precipitation is 24 inches. Tyonek Volunteer Fire Department and the Nikiski Fire Service provide fire protection to Tyonek residents (KPB, 2021b).

Current Fire and Fuel Management Programs and Plans
<ul style="list-style-type: none"> • 2018 ALAH Action Plan • 2019 Kenai Peninsula Borough Hazard Mitigation Plan

Community Polygon NFPA 1144 Survey Summary	
<u>Positive Attributes (Low Scores)</u>	<u>Negative Attributes (High Scores)</u>
<ul style="list-style-type: none"> • Values at risk: Low population density • Separation of adjacent structures: good • Slope: area has minimal slope • Street signs: visible and reflective • Building construction: metal and composite roofs dominant 	<ul style="list-style-type: none"> • Ingress and egress: Very inaccessible. Sea and air access only • Building construction: combustible siding • Utility placement: aboveground • Decking and fencing: combustible • Vegetation type: timber understory- flammable • Fire response from Nikiski

Suggested Mitigation Focus Area

Areas of Concern:

- Island Lake Area, Holt-Lamplight Area, Captain Cook State Park, and KNWR.
- Village of Tyonek
- Fish camps along the coast
- Historical sites along the coast
- Church and school are used as emergency shelters
- Timber camp
- 2nd Lake (primary source of drinking water)

Summary of Mitigation Needs (for details, see Recommendation Matrices in main document)

- Increase defensible space around values at risk and safety shelters including the garden, historic church, school, tribal center, historical homesteads, non-government recognized historical sites, timber camp, historical sites along the coast, and archeological sites in Shirleyville.
- Maintain significant defensible space around the fuel station and plan for periodic maintenance.
- Implement understory thinning and overall fuel reduction in areas determined to be at risk of intense fire behavior as determined by the risk assessment.
- Relocate wood piles to 100+ feet away from structures and install a fire break with a 10-foot buffer around the wood pile.
- Increase fuel free buffers along roads to prevent fire jumping the road. Remove or prune alder trees that impede on the roadways.
- Implement a backup evacuation route to prevent the Tyonek fire evacuation situation.
- Partner with logging companies to harvest and sell beetle kill wood or look for opportunities to utilize as fuel wood.
- Implement regular wildland fire training events for local volunteer fire responders.
- Increase defensible space and road access – install fuel breaks and response vehicle turn-outs along narrow roads.
- Install firebreaks around all above ground utility tanks with a 15-foot buffer.
- Distribute wildfire education resources in regard to home hardening, defensible space, structural ignitability, and how to shelter in place if you will not evacuate.
- Consider the use of prescribed fire (where appropriate) to maintain grassland areas.
- Implement fuel breaks in strategic locations to slow fire spread, for example in areas perpendicular to prevailing winds on the edge of the community.
- Need wider fuel breaks at the lakes closer to village to provide more effective fire mitigation.
- Host firefighter recruitment events.

Fire Department Concerns:

- Need volunteers for local fire department
- Need training to respond to wildfire and to do prescribed burns
- Many homes have diesel fuel tanks connected to them

APPENDIX F:

Funding Sources

SWCA

FEDERAL FUNDING INFORMATION

Source: Pre-disaster Mitigation (PDM) Grant Program

Agency: Department of Homeland Security (DHS) Federal Emergency Management Agency (FEMA)

Website: <http://www.fema.gov/government/grant/pdm/index.shtm>

Description: The DHS includes FEMA and the U.S. Fire Administration. FEMA's Federal Mitigation and Insurance Administration is responsible for promoting pre-disaster activities that can reduce the likelihood or magnitude of loss of life and property from multiple hazards, including wildfire. The Disaster Mitigation Act of 2000 created a requirement for states and communities to develop pre-disaster mitigation plans and established funding to support the development of the plans and to implement actions identified in the plans. This competitive grant program, known as PDM, has funds available to state entities, tribes, and local governments to help develop multi-hazard mitigation plans and to implement projects identified in those plans. **The Pre-Disaster Mitigation program is currently in process of transitioning to the Building Resilient Infrastructure and Communities (BRIC) program.** BRIC will support states, local communities, tribes, and territories as they undertake hazard mitigation projects, reducing the risks they face from disasters and natural hazards. The BRIC program guiding principles are supporting communities through capability- and capacity-building; encouraging and enabling innovation; promoting partnerships; enabling large projects; maintaining flexibility; and providing consistency. You can find more information on the BRIC program here: <https://www.fema.gov/grants/mitigation/building-resilient-infrastructure-communities>

Source: Infrastructure Investments and Jobs Act

Agency: Secretary of the Interior and the Secretary of Agriculture

Website: <https://www.congress.gov/bill/117th-congress/house-bill/3684>

Description: There is authorized to be appropriated to the Secretary of the Interior and the Secretary of Agriculture, acting through the Chief of the Forest Service, for the activities described in subsection (c), \$3,369,200,000 for the period of fiscal years 2022 through 2026.

- Subsection (c):
 - o (1) \$20,000,000 shall be made available for entering into an agreement with the Administrator of the National Oceanic and Atmospheric Administration to establish and operate a program that makes use of the Geostationary Operational Environmental Satellite Program to rapidly detect and report wildfire starts in all areas in which the Secretary of the Interior or the Secretary of Agriculture has financial responsibility for wildland fire protection and prevention, of which—
 - (A) \$10,000,000 shall be made available to the Secretary of the Interior; and
 - (B) \$10,000,000 shall be made available to the Secretary of Agriculture;
 - o (2) \$600,000,000 shall be made available for the salaries and expenses of Federal wildland firefighters
 - o (3) \$10,000,000 shall be made available to the Secretary of the Interior to acquire technology and infrastructure for each Type I and Type II incident management team to maintain interoperability with respect to the radio frequencies used by any responding agency;

- (4) \$30,000,000 shall be made available to the Secretary of Agriculture to provide financial assistance to States, Indian Tribes, and units of local government to establish and operate Reverse-911 telecommunication systems;
- (5) \$50,000,000 shall be made available to the Secretary of the Interior to establish and implement a pilot program to provide to local governments financial assistance for the acquisition of slip-on tanker units to establish fleets of vehicles that can be quickly converted to be operated as fire engines;
- (6) \$1,200,000 shall be made available to the Secretary of Agriculture, in coordination with the Secretary of the Interior, to develop and publish, not later than 180 days after the date of enactment of this Act, and every 5 years thereafter, a map depicting at-risk communities (as defined in section 101 of the Healthy Forests Restoration Act of 2003 (16 U.S.C. 6511) including Tribal at-risk communities;
- (7) \$100,000,000 shall be made available to the Secretary of the Interior and the Secretary of Agriculture for—
 - preplanning fire response workshops that develop
 - (I) potential operational delineations; and
 - (II) select potential control locations; and
 - (ii) workforce training for staff, non-Federal firefighters, and Native village fire crews for—
 - (I) wildland firefighting; and
 - (II) increasing the pace and scale of vegetation treatments, including training on how to prepare and implement large landscape treatments
- (8) \$20,000,000 shall be made available to the Secretary of Agriculture to enter into an agreement with a Southwest Ecological Restoration Institute established under the Southwest Forest Health and Wildfire Prevention Act of 2004 (16 U.S.C. 6701 et seq.)
- (9) \$20,000,000 shall be available for activities conducted under the Joint Fire Science Program
- (10) \$100,000,000 shall be made available to the Secretary of Agriculture for collaboration and collaboration-based activities, including facilitation, certification of collaboratives, and planning and implementing projects under the Collaborative Forest Landscape Restoration Program established under section 4003 of the Omnibus Public Land Management Act of 2009 (16 U.S.C. 7303)
- (11) \$500,000,000 shall be made available to the Secretary of the Interior and the Secretary of Agriculture for—
 - (i) conducting mechanical thinning and timber harvesting in an ecologically appropriate manner that maximizes the retention of large trees, as appropriate for the forest type, to the extent that the trees promote fire-resilient stands; or
 - (ii) precommercial thinning in young growth stands for wildlife habitat benefits to provide subsistence resources
 - (12) \$500,000,000 shall be made available to the Secretary of Agriculture, in cooperation with States, to award community wildfire defense grants to at-risk communities in accordance with subsection (f)
 - (13) \$500,000,000 shall be made available for planning and conducting prescribed fires and related activities

- (14) \$500,000,000 shall be made available for developing or improving potential control locations, in accordance with paragraph (7)(A)(i)(II), including installing fuelbreaks (including fuelbreaks studied under subsection (i)), with a focus on shaded fuelbreaks when ecologically appropriate
- (15) \$200,000,000 shall be made available for contracting or employing crews of laborers to modify and remove flammable vegetation on Federal land and for using materials from treatments to the extent practicable, to produce biochar and other innovative wood products, including through the use of existing locally based organizations that engage young adults, Native youth, and veterans in service projects, such as youth and conservation corps
- (16) \$200,000,000 shall be made available for post-fire restoration activities that are implemented not later than 3 years after the date that a wildland fire is contained
- (17) \$8,000,000 shall be made available to the Secretary of Agriculture—
 - (A) to provide feedstock to firewood banks; and
 - (B) to provide financial assistance for the operation of firewood banks; and
- (18) \$10,000,000 shall be available to the Secretary of the Interior and the Secretary of Agriculture for the procurement and placement of wildfire detection and real-time monitoring equipment, such as sensors, cameras, and other relevant equipment, in areas at risk of wildfire or post-burned areas.

Source: RAISE Discretionary Grants**Agency:** U.S. Department of Transportation (DOT)**Website:** <https://www.transportation.gov/RAISEgrants> and <https://www.transportation.gov/sites/dot.gov/files/2021-06/FR%20NOFO%20RAISE.pdf>**Description:** The Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Discretionary Grant Program provides for the DOT to invest in road, rail, transit, and port projects. Applications for projects to build and repair critical portions of the nation's transportation networks are reviewed by the DOT and chosen based on merit. Eligible applicants include state, local, tribal, and U.S. territory governments. Grants for this program are available up to \$25 million.**Source: Rural Opportunities to Use Transportation for Economic Success (ROUTES)****Agency:** U.S. Department of Transportation (DOT)**Website:** <https://www.transportation.gov/rural>**Description:** The goal of the ROUTES Initiative is to improve how rural areas use DOT discretionary grants and credits for infrastructure projects. Since many commodities are produced in rural areas of the country, it is imperative that these areas be provided with opportunities to enhance the condition of their transportation infrastructure. This initiative seeks to provide support to rural applicants to help with their understanding of grant programs and the associated funding processes. The initiative engages with stakeholders to better understand needs and challenges, collects data on needs and benefits of rural infrastructure, and provides information and technical assistance to assist stakeholders in the grant application process.**Source: Build America Bureau****Agency:** U.S. Department of Transportation (DOT)**Website:** <https://www.transportation.gov/buildamerica/>

Description: The Build America Bureau is responsible for streamlining transportation infrastructure development projects. The Bureau is able to assist funding candidates with credit and grant opportunities as well as technical assistance. As the point of contact for states, municipalities, and project sponsors, the Bureau can provide support for federal transportation credit program applications and access to private funding opportunities. The Bureau utilizes Transportation Infrastructure Finance and Innovation Act (TIFIA) and Railroad Rehabilitation and Improvement Financing (RRIF) loan programs, private activity bonds, and INFRA grant programs to help fund projects.

Source: Hazard Mitigation Grant Program (HMGP)

Agency: FEMA

Website: <https://www.fema.gov/grants/mitigation/hazard-mitigation>

Description: The HMGP provides funding to state, local, tribal, or territorial governments (and individuals or businesses if the community applies on their behalf) to rebuild with the intentions to mitigate future losses due to potential disasters. This grant program is available *after* a presidentially declared disaster.

Source: Hazard Mitigation Grant Program (HMGP) – Post Fire

Agency: FEMA

Website: <https://www.fema.gov/grants/mitigation/post-fire>

Description: The HMGP Post Fire grant program provides assistance to communities for the purpose of implementing hazard mitigation measures following a wildfire. Mitigation measures may include:

- Soil stabilization
- Flood diversion
- Reforestation

Source: General Assistance Program

Agency: EPA

Website: <https://www.epa.gov/r10-tribal/region-10-indian-environmental-general-assistance-program-gap>

Description: In 1992, Congress passed the Indian Environmental General Assistance Program Act. Through this act, the EPA was authorized to administer General Assistance Program (GAP) grants to federally recognized tribes. Grants can be used by tribes for the purposes of planning, developing, and establishing environmental protection programs in Indian country. Additionally, grants can be applied to the development and implementation of solid and hazardous waste programs. While the majority of qualified applicants may request between \$75,000 and \$125,000, larger tribes have the ability to request higher levels of funding.

Source: Multipurpose Grants to States and Tribes

Agency: EPA

Website: <https://www.epa.gov/grants/multipurpose-grants-states-and-tribes>

Description: In 2016, Congress established the Multipurpose Grant (MPG) program to allow states and tribes to fund high-priority environmental activities at their own discretion. The EPA encourages grant recipients to use these funds to address pre- and polyfluoroalkyl substances (PFAS).

However, funds may also be used for activities such as promoting environmental justice and taking measures to address climate change. Applicants can receive a base amount of \$25,000 and an additional amount of funding based on funding received in Fiscal Year 2020.

Source: Public Assistance Grant Program

Agency: FEMA

Website: <https://www.fema.gov/assistance/public/program-overview>

Description: FEMA's Public Assistance Program provides supplemental grants to state, tribal, territorial, and local governments, and certain types of private non-profits so that communities can quickly respond to and recover from major disasters or emergencies. FEMA also encourages protection of these damaged facilities from future events by providing assistance for hazard mitigation measures during the recovery process. More detailed information is provided in the FEMA Public Assistance Program and Policy Guide.

Source: Flood Mitigation Assistance Grant

Agency: FEMA

Website: <https://www.fema.gov/grants/mitigation/floods>

Description: The Flood Mitigation Assistance Program is a competitive grant program that provides funding to states, local communities, federally recognized tribes, and territories. Funds can be used for projects that reduce or eliminate the risk of repetitive flood damage to buildings insured by the National Flood Insurance Program. FEMA chooses recipients based on the applicant's ranking of the project and the eligibility and cost-effectiveness of the project.

Source: Funding for Fire Departments and First Responders

Agency: DHS, U.S. Fire Administration

Website: <https://www.usfa.fema.gov/grants/>

Description: Includes grants and general information on financial assistance for fire departments and first responders. Programs include the Assistance to Firefighters Grant Program, Reimbursement for Firefighting on Federal Property, State Fire Training Systems Grants, and National Fire Academy Training Assistance.

Source: Emergency Management Performance Grant (EMPG)

Agency: FEMA

Website: <https://www.fema.gov/grants/preparedness/emergency-management-performance>

Description: The EMPG program provides funding to state, local, tribal, and territorial emergency management agencies with the overall goal of creating a safe and resilient nation. The two main objectives of the program are 1) closing capability gaps that are identified in the state or territory's most recent Stakeholder Preparedness Review (SPR); and 2) building or sustaining those capabilities that are identified as high priority through the Threat and Hazard Identification and Risk Assessment (THIRA)/SPR process and other relevant information sources. The grant recipient and Regional Administrator must come to an agreement on program priorities, which are crafted based on National, State, and regional priorities.

Source: Emergency Watershed Protection (EWP) Program

Agency: Natural Resources Conservation Service (NRCS)

Website: <https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/landscape/ewpp/>

Description: The program offers technical and financial assistance to help local communities relieve imminent threats to life and property caused by floods, fires, windstorms, and other natural disasters that impair a watershed.

Eligible sponsors include cities, counties, towns, conservation districts, or any federally recognized Native American tribe or tribal organization. Interested public and private landowners can apply for EWP Program recovery assistance through one of those sponsors.

EWP Program covers the following activities.

- Debris removal from stream channels, road culverts, and bridges
- Reshape and protect eroded streambanks
- Correct damaged drainage facilities
- Establish vegetative cover on critically eroded lands
- Repair levees and structures
- Repair conservation practices

Source: Emergency Conservation Program (ECP)

Agency: USDA Farm Service Agency (FSA)

Website: <https://www.fsa.usda.gov/programs-and-services/conservation-programs/emergency-conservation/index>

Description: The Emergency Conservation Program (ECP) helps farmers and ranchers to repair damage to farmlands caused by natural disasters and to help put in place methods for water conservation during severe drought. The ECP does this by giving ranchers and farmers funding and assistance to repair the damaged farmland or to install methods for water conservation. The grant could be used for restoring conservation structures (waterways, diversion ditches, buried irrigation mainlines, and permanently installed ditching system).

Source: Regional Catastrophic Preparedness Grants

Agency: FEMA

Website: <https://www.fema.gov/grants/preparedness/regional-catastrophic>

Description: The Regional Catastrophic Preparedness Grant program provides funding to increase collaboration and capacity in regard to catastrophic incident response and preparation.

Source: Specific EPA Grant Programs

Agency: Environmental Protection Agency (EPA)

Website: <https://www.epa.gov/grants/specific-epa-grant-programs>

Description: Various grant programs are listed under this site. Listed below are examples of grants offered:

- Multipurpose Grants to States and Tribes: <https://www.epa.gov/grants/multipurpose-grants-states-and-tribes>
- Environmental Education Grants: <https://www.epa.gov/education/grants>
- Environmental Justice Grants: <https://www.epa.gov/environmentaljustice/environmental-justice-grants-funding-and-technical-assistance>

Source: Environmental Quality Incentives Program (EQIP)**Agency:** National Resource Conservation Service (NRCS)**Website:** <https://www.nrcs.usda.gov/wps/portal/nrcs/main/co/programs/financial/eqip/>

Description: The Environmental Quality Incentives Program (EQIP) is a voluntary program authorized under the Agricultural Act of 2014 (2014 Farm Bill) that helps producers install measures to protect soil, water, plant, wildlife, and other natural resources while ensuring sustainable production on their farms, ranches, and working forest lands.

Source: Conservation Innovation Grants (CIG)**Agency:** National Resource Conservation Service (NRCS)**Website:** <https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/programs/financial/cig/>

Description: CIG State Component. CIG is a voluntary program intended to stimulate the development and adoption of innovative conservation approaches and technologies while leveraging federal investment in environmental enhancement and protection, in conjunction with agricultural production. Under CIG, Environmental Quality Incentives Program (EQIP) funds are used to award competitive grants to non-federal governmental or nongovernmental organizations, tribes, or individuals. CIG enables the Natural Resources Conservation Service (NRCS) to work with other public and private entities to accelerate technology transfer and adoption of promising technologies and approaches to address some of the nation's most pressing natural resource concerns. CIG will benefit agricultural producers by providing more options for environmental enhancement and compliance with federal, state, and local regulations. The NRCS administers the CIG program. The CIG requires a 50/50 match between the agency and the applicant. The CIG has two funding components: national and state. Funding sources are available for water resources, soil resources, atmospheric resources, and grazing land and forest health.

Source: Volunteer Fire Assistance Program**Agency:** U.S. Forest Service**Website:** <https://www2.illinois.gov/dnr/conservation/Forestry/Pages/VolunteerFireAssistanceProgram.aspx>

Description: U.S. Forest Service funding will provide assistance, through the states, to volunteer fire departments to improve communication capabilities, increase wildland fire management training, and purchase protective fire clothing and firefighting equipment. For more information, contact your state representative; contact information can be found on the National Association of State Foresters website.

Source: Urban and Community Forestry Program, 2021 National Urban and Community Forestry Challenge Cost Share Grant Program**Agency:** U.S. Forest Service**Website:** <https://www.fs.usda.gov/managing-land/urban-forests/ucf>

Description: U.S. Forest Service funding will provide for Urban and Community Forestry Programs that work with local communities to establish climate-resilient tree species to promote long-term forest health. The other initiative behind this program is to promote and carry out disaster risk mitigation activities, with priority given to environmental justice communities. For more information, contact a Forest Service Regional Program Manager.

Source: Fire Management Assistance Grant (FMAG)**Agency:** FEMA**Website:** <https://www.fema.gov/assistance/public/fire-management-assistance>

Description: Fire Management Assistance is available to state, local, and tribal governments for the mitigation, management, and control of fires on publicly or privately owned forests or grasslands, which threaten such destruction as would constitute a major disaster. The Fire Management Assistance declaration process is initiated when a state submits a request for assistance to the FEMA Regional Director at the time a "threat of major disaster" exists. The entire process is accomplished on an expedited basis and a FEMA decision is rendered in a matter of hours. Before a grant can be awarded, a state must demonstrate that total eligible costs for the declared fire meet or exceed either the individual fire cost threshold, which applies to single fires, or the cumulative fire cost threshold, which recognizes numerous smaller fires burning throughout a state.

Source: Clearinghouse of Federal Funding Sources; Land Resources**Agency:** Multiple**Website:** <https://ordspub.epa.gov/ords/wfc/f?p=165:512:6325285542034:::512::>

Description: The Land Finance Clearing House is a catalog of Federal funding sources for all things land related.

Examples of the types of grants found at this site are:

- Forest and Woodlands Resource Management Grant: https://sam.gov/fal/a798ad78cac749639b48270db3e86fdc/view?index=cfda&page=2&organization_id=100011100
- Environmental Education Grant: <https://www.epa.gov/education/grants>
- Public Assistance Grant Program: <https://www.fema.gov/assistance/public>
- Hazard Mitigation Grant: <https://www.fema.gov/grants/mitigation/hazard-mitigation>

Source: Clearinghouse of Federal Funding Sources; Water Resources**Agency:** Multiple**Website:** <https://ordspub.epa.gov/ords/wfc/f?p=165:12:10439242675971:::12::>

Description: The Water Finance Clearing House is a catalog of Federal funding sources for all things water related.

Examples of the types of grants found at this site are:

- Water Conservation Field Services Program: <https://www.usbr.gov/waterconservation/>
- Forestry on Indian Lands Grant: <https://www.bia.gov/>

Source: Emergency Forest Restoration Program (EFRP)**Agency:** USDA Farm Service Agency (FSA)**Website:** <https://www.fsa.usda.gov/programs-and-services/disaster-assistance-program/emergency-forest-restoration/index>

Description: The Emergency Forest Restoration Program (EFRP) helps the owners of non-industrial private forests restore forest health damaged by natural disasters. The EFRP does this by authorizing payments to owners of private forests to restore disaster damaged forests. The local FSA County Committee implements EFRP for all disasters with the exceptions of drought and

insect infestations. Eligible practices may include debris removal, such as down or damaged trees; site preparation, planting materials, and labor to replant forest stand; restoration of forestland roads, fire lanes, fuel breaks, or erosion-control structures; fencing, tree shelters; wildlife enhancement.

To be eligible for EFRP, the land must have existing tree cover; and be owned by any nonindustrial private individual, group, association, corporation, or other private legal entity.

Source: Firewise Communities

Agency: Multiple

Website: <http://www.firewise.org>

Description: Many different Firewise Communities activities are available to help homes and whole neighborhoods become safer from wildfire without significant expense. Community cleanup days, awareness events, and other cooperative activities can often be successfully accomplished through partnerships among neighbors, local businesses, and local fire departments at little or no cost.

The kind of help you need will depend on who you are, where you are, and what you want to do. Among the different activities that individuals and neighborhoods can undertake, the following often benefit from seed funding or additional assistance from an outside source:

- Thinning/pruning/tree removal/clearing on private property—particularly on very large, densely wooded properties
- Retrofit of home roofing or siding to non-combustible materials
- Managing private forest
- Community slash pickup or chipping
- Creation or improvement of access/egress roads
- Improvement of water supply for firefighting
- Public education activities throughout the community or region

Source: The National Fire Plan (NFP)

Agency: DOI & USDA

Website: https://www.federalgrantswire.com/national-fire-plan--rural-fire-assistance.html#.YUJ_Fp1KhPY and <https://www.federalgrantswire.com/national-fire-plan-wildland-urban-interface-community-fire-assistance.html#.YUT1uCuSIPZ>

Description: Many states are using funds from the NFP to provide funds through a cost-share with residents to help them reduce the wildfire risk to their private property. These actions are usually in the form of thinning or pruning trees, shrubs, and other vegetation and/or clearing the slash and debris from this kind of work. Opportunities are available for rural, state, and volunteer fire assistance.

Source: Staffing for Adequate Fire and Emergency Response (SAFER)

Agency: FEMA

Website: <https://www.fema.gov/grants/preparedness/firefighters/safer>

Description: The purpose of SAFER grants is to help fire departments increase the number of frontline firefighters. The goal is for fire departments to increase their staffing and deployment capabilities and ultimately attain 24-hour staffing, thus ensuring that their communities have adequate protection from fire and fire-related hazards. The SAFER grants support two specific

activities: (1) hiring of firefighters and (2) recruitment and retention of volunteer firefighters. When the program is used for the hiring of firefighters, it provides grants to pay for part of the salaries of newly hired firefighters over the five-year program.

Source: The Fire Prevention and Safety Grants (FP&S)

Agency: FEMA

Website: <https://www.fema.gov/grants/preparedness/firefighters/safety-awards#:~:text=Awards%20%20%20%20Organization%20%20%20,%20%20%241%2C499%2C957%20%2016%20more%20rows%20>

Description: FP&S offers support to projects that enhance the safety of the public and firefighters who may be exposed to fire and related hazards. The primary goal is to target high risk populations and mitigate high incidences of death and injury. Examples of the types of projects supported by FP&S include fire-prevention and public-safety education campaigns, juvenile fire-setter interventions, media campaigns, and arson prevention and awareness programs. In fiscal year 2005, Congress reauthorized funding for FP&S and expanded the eligible uses of funds to include firefighter safety research and development.

Source: GSA-Federal Excess Personal Property (FEPP)

Agency: USFS

Website: <https://gsaccess.gov/>

Description: The Federal Excess Personal Property (FEPP) program refers to Forest Service-owned property that is loaned to State Foresters for the purpose of wildland and rural firefighting. Most of the property originally belonged to the Department of Defense (DoD). Once acquired by the Forest Service, it is loaned to State Cooperators for firefighting purposes. The property is then loaned to the State Forester, who may then place it with local departments to improve local fire programs. State Foresters and the USDA Forest Service have mutually participated in the FEPP program since 1956.

Source: Assistance to Firefighters Grants (AFG)

Agency: FEMA

Website: <https://www.fema.gov/grants/preparedness/firefighters>.

Description: The AFG program provides resources to assist fire departments in attaining critical resources such as training and equipment.

STATE AND PRIVATE FUNDING INFORMATION

Source: Western Bark Beetle Initiative Grant Program (WBBI)

Agency: Alaska Department of Natural Resources, Division of Forestry

Website: <http://www.forestry.alaska.gov/insects/grants>

Description: The Western Bark Beetle Initiative (WBBI) is a cost-share program established for non-federal landowners within the state of Alaska for the purposes of bark beetle prevention, suppression, and restoration activities. This program provides grants for individual private landowners as well as larger non-federal landholders. A minimum of five acres is required for eligibility for this program. Additionally, a group of individual private landowners with contiguous

properties of less than five acres can pool their properties together to meet the minimum requirement by submitting a package of individual applications.

Source: Western Wildland-Urban Interface (WUI) Grants

Agency: Alaska Department of Natural Resources, Division of Forestry

Website: <http://www.forestry.alaska.gov/fire/wuigrants>

Description: The National Fire Plan (NFP) that was enacted by Congress in 2000 was initiated to address the increased severity and impacts of wildland fires. Through the NFP, the State Fire Assistance (SFA) program was developed to fund hazard mitigation projects in the Wildland-Urban Interface. The Western Wildland-Urban Interface (WUI) grants are funding opportunities provided by the SFA program to assist communities in the accomplishment of the following four goals: improved wildfire prevention, reduction of hazardous fuels, restoration of fire-adapted ecosystems, and promotion of community assistance. State and local governments, native entities, and non-profits are eligible to apply for assistance through these grants.

Source: Community Forestry Grants

Agency: Alaska Department of Natural Resources, Division of Forestry

Website: <http://www.forestry.alaska.gov/community/grants>

Description: Several community forestry grants are available to communities within the state to promote the planting of trees. Communities can receive \$100 per tree to remove invasive chokecherry trees and replace them with native species under one grant opportunity. Next, the Alaska Community Forest Council is offering Arbor Day grants in the \$200-\$500 range that can be used to plant trees or shrubs or support other activities that promote Arbor Day in Alaska. These grants are intended for local governments, schools, and nonprofit organizations. Additionally, the National Association of State Foresters (NASF) is offering cost-reimbursement grants up to \$400 for schools to plant trees on school grounds or even indoors at the school. The NASF Centennial School Tree Challenge was launched to celebrate NASF's centennial anniversary by having 100 schools plant trees in commemoration of Arbor Day. Lastly, the Alaska Division of Forestry is teaming up with Project Learning Tree (PLT) to provide program applicants with a free curriculum to connect students with the trees on their school's property or within their communities.

Source: Private Landowner Assistance Grant

Agency: Alaska Department of Natural Resources, Division of Forestry

Website: <http://www.forestry.alaska.gov/stewardship/index>

Description: The Forest Stewardship Program assists private landowners in the active management of forests, keeping lands productive, and increasing economic and environmental benefits. Eligible applicants are Alaska Native Corporations, landowners with seven or more acres capable of producing trees, and, potentially, homeowners who are at risk of wildfire with two or more acres.

Source: Alaska Firewise

Agency: National Wildfire Coordinating Group (NWCG)

Website: <http://forestry.alaska.gov/fire/firewise>

Description: Firewise is a certification process through which communities can take steps to become better prepared for wildfire. The goal of this opportunity is to encourage communities to develop protections against wildfire and to acknowledge them for doing so. The following steps need to be taken to become certified as a Firewise community: complete an assessment to

determine if the community is at risk, create a Firewise Board, develop a Community Wildfire Protection Plan, sponsor a Firewise event within the community each year, and invest a minimum of \$2 per capita in Firewise projects each year. After these steps are completed, a community can apply for certification as a Firewise community. Obtaining a certification as a Firewise community can increase chances for grant funding as preference is sometimes given to communities with the designation.

Source: Hazard Mitigation Planning Assistance

Agency: Adapt Alaska

Website: <https://adaptalaska.org/resource/get-help-with-hazard-mitigation-planning/>

Description: States and federally recognized tribes can apply directly through FEMA for assistance with hazard mitigation planning. Alternatively, tribes, cities, and boroughs can apply as sub-applicants of the State of Alaska. Grants provided by this program are to be used for Hazard Mitigation Assistance (HMA) projects. Applicants are required to have FEMA-approved hazard mitigation plans in order to receive assistance on HMA projects. The State of Alaska also provides guidance to tribes and local governments through the Division of Homeland Security and Emergency Management. For additional information, please visit:

Source: Serve Alaska

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/ServeAlaska.aspx>

Description: Through a partnership with the Corporation for National and Community Service (CNCS), Serve Alaska facilitates funding opportunities provided by AmeriCorps within the State of Alaska. The AmeriCorps grants focus on four areas: disaster services, economic opportunity, education, and environmental stewardship. Non-federal entities such as tribal organizations, higher education institutions, local governments, nonprofit organizations, and states are eligible to apply. Grantees are required to match funds based on the number of years that they have received funding from AmeriCorps.

Source: Community Assistance Program (CAP)

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/GrantandFunding/CommunityRevenueSharing.aspx>

Description: In FY16, the Alaska Legislature officially renamed Community Revenue Sharing to the Community Assistance Program (CAP). CAP was designed to provide Alaska's boroughs, cities, and unincorporated communities with funds necessary for the delivery of essential public services. These funds can be used for any public purpose that has been deemed a priority by the funding recipient to include funding fire-related activities. Payments made to eligible entities are based on the entity's classification and its population.

Source: Community Development Block Grants – Alaska

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/GrantsSection/CommunityDevelopmentBlockGrants.aspx>

Description: The Alaska Community Development Block Grant Program (CDBG) is designed to provide funding to communities for public facilities and planning activities that address issues affecting the health and safety of residents as well as those that reduce the cost of essential community services. CDBG grants are competitive single-purpose project grants with a maximum amount of \$850,000 per community. Funding is provided for three categories: community development, planning, and Special Economic Development. With the exception of Anchorage, any Alaskan municipality is eligible to apply.

Source: **Community Development Block Grants – Mitigation - Alaska**

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/GrantsSection/CDBG-MIT.aspx>

Description: The Community Development Block Grant Mitigation (CDBG-MIT) Program provides funding to eligible communities that have experienced a qualifying natural disaster. Grants are intended to be used for mitigation activities that increase resilience to disasters, reduce risk and damage to property, and lessen hardship through the minimization of impacts of future disasters. Grantees are required to submit an action plan prior to utilizing program funds.

Source: **Community Development Block Grants – Disaster Recovery - Alaska**

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/GrantsSection/CDBG-DR.aspx>

Description: In response to severe disasters, Congress has occasionally appropriated additional funds into the CDBG program for the purposes of recovery. In these instances, funds are allocated to state or local governments for the explicit purpose of filling unmet needs following the disaster. Funds must be used for necessary expenses associated with disaster relief, long-term recovery efforts, and restoration of infrastructure and housing. Additionally, funds can only be used in areas that have been Presidentially-declared disaster areas. As these funds are appropriations rather than programmatic funds, they are temporary and will not be annually renewed.

Source: **Alaska Climate Change Impact Mitigation Program (ACCIMP)**

Agency: Alaska Division of Community and Regional Affairs

Website: <https://www.commerce.alaska.gov/web/dcra/PlanningLandManagement/ACCIMP.aspx>

Description: The Alaska Climate Change Impact Mitigation Program (ACCIMP) was established to help climate-impacted communities develop plans to protect their shorelines and relocate buildings or villages as needed. The overall goal of the ACCIMP is to create climate-resilient communities through the provision of technical assistance and funding opportunities. The program uses a two-step process to accomplish its goals. First, hazard impact assessments are conducted to identify and assess hazards within a community and then to develop recommendations for mitigation. The second step is to provide community planning grants for communities to carry out some of the recommended mitigation actions developed in the assessments. For certain communities, grants are awarded on a non-competitive basis in the range of \$10,000 to no more than \$50,000 due to their status as being imminently threatened by climate change. However, once funds have been distributed to these communities, remaining funds are awarded on a competitive basis up to \$150,000 per community. To be eligible for funds, a community must have a village council or incorporated nonprofit organization that is capable of receiving and dispensing funds in accordance with program requirements.

Source: Alaska Risk MAP Program**Agency:** Alaska Division of Community and Regional Affairs and FEMA**Website:** <https://www.commerce.alaska.gov/web/dcra/PlanningLandManagement/RiskMAP.aspx>

Description: The Alaska Risk MAP Program is funded through FEMA's Cooperative Technical Partner Program and was established to increase community resilience to natural disasters. This program provides communities with hazard information, risk assessment tools, and local outreach support to help residents understand local risks, inform decision-making related to risk management, and guide local actions to reduce risk. Risk MAP is a collaborative process to help stakeholders make risk management decisions and take action to reduce the risk of hazards.

Source: Matching Awards Program (MAP)**Agency:** National Forest Foundation (NFF)**Website:** <https://www.nationalforests.org/grant-programs/map>

Description: The NFF is soliciting proposals for its Matching Awards Program (MAP) to provide funds for direct on-the-ground projects benefitting America's National Forests and Grasslands. By pairing federal funds provided through a cooperative agreement with the U.S. Forest Service with non-federal dollars raised by award recipients, MAP measurably multiplies the resources available to implement stewardship projects that benefit the National Forest System.

Source: Patagonia Environmental Grants and Support**Agency:** Patagonia**Website:** <https://www.patagonia.com/how-we-fund/>

Description: Patagonia supports innovative work that addresses the root causes of the environmental crisis and seeks to protect both the environment and affected communities. Patagonia focuses on places where they have built connections through outdoor recreation and through their network of retail stores, nationally and internationally.

Source: Leonardo DiCaprio Foundation Grants**Agency:** Leonardo DiCaprio Foundation**Website:** <https://www.rewild.org/>

Description: The foundation supports projects around the world that build climate resiliency, protect vulnerable wildlife, and restore balance to threatened ecosystems and communities.

Source: U.S. Endowment for Forestry and Communities**Agency:** U.S. Environmental Protection Agency, Natural Resources Conservation Service (NRCS), U.S. Forest Service, U.S. Department of Defense, U.S. Economic Development Agency**Website:** <https://www.usendowment.org/>

Description: As the nation's largest public charity dedicated to keeping our working forests working and ensuring their bounty for current and future generations, the Endowment deploys the creativity and power of markets to advance their mission: The Endowment works collaboratively with partners in the public and private sectors to advance systemic, transformative and sustainable change for the health and vitality of the nation's working forests and forest-reliant communities.

- Auto and roadway safety
- Teen Driver Education
- Home safety and fire prevention
- Disaster preparedness
- Disaster recovery

Source: State and Private Forestry Programs - NASF**Agency:** National Association of State Foresters (NASF)**Website:** <https://www.stateforesters.org/appropriations/>

Description: The National Association of State Foresters recommends that funds become available through a competitive grant process on Wildland Urban Interface hazard mitigation projects. State fire managers see opportunities to use both the State Fire Assistance Program and the Volunteer Fire Assistance Program to improve the safety and effectiveness of firefighters in the interface, as well as in other wildland fire situations. To ensure firefighter safety, minimize property and resource loss, and reduce suppression costs, land management agencies, property owners, local leaders, and fire protection agencies must work cooperatively to mitigate interface fire risks, as well as to ensure that wildland firefighters receive the training, information, and equipment necessary to safely carry out their responsibilities.

Source: The Urban Land Institute (ULI)**Website:** <http://www.uli.org>

Description: ULI is a 501(c)(3) nonprofit research and education organization supported by its members. The institute has more than 22,000 members worldwide, representing the entire spectrum of land use and real estate development disciplines, working in private enterprise and public service. The mission of the ULI is to provide responsible leadership in the use of land to enhance the total environment. ULI and the ULI Foundation have instituted Community Action Grants (http://www.uli.org/Content/NavigationMenu/MyCommunity/CommunityActionGrants/Community_Action_Gr.htm) that could be used for Firewise Communities activities. Applicants must be ULI members or part of a ULI District Council. Contact actiongrants@uli.org or review the web page to find your District Council and the application information.

Source: Environmental Systems Research Institute (ESRI)**Website:** <http://www.esri.com/grants>

Description: ESRI is a privately held firm and the world's largest research and development organization dedicated to geographic information systems. ESRI provides free software, hardware, and training bundles under ESRI-sponsored Grants that include such activities as conservation, education, and sustainable development, and posts related non-ESRI grant opportunities under such categories as agriculture, education, environment, fire, public safety, and more. You can register on the website to receive updates on grant opportunities.

Source: StEPP Foundation**Website:** <https://steppfoundation.org/>

Description: StEPP is a 501(c)(3) organization dedicated to helping organizations realize their vision of a clean and safe environment by matching projects with funders nationwide. The StEPP Foundation provides project oversight to enhance the success of projects, increasing the number of energy efficiency, clean energy, and pollution prevention projects implemented at the local, state, and national levels for the benefit of the public. The website includes an online project submittal system and a Request for Proposals page.

APPENDIX G: Additional Resources

SWCA

COMMUNITY WILDFIRE MITIGATION HOMEOWNERS GUIDE

This guide has been developed to provide a document that can be tailored to serve individual communities across the Peninsula. It is a resource for future education and outreach efforts. The guide 1) suggests specific measures that can be taken by homeowners to reduce structure ignitability and 2) enhances overall preparedness in the planning area by consolidating preparedness information from several organizations.

BEFORE THE FIRE—PROTECTION AND PREVENTION

Reducing Structure Ignitability

Structural Materials

Roofing—The more fire-resistant the roofing material, the better. The roof is the portion of the house that is most vulnerable to ignition by falling embers, known as firebrands. Metal roofs afford the best protection against ignition from falling embers. Slate or tile roofs are also non-combustible, and Class-A asphalt shingles are recommended as well. The most dangerous type of roofing material is wood shingles. Removing debris from roof gutters and downspouts at least twice a year will help to prevent fire, along with keeping them functioning properly.

Siding—Non-combustible materials are ideal for the home exterior. Preferred materials include stucco, cement, block, brick, and masonry.

Windows—Double-pane windows are most resistant to heat and flames. Smaller windows tend to hold up better within their frames than larger windows. Tempered glass is best, particularly for skylights, because it will not melt as plastic will.

Fencing and trellises—Any structure attached to the house should be considered part of the house. A wood fence or trellis can carry fire to the home siding or roof. Consider using nonflammable materials or use a protective barrier such as metal or masonry between the fence and the house.

If designing a new home or remodeling the existing one, do it with fire safety as a primary concern. Use nonflammable or fire-resistant materials and have the exterior wood treated with UL-approved fire-retardant chemicals. More information on fire-resistant construction can be found at <http://www.firewise.org>.

Screen off the Area Beneath Decks and Porches

The area below an aboveground deck or porch can become a trap for burning embers or debris, increasing the chances of the fire transferring to the home. Screen off the area using screening with openings no larger than one-half inch. Keep the area behind the screen free of all leaves and debris.

Firewood, Kindling, and other Flammables

Although convenient, stacked firewood on or below a wooden deck adds fuel that can feed a fire close to the home. Be sure to move all wood away from the home during the fire season. Stack all firewood uphill, at least 30 feet and preferably 100 feet from the home.

When storing flammable materials such as paint, solvents, or gasoline, always store them in approved safety containers away from any sources of ignition such as hot water tanks or furnaces. The fumes from highly volatile liquids can travel a great distance after they turn into a gas. If possible, store the containers in a safe, separate location away from the main house.

Chimneys and Fireplace Flues

The chimney and damper should be inspected at least twice a year and have the chimney cleaned every year before first use. Have the spark arrestor inspected and confirm that it meets the latest safety code. Local fire departments will have the latest edition of National Fire Prevention Code 211 covering spark arrestors. Make sure to clear away dead limbs from within 15 feet of chimneys and stovepipes.

Fireplace and Woodstove Ashes

Never take ashes from the fireplace and put them into the garbage or dump them on the ground. Even in winter, one hot ember can quickly start a grass fire. Instead, place ashes in a metal container, and as an extra precaution, soak them with water. Cover the container with its metal cover and place it in a safe location for a couple of days. Then either dispose of the cold ash with other garbage or bury the ash residue in the earth and cover it with at least 6 inches of mineral soil.

Propane Tanks

A propane tank has many hundreds of gallons of highly flammable liquid that could become an explosive incendiary source in the event of a fire. The propane tank should be located at least 30 feet from any structure. Keep all flammables at least 10 feet from the tank. Learn how to turn the tank off and on. In the event of a fire, turn the gas off at the tank before evacuating, if safety and time allow.

Smoke Alarms

A functioning smoke alarm can help warn a person of a fire in or around the home. Install smoke alarms on every level of the residence. Test and clean smoke alarms once a month and replace batteries at least once a year. Replace smoke alarms once every 10 years.

Fire-safe Behavior

- If a person smokes, always use an ashtray in the car and at home.
- Store and use flammable liquids properly.
- Keep doors and windows clear as escape routes in each room.

Defensible Space

The removal of dense, flammable foliage from the area immediately surrounding the house reduces the risk of structure ignition and allows firefighters access to protect the home. The pruning and limbing of

trees along with the selective removal of trees and shrubs is recommended to create a minimum defensible space area of 30 feet. Steep slopes require increased defensible space because fire can travel quickly uphill.

Within the minimum 30-foot safety zone, plants should be limited to fire-resistant trees and shrubs. Focus on fuel breaks such as concrete patios, walkways, rock gardens, and irrigated garden or grass areas within this zone. Use mulch sparingly within the safety zone, and focus use in areas that will be watered regularly. In areas such as turnarounds and driveways, nonflammable materials such as gravel are much better than wood chips or pine needles.

Vegetative debris such as dead grasses or leaves provide important erosion protection for soil but also may carry a surface fire. It is simply not feasible to remove all the vegetative debris from around the property. However, it is a good idea to remove any accumulations within the safety zone and extending out as far as possible. This is particularly important if leaves tend to build up alongside the house or outbuildings. Removing dead vegetation and leaves and exposing bare mineral soil are recommended in a 2-foot-wide perimeter along the foundation of the house. Also, be sure to regularly remove all dead vegetative matter including grasses, flowers, and leaf litter surrounding the home and any debris from gutters, especially during summer months. Mow the lawn regularly and promptly dispose of the cuttings properly. If possible, maintain a green lawn for 30 feet around the home.

All trees within the safety zone should have lower limbs removed to a height of 6–10 feet. Remove any branches within 15 feet of the chimney or overhanging any part of the roof. Ladder fuels are short shrubs or trees growing under the eaves of the house or under larger trees. Ladder fuels carry fire from the ground level onto the house or into the tree canopy. Be sure to remove all ladder fuels within the safety zone first. The removal of ladder fuels within about 100 feet of the house will help to limit the risk of crown fire around the home. More information about defensible space is provided at <http://www.firewise.org>.

Fire Retardants

For homeowners who would like home protection beyond defensible space and fire-resistant structural materials, fire-retardant gels and foams are available. These materials are sold with various types of equipment for applying the material to the home. They are similar to the substances applied by firefighters in advance of wildfire to prevent ignition of homes. Different products have different timelines for application and effectiveness. The amount of product needed is based on the size of the home, and prices may vary based on the application tools. Prices range from a few hundred to a few thousand dollars. An online search for "fire blocking gel" or "home firefighting" will provide a list of product vendors. Residents should research and consider environmental impacts of chemicals.

Address Posting

Locating individual homes is one of the most difficult tasks facing emergency responders. Every home should have the address clearly posted with numbers at least three inches high. The colors of the address posting should be contrasting or reflective. The address should be posted so that it is visible to cars approaching from either direction.

Access

Unfortunately, limited access may prevent firefighters from reaching many homes in the planning area. Many of the access problems occur at the property line and can be improved by homeowners. First, make sure that emergency responders can get in the gate. This may be important not only during a fire but also

to allow access during any other type of emergency response. If a person will be gone for long periods during fire season, make sure a neighbor has access, and ask them to leave the gate open in the event of a wildfire in the area.

Ideally, gates should swing inward. A chain or padlock can be easily cut with large bolt cutters, but large automatic gates can prevent entry. Special emergency access red boxes with keys are sold by many gate companies but are actually not recommended by emergency services. The keys are difficult to keep track of and may not be available to the specific personnel that arrive at the home. An alternative offered by some manufacturers is a device that opens the gate in response to sirens. This option is preferred by firefighters but may be difficult or expensive to obtain.

Beyond the gate, make sure the driveway is uncluttered and at least 12 feet wide. The slope should be less than 10%. Trim any overhanging branches to allow at least 13.5 feet of overhead clearance. Also make sure that any overhead lines are at least 14 feet above the ground. If any lines are hanging too low, contact the appropriate phone, cable, or power company to find out how to address the situation.

If possible, consider a turnaround within the property at least 45 feet wide. This is especially important if the driveway is more than 300 feet in length. Even small fire engines have a hard time turning around and cannot safely enter areas where the only means of escape is by backing out. Any bridges must be designed with the capacity to hold the weight of a fire engine.

Neighborhood Communication

It is important to talk with neighbors about the possibility of wildfire in the community. Assume that a person will not be able to return home when a fire breaks out and may have to rely on neighbors for information and assistance. Unfortunately, it sometimes takes tragedy to get people talking to each other. Don't wait for disaster to strike. Strong communication can improve the response and safety of every member of the community.

Phone Trees

Many neighborhoods use phone trees to keep each other informed of emergencies within and around the community. The primary criticism is that the failure to reach one person high on the tree can cause a breakdown of the system. However, if neighbors are willing and able, particularly those that are at home during the day, the creation of a well-planned phone tree can often alert residents to the occurrence of a wildfire more quickly than media channels. Talk to the neighborhood association about the possibility of designing an effective phone tree.

Neighbors in Need of Assistance

Ask mobility-impaired neighbors if they have notified emergency responders of their specific needs. It is also a good idea for willing neighbors to commit to evacuating a mobility-impaired resident in the event of an emergency. Make sure that a line of communication is in place to verify the evacuation.

Absentee Owners

Absentee owners are often not in communication with their neighbors. If a home nearby is unoccupied for large portions of the year, try to get contact information for the owners from other neighbors or the neighborhood association. The absentee neighbors would probably appreciate notification in the event of

an emergency. Also, it may be helpful to contact them to suggest that they move their woodpile or make sure that the propane line to the house is turned off.

Household Emergency Plan

A household emergency plan does not take much time to develop and will be invaluable in helping a family deal with an emergency safely and calmly. One of the fundamental issues in the event of any type of emergency is communication. Be sure to keep the phone numbers of neighbors accessible rather than at home.

It is a good idea to have an out of state contact, such as a family member. When disaster strikes locally, it is often easier to make outgoing calls to a different area code than local calls. Make sure everyone in the family has the contact phone number and understands why they need to check in with that person in the event of an emergency. Also, designate a meeting place for the family. Having an established meeting site helps to ensure that family members know where to go, even if they can't communicate by phone.

Children

Local schools have policies for evacuation of students during school hours. Contact the school to get information on how the process would take place and where the children would likely go.

The time between when the children arrive home from school and when other family members return home from work is the most important time frame to address. Fire officials must clear residential areas of occupants to protect lives and to allow access for fire engines and water drops from airplanes or helicopters. If the area is evacuated, blockades may prevent people from returning home to collect children. It is crucial to have a plan with a neighbor for them to pick up children if evacuation is necessary.

Pets and Livestock

Some basic questions about pets and livestock involve whether a person has the ability to evacuate the animals on their own and where to take them. Planning for the worst-case scenario may save animals. An estimated 90% of pets left behind in an emergency do not survive. Don't expect emergency service personnel to prioritize pets in an emergency. Put plans in place to protect furry family members.

Pets

Assemble a pet disaster supply kit and keep it handy. The kit should contain a three-day supply of food and water, bowls, a litter box for cats, and a manual can opener if necessary. It is also important to have extra medication and medical records for each pet. The kit should contain a leash for each dog and a carrier for each cat. Carriers of some kind should be ready for birds and exotic pets. In case a pet must be left at a kennel or with a friend, also include an information packet that describes medical conditions, feeding instructions, and behavioral problems. A photo of each pet will help to put the right instructions with the right pet.

In the event of a wildfire a person may be prevented from returning home for their animals. Talk to neighbors and develop a buddy system in case people are not home when fire threatens. Make sure a neighbor has a key and understands what to do with pets should they need to be evacuated.

Learn of locations that will accept people and pets. Contact friends and family in advance to ask whether they would be willing to care for pets. Contact hotels and motels in the area to find out which ones accept pets. Boarding kennels may also be an option. Make sure the pets' vaccinations are up-to-date if they need to be boarded.

Once pets are evacuated, continue to provide for their safety by keeping them cool and hydrated. Try to get pets to an indoor location rather than leaving them in the car. Do not leave pets in the vehicle without providing shade and water. It is not necessary to give pets water while driving but be sure to offer water as soon as the final destination is reached.

Livestock

Getting livestock out of harm's way during a wildfire is not easy. People may not be able or allowed to return home to rescue the stock during a wildfire evacuation. Talk with neighbors about how to deal with an evacuation. If livestock are encountered by emergency responders, they will be released and allowed to escape the fire on their own. Make sure livestock have some sort of identification. Ideally, the owner's contact information should be included on a halter tag or ear tag so that they could be reached if an animal is encountered.

If planning to evacuate the livestock, have a plan in place for a destination. Talk to other livestock owners in the area to find out whether they would be willing to board the stock in the event of an emergency. Often in large-scale emergencies, special accommodations can be made at fair and rodeo grounds, but personal arrangements may allow a person to respond more quickly and efficiently.

If a person does not own a trailer for horses or other livestock, talk to a neighbor who does. Find out whether they would be willing to assist in the evacuation of the animals. If a person does own a trailer, make sure it is in working condition with good, inflated tires and functioning signal lights. Keep in mind that even horses that are accustomed to a trailer may be difficult to load during an emergency. Practicing may be a good idea to make sure the animals are as comfortable as possible when being loaded into the trailer.

House and Property

Insurance companies suggest that a person make a video that scans each room of the house to help document and recall all items within the home. This video can make replacement of the property much easier in the unfortunate event of a large insurance claim. See more information on insurance claims in the "After the Fire" section below.

Personal Items

During fire season, the items one would want to take during an evacuation should be kept in one readily accessible location. As an extra precaution, it may be a good idea to store irreplaceable mementos or heirlooms away from the home during fire season.

It is important to make copies of all important paperwork, such as birth certificates, titles, and so forth, and store them somewhere away from the home, such as in a safe deposit box. Important documents can also be protected in a designated firesafe storage box within the home.

IN THE EVENT OF A FIRE

Notification

In the event of a wildfire, announcements from the local Emergency Management office will be broadcast over local radio and television stations. Media notification may be in the form of news reports or the Emergency Alert System (EAS). On television, the emergency management message will scroll across the top of the screen on local channels. The notice is not broadcast on non-local satellite and cable channels.

One good way to stay informed about wildfire is to use a National Oceanic and Atmospheric Administration weather alert radio. The radios can be purchased at most stores that carry small appliances, such as Target, Sears, or Radio Shack. The radio comes with instructions for the required programming to tune the radio to the local frequency. The programming also determines the types of events for which one wants to be alerted. The weather alert radio can be used for any type of large incident (weather, wildfire, hazardous materials, etc.), depending on how it is programmed. Local fire personnel can assist with programming if needed.

When Fire Threatens

Before an evacuation order is given for the community, there are several steps a person can take to make the escape easier and to provide for protection of the home. When evaluating what to do as fire threatens, the most important guideline is: **DO NOT JEOPARDIZE LIFE.**

Back the car into the garage or park it in an open space facing the direction of escape. Shut the car doors and roll up the windows. Place all valuables to take in the vehicle. Leave the keys in the ignition or in another easily accessible location. Open the gate.

Close all windows, doors, and vents, including the garage door. Disconnect automatic garage openers and leave exterior doors unlocked. Close all interior doors as well.

Move furniture away from windows and sliding glass doors. If there are lightweight curtains, remove them. Heavy curtains, drapes, and blinds should be closed. Leave a light on in each room.

Turn off the propane tank or shut off gas at the meter. Turn off pilot lights on appliances and furnaces.

Move firewood and flammable patio furniture away from the house or into the garage.

Connect garden hoses to all available outdoor faucets and make sure they are in a conspicuous place. Turn the water on to "charge," or fill the hoses and then shut off the water. Place a ladder up against the side of the home, opposite the direction of the approaching fire, to allow firefighters easy access to the roof.

Evacuation

When evacuation is ordered, a person needs to go **immediately**. Evacuation not only protects lives but also helps to protect property. Some roads are too narrow for two-way traffic, especially with fire engines. Fire trucks often can't get into an area until the residents are out. Also, arguably the most important tool in the WUI toolbox is aerial attack. Airplanes and helicopters can be used to drop water or retardant to help

limit the spread of the fire, but these resources cannot be used until the area has been cleared of civilians.

Expect emergency managers to designate a check-out location for evacuees. This process helps to ensure that everyone is accounted for and informs emergency personnel as to who may be remaining in the community. Every resident should check out at the designated location before proceeding to any established family meeting spot.

A light-colored sheet closed in the front door serves as a signal to emergency responders that the family has safely left. This signal saves firefighters precious time, as it takes 12–15 minutes per house to knock on each door and inform residents of the evacuation.

AFTER THE FIRE

Returning Home

First and foremost, follow the advice and recommendations of emergency management agencies, fire departments, utility companies, and local aid organizations regarding activities following the wildfire. Do not attempt to return to the home until fire personnel have deemed it safe to do so.

Even if the fire did not damage the house, do not expect to return to business as usual immediately. Expect that utility infrastructure may have been damaged and repairs may be necessary. When a person returns to the home, check for hazards, such as gas or water leaks and electrical shorts. Turn off damaged utilities if they were not previously turned off. . Have the fire department or utility companies turn the utilities back on once the area is secured.

Insurance Claims

The insurance agent is the best source of information about the actions to take in order to submit a claim. Here are some things to keep in mind. The insurance claim process will be much easier if a person photographed the home and valuable possessions before the fire and kept the photographs in a safe place away from the home. Most, if not all, of the expenses incurred during the time a person was forced to live outside the home could be reimbursable. These could include, for instance, mileage driven, lodging, and meals. Keep all records and receipts. Don't start any repairs or rebuilding without the approval of a claims adjuster. Beware of predatory contractors looking to take advantage of anxious homeowners wanting to rebuild as quickly as possible. Consider all contracts very carefully, take time to decide, and contact the insurance agent with any questions. If it appears to be a large loss, consider whether it makes sense to should hire a public adjuster that is licensed by the state department of insurance who will represent and advocate for the policyholder in appraising and negotiating the claimant's insurance claim to ensure the best outcome and recovery from the insurance company. Most public adjusters charge a small percentage of the settlement that is set by the state and primarily they appraise the damage, prepare an estimate and other claim documentation, read the policy of insurance to determine coverages, and negotiate with the insurance company's claims handler.

Post-fire Rehabilitation

Homes that may have been saved in the fire may still be at risk from flooding and debris flows. Burned Area Emergency Rehabilitation (BAER) teams are inter-disciplinary teams of professionals who work to mitigate the effects of post-fire flooding and erosion. These teams often work with limited budgets and

manpower. Homeowners can assist the process by implementing treatments on their own properties as well as volunteering on burned public lands to help reduce the threat to valuable resources. Volunteers can assist BAER team members by planting seeds or trees, hand mulching, or helping to construct straw-bale check dams in small drainages.

Volunteers can help protect roads and culverts by conducting storm patrols during storm events. These efforts dramatically reduce the costs of such work as installing trash racks, removing culverts, and re-routing roads.

Community volunteers can also help scientists to better understand the dynamics of the burned area by monitoring rain gauges and monitoring the efficacy of the installed BAER treatments.

A GUIDE TO TREE MANAGEMENT OPTIONS FOR HOME AND WOODLOT OWNERS; SPRUCE BEETLES

Spruce Beetles

A Guide to Tree Management Options for Home and Woodlot Owners

Spruce beetles can be a very serious cause of tree mortality in the spruce forests of Alaska. They occur statewide, though historically, the majority of damage has occurred in Southcentral Alaska. Spruce beetles are always present in the environment, though their activity is not always noticed. Spruce beetles are not restricted to forest stands; high-value ornamental trees in yards or community settings are also susceptible to spruce beetle.

What do spruce beetles do?

Adult spruce beetles emerge from their host tree during early summer, usually between mid-May and July. This period is referred to as the adult flight period. Once they emerge, they seek out new hosts to attack in the surrounding area. Beetles prefer to attack the lower portions of the trunk, with the majority of attacks occurring within the first 15 feet.

Adults bore through the bark into the phloem, a layer of cells just inside the bark that carries sugars created in the needles to the roots of the tree for energy. Here, the female lays eggs in a tunnel, called a gallery, that is chewed parallel to the wood. When the eggs hatch, the larvae feed outward from the gallery, severing the phloem and disrupting the transport of sugars from the needles to the roots of the tree. The tree is killed when the phloem is severed around the entire circumference of the tree.

Does it matter what species of spruce I have on my property?

Spruce beetles prefer to attack white, Sitka and Lutz spruce (the hybrid cross Sitka x white), but they rarely attack black spruce. Spruce beetles can also attack ornamental spruce species such as Norway, Engelmann and Colorado blue spruce. Spruce beetles do not attack hardwood tree species like birch or cottonwood.

Does it matter how big my trees are?

Typically, spruce beetles attack trees larger than about 12 inches in diameter, though under certain circumstances they will attack trees as small as 4 inches in diameter. Large-diameter older trees are particularly susceptible, especially if they have been stressed by lack of water or mechanical damage to the bark or roots. Crowded tree stands can be stressed as a result of competition with other trees for water and nutrients, making them more susceptible to attack.

How do I determine if my trees have been attacked?

Trees that have been attacked by spruce beetles may exhibit the following signs and symptoms:

1. **Boring dust:** A fine, reddish-brown, sawdust-like dust that is produced by the beetles as they chew entrance holes into the bark. It accumulates in cracks and crevices of the bark and around the base of the tree.
2. **Pitch tubes:** Live attacked trees will usually exhibit globules of pitch at the site of a spruce beetle entrance hole as the tree attempts to "pitch out" the attacking beetle. The pitch can range from creamy white in color to reddish-brown and is often mixed with the boring dust.
3. **Needle color change:** Live attacked trees will start to exhibit a change in needle color the year following a spruce beetle attack. Needles typically change from green to yellow to reddish-brown before falling off the tree.

Keep in mind that evidence of a spruce beetle attack may not always be visible. Trees that are severely drought-stressed may not produce enough pitch for pitch tubes, or heavily infested trees may not exhibit needle color change before the needles drop. Inspect

your trees fully and if you are unsure, contact your local Extension office or a tree care professional for help with diagnosis.

How do spruce beetles affect trees?

Trees are typically killed within the first few weeks of a severe spruce beetle attack, but it may take a year or more for the needles to begin changing color and falling off. Trees that have been killed by spruce beetles are subject to advancing stem and root rot infection and being blown over or falling down. The length of time these dead trees have until they fall varies from site to site, depending on factors such as ground moisture and wind patterns. Dead trees become an increasing hazard to structures and people, and it is recommended that concerned landowners have their trees examined by a forester or tree care specialist.

Downed trees with bark on them can also serve as host material for spruce beetles and could lead to further infestation of healthy trees nearby.

What do I do with my trees?

First, examine your tree(s) to determine if there appears to be any spruce beetle activity as previously described. Then, use the following information as a guide for managing spruce beetles based on the tree conditions described below.

The tree appears unattacked

The tree has green needles. There is no reddish-brown boring dust present in the crevices of the bark, especially at eye level and below, or on the ground at the base of the tree. No pitch tubes are evident, especially at eye level or below, including at the base of the tree or along any above-ground roots. If the tree is unattacked, use the steps below to prevent an attack.

Maintain health and vigor of trees.

Spruce beetles prefer to attack weaker trees or ones that have fallen down, so maintaining the health and vigor of your trees is important. Tree care practices such as watering and fertilizing early in the growing season will help develop and maintain healthy trees. Removal of weakened or damaged trees and downed trees with bark on them may need to be considered to protect the health of other trees on the property. Removed material should be processed using the guidelines in the following sections.

Be careful about accidentally importing the beetles to your home or lot.

Firewood or logs brought to your property may be a source of future infestation. Beetles can develop through different life stages under the bark and may emerge and attack other trees in the immediate area. Removing the bark and burning it will help ensure limited impact from spruce beetle-infested firewood or logs.

Do not damage the trees.

Be careful not to damage the trees on your lot during any construction, landscaping or tree management activities since damaged trees are more susceptible to infestation.

Thinning forest stands may reduce competition for water and nutrients by your desired trees.

Optimum stocking for tree vigor is dependent upon tree species, age and size, and growing site conditions. Select trees for removal based on evidence of physical damage, insect damage and tree form. Contact the Alaska Division of Forestry for more information. When thinning stands, process the material as described below to reduce host material in the stand. Avoid thinning trees during the adult flight period of May-July.

Prune lower branches for fully crowned trees.

Pruning should be done in the fall or winter and the branches removed from the site. Research has shown that pruning the lower branches of the tree can reduce the risk of infestation as a result of changing the environmental conditions in this portion of the tree. Avoid pruning trees during the adult flight period of May-July.

Apply a registered insecticide to prevent spruce beetle attacks.

Insecticides can be used to protect trees from spruce beetle attack. Insecticides are **preventive only** because of the nature and location of spruce beetle damage. There are two ways to apply insecticides for spruce beetle prevention. The first is by **spraying**. Spraying should be done in spring by early May in order to protect the tree prior to the beetles' emergence and adult flight period. Two active ingredients are registered and effective as sprays for spruce beetle: *carbaryl* and *permethrin*. These active ingredients may be sold under several trade names for different uses. Sprays should be applied to the trunk of the tree from

the ground up until the tree is 5 inches in diameter. If that height cannot be reached, applications should be made to at least the first 25 feet of the trunk. In this case, know that beetles may attack above the spray line.

The second way to apply insecticides is by **injection**. New product formulations and application technology allow for the direct injection of insecticides into a tree to control spruce beetles. Active ingredients registered for injection for spruce beetle control are *emamectin benzoate* and *abamectin*. These active ingredients may also be sold under several trade names for different uses. Studies on the use of these products are beginning in Alaska to determine the correct timing for our growing conditions. Recent work in other spruce beetle systems indicates that emamectin benzoate needs to be applied approximately 12 months before a tree is attacked by beetles for it to be fully protected. This is because of time needed to move the product within the tree. We hope to have more specific timing recommendations for Alaska soon. Injection applications should be made low on the trunk to maximize transport of the insecticide upward through the tree.

If you choose to use an insecticide, be sure that the product you purchase is registered for your specific use. Some products may be registered for ornamental trees or forest settings or both. **Be sure to read and follow all label directions. The label is the law!**

Due to the cost of application equipment and protective gear, it may be more economical to hire a certified pesticide applicator.

If you have any questions about any aspect of the use of insecticides for spruce beetle control, contact your local Extension office.

Life cycle of the spruce bark beetle.

The tree appears to be attacked

See the varying descriptions below.

Tree has green needles and evidence of pitch tubes and/or boring dust is present on the bark.

The tree was attacked within the past year. One or a few beetle attack sites on the bark doesn't mean that the tree will die immediately, but an initial attack may mean that the tree will experience a larger attack the following year. An attacked tree may also harbor a source population that will further infest the area in the following years. A careful assessment of the existing damage and treatment alternatives by a qualified professional may be needed. Surviving attacked trees should be cared for to increase their vigor by watering during the growing season and fertilizing. Preventive measures should be considered for surrounding unattacked trees.

If the tree has been heavily attacked, it should be removed and processed before the following May in order to prevent further infestation of surrounding trees.

Tree has faded yellow or bright red needles and evidence of pitch tubes and/or boring dust is still present on the bark.

The tree was attacked last season. Evidence of spruce beetle life stages is easy to find under the bark. Bark is relatively easy to peel and may exhibit evidence of woodpecker activity. These trees may be the source of new infestations for the present season and possibly the next since beetles can have either a one- or a two-year life cycle. Remove these trees before May and debark or otherwise process the trees immediately upon felling.

Tree has no needles remaining on twigs and there is evidence of prior beetle attacks.

The tree was attacked last season or before and may still have evidence of prior beetle attacks, such as pitch tubes on the bark. Adult emergence holes are also present on the bark; they are approximately 1/8 inch in diameter. Many smaller holes may begin to appear in the bark as a result of secondary pests moving into the tree. Beetle larvae may not be present under the bark, although there may be some adults. Large portions of the bark may be removed by woodpecker activity. These trees may harbor source populations for the next season's infestation. Remove a section of the bark to determine if adult beetles are

present. If adults are present, fell the tree prior to mid-May and debark or otherwise process the tree immediately upon felling.

Tree has no needles, branches appear “droopy” and tree color appears silver-gray.

These trees have been attacked at least three or more seasons ago. They will generally have loose bark with evidence of bark beetle activity on the undersides of the bark. These trees will have no spruce beetles remaining under the bark although other insects and wood decomposers may be present. You may choose to fell the tree for firewood or other uses or leave the tree standing for wildlife habitat. Depending on soil moisture, the presence of root rot and wind patterns, these trees may have only five or more years before they will be at risk of falling down. If they could endanger people or property, they should be removed.

Removing and processing trees

Trees that need to be removed, whether they are living or have been attacked by spruce beetles, should be processed to eliminate spruce beetle habitat. Once the tree is felled, process the material by splitting, debarking or chipping the material. Stumps should not extend above the ground and should be debarked down to 2 inches below the ground or mechanically ground down.

If splitting the wood for firewood, burn material with bark before the following spring. Wood without bark can be stored longer for later use. Stack firewood loosely to encourage air movement and rapid drying. Do not stack spruce firewood near living spruce trees.

Processing should be done soon after the tree is down and ideally before the flight period from mid-May to July.

Dead trees and fire concerns

The link between beetle-killed trees and wildfire is complex and there are often many factors involved that can make generalizations difficult. A dead tree that is closer to a structure than one and a half times its height should be removed to reduce risk of fire or falling. Pruning off dead branches from the lower portion of trees can reduce the risk of fire moving up the tree. For more information on wildfire, contact the Alaska Division of Forestry.

Is there anything I can do to prevent future outbreaks of bark beetles on my property?

Maintaining a mixture of native tree species and age classes is a good approach to maintaining a healthy and pest-resilient forest area. Landowners and homeowners should be cautious about leaving fresh spruce firewood on their property and especially about stacking it against or near living spruce trees. Spruce firewood with bark can bring beetles onto your property if the wood is infested. If bringing in spruce firewood, store only enough for a single winter's use or debark the material for longer-term storage.

For more information on managing spruce beetles, contact your local Cooperative Extension Service.

APPENDIX H: Public Involvement and Outreach

SWCA

PUBLIC INVOLVEMENT

Engaging interested parties is critical in the CWPP process; substantive input from the public will ensure that the final document reflects the highest priorities of the local community. A key element in the CWPP process is the meaningful discussions it generates among community members regarding their priorities for local fire protection and forest management (Society for American Foresters [SAF] 2004). Public meetings were convened throughout the development of the CWPP. Meetings were held throughout the peninsula to collect ideas and suggestions from the public for use in the CWPP.

The Core Team offered multiple public engagement opportunities including public meetings, surveys, social media announcements, story map provide content, as well as an opportunity to submit questions and receive answers through the story map or via email. In addition, the Draft Kenai Peninsula Community Wildfire Protection Plan Update was available for public comment from January 24 to February 4, 2022. Public comments were reviewed and incorporated into the Final Plan, as possible.

The Core Team hosted 5 public meetings from July 20 to July 24, 2021, throughout the Borough (see Table H.1 for dates and locations). The public meetings were designed using an Open House format to encourage interactive communication with stakeholders. In communities that had not previously received significant wildfire mitigation outreach, a public meeting presentation about the project before the Open House was provided. This two-way communication was intended to increase understanding and build trust, rather than simply provide information. The goal of the public engagement was to inform the public about the Kenai Peninsula Community Wildfire Protection Plan Update and to gather feedback about specific topics related to this project, as well as general wildfire concerns. The Open House had four stations, each hosted by a subject matter expert, to provide information on the following themes:

1. CWPP Overview

Purpose: Provide background information about CWPPs and direct people to information at other stations at open house.

2. Resilient Landscapes

Purpose: Gather information and describe the role of fire on the landscape related to forest health and resiliency and maintenance of fire-adapted ecosystems

3. Fire Adapted Communities

Purpose: Provide information and practices for protecting homes, communities, and other values at risk

4. Safe and Effective Wildfire Response

Purpose: Gather information and communicate how to effectively respond to wildfire

The Core Team encouraged participants to share their concerns related to wildfire, questions about the plan, the planning process, the risk assessment, project recommendations, or other issues (Figures H.1 and H.2). Facilitators specifically asked community members to provide input about community values at risk, project recommendations and fire response resources needs. During the public meetings people could provide this information by completing a community survey or submitting a comment card. Flip charts with various questions were placed throughout the room and people were encouraged to write answers to these questions on the flip charts. Maps displaying the Risk Assessment and identifying evacuation routes were presented and people were asked to identify areas of concern.

In addition to the public meetings, the Core Team also hosted a booth at the Soldotna Progress Days annual festival. The KPB and interagency partners purchased a mobile educational trailer (Figures H.3 and H.4) with wildfire mitigation themed graphics, designed to be easily transported and permanently host educational printed materials about Fire Adapted Communities, Firewise, Preparing for Wildfire and a range of other related subjects to be distributed to the public. The trailer was transported to each public meeting and the Soldotna Progress Days to provide information to the public.

Information gathered through the public engagement process was used to support wildfire response, fuel management planning, revisions to land and resource management plans and public education and outreach.

Table H.1. Public Meeting Schedule

Date	Location	Meeting Format	Time
Tuesday, July 20, 2021	Seward Community Library & Museum 239 6 th Avenue Seward	Informal Open House	6–8 p.m.
Wednesday, July 21, 2021	Cooper Landing School Gym 19030 Bean Creek Road Cooper Landing	Public Meeting Presentation followed by Informal Open House	6–8 p.m.
Thursday, July 22, 2021	Soldotna Progress Days Soldotna Creek Park 251 States Avenue Soldotna *Look for the Kenai Peninsula Prevention Coop Trailer	Informational Booth at Soldotna Progress Days	4–6 p.m.
Friday, July 23, 2021	West Homer Elementary School Gym 995 Soundview Avenue, Suite 1 Homer	Informal Open House	4–6 p.m.
Saturday, July 24, 2021	Banquet Room, Nikiski Community Recreation Center 50097 Kenai Spur Hwy (located at mile 23.4) Nikiski	Public Meeting Presentation followed by Informal Open House	6–8 p.m.

Furthermore, several local meetings were held to solicit feedback from the Draft CWPP. Below is the list of additional scheduled outreach efforts which took place during the planning process.

- 1/19/22: KPB Local Emergency Planning Commission meeting
 - o This commission meets quarterly at a public venue. They were asked to review the CWPP and provide comments at the January meeting. No comments were submitted.
- 01/21/22: Kenai Peninsula Fire Chiefs Association January Meeting
- 01/24/22: Facebook KPB Alerts
- 01/24/22: KPB Seward Bear Creek Flood Service Area Board
- 01/24/22: KPB Planning Commission

- 01/26/22: KBBI Public Radio interview
- 01/31/22: Facebook KPB Alerts, including Borough main page and all KPB fire service area pages (see table H.2 for a list)
- 02/01/22: Assembly meeting – Mayor’s Report

In addition, Advisory Planning Commissions (APCs) were asked to provide input regarding the draft CWPP at their meetings in the following ways: (1) add CWPP as an agenda item for the February meetings (meetings held 9th or 10th); (2), schedule a special meeting, or (3) review CWPP at their March meetings on March meetings are 16 or 17. It was also encouraged that the APCs host special meetings in February. Furthermore, recommendations provided by the APCs are to be included in the March 21, 2022, planning commission resolution. The schedule for the APC meetings is listed below.

- Anchor Point: 02/10 and 03/17
- Cooper Landing: 02/9 and 03/16
- Funny River: 03/17
- Kalifornski: Beach 02/9 and 03/16
- Hope: 02/9 or 03/16
- Moose Pass: 02/17 and 3/17
- Kachemak Bay: 02/10 and 03/17

Figure H.5. CWPP social media post.

[RELEASED 07/13/21]: You are invited to a public meeting for the Kenai Peninsula Borough Community Wildfire Protection Plan (CWPP). Communities develop CWPPs to address wildfire planning, response, and recovery. We want to ensure that this plan represents your community's preferences for emergency management, education and outreach, and fuels reduction activities to effectively lower wildfire risk. We welcome community members to join the planning process and let us know what matters to you. See the July meeting matrix below.

NOTE: Meetings for off-road communities and central peninsula communities are being scheduled for August dates.

Date/Time	Location	Meeting Format
Tuesday 6-8PM July 20 th , 2021	EAST PENINSULA COMMUNITIES Seward Community Library & Museum 239 6 th Avenue, Seward AK	Informal Open House
Wednesday 6-8PM July 21 st , 2021	Cooper Landing School Gym 19080 Bean Creek Rd., Cooper Landing	Public Meeting Presentation followed by Informal Open House
Thursday 4-6PM July 22 nd , 2021	Soldotna Progress Days Soldotna Creek Park 251 States Avenue Soldotna	Look for Smokey Bear and the Kenai Peninsula Prevention Coop Information Trailer
Friday 4-6PM July 23 rd , 2021	SOUTH PENINSULA COMMUNITIES West Homer Elementary School Gym 895 Soundview Ave., Ste. 1, Homer AK	Informal Open House
Saturday 6-8PM July 24 th , 2021	NORTHWEST COMMUNITIES Banquet Room, Nikiski Community Recreation Center 50097 Kenai Spur Hwy (located at mile 23.4) Nikiski AK	Public Meeting Presentation followed by Informal Open House

Background: From 2006 to 2009, communities located throughout the Kenai Peninsula developed 17 unique CWPPs. Building on the foundation of information provided in these plans, the 2018 All Lands/All Hands Action Plan considers recommendations from the plans and reflects new approaches based on federal guidance. Currently, the Kenai Peninsula Borough is leading an effort to develop a borough-wide CWPP update that encompasses all communities in collaboration with the All Lands/All Hands Interagency Group (ALAH Group) to ensure the plan is current and best serves the communities it is designed to protect. Members from this group include municipal, state, federal, and tribal land management agencies to make up the Core Team. This team is tasked with driving the planning and decision-making process for this project.

CWPP Update: Now it is time to review, revise, and refocus previously proposed implementation measures to ensure that the borough-wide CWPP remains active and effective. During the planning process, the public will be invited to review CWPP planning materials and provide input to identify areas where efforts should be focused to reduce wildfire threat. For more information, visit the story map www.kpb.us/cwpp. A story map (an interactive project website designed to tell a story with maps) will be used as primary two-way communication tool to provide information and gather community input about the project. The future, the public will be invited to provide feedback on the Draft Plan. The Core Team will work together to review and revise the original CWPP to ensure the plan is applicable to the communities it is designed to serve. The goal is that all recommended projects are designed to greatly reduce wildfire risk to residents and ensure that communities can live safely in this fire-prone environment.

The CWPP is yours and your engagement in the process will be invaluable. The update is also guiding document for fire and emergency managers, as well as agencies who manage land within the Kenai Peninsula. For more information, please contact Brenda Ahlberg, Kenai Peninsula Borough Office of Emergency Management, bahlberg@kpb.us or 907-714-2153, or Emily Geery, Project Manager, at egeery@swca.com.

This project is funded in part by the Kenai Peninsula Borough, Alaska Division of Forestry and Department of Natural Resources pursuant to USDA Forest Service Award No. 2018-DG-110106-810.

Figure H.6. CWPP public meeting announcement distributed via GovDelivery.

Kenai Peninsula Borough
Community Wildfire Protection Plan Update

FIRE ADAPTED COMMUNITIES
People and communities are prepared to receive, respond to and recover from wildfire.

SAFE, EFFECTIVE WILDFIRE RESPONSE
All jurisdictions coordinate on coordinated, high-effective, risk-based management decisions.

RESILIENT LANDSCAPES
Landscapes are resilient to fire, insect, and disease disturbances, providing a foundation for recovery.

KENAI PENINSULA CWPP

POST-FIRE RECOVERY
Preparing communities for potential fire effects, providing guidance and assistance for rebuilding and recovery.

What is a CWPP and what's happening? A Community Wildfire Protection Plan addresses wildfire planning, response and recovery. The borough is updating the 2006-2009 CWPPs. This effort encompasses input on all lands with funding assistance in cooperation with the AK Division of Forestry and U.S. Forest Service. This is your plan that will reflect your input on emergency management, outreach, fuels reduction projects and much more. Be on the lookout for upcoming public meetings in your area end-July and August. We cannot wait to hear from you!

Learn more about this project at <http://www.kpb.us/cwpp>

#Firewise #FireAdapted #kenaipeninsula #Alaska #alllandsallhands #wildfirepreparedness #readysetgo

Figure H.7. CWPP social media announcement distributed via Facebook.

Good evening all:

Fast FYI on a project that the borough is making great strides toward completing. The borough is updating the 2006-2009 CWPPs with SWCA Environmental Consultants. What is a CWPP and what's happening? The Community Wildfire Protection Plan addresses wildfire planning, response and recovery. This effort encompasses public input on all lands with funding assistance in cooperation with the AK Division of Forestry and U.S. Forest Service. This is your plan that will reflect your input on emergency management, outreach, fuels reduction projects and much more. Be on the lookout for upcoming public meetings in your area end-July and August. We cannot wait to hear from you!

SAVE THE DATE FOR JULY MEETINGS THAT HAVE BEEN CONFIRMED (more details to come):

<i>Date</i>	<i>Location</i>
Tuesday, July 20 th , 2021	Seward Community Library & Museum 239 6 th Avenue Seward
Wednesday, July 21 st , 2021	Cooper Landing School Gym 19030 Bean Creek Road Cooper Landing
Thursday, July 22 nd , 2021	Soldotna Progress Days Soldotna Creek Park 251 States Avenue Soldotna <i>*Look for the Kenai Peninsula Prevention Coop Trailer</i>
Friday, July 23 rd , 2021	West Homer Elementary School Gym 995 Soundview Avenue, Suite 1 Homer
Saturday, July 24 th , 2021	Banquet Room, Nikiski Community Recreation Center 50097 Kenai Spur Hwy (located at mile 23.4) Nikiski

To learn more about this project be sure to visit the project story map at <http://www.kpb.us/cwpp>

Figure H.8. Public Meeting Announcement distributed via KPB listerv.

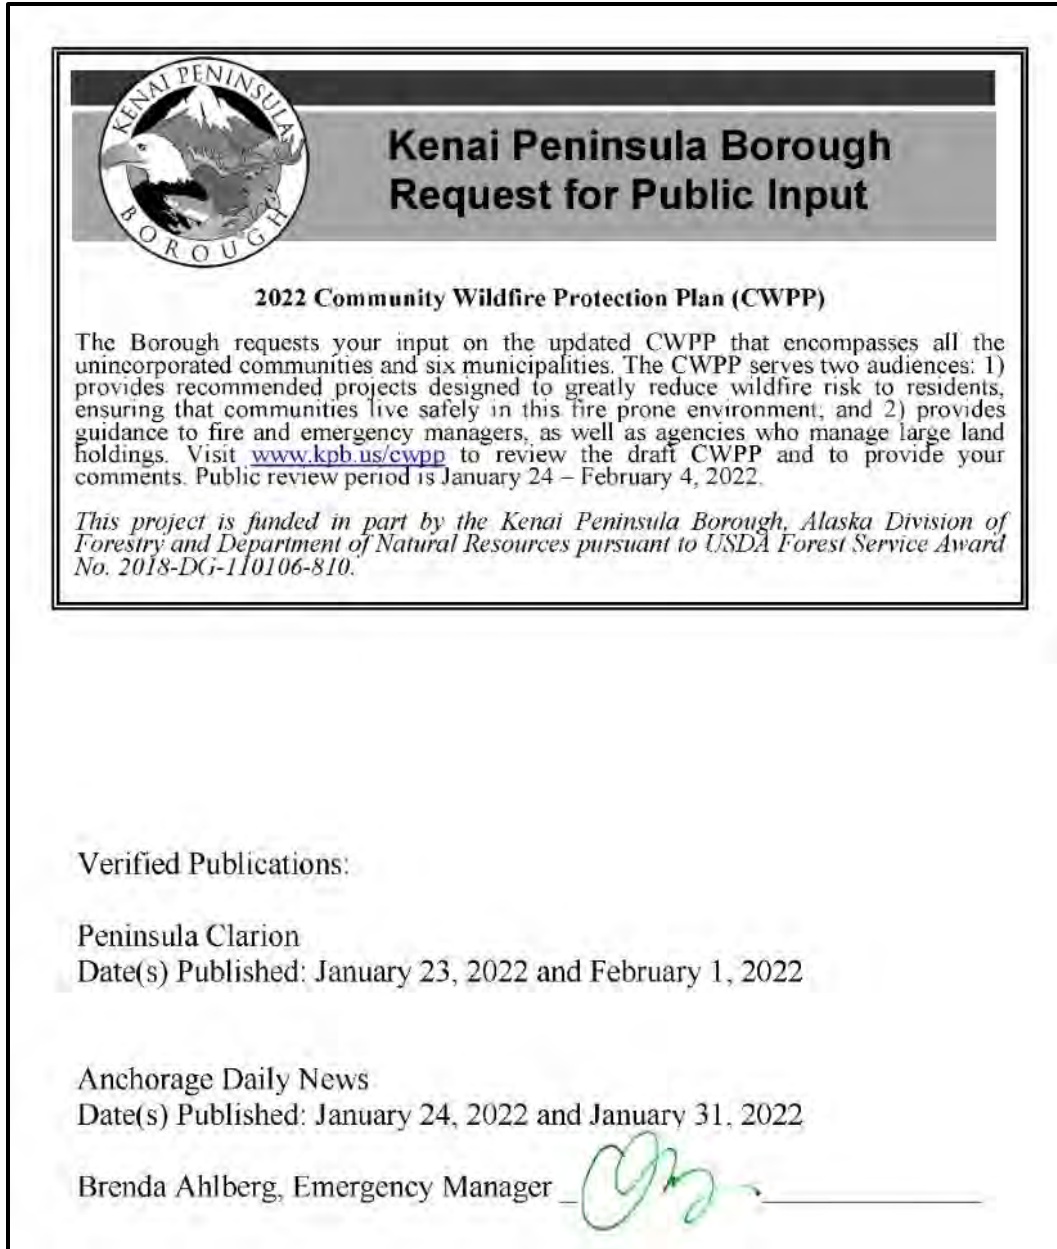

Figure H.9. Newspaper Publication, released on 1/23/22, 1/24/22, 1/31/22, and 2/1/22.

COMMUNITY SURVEY FINDINGS

A total of 23 responses were tallied for the community surveys. A quarter of the respondents stated Cooper Landing as the closest community to where they live. In terms of wildfire risk, the majority of respondents (57%) rated their homes as high risk. The top two concerns for residents, with respect to home vulnerability, were surrounding fuels (i.e., dense vegetation, wood piles, grass, shrubs, dead and downed trees) on their property and on neighboring properties. Most respondents (61%) stated that they do not participate in community wildfire risk mitigation activities (e.g., Firewise Alaska). Lastly, 70% of respondents felt that costs associated with tree removal and fuels treatment around their properties was the biggest challenge to making their homes fire safe.

Survey highlights are summarized below:

Survey Question: “How would you rate your house in terms of risk from wildfire? (Consider the proximity of your house to tracts of undeveloped land, vegetated land, emergency response and access).”

- The most common response was high (12), medium (8), then low (1).

Survey Question: Are you engaged in any community wildfire mitigation (such as Firewise USA or Ready, Set, Go!) to reduce the risk of wildfire in your community?

- 14% of respondents said no (14), 9% of respondents yes (9).

Survey Question: My home is vulnerable to wildfire because of...

- The top two choices were:
 - Surrounding fuels on neighboring property - (i.e., dense vegetation, wood piles, dead and downed trees): 18 responses
 - Surrounding fuels on your property - (i.e., live and dead trees, shrubs, grass, wood piles): 15 responses

Survey Question: My biggest challenge to making my home fire safe is...

- 70% of respondents selected: Costs to remove trees and other flammables around my home

STORY MAP

The Borough developed the CWPP story map (online content, link in Table H.2) to accommodate engagement with the public. The story map provides opportunities for both information sharing and gathering between the public and the Core Team. The story map has several tabs, each demonstrating information from various chapters in the CWPP document. The introductory tab presents the purpose of

the story map, project history, instructions for navigating the content, and the National Cohesive Wildland Fire Management Strategy framework (Figure H.10). Next, the public involvement tab invites viewers to participate in the CWPP community survey, review the CWPP informational flyer and press release, and watch several educational videos. The fire environment, valued resources and assets, WUI hazard and risk assessment, mitigation strategies, and monitoring and evaluation strategies tabs present the bulk of the CWPP content (Figures H.10–H.12). These tabs introduce the WUI concept, fire regimes and fire history in the Borough, information regarding fire planning and response, valued resources and assets, areas with high versus low risk, wildfire mitigation actions, and monitoring strategies for applied treatments.

The figures below (H.10–H.12) demonstrate the spatial information that is conveyed through the story map. Each map is interactive, with several clickable layers providing information on numerous aspects of wildfire, including but not limited to communities in high-risk areas, vegetation and fuels, current mitigation projects, and fire behavior.

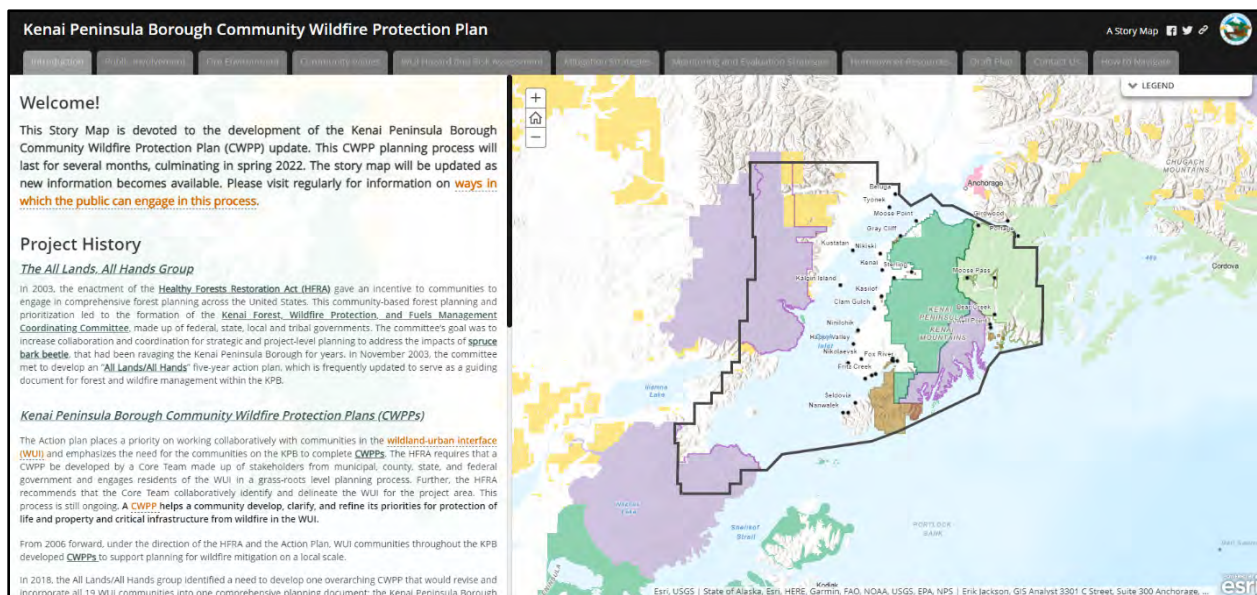

Figure H.10. CWPP story map introduction tab sample.

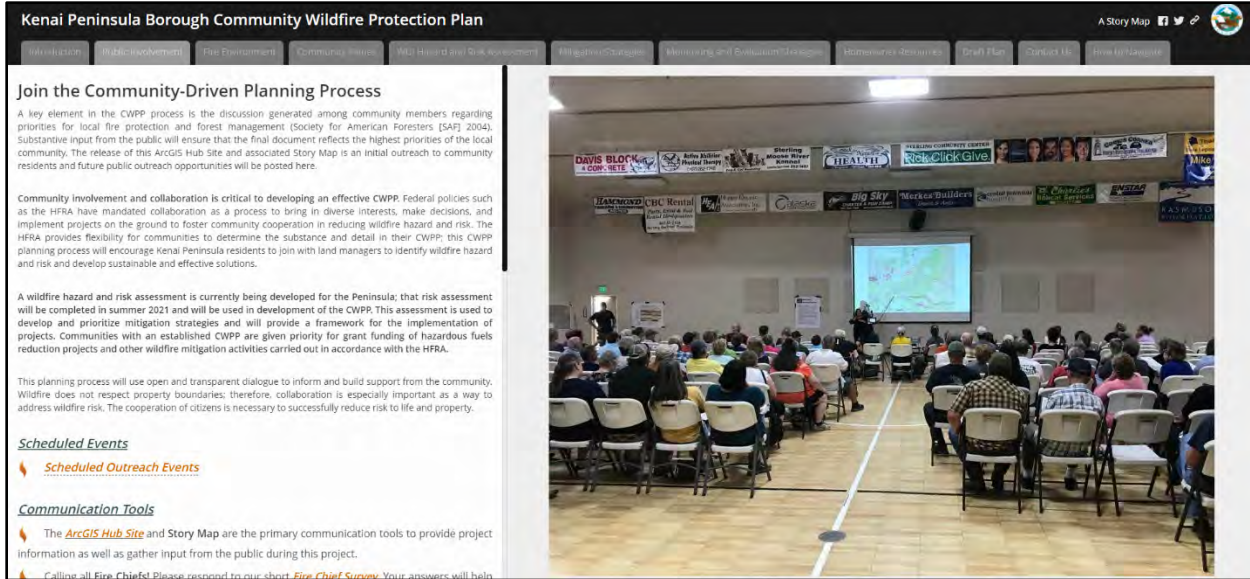

Figure H.11. Story map public involvement tab sample.

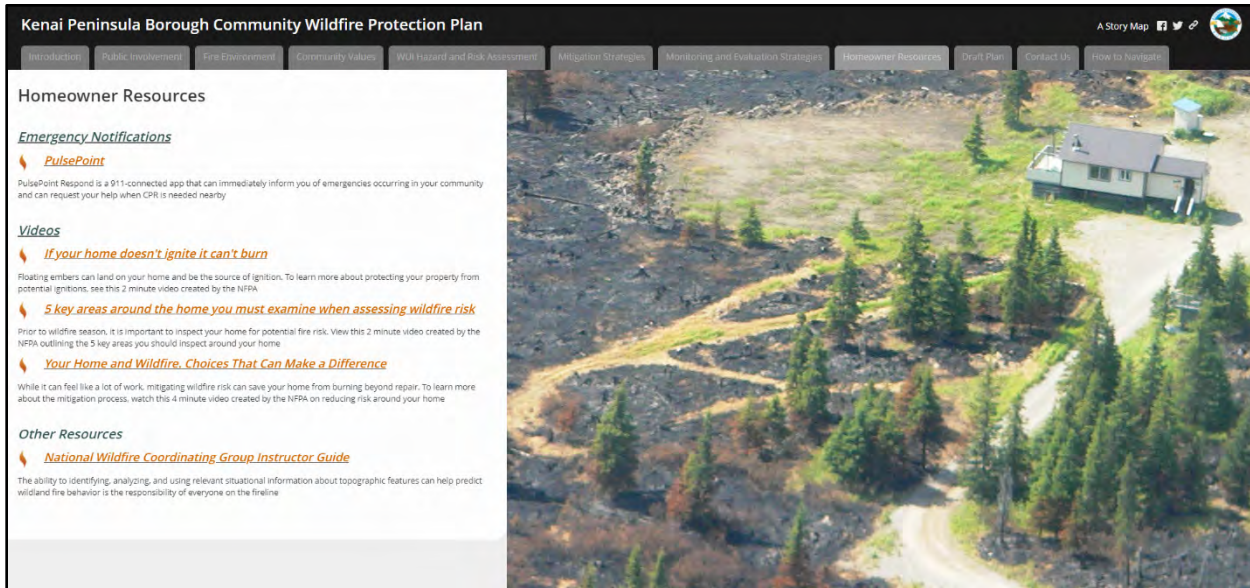

Figure H.12. Story map homeowner resources tab sample.

The story map tool allowed the project team to assess the number of views per day. Figure H.13 shows the average number of views per day and related graphical information. The number of views from January 24 (when the story map was originally posted for Core Team review) through February 4, was 637, and the average number of views per day was just under 58 (see Figure H.12).

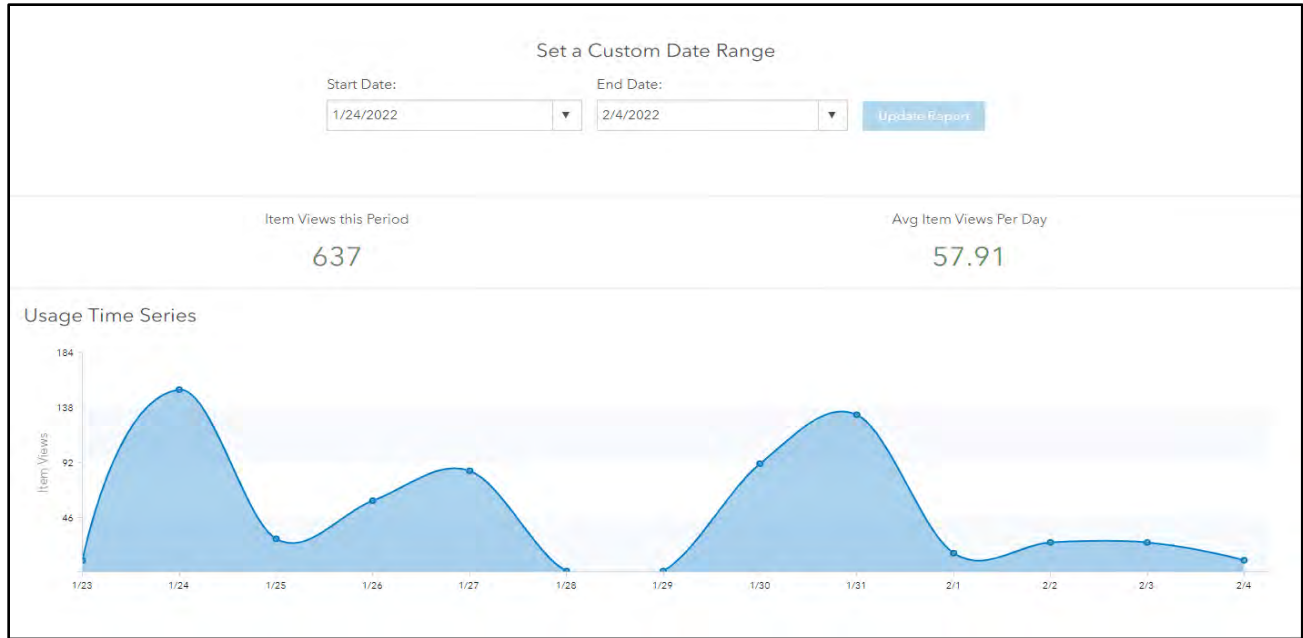

Figure H.13. Story map views from January 24th through February 4th, 2022.

EDUCATIONAL PROGRAMS

Public education and outreach programs are a common factor in virtually every agency and organization involved with the wildfire issue.

LOCAL AND STATE PROGRAMS

Alaska Department of Natural Resources, Division of Forestry

Firewise Alaska

The DOF encourages Alaskan communities to form Firewise communities. Firewise is a collaborative effort between local, state, federal, and private agencies and organizations to encourage fire safety in the WUI. Firewise Alaska is a reference guide for homeowners designed by the Alaska Wildland Fire Coordinating Group (AWFCG 2009). The guide details the steps an Alaskan homeowner can take to reduce the probability that their home and property will be consumed by a wildfire. The guide focuses on preparation and is well suited for small communities, developments, and residential home associations of all types (ADFG 2021c). The guide can be accessed here:

<http://forestry.alaska.gov/Assets/pdfs/home/firewise09.pdf>

Forest Stewardship Program

The DOF's Forest Stewardship Program is a collaborative state and federal service that aids private landowners with forest concerns. Usual concerns include insect and disease pests, wildfire protection for homes, firewood assessment, tree planting, and wildlife habitat. The aim is to help the active management of forest resources to maintain land productivity for present and future owners and increase the ecological and economic benefits. Upon request for assistance, a site assessment is conducted, and

a plan is subsequently developed based on the findings. Financial assistance is available for some activities recommended in the plan. The following examples constitute eligible projects: dead tree and spruce removal around homes, soil preparation for tree seedling establishment, and tree seedling purchase and planting. The program is available to provide forestry-related technical advice for private landowners regardless of property size. Alaska Native corporations are also eligible (DOF 2021b).

NATIONAL PROGRAMS

Ready, Set, Go!

The Ready, Set, Go! Program, which is managed by the International Association of Fire Chiefs, was launched in 2011 at the WUI conference. The program seeks to develop and improve the dialogue between fire departments and residents, providing teaching for residents who live in high-risk wildfire areas—and the WUI—on how to best prepare themselves and their properties against fire threats. The program works in collaborative and synergistic fashion with Firewise USA and other existing wildland fire education efforts (International Association of Fire Chiefs 2021).

The tenets of Ready, Set, Go! as included on the website (<http://www.wildlandfirersg.org>) are:

Ready – Take personal responsibility and prepare long before the threat of a wildland fire so your home is ready in case of a fire. Create defensible space by clearing brush away from your home. Use fire-resistant landscaping and harden your home with fire-safe construction measures. Assemble emergency supplies and belongings in a safe place. Plan escape routes and ensure all those residing within the home know the plan of action.

Set – Pack your emergency items. Stay aware of the latest news and information on the fire from local media, your local fire department, and public safety.

Go – Follow your personal wildland fire action plan. Doing so will not only support your safety but will allow firefighters to best maneuver resources to combat the fire.

National Fire Protection Association

The NFPA is a global non-profit organization devoted to eliminating death, injury, property, and economic loss due to fire, electrical, and related hazards. Its 300 codes and standards are designed to minimize the risk and effects of fire by establishing criteria for building, processing, design, service, and installation around the world.

The NFPA develops easy-to-use educational programs, tools, and resources for all ages and audiences, including Fire Prevention Week, an annual campaign that addresses a specific fire safety theme. The NFPA's Firewise Communities program (www.firewise.org) encourages local solutions for wildfire safety by involving homeowners, community leaders, planners, developers, firefighters, and others in the effort to protect people and property from wildfire risks.

The NFPA is a premier resource for fire data analysis, research, and analysis. The Fire Analysis and Research division conducts investigations of fire incidents and produces a wide range of annual reports and special studies on all aspects of the nation's fire problem.

Insurance Institute for Business and Home Safety

The Insurance Institute for Business and Home Safety (IBHS) is an independent, non-profit, scientific research and communications organization supported solely by property insurers and reinsurers. The IBHS's building safety research leads to real-world solutions for home and business owners, helping to create more resilient communities. Its mission is to conduct objective, scientific research to identify and promote the most effective ways to strengthen homes, businesses, and communities against natural disasters and other causes of loss.

The IBHS conducts laboratory and field experiments in structural ignitability and has helped develop new guidelines for defensible space zones to emphasize ember resistance and a "home ignition zone" (Figure H.14).

Reduce Your Wildfire Risk
Create Defensible Space

Additional wildfire resources are available at DisasterSafety.org/Wildfire

Know Your Zones

ZONE 1 0-5 FT
Reduce the chance of wind-blown embers igniting materials near your home, exposing it to flames.
Choose products and features such as rock, gravel mulches, brick, or concrete walkways.
Noncombustible materials are the best choice.
Firewood/lumber and other combustibles should not be stored under the deck or beside your home.

ZONE 2 5-30 FT
Create a landscape that will not readily transmit fire to the home.
Remove shrubs under trees and thin trees. Prune branches overhanging your home and remove dead vegetation.
Move trailers/recreational vehicles, storage sheds and other combustible structures out of this zone and into the 30-100 ft. zone. If unable to move, create defensible space around them.
Remove dead plant materials and tree branches.

ZONE 3 30-100 FT
Reduce the energy and speed of the wildfire.
Thin and separate trees and shrubs. Limb up trees and remove shrubs that can serve as ladder fuels.
Extend zone to 150-200 ft. if home is near the top of a slope, or on a ridge.

Additional Tips:
 - Create a 30-foot noncombustible zone around propane tanks.
 - Choose a Class A rated roof covering. Remove debris from your roof on a regular basis.
 - Participate in community-wide education and fuels management programs.
 - Do not store firewood, lumber and other combustibles under your deck. When a wildfire threatens, move combustibles off your deck or patio.
 - Remove debris from gutters.
 - Have 6 inches of clearance between the ground and the start of your siding.
 - Use in your water using a noncombustible material.
 - Remove combustible mulch and rubber landing surfaces under play structures, which are vulnerable to ember ignition.
 - Select dual-pane windows, preferably with tempered glass.
 - Cover attic, foundation and other vents with 1/8 inch metal mesh screens. Avoid storing combustibles in your attic.
 - Create defensible space for your decks, RV's and yard structures, or move them into the 30-100 foot zone.
 - Remove dead plant material and vegetative debris in all three zones.

Figure H.14. Defensible space standards from the IBHS.

**KENAI PENINSULA BOROUGH PLANNING COMMISSION
RESOLUTION 2022-13**

**A RESOLUTION RECOMMENDING ADOPTION OF THE UPDATED 2022 KENAI
PENINSULA BOROUGH COMMUNITY WILDFIRE PROTECTION PLAN**

WHEREAS, the Kenai Peninsula Borough is vulnerable to damages from wildfire events which pose a threat to wildlife habitat, public health and safety and could result in property loss or economic hardship; and

WHEREAS, the KPB Community Wildfire Protection Plan (“Plan”) encompasses all lands and serves two audiences: 1) it provides recommended projects designed to greatly reduce wildfire risk to residents, ensuring that communities live safely in this fire prone environment; and 2) it provides guidance to fire and emergency managers, as well as agencies who manage large land holdings; and

WHEREAS, the 2022 Plan is aligned with the National Cohesive Wildland Fire Management Strategy and the 2018 All Lands All Hands Action Plan; and

WHEREAS, this project was funded in part by the Borough, Alaska Division of Forestry and Department of Natural Resources pursuant to USDA Forest Service Award No. 2018-DG-110106-810; and

WHEREAS, the Anchor Point Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended approval of the Plan; and

WHEREAS, the Cooper Land Advisory Planning Commission at its regular scheduled meeting of March 16, 2022 recommended approval of the Plan; and

WHEREAS, the Funny River Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended approval of the Plan; and

WHEREAS, the Hope Advisory Planning Commission at its regular scheduled meeting of March 16, 2022 recommended approval of the Plan; and

WHEREAS, the Kachemak Bay Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended approval of the Plan; and

WHEREAS, the Kalifornsky Advisory Planning Commission did not have a quorum March 16, 2022 to make a recommendation; and

WHEREAS, the Moose Pass Advisory Planning Commission at its regular scheduled meeting of March 17, 2022 recommended approval of the Plan; and

WHEREAS, it is in the best interest of the Planning Commission to pass this resolution.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

SECTION 1. The Planning Commission recommends adoption of the document entitled 2022 Kenai Peninsula Borough Community Wildfire Protection Plan.

SECTION 2. That this resolution takes effect immediately upon its enactment.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH THIS ___ DAY OF _____ 2022.

- 2. Ordinance 2022-04: An ordinance adopting the updated 2022 Kenai Peninsula Borough Community Wildfire Protection Plan.**

Kenai Peninsula Borough

Office of Emergency Management

MEMORANDUM

TO: Brent Johnson, Assembly President
Members, Kenai Peninsula Borough Assembly

THRU: Charlie Pierce, Mayor *CP*
Melanie Aeschliman, Planning Director *MA*

FROM: Brenda Ahlberg, Emergency Manager *BA*

DATE: February 16, 2022

RE: Ordinance 2022-_____, Adopting the Updated 2022 Kenai Peninsula Borough Community Wildfire Protection Plan (Mayor)

The 2022 Community Wildfire Protection Plan (CWPP) update combines the former 17 plans developed in 2006 through 2009 and encompasses all lands, including unincorporated areas, municipalities and private land holdings as wildfire knows no boundaries across the landscape.

The CWPP project was comprised of a dedicated core team made of local, state, federal agencies as well as non-government agencies and residents. The team was tasked with decision making, data sharing, experience and communication with the communities. The core team conducted five meetings in addition to regular emails or conference calls. The project was broadly promoted throughout the borough, including public venues, comprehensive meetings with individual fire departments, Tribal entities, and critical infrastructure utilities and transportation agencies. The core team participated in a six-week review period to review the working draft, and the planning commission as well as the advisory planning commissions were also asked to review the working draft. Their recommendations will be provided at the April 5, 2022 assembly meeting.

You may visit the project story map at www.kpb.us/cwpp. This story map (an interactive project website designed to tell a story with maps) was used as the primary two-way communication tool, providing information and collecting community input throughout the performance period. The story map will remain "live" and be instrumental for current mapping products, data and serve as a repository of completed mitigation projects.

Your consideration of this ordinance is appreciated.

**ITEM 3 - RIGHT OF WAY VACATION
VACATE A PORTION OF PAPER BIRCH LANE AND ASSOCIATED UTILITY EASEMENTS**

KPB File No.	2022-023V
Planning Commission Meeting:	March 21, 2022
Applicant / Owner:	Cody McLane, Gale Smith, Littleknife Inc., all of Soldotna, Alaska
Surveyor:	James Hall / McLane Consulting Inc.
General Location:	Sterling area, Paper Birch Lane, Mountain Ash Street
Legal Description:	Lot 1 Forest Hills Lookout Subdivision, Plat KN 86-204, and Lots 8, 9, and 15 of Tulchina Pointe Estates Phase 2, Plat KN 2009-48.

STAFF REPORT

Specific Request / Purpose as stated in the petition: Right of way vacation of Paper Birch Lane from Authentic Road to the easterly property line of Lot 1 (KN 86-204). Current right-of-way width is 60 feet over very difficult terrain with steep slopes.

Proposed vacation is approximately .591 acres.

Lot 1 (KN 86-204) is in the process of being subdivided and has preliminary approval by the Kenai Peninsula Borough on 11/12/2019 with vacation approval of Mountain Ash Street and section line easements on 10/28/2019 under KPB File No. 2019-117. This plat is in the process of being finalized and will dedicate alternate access that can be connected to in the future subdivision of Lot 2 (KN 86-204).

At this time, a cul-de-sac is proposed at the end of Paper Birch Lane to accommodate a proper turn-around area for traffic.

Reasoning: A new structure on Lot 9 (KN 2009-48) has been constructed over the R/W line of Paper Birch Lane. By re-platting this area and vacating Paper Birch Lane, the property is free of encroachments and allows additional acreage for wastewater treatment systems.

Lot 15 (KN 2009-48) is also encumbered by steep slopes and minimal useable area for construction and would benefit by the additional acreage provided by the R/W vacation.

Notification: Public notice appeared in the March 10, 2022 issue of the Peninsula Clarion as a separate ad. The public hearing notice was published in the March 17, 2022 issue of the Peninsula Clarion as part of the Commission’s tentative agenda.

The public notice was posted on the Planning Commission bulletin board at the Kenai Peninsula Borough George A. Navarre Administration building. Additional notices were mailed to the following with the request to be posted for public viewing.

Library of Soldotna

Post Office of Soldotna

Twenty-seven certified mailings were sent to owners of property within 300 feet of the proposed vacation. Fourteen receipts had been returned when the staff report was prepared.

Public hearing notices were sent by regular mail to sixteen owners within 600 feet of the proposed vacation.

Seventeen public hearing notices were emailed to agencies and interested parties as shown below;

State of Alaska Dept. of Fish and Game
State of Alaska DNR
State of Alaska DOT
State of Alaska DNR Forestry
Central Emergency Services

Alaska Communication Systems (ACS)
ENSTAR Natural Gas
General Communications Inc, (GCI)
Homer Electric Association (HEA)

Legal Access (existing and proposed): Paper Birch Lane is a 60 foot wide right of way located in the Sterling Area. Paper Birch Lane is approximately 3,100 feet long with several intersections that break the road into segments. The proposal will vacate the western segment and the remainder of the right of way will remain. The road is located off Forest Lane, a state maintained right of way that runs south of the Sterling Highway near mile 90.

To access the portion being discussed there are multiple routes dedicated but not all are fully constructed. Foster Avenue, Moran Street, Authentic Road, and Quillback Drive intersect Paper Birch Lane. Foster Avenue and Moran Street are constructed and maintained by the Kenai Peninsula Borough. Authentic Road is constructed and connects to Diamond Willow Lane. Both are constructed and maintained by the Borough. Diamond Willow Lane connects back to Foster Avenue near the Forest Lane intersection. Quillback Drive is only a half width right of way that is not constructed.

Portions of Paper Birch Lane appear to be cleared and used for access. The Kenai Peninsula Borough does not maintain any portions of Paper Birch Lane. The areas cleared are northeast of the Quillback Drive intersection and are accessed via Moran Street and Foster Avenue.

The petition is to vacate approximately 428 feet of the western portion of Paper Birch Lane. Preliminary plat Forest Hills Lookout Bolder Heights Addition, KPB File 2019-117, is located to the north of the proposed vacation. That plat and the associated vacations have been approved. The plat, once recorded, will vacate a portion of Mountain Ash Street, a portion of Foster Avenue, and will provide a new right of way that continues Authentic Road to the north and provides a connection to Foster Avenue. A new right of way will be dedicated that provides access to the large acreage tract to the east. The owners are working to vacate some section line easements and the Planning Commission granted four year approvals to allow the vacations and plat to be recorded together.

A partial bulb is proposed to be dedicated to provide an adequate turn around area for Paper Birch Lane. The 15 acre lot to the north will continue to have access to Paper Birch Lane and by Foster Avenue to the north. Once the plat to the west is finalized, the parcel will also have access from the new dedications. If the 15 acre parcel to the north is ever subdivided, it will have multiple access routes to provide access and possible connections to internal right of ways.

Lot 15 has access from Authentic Road and Gloria Burns Circle. Lots 8 and 9 have constructed access on Developer Circle.

Paper Birch Lane, Quillback Drive, and Authentic Road provide a closed block. The length around Authentic Road is not compliant. Multiple right of ways are off Authentic Road but they are cul-de-sacs and do not improve the block. The proposed vacation and new dedications to the north will not improve the block and the block will be slightly longer. The reason for the placement for the new right of ways in the proposed subdivision to the north is due to terrain. The sketch provided shows the steep terrain within the Paper Birch Lane Dedication. An exception to KPB 20.30.170, block lengths, will need to be requested when the plat is submitted for review.

The Roads Department originally provided a review of “no comment”. Staff reached out to the Roads Department due to calls received by concerned landowners. The Roads Department changed their comment to “We oppose the vacation because it will reduce/prevent access to other parcel.” The comment received was forwarded to the owner and surveyor and they were advised to begin having conversations with the Roads Department on methods to resolve the issue. The surveyor submitted to the Roads Department an explanation that a portion proposed for vacation does not meet RSA standards. Plans were submitted for the subdivision to the north to support their stance. The Roads Department reviewed the submitted items and changed their comment. “RSA will support the

vacation actions with the knowledge that parcel access will be improved with the next phase of subdivision.” The emails and documents have been included in the packet.

KPB Roads Dept. comments	Out of Jurisdiction: No Roads Director: Uhlin, Dil Comments: RSA will support the vacation actions with the knowledge that parcel access will be improved with the next phase of subdivision.
SOA DOT comments	No comment

Site Investigation: The dedicated right of way contains steep slopes through the majority of the portion petitioned for vacation. There does not appear to be any lot wet areas within the dedication.

Quillback Drive, Paper Birch Lane and its intersections with Foster Avenue and Moran Street appear to be free from low wet areas. Steep slopes do not appear to be present within the right of ways. The slopes within Quillback Drive are approximately 9 percent.

KPB River Center review	<p>A. Floodplain Reviewer: Carver, Nancy Floodplain Status: Not within flood hazard area Comments: No comments</p> <p>B. Habitat Protection Reviewer: Aldridge, Morgan Habitat Protection District Status: Is NOT within HPD Comments: No comments</p> <p>C. State Parks Reviewer: Russell, Pam Comments: No Comments</p>
-------------------------	---

Staff Analysis: Forest Hills Lookout Subdivision, Plat KN 86-204, dedicated the right of way being discussed. It was named Walker Street when dedicated. Resolution SN 2015-09 changed the street name. The parent subdivision created larger acreage lots. Many have been subdivided through the years and provide the current configuration of the area.

The lot to the northwest has received preliminary approval to vacate multiple right of ways and easements to allow for dedications that work with the terrain in the area. The ability for Paper Birch Lane to provide a better connection to another right of way may be obtained in the future if Lot 2, located to the northeast, is ever subdivided.

The owner of Lots 8 and 9 is LittleKnife Inc. The owner is a construction company that recently built a home on the lots for a client. It was determined that the house was constructed partially within the right of way. An as-built was not provided with the application but a sketch was previously received. The sketch shows the house within the right of way but no dimensions were provided.

A bulb is proposed to provide an adequate turnaround area.

The petition is proposing to vacate the associated utility easements along the portion of Paper Birch Lane to be vacated. 10 foot utility easements will be placed along Authentic Road, Paper Birch Lane straight away and bulb.

At the time the staff report was prepared no written comments have been received from the public. Staff has had several phone calls and in person contact with members of the public with concerns about the vacation. Staff answered questions asked and advised that comments be submitted or attend the meeting to provide testimony to the Planning Commission.

20.65.050 – Action on vacation application

- D. The planning commission shall consider the merits of each vacation request and in all cases the planning commission shall deem the area being vacated to be of value to the public. It shall be incumbent upon the applicant to show that the area proposed for vacation is no longer practical for the uses or purposes authorized, or that other provisions have been made which are more beneficial to the public. In evaluating the merits of the proposed vacation, the planning commission shall consider whether:
1. The right-of-way or public easement to be vacated is being used;
Staff comments: This portion is not constructed and no comments were received of other uses.
 2. A road is impossible or impractical to construct, and alternative access has been provided;
Staff comments: The intersection with Authentic Road will be difficult due to the terrain. New right of ways are proposed to the north that used terrain to help determine locations. The lots along this portion to be vacated all have access from other right of ways.
 3. The surrounding area is fully developed and all planned or needed rights-of-way and utilities are constructed;
Staff comments: No lots will be denied access to utility easements.
 4. The vacation of a public right-of-way provides access to a lake, river, or other area with public interest or value, and if so, whether equal or superior access is provided;
Staff comments: Does not provide access to public lands or waters.
 5. The proposed vacation would limit opportunities for interconnectivity with adjacent parcels, whether developed or undeveloped;
Staff comments: This will make the block no longer close. The ability to construct a closed block in this location will be difficult. No lots will be denied access.
 6. Other public access, other than general road use, exist or are feasible for the right-of-way;
Staff comments: The steep terrain may make pedestrian use difficult but could still be feasible. Other dedicated right of ways provide adequate access.
 7. All existing and future utility requirements are met. Rights-of-way which are utilized by a utility, or which logically would be required by a utility, shall not be vacated, unless it can be demonstrated that equal or superior access is or will be available. Where an easement would satisfactorily serve the utility interests, and no other public need for the right-of-way exists, the commission may approve the vacation and require that a utility easement be granted in place of the right-of-way.
Staff comments: Requests by utility providers will be reviewed and the surveyor/owner must work with utility providers to ensure all needed easements are provided. The proposed plat will grant easements along dedicated right of ways.
 8. Any other factors that are relevant to the vacation application or the area proposed to be vacated.
Staff comments: There is a structure within the right of way.

A KPB Planning Commission decision denying a vacation application is final. A KPB Planning Commission decision to approve the vacation application is subject to consent or veto by the KPB Assembly, or City Council if located within City boundaries. The KPB Assembly or City Council must hear the vacation within thirty days of the Planning Commission decision.

If approved, the Assembly will hear the vacation at their April 5, 2022 or April 19, 2022 meeting. Meeting date may be verified by contacting the Clerk's office.

If approved, Tulchina Pointe Estates 2022 Replat will finalize the proposed right of way vacations. Once a complete application for the preliminary plat is received, it will be scheduled for review by the Plat Committee

RECOMMENDATION:

Based on consideration of the merits as per KPB 20.65.050(D) as outlined by Staff comments, Staff recommends APPROVAL as petitioned, subject to:

1. Consent by KPB Assembly.
2. Compliance with the requirements for preliminary plats per Chapter 20 of the KPB Code.
3. Grant utility easements requested by the utility providers.
4. Submittal of a final plat within a timeframe such that the plat can be recorded within one year of vacation consent (KPB 20.70.130).

KPB 20.65.050 – Action on vacation application

H. A planning commission decision to approve a vacation is not effective without the consent of the city council, if the vacated area to be vacated is within a city, or by the assembly in all other cases. The

council or assembly shall have 30 days from the date of the planning commission approval to either consent to or veto the vacation. Notice of veto of the vacation shall be immediately given to the planning commission. Failure to act on the vacation within 30 days shall be considered to be consent to the vacation. This provision does not apply to alterations of utility easements under KPB 20.65.070 which do not require the consent of the assembly or city council unless city code specifically provides otherwise.

- I. Upon approval of the vacation request by the planning commission and no veto by the city council or assembly, where applicable, the applicant shall have a surveyor prepare and submit a plat including the entire area approved for vacation in conformance with KPB 20.10.080. Only the area approved for vacation by the assembly or council may be included on the plat. The final plat must be recorded within one year of the vacation consent.
- J. A planning commission decision denying a vacation application is final. No reapplication or petition concerning the same vacation may be filed within one calendar year of the date of the final denial action except in the case where new evidence or circumstances exist that were not available or present when the original petition was filed.
- K. An appeal of the planning commission, city council or assembly vacation action under this chapter must be filed in the superior court in accordance with the Alaska Rules of Appellate Procedure.

The 2019 Kenai Peninsula Borough Comprehensive Plan adopted November 2019 by Ordinance No. 2019-25. The relevant objectives are listed.

Goal 3. Preserve and improve quality of life on the Kenai Peninsula Borough through increased access to local and regional facilities, activities, programs and services.

- *Focus Area: Energy and Utilities*
 - o *Objective A - Encourage coordination or residential, commercial, and industrial development with extension of utilities and other infrastructure.*
 - *Strategy 1. Near – Term: Maintain existing easements (especially section line easements) in addition to establishing adequate utility rights of way or easements to serve existing and future utility needs.*
 - *Strategy 2. Near – Term: Maintain regular contact with utility operators to coordinate and review utility easement requests that are part of subdivision plat approval.*
 - *Strategy 3. Near – Term: Identify potential utility routes on Borough lands.*
- *Housing*
 - o *Objective D. Encourage efficient use of land, infrastructure and services outside incorporated cities by prioritizing future growth in the most suitable areas.*
 - *Strategy 1. Near – Term: Collaborate with the AK Department of Transportation, incorporated cities within the borough, utility providers, other agencies overseeing local services, and existing communities located adjacent to the undeveloped areas that are appropriate for future growth, to align plans for future expansion of services to serve future residential development and manage growth.*

Goal 4. Improve access to, from and connectivity within the Kenai Peninsula Borough

- *Focus Area: Transportation*
 - o *Objective B. Ensure new roads are developed in alignment with existing and planned growth and development.*
 - *Strategy 2. Near – Term: Establish subdivision codes that dictate road construction standards to accommodate future interconnectivity and/or public safety.*
 - *Strategy 3. Near – Term: Identify areas of anticipated growth to determine future access needs.*

END OF STAFF REPORT

Hi Julie,

The RSA will support the vacation actions with the knowledge that parcel access will be improved with the next phase of subdivision.

Dil,

In response to RSA comments on the proposed vacation of a portion of Paper Birch Lane right of way for Steve Bowen I'd like to offer support that Paper Birch Lane is effectively unbuildable to anything near RSA standards near the intersection with Authentic Road. I've attached a pdf of the preliminary design for the extension of Authentic Road along with a copy of the preliminary plat which has already been reviewed and received preliminary approval by the Platting Dept. The right cut slope of the cross section at 3+50 (sheet X1) extends east into Paper Birch Lane and is shown at a 1:5:1 slope for reference. The elevation difference from the proposed centerline FG at Authentic at 3+10 (240.0') and the top of the hill on Birch Hill Lane 191' to the east (306') is approximately 66 feet for a centerline grade of over 34% approaching the intersection with Authentic. This result greatly exceeds allowable tolerances of codes 14.06.160A Vertical Alignment and 14.06.160E Intersections creating a dangerous intersection approach. As an alternative I am proposing to dedicate an alternative right of way as shown that extends to the west boundary of Lot 2 (parcel# 05836002). When this parcel is eventually subdivided the expectation is that this right of way would be extended to connect to Paper Birch Lane and provide superior access than that of the segment of Paper Birch which is proposed to be vacated. I am in process of finishing the road design and will be applying for a construction permit and eventually maintenance. Feel free to reach out if you have any questions.

Cody

Subject: Paper Birch Vacation

James,

I wanted to inform you that we have received multiple calls from members of the public opposed to this vacation with intent to attend the meeting. The roads department as submitted a comment of opposition to the vacation because it will reduce/prevent access to other parcels.

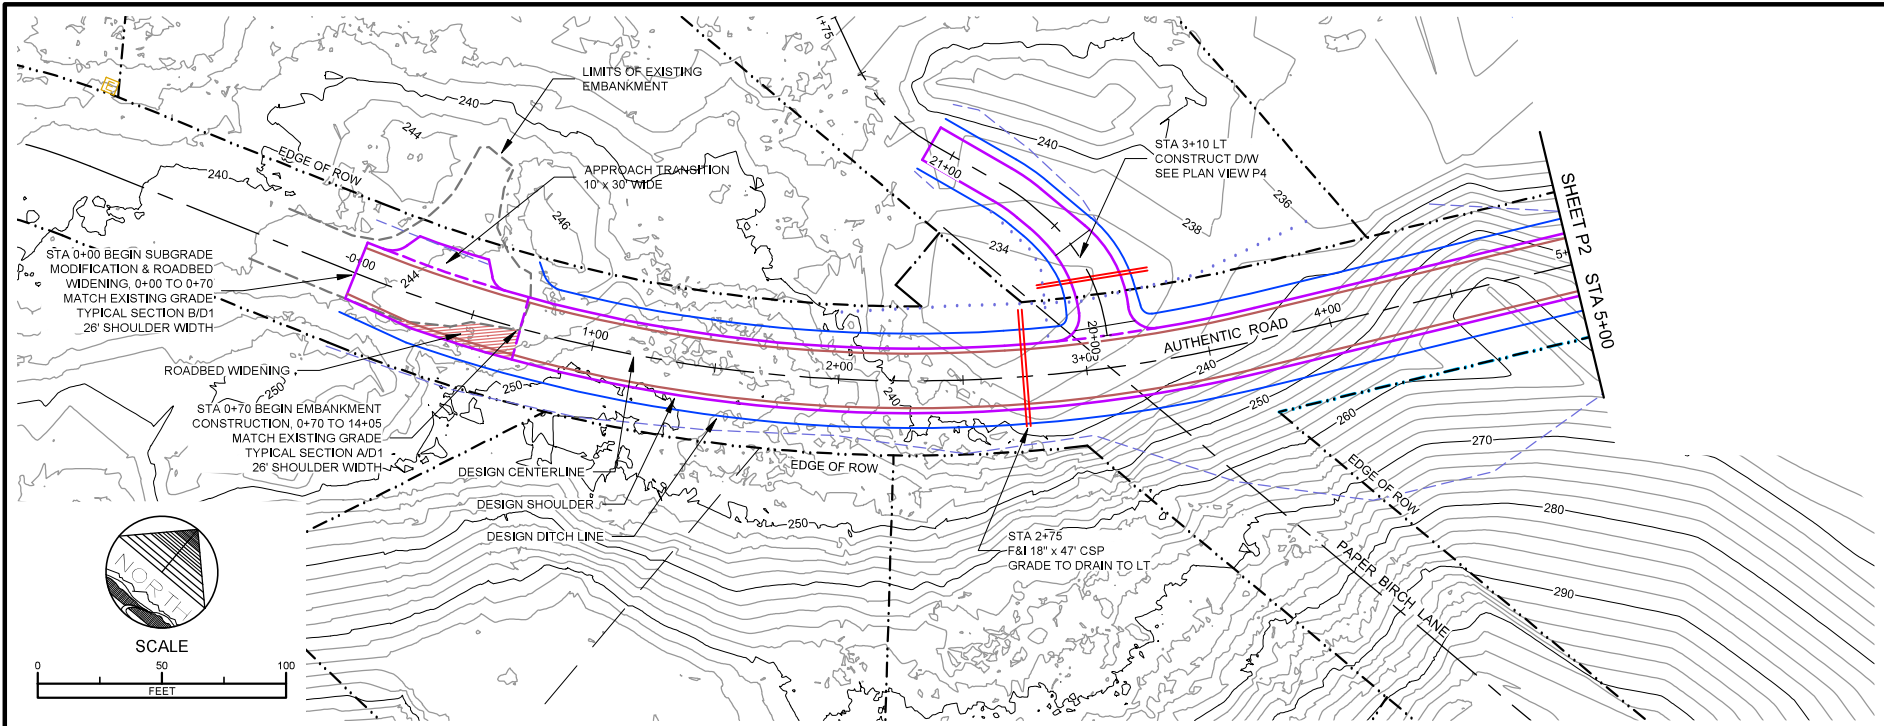

I wanted to let you know and I will be calling the petitioner today to let him know and suggest he begin working with the roads department on a solution that will either improve the roads department comment or how to resolve if denied.

AMENDED PLAT NOTE

This plat amends Plat No. 2006-63 KR0 by correcting curves 64 & 66 and lines 21 & 22 within their respective blocks. The old information has been lined out and corrective table provided above.

I certify that I have made the corrections noted above and no other changes have been made.
[Signature] 19 August 07
Engineer License # 2380-E Date

CERTIFICATE OF SURVEYOR
I hereby certify that I am properly registered and licensed to practice land surveying in the State of Alaska, this plot represents a survey made by me or under my direct supervision, the monuments shown hereon actually exist as described, and all dimensions and other details are correct to the normal standards of practice of land surveyors in the State of Alaska.

- NOTES:
1) Restrictive Covenants that may affect the development of these lots will be recorded.
2) No permanent structures are permitted within the pondhatch portion of Lots 9, 17, 36, 39, 42, 43 and 44.
3) Building Setback - A setback of 20 feet is required from all street, rights-of-way unless a lesser standard is approved by resolution of the appropriate Planning Commission.
4) The Plat Committee granted exceptions to 20.20.160 & 20.20.180 on April 10, 2006.
5) Front 10 ft. of the building setback adjacent to rights-of-way with an adjacent 10 ft. within 5 ft. of the side property line is also a utility easement. No permanent structure shall be constructed or placed within a utility easement which would interfere with the ability of a utility to use the easement.
6) Roads must meet the design and construction standards established by the Borough in order to be considered for certification and inclusion in the road maintenance program.
7) WASTEWATER DISPOSAL: Soil conditions, water table levels, and soil types in this subdivision have been found suitable for conventional onsite wastewater treatment and disposal systems serving single-family residential residences and meeting the regulatory requirements of the Kenai Peninsula Borough. Any other type of onsite wastewater treatment and disposal system must be designed by a professional engineer, registered to practice in Alaska, and the design must be approved by the Alaska Dept. of Environmental Conservation.

CERTIFICATE OF OWNERSHIP and DEDICATION

I HEREBY CERTIFY THAT WE ARE THE OWNER(S) OF THE REAL PROPERTY SHOWN AND DESCRIBED HEREON AND THAT WE HEREBY ADOPT THIS PLAT OF SUBDIVISION AND BY OUR FREE CONSENT DEDICATE ALL RIGHTS-OF-WAY AND PUBLIC AREAS TO PUBLIC USE AND GRANT ALL EASEMENTS TO THE USE SHOWN.

- NOTES**
- There shall be a 20' minimum building setback from all dedicated R/W's unless a lesser standard is approved by resolution of the appropriate planning commission.
 - There shall be a 10' Utility Easement along all dedicated Right-of-Ways.
 - All water carried domestic sewage systems must be designed by an Engineer registered in the State of Alaska and approved by the Alaska Dept. of Environmental Conservation prior to installation.
- Amended 10-8-86**
- Bearing on centerline of Forest Lane changed from N 64° 23' 53" W to N 64° 53' 23" W.
 - Added missing dimension on Lot 3, along R/W of Walker Street - 233.74 feet.
 - Changed dimension on East boundary of Lot 17 from 1236.07 feet to 1085.50 feet and add the dimension of 152.57 to reflect bearing break at W.C. N.I.V.E. corner.
 - Changed area of Lot 14 from 20.00 acres to 23.00 acres to reflect correct area as monumented.
 - Changed dimension of curve on Lot 4 from 266.36 feet to 265.36 feet.
 - Changed the title block to reflect the correct spelling of "Containing".

RE: Request to Vacate Paper Birch Lane

My name is Charles Johnson. I am the owner of lot #2. I am the forth party directly connected to the vacate request due to the encroachment on lot #9. I am the one that stands to lose his access for road and utilities by this move. This portion of Paper Birch Lane if vacated would remove my best and most economical option.

I would not be opposed to this vacate if I could be assured that I would have access to road and utilities that would be as good or superior than that of Paper Birch.

Note: Planning Commission considerations 20.65.050 #5 and #7. I have been shown the proposed subdivision plat of lot #1 provided to the borough by Cody McLane (owner) that includes roads to my property.

I would like to be assured that the roads will be built as shown and have access to the appropriate utilities, then this vacate would have my acceptance.

If I can not be assured, then I would ask that the road not be vacated and instead be moved slightly to avoid the encroachment from Lot #9.

I work on the slope but will try to get down there in person. I own a dbl lot on Authentic Rd.

When this house started to build (lot 8 & 9) it was OBVIOUS by standing in the road that the house was being built way too far back! I even discussed this with the neighbors. Compared to the neighboring houses it is too far back. I feel that that this may have been done on purpose to get a better view. Since the house is only on the easement by a small amount I would have to say leave it where it is. No respectable builder builds a house not knowing the property lines are, period!

On the proposal it says that the area is full of steep slopes and not usable which I have to disagree with. 1st of all the survey work was done by Cody McLane's company which seems to profit on land usage if this goes thru and it could be used for wastewater treatment systems. If its so steep and unusable then a septic system would not be possible either!

By allowing this to proceed you are setting precedent! Any builder or landowner will use this to their advantage!

I hear that there may be a gentlemans agreement between Cody McLane and Charles Johnson to provide access to Mr Johnsons property. Until that is put in writing I feel that this hearing should be DELAYED until that access proposal is approved by the Borough.

Thank You
Mark Kemberling

Madeleine or Julie, Will you please send me a confirmation when you receive this email?

Thanks you,

Heidi

3/16/2022

Heidi and Kevin Morrison
Owners of Forest Hills Lookout Subdivision,
Lot 6, 15 Acres on Paper Birch Lane

Subject: Testimony Regarding Vacating the Easement Along Paper Birch Lane

To whom it may concern:

I am writing due to concern about the easement vacation notice dated 2/24/2022 that I received March 3rd. I have owned a 15 acre parcel with at least 1,400 feet of road frontage along Paper Birch Lane for 20 years. We have walked the road easement many times since we owned the property. We are familiar with the terrain and placement of the road. We never had the concern that constructing a road within the easement would have ever been questioned. In fact, we are baffled that dangerous terrain is being used as an excuse to reward someone for building a house in a right-of-way.

We are opposed to lending support to vacating our access to the Tulchina Pointe Subdivision roads. Abandoning the easement has negative effects on many property owners, but the consequences that this proposal puts directly on my property faces are more impactful and shifts substantial development costs to me. First of all, vacating the primary road easement as proposed puts pressure on the development of Quillback Drive, which runs along 622' of the west side of my property. Although there is a partial road allotment for access for Quillback Rd, I have never dedicated matching road access for this easement as I do not desire to develop this road. It would cost me at least a half an acre of land just for my portion of the road easement! Not to mention the increased cost and burden to build a road. The value of that

half an acre can be roughly figured by comparing it to the value of the lots in Tulchina Pointe as it is adjacent to that subdivision and shares lot lines with several of their lots. Why would I ever want to develop Quillback when I have full access to all 15 acres of my property along Paper Birch?

Secondly, the added pressure to develop the only remaining easement, through Quillback, reduces my potential to subdivide small portions of my lot to sell to the adjacent property owners. I have a written request from a neighbor from 2019 offering to purchase a portion of my property to increase their lot size and move or remove Quillback. It has been our intent to explore this option once we move back to Soldotna, which will be this summer, 2022. If the easement on Paper Birch is vacated as proposed, I will be under more scrutiny and have less consideration should we decide to move forward with potential offers.

One more direct negative result on my property comes from the cost and burden of developing Quillback. Most of my neighbors along Quillback do NOT desire to see Quillback developed. Because they have no benefit of the road development (they all have direct access to Developer or Authentic Dr), I have fewer property owners to potentially share the development costs with. However, there are multiple large parcel owners along Paper Birch. It has always been our intent to propose a cost share for a mutually beneficial road. I would also like to mention that Paper Birch, which was Walker Street at the time, has been on the Borough road list for development in the past. I believe it was around 2004 when I saw that the Borough had received unexpected road development funding. I was thrilled to see Walker Street on the list of a handful of roads to develop. Upon contacting the Borough to find out more, I learned that there were a few roads ahead of Walker Street in priority, but the Borough would develop the roads as prioritized until funding ran out. Unfortunately, funding did run out before they got to Walker Street/Paper Birch, but that doesn't prevent the possibility that another round of funding may also help expedite the road development. Having Paper Birch end in a "bulb" or partial round-about as proposed detracts from potential Borough development assistance. From my conversations with the Borough, they are most interested in lending support to roads that improve access by connecting to other roads.

Contrary to the effects this proposal has on my lot, the petitioners have much to gain. The four lots stand to gain .591 acres split amongst the lots. Their gain shifts the pressure to my lot to produce an matching 30' wide easement, which causes my lot alone a risk of LOSING .43 acres. They gain .591 acre; I lose .43 acre.

Secondly, their property has an increased desirability and added value due to not having a road run beside their houses. However, the direct opposite effect is applied to my property because I will be under pressure to develop Quillback and have the road, that should have been their burden, be in my yard and in my neighbors' yards.

The newly constructed house also gained a tremendous view and southern exposure by being placed where it is. Having a better view and exposure obviously took priority over the impact of having a road right next to the house. The road easement was already on the plat when they selected the building site, so it is assumed that the owners and contractor knew that the house would be close to a road, and they were ok with that because they were gaining a view. The house was built on a double lot, so there were many options for a non-controversial location. Either the owners/builder were ok with the house being close to the road or they had intentions to build first, ask questions later. I am assuming they were ok with the first option.

Lastly, the petitioners' gains will be the result of rewarding bad business practices. Had due diligence been completed, we wouldn't be here having this discussion and, later on, us property owners along Paper Birch would be dealing with developing the road as platted. Assuming this isn't the first time the Borough has dealt with situations like these, the impact of granting this easement vacation as proposed send a distasteful message to us property owners along the road and rewards the offending party; a practice that doesn't cast the Borough in a positive light.

To summarize, my main concerns are maintaining a through access to Authentic Dr and relieving pressure for developing Quillback Dr. Due to the limited options available, my first suggestion to Littleknife Inc was to encumber the easement somewhere else on their generous double lot. Although not ideal, it is possible to turn Paper Birch at the corner of their property, creating a 90 degree turn, and connect to Developer Dr. This solution allows the offending party to correct

their mistake within their own property and not shift the consequences to other property owners. I recognize this solution may not produce an ideal road corner, however it seems the most just.

Perhaps the best alternative is moving the easement altogether by connecting Paper Birch to Authentic Road via Cody McLane's new subdivision. I have spoken with Littleknife Inc and another property owner who have had conversations with Charles Johnson, who owns a 15 acre parcel along Paper Birch, about connecting Paper Birch to Authentic through Charles' lot. It appears that Charles is in favor of this idea. Not only would this solution alleviate the encroachment, it would place Paper Birch in better terrain for developing. I am in favor of seeing this idea move forward, however, I will only support moving this easement after this new easement is **GUARANTEED** and **FINALIZED** on a Borough approved plat. It is a bad business practice to rely on word of mouth and good intentions. We do not want continue down the path of bad practices.

I propose that the Borough **DELAY** their decision on vacating this easement until the new easement is **ASSURED**, keeping us property owners whole and not leaving us worried about the future outcome. The motivation of the involved parties to finalize this alternate access will be greatly reduced as soon as the vacation on Paper Birch is granted. Please keep all parties working on this solution until it is finalized.

It is also worth keeping the petitioners involved in the process of gaining a new easement until it is finalized because, as mentioned above, there is a potential for another solution for easement on the double lot owned by Littleknife. Approving this petition now releases the petitioners from seeking a solution on their own properties. Also, Cody McLane and Steven Bowen have already made connections with Charles Johnson, and they have business connections that make them valuable partners in helping Charles Johnson create a plat and finalize his easement. Keeping their involvement with gaining a new access would help the process run smoother and, hopefully, quicker.

Moving the road easement through Charles Johnson's lot addresses two of my main concerns; road access to Authentic Dr and alternatives to developing Quillback Dr. I still have one issue that is not resolved with relocating the road. The issue of having pedestrian access through this existing right-of-way. Many of us walk and ride four-wheelers on the Paper Birch road easement, which is currently not much more than a trail. The public has much to gain from **retaining a right-of-way along this route**; it provides interconnectivity between the roads, it is convenient and direct, it creates a walking path loop (which is more desirable than a one way path), the terrain is suitable for public right-a-way, and maintaining a public right-of-way supports the precedent that future encroachments do not end up as win-win-win for the offenders. I would like to see a smaller public right-of-way easement continue through this portion of Paper Birch; one that will free the new house of encroachment, but still allow for public access. I am confident that the owners of the new home would be satisfied with this compromise since they were already aware that there was going to be a large ROAD next to their house. Having a smaller access easement seems like a reasonable compromise and allows them to proceed with resolving their encroachment.

Thank you for considering our comments,

Heidi and Kevin Morrison

I am Russ Morrison. I own 5.5 acres lot on Paper Birch Lane. I am against vacating the Paper Birch easement unless another easement is arranged AND finalized. I bought my parcel last year because it can be subdivided and sold at a high value due to the direct road access to the Tulchina Pointe Subdivision. The Planning Commission would be devaluing my property by vacating this easement without another easement in place. I am against vacating this easement UNTIL another easement is guaranteed.

I understand there is a potential opportunity for an easement to go through Charles Johnson's lot. If that is the case, I urged the Commission to **DELAY** a decision on vacating the easement on Paper Birch until we know if the other easement is viable, as there is another option for easement through Steve's lot. Please do not grant this vacation until there is another easement in place.

Also, please do not approve a full easement vacation. Please provide for a public right-of-way, as currently allowed. I would like to be able to continue to use the Paper Birch trail through Lot 7, 8, 9, and 15.

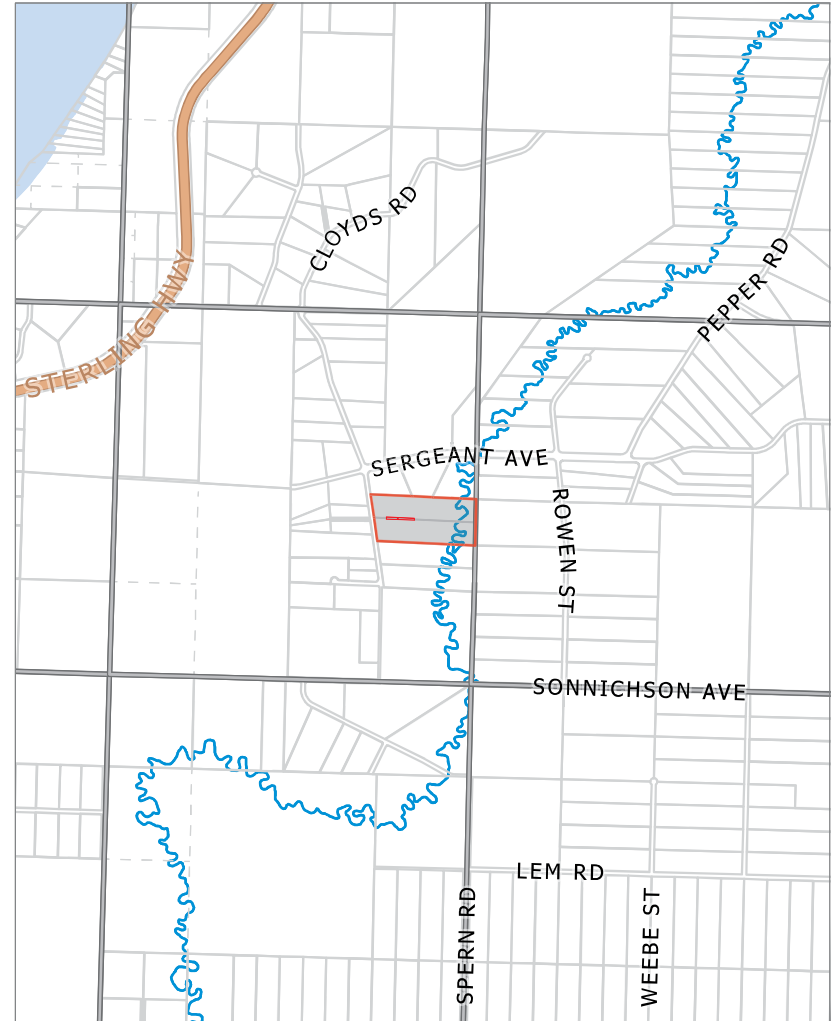

Cody McLane and Steve Bowen have the ability to help Charles Johnson complete his easement. They have skills and experience with these thing. Also, they are responsible for us being in this situation. If the

Commission approves this vacation, Cody and Steve have less motivation to assist in getting the new easement finalized.

Russ

**ITEM 4 - UTILITY EASEMENT ALTERATION
PIPER’S HAVEN UNIT 3 LOT 3 AND LOT 4**

KPB File No.	2021-115V
Planning Commission Meeting:	March 21, 2022
Applicant / Owner:	David and Jessica Talbot, Baxter Poe and Megan Tashash, all of Anchor Point, Alaska
Surveyor:	Jason Schollenberg / Peninsula Surveying, LLC
General Location:	Cloyd’s Road, Happy Valley, Anchor Point APC

STAFF REPORT

Specific Request / Purpose as stated in the petition: We would like to vacate 325’ of the 20’ wide utility easement along the lot line between Lots 3 and 4, Piper’s Haven Unit 3. There are not any utilities in the portion of the easement we would like to vacate. The lot line in this area is also being moved.

There is an existing house built within the easement. See attached as-built showing the encroachment. Moving the lot line and vacating the utility easement would solve the encroachment problem.

Notification: Notice of vacation mailings were sent by regular mail to thirty owners of property within 300 feet. Notice of the proposed vacation was emailed to nine agencies and interested parties.

The public notice was posted on the Planning Department’s bulletin board at the KPB Administration Building.

Staff Analysis: Piper’s Haven Unit 3, Plat HM 98-9, granted a 20 foot by 600 foot utility easement centered on the shared lot line of Lots 3 and 4. A house has been constructed on Lot 4 that encroaches on Lot 3 and through the existing utility easement. The as-built submitted shows the location of the encroaching structure. The preliminary plat, Piper’s Haven Unit 3 2021 Replat, was heard and approved by the Kenai Peninsula Borough Plat Committee on September 13, 2021. The plat is proposing to adjust the lot line to correct the encroaching structure.

The petition is to vacate the eastern 325 feet of the utility easement. A 20 foot by 275 foot utility easement will remain centered on the western common lot line for Lot 3A and Lot 4A of the new plat.

The additional 20 foot by 600 feet utility easements granted by Piper’s Haven Unit 3, Plat HM 98-9, that are centered on the north lot line of Lot 3 and the southern lot line of Lot 4 will remain. Additionally, the 10 foot utility easement adjacent to Cloyd’s Road will remain.

Utility provider review:

HEA	No objections
ENSTAR	Petition states no response was received.
ACS	No objections
GCI	Approved as shown.

Findings:

1. The petition states that the utility easement proposed to be vacated is not in use by a utility company.
2. ACS, GCI, and HEA provided written non-objection to the proposed vacation.
3. Piper’s Haven Unit 3, Plat HM 98-9, granted a 20’ wide utility easement centered on the common lot line of Lots 3 and 4.
4. The 20 foot utility easement is located along the western portion of the lots for a length of 600 feet.
5. The proposed petition is to vacate a 325 foot portion and leave a 275 foot portion remaining.

6. A house has been constructed on Lot 4 and encroaches into the utility easement and into Lot 3.
7. No surrounding properties will be denied utilities.
8. Kenai Peninsula Borough Roads Department has no comment.
9. Alaska DOT and Alaska Fish and Game had no comments or objections.

RECOMMENDATION:

Based on consideration of the merits as outlined by Staff comments and Staff findings, Staff recommends APPROVAL of the utility easement alteration as petitioned, subject to:

1. Grant utility easements requested by the utility providers.
2. Finalizing the approval of the easement alteration by either;
 - a. The recording of a subdivision plat within 12 months or,
 - b. The recording of a utility easement alteration resolution within 90 days of the adoption of the resolution by the Planning Commission, with the following requirements:
 - i. An exhibit drawing showing, and dimensioning, the utility easement alteration area, prepared, signed and sealed by a licensed land surveyor. The exhibit drawing will be attached to, and recorded with, the resolution.
 - ii. The applicants will provide the recording fee for the resolution and its attachment to the Planning Department.
 - iii. The Planning Department is responsible for filing the Planning Commission resolution.

20.65.070 Alteration of platted utility easements

- E. A planning commission decision under this section is final. A notice of decision shall be sent to the petitioner. No reapplication or petition concerning the same alteration to platted utility easement may be filed within one calendar year of the date of the final denial action except in the case where new evidence or circumstances exist that were not available or present when the original petition was filed. If the reasons for denial are resolved, the petitioner may submit a new petition for alteration of platted utility easement with documentation that the issues have been resolved, accompanied by a new fee.**
- F. An appeal of the planning commission decision under this section must be filed in the superior court in accordance with the Alaska Rules of Appellate Procedure.**

The 2019 Kenai Peninsula Borough Comprehensive Plan adopted November 2019 by Ordinance No. 2019-25. The relevant objectives are listed.

Goal 3. Preserve and improve quality of life on the Kenai Peninsula Borough through increased access to local and regional facilities, activities, programs and services.

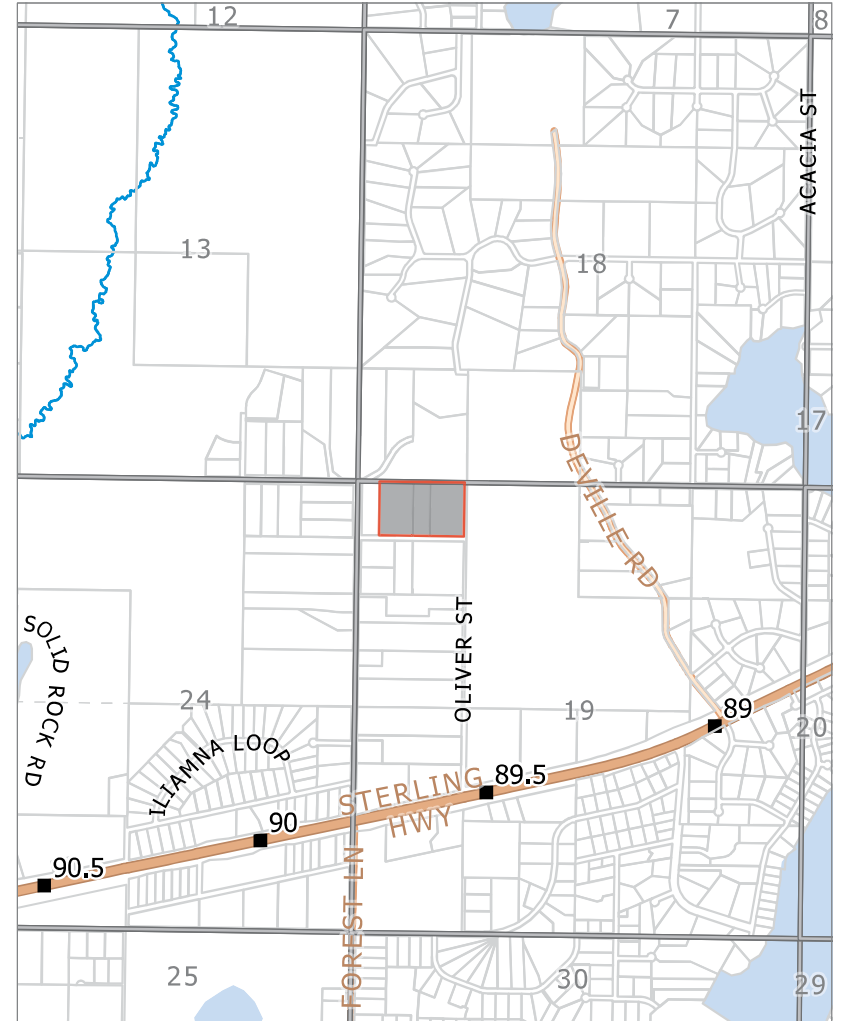

- *Focus Area: Energy and Utilities*
 - o *Objective A - Encourage coordination or residential, commercial, and industrial development with extension of utilities and other infrastructure.*
 - *Strategy 1. Near – Term: Maintain existing easements (especially section line easements) in addition to establishing adequate utility rights of way or easements to serve existing and future utility needs.*
 - *Strategy 2. Near – Term: Maintain regular contact with utility operators to coordinate and review utility easement requests that are part of subdivision plat approval.*
 - *Strategy 3. Near – Term: Identify potential utility routes on Borough lands.*
- *Housing*
 - o *Objective D. Encourage efficient use of land, infrastructure and services outside incorporated cities by prioritizing future growth in the most suitable areas.*
 - *Strategy 1. Near – Term: Collaborate with the AK Department of Transportation, incorporated cities within the borough, utility providers, other agencies overseeing*

local services, and existing communities located adjacent to the undeveloped areas that are appropriate for future growth, to align plans for future expansion of services to serve future residential development and manage growth.

- 4) Covenants, conditions, and restrictions which affect this subdivision are recorded in Book 560 Page 557 and Book 581 Page 57 Kenai Recording District. The Borough will not enforce private covenants, easements, or Kdeed restrictions per PB 21.44.080.
- 5) Front 10 feet adjacent to right-of-ways and 20 feet within 5 feet of the side lot lines is a utility easement. No permanent structure shall be constructed or placed within a utility easement which would interfere with the ability of a utility to use the easement.
- 6) **WASTEWATER DISPOSAL:** The parent subdivision for lots resulting from this platting action was approved by the Kenai Peninsula Borough on October 3, 1977. Wastewater treatment and disposal systems must meet the regulatory requirements of the Alaska Department of Environmental Conservation.

PLAT APPROVAL

THIS PLAT WAS APPROVED BY THE KENAI PENINSULA BOROUGH PLANNING COMMISSION AT THE MEETING OF FEBRUARY 14, 2022.

**ITEM 5 - UTILITY EASMENT ALTERATION
ARROWHEAD ESTATES MOORE REPLAT LOT 11A AND ARROWHEAD ESTATES PHASE 1 LOT 10**

KPB File No.	2022-001V
Planning Commission Meeting:	March 21, 2022
Applicant / Owner:	Nathan and Julie Moore of Soldotna, Alaska
Surveyor:	John Segesser / Segesser Surveys
General Location:	Half Moon Avenue and Oliver Street, Sterling

STAFF REPORT

Specific Request / Purpose as stated in the petition: None stated. A preliminary plat has been approved that reconfigures the lot lines.

Notification: Notice of vacation mailings were sent by regular mail to twenty owners of property within 600 feet. Notice of the proposed vacation was emailed to seven agencies and interested parties.

The public notice was posted on the Planning Department’s bulletin board at the KPB Administration Building.

Staff Analysis: The parent plat, Arrowhead Estates Phase 1 KN 2000-7, granted a 20 foot utility easement centered on the shared lot line for Lots 10 and 11. That plat also granted 10 foot utility easements along Half Moon Avenue and Oliver Street (Ridge Street) increasing to 20 feet within 5 feet of the side lot lines.

Arrowhead Estates Moore Replat, Plat KN 2010-47, combined Lot 11 with Lot 12. The 10 foot utility easement along the western boundary of Lot 11 was carried over as was the 10 foot utility easements along the right of ways that increases to 20 feet within 5 feet of the side lot lines.

On February 14, 2022, the Kenai Peninsula Borough Plat Committee heard and approved a preliminary plat for Arrowhead Estates 2022 Replat. That plat is combining three lots into two. The 20 foot utility easement centered on the lot line of Lots 10 and 11 will now divide proposed Lot 10A. This vacation will remove the utility easement centered on the former lot line leaving 10 foot utility easements along Half Moon Avenue and Oliver Street. This vacation will include the back 10 feet within 5 feet of the former lot line. Portions of the utility easement where it increased to 20 feet will remain in place where former lot lines are no longer present.

The sketch provided for the vacation is labeled as a 10 foot utility easement. The preliminary plat for Arrowhead Estates 2022 Replat correctly labeled the easement as 10 foot each side. This action will be vacating a 20 foot wide utility easement.

Utility provider review:

HEA	No comment
ENSTAR	No comments or recommendations
ACS	No objections
GCI	No objections

Findings:

1. The petition stated that the utility easement proposed to be vacated is not in use by a utility company.
2. ACS, ENSTAR, GCI, and HEA provided written non-objection to the proposed vacation.
3. Arrowhead Estates Phase 1, Plat KN 2000-07, granted a 20 foot wide utility easement centered on the shared lot line for Lot 10 and Lot 11.
4. Arrowhead Estates Moore Replat, Plat KN 2010-47, carried over the 10 foot portion of the utility easement

- along Lot 11 to be shown within Lot 11A.
5. Arrowhead Estates 2022 Replat, KPB File 2022-001, will be moving the lot line common to Lot 11A and Lot 10 leaving the 20 foot easement within the new lot.
 6. A 10 foot utility easement adjacent to Half Moon Avenue will remain in place.
 7. No surrounding properties will be denied utilities.
 8. The Kenai Peninsula Borough Roads Department had no objection.
 9. Alaska DOT and Alaska Fish and Game has no comment on the proposed vacation.

RECOMMENDATION:

Based on consideration of the merits as outlined by Staff comments and Staff findings, Staff recommends **APPROVAL** of the utility easement alteration as petitioned, subject to:

1. Grant utility easements requested by the utility providers.
2. Finalizing the approval of the easement alteration by either;
 - a. The recording of a subdivision plat within 12 months or,
 - b. The recording of a utility easement alteration resolution within 90 days of the adoption of the resolution by the Planning Commission, with the following requirements:
 - i. An exhibit drawing showing, and dimensioning, the utility easement alteration area, prepared, signed and sealed by a licensed land surveyor. The exhibit drawing will be attached to, and recorded with, the resolution.
 - ii. The applicants will provide the recording fee for the resolution and its attachment to the Planning Department.
 - iii. The Planning Department is responsible for filing the Planning Commission resolution.

20.65.070 Alteration of platted utility easements

- E. A planning commission decision under this section is final. A notice of decision shall be sent to the petitioner. No reapplication or petition concerning the same alteration to platted utility easement may be filed within one calendar year of the date of the final denial action except in the case where new evidence or circumstances exist that were not available or present when the original petition was filed. If the reasons for denial are resolved, the petitioner may submit a new petition for alteration of platted utility easement with documentation that the issues have been resolved, accompanied by a new fee.**
- F. An appeal of the planning commission decision under this section must be filed in the superior court in accordance with the Alaska Rules of Appellate Procedure.**

The 2019 Kenai Peninsula Borough Comprehensive Plan adopted November 2019 by Ordinance No. 2019-25. The relevant objectives are listed.

Goal 3. Preserve and improve quality of life on the Kenai Peninsula Borough through increased access to local and regional facilities, activities, programs and services.

- *Focus Area: Energy and Utilities*
 - o *Objective A - Encourage coordination or residential, commercial, and industrial development with extension of utilities and other infrastructure.*
 - *Strategy 1. Near – Term: Maintain existing easements (especially section line easements) in addition to establishing adequate utility rights of way or easements to serve existing and future utility needs.*
 - *Strategy 2. Near – Term: Maintain regular contact with utility operators to coordinate and review utility easement requests that are part of subdivision plat approval.*
 - *Strategy 3. Near – Term: Identify potential utility routes on Borough lands.*
- *Housing*

- *Objective D. Encourage efficient use of land, infrastructure and services outside incorporated cities by prioritizing future growth in the most suitable areas.*
 - *Strategy 1. Near – Term: Collaborate with the AK Department of Transportation, incorporated cities within the borough, utility providers, other agencies overseeing local services, and existing communities located adjacent to the undeveloped areas that are appropriate for future growth, to align plans for future expansion of services to serve future residential development and manage growth.*

KPB File No.	2022-22
Planning Commission Meeting:	March 21, 2022
Applicant	Mark Arkens
Mailing Address	PO Box 2079 Soldotna, AK 99669
Legal Description	T 5N R 9W SEC 22 SEWARD MERIDIAN KN 0750114 BEND IN THE RIVER SUB LOT 11 BLK 1
Physical Address	36315 Mykiss
KPB Parcel Number	06625023

Project Description

A Conditional Use Permit is sought pursuant to KPB 21.18 for the installation of a 140-foot chain-link fence on a parcel within the 50-foot Habitat Protection District of the Kenai River.

Background Information

Applicant recently acquired this property and is proposing to install a chain-link fence along the eastern side of the property. This property is adjacent to the Mykiss Street public ROW that grants access to the Kenai River. Over the years, the public's use of this ROW has led to trespassing on the applicant's property, which has degraded the habitat. Applicant would like to install a fence to stop the public from trespassing so the riparian habitat can regenerate. In the fall of 2021, the applicant had the property surveyed and the corners marked to ensure the fence remains out of the ROW and section line easement. Pursuant to KPB 21.18.071, portions of this project have already been permitted under a staff permit.

Project Details within the 50-foot Habitat Protection District

1. Installation of a 6-foot by 140-foot chain-link fence, of which approximately 45 feet will be in the Habitat Protection District.
2. Installation of metal fence posts spaced every 6 - 10 feet.
3. Minimal removal of vegetated material.

Findings of fact pursuant to KPB 21.18.081 Conditional Use Permit

1. Portions of this proposed project are within the 50-foot habitat protection district as defined by KPB 21.18.040.
2. Pursuant to KPB 21.18.081(B)(2), fences may be permitted within the habitat protection district under a conditional use permit.
3. Pursuant to 21.18.081(D) General Standards, staff finds that the proposed project meets the five general standards.

4. Pursuant to KPB 21.18.020(A), this chapter was established to protect and preserve the stability of anadromous fish through controlling shoreline alterations and disturbances along anadromous waters and to preserve nearshore habitat.
5. Pursuant to KPB 21.18.20(B)(5), one purpose of this chapter was established to separate conflicting land uses.
6. Pursuant to KPB 21.06.050, chain-link fencing allows for the unobstructed passage of water.
7. Pursuant to KPB 21.06.081(D)(3), the proposed work will occur on the applicant's property and shall not have an adverse effect on adjoining properties.
8. Kenai Peninsula Borough Planning Commission Resolution 2015-35 defines water-dependent as:

"...a use or structure located on, in or adjacent to water areas because the use requires access to the waterbody. The definition is applicable to facilities or activities that must be located at or near the shoreline and within the 50-foot buffer. An activity is considered water dependent if it is dependent on the water as part of the intrinsic nature of its operation. Examples of water dependent facilities may include, but are not limited to, piers, boat ramps, and elevated walkways."
9. The River Center found the application complete and scheduled a public hearing for March 21, 2022.
10. Agency review was distributed on February 28, 2022. No comments or objections have been received from resource agencies to date.
11. Pursuant to KPB 21.11.030, public notice was mailed to all property owners within a radius of 300 feet of the project on March 1, 2022. A total of 19 mailings were sent.
12. Pursuant to KPB 21.11.020, public notice was published in the Peninsula Clarion on March 10, 2022 and March 17, 2022.
13. The applicant is currently in compliance with Borough permits and ordinances.

Permit Conditions

1. Construction techniques and best management practices shall be utilized to ensure that land disturbing activities do not result in runoff or sedimentation to the Kenai River.
2. The fence must be designed and installed to meet KPB floodplain requirements.
3. The permittee shall minimize damage to all vegetation and shall revegetate all disturbed areas with native vegetation.
4. For each tree removed, two seedlings less than 5.5-feet tall of a species native to the region will be planted within the 50-foot HPD.
5. Storage or use of fuel is prohibited within 50-feet of any open water.
6. The River Center shall be notified at least 3 days prior to the start of the project.
7. If changes to the approved project described above are proposed prior to or during its siting, construction, or operation, the permittee is required to notify the River Center to determine if additional approval is required.
8. The permittee shall be held responsible for the actions of the contractors, agents, or others who perform work to accomplish the approved plan.
9. The construction or installation phase of this Conditional Use Permit must be completed within one calendar year from the date of the permit's issuance, or the Conditional Use Permit shall expire unless the Planning Commission finds that more time is necessary to effectuate the purposes of this chapter, in which case the commission may extend the deadline for a maximum of six years from the date of issuance. Prior to its expiration date and upon written request, the Planning Director may grant a Conditional Use Permit extension for 12 months (KPB 21.18.081 (H)).
10. In addition to the penalties provided by KPB 21.18.110, and pursuant to KPB 21.50, the permit may be revoked if the permittee fails to comply with the provisions of this chapter or the terms and conditions

of a permit issued under this chapter. The Borough Clerk shall provide at least 15 day's written notice to the permittee of a revocation hearing before the hearing officer (KPB 21.18.082).

11. The permittee shall comply with the terms, conditions and requirements of the Kenai Peninsula Borough Code of Ordinances Chapter 21.18, and any regulations adopted pursuant to this chapter.
12. The permittee is responsible for abiding by all other federal, state, and local laws, regulations, and permitting requirements applicable to the project (KPB 21.18.081 (G)).

General Standards

Pursuant to 21.18.081(D) General Standards, the following standards shall be met before conditional use approval may be granted:

1. The use or structure will not cause significant erosion, sedimentation, damage within the habitat protection district, an increase in ground or surface water pollution, and damage to riparian wetlands and riparian ecosystems; **Finding 4 and Conditions 1 - 5, 11, 12 appear to support this standard.**
2. Granting of the conditional use shall be consistent with the purposes of this chapter, the borough comprehensive plan, other applicable chapters of the borough Code, and other applicable planning documents adopted by the borough; **Findings 1 - 8, 11 - 13 appear to support this standard.**
3. The development of the use or structure shall not physically damage the adjoining property; **Finding 7 appears to support this standard.**
4. The proposed use or structure is water-dependent; **Findings 1 - 4, 8 appear to support this standard.**
5. Applicant or owner's compliance with other borough permits and ordinance requirements. **Finding 13 appears to support this standard.**

Multi-Agency Application
Draft Resolution 2022-22

Staff Recommendation

Staff finds that the proposed project meets the five general standards of KPB 21.18.081 and recommends that the Planning Commission grant a Conditional Use Permit subject to the conditions as set forth in PC Resolution 2022-22.

Note: An appeal of a decision of the Planning Commission may be filed to the Hearing Officer, in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. An appeal must be filed with the Borough Clerk within 15 days of date of the notice of the decision using the proper forms and be accompanied by the filing and records preparation fee.

I'm ASKING TO REPAIR THE BANK OF THE RIVER & RETURN IT TO THE ORIGINAL RIPARIAN STATE. I WOULD LIKE TO TIE SPRUCE BOUGHTS TO THE ENTIRE BANK, RESTORING IT TO ITS NATURAL STATE. I WILL BE USING DUCK BILLED ANCHERS & SPRUCE BOUGHTS ONLY. PEOPLE HAVE BEEN WALKING ON IT AND DESTROYING THE BANK & ALL THE RIPARIAN VEGETATION IS GONE. I WANT TO RESTORE IT & KEEP PEOPLE OFF. I ALSO WANT TO BUILD A FENCE TO STOP PEOPLE FROM WALKING & PARKING ON THE LOT. THEY HAVE DAMAGED THE BANK & I MEAN TO RESTORE IT THE BEST I CAN. THE ONLY WAY TO DO IT IS BUILD A FENCE TO KEEP PEOPLE OFF & RESTORE THE BANK. WE NEED TO TAKE CARE OF OUR KENAI RIVER, I CONSIDER MYSELF A RIVER STEWARD, #1869 I CAN MAKE A DIFFERENCE ON THIS PIECE OF THE RIVER.

Project Questions:

Note: Use Ordinary High Water (OHW) for non-tidal waters, and Mean High Tide (MHT) for tidal waters.

- Start date: APRIL 1 End date: NOV 1 Estimated Days of Construction: 30
- Is the project located within 50 feet of OHW or HTL a waterbody? Yes No
- Does any portion of the project extend **below** the OHW or HTL of the stream or waterbody? Yes No
- Does any portion of the project cantilever or extend **over** the OHW of the waterbody? Yes No
- Will anything be placed below OHW or HTL of the waterbody? Yes No
- Will material be extracted or dredged from the site? Yes No
- Including areas below OHW or HTL, what is the total area (in acres) that will be excavated or dredged?
Total Area: NA Type of Material: _____
Location you will depositing fill: _____
- Will any material (including soils, debris, and/or overburden) be used as fill? Yes No
Type of material: SPRUCE BOARDS Amount: ENOUGH FOR PERMANENT Permanent or Temporary
Will fill be placed below OHW or HTL: Yes No
- List all motorized equipment to be used in this project, including access route to site, any stream or waterbody crossings, and (if applicable) how long equipment will be used below OHW or HTL: NA
- Is any portion of the work already complete? Yes No
If yes, describe: _____

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

Public notice is hereby given that an application for a Conditional Use Permit has been received to install a 140-foot wooden fence on a parcel within the 50-foot Habitat Protection District of the Kenai River, near Soldotna, Alaska. ***You have been sent this notice because you are a property owner within 300 feet of the described property.***

Pursuant to KPB 21.18.081(B)(3) Fences and KPB 21.18.091 Mitigation measures, projects within the 50-foot Habitat Protection District are not permitted unless a Conditional Use Permit (CUP) is approved by the Planning Commission. This project is located at T 5N R 9W SEC 22 SEWARD MERIDIAN KN 0750114 BEND IN THE RIVER SUB LOT 11 BLK 1, Soldotna, Alaska.

Petitioner: Mark Arkens
PO Box 2079
Soldotna, AK 99669

Public Hearing: The Kenai Peninsula Borough Planning Commission meeting will hold a public hearing on March 21, 2022 commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting is to be held in the Borough Administrative Building, 144 N. Binkley St., Soldotna, Alaska. The public may also attend the meeting electronically/telephonically via Zoom. To join the meeting from a computer visit <https://us06web.zoom.us/j/9077142200>. To attend the Zoom meeting by telephone call toll free 1-888-788-0099 or 1-877-853-5247. When calling in you will need the Meeting ID **907 714 2200**.

Public Comment: Anyone wishing to testify may attend the above meeting to give testimony, or may submit written comment to the Donald E. Gilman River Center, 514 Funny River Rd., Soldotna, Alaska 99669. Written comments may also be sent by fax to (907) 260-5992 or by email to KenaiRivCenter@kpb.us. **Written comments must be submitted by 1:00 pm Friday, March 18, 2022.**

For additional information contact Samantha Lopez, slopez@kpb.us, Donald E. Gilman River Center, (907) 714-2468.

KENAI PENINSULA BOROUGH PLANNING COMMISSION

RESOLUTION 2022-22

A RESOLUTION GRANTING A CONDITIONAL USE PERMIT PURSUANT TO KPB 21.18 FOR THE CONSTRUCTION OF A FENCE WITHIN THE 50-FOOT HABITAT PROTECTION DISTRICT OF THE KENAI RIVER.

- WHEREAS,** Chapter 21.18 provides for the approval of Conditional Use Permits for certain activities within the habitat protection district; and
- WHEREAS,** KPB 21.18.081 provides that a conditional use permit is required for construction not meeting the standards of KPB 21.18.071; and
- WHEREAS,** KPB 21.18.091 provides for mitigation measures by the planning department staff to address impacts to the Habitat Protection District from a proposed, ongoing, or completed project; and
- WHEREAS,** public notice was sent to all property owners within a 300-foot radius of the proposed activity as provided in Section 21.11.030; and
- WHEREAS,** public notice was published in the Peninsula Clarion on March 10, 2022 and March 17, 2022 as provided in Section 21.11.020; and
- WHEREAS,** public testimony was received at the March 21, 2022 meeting of the Kenai Peninsula Borough Planning Commission;

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:

That the Planning Commission makes the following findings of fact pursuant to KPB 21.18:

Section 1. Project Details Within the 50-foot Habitat Protection District

1. Installation of a 6-foot by 140-foot chain-link fence, of which approximately 45 feet will be in the Habitat Protection District.
2. Installation of metal fence posts spaced every 6 - 10 feet.
3. Minimal removal of vegetated material.

Section 2. Findings of fact pursuant to KPB 21.18.081

1. Portions of this proposed project are within the 50-foot habitat protection district as defined by KPB 21.18.040.
2. Pursuant to KPB 21.18.081(B)(2), fences may be permitted within the habitat protection district under a conditional use permit.
3. Pursuant to 21.18.081(D) General Standards, staff finds that the proposed project meets the five general standards.

4. Pursuant to KPB 21.18.020(A), this chapter was established to protect and preserve the stability of anadromous fish through controlling shoreline alterations and disturbances along anadromous waters and to preserve nearshore habitat.
5. Pursuant to KPB 21.18.20(B)(5), one purpose of this chapter was established to separate conflicting land uses.
6. Pursuant to KPB 21.06.050, chain-link fencing allows for the unobstructed passage of water.
7. Pursuant to KPB 21.06.081(D)(3), the proposed work will occur on the applicant's property and shall not have an adverse effect on adjoining properties.
8. Kenai Peninsula Borough Planning Commission Resolution 2015-35 defines water-dependent as:
"...a use or structure located on, in or adjacent to water areas because the use requires access to the waterbody. The definition is applicable to facilities or activities that must be located at or near the shoreline and within the 50-foot buffer. An activity is considered water dependent if it is dependent on the water as part of the intrinsic nature of its operation. Examples of water dependent facilities may include, but are not limited to, piers, boat ramps, and elevated walkways."
9. The River Center found the application complete and scheduled a public hearing for March 21, 2022.
10. Agency review was distributed on February 28, 2022. No comments or objections have been received from resource agencies to date.
11. Pursuant to KPB 21.11.030, public notice was mailed to all property owners within a radius of 300 feet of the project on March 1, 2022. A total of 19 mailings were sent.
12. Pursuant to KPB 21.11.020, public notice was published in the Peninsula Clarion on March 10, 2022 and March 17, 2022.
13. The applicant is currently in compliance with Borough permits and ordinances.

Section 4. Permit Conditions

1. Construction techniques and best management practices shall be utilized to ensure that land disturbing activities do not result in runoff or sedimentation to the Kenai River.
2. The fence must be designed and installed to meet KPB floodplain requirements.
3. The permittee shall minimize damage to all vegetation and shall revegetate all disturbed areas with native vegetation.
4. For each tree removed, two seedlings less than 5.5-feet tall of a species native to the region will be planted within the 50-foot HPD.
5. Storage or use of fuel is prohibited within 50-feet of any open water.
6. The River Center shall be notified at least 3 days prior to the start of the project.
7. If changes to the approved project described above are proposed prior to or during its siting, construction, or operation, the permittee is required to notify the River Center to determine if additional approval is required.
8. The permittee shall be held responsible for the actions of the contractors, agents, or others who perform work to accomplish the approved plan.
9. The construction or installation phase of this Conditional Use Permit must be completed within one calendar year from the date of the permit's issuance, or the Conditional Use Permit shall expire unless the Planning Commission finds that more time is necessary to effectuate the purposes of this chapter, in which case the commission may extend the deadline for a maximum of six years from the date of issuance. Prior to its expiration date and upon written request, the Planning Director may grant a Conditional Use Permit extension for 12 months (KPB 21.18.081 (H)).

10. In addition to the penalties provided by KPB 21.18.110, and pursuant to KPB 21.50, the permit may be revoked if the permittee fails to comply with the provisions of this chapter or the terms and conditions of a permit issued under this chapter. The Borough Clerk shall provide at least 15 day's written notice to the permittee of a revocation hearing before the hearing officer (KPB 21.18.082).
11. The permittee shall comply with the terms, conditions and requirements of the Kenai Peninsula Borough Code of Ordinances Chapter 21.18, and any regulations adopted pursuant to this chapter.
12. The permittee is responsible for abiding by all other federal, state, and local laws, regulations, and permitting requirements applicable to the project (KPB 21.18.081 (G)).

Section 3. Pursuant to 21.18.081(D) General Standards, the following standards shall be met before conditional use approval may be granted:

1. The use or structure will not cause significant erosion, sedimentation, damage within the habitat protection district, an increase in ground or surface water pollution, and damage to riparian wetlands and riparian ecosystems;
2. Granting of the conditional use shall be consistent with the purposes of this chapter, the borough comprehensive plan, other applicable chapters of the borough Code, and other applicable planning documents adopted by the borough;
3. The development of the use or structure shall not physically damage the adjoining property;
4. The proposed use or structure is water-dependent;
5. Applicant's or owner's compliance with other borough permits and ordinance requirements.

THIS CONDITIONAL USE PERMIT EFFECTIVE ON _____ DAY OF _____, 2022.

Blair Martin, Chairperson
Planning Commission

ATTEST:

Ann Shirnberg
Administrative Assistant

Note: An appeal of a decision of the Planning Commission may be filed to the hearing officer, in accordance with the requirements of the KPB Code of Ordinances, Chapter 21.20.250. An appeal must be filed with the Borough Clerk within 15 days of date of the notice of the decision using the proper forms and be accompanied by the filing and records preparation fee.

E. NEW BUSINESS

7. Marijuana Cultivation Facility License

Applicant: Redoubt Reefer / Landowner: Jason Rodean

Parcel ID: 133-350-16

Location 27250 Vincent Street

Kasilof Area

AGENDA ITEM F. PUBLIC HEARING

X. State application for a marijuana establishment license; Kasilof Area

STAFF REPORT

PC MEETING: Monday, March 21, 2022

Applicant: Redoubt Reefer
Landowner: Jason Rodean
Parcel ID#: 13335016
Legal Description: T 3N R 11W SEC 6 Seward Meridian KN 0760167 OLD KASILOF SUB LOT 8
Location: 27250 Vincent Street, Kasilof, AK 99610

BACKGROUND INFORMATION: On Thursday, June 24, 2021 the applicant notified the borough that he/she had submitted an application to the state for a Standard Marijuana Cultivation Facility license. On Tuesday, July 27, 2021 the applicant supplied the borough with a signed acknowledgement form and a site plan on Tuesday, July 27, 2021 of the proposed Standard Marijuana Cultivation Facility on the above described parcel. The Alcohol and Marijuana Control Office notified the borough that the application was complete on Friday, February 18, 2022. Staff has reviewed the completed license that has been submitted to the state and the site plan submitted to the borough and has found the following concerning the standards contained in KPB 7.30.020:

1. The Borough finance department has been notified of the complete application and they report that the applicant is in compliance with the borough tax regulations.
2. Borough planning department staff has evaluated the application and has determined that the proposed facility will be located greater than 1,000 feet from any school.
3. Borough planning department staff has evaluated the application and has determined that the proposed facility will be located greater than 500 feet from all recreation or youth centers, and all buildings in which religious services are regularly conducted, and all correctional facilities.
4. The proposed facility is not located within a local option zoning district.
5. The proposed facility is located where there is sufficient ingress and egress for traffic to the parcel.
 - The site plan indicates that the approach is or will be constructed to a minimum width of 24 feet where it accesses the Vincent Street right-of-way.
 - The signed acknowledgement form indicates that there will not be any parking in borough rights-of-way.
 - The site plan indicates a clear route for delivery vehicles which allows vehicles to turn safely.
 - On-site parking and loading areas are designated at a location that would preclude vehicles from backing out into the roadway.
6. Because this application is for cultivation the hours of operation for a retail store is not applicable.

KPB 7.30.020(E) allows the recommendation of additional conditions on a license to meet the following standards:

- protection against damage to adjacent properties,
- protection against offsite odors,
- protection against noise,
- protection against visual impacts,
- protection against road damage,

- protection against criminal activity, and
- protection of public safety.

The Alaska Marijuana Control Board will impose a condition a local government recommends unless the board finds the recommended condition is arbitrary, capricious, and unreasonable (3 ACC 306.060b). If the Planning Commission recommends additional conditions, additional findings must be adopted to support the conditions.

PUBLIC NOTICE: Public notice of the application was mailed on Wednesday, March 02, 2022 to the 11 landowners of the parcels within 300 feet of the subject parcel. Public notice of the application was published in the Thursday, March 10, 2022 & Thursday, March 17, 2022 issues of the Peninsula Clarion.

KPB AGENCY REVIEW: Application information was provided to pertinent KPB staff and other agencies on Wednesday, March 02, 2022.

ATTACHMENTS

- State marijuana establishment application with associated submitted documents
- Site Plan
- Acknowledgement form
- Aerial map
- Area land use map with 500' & 1,000' parcel radius

STAFF RECOMMENDATION

Staff recommends that the planning commission forward this application to the assembly with the findings contained in this staff report and with the recommendation that the following conditions be placed on the state license pursuant to 3 AAC 306.060(b):

1. The marijuana establishment shall conduct their operation consistent with the site plan submitted to the Kenai Peninsula Borough.
2. There shall be no parking in borough rights-of-way generated by the marijuana establishment.
3. The marijuana establishment shall remain current in all Kenai Peninsula Borough tax obligations consistent with KPB 7.30.020(A).

KENAI PENINSULA BOROUGH PLANNING COMMISSION NOTICE OF PUBLIC HEARING

Public notice is hereby given that the Kenai Peninsula Borough has been notified of an application for a Standard Marijuana Cultivation Facility license in the Kasilof Area. The Borough will hold a public hearing prior to providing comments to the State on this application. This notice is being sent to landowners located within a 300-foot radius of the subject property. All members of the public are invited to comment. The application under consideration is described as follows:

Applicant: Redoubt Reefer

Please turn over for map.

Landowner: Jason Rodean

Parcel Number: 13335016

Property Description: T 3N R 11W SEC 6 Seward Meridian KN 0760167 OLD KASILOF SUB LOT 8

Location: 27250 Vincent Street, Kasilof, AK 99610

Proposed Land Use: The applicant wishes to obtain a license from the Alaska Marijuana Control Board for a Standard Marijuana Cultivation Facility on the parcel listed above.

Applicable Code: State marijuana applications are reviewed by the borough in accordance with KPB 7.20 and 7.30. Copies of these ordinances are available from the Clerk's Office or on the KPB website at: kpb.us. State regulations (3 AAC 306) allow local jurisdictions to protest the issuance of marijuana licenses and recommend conditions to be placed upon licenses.

Public Hearing: A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday, March 21, 2022**, commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the assembly chambers of the borough administration building located at 144 N. Binkley Street, Soldotna, Alaska. The public may also attend the meeting electronically/telephonically via Zoom. To join the meeting from a computer visit <https://zoom.us/j/9077142200>. To attend the Zoom meeting by telephone call toll free **1-888-788-0099** or **1-877-853-5247**. When calling you will need the Meeting ID # **907 714 2200**. If you connect by computer, and wish to comment but do not have a microphone, connect online and then select phone for audio. A box will come up with the toll free numbers, the Meeting ID#, and your participant number.

Public Comment: Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to: Planning Commission Chairman, 144 N. Binkley, Soldotna, Alaska 99669. A statement addressed to the chairman may also be emailed to: planning@kpb.us, or faxed to (907) 260-5992. Please provide written statements by 1:00 PM, Friday, March 18, 2022.

For additional information about this application, please call the planning department at (907) 714-2206, or 1-800-478-4441 (toll free within the Kenai Peninsula Borough).

New Application **New Onsite Consumption Endorsement Application (Retail Only)**

AMCO has received a complete application for a marijuana establishment within your jurisdiction. This notice is required under 3 AAC 306.025(d)(2). Application documents will be sent to you separately via ZendTo.

To protest the approval of this application pursuant to 3 AAC 306.060, you must furnish the director **and** the applicant with a clear and concise written statement of reasons for the protest within 60 days of the date of this notice, and provide AMCO proof of service of the protest upon the applicant. If the protest is a “conditional protest” as defined in 3 AAC 306.060(d)(2) and the application otherwise meets all the criteria set forth by the regulations, the Marijuana Control Board may approve the license, but require the applicant to show to the board’s satisfaction that the requirements of the local government have been met before the director issues the license.

3 AAC 306.010, 3 AAC 306.080, and 3 AAC 306.250 provide that the board will deny an application for a new license if the board finds that the license is prohibited under AS 17.38 as a result of an ordinance or election conducted under AS 17.38 and 3 AAC 306.200, or when a local government protests an application on the grounds that the proposed licensed premises are located in a place within the local government where a local zoning ordinance prohibits the marijuana establishment, unless the local government has approved a variance from the local ordinance.

This application will be in front of the Marijuana Control Board at our April 13-14, 2022 meeting.

Sincerely,

Glen Klinkhart, Director

Alaska Marijuana Control Board
Form MJ-01: Marijuana Establishment Operating Plan

What is this form?

An operating plan is required for all marijuana establishment license applications. Applicants should review **Title 17.38** of **Alaska Statutes** and **Chapter 306** of the **Alaska Administrative Code**. This form will be used to document how an applicant intends to meet the requirements of those statutes and regulations. If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020(c).

What must be covered in an operating plan?

Applicants must identify how the proposed premises will comply with applicable statutes and regulations regarding the following:

- Control plan for persons under the age of 21
- Security
- Business records
- Inventory tracking of all marijuana and marijuana product on the premises
- Employee qualification and training
- Health and safety standards
- Transportation and delivery of marijuana and marijuana products
- Signage and advertising

Applicants must also complete the corresponding operating plan supplemental forms (**Form MJ-03**, **Form MJ-04**, **Form MJ-05**, or **Form MJ-06**) to meet the additional operating plan requirements for each license type.

Section 1 – Establishment & Contact Information

Enter information for the business seeking to be licensed, as identified on the license application.

Section 2 – Control Plan for Persons Under the Age of 21

2.1. Describe how the marijuana establishment will prevent persons under the age of 21 from gaining access to any portion of the licensed premises and marijuana items:

Photo ID will be required and checked for all visitors upon signing in to visitor log book.

Section 3 – Security

Restricted Access Areas (3 AAC 306.710):

3.1. Describe how you will prevent unescorted members of the public from entering restricted access areas:

Unescorted members of the public will be prohibited from entering restricted access areas passed the main entryway/office.
Signs will be posted at restricted access areas.
Guests will be accompanied at all times and will be required to wear a visitors pass for the entire visit.

3.2. Describe your recordkeeping and processes for admitting visitors into and escorting them through restricted access areas:

Guests will be required to sign in with name, age, date and time of entry and time of exit, name of the person escorting the visitor and drivers license number. An employee or owner with an "Alaska Marijuana Handler Card" will escort the visitor at all times and visitor will be required to wear a visitors pass. All information recorded will be stored in a locked file cabinet in the office.

Form MJ-01: Marijuana Establishment Operating Plan

3.3. Provide samples of licensee-produced identification badges that will be displayed by each licensee, employee, or agent while on the premises, and of visitor identification badges that will be worn by all visitors while in restricted access areas:

Security Alarm Systems and Lock Standards (3 AAC 306.715):

3.4. Exterior lighting is required to facilitate surveillance. Describe how the exterior lighting will meet this requirement:

Exterior motion lighting will be installed to facilitate surveillance.
 Exterior motion lights will be placed on each corner of the licensed premises to detect motion within 25 feet of the building. Lighting both interior and exterior will allow for the entire licensed premises to be sufficiently monitored via video surveillance.

Form MJ-01: Marijuana Establishment Operating Plan

3.5. An alarm system is required for all license types that must be activated on all exterior doors and windows when the licensed premises is closed for business. Describe the security alarm system for the proposed premises, explain how it will meet all regulatory requirements, and outline your policies and procedures regarding the actions to be taken by a licensee, employee, or agent when the alarm system alerts of an unauthorized breach:

An alarm system will be installed and monitored by Communications Alaska and will be set up to monitor intrusion at all entrance and exit sites during closed hours. Owner/Supervisor will be trained in alarm function, arming and disarming the system as well as breach response. Each morning Owner/Supervisor will deactivate alarm and ascertain that alarm and video surveillance systems are in working order. Owner/Supervisor will also activate alarm upon closing for the day before locking all entrances/exits. Motion activated lighting will be on the exterior of the building as well as signs notating that the building is protected by security system as an added deterrent. In case of unauthorized breach there will be a 100 decible siren that sounds in the building and the monitering agency will be notified. Owner/Supervisor will then be contacted to determine if breach is accidental or an unauthorized intrusion. If in the event of an unathorized breach the Alaska State Troopers will be notified and will determine the nature of the breach. The AMCO board will be notified within 24 hours in the event of an unathorized intrusion.

3.6. Describe your policies and procedures for preventing diversion of marijuana or marijuana product, including by employees:

All employees will be subject to background check proir to hire and will be under video surveillance the entire time present on the licensed premesis. All growing rooms will also be under 24 video surviellance, as well as the drying room/trimming area. All processing will be under the direction of Owner/Supervisor. All finished marijuana product will be tracked in METRC and locked in a safe and will only be handled under the supervision of Owner/Supervisor. All transfers will be done with sealed packages with strain info and weight notated on packages as well as transfer manifests and will be transported in a locked box in the secured rear of the vehicle and will be monitored by Owner/Supervisor. The Exterior of the builing will have motion sensor lighting as well as 24 hour video surveillance. A security company will also be hired to monitor the security of the building.

3.7. Describe your policies and procedures for preventing loitering:

Upon arrival at the facility all visitors will be greeted by owner/employee who holds a current Alaska Marijuana Handlers card. All visitors will sign into the logbook with Name, Drivers License/ID #, reason for visit and time entered. Visitors will be escorted by owner/employee for the entire length of their visit. Visits will also be monitored and recorded by the video surveillance system. Visitors will then be required to sign out upon completion of their visit and immediately exit the licenswed premesis. Signs stating "No Loitering" will also be posted. "No Trespassing" signs will also be posted around the property as well as motion activated lighting to disuade any unwanted loitering.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

3.8. I certify that if any additional security devices are used, such as a motion detector, pressure switch, and duress, panic, or hold-up alarm, to enhance security of the licensed premises, I will have written policies and procedures describing their use.

Form MJ-01: Marijuana Establishment Operating Plan

Video Surveillance (3 AAC 306.720):

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box: Initials

3.9. The video surveillance and camera recording system for the licensed premises covers each restricted access area, and both the interior and exterior of each entrance to the facility.

3.10. Each video surveillance recording: is preserved for a minimum of 40 days, in a format that can be easily accessed for viewing (consistent with the Alcohol & Marijuana Control Office's approved format list); clearly and accurately displays the time and date; and is archived in a format that does not permit alteration of the recorded image.

3.11. The surveillance room or area is clearly defined on the Form MJ-02: Premises Diagram that is submitted with this application.

3.12. Surveillance recording equipment and video surveillance records are housed in a designated, locked, and secure area or in a lock box, cabinet, closet or other secure area where access is limited to the licensee(s), an authorized employee, and law enforcement personnel (including an agent of the Marijuana Control Board).

3.13. Describe how the video cameras will be placed to produce a clear view adequate to identify any individual inside the licensed premises, or within 20 feet of each entrance to the licensed premises:

High resolution video cameras will be placed above all entrances and corners of the building. High resolution video cameras will be placed in all interior rooms as to ascertain a 360 degree view of all areas of the licensed premises. Cameras will also have high resolution recording capabilities as well as night vision.

3.14. Describe the locked and secure area where video surveillance recording equipment and original copies of surveillance records will be housed and stored, and how you will ensure the area is accessible only to authorized personnel, law enforcement, or an agent of the Marijuana Control Board. If you will be using an offsite monitoring service and offsite storage of video surveillance records, your response must include how the offsite facility will meet these security requirements:

The harddrive on which video surveillance is stored, will be kept in a locked cabinet in the surveillance room/office and the key will be kept locked in the safe which only owner/supervisor will have access to in the event that the Alaska State Troopers or a member of Alaska Marijuana Control Board need to access the records. All video surveillance records will be kept for a minimum of 40 days in a format that easily accessed for viewing.

Section 4 – Business Records

Review the requirements under 3 AAC 306.755. All licensed marijuana establishments must maintain, in a format that is readily understood by a reasonably prudent business person, certain business records.

4.1. I certify that the following business records will be maintained and kept on the licensed premises: Initials

- a. all books and records necessary to fully account for each business transaction conducted under my license for the current year and three preceding calendar years (records for the last six months must be maintained on the licensed premises; older records may be archived on or off-premises);
- b. a current employee list setting out the full name and marijuana handler permit number of each licensee, employee, and agent who works at the marijuana establishment;
- c. the business contact information for vendors that maintain video surveillance systems and security alarm systems for the licensed premises;
- d. records related to advertising and marketing;
- e. a current diagram of the licensed premises, including each restricted access area;
- f. a log recording the name, and date and time of entry of each visitor permitted into a restricted access area;
- g. all records normally retained for tax purposes;
- h. accurate and comprehensive inventory tracking records that account for all marijuana inventory activity from seed or immature plant stage until the retail marijuana or retail marijuana product is sold to a consumer, to another marijuana establishment, or destroyed;
- i. transportation records for marijuana and marijuana product, as required by 3 AAC 306.750(f); and
- j. registration and inspection reports of scales registered under the Weights and Measures Act, as required by 3 AAC 306.745.

Handwritten initials in a vertical column next to the list items, corresponding to each item from a to j.

4.2. A marijuana establishment is required to exercise due diligence in preserving and maintaining all required records. Describe how you will prevent records and data, including electronically maintained records, from being lost or destroyed:

A copy of all records will be made and stored in a locked file cabinet in the secured office area. Accounting software will keep records of all financial and transaction records on the hard drive of the licensed establishments computer. Computer will be stored in locked secured office area. Copies of records and files will be continually updated for the purpose of having backup copies as needed.

Form MJ-01: Marijuana Establishment Operating Plan

Section 5 – Inventory Tracking of All Marijuana and Marijuana Product

Review the requirements under 3 AAC 306.730. All licensed marijuana establishments must use a marijuana inventory tracking system capable of sharing information with Metrc to ensure all marijuana cultivated and sold in the state, and each marijuana product processed and sold in the state, is identified and tracked from the time the marijuana is propagated from seed or cutting, through transfer to another licensed marijuana establishment, or use in manufacturing a marijuana product, to a completed sale of marijuana or marijuana product, or disposal of the harvest batch of marijuana or production lot of marijuana product.

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box: Initials

- 5.1. My marijuana establishment will be using Metrc, and if any other tracking software is used, it will be capable of sharing information with Metrc.
- 5.2. All marijuana delivered to a marijuana establishment will be weighed on a scale registered in compliance with 3 AAC 306.745.
- 5.3. My marijuana establishment will use registered scales in compliance with AS 45.75.080 (Weights and Measures Act), as required by 3 AAC 306.745.

Section 6 – Employee Qualification and Training

Review the requirements under 3 AAC 306.700. All licensees, and every employee or agent of the marijuana establishment who sells, cultivates, manufactures, tests, or transports marijuana or a marijuana product, or who checks the identification of a consumer or visitor, must obtain a marijuana handler permit from the board before being licensed or beginning employment at a marijuana establishment.

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box: Initials

- 6.1. All licensees, and each employee or agent of the marijuana establishment who sells, cultivates, manufactures, tests, or transports marijuana or marijuana product, or who checks the identification of a consumer or visitor, shall obtain a marijuana handler permit from the board before being licensed or beginning employment at the marijuana establishment.
- 6.2. Each licensee, employee, or agent who is required to have a marijuana handler permit shall keep that person's marijuana handler permit card in that person's immediate possession (or a valid copy on file on the licensed premises) when on the licensed premises.
- 6.3. Each licensee, employee, or agent who is required to have a marijuana handler permit shall ensure that that person's marijuana handler permit card is valid and has not expired.

6.4. Describe any in-house training that will be provided to employees and agents (apart from a marijuana handler course):

All employees will be required to undergo company safety training, be trained in the admittance of visitors, safe handling of plants, products, inventory and the proper disposal of waste products. Employees will also be trained as to the acceptable manner in which all plants and product will be watered, fed, pruned, manicured, harvested, trimmed, delivered etc.

Section 7 – Health and Safety Standards

Review the requirements under 3 AAC 306.735.

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box: Initials

- 7.1. I understand that a marijuana establishment is subject to inspection by the local fire department, building inspector, or code enforcement officer to confirm that health or safety concerns are not present.
- 7.2. I have policies regarding health and safety standards (including: ensuring a person with an illness or infection does not come into contact with marijuana or marijuana product; good hygienic practices; cleaning and maintenance of equipment and the premises; pest deterrence; chemical storage; sanitation principles; and proper handling of marijuana and marijuana product) and will take all reasonable measures and precautions to ensure that they are met or exceeded.
- 7.3. I have policies to ensure that any marijuana or marijuana product that has been stored beyond its usable life, or was stored improperly, is not salvaged and returned to the marketplace.
- 7.4. I have policies to ensure that in the event information about the age or storage conditions of marijuana or marijuana product is unreliable, the marijuana or marijuana product will be handled in accordance with 3 AAC 306.735(d).

Answer "Yes" or "No" to each of the following questions: Yes No

- 7.5. Adequate and readily accessible toilet facilities that are maintained and in good repair and sanitary condition are clearly indicated on my Form MJ-02: Premises Diagram.
- 7.6. Convenient handwashing facilities with running water at a suitable temperature are clearly indicated on my Form MJ-02: Premises Diagram.

7.7. If you answered "No" to either 7.5 or 7.6 above, describe how toilet and/or handwashing facilities are made accessible, as required by 3 AAC 306.735(b)(2):

[Empty text box for answer to 7.7]

Section 8 – Transportation and Delivery of Marijuana and Marijuana Products

Review the requirements under 3 AAC 306.750.

8.1. Describe how marijuana or marijuana product will be prepared, packaged, and secured for shipment. Include a description of the type of locked, safe, and secure storage compartments to be used in vehicles transporting marijuana or marijuana product:

After harvest, plants will be hung in a dark secured drying room for 2-5 days after which time the flower will be separated from the branches and hand trimmed to remove excess leaf. product will be allowed to cure and then be packaged, sealed and placed in the safe. Upon delivery it will be placed in a 'Non see through" plastic container and locked with the appropriate child proof locking tag. Product will then be placed in the closed and locked trunk or secured backseat of the vehicle.

Form MJ-01: Marijuana Establishment Operating Plan

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box: Initials

- 8.2. The marijuana establishment from which a shipment of marijuana or marijuana product originates will ensure that any individual transporting marijuana shall have a marijuana handler permit required under 3 AAC 306.700.
- 8.3. The marijuana establishment that originates the transport of any marijuana or marijuana product will use the marijuana inventory tracking system to record the type, amount, and weight of marijuana or marijuana product being transported, the name of the transporter, the time of departure and expected delivery, and the make, model, and license plate number of the transporting vehicle.
- 8.4. The marijuana establishment that originates the transport of any marijuana or marijuana product will ensure that a complete printed transport manifest on a form prescribed by the board must be kept with the marijuana or marijuana product at all times during transport.
- 8.5. During transport, any marijuana or marijuana product will be in a sealed package or container in a locked, safe, and secure storage compartment in the vehicle transporting the marijuana or marijuana product, and the sealed package will not be opened during transport.
- 8.6. Any vehicle transporting marijuana or marijuana product will travel directly from the shipping marijuana establishment to the receiving marijuana establishment, and will not make any unnecessary stops in between except to deliver or pick up marijuana or marijuana product at any other licensed marijuana establishment.
- 8.7. When the marijuana establishment receives marijuana or marijuana product from another licensed marijuana establishment, the recipient of the shipment will use the marijuana inventory tracking system to report the type, amount, and weight of marijuana or marijuana product received.
- 8.8. The marijuana establishment will refuse to accept any shipment of marijuana or marijuana product that is not accompanied by the transport manifest.

Section 9 – Signage and Advertising

Review the requirements under 3 AAC 306.770.

9.1. Describe any signs that you intend to post on your establishment, including quantity, dimensions, graphics, and location on your establishment (photos or drawings may be attached):

The only signs posted on the building will be informational in nature such as "No Loitering" "No Admittance to anyone Under 21" "Restricted Access Area. Visitors Must be Escorted" and signs noting that the building is protected by wired security

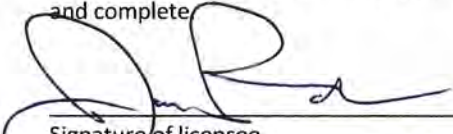

Form MJ-01: Marijuana Establishment Operating Plan

9.2. Describe any advertising you intend to distribute for your establishment. Include medium types and business logos (photos or drawings may be attached):

Redoubt Reefer will have a website as well as a line of Hoodies, T-shirts and Stickers. Most advertising will be done via word of mouth.

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete

(Additional Space as Needed):

Alaska Marijuana Control Board Form MJ-02: Premises Diagram

What is this form?

A detailed diagram of the proposed licensed premises is required for all marijuana establishment license applications, per 3 AAC 306.020(b)(8). **All areas designated as the licensed premises of a single license must be contiguous. All diagrams must have the licensed premises area labeled, and outlined or shaded as appropriate.**

What must be submitted with this form?

Applicants must attach multiple diagrams to this form, including (as applicable):

- **Diagram 1:**
a diagram showing only the licensed premises areas that will be ready to be **operational at the time of your preliminary inspection** and license issuance;
- **Diagram 2:**
if different than Diagram 1, a diagram outlining **all areas for which the licensee has legal right of possession** (a valid lease or deed), and clearly showing those areas' relationship to the current proposed licensed premises (*details of any planned expansion areas do not need to be included; a complete copy of Form MJ-14: Licensed Premises Diagram Change must be submitted and approved before any planned expansion area may be added to the licensed premises*);
- **Diagram 3:**
a **site plan or as-built of the entire lot**, showing all structures on the property and clearly indicating which area(s) will be part of the licensed premises;
- **Diagram 4:**
an **aerial photo of the entire lot and surrounding lots**, showing a view of the entire property and surrounding properties, and clearly indicating which area(s) will be part of the licensed premises (*this can be obtained from sources like Google Earth*); and
- **Diagram 5:**
a diagram of the **entire building in which the licensed premises is located**, clearly distinguishing the licensed premises from unlicensed areas and/or premises of other licenses within the building. If your proposed licensed premises is located within a building or building complex that contains multiple business and/or tenants, please provide the addresses and/or suite numbers of the other businesses and/or tenants (*a separate diagram is not required for an establishment that is designating the entire building as a single licensed premises*).

This form, and all necessary diagrams that meet the requirements on Page 2 of this form, must be completed and submitted to AMCO's main office before any new or transfer license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Jason Marc Rodean	MJ License #:	29604

Alaska Marijuana Control Board
Form MJ-02: Premises Diagram

Section 2 – Required Information

For your security, do not include locations of security cameras, motion detectors, panic buttons, and other security devices. Items marked with a double asterisks (**) are only required for those retail marijuana establishments that are also applying for an onsite consumption endorsement.

The following details must be included in all diagrams:

- License number and DBA
- Legend or key
- Color coding
- Licensed Premises Area Labeled and Shaded, or Outlined as appropriate
- Dimensions
- Labels
- True north arrow

The following additional details must be included in Diagram 1:

- Surveillance room
- Restricted access areas
- Storage areas
- Entrances, exits, and windows
- Walls, partitions, and counters
- Any other areas that must be labeled for specific license or endorsement types
- ** Serving area(s)
- **Employee monitoring area(s)
- **Ventilation exhaust points, if applicable

The following additional details must be included in Diagram 2:

- Areas of ingress and egress
- Entrances and exits
- Walls and partitions

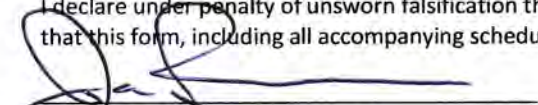

The following additional details must be included in Diagrams 3 and 4:

- Areas of ingress and egress
- Cross streets and points of reference

The following additional details must be included in Diagram 5:

- Areas of ingress and egress
- Entrances and exits
- Walls and partitions
- Cross streets and points of reference

I declare under penalty of unsworn falsification that I have attached all necessary diagrams that meet the above requirements, and that this form, including all accompanying schedules, statements, and depictions is true, correct, and complete.

Alaska Marijuana Control Board Operating Plan Supplemental Form MJ-04: Marijuana Cultivation Facility

What is this form?

This operating plan supplemental form is required for all applicants seeking a marijuana cultivation facility license and must accompany **Form MJ-01: Marijuana Establishment Operating Plan**, per 3 AAC 306.020(b)(11). Applicants should review **Chapter 306: Article 4** of the **Alaska Administrative Code**. This form will be used to document how an applicant intends to meet the requirements of the statutes and regulations.

If your business has a formal operating plan, you may include a copy of that operating plan with your application, but all fields of this form must still be completed per 3 AAC 306.020 and 3 AAC 306.420(2).

What additional information is required for cultivation facilities?

Applicants must identify how the proposed establishment will comply with applicable regulations regarding the following:

- Prohibitions
- Cultivation plan
- Waste disposal
- Odor control
- Testing procedure and protocols
- Packaging and labeling

This form must be completed and submitted to AMCO's main office before any new or transfer application for a standard marijuana cultivation facility or limited marijuana cultivation facility license will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

Licensee:	Jason Marc Rodean	MJ License #:	29604		
License Type:	Standard Marijuana Cultivation Facility				
Doing Business As:	Redoubt Reefer				
Premises Address:	27250 Vincent St				
City:	Kasilof	State:	Alaska	ZIP:	99610

Section 2 – Overview of Operations

2.1. Provide an overview of your proposed facility's operations. Include information regarding the flow of marijuana from seed or clone to harvest and transfer from your premises:

Cuttings will be taken off mother plants and placed in a cloning box for approximately 10 days until roots appear and become established. Cuttings will be planted in 6" pots and allowed to root into the growing medium for approximately 2 weeks and then be planted into a 5 gallon pot for 4 weeks. Plants will be logged into METRC and given a tagged identification number before they exceed 8" in height. This will happen under a vegetative light cycle which is 24 hours daily of light. Plants will then be placed into a flower room with 12/12 light cycle to facilitate flowering. Plants will be allowed to bloom for approximately 9 weeks and then harvested. Nutrients will be added to the water and plants will be hand watered throughout entire life cycle. Plants will be harvested, weighed and hung to dry for approximately 3 days, then hand trimmed and sealed and burped until cured at which point will be placed in a climate controlled environment in the secured office until it is ready to be packaged and transported for delivery.

Section 3 – Prohibitions

Review the requirements under 3 AAC 306.405 and 3 AAC 306.410.

3.1. I certify that the marijuana cultivation facility will not:

- a. sell, distribute, or transfer any marijuana or marijuana product to a consumer, with or without compensation;
b. allow any person, including a licensee, employee, or agent, to consume marijuana or marijuana product on the licensed premises or within 20 feet of the exterior of any building or outdoor cultivation facility; or
c. treat or otherwise adulterate marijuana with any organic or nonorganic chemical or compound to alter the color, appearance, weight, or odor of the marijuana.

Initials

Handwritten initials in a box next to the list items.

Section 4 – Cultivation Plan

Review the requirements under 3 AAC 306.420 and 3 AAC 306.430.

4.1. Describe the size of the space(s) the marijuana cultivation facility intends to be under cultivation, including dimensions and overall square footage. Provide your calculations below:

The licensed premises will have two flowering rooms, one veg room, an office, bathroom, watering room and a drying/processing room.
Square footage of rooms are as follows:
Flower 1) 586.5 Square Feet
Flower 2) 617.55 Square Feet
Veg) 297.375 Square Feet
Office) 127.5 Square Feet
Watering room) 63.25 Square Feet
Bathroom) 26.125 Square Feet
Dry/Cure/Processing) 379.5 Square Feet
Total Square Footage of Interior of Licensed Premises is 1,781 Square Feet

Form MJ-04: Marijuana Cultivation Facility Operating Plan Supplemental

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right:

Initials

4.2. The proposed area(s) for cultivation are clearly identified on the Form MJ-02: Premises Diagram that is submitted with this application.

[Handwritten initials]

Answer "Yes" or "No" to the following question:

Yes No

4.3. Will the marijuana cultivation facility include outdoor production?

If "Yes", describe the outdoor structure(s) or the expanse of open or clear ground and how it is fully-enclosed by a physical barrier:

[Empty text box]

4.4. Describe the method(s) used to ensure that any marijuana at the marijuana cultivation facility, whether indoors or outdoors, cannot be observed by the public from outside the facility:

There are no windows on the cultivation facility and all product will be kept in a secured location not viewable from outside the building

4.5. Describe the marijuana cultivation facility's growing medium(s) to be used:

Sunshine Soil Advanced #4 will be used and ammended with coconut husk

4.6. Provide the complete product name and EPA registration # (if applicable) for each of the cultivation facility's pesticide and pest control product to be used. All proposed products must be on DEC's list of approved pesticides in the state of Alaska:

Nuke Em exempt-25(b)

4.7. Describe all other fertilizers, chemicals, gases, and delivery systems, including carbon dioxide management, to be used at the marijuana cultivation facility:

Age Old Fish and Seaweed...Age Old Grow...Age Old Bloom... General Organics BioThrive...General Hydroponics Flora...Roots Organic Trinity...Roots Organic HPK...Canna P/K...Canna Aqua Flores A&B....Trifecta..

Form MJ-04: Marijuana Cultivation Facility Operating Plan Supplemental

4.8. Describe the marijuana cultivation facility's irrigation and waste water systems to be used:

Plants will be hand watered by owner/supervisor or trained staff and will never be overwatered to the point of excessive spilling. Potted plants will be placed in saucers and any overflow will be consumed by the plant.

Section 5 – Waste Disposal

Review the requirements under 3 AAC 306.740.

You must be able to certify the statement below. Read the following and then sign your initials in the box to the right: Initials

5.1. The marijuana cultivation facility shall give the board at least three days written notice required under 3 AAC 306.740(c) before making marijuana waste unusable and disposing of it.

5.2. Describe how you will store, manage, and dispose of any solid or liquid marijuana waste, including wastewater generated during marijuana cultivation, in compliance with any applicable laws. Include details about the material(s) you will mix with ground marijuana waste and the processes that you will use to make the marijuana waste unusable for any purpose for which it was grown:

All marijuana plant waste including, roots, stalks leaves and stems will be made unusable by grinding the waste and mixing it with equal parts of soil or other acceptable compostable material, in a secured area under video surveillance and will be composted. In the marijuana tracking system the board will be given notice not later than three days before making the waste unusable and disposing of it. A record will be kept to the final destination of the marijuana waste made unusable.

All non compostable material including, paper waste, cardboard waste, plastic waste or other wastes will be disgraded at a permitted waste facility.

No wastewater will be created during the cultivation process.

Section 6 – Odor Control

Review the requirements under 3 AAC 306.430.

Answer "Yes" or "No" to the following question:

Yes No

6.1. Have you received an exemption from your local government for the odor control requirement set forth in 3 AAC 306.430(c)(2)?

Yes: [] No: [x]

If "Yes", you must be able to certify the statement below. Read the following and then sign your initials in the box:

Initials

I am attaching to this form documentation of my odor control exemption from the local government.

[]

If "No" to question 6.1., describe the odor control method(s) to be used and how the marijuana cultivation facility will ensure that any marijuana at the facility does not emit an odor that is detectable by the public from outside the facility:

12" X 39" Active Air Carbon Filters with 1700 CFM capabilities will be connected to inline fans and will be placed in all areas of Vegetative, Blooming and Processing. Fresh air will be introduced from outside via inline fans and pass through the same carbon filter.

Section 7 – Testing Procedure and Protocols

Review the requirements under 3 AAC 306.455 and 3 AAC 306.465.

You must be able to certify each statement below. Read the following and then sign your initials in the corresponding box:

Initials

7.1. I understand and agree that the board or director will, from time to time, require the marijuana cultivation facility to provide samples of the growing medium, soil amendments, fertilizers, crop production aids, pesticides, or water for random compliance checks.

[x]

7.2. I will ensure that any individual responsible for collecting random, homogenous samples for required laboratory testing under 3 AAC 306.455 will prepare the necessary accompanying signed statement, provide the signed statement to the marijuana testing facility, and maintain a copy as a business record under 3 AAC 306.755.

[x]

7.3. Describe the testing procedures and protocols the marijuana cultivation facility will follow:

After a period of flowering, each specific strain will be place in segregated harvest batches. The Owner/Supervisor will take a "random sample" from each batch, it will be dried to the appropriate moisture content, packaged, labeled and entered into the marijuana tracking system. Owner/Supervisor will sign a "random sample affidavit" stating the sample has been randomly selected for sampling and provide the statement to the marijuana testing facility and retain a copy as a buisness record. The sample will then be registered for transfer in the marijuana tracking system and be transported to the marijuana testing facility. During transport, the marijuana product will be in a sealed package or container and in a locked, safe, and secure storage compartment in the vehicle and be accompanied by the appropriate transfer manifests. During this time the entire batch, from which the testing sample was selected will be segregated and will be stored in a secure, cool and dry location to prevent the batch from being contaminated or losing its efficacy until the marijuana testing facility reports the results of the test. A copy of the test results will kept on file.

Section 8 – Packaging and Labeling

Review the requirements under 3 AAC 306.470 and 3 AAC 306.475.

Answer "Yes" or "No" to the following question:

Yes No

8.1. Will the marijuana cultivation facility be packaging marijuana for a retail marijuana store to sell to a consumer without repackaging?

Yes No

If "Yes", describe how the marijuana cultivation facility will ensure that the marijuana sold will meet the packaging requirements in 3 AAC 306.470, and provide a sample label that the facility will use to meet the labeling requirements set forth in 3 AAC 306.475:

[Empty box for response to 8.1]

Answer "Yes" or "No" to the following question:

Yes No

8.2. Will the marijuana cultivation facility be packaging marijuana in wholesale packages?

Yes No

If "Yes", describe how the marijuana cultivation facility will ensure that the marijuana sold will meet the packaging requirements in 3 AAC 306.470, and provide a sample label that the facility will use to meet the labeling requirements set forth in 3 AAC 306.475:

In a wholesale package not exceeding 10 pounds for repackaging by the retail marijuana store
or
To a marijuana product manufacturing facility in a wholesale package
(A) not exceeding 10 pounds
and
(B) consisting of a single strain or a mixture of strains as identified

I certify that as a marijuana cultivation facility, I will submit monthly reports to the Department of Revenue and pay the excise tax required under AS 43.61.010 and AS 43.61.020 on all marijuana sold or provided as a sample to a marijuana establishment, as required under 3 AAC 306.480.

I declare under penalty of unsworn falsification that this form, including all accompanying schedules and statements, is true, correct, and complete.

Alaska Marijuana Control Board

Form MJ-07: Public Notice Posting Affidavit

What is this form?

A public notice posting affidavit is required for all marijuana establishment license applications, per 3 AAC 306.020(b)(10). As soon as practical after initiating a marijuana establishment license application, an applicant must give notice of the application to the public by posting a true copy of the application for ten (10) days at the location of the proposed licensed premises and one other conspicuous location in the area of the proposed premises, per 3 AAC 306.025(b)(1).

This form must be completed and submitted to AMCO's main office before any new or transfer license application will be considered complete.

Section 1 – Establishment Information

Enter information for the business seeking to be licensed, as identified on the license application.

RE: Redoubt Reefer, Jason Rodean applicant

While we realize that the land in question is in an unzoned area that should not be a sufficient reason to allow for this type of development. Our subdivision is a family oriented area. We should not have to be exposed to the safety issues that follow this type of establishment. We do not need the extra traffic that will come as a result. We do not need the curiosity seekers. We do not need the increase risk of crime for our neighborhood. There are young children in the neighborhood who do not need to be exposed to the marijuana industry. We do not want the odor of marijuana in our neighborhood. We are told that there will not be any odor emitted from the facility. Tell that to the folks who live in the Pollard Loop area. I walk Pollard Loop on a regular basis and often smell the marijuana odor from the plant in that area. We read and hear in the Alaska news that Alaska is already overpopulated with this industry. So why allow it to continue to grow?

Therefore, we respectfully request that the above-referenced applicant be denied a license for a Standard Marijuana Cultivation Facility.

Respectfully submitted,

John M. and Diane M. McClure

E. NEW BUSINESS

8. Conditional Land Use Permit

Planning Commission Resolution 2022-10

Applicant: Trimark Earth Reserve, LLC

Parcel Number: 055-072-76

Kalifornsky Area

Conditional Land Use Permit for a Material Site

STAFF REPORT

PC MEETING: (Tentative Mar. 21, 2022)

Applicant: Trimark Earth Reserve LLC

Landowner: Trimark Earth Reserve LLC/Cap Shafer

Parcel Number: 055-072-76

Legal Description: T5N R11W Section 25 S.M. Kalifornsky Center Subdivision Tract D

Location: Ravenwood St. & Bonita Ave.

BACKGROUND INFORMATION: The applicant wishes to obtain a permit for gravel extraction on a portion of the parcel listed above.

The submitted site plan indicates that the haul route will be utilizing Ravenwood St. and Bonita Ave. The haul route has not been developed and roadway permits will need to be obtained from the KPB Road Service Area.

The site plan and application proposes the following buffers:

- North: Minimum 50 foot natural vegetation buffer, 6' Fence or 6' earthen berm.
- South: Minimum 50 foot natural vegetation buffer, 6' Fence or 6' earthen berm.
- East: Minimum 50 foot natural vegetation buffer, 6' Fence or 6' earthen berm.
- West: Minimum 50 foot natural vegetation buffer, 6' Fence or 6' earthen berm.

(The preferred buffers will be a minimum of 50 foot natural vegetation. When excavation is within 50' of the property line a 6' high sight-limiting fence will be utilized. When extraction in the localized area is completed, the fence will be replaced with a 6' high earthen berm.)

The subject property is bordered by material sites on the North and South, while the properties East and West are owned by KPB and are currently undeveloped.

The proposed haul route, though undeveloped, would be Ravenwood St. to Bonita Ave. and connect to Kalifornsky Beach Rd. Ravenwood St. and Bonita Ave. would be maintained by the Kenai Peninsula borough, while Kalifornsky Beach Rd. is maintained by the State of Alaska.

The site plan completed by McLane Consulting Inc., claims ground water is deeper than 23' below the existing surface based on 4 test holes. The application states that the proposed depth of material excavation will equal 23'. Plan notes state that there are no wet lands or surface waters within the property boundaries. A central area will be maintained as a processing, staging and stockpile area. This process area is greater than 300' from all property lines. Native vegetation will provide surface water protection by way of phytoremediation, according to the McLane report. The site plan also indicates that there are no wells located within 300' from the proposed excavation area.

Plan notes states that reclamation will include re-contouring using strippings, overburden, waste import and topsoil to a condition that allows for the re-establishment of natural vegetation. Slopes steeper than 2:1 will be seeded.

The applicant estimates a life span of 35 years for the site with an approximate annual quantity of 45,000 cubic yards.

PUBLIC NOTICE: Public notice of the application was mailed on 01/26/2022 to the 367 landowners or leaseholders of the parcels within 1/2 mile of the subject parcel. Public notice was sent to the postmaster in

Kalifornsky area requesting that it be posted at their Post Office. Public notice of the application was published in the Kenai/ Soldotna Area.

KPB AGENCY REVIEW: Application information was provided to pertinent KPB staff and other agencies on March 2 2022.

ATTACHMENTS

- Conditional Land Use Permit application and associated documents

- Area land use map
- Ownership map
- Contour map

FINDINGS OF FACT

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On 01/21/2022 the applicant, Trimark Earth Reserve LLC, submitted a conditional land use permit application to the Borough Planning Department for KPB Parcel 055-072-76, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed disturbed area is approximately 50.96 acres.
6. A public hearing of the Planning Commission was held on March 21, 2022 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.
7. The proposed extraction meets material site standard 21.29.040(A)(1); "Protects against the lowering of water sources serving other properties", as evidenced by:
 - A. Permit condition number 6 requires that the permittee not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
 - B. The submitted site plan indicates that there are no wells located within 300' from the property lines.
 - C. Permit condition number 4 requires that the permittee maintain a 2-foot vertical separation from the seasonal high water table.
 - D. The site plan specifies that 4 test holes were excavated to a depth of 23' below existing ground. The application states that the proposed depth of material extraction will be 23'. If the water table is encountered it will be covered to a level of 4' above the water table.
 - E. Permit condition number 4 requires that the permittee not dewater either by pumping, ditching or any other form of draining.
8. The proposed extraction meets material site standard 21.29.040(A)(2); "Protects against physical damage to other properties". There is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
9. The proposed extraction meets material site standard 21.29.040(A)(3); "Minimizes off-site movement of dust", as evidenced by:
 - A. Permit condition number 10 requires that the permittee provide dust suppression on haul

roads within the boundaries of the material site by application of water or calcium chloride.

10. The proposed extraction meets material site standard 21.29.040(A)(4); "Minimizes noise disturbance to other properties" as evidenced by:
 - A. Permit condition number 2 requires that the permittee maintain the following buffers that will reduce the noise disturbance to other properties:
 - North: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - South: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - East: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - West: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - B. The submitted site plan indicates, and permit condition number 11 requires rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
11. The proposed extraction meets material site standard 21.29.040(A)(5); "Minimizes visual impacts" as evidenced by permit condition number 2 that requires that the permittee maintain the following buffers that will reduce the visual impacts to other properties:
 - North: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - South: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - East: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - West: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
12. The proposed extraction meets material site standard 21.29.040(A)(6); "Provides for alternate post-mining land uses" as evidenced by:
 - A. The submitted application contains a reclamation plan as required by KPB 21.29.060.
 - B. Permit condition number 12 requires that the permittee reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C3) and as approved by the planning commission.

STAFF RECOMMENDATION

In reviewing the application staff has determined that the six standards contained in KPB 21.29.040 will be met and recommends that the Planning Commission approve the conditional land use permit with listed conditions, and adopt the findings of fact subject to the following:

1. Filing of the PC Resolution in the appropriate recording district after the deadline to appeal the Planning Commission's approval has expired (15 days from the date of the notice of decision) unless there are no parties with appeal rights.
2. The Planning Department is responsible for filing the Planning Commission resolution.
3. The applicant will provide the recording fee for the resolution to the Planning Department.
4. Driveway and roadway permits must be acquired from either the state or borough as appropriate prior to the issuance of the material site permit.

PERMIT CONDITIONS

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300' of the excavation perimeter.
2. KPB 21.29.050(2) Where an easement exists, a buffer shall not overlap the easement. Subject parcel has a 10' utility easement on all sides of the property.

3. The permittee shall maintain the following buffers around the excavation perimeter or parcel boundaries as shown in the approved site plan:
 - a. North: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - b. South: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - c. East: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.
 - d. West: Minimum 50 foot natural vegetation buffer or 6' fence or 6' earthen berm.

These buffers shall not overlap the established easement.
4. The permittee shall maintain a 2:1 slope between the buffer zone and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
5. The permittee shall not allow buffers to cause surface water diversion which negatively impacts adjacent properties or water bodies.
6. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
7. The permittee shall maintain a 2' vertical separation from the seasonal high water table.
8. The permittee shall not dewater either by pumping, ditching or any other form of draining.
9. The permittee shall maintain an undisturbed buffer, and no earth material extraction activities shall take place within 100 linear feet from a lake, river, stream, or other water body, including riparian wetlands and mapped floodplains.
10. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
11. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
12. The permittee shall notify the planning department of any further subdivision or return to acreage of this property. Any further subdivision or return to acreage may require the permittee to amend this permit.
13. The permittee shall provide dust suppression on haul roads within the boundaries of the material site by application of water or calcium chloride.
14. The permittee shall not operate rock crushing equipment between the hours of 10:00 pm and 06:00 am.
15. The permittee shall reclaim the site as described in the reclamation plan for this parcel with the addition of the requirements contained in KPB 21.29.060(C)(3) and as approved by the planning commission.
16. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related permits. These laws and permits include, but are not limited to, the borough's flood plain, coastal zone, and habitat protection regulations, those state laws applicable to material sites individually, reclamation, storm water pollution and other applicable Environmental Protection Agency (EPA) regulations, clean water act and any other U.S. Army Corp of Engineer permits, any EPA air quality regulations, EPA and ADEC water quality regulations, EPA hazardous material regulations, U.S. Dept. of Labor Mine Safety and Health Administration (MSHA) regulations (including but not limited to noise and safety standards), and Federal Bureau of Alcohol, Tobacco and Firearm regulations regarding using and storing explosives.
17. The permittee shall post notice of intent on parcel corners or access, whichever is more visible if the permittee does not intend to begin operations for at least 12 months after being granted a conditional land use permit. Sign dimensions shall be no more than 15" by 15" and must contain the following information: the phrase "Permitted Material Site" along with the permittee's business name and a contact phone number.
18. The permittee shall operate in accordance with the application and site plan as approved by the planning commission. If the permittee revises or intends to revise operations so that they are no longer consistent with the original application, a permit modification is required in accordance with KPB 21.29.090.
19. This conditional land use permit is subject to review by the planning department to ensure

compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.50, a permit may be revoked for failure to comply with the terms of the permit or the applicable provisions of KPB Title 21. The borough clerk shall issue notice to the permittee of the revocation hearing at least 20 days but not more than 30 days prior to the hearing.

20. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

NOTE: Any party of record may file an appeal of a decision of the Planning Commission in accordance with the requirements of the Kenai Peninsula Borough Code of Ordinances, Chapter 21.20.250. A “party of record” is any party or person aggrieved by the decision where the decision has or could have an adverse effect on value, use, or enjoyment of real property owned by them who appeared before the planning commission with either oral or written presentation. Petition signers are not considered parties of record unless separate oral or written testimony is provided (KPB Code 21.20.210.A.5b1). An appeal must be filed with the Borough Clerk within 15 days of the notice of decision, using the proper forms, and be accompanied by the \$300 filing and records preparation fee. (KPB Code 21.25.100)

## CLUP DEVELOPMENT NOTES

1. THIS PERMIT APPLICATION IS KPB PARCEL 05507276, TOWNSHIP 5N, RANGE 11W, SECTION 25 SEWARD MERIDIAN.
2. THE PROPERTY IS UNDEVELOPED AND COVERED IN NATIVE VEGETATION. THERE IS A TRAIL AS SHOWN ON THE SITE PLAN.
3. PROPOSED PRIMARY INGRESS/EGRESS IS TO RAVENWOOD STREET RIGHT-OF-WAY NEAR THE INTERSECTION OF BONITA AVENUE. SECONDARY INGRESS/EGRESS TO BONITA AVENUE, NEAR THE EXISTING TRAIL LOCATION.
4. THE PREFERRED BUFFERS ARE 50' (OR GREATER) NATIVE VEGETATION ON ALL SIDES UNTIL WITHIN 50' OF PROPERTY LINE & THEN 6' HIGH SIGHT-LIMITING FENCE DURING EXCAVATION WITHIN THE 50' ZONE, TO BE REPLACED WITH A 6' HIGH BERM AFTER EXCAVATION IS EXHAUSTED.
5. THERE ARE NO WELLS LOCATED WITHIN 100' OR WITHIN 300' OF THE EXCAVATION AREA. EXCAVATION BELOW WATER TABLE IS NOT PROPOSED AT THIS TIME.
6. THERE ARE NO WETLANDS OR SURFACE WATERS.
7. NATIVE VEGETATION WILL PROVIDE SURFACE WATER PROTECTION OF ANY SITE RUN-OFF BY WAY OF PHYTOREMEDIATION.
8. TEST HOLES WERE EXCAVATED AND LOGGED IN FOUR (4) LOCATIONS BY THE APPLICANT. TEST HOLES WERE EXCAVATED TO 23' BELOW EXISTING GROUND.
9. GROUNDWATER IS GREATER THAN 23' BELOW EXISTING GROUND. NO GROUNDWATER ENCOUNTERED IN THE FOUR (4) TEST HOLES. MONITOR WELLS HAVE NOT BEEN INSTALLED.
10. RECLAMATION WILL INCLUDE RECONTOURING USING STRIPPINGS, OVERBURDEN, WASTE IMPORT AND TOPSOIL TO A CONDITION THAT ALLOWS FOR RE-ESTABLISHMENT OF NATURAL VEGETATION. SLOPES STEEPER THAN 2:1 WILL BE SEEDED.
11. A CENTRAL AREA WILL BE MAINTAINED AS A PROCESSING, STAGING AND STOCKPILE AREA. THIS PROCESS AREA IS GREATER THAN 300' FROM ALL PROPERTY LINES.
12. THE PROPERTY CORNERS WERE LOCATED AND THE PARCEL BOUNDARY HAS BEEN FLAGGED AT VISIBLE INTERVALS, AS SHOWN ON THE EXHIBIT.

## Conditional Land Use Permit Application

For a Sand, Gravel or Material Site

**RECEIVED**

JAN 21 2022  
KPB PLANNING DEPT.

### I. APPLICANT INFORMATION

Applicant <u>Trimark Earth Reserve LLC</u>	Landowner <u>Trimark Earth Reserve LLC</u>
Address <u>34481 North Fork Road</u>	Address <u>34481 North Fork Road</u>
City, State, Zip <u>Anchor Point AK 99556</u>	City, State, Zip <u>Anchor Point AK 99556</u>
Telephone <u>907-235-7126</u> Cell <u>907-399-4550</u>	Telephone <u>907-235-7126</u> Cell <u>907-399-4550</u>
Email <u>cap@dibblecreekrock.com</u>	Email <u>cap@dibblecreekrock.com</u>
Agent: <u>McLane Consulting, Inc. Gina DeBardelaben 907-283-4218 ginadebar@mclanecg.com</u>	

### II. PARCEL INFORMATION

KPB Tax Parcel ID# 05507276 Legal Description T5N R11W Section 25 S.M.  
Kalifornsky Center Subdivision Tract D

If permit is not for entire parcel, describe specific location within parcel to be material site, e.g.; "N1/2 SW1/4 NE1/4 – 10 acres", or "5 acres in center of parcel".

### III. APPLICATION INFORMATION "Check" boxes below to indicate items included.

- \$300.00 permit processing fee payable to: Kenai Peninsula Borough. (Include Parcel # on check comment line.)
- Site Plan, to scale, prepared by a professional surveyor (licensed and registered in Alaska) showing, where applicable:
 

<ul style="list-style-type: none"> <li><input type="checkbox"/> parcel boundaries</li> <li><input type="checkbox"/> location of boundary stakes within 300 ft. of excavation area (to be in place at time of application)</li> <li><input type="checkbox"/> proposed buffers, or requested buffer waiver(s)</li> <li><input type="checkbox"/> proposed extraction area(s), and acreage to be mined</li> <li><input type="checkbox"/> proposed location of processing area(s)</li> <li><input type="checkbox"/> all encumbrances, including easements</li> <li><input type="checkbox"/> points of ingress and egress</li> <li><input type="checkbox"/> anticipated haul routes</li> </ul>	<ul style="list-style-type: none"> <li><input type="checkbox"/> location/depth of testholes, and depth to groundwater, if encountered</li> <li><input type="checkbox"/> location of all wells within 300 ft. of parcel boundary</li> <li><input type="checkbox"/> location of water bodies on parcel, including riparian wetlands</li> <li><input type="checkbox"/> surface water protection measures</li> <li><input type="checkbox"/> north arrow and diagram scale</li> <li><input type="checkbox"/> preparer's name, date and seal</li> </ul>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------
- Site Plan Worksheet (attached)
- Reclamation Plan (attached) and bond, if required. Bond requirement does not apply to material sites exempt from bonding requirements pursuant to AS 27.19.050

**Please Note:** If a variance from the conditions of KPB 21.29 is requested, a variance application must be attached. (A variance is NOT the same thing as a waiver.)

### IV. CERTIFICATION STATEMENT

The information contained on this form and attachments are true and complete to the best of my knowledge. I grant permission for borough staff to enter onto the property for the purpose of processing the permit application.

- C. _____

## Material Site Reclamation Plan for Conditional Land Use Permit Application

1. All disturbed land shall be reclaimed upon exhausting the material on-site, so as to leave the land in a stable condition.
2. All revegetation shall be done with a "non-invasive" plant species.
3. Total acreage to be reclaimed each year: 2-5 acres
4. List equipment (type and quantity) to be used in reclamation:

Loader, dozer, hydroseeder

---

---

---

5. Describe time schedule of reclamation measures:

Reclamation will be completed annually before the growing season ends (September). Seeding will be applied as necessary each season to areas that are depleted and achieve final stabilized grade in order to minimize erosion and dust. Interior processing and staging area will be maintained for the life of the material site.

---

---

6. The following measures must be considered in preparing and implementing the reclamation plan, although not all will be applicable to every plan –  **"check" all that apply to your plan.**

Topsoil that is not promptly redistributed to an area being reclaimed will be separated and stockpiled for future use. This material will be protected from erosion and contamination by acidic or toxic materials and preserved in a condition suitable for later use.

The area will be backfilled, graded and recontoured using strippings, overburden, and topsoil to a condition that allows for the reestablishment of renewable resources on the site within a reasonable period of time. It will be stabilized to a condition that will allow sufficient moisture for revegetation.

Sufficient quantities of stockpiled or imported topsoil will be spread over the reclaimed area to a depth of four inches to promote natural plant growth that can reasonably be expected to revegetate the area within five years. The applicant may use the existing natural organic blanket representative of the project area if the soil is found to have an organic content of 5% or more and meets the specification of Class B topsoil requirements as set by Alaska Test Method (ATM) T-6. The material shall be reasonably free from roots, clods, sticks, and branches greater than 3 inches in diameter. Areas having slopes greater than 2:1 require special consideration and design for stabilization by a licensed engineer.

Exploration trenches or pits will be backfilled. Brush piles and unwanted vegetation shall be removed from the site, buried or burned. Topsoil and other organics will be spread on the backfilled surface to inhibit erosion and promote natural revegetation.

Peat and topsoil mine operations shall ensure a minimum of two inches of suitable growing medium is left or replaced on the site upon completion of the reclamation activity (unless otherwise authorized).

Ponding will be used as a reclamation method. (Requires approval by the planning commission.)

**ADDITIONAL APPLICATION COMMENTS**

(Please indicate the page and item # for which you are making additional comments.)

Primary site access is proposed to Ravenwood Street. Secondary access will be to Bonita Avenue. Both are shown on the site exhibit.

Material site will be utilized in phases in an as-needed basis. Phases I begins at the easterly 1/3 of the property.

Each Phase moves westerly across the property. The centrally located processing, staging and stockpile area will be maintained for the life of the material site.

Proposed buffers include maintaining 50' of native vegetation on all sides until extraction is within 50' of the property line.

Then a 6' high sight-limiting fence will be utilized during extraction within the buffer zone. When extraction in the localized area is completed, the fence will be replaced with a 6' high earthen berm.

The proposed parcel is bordered by material sites on the north and south. The properties east and west are owned by KPB and undeveloped.

**KENAI PENINSULA BOROUGH PLANNING COMMISSION  
RESOLUTION 2022-10  
KENAI RECORDING DISTRICT**

**A resolution granting approval of a conditional land use permit to operate a sand, gravel, or material site for a parcel described as T 05N R 11W SEC 25 SEWARD MERIDIAN KN 2020018 KALIFORNSKY CENTER SUB TRACT D, Kenai Recording District., Third Judicial District, State of Alaska.**

- WHEREAS,** KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough; and
- WHEREAS,** KPB 21.29 provides that a conditional land use permit is required for material extraction which disturbs more than 2.5 cumulative acres; and
- WHEREAS,** On 01/21/2022 the applicant, Trimark Earth Reserve LLC, submitted to the Borough Planning Department a conditional land use permit application for a portion of KPB Parcel 055-072-76, which is located within the rural district; and
- WHEREAS,** Public notice of the application was mailed on or before 01/26/2022 to the 367 landowners or leaseholders within ½ mile of the subject parcel pursuant to KPB 21.25.060; and
- WHEREAS,** Public notice was sent to the postmaster in Kalifornsky area requesting that it be posted at the Kalifornsky Post Office; and
- WHEREAS,** Public notice of the application was published in the March 9th 2022 & March 16th 2022 issues of the Peninsula Clarion; and
- WHEREAS,** A public hearing was held at the March 21, 2022 meeting of the Kenai Peninsula Borough Planning Commission;

**NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH:**

**SECTION 1.** That the Planning Commission makes the following findings of fact pursuant to KPB 21.25 and 21.29:

**Findings of Fact**

1. KPB 21.25 allows for land in the rural district to be used as a sand, gravel or material site once a permit has been obtained from the Kenai Peninsula Borough.
2. KPB 21.29 governs material site activity within the rural district of the Kenai Peninsula Borough.
3. On 01/21/2022 the applicant, Trimark Earth Reserve LLC, submitted to the Borough Planning Department a conditional land use permit application for a portion of KPB Parcel 055-072-76, which is located within the rural district.
4. KPB 21.29 provides that a conditional land use permit is required for material extraction that disturbs more than 2.5 cumulative acres.
5. The proposed cumulative disturbed area within the parcel is approximately 50.96 acres.
6. To meet material site standard 21.29.040(A)(1), the proposed activity must protect against aquifer disturbance by maintaining a 2-foot vertical separation from the seasonal high water table and by ensuring that no material extraction takes place within 100 horizontal feet of any existing water source.
7. The application indicates that the high water table is greater than 23 feet below the surface.
8. The applicant's intended depth of excavation is 23 feet below the existing grade.

9. The site plan indicates that there is no well located within 300 feet of the proposed excavation area.
10. To meet material site standard 21.29.040(A)(2), the proposed activity must be conducted in a manner to protect against physical damage to adjacent properties by complying with the required permit conditions of KPB 21.29.050.
11. To meet material site standard 21.29.040(A)(3), the proposed activity must be conducted in a manner which minimizes the off-site movement of dust by complying with required permit condition KPB 21.29.050(10), Dust Control.
12. Ingress and egress at the material site will be Ravenwood St. and Bonita Ave. to Kalifornsky Beach Rd.
13. It is in the best interest of the borough and the surrounding property owners for the permittee to provide dust suppression on the haul route.
14. To meet material site standard 21.29.040(A)(4), the proposed activity must be conducted in a manner which minimizes noise disturbance to other properties by complying with permit condition KPB 21.29.050(2), Buffer Zone; KPB 21.29.050(3), Processing; and KPB 21.29.050(11), Hours of Operation.
15. The site plan indicates that all sides of the material site will be buffered with 50 feet of natural vegetation or 6-foot Fence or 6-foot earthen berm, providing a noise buffer.
16. The applicant indicates that material processing may take place on the property. Any equipment used for conditioning or processing materials will be operated at least 300 feet from the parcel boundaries, and will not be operated between 10:00 p.m. and 6:00 a.m., to minimize noise disturbance to other properties.
17. To meet material site standard 21.29.040(A)(5), the proposed activity must be conducted in a manner which minimizes visual impacts by complying with the permit condition KPB 21.29.050(2), Buffer Zone.
18. To meet material site standard 21.29.040(A)(6), the proposed activity must be conducted in a manner which provides for alternate post-mining land uses by complying with the permit condition KPB 21.29.050(12).
19. The applicant has submitted a reclamation plan consistent with KPB 21.29.050(12)(a).
20. The bonding requirement of KPB 21.29.050(12)(b) will not apply to this material site if extraction in any one year does not exceed 50,000 cubic yards of material.
21. A public hearing of the Planning Commission was held on March 21, 2022 and notice of the meeting was published, posted, and mailed in accordance with KPB 21.25.060 and KPB 21.11.

**Section 2. That based on the above findings, the Planning Commission concludes as a matter of law that the application has met all the requirements of KPB 21.25 and KPB 21.29, and through imposition of the conditions under KPB 21.29.050, the Planning Commission concludes as a matter of law that the application meets the six standards found in KPB 21.29.040:**

### **Regulations and Standards for Material Sites**

A. These material site regulations are intended to protect against aquifer disturbance, road damage, physical damage to adjacent properties, dust, noise, and visual impacts.

1. Material site standard 21.29.040(A)(1) is met because the high water table is greater than 23 feet below the surface, and the applicant's intended depth of excavation is 23 feet below the existing grade, as set forth in #7-8, above.
2. Material site standard 21.29.040(A)(2) is met because there is no evidence in the record to indicate that physical damage will occur to any other properties as a result of the operations of a material site at this location.
3. Material site standard 21.29.040(A)(3) is met because the permittee will use water and calcium chloride on the driveways throughout the excavation area to minimize the movement of off-site dust.
4. Material site standard 21.29.040(A)(4) is met because the site plan indicates that all sides of the material site will be buffered with 50 feet of natural vegetation or 6-foot fence or 6-foot earthen

berm, providing a noise buffer. The Planning Commission deems the 50 feet buffer of natural vegetation alone to be sufficient to provide noise screening. Material site standard 21.29.040(A)(4) is also met, because any equipment used for conditioning or processing materials will be operated at least 300 feet from the parcel boundaries, and will not be operated between 10:00 p.m. and 6:00 a.m., to minimize noise disturbance to other properties.

5. Material site standard 21.29.040(A)(5) is met because the site plan indicates that all sides of the material site will be buffered with 50 feet of natural vegetation or 6-foot fence or 6-foot earthen berm providing visual screening from the excavation area.
6. Material site standard 21.29.040(A)(6) is met because the applicant has submitted a reclamation plan consistent with KPB 21.29.050(12)(a).

**SECTION 3.** That the land use and operations are described and shall be conducted as follows:

- A. A portion of KPB Tax Parcel Number 055-072-76. The disturbed area within the parcel is approximately 50.96 acres
- B. Legal Description: **T 05N R 11W SEC 25 SEWARD MERIDIAN KN 2020018 KALIFORNSKY CENTER SUB TRACT D**, Kenai Recording District, Third Judicial District, State of Alaska.
- C. The applicant, Trimark Earth Reserve LLC, proposes to:
  1. Extract gravel and sand from the subject parcel;
  2. Reclaim the site to a stable condition upon depletion of material.

#### **PERMIT CONDITIONS**

1. The permittee shall cause the boundaries of the subject parcel to be staked at sequentially visible intervals where parcel boundaries are within 300 feet of the excavation perimeter.
2. The permittee shall retain 50 feet of undisturbed **natural** vegetation or 6-foot fence or 6-foot earthen berm along all property boundaries.
3. The permittee shall maintain at least a 2:1 slope between the inner buffer zones and pit floor on all inactive site walls. Material from the area designated for the 2:1 slope may be removed if suitable, stabilizing material is replaced within 30 days from the time of removal.
4. Rock crushing equipment shall not be operated between 10:00 p.m. and 6:00 a.m.
5. The permittee shall not extract material within 100 horizontal feet of any water source existing prior to issuance of this permit.
6. The permittee shall maintain a 2-foot vertical separation from the seasonal high water table.
7. The permittee shall not dewater either by pumping, ditching or any other form of draining unless an exemption is granted by the planning commission.
8. The permittee shall ensure that fuel storage containers larger than 50 gallons shall be contained in impermeable berms and basins capable of retaining 110 percent of storage capacity to minimize the potential for uncontained spills or leaks. Fuel storage containers 50 gallons or smaller shall not be placed directly on the ground, but shall be stored on a stable impermeable surface.
9. The permittee shall conduct operations in a manner so as not to damage borough roads as required by KPB 14.40.175, and will be subject to the remedies set forth in KPB 14.40 for violation of this condition.
10. The permittee shall notify the planning department of any further subdivision or return to acreage of this parcel. The planning director may issue a written exemption from the permit amendment requirement if it is determined that the subdivision is consistent with the use of the parcel as a material site and all original permit conditions can be met.
11. The permittee shall apply water or calcium chloride, as needed, on haul roads within the boundaries of the subject parcel.
12. The permittee shall reclaim the site as described in the reclamation plan for this parcel and approved by the planning commission.
13. The permittee is responsible for determining the need for any other municipal, state or federal permits and acquiring the same. The permittee is responsible for complying with all other federal, state and local laws applicable to the material site operation, and abiding by related

- permits.
14. The permittee shall provide dust suppression and maintain the haul route to Kalifornsky Beach Rd.
  15. This conditional land use permit is subject to annual review by the planning department to ensure compliance with the conditions of the permit. In addition to the penalties provided by KPB 21.25.090, the planning commission may revoke a permit issued pursuant to this chapter if the permittee fails to comply with the provisions of this chapter or the conditions of the permit. The planning director shall provide at least 30 days written notice to the permittee of a revocation hearing before the planning commission.
  16. Once effective, this conditional land use permit is valid for five years. A written request for permit extension must be made to the planning department at least 30 days prior to permit expiration, in accordance with KPB 21.29.070.

ADOPTED BY THE PLANNING COMMISSION OF THE KENAI PENINSULA BOROUGH ON  
THIS _____ DAY OF _____, 2022.

_____  
Blair Martin, Chairperson  
Planning Commission

ATTEST:

_____  
Ann Shirnberg  
Administrative Assistant

## KENAI PENINSULA BOROUGH PLANNING COMMISSION

### NOTICE OF PUBLIC HEARING

Public notice is hereby given that a conditional land use permit application has been received for material extraction on a parcel in the Kalifornsky area. This notice is being sent to landowners located within 2640 feet of the subject property. All members of the public are invited to comment. The projects under consideration are described as follows:

**Applicant:** Trimark Earth Reserve LLC

Please turn over for map.

**Landowner:** Trimark Earth Reserve LLC/ Cap Shafer

**Parcel Number:** 055-072-76

**Legal Description:** T 05N R 11W SEC 25 SEWARD MERIDIAN KN 2020018 KALIFORNSKY CENTER SUB TRACT D

**Location:** Bonita Ave

**Proposed Land Use:** The applicant wishes to obtain a permit for sand and gravel extraction on a portion of the parcel listed above.

**KPB Code:** Conditional land use permit applications for material extraction are reviewed in accordance with KPB Code 21.25 and 21.29. Copies of these ordinances are available from the Planning Department or on the KPB website at: [borough.kenai.ak.us](http://borough.kenai.ak.us)

**Public Hearing:** A hearing will be held by the Kenai Peninsula Borough Planning Commission to consider the application on **Monday March 21, 2022** commencing at 7:30 p.m., or as soon thereafter as business permits. The meeting will be held in the assembly chambers of the borough administration building located at 144 N. Binkley Street, Soldotna, Alaska.

**Public Comment:** Those wishing to comment may come to the above meeting to give testimony or may submit a written statement addressed to: Planning Commission Chairman, 144 N Binkley St, Soldotna, AK 99669. A statement addressed to the chairman may also be emailed to: [eogren@kpb.us](mailto:eogren@kpb.us), or faxed to (907) 714-2378. Written statements must be provided by 1:00 pm Friday, March 18, 2022. Persons who participate in the public hearing, either by written or oral statement, may appeal the Planning Commission's decision within 15 days of the date of notice of the decision.

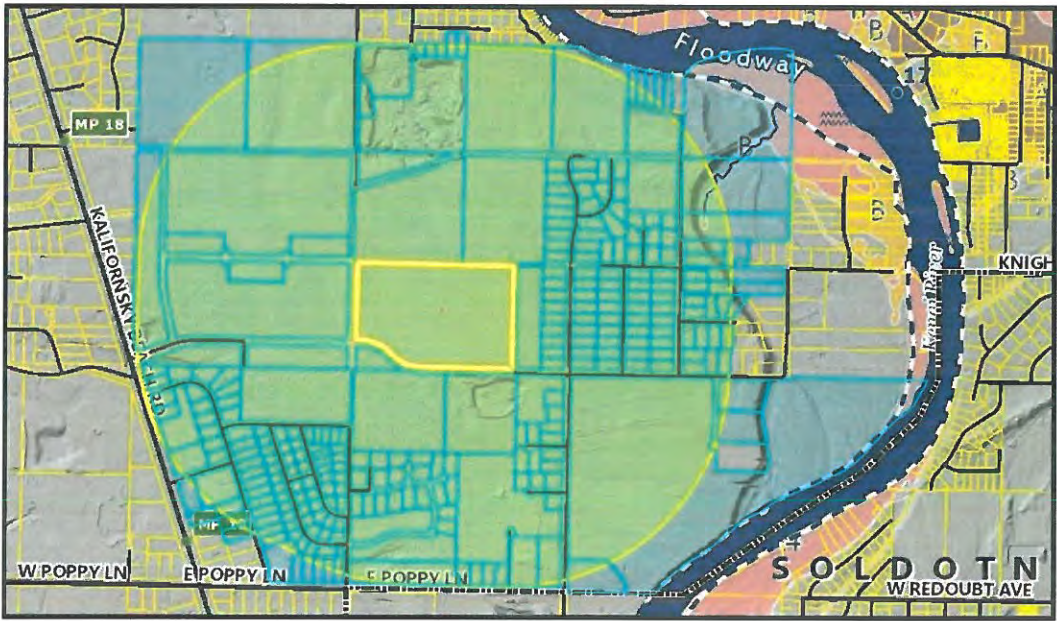

For additional information about this application, please call the planning department at (907) 714-2200, or 1-800-478-4441 (toll free within the Kenai Peninsula Borough).

Dear Planning Commission Chairman,

My husband and I are currently building a new home at 46200 Sathers Court. We plan on making this our final home as I am retired and my husband will be in a few years. I am an avid gardener and enjoy being outside during the day. I guess I can best sum up our outrage over the idea of another gravel pit so close to our home by asking you these questions.

Would you want to listen to the sounds coming from an active gravel pit all day long while you are outside gardening or just sitting out in your own private yard enjoying the day?

Would you want to deal with the dust created by said gravel pit covering your garden plants, by breathing it in and dealing with it filtering into your home?

Its bad enough to have the much smaller gravel pit close by but it was already there so we are unable to complain regarding it. But this proposed pit will be close to ten times the size of it. Can you imagine listening to the noise of said pit all day long? It has no business being built next to established neighborhoods. Our homes are our private sanctuaries. This will be a travesty for all the folks who live in the area. Please have some regard for us the homeowners.

Thank you,  
Lynne Beeker and  
Darrell Beeker

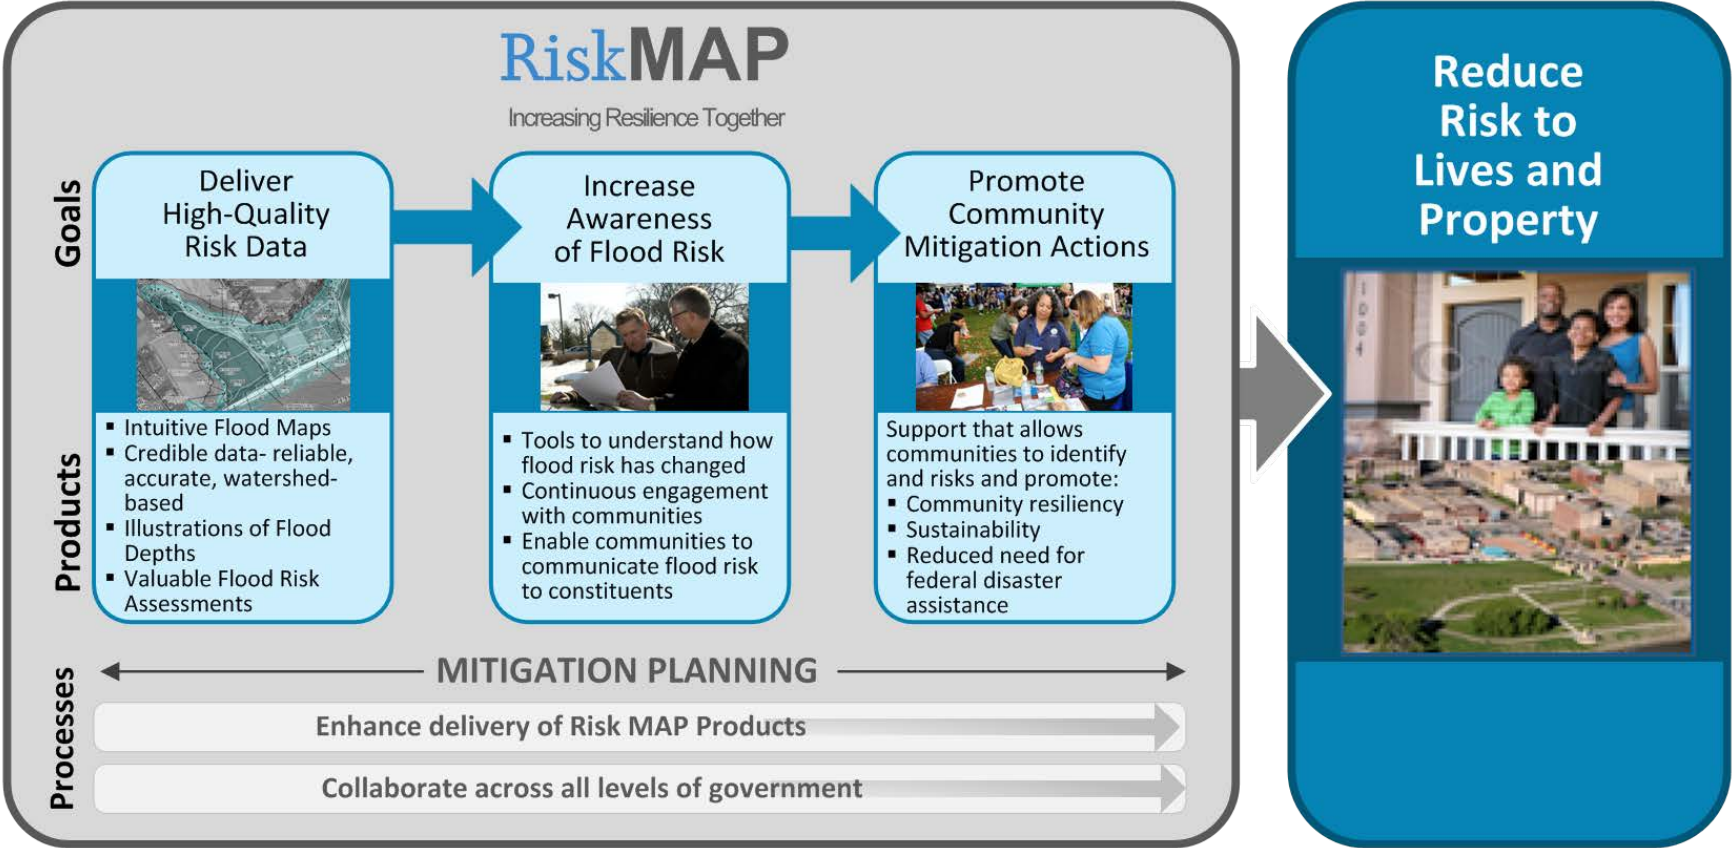

# KENAI RIVER FLOOD STUDY

Flood Risk Review | March 21, 2022

FEMA

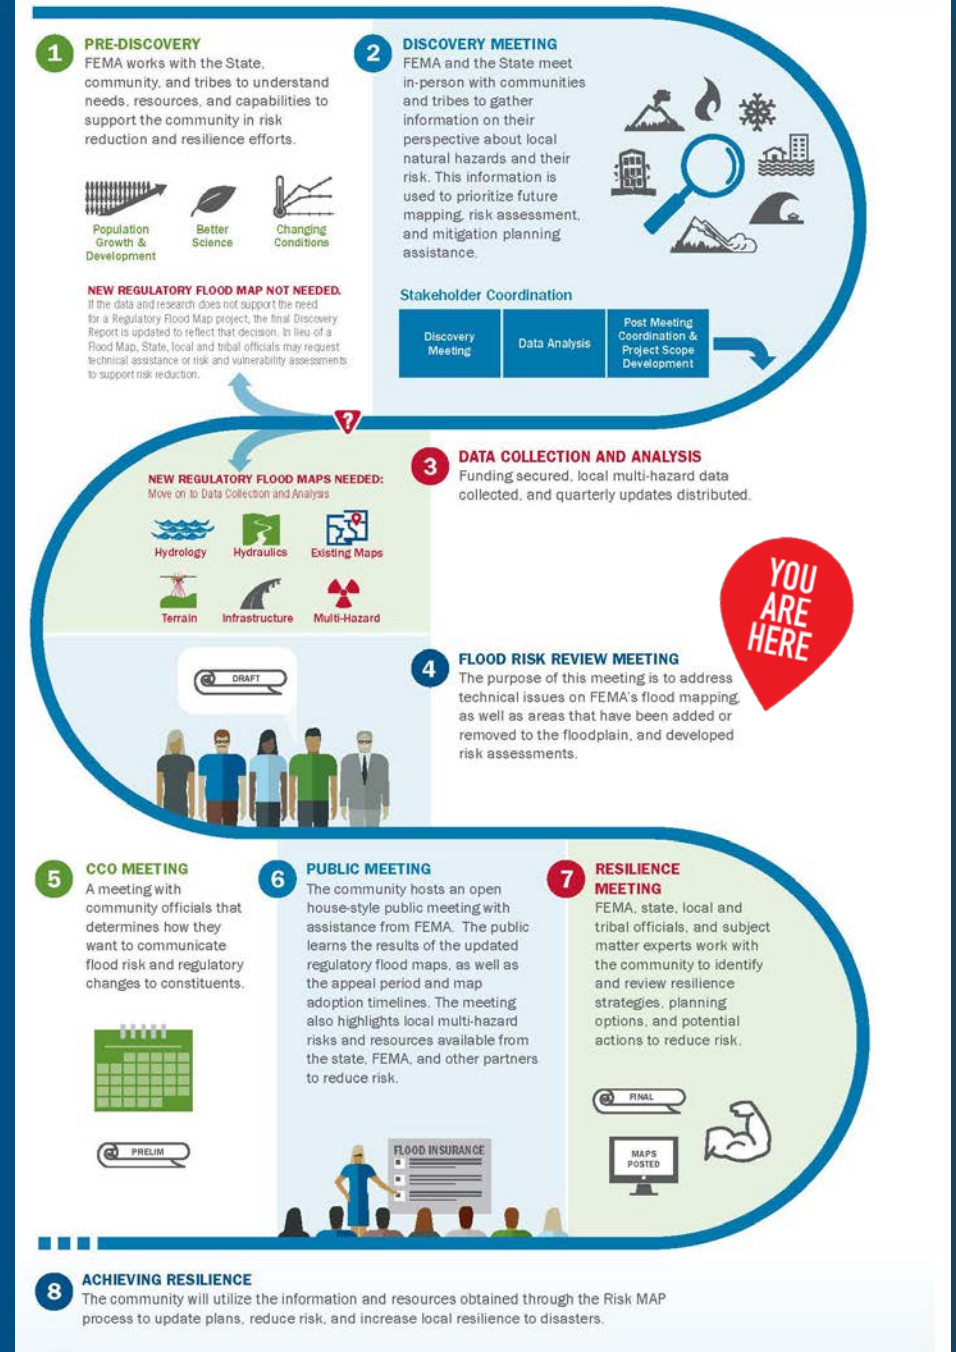

# RiskMAP, The NFIP & Hazard Mitigation Planning

**FEMA**

# Risk Mapping, Assessment & Planning (MAP)

- Risk MAP supports community resilience by:
  - Providing high-quality data
  - Building lasting partnerships
  - Supporting long-term hazard mitigation planning
- Outputs to Risk MAP may be:
  - Regulatory or Non-Regulatory
  - Flood-focused or Multi-Hazard focused

FEMA

# NFIP and the Kenai Peninsula Borough

---

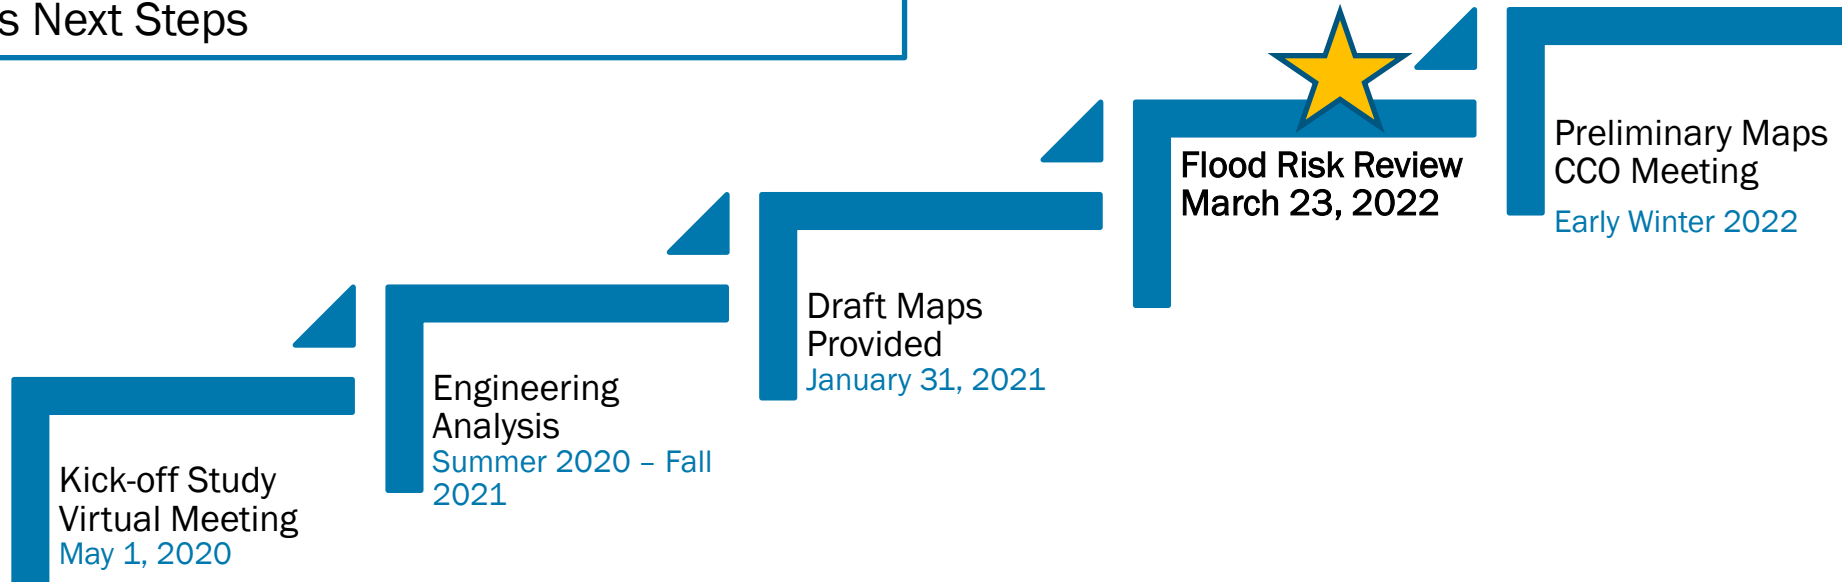

- Kenai Peninsula Borough participates in the National Flood Insurance Program as well as the Community Rating System
- KPB floodplain maps are not all updated by this study:
  - 1981: Original FIS and mapping
  - 1999: First revision, Big Eddy area
  - 2016: Third revision, Coastal Hazard Analysis
- Purpose of the NFIP: reduce economic loss caused by flood events
- 257 NFIP policies
- \$73 million in property covered
- 75 paid losses (since 1978)
- \$600,000 paid (since 1978)
- CRS Class 9, 5% discount to all policyholders

# Study Progress

## *Flood Risk Review Meeting Objectives*

- Review methodology, analysis and draft maps
- Discuss Next Steps

FEMA

# Key Responsibilities for NFIP-participating Communities

---

- Determine whether proposed development activities are in SFHAs
- Review development proposals to ensure compliance with requirements of floodplain management regulations
- Require new subdivisions and development proposals with more than 50 lots, or larger than 5 acres, to include BFEs
- Issue or deny permits for floodplain development
- Inspect all development in SFHAs to ensure compliance
- Maintain records of issued permits, elevation data, inspections and enforcement actions
- Assist in preparation and revision of floodplain maps
- Help residents obtain information on flood hazards, floodplain map data, and compliant construction measures

# Scope of Work

## USACE – Alaska District

- 1-D detailed analysis for 47 miles, outlet of Skilak Lake to mouth of Kenai River
- Multi-frequency analysis (10%, 25%, 50%, 1% and 0.2%)
- Water surface elevation and depth grids
- 1-ft increment inundation (for gages)

## STARR II

- Floodway modeling and mapping

- ✓ National Weather Service developed calibrated model with 1995 and 2012 flood events.

FEMA

# Benefits and Uses of Completed Analysis

- Supplement regulatory products (FIRM/FIS)
- Best available information for BFE determinations for development and Letter of Map Amendments. Possibly Letters of Map Revision.
- Can be used for planning efforts – emergency, mitigation, preparedness, land use, and capital improvements
- Provide data to inform Hazard Mitigation Plans
- Models are intended to be upgradable or enhanced. No need to start from scratch.

# Project Timelines Toward Map Adoption

* Dates estimated

**FEMA**

# Review Questions

- ❑ Are the new or revised floodplains consistent with your local knowledge of the flooding sources?
- ❑ Is water going somewhere it physically can not go?
- ❑ Are important map elements missing (roads, structures, bridges, culvert, etc.)?
- ❑ Are streams and significant features labeled correctly

Anchor Point Advisory Planning Commission  
Meeting Minutes: March 17, 2022

Call to Order: Meeting called to order by Jay Wright at 7:00 pm

Roll Call: Jay Wright, John Cox, Maria Bernier and Donna White were present. Dawson Slaughter, Mary Trimble and Raymond Drake were absent.

Approval of previous minutes: A motion was made by Maria Bernier and seconded by John Cox to approve the minutes. The motion passed.

Approval of Agenda: Marie Bernier made the motion to approve the agenda and John Cox seconded. The motion passed.

Correspondence: We received notice that the Plat Committee granted conditional approval of the Woody Acres 2022 Replat previously reviewed by this Advisory Committee at the February 2022 meeting.

Public Comment/ Presentation without previous notice: None

Report from Borough

- a. Brenda Ahlberg, Emergency Manager was present telephonically to review the 2022 Kenai Peninsula Borough Community Wildfire Protection Plan. Rob Matthis, Deputy Chief of the Western Peninsula Emergency Service Area was present.

Brenda Ahlberg explained that when the CWPP is adopted, the Borough will begin providing project recommendations to reduce fire danger.

Old Business:

- a. Update on Zoom meetings: No new information until Borough meets on our budget request.

- b. Review Kenai Peninsula Borough Community Wildlife Protection Plan.

Donna White made a motion to support the 2022 Kenai Peninsula Borough Community Wildfire Protection Plan. The motion was seconded by Jay Wright. The motion passed.

New Business:

- a. Pipers Haven Unit 3 2021 Replat Utility Easement Vacation KPB 2021-115V.

The advisory planning commission did not feel that they had enough information to make a recommendation regarding this easement vacation. John Cox made a motion for the petitioner to appear at our next meeting.

Announcements: None

We would like to review the Cooper Landing Comprehensive plan for the next meeting.

We request that the Borough mail a hard copy of any plat to be submitted to this commission. The plats that we receive by email do not print clear enough to be read easily.

Adjournment: Jay Wright made a motion to adjourn the meeting and the motion was seconded by Marie Bernier. The motion was approved. The meeting adjourned at 7:25 pm

Hope/Sunrise Advisory Planning Commission  
Regular Meeting Unapproved Minutes  
7 PM: March 16, 2022  
Hope Library, Zoom was inoperative

- A) Meeting was called to order at 7:10 by Jim Skogstad
- B) All HAPC members were present: Levi, Jim, Scotty, Jessie, Flip, Derrick and Johnny. Nancy Carver from the Borough participated via phone as did Bud Sexton
- C) The agenda was approved with an additional discussion item of a public input survey.
- D) Minutes of February 9, 2022 were approved.
- E) There were no public comments.
- F) Correspondence was received from the Borough to manage Spruce Bark Beetle (SBB).
- G) The Borough had nothing to report.
- H) Unfinished business the revisions to the 1987 have been received from commission members however changes need to be reviewed and compiled. It is also necessary for the community to review the draft plan and make public comments with an opportunity to change the plan. What is the best way to encourage public comment? Several ideas were presented including sample questionnaires from other areas such as Moose Pass. The Borough IT department is available as a resource.
- I) New Business: The Community Wildfire Protection Plan was discussed and it was agreed by all that the plan was very professional. Scotty motioned to accept/support the plan and HAPC approved the plan as submitted.

New Business: The Borough Spruce Bark Beetle mitigation plan ([www.kpb.us/forestmanagement](http://www.kpb.us/forestmanagement)) was discussed. Comments included it is better to utilize the trees rather than have them rot while remaining a fire hazard. Reforestation is included in the plan and the HAPC generally supports a mixed utilization of timber for both private firewood and commercial needs. Most of the impact of SBB has been in areas other than Hope/Sunrise. The mitigation plan was approved with no changes by the commission.

- J) There were no Items from the Commission or Announcements.
- K) The next meeting is scheduled for April 13, at 7:00 P.M.
- L) The meeting was adjourned at 8:00 P.M.

Any Questions, please contact: Chair Jim Skogstad at 907-229-1430 or email [akskogstad@aol.com](mailto:akskogstad@aol.com)

**KACHEMAK BAY ADVISORY PLANNING COMMISSION**  
**Regular (VIDEO CONFERENCE) MEETING**  
**LOCATION: ZOOM**  
**Thursday, March 17, 2022**  
**7:00 P.M.**

**UNAPPROVED MINUTES**

A. CALL TO ORDER: 7:00 pm

B. ROLL CALL

Present: Eric Knudtson, Owen Meyer, Bruce Robinson, and Louise Seguela.

Quorum has been met to move forward with the meeting.

Also present Sandra Fletcher, Ryan Raidmaid, Bud Sexton, and Dakota Truitt from KPB.

C. APPROVAL OF MINUTES

1. Approved February 20, 2022 minutes.

D. PUBLIC COMMENT/PRESENTATION WITHOUT PREVIOUS NOTICE

1. None

E. REPORT FROM THE BOROUGH

Sandra Fletcher introduced Ryan Raidmaid, the new KPB planner, who will be working with our APC.

F. NEW BUSINESS

1. Bud Sexton from OEM solicited our questions and comments. We passed the following resolution.

Because Kachemak Bay Advisory Planning Commission (KBAPC) communities fall within the Kenai Peninsula Borough (KPB) Community Wildfire Protection Plan (CWPP) area, and it is in the interest of the KBAPC to have a wildfire protection plan, KBAPC supports the design and application of the 2022 CWPP to our communities.

2. We discussed restarting in-person meetings. Louise will learn how KPB can help us conduct a hybrid in-person and Zoom meeting.
3. Dakota Truitt from KPB land management talked to us about the Spruce Beetle Timber Sales and Reforestation Project.

G. OLD BUSINESS

1. We briefly discussed the current draft of our introduction for the KB APC plan. Sandra will research the best way for us to share and edit our evolving draft and also our spreadsheet of the borough lands within our APC. We will email our comments and edits on Louise's latest draft to Louise. Bruce recommended seeking Native and

Russian reviewers of the history section of our draft. Owen recommended inviting Mike Tuberman to our next meeting.

H. ANNOUNCEMENTS

1. None

I. COMMISSIONERS' COMMENTS

J. ADJOURNMENT – 8:28 pm.
